Can make over 100 per cent in a highly respectable, easy and new business. No Patent Medicines, Book business, or anything of the kind. For particulars address, post-paid, 234-3t P. O. Box No. 7, Crawfordsville, Ind.

MOORE'S RURAL NEW-YORKER,

IS PUBLISHED EVERY SATURDAY,

BY D. D. T. MOORE, ROCHESTER, N. Y.

TERMS, IN ADVANCE:

Subscription—$2 a year—$1 for six months. To Clubs and Agents as follows:—Three Copies one year, for $5; Six Copies (and one to Agent or getter up of club,) for $10; Ten Copies (and one to Agent,) for $15; Twenty Copies for $25, and any additional number, directed to individuals at the same rate. Six months subscriptions in proportion. As we are obliged to pre-pay the American postage on papers sent to the British Provinces, our Canadian agents and friends must add 25 cents per copy to the club rates of the Rural,—making the lowest price to Canadian subscribers $1,50 per year.

☞ Subscription money, properly enclosed, may be sent by mail at the risk of the Publisher.

, The postage on the Rural is but 3½ cents per quarter, payable in advance, to any part of the State—and 6½ cents to any part of the United States,—except Monroe County, where it goes free.

Advertising.—Brief and appropriate advertisements will be inserted at $1,50 per square, (ten lines, or 100 words,) or 15 cents per line—*in advance*. The circulation of the Rural New-Yorker is several thousand greater than that of any other Agricultural or similar journal in America. Patent medicines, &c., will not be advertised in this paper on any terms.

☞ All communications, and business letters, should be addressed to D. D. T. Moore, Rochester, N. Y.

MOORE'S
RURAL NEW-YORKER

VOLUME V. NO. 29.} ROCHESTER, N. Y.—SATURDAY, JULY 22, 1854. {WHOLE NO. 237.

Moore's Rural New-Yorker:

A QUARTO WEEKLY

Agricultural, Literary, and Family Newspaper.

CONDUCTED BY D. D. T. MOORE,

ASSISTED BY

JOSEPH HARRIS, in the Practical Departments:

EDWARD WEBSTER, in the Literary and News Dep'ts.

Corresponding Editors:

J. H. Bixby,—H. C. White,—T. E. Wetmore.

The Rural New-Yorker is designed to be unique and beautiful in appearance, and unsurpassed in Value, Purity and Variety of Contents. Its conductors earnestly labor to make it a Reliable Guide on the important Practical Subjects connected with the business of those whose interests it advocates. It embraces more Agricultural, Horticultural, Scientific, Mechanical, Literary and News Matter, interspersed with many appropriate and handsome engravings, than any other paper published in this Country,—rendering it a complete Agricultural, Literary and Family Newspaper.

☞ For Terms, &c., see last page. ☜

Rural New-Yorker.

Progress and Improvement.

CULTIVATION OF WHEAT.—NO. I.

No phrase is more common than "a good wheat soil;" yet were we to ask half a dozen farmers as to what they considered "a good wheat soil," we should probably obtain six different answers. We understand by it, in a wide sense, a rather stiff clay loam, abounding in calcareous matter. But many soils which are neither clayey nor calcareous produce good wheat, though they cannot be considered as good natural wheat soils; thus, the county of Norfolk, in England, is naturally a sterile blowing sand, yet, at the present time, by judicious tillage and manuring, it produces as much wheat per acre as any other county in England. The value of clay in a wheat soil is usually attributed to a mechanical rather than to a chemical action, rendering the soil compact and retentive of moisture. The cause of the value of lime in a good natural wheat soil is, after all that has been written on the subject, still enveloped in much uncertainty; but one thing appears clear, all natural wheat soils contain a considerable quantity of lime, say as much as one per cent. When we consider that wheat contains a much less quantity of lime than almost every other crop grown, it will hardly do to say that the value of the lime in the soil is simply in supplying the wheat plant with the small quantity of lime which it requires, and that certain soils which do not produce wheat fail to do so from lack of lime, for these very soils frequently produce large crops of clover and Indian corn, both of which require, according to analysis, much more lime than wheat. Boussingault, ten years ago, called attention to this matter, as follows:

"It appears highly probable that calcareous matter is chiefly beneficial from the particular action it exercises on the fixed ammoniacal salts of the manure, transforming these successively, slowly, and as they may be wanted, into carbonate of ammonia. In the most favorable condition, the earth is only moist, not soaked with water, but permeable to the air. New researches will perhaps illustrate the utility of ammoniacal vapors thus developed in a confined atmosphere, where the roots are in operation. At least, it would be difficult to assign any other office to chalk in the marling or liming of land intended for corn, when we know how little lime corn absorbs. If, indeed, gypsum promotes the vegetation of trefoil, lucerne, sainfoin, &c., by furnishing the needful calcareous element, it could not fail to exercise an equally favorable agency upon wheat and oats, did they require it. The experiments adduced prove it not to be so, and their results are in some measure corroborated by analysis. Thus, if we compare the different quantities of lime withdrawn from the soil by trefoil and corn, we find them as follows:

The clover crop takes from one acre of ground nearly 70 lbs. of lime.			
Wheat	"	"	16 lbs.
Oats	"	"	6.4 "

With this comparison before us, it seems evident that if the marling and liming of corn lands had no other object than the introduction of the minute portion of lime which is encountered in the crops, it would be difficult to justify the enormous expenditure of calcareous carbonate which is proved by daily experience to be advantageous."

We are not prepared to assert that the chief value of lime in a wheat soil is in converting the fixed ammoniacal salts into carbonate of ammonia, or that it is owing to its accelerating the decomposition of organic matter in the soil; but as it is now established beyond all controversy that the great requirement of the wheat plant is ammonia, we feel assured that the large quantity of lime which always exists in a good natural wheat soil, is, in some way or other, connected with the supply of ammonia in a suitable condition for assimilation by the plant.

Why clay (alumina) is so necessary in a naturally good wheat soil is not clearly perceived. As we have said, however, it renders the soil retentive of moisture, and by its compact nature, prevents the formation, or at least the extension, of fibrous surface roots, causing the plant to send down a long *tap-root*, enabling it the better to withstand the effects of freezing and thawing in winter, and the heat and drought of summer; in fact, placing it in a soil or "pasture," but little influenced by the variations of temperature at the surface.

Professor Way, from some results obtained during his experiments for the Royal Agricultural Society of England, "on the absorbent power of soils," has thrown out the idea that the silica, so abundant in the straw of wheat and other cereals, is taken up by the plant from a solution of the double salt silicate of alumina and ammonia, and that the ammonia evaporates just as water is known to do, as soon as the silica is deposited; he bases this theory principally on the fact that in Mr. Lawes' wheat experiments, about five times as much ammonia is needed to produce wheat as the plant contains when grown. If this ingenious hypothesis should prove correct, future experiments may show that one of the reasons why a rather clayey aluminous loam is better for wheat than a sandy soil, is owing to its containing the double silicate of alumina and ammonia, or that of lime, soda, or potash, or other compounds capable of forming it under proper tillage and manuring.

Professor Way is still pursuing these investigations with renewed ardor. He is very sanguine that the double salt silicate of alumina and ammonia can be manufactured cheaply, and that it will prove of great value as an artificial fertilizer for wheat. We have but small expectations in this direction, from the fact that the compound, however pure, would be too bulky and too poor in ammonia to be economically transported to any distance as an artificial manure. But it may be manufactured on the farm, by mixing farm-yard manure with loam, or, what would be still better, by filtering the wash of the barn-yard through loam placed in a convenient spot for the purpose, and which could be carted on to the land, and a fresh quantity put in its place, as soon as the water filtering through contained any trace of ammonia. The clay must not be burnt, as it destroys its absorbent power. We cannot too earnestly recommend this practice to all who desire to augment the quantity and quality of the manure heap, and, as a consequence, the productiveness of their farms.

We would mention in this connection that in England it has been a common practice, for a century back at least, to draw on to old loamy headlands a large quantity of stable manure, and throw up the soil into a heap in the center, at the same time mixing with it the manure. Every old farmer will tell you of the wonderful effect such a compost produces on old meadows, &c. Does not this afford another instance of the fact which all conversant with the later developments of scientific investigations must have observed, that practical farmers are further advanced in the practices of *true* scientific agriculture than the best of chemists? About all that the chemist has yet done for agriculture, is to explain the *rationale* of processes which experience has long taught the farmer to practice, and to suggest improvements, or carry them out still further. Practical farmers first discovered the value of bones, woolen rags, lime, marl, guano, &c., and the chemist has merely told us to what their fertilizing properties are owing. The advantages of growing turnips, clover, peas, beans, tares, &c., alternately with the cereals, were as well known before as since Mr. Lawes' experiments explained the *rationale* of such a rotation. And the discovery that the double silicates retain ammonia, only serves to explain what was before *acted upon* in the practice of composting manure with loamy soil. A knowledge, however, of the *principles* on which an improved agriculture rests, is of immense importance, and those who are so ardently laboring for their development, deserve the thanks of all in any way connected with the agricultural interests of the world; and it appears to us that America is more benefited by a knowledge of these principles, than the countries of the Old World, where they have long been ignorantly applied, for we can act upon them in conformity with our modified circumstances, and thus they will supply our lack of long experience. In this series of articles, therefore, we shall endeavor to bring to view some of the *principles* underlying the cultivation of wheat.

THE PRACTICAL FARMER AND MR. MAPES.

The *Practical Farmer*, an excellent agricultural paper, published at Boston by W. S. King & Co., and edited by W. S. King, with Professor J. J. Mapes and Levi Bartlett as associate agricultural editors, is much offended because in our article in the Rural of June 24, headed "Mr. Mapes once more," we said that "he (Mapes) was also editor of the *Working Farmer*, *Practical Farmer*, and *Journal of Agriculture*." Mr. King asserts that we said Mapes was "*the* editor" (the italics are his own), and that we "set him down, and Levi Bartlett to boot, as nobodies." We certainly had no intention of doing so, and did not think it would be so understood. We did not say that Mapes was *the* editor, but simply that he was editor. Is it because Mr. King is ashamed of his associate that he so severely censures us for mentioning his connection with the *Practical Farmer?* If it will be any relief to Brother King's wounded feelings, we will promise hereafter to speak of Mr. Levi Bartlett and Mr. Mapes as *associate* editors, and of Mr. King as emphatically *the* editor of the *Practical Farmer*.

Again, Mr. King states that we assert that the *Practical Farmer* has been "*used* to puff the Improved Superphosphate, &c." Now all that we said was that Mr. Mapes' connection, as editor, with several papers, and his avocation as a lecturer and debater at farmers' clubs, where his assertions, in the language of Solon Robinson, are copied "into a hundred thousand *Tribunes* and other papers," gave him "rare chances to puff his improved manure, seeds, plants, plows, &c." We gave some specimens of this manner of driving a business from the last number of the *Working Farmer*, but we neither said nor intimated that the *Practical Farmer* was *used* for this purpose; and are somewhat surprised that Mr. King should attribute to us statements which we never made, and then say that they were "singularly devoid of even the shadow of truth." We will not now stop to argue whether Mr. Mapes has or has not used his connection with the *Practical Farmer* to puff his wares, as it does not in the least affect the matter in dispute. It is, however, notorious that since he has manufactured superphosphate, Mapes seldom writes an article, makes a speech, or delivers a lecture, without directly or indirectly commending his manure. The *Practical Farmer* then says:

"We regret exceedingly that Mr. Harris should have thought it expedient to make us a party to this fight [fight?]; for, appearances to the contrary notwithstanding, we detest disputes. We are sorry that he has so far committed himself to the quarrel; because we believe that he has in him material to be useful as an agricultural writer; and, whatever may be the effect of his assault on Mapes, he will himself be pretty effectually used up, at its conclusion. Most of all we regret, for his own sake, his unfortunate adventure in disguise, at Newark; for people are apt to believe that [he] who will stoop to enact a falsehood, will not hesitate at the mere utterance of untruth."

Brother King forgets to tell his readers that Mr. Mapes had drawn up a statement showing that we—Joseph Harris—were an "unmitigated wholesale manufacturer of falsehood," and had taken the sacred oaths of some twenty men for the purpose of substantiating the terrible charge. In order to clear ourselves, it was necessary to obtain conclusive evidence as to whether Mr. Mapes had altered his process of manufacture between the period of our first visit and the time of swearing his men. To accomplish this, we used all honorable means, without success. A gentleman we employed to visit the factory for this purpose, saw Mr. Mapes, who had written "No Admittance" on his factory doors, and he would not allow him to enter. Other open means were alike futile. What were we to do? Sit down quietly before the public as a branded liar, when we knew that we were guilty of no misrepresentation? After mature deliberation and consultation with friends, it was agreed that we must get into the factory, even though it was necessary to stoop to deception for the purpose.—We freely admit that, under ordinary circumstances, such an act would have been mean, skulking and dishonorable; or had we entered the factory in disguise, for the purpose of exposing the improper method of manufacture, we should have laid ourselves open to the charge Mr. King has brought against us. But we were acting simply in self-defence; and, whatever others may think, we are well satisfied that we were perfectly justified in resorting to the only means which afforded the least hope of success.

"People are apt to think that they who will stoop to enact a falsehood, will not hesitate at the mere utterance of untruth." This is not always true. A general who takes a fortress by stratagem, deceives or "enacts a falsehood," but we do not place the less confidence in his description of the things he finds there. And so it is in almost all cases in detecting crime. The constable or police officer "enacts a falsehood" in order to apprehend the guilty party, or to obtain evidence to convict him; yet such a man is allowed to enter the witness-box unchallenged. Had Mapes robbed us of a few thousand dollars, even W. S. King would not have condemned us for putting on a workman's rig, in order to obtain evidence to convict the thief, and recover the money. How much more, therefore, are we justified in using the same means in order to convict the vilifier of our character, and thereby regain our good name?—J. H.

TURKEY IN AMERICA.

Turkey in Europe and the Eastern war occupy a large share of public attention; so, perhaps, it will be in vain for us to talk of *Turkey in America*, and the war which, in less than a year, will be certain to rage here.—We predict it will break out near the close of November—and continue with more or less violence, according to the crop of cranberries, until after Christmas. That the campaign may be a brilliant one, and the result satisfactory, we would offer a few hints on this (about Thanksgiving) most interesting subject.

Turkeys, as well as Buffaloes, are American aborigines, and even now occupy some territory to which their title is not extinguished. A few more Nebraska bills, however, and their defiant *gobble, gobble, gobble*, will die forever, and with a faint *quit, quit*, they will pass from their native wildwood haunts, "to return no more."

In breeding this noble fowl, the mistake of keeping only young birds is often made. A turkey does not arrive at full growth and maturity until over two years old, and should not be bred from until it has attained its full strength and vigor. A writer, who "has tried the thing thoroughly," says that breeding from immature birds reduces the size of the young, and that such chicks are much more difficult to raise than those of old turkeys. "Were we to choose our birds for the very best breeding," he adds, "both cocks and hens should not be less than three years old, and the cock from a different stock from the hens. Turkeys bear breeding from close affinities less successfully than any other fowl—and we would never breed thus, if it could be helped." He also advises their sitting upon their first laying of eggs, instead of hatching them under a hen, and turning the turkey out for a second clutch of eggs. The young should be reared in their *proper* season to have the finest and best.

[FEMALE WILD TURKEY.]

The "Domestic Poultry Book" says, that "turkeys sit from thirty to thirty-one days.—The youngest require no food until the second day, and then for a few days should be fed on boiled egg and soaked bread, or curd; or a few pounded crackers mixed with the egg, is very nourishing. When they are two weeks old, meal and grain should be given, and they should be well housed in stormy weather, as nothing causes a young turkey to droop sooner than dampness." Do not leave them at large until after haying, or they will wander off through the dewy grass, and thus become diseased—and a sick turkey chick is little better than a dead one. Curds are probably the best food that can be given them, though that alone is not sufficient.

A cross of the tame with the wild turkey is occasionally very useful, giving additional stamina and vigor to the domestic race. The writer from whom we first quoted, says, "It is wonderful to see the invigorating influences of the wild blood upon the tame in the first progeny. The style of the bird—in figure, plumage and action—is all changed. A degree of self-reliance is added to the young things, as they creep and dodge among the leaves, 'shirking for themselves.' One single cross is sufficient—more is apt to give them shy and rambling habits, as it takes several generations of domestication to make the wild turkey thoroughly tame."

The improvement of the turkey is very possible, and by care in breeding, their usual weight and quality can be much increased. At the English Shows, turkeys weighing *forty* pounds have been exhibited, which is full ten pounds above our largest specimens. Turkey in Europe surely need not be allowed to out-do Turkey in America.—R.

Improvement in Portable Steam Engines.

Steam engines are used on British farms to an extent not readily believed in this country. Instead of thrashing their grain, as we do, immediately after harvest, it is carefully stacked, and thrashed gradually during the winter months as fast as the straw is wanted by the stock. For this purpose, it has been fully demonstrated that steam engines are much more economical than horse-power, and the demand for them is yearly increasing. With this demand, great improvements in their construction are made, thus:—The prize engine of the Royal Agricultural Society, in 1849, consumed per hour 11.50 lbs. of coal per horse-power; in 1850, 7.56 lbs.; in 1851, 6.79 lbs.; in 1852, 4.66 lbs.; in 1853, 4.32 lbs. These, we believe, are portable engines, but a like improvement has also taken place in the construction of fixed engines.

I. I. Skelly, Cardiff, Onondaga Co., N. Y. writes us that the wheat in that county was much injured by the severe winter, and that in the town of Onondaga, and probably in the county, there cannot be half the wheat harvested this year that there was last. Wheat put in with the drill is the best. Mr. Skelly's letter accidentally has been mislaid till it is somewhat out of season, or we should publish the whole of it. We hope to hear from him again.

Meteorological Observations,

MADE AT ROCHESTER, N. Y.—QUARTERLY ABSTRACT.

A. J. ENSIGN, OBSERVER.

1854.	—April.— Barom.	Ther.	—May.— Barom.	Ther.	—June.— Barom.	Ther.
Highest Obs.	30.000	73°.2	29.504	79°.4	29.145	88°.2
Lowest do.,	29.020	25°	29.049	33°.3	29.085	45°.9
Range,	.980	48°.2	.746	46°.9	.660	22°.3
Month. Mean,	29.528	42°.54	29.411	58°.54	29.393	68°.61
Coldest day,		2d		7th		1st
Warmest day,		26th		24th		28th
Am't of rain,	2.428		2.146		5.473	

April.—This month came in very cold. In the first part, there were frequent snow squalls, and the weather was quite severe. From the 18th to the 28th it was warm and pleasant; vegetation grew rapidly. The close of the month was cold and stormy; snowing on the 29th, and raining the entire day of the 30th. There were twelve days on which it either rained or snowed. The amount of rain and melted snow was not so much as for the same month last year, being then 3.245 inches. The mean temperature for the month, as stated above, was 42°.54; for the same month last year, 43°.6, a slight difference of 1°.06.

May.—The first two days were cold and rainy; then the weather became warm and pleasant; cold again on the 6th, and, at night, ice a quarter of an inch in thickness formed in exposed places. From the 8th to the 19th was a warm growing time. The last part of the month was cold and cloudy—a backward spring. The number of rainy days was 13. The amount of rain for the same month last year was 4.725.—The mean temperature of the month for this year, was 58°.54; for that of last, 55°.4, a difference of 3°.14.

June—The first two or three days of this month were cold for the lateness of the season. The weather then became warmer, and there was a fine growing time during the rest of the month. The last part was extremely warm.—The number of rainy days was 11; the amount of rain was 5.473; for the same month last year, 1.480. The mean monthly temperature was 68°.61 for that of last year, 71°.5, showing a difference of 2°.87. The warmest day of the month, as seen by the above table, was the 28th, when the thermometer stood at 88°.2; for that of last year, the 15th was the warmest, when the thermometer stood at 93°.

July—The first ten days of this month have been very warm. Much of the time the sky has been perfectly cloudless, and the fiery rays of the sun intense. The two warmest days were the 4th and 8th, when the thermometer indicated a temperature of 93° in the shade. The highest degree of the thermometer, for the first ten days of the same month last year, did not at any time exceed 80°. Thus far there has been no rain of consequence, only a slight sprinkle on the afternoon of the 9th.

The amount of rain that usually falls during the year, as indicated by the ombrometer, is from thirty to thirty-six inches.

University of Rochester, July, 1854.

INDUSTRIOUS FOWLS.

MR. MOORE.—In your valuable paper of July 1st, I read an extract from the Maine Farmer, of a hen doing "double duty"—that is, rearing a brood of chicks and laying at the same time. Allow me to tell a "bigger" story, and yet a true one.

Of some twenty full blood Shanghai and Chittagong hens, which have set this season, with but two or three exceptions, all have commenced laying when the chicks have been from two to four weeks old, and continued to do so almost daily, until the brood was weaned, (which they have done very early;) when, after completing their laying they have set again, and some are now setting for the third time.—I would especially mention a pure white Shanghai, and a Chittagong pullet; the former, when with her second brood, (of 17 fine chicks,) began laying when they were three weeks old, and laid 20 eggs without missing even a day, when she weaned her chickens and is now among the number setting for the third time. The latter hatched out 15 chicks the first setting, which was very early in the season, and 14 the second time, and what she will do now remains to be seen; but she has laid regularly when her chicks were about three weeks old. Let those who decry the Shanghai fowls, give them a fair trial—feed them as well as they would any other choice stock on their farms—mark well the result, and rely upon it their opinion will undergo a change.

Rahway, N. J., July, 1854. L. C. FROST.

CROPS IN NORTHERN NEW YORK.—A recent letter from Mr. E. G. COOK, Belleville, Jeff. Co., says:—"The weather has been quite cool and dry, with but few warm days until within two weeks. Winter Wheat badly killed out by freezing and thawing late in spring; it will not average over ten bushels per acre—some say five. Grass light—not half a crop. Of Corn a large amount was planted, but on sward land the worm has eaten it badly.—Many planted over two or three times, and then had to drag and sow to grain to get any thing. On old land it stands well, but small; little corn weather yet, and the crop never looked worse at this season. Spring Wheat, Barley, Oats, &c., look first rate—perhaps never better. As there has been a large amount of Barley sown, we shall have something to feed in place of Corn."

AGRICULTURAL QUALITIES OF NEBRASKA.

THE Cleveland Herald contains an interesting letter from the Nebraska region, written by William Walker, an intelligent and worthy half-breed, and the chief of the Wyandot Indians, from which we make the following extract:

As far as I have been able to make observation on cultivated lands, I have no hesitation in affirming that there can be no country found to surpass it in the production of corn, wheat and oats. Clover, I think, will not do well.—The soil is too loose, and clover freezes out in the winter; and what is left gets the finishing stroke during the the unusual drouths so common in this country. That this country is well adapted to fruit raising I can speak with confidence, as I have been doing something in that line myself, and take much interest in that department of horticulture. I think I never ent as luscious peaches in my life, as my neighbors and I have raised. It is to be regretted, however, that in some seasons the peach crop has met with total failure. But apples, and other fruits, seldom fail. On the alluvial lands are have pumpans, &c., that will eclipse anything in the western world.

With regard to mercantile and mechanical pursuits, it would be difficult at present to tell. This will depend upon the population in the various prominent points, and when the current of trade has settled down to the permanent maximum. The location of the Mississippi and Pacific Railroad through the central route, will soon develop the business points.—But upon the organization of the Territory, and, moreover, upon the extinguishing of the title of the Shawnee and Delaware Indians to their lands upon the Kansas river, (as they own both sides) a great opening will here present itself to the enterprising, and business men of all pursuits. It is navigable for 200 miles up the "Republican Fork," except in a low state of the water, which occurs generally in the fall. The country upon this stream is considered the best portion of the Territory, the land generally being well adapted to agricultural purposes, and being well watered by streams emptying into the Kansas river.

I have not traveled this portion of the Territory, and therefore state only what I derive from reliable authority. I have explored the southern portion, and cannot speak in rapturous terms of the country. It is not well watered, nor has it as many privileges for machinery as in the northern part, nor is the soil as good, though a fine grazing country. The whole Territory is a prairie, except upon the streams; and like most other western countries, has hills and dales, rivers and creeks, prairie and timber, rich and poor land. The upland lies high and rolling into beautiful waves. The timber in the country is red, white, black, burr and pine oak, shell and smooth bark hickory, coffee bean, mulberry, ash, linden, &c.; and in the bottom lands, which are subject to inundation, nothing but cotton-wood of the rankest and most rapid growth.

There can be no better country for raising live stock. The water (from springs) is generally hard, owing to the source being from limestone. There are springs, however, that proceed from clay banks, and the water from these is invariably soft.

With regard to the climate, it is about the same as in the northern part of Ohio, except the winters are not so long, and the summers are longer and warmer. As evidence of the latter, I will state that through the months of July and August, the mercury in the shade is frequently up to 100 and 105 deg., and I recollect two or three instances of 110 deg.

In the winter, the weather is very irregular. In the winter months, the mercury will sometimes stand at 55° of "temperate," and in 12 hours' time it will be 10° below zero. The irregularity of the climate is by many attributed to our altitude above the Mississippi and proximity to the Rocky Mountains. But permit me to say at least one thing in praise of the "Queen of the Prairies"—we have, both in winter and summer, the finest roads for wheel carriages on the Continent of America. I do not say turnpike macadamized roads, but roads made by the plastic hand of nature. In the winter, especially, it is glorious wheeling. Indeed good for any other mode of traveling.

One peculiarity I cannot pass without remark. The morning and evening twilight lasts about an hour longer than in Ohio.

SALE OF HORSES.

AT 12 o'clock yesterday, July 11, a sale of valuable horses took place at the "New York Tattersall's," in Sixth-avenue. Nearly a thousand persons were in attendance, and the bidding was active. From twelve to fifteen horses were put up during the early part of the sale, and were bid off at prices varying from $200 to $550.

The main interest that attached to the sale, was the announcement that the celebrated trotters, Mac, Tacony, Frank Forrester and Barnum, would be sold under the hammer.

Mac was struck off at $4,100, to Mr. Mann, of Baltimore; Tacony was sold for $3,700, to Mr. J. G. Bevins, of this city; Frank Forrester was sold to Mr. Mann also, who paid $2,350. Barnum was withdrawn from the auction, he having been sold at private sale during the morning, for the sum of $2,850.

Two mares—a bay and a black—were put up, each being warranted to trot a mile in 2.40, and together in 2.45. They were sold to Mr. Getson for $1,150. The auctioneer was Mr. Henry Palmer.—*N. Y. Times.*

FARM 150 MILES LONG.—Mr. Brotherwood, who is the agent for keeping the permanent way, or rails, for the Great Western Railroad, England, in repair, also rents the land on each side of the road belonging to the company, and farms it out, or rents it. In some places the distance between the line and the fence is twenty yards, and in others it is not six feet, but it is known as Mr. Brotherwood's farm, and is 150 miles long. The contractor has risen to opulence by the rents of his farm.

Agricultural Miscellany.

THE WHEAT HARVEST is progressing finely in this region, the weather continuing favorable. A great portion of the crop will be cut the present week. We hear less complaints of the ravages of the weevil, and presume the damage has been over-estimated in some localities—yet the loss from this cause will be large in the aggregate, and undoubtedly affect the price of pure Genesee wheat for the next twelvemonth. The yield in towns adjoining, and even of fields in immediate proximity, varies materially—in consequence of which reports from the same district are often contradictory.

Corn is looking up—the recent warm weather being very favorable. Other crops are also improving rapidly—and the prospect is that, notwithstanding the partial failure of the wheat crop, the farmers of Western New York, will have abundant use for their spacious barns and granaries.

OHIO COUNTY FAIRS.

THE following list of County Fairs to be held in Ohio, the ensuing fall, is copied from the Ohio Cultivator of the 15th inst. Many Societies have not yet designated the time and place of holding their Fairs, yet the list outnumbers that of our own State, given last week:

Ashtabula, Jefferson, Sept. 26—28.
Belmont, St. Clairsville, Oct. 3—5.
Carroll, Carrollton, Oct. 17—19.
Clarke, Springfield, Oct. 3—5.
Clermont, Bantam, Oct. 3—6.
Columbiana, New Lisbon, Oct. 27—29.
Coshocton, Coshocton, Oct. 12—13.
Defiance, Defiance, Oct. 12—13.
Gallia, Gallipolis, Oct. 5—6.
Geauga, Burton, Oct. 4—6.
Guernsey, Cumbridge, Sept. 6—7.
Hardin, Kenton, Sept. 27—28.
Harrison, Cadiz, Oct. 5—6.
Henry, Napoleon, Oct. 5—6.
Licking, Newark, Oct. 11—12.
Logan, Bellefontaine, Oct. 3—5.
Lorain, Elyria, Sept. 27—28.
Lucas, Toledo, Sept. 26—27.
Mahoning, Canfield, Sept. 25—26.
Medina, Medina, Sept. 13—14.
Miami, Troy, Sept. 27—28.
Morgan, Connellsville, Oct. 3—4.
Pickaway, Circleville, Sept. 6—8.
Preble, New Paris, Oct. 11—13.
Richland, Mansfield, Sept. 27—29.
Sandusky, Clyde, Sept. 26—27.
Trumbull, Warren, Oct. 5—6.
Wood, Perrysville, Oct. 4—5.

GRAIN DRILLS.—Will you please inform me, either through your paper or by letter, as to the best kind of drill for sowing wheat, &c., and where obtainable? An answer will oblige me and other subscribers in this section.—D. R. TAYLOR, *Oakfield, N. Y., July*, 1854.

THERE are several good drills before the public, but we cannot undertake to say which is the best. It is a question upon which editors, as well as farmers, disagree—and besides, we have not witnessed the operation of all the machines in use. MOORE'S Grain Drill, advertised in this paper, is highly recommended by many excellent farmers as a superior machine, and is unhesitatingly worthy of trial. SEYMOUR'S Drill is also a good one; and there are others (names not now remembered,) manufactured in various localities, which are worthy the attention of farmers.

PERUVIAN GUANO.—The Guano Agent of the Peruvian Government has raised the wholesale price of this fertilizer to $60 per ton (gross). This is said to be owing to the increased rate of freights, but we apprehend it is rather owing to the extraordinary increase in the demand for Peruvian Guano in this country and in Great Britain, consequent on the prosperous high prices of agricultural produce. Even at $60 per ton, for the cereal crops, it is by far the cheapest artificial manure in the market.

THE CROPS IN NEW ENGLAND.—The New-England Farmer of the 15th inst., says:—"The intense sun of the last eight or ten days has had a wonderful effect upon vegetation. The drouth has become very sharp, all at once.—The grass has nearly all become fit to cut, vines and beans languish, and in some cases the corn leaves have rolled. There was little rain in this region in June, which we suppose will partly account for the suddenness and sharpness of this pinch.

WESTWARD HO!—A company from the State of Maine, have recently purchased 40,000 acres of land in Wisconsin, for the purpose of cultivation and improvements, and pay five dollars per acre, or $200,000. This tract of land is principally in Grant county; it was entered in 1836, by a son of the Earl of Bute, who is now British Consul in Egypt. The immigration into this new State is now very great. The wheat fields are standing up thick and strong, in some places even with the fences, and look well. It is predicted that one more good crop of wheat, even at one dollar a bushel, and Wisconsin will be the wealthiest State in the Union, in proportion to her population.

THE KENTUCKY Agricultural and Mechanical Association at Lexington, have contracted with an architect of that city, for the erection of a stone-and-brick *Amphitheatre* and other improvements, on their Fair Ground. The improvements will involve an outlay of some twelve or fifteen thousand dollars, and are to be completed in time for the annual exhibition in September.—*Maysville Eagle.*

DO KING-BIRDS EAT BEES?

MUCH discussion has been going on in the New York *Tribune* on this subject. It appears to be fully settled, that no bird does or can eat a *honey-bee*, but that they frequently eat the *drones*, as was stated a few weeks since by a correspondent in the RURAL, in regard to swallows. A late Tribune says:

"C. W. C. writes us that, while bees are sometimes found in the craps of king-birds, they are invariably *drones*, and not working honey-bees, that are provided with an instrument of defence with which no bird would like to come into close quarters. Indeed, the finding of *live* bees in the stomachs of birds, (which two of our correspondents have done,) ought to have made them suspect that the bees so swallowed alive were not provided with *stings*, else the birds might calculate on a severe attack of colic forthwith. We venture to say that no *man* can swallow a live honey-bee without imminent danger of death; and it is not likely that a bird weighing some two ounces could take a crop-full of bees without wishing he hadn't. We guess the fact is that king-birds *do* eat bees, but not the sort that carry stings behind them.

P. S.—A letter from a correspondent in Winchester, Penn., corroborates the above."

BUTTER MAKING.

NOT one pound in five of the butter sold in the markets, is fit for human food. Butter makers should remember these few short rules:

The newer and sweeter the cream, the sweeter and higher flavored will be the butter.

The air must be fresh and pure in the room or cellar where the milk is set.

The cream should not remain on the milk over thirty-six hours.

Keep the cream in tin pails, or stone pots, into which put a spoonful of salt at the beginning; then stir the cream lightly each morning and evening; this will prevent the cream from mouldering or tainting.

Churn as often as once a week, and as much oftener as circumstances will permit.

Upon churning, add the cream upon all the milk in the dairy.

Use nearly an ounce of salt to a pound of butter.

Work the butter over twice, to free it from the buttermilk and brine, before lumping and packing.

Be certain that it is entirely free from every particle of buttermilk or coagulated milk, and it will keep sweet forever.

In Scotland, a syphon is sometimes used to separate the milk from the cream, instead of skimming the pans.—*Ag. Exchange.*

PLASTER AND ASHES FOR CLOVER.

THE HON. T. C. PETERS says:—One ton of the dried clover, or the crop upon an acre produces more of the necessary food for the perfection of the wheat plant, than is taken off in two crops, and hence it is that land upon which red clover can be grown well, has within itself as it were, the means of its own perpetual fertility. Yet it is well to manure your clover, for a fat clover field will be sure to make a rich wheat crop. Plaster has been found an excellent indeed an indispensable manure for the clover crop. I have found leached ashes good, and the effect upon the succeeding crop very remarkable. Last fall I applied at the rate of two hundred bushels to the acre, upon my wheat and the difference between the ashed and unashed was nine times equal to the whole expense of the application. My first experiment was upon some clover, the previous spring, and the yield was more than doubled, and the wheat upon the clover soil was the best I had, though some had been heavily dressed with barn-yard manure. Nearly three quarters of the bulk of wood ashes is lime in combination with phosphate, and hence is one of the most valuable applications that can be made.

PROTECTING CLOVER HAY-STACKS.

JOSIAH LACKEY writes to the Iowa Farmer that he has tried to preserve clover hay from the effects of the weather in the following manner, and found that it answered as well as if it had been put in a barn.

Clover hay put up in the ordinary manner is apt to get musty and unpalatable, but put up in the manner recommended, it comes out good and sweet. He says:

"When the stack, which is commenced in the usual way, is raised about one-half its destined height, the ends of the long wheat or rye straw are placed just on the edge of the stack, so that when the next layer of hay is placed upon it, the principal length of the straw will droop over the sides of the stack. Following this plan until the stack is finished, a complete and impervious covering is furnished to the hay that will keep it nearly as well as the best barn. I think that the long coarse grass that grows in the sloughs of this country will answer a much better purpose; the straw being longer will turn quite as well.—*Ger. Tel.*

GALLS ON HORSES.

TO cure galls on horses, take whiskey, and add as much pulverized alum as it will dissolve; with this bathe the parts affected. I have known the very worst of galls healed in this way, and the horse kept in constant use. I ever resort to this remedy, carrying it with me wherever I journey, and continue its use with unlessened approval. I apply no other remedy. When a horse has been put out for the winter, and has not been used, his breast and back get very tender; a single hour's use, then, on a hot day, will scald his breast so as to cause serious injury. My uniform practice, therefore, has been, for a week or so before he is beginning to use the harness, to harden the breast and back by bathing them regularly two or three times a day. No injury has then resulted from the application of the collar.

FARM LIFE.

THE beautiful lines of Mrs. SIGOURNEY give a truthful, though poetical picture of Farm Life:

Saw ye the farmer at his plow
As you were riding by?
Or wearied 'neath the noon-day toil,
When the summer-suns were high?
And thought you that his lot was hard?
And did you thank your God,
That you and yours were not condemned
Thus like a slave to plod?

Come, see him at his harvest home,
When garden, field, and tree,
Conspire with flowing stores to fill
His barn and granary.
His healthful children gaily sport
Amid the new-mown hay,
Or proudly aid with vigorous arm
His toils as best they may.

The Harvest Giver is his friend,
The Maker of the soil,
And Earth, the Mother, gives them bread
And chases their patient toil.
Come join them round their wintry hearth,
The heartfelt pleasures see,
And you can better judge how blest
The farmer's life may be.

ABOUT BEES.

SOME two or three years ago an acquaintance of mine gave me a receipt which he claimed as infallible against the bee moth or miller. If it is of any use, your readers "and the rest of mankind" are welcome to the knowledge of it. I have not tested it myself, partly because I could not get the sweet flag root in my vicinity, and partly because I do not suffer, as yet, from the moth. I have but a small stock of bees, and I endeavor to keep my hives populous; then, as soon as the weather will admit, I raise the hive about half an inch or more from the bottom board, by pins in the corners. The miller then has a poor chance to deposit her eggs where the hive is full of bees. Besides this, I keep a good look out to catch and kill all the marauders I can.

A friend residing in Kingston, Tenn., who keeps a large number of bees, and has excellent success, pursues a similar course. A pair or two of wrens have for several years much assisted him, in building their nests close by.—Especially when providing for their young would they visit the hives at all hours of the day, for any chance worm, or cast out larvæ of the bees.

But to the receipt, which follows:—Take dried sweet flag, pulverize it very fine, make it into a dough, well working it with strong spirits of turpentine, then dry it in the sun or by a gentle heat. When well dried pulverize it again and again, make it into dough with spirits of turpentine, this time adding a portion of common salt. Dry it and it is ready for use, and may be kept on hand. Sheer it on the bottom board and around the hive. The miller, my informant says, will select it for depositing her eggs, where they will stay deposited, as the mixture very soon destroys their vitality. It is inoffensive to the bees, but its power over life in the embryo is so great that even hens, and other eggs are made worthless for hatching by wrapping it out of it around them for a short time.—T. E. WETMORE, *in Maine Farmer.*

A PERVERSE ANIMAL SUBDUED.

AN itinerant was at a nobleman's to exhibit feats of horsemanship, and the people had collected from far and near, to behold the exhibition. When the man had done with his own horses he turned and said, "Now, my lord, I am willing to ride an horse of yours in the same manner." Having one remarkably stubborn, the nobleman told a groom to bring her out. The stranger then deliberately mounted, and urged her to move, but not one step would she stir. After a pause, he quietly dismounted, gave her one severe stroke with his whip, and again resumed the saddle. The mare remained immovable, but the man preserved his temper, and got down quietly a second time, repeating the blow, but with no better success. After the third stroke, however, she was completely subdued, and moved forward with perfect obedience.

It now became evident that the design of the horseman was to give the animal time to associate the idea of her obedience with the stroke that followed. When this was established, she was willing to move. On the contrary, if a shower of blows had been dealt out, as thousands of horsemen would have done, the mare would have had no time to reflect, and both she and her rider been roused into fury. With good temper great savings might be made in the article of whips.

A FACT FOR THE READERS OF POULTRY.—Mr. Purse, steward to S. Capon, Esq., Framingham, had, some few weeks back, a duck turkey, or, as they are called in Suffolk, a gobble-duck, determined to sit upon some eggs which were left in a nest. The steward, by way of experiment, placed under him 25 duck's eggs, which so delighted him that for several days he refused to come off after his food.—After sitting 29 days he hatched out 20 ducks. A hen and a duck hatched out 30 between them. As the gobbler's services were now required in another direction, it was thought advisable to commit his young family, together with those of the hen, to the care of the duck. They are now all alive, 3 weeks old, 50 in number, marching about with the old duck.—*Mark Lane Express.*

ONIONS FOR POULTRY.—Scarcely too much can be said in praise of onions for fowls.—They seem to be a preventive and remedy for various diseases to which domestic poultry are liable. Having frequently tested their excellencies, we can speak understandingly. For gapes and inflammation of the throat, eyes, and head, onions are almost a specific. We would recommend giving fowls, especially the young chicks, as many as they will eat, as often as twice or three times a week. They should be finely chopped. A small addition of corn meal is an improvement.

Orchard and Garden.

THE CHERRY OR PEAR SLUG.

The Slimy Slug (*Selandria Cerasi*) is known to most fruit-growers as a destructive enemy of pear and cherry trees. They make their first appearance in June or July, and a second brood afterwards; and seem often to come all at once, and in such numbers as to make it a work of much difficulty to destroy them. They are a small, slimy, dark-brown slug, about a quarter of an inch in length, shaped somewhat like a tad-pole, only the tail ends more bluntly; and generally appear on the upper surface of the leaves, greedily devouring the *parenchyma*, or parts of the leaves between the ribs, and leaving the leaf upon which they have preyed, like a piece of coarsely woven gauze in appearance, and soon, if numerous, completely stopping the growth of the tree. Stocks for budding, says the "Fruit Garden," require careful watching, for a day or two of these slugs may prevent them from being worked that season.

The slug, as well as many other insects, can be destroyed by syringing with whale oil soap suds, or tobacco water, pretty liberally. Dusting with fine earth, ashes, or slaked lime, will also put an end to their ravages. The following is the method recommended for applying the latter, which seems well calculated to be effective:—"Take a piece of very coarse cotton cloth, say twenty inches square, and tie up the corners of it, enclosing one or two quarts of air-slaked lime, or unleached ashes, therein, and make it secure to the end of a long, light pole. In the morning, while the dew is on, elevate the sack above the topmost branches of the tree, striking the end of the pole with a small mallet occasionally, and moving the pole or sack about till every leaf is finely dusted over with the lime or ashes. This operation need not be repeated if once thoroughly performed. The time requisite for a full grown tree is not over five minutes."

The "Fruit Gardener" prefers lime or ashes to dust, as more certain, and recommends going over the trees repeatedly, to be sure that none escape. Like the aphis, they are generally the most troublesome in warm and dry seasons.—All horticultural writers describe the slug in nearly the same terms, and prescribe remedies similar to those given above.—D.

A FRENCH FLORAL EXHIBITION.

Strasbourg, June 12th, 1853.

Mr. Moore:—I have just returned from a Floral Exposition by the Horticultural Society of the Bas-Rhin, and it has occurred to me that many of your readers might be interested in a short account of it. The Exposition was held in a large hall in this city, and the decorations of the apartment and the arrangement of the flowers were such as to do honor to French taste. The collection of Geraniums was very rich—several hundred specimens of every conceivable hue. Among them were many of the celebrated five-spotted, or Odier Geraniums. The Rose tribe was represented by two hundred trees, all in blossom, and comprising everything novel and beautiful. Many of them were grafts upon Eglantine stocks, and some of the roses thus produced presented a very singular appearance, the blossoms being large and full, but upon stems not more than four inches high. A gold medal, thirty dollars in value, was awarded to the exhibitor of this collection of roses, and one of twenty dollars to the collection of geraniums mentioned above.

There was a great variety of Calceolarias, the soft, velvet blossoms running through all shades of color, from the darkest crimson to a pale straw-color, dappled with brown. One peculiarity in these flowers would serve to indicate that nature is parsimonious of her coloring material. All the richly-tinted blossoms are small, while those of a paler color are more generous in size.

The prize proposed for the most new and meritorious flowering-plant, was gained by the Medinella Magnifica and the Displacus Californicus, conjointly. The former has been recently introduced from Java, belongs to the family of the Melastomacea, and displays a magnificent rose-colored blossom. The Displacus Californicus, as its name implies, comes from the land of gold. It is a graceful plant, of moderate size, with large flowers of a beautiful salmon color. It can be cultivated in the open air, and remains in blossom a long time.

A celebrated horticulturist of Paris, M. Verdiers, sent a large collection of cut peonies—no less than twenty-nine varieties. There was also a large collection of English pansies, some very remarkable in color,—several approaching very nearly to the tan-color which was so much in vogue for ladies' dresses two or three years ago. By the way, fashion is not without its voice in horticulture, as in most other matters. The plants most sought after at present, are those of the cone-bearing and fern tribes. No less than one hundred and eighty-six distinct varieties of the former class were exhibited, and of the latter ninety. There does not seem to be any particular beauty in the coniferæ, except to decorate a winter garden, in the absence of other vegetation; but the ferns are certainly exceedingly graceful, and produce a very pleasing and picturesque effect when intermingled with flowering shrubs, the larger kinds being used to fill up the background. There were several varieties of the deliente fern, called with us "Maiden's-hair," from the shining brown stem which distinguishes it. These were very pretty, and seemed to take to their new location very kindly. The native ferns, or brakes, which fill the forests of the State of New York in such profusion are, some of them, much handsomer than any I saw in this Exposition, and those who cultivate flowers would do well to add them to their collections.

One of the attractions of the hall was a fine pitcher-plant, which displayed, in great perfection, several of the curious appendages that characterize this remarkable production of nature. I noticed a fine collection of garden cutlery; also some furniture for green-houses and conservatories, consisting of flower-stands, baskets, chandeliers, arm-chairs, *causenses*, &c. all in iron, and very light and graceful.

A variety of bouquets completed the exhibition. These were not as beautiful as I expected to find. I even had the vanity to think I could have made as pretty myself. Still, one of them received a silver medal; and as French taste is not to be disputed, I will not venture to disparage them further.

One feature in the closing-up of this Exhibition would be rather novel to an American public. Some hundred and fifty plants were distributed by lottery, each ticket of admission to the Exposition being also a ticket for the lottery. But government in France, so far from condemning lotteries, takes them under its especial patronage, and frequently resorts to them for the accomplishment of public works. A lottery scheme is now posted up about the city, undertaken by government for the purpose of erecting a statue to Joan of Arc at Rheims, the place of her cruel execution.

The weather here, as in fact throughout France and Spain, is at present very unfavorable. There have been almost constant rains for three weeks, the rivers are all very much swollen, and the level country about Paris, is bordering upon a state of inundation. Great fears are entertained of serious injury to the crops. If a dearth of bread should be added to the commercial difficulties which the war has already caused, there could not fail to be much suffering among the poorer classes. M.

London Currants.—A writer in the *Horticulturist* speaks of the fine currants of the market-gardens near London, which are grown in the following manner: They are planted in rows twenty or thirty feet apart, and three or four feet apart in the rows; the ground, which is naturally good, is highly manured, and cropped between with vegetables. When the plants commence bearing, they are pruned very hard; the greater part of the young wood is thinned out, and what is allowed to remain is shortened back to two or three inches. By this means the trees are always kept short, never attaining a greater height than two or three feet. These strong-manured and well-pruned trees produce magnificent fruit, and in great abundance, well remunerating the market gardener for his trouble.

Pruning Tomato and Other Vines.—It has been recommended in this and other agricultural journals, to shorten in tomato plants and the vines of cucumbers, squashes, and lima beans, so as to induce earlier bearing, and prevent the strength of the vine going so largely to foliage, &c. It is a valuable hint; but it should be remembered that the practice may be carried too far, and all the fruit ripened at once, instead of continuing to form as long as the season will permit. A few plants might be pruned pretty closely, if fruit a few days earlier was thought desirable.

Setting out Evergreens.—A subscriber says he had no *luck* in transplanting evergreens, and inquires the best time and mode of doing it. The best time for setting out evergreens is in the spring and fall, when other trees are set out. As for *luck*, that depends upon yourself. We used to have no *luck* in this business, until we found out that the roots of an evergreen never ought to *see day light*. It is true that they will live sometimes when the roots have been exposed to sun and air. But they should either be taken up with a good ball of dirt about them or immediately wrapped up in wet moss or something similar, and so kept until planted again.—*Me. Farmer.*

Plums and the Curculio.—Josiah Bigelow, Esq., of Groton, said to us, to-day, that he has sixty plums trees, of the various kinds—that many of them are loaded with fruit, and none of it, he thinks, bitten by the curculio. His remedy, or preventive, was, to syringe the trees about once a week with *lime water*, and he thinks it has been completely effectual. If this should prove so, the remedy will be so cheap, and easy of application, that the plum may become again a fruit worthy of general cultivation.—*N. E. Farmer.*

RAISING GARDEN SEEDS.

A good lesson is contained in the following paragraph from an exchange:

"Some years since, in pulling my English turnips (raised from imported seed), though a great yield, they run too much to tops, with dishing crowns. Finding one only, with a small tap and small root, shaped like two saucers put together, I preserved it for seed, and the next year sowed what I got from it, among my potatoes, then beginning to be affected with disease. They mostly died; but I got seventy-five bushels of turnips, "true to the seed." I saved and set out eight bushels of the most beautiful I ever saw. This was in Springfield. All who saw them admired them, and spoke for some of the seed, which I circulated freely at $1 the pound. Tops barely enough to pull up the single root, and much bigger than a pipe-stem. They were as good as handsome. All this goes to encourage me in selecting the best roots, and employing the best *means* possible for obtaining the very best seed, from which to secure the reward for best care and culture of the orchard, field and garden.

LATE SOWN VEGETABLES.

Some of the greatest delicacies for table use may be obtained from quite late sowings. We can speak most positively in regard to turnips. Both the round and the flat turnip may be sown at any time in July or August, and we have known them come to considerable maturity in a season in which there were no early frosts, when sown in the first week of September.—Special pains should be taken to enrich the soil, for in this way we secure two objects—the more rapid growth of the plant, and a sweeter and more tender vegetable. We suppose it is generally known that the more rapid the growth of this and several other vegetables, the more mild and tender they are to the taste. Cabbages, onions, radishes, squashes, cauliflowers, are all much more delicate in flavor, and agreeable to the palate when grown freely and rapidly, than when their growth is stinted and slow. Cucumbers and celery may also be added to the above named, as being much milder when grown rapidly than when of slow growth. Some of these may be raised late in the season, as well as turnips, so as to supply the table with the delicacies of spring and summer until quite late in the fall and winter.

Domestic Economy.

CURRANT WINE.

Here is a recipe for making currant wine, worth, to any of our subscribers who have a bushel of currants, at least two year's subscription to the Journal. We had an opportunity of tasting wine made after it, which was of such excellent quality, that we could not resist the temptation of publishing the recipe. Here it is; try it and report the results:

To one quart of ripe currant juice add three pounds of the very best white sugar, (the finer the quality the better,) and to this add as much water as will, with the juice and sugar, make a gallon. Put the mixture into a keg or demijohn, leaving it open for two weeks, or until the fermentation subsides; then cork it up tightly, and let it remain quiet for five months, when it will be fit for use, and may be racked off into bottles.—*Pa. Farm Jour.*

A gentleman who has had much experience in making currant, raspberry and grape wines, says the above recipe is a good one, but that clear wine cannot be made in a demijohn. It should be put in a keg or cask which it will just fill, so that as it ferments the scum will run off. When the fermentation ceases, cork it tightly and let it stand five or six months, and then draw it off for bottling by tapping near the bottom, being careful not to disturb the sediment.—Eds. Rural.

To Dry Cherries.—To every five pounds of the stoned fruit weigh one pound of refined sugar; put the fruit into the pan, with very little water, and make both scalding hot; take the fruit out and immediately dry them; put them into the pan again, strewing the sugar between each layer of cherries; let it stand to melt, then set the pan on the fire, and make scalding hot as before; take it off, and repeat this three times with sugar; drain them from the syrup, and lay them singly to dry on dishes, in the sun or on a stove. When dry, put them into a sieve, dip it into a pan of cold water, and draw it instantly out again, and pour them on a fine soft cloth—dry them and set them once more in the hot sun or on a stone; keep them in a box, with layers of white paper, in a dry place; this way is the best to give plumpness, odor, and flavor to the fruit.

Egg Plants.—Peel the fruit, and cut them into thin slices, boil in salt and water, until quite tender; drain off the water, and add sweet milk, crumb in toasted bread, and whilst simmering gently, add butter, pepper, &c., and break in three or four fresh eggs; take up before the eggs cook hard, and you will have a dish almost equal to stewed oysters. To fry egg plants, they should be peeled, cut into thin slices, parboiled, then dipped in batter, which has been highly seasoned and fried in butter or lard; either way they are delicious.

Raspberry Jam.—To each pound of fruit, allow three-quarters of a pound of fine loaf sugar. Mash the berries, and break the sugar. Mix together, boil, stir, and skim; the jam will be done in half an hour. Put in warm glasses, and tie up, with papers over the top. Other jams are made in the same way.

Cream Pie.—Boil and sweeten the cream, flavor it with grated lemon, and bake in a paste, about as long as a pumpkin pie.

Mechanic Arts, &c.

LIST OF PATENT CLAIMS

Issued from the United States Patent Office,

For the week ending July 11, 1854.

Geo. B. Hartsan, of New York, for improvement in making wrought iron car wheels.

Chas. M. Gould, Brooklyn, for gas heating apparatus.

Elisha French, Braintree, Mass., for coal sifter.

Martin V. B. Darling, Providence, for improved slide valve motion of steam engines.

G. W. Crozier, Knoxville, Tenn., for improvement in camphor wash mixtures.

Collins B. Brown, Upper Alton, Ill., for improvement in harvester rakes.

C. F. Brown, Warren, R. I., for improved implement for blasting rocks.

John B. Wickersham, New York, for improvement in foundation for pavements.

John M. Thompson, Taunton, for improvement in parallel motion for beam engines.

J. B. Smith, Milwaukie, for machine for mortising sash stiles.

Gustavus Runge, Philadelphia, for improvement in trap-doors.

Daniel Rankin, Augusta county, Va., for method of applying water to compound buckets of flutter wheels.

Robert G. Pine, Newark, for improvement in plating metals.

Chas. F. Packard, Greenwich, Conn., for improved sawing machine.

William McCord, Sing Sing, for improvement in horse powers.

A. Mayer, Philadelphia, for improvement in gas stoves.

H. L. Lipman, Philadelphia, for improvement in eyelet machines.

A. Lyon, Worcester, for improvement in lightning rods.

S. Hunt, Baltimore, for improvement in apparatus for detaching harness from horses.

Hiram W. Hayden, Waterbury, Conn., for improvement in ornamenting metallic buttons.

Jonathan Ball, New York, for improved mode of connecting water pipes.

H. Crosby and Seth E. Crosby, Gustavus, O., for improved mode of arranging arch boards for cistern arches.

James A. Cutting, Boston, for improvement in photographic pictures on glass.

General F. Foote, Buffalo, for improvement in ventilating railroad cars.

H. P. Gengenbur, Alleghany City, for improved cement of boiled coal tar and earths.

Robert T. Fry, Spring Garden, Penn., for improvement in the construction of ink-stands.

Rufus Porter, Washington, for chair cane.

J. Rabbeth, East Hartford, for improvement in dimper pins.

Thomas B. Smith, Truioe, Tenn., for improvement in cow-catchers.

Franklin G. Smith, Columbia, Tenn., for improvement in condensers for steam engines.

Josiah M. Smith, New York, for improvement in machines for planing stone and metals.

Willed Thompson, New Haven, Ct., for ship ventilator.

Wm. H. Fullerton, Louisville, for improvement in machines for husking corn husks.

Peter Sweeney, Buffalo, for hot air furnaces.

Geo. Wright, New England Village, Mass., for improvement in self-acting mules for spinning.

Washington Spangler, Harper's Ferry, assignor to himself, Edmund H. Chambers, and Wm. F. Wilson, of same place, for improvement in augers, gimlets, &c.

Thomas W. Gillett, New Haven, assignor to J. Mathews, of New York, for improvement in apparatus for corking bottles.

John W. Brewer, Cincinnati, for improved arrangement for mooring and managing balloons.

Ann G. V. McKinstry, Washington, administratrix and executrix of William McKinstry, deceased, late of same place, for improved adjustable bearings for circular saws.

Eden A. Baldwin, second, administrator of the estate of Eden Baldwin, deceased, late of Templeton, Mass., for improvement in fire-arms.

Geo. A. Leighton, Boston, assignor to Nehemiah Hunt, of same place, for improvement in sewing machines.

Thomas Clegg, Andover, assignor to himself and Nathaniel Stevens, of same place, for improvement in machines for making wire heddle eyes.

William J. Casselman, Vernon Village, New York, assignor to Elias A. Swan, of New York, for improvement in machines for carving marble, stone, &c.

A. G. Gallahue, New York, for improvement in machines for pegging boots and shoes.

Russell D. Bartlett, Bangor, for machine for making the heads of shovel handles.

Andrew Lanergan, Boston, Mass., for improvement in lanterns.

Charles Mellam, New York, for improvement in construction of iron houses.

Joseph J. Martin, New York, for improved grapple for raising sunken vessels.

Henry Outcalt, Wilmington, Ohio, for improved mode of constructing metallic roofing.

William Loughridge, Wererton, Md., for improved arrangement of means for freeing canal boats from water.

William Lowe, Hartford, for improvement in operating cut off valves of steam engines.

James C. Kennedy, Albany, for elevated oven.

Abel Greenleaf Kingston, Penn., for improved impact water wheel.

Joel Green, Cincinnati, for improvement in apparatus for sealing cans.

Robert W. Genung, Blooming Grove, N. Y., for improvement in lifting jacks.

Wm. P. Chadwick, Edgartown, for improvement in oil or rubber presses.

Stillman A. Clemens, Springfield, Mass., for improved valvular arrangements for diaphragm pumps.

Alfred Barwell, Rochester, for improvement in machines for stretching shoes, &c.

Adolph Brown and Felix Brown, New York, for improvement in hat shapers.

P. B. Smith, Craigsville, N. Y., for improvement in lifting jacks.

Albert S. Southworth and Josiah J. Hawes, Boston, for improvement in taking daguerreotypes for stereoscopes.

R. H. St. John, Columbus, Ohio, for improvement in bedstead fastenings.

Willis Straw, Dalton, N. H., for improved chain hook.

George B. Snow, Buffalo, for improved mode of ringing bells by steam.

Jabez C. Terry, Springfield, Mass., for improvement in screw wrenches.

Thomas B. Woolward, Kensington, Penn., for improvement in mills for grinding.

Moses D. Wells, Morgantown, Va., for improvement in brakes for light vehicles.

Wm. E. Ward, Port Chester, for improved mode of manufacturing slats for window blinds.

John Stouffer, Peter Bumgh, and John W. Barr, of Chambersburg, for improvement in flouring and bolting.

Orrin W. Fiske, Dedham, for improvement in machinery for making pasteboard.

Jacob J. Hatchen, Philadelphia, for improved pen and pencil case.

Matthew Walker, sr., Philadelphia, assignor to M. Walker & Sons, of the same place, for improved iron picket fence.

ANGLE RAILROAD WHEELS.

The Paris correspondent of the New York *Daily Times*, says:

"One of the most interesting sights in Paris, and one that no American ever thinks of visiting, as he probably never heard of it, is the railroad from the Barrier d'Enfer to Sceaux.—It is but seven miles long, and was built as an experiment upon a new system of wheels.—The engine, tender, and hindermost car of the train, are furnished with oblique wheels, under the ordinary upright ones. Where the track is straight, these do not touch the rails; but at the curves, they come into play, rattling along the inner edge of the rails, and preventing the train from running off the track. The road was therefore made purposely tortuous, and the most sudden and seemingly dangerous bends were introduced at frequent intervals.—The two stations are circular, and the train as it receives its passengers, is doubled up into a ring of 50 feet radius. The smallest curve upon the road is 68 feet radius, and over this the train goes at full speed. The corners of the cars are cut off, so that the vehicles, in following the curves, do not infringe upon each other. Sceaux is upon an eminence, which the road ascends spirally, with something like a mile of track—it only going, in advance, a hundred feet. The invention—which, by the way, is ten years old—has proved practically very successful; but it has never been applied to any extent."

TO RENDER WOOD INCOMBUSTIBLE.

A very excellent way to render wood incombustible, is to soak it in a strong solution of alum and the sulphate of copper. About one pound of alum and one of the sulphate of copper should be sufficient for 100 gallons of water. These substances are dissolved in a small quantity of hot water, then mixed with the water in the vessel in which the wood is to be steeped. The timber to be rendered fire-proof can be kept under the liquor by stones, or and other mode of sinking it. All that is required is a water-tight vessel, of sufficient dimensions to hold enough of liquor to cover the timber, which should be allowed to steep for about four or five days. After this, it is taken out, and dried thoroughly before using.—Various substances have been prepared for this purpose, but in answer to a correspondent we present the above as being equal to any that we are acquainted with.—*Sci. Am.*

Testing Marbles.—A Washington letter writer states that in the basement of the Smithsonian Institute there is a room where marbles are scientifically tested. Specimens from all parts of the world may be seen there, cut into squares and cubes. To prove their strength they are tested in a crushing machine. That which is brought from Lee, Mass, is said to be the strongest and best in the country for building purposes. But the marble is not tested by pressure alone. They try it also by acids, by water, by drying, &c. They have scales to weigh the crystals in, which are so delicate that ten thousand of its smallest weights are required to make an ounce. The index tablet, for telling the weight, is so fine that its movement has to be examined by a very powerful microscope, to discover the variations.

Railroad Speed.—The Great Western Express to Exeter, England, is made to go at the rate of sixty miles an hour, including stoppages. Supposing the locomotive which draws such a train to have driving-wheels seven feet in diameter, those wheels will revolve five times in a second; the valve moves and the steam escapes ten times in a second—but as there are two cylinders which act alternately, there are really twenty puffs or escapes of steam in a second. Such a locomotive speed is equal to nearly one-fourth of that of a cannon ball; and the momentum of a whole train, moving at such a speed, would be nearly equivalent to the aggregate force of a number of cannon balls equal to one-fourth the weight of the train.—*Banner of Industry.*

Glass Globes unsuitable for Fish.—In the first place, the fish require abundance of air.—Now, scarcely any other shape than a globular one contains so much water with so little exposure to the air. Fish, too, require shade, not when we choose to give it to them, but when they feel the want of it; and it need scarcely be observed that all day long a glass globe is in a blaze of light. Still more, the water in the globe must be daily changed, consequently the fish must be lifted out either by hand or a small net; and it is utterly impossible, however careful we may be, to handle or net these delicate little straggling creatures without injuring them, at one time or another.

An English artisan proposes to employ the chemical agency of light in dyeing or staining textile fabrics; the cloth, whether wool, silk, flax or cotton, being first steeped in a suitable solution, then dried in the dark, and subsequently exposed to the action of light, those parts which are to form the pattern being protected by pieces of darkened paper or some other suitable material, fastened to a piece of glass. When the desired effect is produced, the time for which varies from 2 to 20 minutes, the fabric has to be removed, in order to undergo a fixing operation, whilst a fresh portion of it is exposed to light.

A first class twenty-five ton locomotive costs ten thousand dollars.

Educational.

BE PATIENT.

The solemn admonition which every teacher ought to keep constantly before the mind is, "be patient!" There is much, far too much in the position of the most pleasantly situated teacher, to try the patience and render him in the end querulous and ill-tempered. A double watch and ward must be kept up over every word and action connected with the school-room, for otherwise the best natured man in the world will, if his business be teaching, slowly and imperceptibly degenerate into the ill-natured pedagogue, feared by many of his pupils, and hated by all. Inattention and remissness on the part of pupils, are very trying to the teacher who labors earnestly for their good, and who sees golden opportunities for acquiring knowledge, slipping unheeded out of the pupil's grasp. Obtuseness of the youthful intellect sometimes gives rise to impatience on the part of the teacher, when the pupil really is not in fault. We have known a pupil whose intellect was not of the most brilliant cast, scolded by the teacher until she cried for half a day thereafter, for not grasping the explanation of a difficult problem. She dreaded to attend school, not because she was indifferent about learning, for she really was desirous to learn; but because an invariable lecture accompanied each recitation, and the short-comings of a comparatively slow-moving intellect were, by the teacher, laid at the door of wilful neglect.

Teachers should consider that even the most brilliant intellect grasps a new truth with difficulty, and that what a scholar sees through clearly as the noon-day sun, after he has mastered it, is previously cloudy and obscure. Hence patience and care in explanation must always be maintained, and the thousandth successive explanation to the thousandth new comer, must be made just as lucid and just as simple as if the teacher was then giving his initiatory illustration. After traveling over the same ground for a series of years, we are too apt to forget that impediments easily passed by us, are insurmountable obstacles to a novice; and hence grow impatient that he fails to grasp a proposition which seems to us almost an axiom.

A case in point occurs to me at this moment, which happened several years ago, while engaged in teaching a winter-school. An arithmetic class were in the old rule of Practice, and solving problems where the aliquot part of a given number of articles was to be obtained as a representative of the price. For example: if the thing was worth a sixpence, then one-sixteenth of the whole number would be the price in dollars. The simple propositions were plain enough; but when we took complicated examples, where several successive aliquot parts were added to make up the whole price, it was much more difficult to understand. There was a brilliant little girl in the class, very quick and sensitive, and very anxious to keep up with those of nearly twice her years. She was a favorite of mine, that is, if an earnest desire to second her effort in the path of knowledge, without doing injustice to others, may be called favoritism. She failed to grasp the subject readily, and after repeated explanations in various ways without success, until she became mortified at her own failure, I spoke out unreflectingly, and possibly with an unintentional harshness of tone,—"It is passing strange that you cannot see through a matter so very simple!" She answered, more in self-reproach than reproaching, others,—"I could see it, if I was not a fool!" and burst into tears.

A peculiar and bitter feeling of self-condemnation stole over me at that moment, such as it has rarely been my lot to experience, and immediate effort was made to pacify the poor girl, by telling her it was really no matter of surprise that she met with such obstacles; that teachers like me, who traveled the road over year after year, until every inch of it could be traced in the darkness of the night, were too apt to forget how much labor it cost ourselves in the first instance, to master those things wherein a pupil failed. The propriety of the admonition, "be patient," was forcibly illustrated by the circumstance, and the reminiscence of it has given rise to the above commentary.

The poor girl is now in her grave. Her existence was brilliant but brief, and when the writer saw her a couple of years after teaching that winter school, she was just about to take her departure from the world. The irritable remark was no doubt forgotten by her with the close of the day on which it was uttered, but it has not been forgotten by me, even to this day.

The most agreeable of all companions is a simple, frank man, without any high pretensions to an oppressive greatness—one who loves life, and understands the use of it; obliging alike at all hours; above all, of a golden temper, and steadfast as an anchor. For such a one we would gladly exchange the greatest genius, the most brilliant wit, the profoundest thinker.

The Essayist.

THE GREAT ECLIPSE, MAY 26, 1854, AND ECLIPSES.

BY PROF. O. DEWEY.

In this section of the country the day was the finest desirable for observing a solar eclipse. Not a cloud appeared in our horizon, and the air was not excessively warm. Here the eclipse began about three o'clock and fifty-three minutes P. M., and ended before sunset.

So large an eclipse has not been witnessed here since the total eclipse of June, 1806.—Rochester was indeed south of the central line, and the most splendid phenomenon of the day, the annular eclipse, was a little north of us. An annular eclipse has not passed over the Northern States since 1791, except the beginning of one in the eastern part of Massachusetts, some years later.

How many memories of the past cluster around such a wondrous phenomenon! The name itself is a curiosity. Because we have learned to call the earth's path round the sun the *ecliptic*, and an eclipse can happen only when the moon is near this annual path, many seem to believe that the phenomenon is named from the ecliptic, whereas the latter is named from the former. The word eclipse is from the Greek word which means to *fail or cease, to faint or die*, and hence the earth's path is named *ecliptic*, because the *failure*, or *fainting*, or eclipse, occurs when the moon is on or near the earth's orbit. With what an eye of terror the ancients must have observed this phenomenon, when they connected it with some dire disaster to the sun, and as an indication of dire evils to man. Hence, too, the Latins named eclipses the *labors or agonies of the sun and moon*. The same notions of the sad indications of eclipses were found among the aborigines of our country. During the total eclipse of 1806 the Indians in our State shot a multitude of arrows at the monster which was devouring, or had seized upon the sun. This is another of the proofs that our Indians originally descended from the nations of the Old World. The common dread of evil from uncommon manifestations of God's government, shows the common sinful humanity of the one family of man.

Eclipses were calculated before the Christian era, not with present accuracy, because improvements have been made by the series of observations in the past two thousand years. The calculation of eclipses depends upon certain fundamental observations, as the length of the year, the time of the moon's revolution round the earth, the obliquity of the ecliptic to the equator, and the obliquity of the moon's orbit to the ecliptic. The watchful eyes of inquisitive men had long ago determined most of these with unexpected accuracy. A meridian, and the time of day, are also necessary, as well as the latitude of the place.

The revolution of the earth in the ecliptic is now ascertained to be 365 days, 5 hours, 48 minutes and 51 and six-tenths seconds. More than two centuries before Christ, the Chinese made the year to be 365 days, 6 hours, as did the Romans; but HIPPARCHUS, at Alexandria, about 140 B. C., determined the length of the year within six minutes of that now given.—HIPPARCHUS also gave the moon's revolution only one-fourth of a second more than that now fixed, and EUDOXUS, in Greece, still earlier, made the same only twenty-five seconds less than the true time. Still earlier, the Chaldeans formed their Saros, or period of eclipses, at 6585 days, 8 hours. The modern tables make that period only seventeen-and-a-half minutes less. This is very near 223 lunations or periods between the new moons, when the same circle of eclipses appears again.

With their means and helps, what care and diligence must the wise men of Chalden have bestowed on the motions of the sun and moon and stars, to have been able to form the Saros, and thus approximate so nearly to the true length of this cycle, or very nearly 18 years! The motions and periods of the heavenly bodies, are matters of pure and accurate observation, and have been ascertained in this way alone. Thus it is, that the science of astronomy is founded on facts occurring among the celestial bodies and in the celestial spheres.

This eclipse, occurring in 1854, happened also in 1836, eighteen years before, as this cycle shows, and fact did show; and in 1818, and again in 1800, and so on back to July 2, 1313, when it first touched the earth at the north pole. In 1872, the end of the next 18 years, it will occur again; and in 2593, it will leave the earth, and will not return for some thousand years—more than 10,000 years.

The next total eclipse of the sun will be, in the United States, in 1869.

At the late great eclipse, the obscuration here was more than eleven-twelfths of the sun's diameter, and at the greatest showed a small, but beautiful crescent of the sun, the cusps, or points of which, were drawn to a very fine termination, distinct and smooth on both sides, thus indicating no visible inequalities in the discs of either sun or moon, when viewed in a telescope magnifying 180 times. However, after the greatest obscuration, there appeared for a third of an hour perhaps an uneven or beaded edge along the disc of the sun next the moon, as if inequalities on the moon were now made evident.

The obscuration, when greatest, a little after five o'clock, was not an approach to darkness, nor even to twilight soon as the sun has gone down. In truth, a small portion of the sun sheds a volume of light, as we often observe when the least portion rises above the horizon in a clear morning, or is above the horizon at sunsetting in the cloudless west. In the total solar eclipse of 1806, the diminution of light, though sufficient to send cattle to rest and the hens to roost, was not the darkness of night. All things around you were visible, while some stars and planets appeared. It was the darkness of middle twilight, but of a sombre hue. Far less was the diminution of light at the late eclipse. Vegetation took on a darker hue, a deeper green, with a slight yellowish or brownish tinge.

Beautiful crescent images of the sun were abundant on the ground and on the sides of buildings, where the sun's light came through trees or thick foliage. When the sun is not covered at all, fine round images of the sun appear on the ground under forests, where the sun shines through the small openings in the foliage.

During the eclipse, the temperature of the atmosphere changed considerably. From the beginning of the eclipse to the middle, the thermometer in *the shade fell five degrees*, and rose only one degree to the end; while in the sun, the thermometer fell from 88° at the beginning to 70° at the middle, and then rose to 80° at the end of the eclipse, making a difference of eighteen degrees of temperature between the beginning and the greatest obscuration.

Some imagine that a large solar eclipse affects the temperature for some time. The little change, however, in the shade, where the thermometer shows the temperature of the atmosphere, renders this improbable. A thick, cloudy day over a large extent, must interrupt more light and heat of the sun, than did the eclipse. Variations in temperature in an afternoon, are often greater than during this eclipse. Besides, the weather was as warm for days after the eclipse, as before, and soon warmer still. Any considerable and permanent diminution of the heat of the atmosphere, cannot be anticipated from the eclipse.

It is often thought to be wonderful that an eclipse can be calculated with the common accuracy. It is indeed wonderful. The intellectual powers of man are thus shown to be great and high. No full exhibition of the mode of computation can be presented in this paper. It is sufficient to remark, that the time of an eclipse is first found from tables of the mean motions of the earth and moon, and that this time, called the *mean time*, is then altered by the corrections made for all the known causes of change, such as the unequal motions of the earth and moon in their elliptic orbits, their relative distances, their action on each other in retarding or hastening their mean motions, the effect of the obliquity of their orbits to each other and the equator, and also to the disturbing power of the planets, especially of Venus and Jupiter, upon these motions. Careful observation and high mathematical knowledge, have effected this great triumph.

Illustrate this by the history of this eclipse. According to the mean motions, this eclipse should have touched the earth at least eighteen years sooner than it did, and should continue to be seen every eighteen years till 2665, or 72 years later than the corrections make possible; all which was shown by FERGUSON in his Astronomy many years ago.

A large solar eclipse is a splendid phenomenon. As viewed in the light of science, it is a magnificent display of Divine Power and Design, and of the subjection of suns and planets to the laws which God has established. They are not a reasonable cause of terror and apprehension of evil, but a firm ground of confidence and safety. Eclipses go and return in regular cycles, as fixed as the seasons of the year, or the rising and setting of the sun, and are in their nature or known operations no more to be dreaded. At the predicted hour and minute, millions of eyes were directed to the sun; all was bright and round; no dark body was to be seen. At the next instant, a slight indentation was seen on the northwestern part of the sun, and a million tongues exclaimed, "*The eclipse has begun.*" "Great and marvelous are thy works, Lord God Almighty."

EVEN a man of very ordinary parts who has lived long in the world, and probably after a thousand blunders, learned to conduct himself with ability and prudence, is better qualified for imparting instruction to others, than those who in other respects are most remarkable for their talents and attainments.

IT is not the height to which men are advanced that makes them giddy; it is the looking down with contempt upon those beneath them.

THE GLASS RAILROAD.

"There was a Moral in that Dream"

THE "Milford Band," during one of his fits of *mania a potu*, said:

"It seemed to me as though I had been suddenly aroused from my slumbers. I looked around and found myself in the centre of a gay crowd. The first sensation that I experienced was that of being borne along with a peculiar, gentle motion. I looked around and found that I was in a long train of cars which were gliding over a railway, and seemed to be many miles in length. It was composed of many cars. Every car, opened at the top, was filled with men and women, all gaily dressed, all happy, all laughing, talking and singing. The peculiarly gentle motion of the cars interested me. There was no grating, such as we hear on a railroad. They moved on without the least jar or sound. This, I say, interested me. I looked over the side, and to my astonishment found the railroad and cars made of glass.—The glass wheels moved over the glass rails without the least noise or oscillation. The soft motion produced a feeling of exquisite happiness. I was happy! It seemed as if everything was at rest within—I was full of peace.

While I was wondering over this circumstance, a new sight attracted my gaze. All along the road, on either side, within a foot of the track, were laid long lines of coffins, and every one contained a corpse, dressed for burial, with its white face turned upwards to the light. The sight filled me with horror; I yelled in agony, but could make no sound. The gay throng who were around me only redoubled their singing and laughter at the sight of my agony, and we swept on, gliding with glass wheels over the glass railroad, every moment coming nearer to the head in the road, far, far in the distance.

"Who are those?" I cried at last, pointing to the dead in their coffins.

"These are the persons who made the trip before us," was the reply of one of the gayest persons near me.

"What trip?" I asked.

"Why, the trip we are now making. The trip on this glass railroad," was the answer.

"Why do they lie along the road, each one in his coffin?" I was answered with a whisper and a half laugh that froze my blood:

"They were dashed to death at the end of the railroad," said the person whom I addressed.

"You know the railroad terminates at an abyss which is without bottom or measure. It is lined with pointed rocks. As each car arrives at the end, it precipitates its passengers into the abyss. They are dashed to pieces against the rocks, and their bodies are brought here and placed in the coffins as a warning to other passengers, but no one minds it, we are so happy on the glass railroad."

I can never describe the horror with which those words inspired me.

"What is the name of the glass railroad?" I asked.

The person whom I asked replied in the same strain:

"It is very easy to get into the cars, but very hard to get out. For, once in these cars, everybody is delighted with the soft, gliding motion. The cars move so gently! Yes, this is a railroad of HABIT, and with glass wheels we are whirled over a glass railroad towards a fathomless abyss. In a few moments we'll be there, and they'll bring our bodies and put them in the coffins as a warning to others, but nobody will mind it, will they?"

I was choked with horror. I struggled to breathe, made frantic efforts to leap from the cars, and in the struggle awoke. I knew it was only a dream, and yet whenever I think of it I can see that long train of cars move gently over the glass railroad. I can see cars far ahead, as they are turning the head of the road. I can see the dead in their coffins, clear and distinct, on either side of the road, while the laughing and singing of the gay and happy passengers resound in my ears. I only see those cold faces of the dead, with their glassy eyes uplifted, and their frozen hands upon their shrouds.

It was a horrible dream!

And the bard's hanging features and brightening eye attested the emotion which had been aroused by the very memory of the dream.

It was, indeed, a horrible dream. A long train of glass cars, gliding over a glass railway freighted with youth, beauty, and music, while on either hand are stretched the victims of yesterday—gliding over the railway of habit towards the fathomless abyss.

"There was a Moral in that Dream!"

Reader, are you addicted to any sinful habit? Break it off ere you dash against the rocks.—*Geo. Lippard.*

CAPITAL FOR THE YOUNG.

IT is a consolation for all right-minded young men in this country, that though they might not be able to command as much pecuniary capital as they would wish to commence business themselves, yet there is a moral capital which they can have, that will weigh as much as money with those people whose opinion is worth having. And it does not take a great while to accumulate a respectable amount of this capital. It consists in truth, honesty and integrity; to which may be added, decision, courage and perseverance. With these qualities there are few obstacles which cannot be overcome. Friends spring up and surround such a young man as if by magic. Confidence flows out to him, and business accumulates on his hands faster than he can ask it. And in a few short years such a young man is far in advance of many who started with him, having equal talents, and larger pecuniary means; ere long our young friend stands foremost, the honored, trusted and loved. Would that we could induce every youthful reader to commence life on the principle that moral capital is the thing after all.

THE nerve which never relaxes, the eye which never blenches, the thought which never wanders—these are the masters of victory.

Sunday Reading.

ESCAPE FROM DEATH.

ALMOST every person can recollect narrow escapes from death or severe bodily injuries, in one form or another; and probably our escapes from unseen dangers are more than those we have seen.

At a meeting of ministers, one of the fathers spoke with deep emotion of a narrow escape on his way. "Just as I came to the top of a long and steep hill," said he, "which I had often descended without fear or accident, the hold-back of the harness broke, which brought the carriage down upon the horse, and frightened him so that he started to run with full speed, and I expected nothing but to be dashed to pieces. But it was so ordered that I kept him in the road, and checked him before coming to another hill, without being thrown out or upset; and here I am in the midst of you without having experienced any harm." He was listened to with affectionate interest. Every one felt that it was a narrow, providential escape, and all were ready to unite with him in thanksgiving to God for his deliverance.

But what was their surprise, when another of their body rose and remarked, that it certainly was a striking example of divine protection, which should be devoutly acknowledged in prayer, but he had one to mention which he thought had still higher claims to their gratitude. Every one eagerly listened. What could it be? "I came," said he, "on the same road as my brother, and when I got to the top of the same hill, I began to descend, and my harness did *not* break, and my horse did *not* run, and I felt no alarm, and came on all the way in perfect safety, and without a moment's fear. And now, brethren, I appeal to you, which has the most reason to be thankful for divine protection, our highly esteemed father and brother who so narrowly escaped, or myself who saw and felt no danger? We are both here, and are *all* here to-day, alive living and well. He alone has suffered any alarm; and while he may well feel that it becomes him to bless God for his sparing mercies, have we not additional reasons for thanksgiving?

While God's hand forces itself visibly, as it were, upon our attention, in all our deliverances from imminent danger, how apt we are to forget that there are a thousand dangers unseen as well as seen, and that without divine protection we could not be safe a moment, at home or abroad, going out or coming in. If, when some great danger has been escaped, we are bound fervently to acknowledge that Providence which watched over and delivered us, how much more do we owe to our Divine Protector for his hourly, daily, weekly and monthly care over us by day and by night, when no ambush springs up in our path, and no plague comes nigh our dwellings!

These thoughts might be illustrated by a thousand examples. Two friends are crossing the sea; in a storm one of them falls overboard, and barely escapes with his life. It is a merciful deliverance. But which of the two has experienced the greater favor, the man who was drawn into the boat half dead, or his friend who remained safe upon deck? A ship coming upon our coast in a dark and stormy night is wrecked; the crew, after suffering incredibly from cold and hunger, at last find food and shelter. The next morning, another ship that sailed in company, enters the harbor with a fine breeze, and the passengers all land in high spirits to meet their friends. Who have the most occasion for thanksgiving when they get ashore, the shipwrecked company, or the other?

Yesterday the cars with a hundred passengers were thrown off the rail, and though many were injured, no lives were lost. It was a narrow and providential escape. They have certainly great reason to be thankful; but how much more the hundred who have passed over the same road to-day without the slightest accident! A fire breaks out in a dwelling-house at midnight. The family are barely rescued from the devouring element, and some of them badly scorched; but, praised be God, they are all saved. On either side are large families, quite out of the reach of the fire, and scarcely awaked by the alarm. Which have the most reason to be thankful, the family that has lost everything, but has been almost miraculously snatched from a dreadful death, or those who have lost nothing and suffered nothing? An alarming and mortal sickness comes into a neighborhood. Every member, perhaps, of one family is taken down and brought near to death; but the great Physician interposes, and they all slowly recover. What a theme for thanksgiving, morning and evening, in that house! We should think it strange, and most ungrateful indeed, if they did not look upon it and speak of it as a great temporal salvation. The disease does not enter the house of the next neighbor at all. Which of these families is laid under the highest obligations of gratitude to the Giver and Preserver of life? Is it not the latter? And yet who takes this view of the subject? Who does not feel that the preservation of life and limb, under circumstances of great manifest exposure, calls for more thankfulness than days and weeks of health and safety?

Let us seriously ponder the subject. Is it not a greater mercy to be kept out of danger, to receive no wound or hairbreadth escapes, than to be snatched from the jaws of death when just ready to be swallowed up, great as such a deliverance is? If so, how far do we, when everything goes well with us, fall short in thanksgivings for daily and hourly protection.—*Edinburgh Christian Treasury.*

A MAN'S own conscience is his sole tribunal, and he should care no more for that phantom "opinion," than he should fear meeting a ghost if he crossed the church-yard at dark.—*Bulwer.*

HE that cannot forgive others, breaks the bridge over which he must pass himself; for every man has need to be forgiven.

Miscellaneous.

THE BELL-BOY.

The railroad is one of the most gigantic enterprises of the present time—gigantic in structure, gigantic in management, gigantic in beneficence, and, we might add as a set-off to some of its advantages, gigantic in frauds, failures, false pretences, bankruptcy, pecuniary ruin, and human slaughter! Rightly directed, it is the physical right-arm of modern civilization; wrongly directed, recklessly managed, like any other great good, it becomes an unmitigated curse!

Corporations like the New York Central, or the Erie Railroad, employ an army of men, and an amount of locomotive power, which, if combined and acting in one direction, would be sufficient to produce an earthquake. One who has stood beside a railroad where the track crosses a level plain in a long tangential and uninterrupted stretch, and observed a train drawn by a single engine approach and pass at the rate of forty miles an hour, can imagine the effect that would be produced by two or three hundred such motors united in one.

Among the numerous agents and employees upon a railroad, from the Superintendent, at his three to five thousand dollar salary, down through all grades to the flagman at a crossing, who receives for his vigilance, or possibly *his carelessness*, twelve to fifteen dollars a month, the bell-boy must not be overlooked or forgotten. He is an important appendage to every fast train, and his ding-dong warning to the passer-by, is a necessary element of safety in railroad management. He is a small, rough-looking boy, with an air of self-possession and a fearlessness of danger, remarkable in one so young; dressed in an old greasy suit, with a pair of blue cotton overalls, frequently too large by half, enveloping his nether limbs, he sits upon a ledge of the cab, which encloses the foot-boards for the stoker and the engineer.—The huge machine stands just outside the station-house, fired-up and ready for a start. The press of steam is whizzing through the safety-valve, and a dense volume of black smoke is pouring out of the smoke-pipe. Hurry, bustle and confusion reign around; hackmen scolding, runners seizing men by the button, and thrusting bills of "cheap through fares" and "first-class hotels" in their faces, unprotected females in tribulation looking after divers stray bandboxes and paper parcels, luggage-men checking and trundling off trunks and valises, brakemen attaching cars and adjusting signal-ropes, with a thousand other sights and sounds, making a Babel of discord, upon which the bell-boy smiles complacently.

But anon the signal-bell strikes twice, the shrill whistle on the locomotive sends forth a couple of quick and startling shrieks, huge puffs of smoke and steam rush off into the atmosphere, as the heavy driving-wheels commence their tireless revolutions, and the long train begins very slowly to move forward. The bell-boy grasps his rope, "ding-dong, ding-dong—look out for the engine while the bell rings!" sounds in the ears of the crowd, and away goes the train, increasing the rapidity of its puffs, until they become blended into one continuous rush of steam. But the bell-boy keeps up the even measure of his din, whether first moving from the station at a creeping pace, or dashing at lightning speed across a country road. "LOOK OUT FOR THE ENGINE WHILE THE BELL RINGS!" in great black letters, stares the careless wayfarer in the face as he approaches the railroad crossing; a faint, dull sound strikes upon his ear, which increases from its almost inaudible pulsations into a sullen roar; anon he distinguishes the distant signal of the bell-boy, who, with measured stroke, is playing forever on the same string. Whenever and wherever the engine is in locomotion,—whether moving forward on the main line, or backing down a side track,—whether dashing past an obscure road in the midst of a forest, or passing at slow rate across the crowded street, the unmusical accompaniment of the bell-boy is sure to be heard. He has his functions to perform, as necessary, legally, to the movement of a train, as those of the engineer are physically. The one grasps the lever of the throttle-valve, the other the rope of the bell; the one sets the machine in motion, the other gives warning of the movement; the action of the one might crush to death the careless wayfarer, that of the other notifies him to get out of the way.

The history of bell-boys is a varied one.—This one becomes, perchance, careless of his duties, and is superseded. That one rushes to his death when the engine comes in collision with another of its kind, scattering direful ruin all around; he meets his death bravely at his post, ringing his bell to the last. Another grows too old, too valuable in service, too expensive in pay, for a bell-boy, and becomes successively a fireman and then an engineer—holding in his hand the lives and safety of thousands of his fellow men. The responsible duties of an engineer cannot be over-estimated; and those of a bell-boy, in a humbler way, are equally important. With the ten thousand other employments where the life or death, the safety or destruction of others, depends upon a faithful discharge of duty, both go in as important items to swell the great account of human responsibility.

A SCOTTISH BALLAD.

BY ROBERT BURNS.

JOHN ANDERSON, my jo, John,
When Nature first began
To try her canny hand, John,
Her master-work was man!
And you, among them a' John,
So trig frae top to toe,
You proved to be no journey-work,
John Anderson, my jo.

John Anderson, my jo, John,
Ye were my first conceit;
I think nae shame to own, John,
I lo'ed ye 'mang the lave;
They say ye're turning auld, John,
And what though it be so,
Ye'er aye the same kind man to me,
John Anderson, my jo.

John Anderson, my jo, John,
When first we were acquaint,
Your locks were like the raven,
Your bonny brow was brent;
But now your brow is bald, John,
Your locks are like the snow,
But blessing on your frosty pow,
John Anderson, my jo.

John Anderson, my jo, John,
We clamb the hill thegither,
And many a canty day, John,
We've had wi' ane anither;
Now we maun totter down, John,
But hand in hand we'll go,
And sleep thegither at the foot,
John Anderson, my jo.

JOHN ANDERSON TO HIS JEAN.

BY MRS. J. WARD.

AIR,—*John Anderson, my jo.*

Oh, Jean! it seems but yesterday,
Since light as any fawn,
Ye tripped in virgin teen'hood's grace
Across the flowery lawn;
And bright your golden hair waved,
That Time hath strewn wi' snaw;
Yet still ye wear youth's winning smile,
Though youth's bright morn's awa.

Though your eye be no mair clear, Jean,
As when in youthful prime,
See sweetly, nae confidingly,
Its melting glance met mine;
Though passion's hour has fled, Jean,
And cauld our pulses be;
Your mellowed look o' kindly love,
Still gently beams on me.

And though the grave's white blossoms, Jean,
Are scattered on your brow,
And in life's glass the ebbing sands
Are wasted thin and low;
No change our hearts can know, Jean,
But, lang as life shall last,
We'll gild our hopes n' future bliss
Wi' memories o' the past.

[Written for the Rural New-Yorker.]

FLORAL HOROLOGY.

"In every copse and sheltered dell,
Unveiled to the observant eye,
Are faithful monitors, who tell
How pass the hours and moments by."

NATURE in her richness and variety of flowering plants and verdant shrubbery, furnishes a simple, yet true system of horology. The opening and closing of the rosy petals, in turn, mark the passing hours. The violet lingering in the dell, the twining jasmine with fragrant flowers, the wan primrose, the anemone spangling the grove, and all the numerous wild-flowers decking the vale, are, in their loveliness and frailty, emblems of the flight of time. The hour-glass, from which continually run the sands of life, in early spring-time, is garlanded with roses. In the silent, yet certain decay of the green-robed children of nature, as well as their bursting into life and beauty, the flight of the swift wing of time, is as surely marked.

Linger by the placid stream when the transparent waters flow softly over their tranquil bed, and admire the delicate and fragrant water-lily, the young and beautiful nymphæa of the Grecian Poets. Lightly it rests upon the dimpling tide, and the cool wave laves the white blossom. Conscious of the presence of the first rays of morning, it opens its petals to the light. When day declines, and the sun sinks into the western wave, again they close, and the modest flower slumbers in quiet on the rocking crest of the liquid surface. The radiated flowers of the Hieracium, by their bloom, describe the course of time. At certain hours they are opened, at others closed. The small white flowers of the Goatsbeard, in the middle of the day close up their cautious petals, retreating, as it were, from the noon-tide blaze.

The Bethlehem Star at the early morning hour, when the first rays of the golden orb peer over the mountain top, unveils her smiling face, But when the vesper gales sweep by, and the evening dew begins to fall, she folds those petals fair. The humble arenarium, creeping along the arid sands, is adorned by the purple star which blushes in rich bloom. At night it reposes in its calyx. The slender Harebell, penciled with delicate blue, opens its plaits to the meridian sun. But when the night-drops sparkle on the green, it conceals its modest face within its bosom. The Chicorium, when the shrill matin notes of the lark are heard, lifts her soft eyes and marks the time as true as the dial.

Thus, each simple plant and flower which border our pathway, indicate how swiftly pass the fleeting moments. A. J. H.

JOHN B. GOUGH.

HE is the Paganini of orators. He plays only on one string, but one capable of infinite responses—the life of a drunkard! O, heavens and earth! O, angels, men and devils, what a theme! running from the cherub infant, through the wasted youth, blasted manhood, days of alternate revelry and cursing, a home of unrelieved misery, a death of shame and anguish! It is thus that Mr. Gough recites, night after night. He paces up and down some twelve or twenty feet of platform, judiciously cleared for him, paces up and down with hands clenched as if in agony, or pawing the air to keep off ghosts of memory—pouring out words with such spontaneity that they sometimes seem to tumble over one another, and smother meaning in their fall, scarcely stopping at a cheer, never inviting one. He tells you with gestures even more significant than his passionate and sometimes beautiful words, how he went out from the home of a poor but pious loving mother, wandered from the straight road, was whipped by demons over an arid desert, fed upon the hot sand of his burning thirst, felt a word of mercy like cooling water on his tongue, saw a rainbow of hope over the abyss of seven years of sin, and was restored to strength and purity, if not happiness. When he has told this, he can turn to other men, can paint society with a vivid pencil, and conduct an argument with vigor, the more effective because tolerant. Sometimes he will introduce an illustration, like that of a boat on the rapids, which will hold an audience in suspense, almost of agony; and force them to seek relief in appropriate tumult.—*London Times.*

ELEGANT EXTRACT.

THE grandeur of man's nature turns to insignificance all outward distinctions. His powers of intellect, of conscience, of love, of knowing God, of perceiving the beautiful, of acting on his own mind, on outward nature, and on his fellow-creatures—these are his glorious prerogatives. Through the vulgar error of undervaluing what is common, we are apt, indeed, to pass these by as of but little worth.—But as in the outward creation, so in the soul, the common is the most precious.

Science and art may invent splendid modes of illuminating the apartments of the opulent; but these are all poor and worthless compared with the common light which the sun sends into our windows, which he pours freely, impartially, over hill and valley, which kindles daily the eastern and western sky; and so the common lights of reason, and conscience, and love, are of more worth and dignity than the rare endowments which give celebrity to a few.—*Channing.*

SIZE OF THE WEST.—Illinois would make forty such States as Rhode Island, Minnesota sixty. Missouri is larger than all New England. Ohio exceeds either Ireland or Scotland, or Portugal, and equals Belgium, Scotland, and Switzerland together. Missouri is more than half as large as Italy, and larger than Denmark, Holland, Belgium, and Switzerland. Missouri and Illinois are larger than England, Scotland, Ireland, and Wales.

FRIENDSHIP is more firmly secured by lenity towards failings than by attachment to excellences. The former is valued as kindness which cannot be claimed, the latter is exacted as a payment of a debt to merit.

Ladies' Department.

CONDUCTED BY A——E.

Trans-Atlantic Epistles, TO COUSIN KATEY.

Communicated thro' Moore's Rural New-Yorker.

EPISTLE EIGHTH.

STRASBOURG, June 16th, 1854.

DEAR COUSIN KATEY:—Some weeks have elapsed since the date of my last communication; my only apology for the neglect is, that during all this time I was in Italy, the classic land of poetry and song, and was too much excited and absorbed by the interesting objects that surrounded me—by the majestic ruins, with their exhaustless stores of historical associations—by the master-pieces of ancient art, which still charm the world, though the Greeks whose cunning chisel wrought them out, and the proud old Romans whose eyes were gladdened by their pristine beauty, sleep together beneath the dust of ages—by the luxurious palaces, which stand with open doors, inviting the traveler to enter, and welcoming him to their long picture galleries and sumptuous apartments—by the splendid churches, where costly decorations, and paintings, and statuary, in the most lavish profusion, combine with the imposing ceremonies of Catholic worship, with the wreathing clouds of incense and the swelling strains of ravishing music to captivate the senses and dazzle the imagination—finally, by the delicious climate, the soft balmy air, the blue depths of the cloudless sky, and the gorgeous sunsets, to come down to anything so very prosaic and commonplace as letter writing. And here let me tell you, KATEY, *in strict confidence*, that all this talk about the *blueness* of the Italian sky is——humbug, as far as Americans are concerned. It may do for the English, who, in their foggy isle, scarcely know what clear weather is; but we, in our new world, when the leafy month of June brings back the roses to our gardens, have as beautiful a sky as hangs over any part of God's universe. Still, "Le-beau-ideal d'Italie" is a stereotyped phrase, very convenient to round a sentence with, as I occasionally find by experience, and I would not like to destroy its value.

But, to return to my apology. There is another thing for which Italy is famous, the partiality of its inhabitants to the "Dolce far niente." You may be inclined to the opinion that what I took for poetical inspiration was, in part, at least, the result of this influence, and I do not know that I can wholly repel the "soft impeachment." At all events I have now escaped from the enchanted ground, and am quite prepared to enter again upon the realities of this work-a-day life.

We spent fifteen days in Rome, and every hour of that time was busily employed. I will not attempt to give you a list of the objects of interest that we saw—it would require pages to do even this. A slight sketch of one or two among the many monuments that still remain to mark the ancient grandeur of this fallen city, this city which has been so appropriately named the "Niobe of nations," must suffice. And first, let us enter the Pantheon, the "pride of Rome." After mounting the steps which lead to its stately portico, let us pause a moment to admire the double row of massive columns with which this part of the building is graced. Sixteen in number, more than forty feet high, and nearly fifteen in circumference, each is formed of a single block of oriental granite, with a base and chapiter of white marble, beautiful in form and proportion as any that the palmiest days of architecture have ever produced. But nearly two thousand years' exposure to the atmosphere has blackened and defaced the once polished surface, and they now present but a faint image of their original beauty.

Let us pass into the interior. A rotunda, whose diameter is precisely the same as its height,—simple, unpretending, but so admirably proportioned, so suggestive of the harmony of nature, that your first impression is that it was not *made*, but *grew*. You glance around, observe the altars placed at intervals in the circumference of the temple, which mark its transfer from the service of heathen divinities to a devout, but most mistaken worship of the Christian's God—your eye falls upon the pavement, elaborately wrought in mosaic of the richest marbles, and then, for the first time, you notice the absence of conflicting light and shade. You become aware that the tranquil, luminous atmosphere that surrounds you, and fills the immense space in all its extent like the pervading presence of Deity, is heaven's own light, flowing direct from the ether above, and not admitted piece-meal through any artificial medium. A circular opening, twenty feet in diameter, in the centre of the dome, affords free access to the light and air, and as you gaze up into the blue sky you feel the soft breezes of an Italian spring fanning your cheek. It is astonishing what an indefinable charm this single thing gives to the whole structure. External sights, external sounds, are all shut out—the curved lines of the architecture, converging to a common centre, lead the mind, as by an irresistible fascination, to the pure expanse above, and the eye and the thought plunge into its depths until they almost reach the open portal of heaven.

Such is the Pantheon, the most perfect in its preservation, and, to me, the most impressive of any of the ancient monuments. There is a unity, a simplicity and a harmony about it which none of its imitations possess. MICHAEL ANGELO is said to have copied from it the dome of St. Peter's, but the proportions are changed, and the effect is entirely different. The immortal RAPHAEL showed his appreciation of this fine old temple, by selecting it as the place of his tomb, and it is not the least among the attractions which cluster around this famous locality, that it contains all that was mortal of the "divine painter."

The Pantheon is one of the few specimens of architecture which remain to us from the time of AUGUSTUS. Most of the other relics which Rome possesses, are of a date posterior to the burning of the city under NERO, and all of these are, more or less, in ruins. But the Pantheon still rears its majestic dome without a flaw or break to mar its fair proportions, tho' the weight of accumulated centuries is pressing upon it, centuries of neglect, and even of pillage. Successive Popes have plundered its decorations to enrich their own constructions. URBAN VIIIth removed the immense bronze bas-relief that adorned the front of its portico, and converted it into the baldequin which now canopies the high altar of St. Peter's, and at another time the interior of the dome was ruthlessly stripped of the bronze plates with which it was originally covered. But, so harmonious is the style of architecture, that the absence of ornament is not perceived, or rather, it recalls what the poet says of beauty, "When unadorned, adorned the most."

But as you have never had the pleasure of seeing this wonderful building, I fear my eulogies of it may become wearisome, and therefore I bid you and the Pantheon

Good-Bye, MINNIE.

THE LADY'S MAN.

His face is eternally wreathed with unmeaning smiles, and when he addresses a lady it is always in strain of absurd nonsense, so that we have often been surprised that a lady armed with a fan, and so addressed, did not brand the animal on the spot. If a lady's man does, by any possibility, possess the least degree of common sense, he takes especial pains to conceal it, for somehow or other he has taken it into his wise head that empty sentimentality and absurd nothings are the only offerings fit for the female mind. In order to be true to what he conceives to be the entertainment and amusement of the ladies, he turns traitor to manhood, and so becomes anywhere himself without a just claim to be classed with either the male or female sex. His best qualities are those which he possesses in common with certain kinds of dogs—to fetch and carry. Ladies who laugh in their sleeves at the fool, may not object to the attentions of the servant, and so, out of mere commiseration, may allow him to carry a fan, or escort them to the opera, when the sex of their acquaintance are not accessible. The lady's man is sufficiently rewarded for attending them through a whole evening's entertainment, if they will only drop a smile into his hat at parting. With this substantial blessing he is encouraged to future exertions in this wide field of masculine ambition. If a man's duty to a lady consists in picking up dropped handkerchiefs and fans, or twirling her round to giddiness and exhaustion in the waltz, we should, perhaps, envy the accomplishment of the mere lady's man.—*N. O. Delta.*

A CHILD'S INFLUENCE.

An English lady of respectability resided, for a few years after becoming a widow, with her little son, in one of the chief cities in Canada. The child had been faithfully instructed in the elements of Christian faith. He was about four years of age, very lovely and promising, and greatly caressed by the fellow-boarders. An elderly gentleman in the family, Mr. B., was exceedingly fond of him, and invited him one day, upon the removal of the cloth after dinner, to remain upon his knee.—The ladies had retired, and free conversation ensued. The gentleman alluded to was given to expressions which ever shock a pious mind. "Well, Tommy," said one at the table, in high glee, "what do you think of Mr. B.?" The child hesitated for a moment, and then replied, "I think he did not have a good mother; for, if he had, he would not use such *naughty words*." The gentleman was a Scotchman; home and a pious mother rose, in all their freshness, to his mind. The effect upon him was overpowering; he rose from the table without speaking, retired, and was never afterward known to make use of similar expressions. —*Mrs. Whittlesey's Magazine.*

FEMALE LOVELINESS.—Female loveliness never appears to so good advantage as when set off with simplicity of dress. No artist ever decked his angels with towering feathers and gaudy jewelry; and our dear human angels, if they would make good their title to that name, should carefully avoid ornaments which properly belong to squaws and African princes.—Those tinselries may serve effect on the stage or upon the ball-room floor, but in daily life there is no substitute for the charm of simplicity. A vulgar taste is not to be disguised by gold and diamonds.

ROCHESTER, JULY 22, 1854.

To Agents and Others.

A new half volume of the RURAL commenced last week—a favorable time to subscribe or form clubs for either six months or a year. Agents and other kind friends throughout the country are requested to give the matter such attention as may be consistent with their engagements. The RURAL will be furnished for six months, from July to January, at half the yearly rates, or as follows:—Three copies for $2,50; Six copies (and one free to agent) for $5; Ten copies (and one to agent) for $7,50; Twenty copies (and one to agent) for $12,50.

The Sixth Volume of THE WOOL GROWER AND STOCK REGISTER,—improved and enlarged to 32 pages monthly—also commences the 1st of July. We will furnish the two journals, *one year*, at the following low rates:—Three copies of W. G. & S. R. and one of RURAL for $3; Five copies W. G. and two of RURAL for $5; Nine copies W. G. and three of RURAL for $8; Twelve copies of W. G. and four of RURAL for $12 ☞Specimen numbers, &c., of both journals sent free to all applicants.

A Seasonable Topic.

THE WEATHER is apparently the warmest topic, "about these days," and we are inclined to indite a paragraph for the benefit of our fellow sufferers—the attenuated specimens of perspiring, sun-scorched, over-heated, city-imprisoned humanity, who are endeavoring to remain at their posts during the summer solstice. We are *obliged* to forego the comforts and pleasures of sojourning in the God-made country, even for a brief season,—(the RURAL *must* be issued promptly, and contain its usual variety, even though editors and printers are city-sick and exhausted.)—and can speak feelingly of the misery of tarrying amid heated walls and pavements and traversing suffocating thoroughfares. Without enumerating the ills that the flesh of city denizens is heir to in this season, we advise all who can to go into the country—not on a visit to farming friends, who are just now too busy to entertain company, but to Clifton Springs, Avon, Portage, or some other cool and quiet resting place for the weary and over-tasked. Clifton is a delightful resort, in a rich and beautiful region, and not too fashionable for comfort. It is located on the Central Railroad, a few miles east of Canandaigua. Avon and Portage, though not so easy of access, are most inviting at this season. For invalids, either place is desirable—and all rich, or well-to-do city folks, who can leave home and business cares, may be benefited in body and mind by visiting one of the resorts named, and perambulating the surrounding country.

Our advice to those who cannot leave the city, is to keep calm and cool if possible—avoiding excitement, unnecessary exposure to the heat of the sun, and excessive labor, exercise, &c. If you would retain health, keep your premises pure and sweet, and ignore eating unripe fruit, vegetables, &c., or partaking of the ardent.—Thus far the city has been remarkably healthy for the season,—not a case of cholera having occurred, though the disease is prevailing at the east, west, and elsewhere. Cleanliness, equanimity, and "Temperance in all things," are essentially necessary, however, and should be observed by all, whether at home or abroad,—especially with the mercury near the nineties.

Villains Caught and Caged.

Most of our readers recollect the kidnapping of a colored man named SOLOMON NORTHRUP, who was inveigled to Washington on false pretences, and there being plied with drugged liquor, he was, in a stupid condition, placed in a slave-pen, and sold to the South. He was passed successively through several hands, and finally placed on a plantation up Red River, where he was discovered, his freedom established, and, after twelve years' service as a slave, set at liberty in January, 1853.

Indefatigable exertions have since been made to ferret out the perpetrators of this most diabolical outrage, and last week the villains were discovered and identified near Fonda. Their names are ALEXANDER MERRILL and JOSEPH RUSSELL, and they were taken to Saratoga, examined, and fully committed for trial. There is plenty of evidence to convict them of kidnapping, and the penalty for the offence is State Prison not less than two, nor more than ten years. The negro, by advice of friends, has also instituted a civil action against them, laying the damages at $5,000. Let ample justice be meted out to them.

Trans-Pacific Steam Navigation.

THE readers of the RURAL will recollect that a couple of months since we gave an illustration of the American-built steamer Golden Age, then on her first voyage to Australia, via. England and Cape of Good Hope. On the fifth of May she sailed from Melbourne for Panama, as the pioneer steamer of a line from Australia to England, by way of the Isthmus. This opens a new era in steam navigation, and we may expect ere long that the broad Pacific will be turned into a great international highway, and that the Orient and the Occident will shake hands across her waters.

A bill establishing a steam mail line from San Francisco for Shanghai, has passed the U. S Senate, so that steam circumnavigation of the globe will, before many years, become a fixed fact.

Letter from St. Paul.

St. Paul, Minnesota, July 6, 1854.

MESSRS. EDITORS:—Although we are at the extreme Northwest boundary of civilization in America, yet is patriotism and love of liberty and union, as strong here as in any eastern State. The Fourth of July was celebrated here by ringing of bells, thumbs of cannon, eating of trout and venison, drinking of Catawba and Minnesota wine, speeches, toasts, Sioux Indians playing on jewsharps, some little drunkenness, and general rejoicing, to say nothing about the Ball, which would lay your Rochester individuals out cold as a Pembina iceberg. The day came in like a Lion and went out like an Elephant, marching along with majestic strides, fully conscious of the importance of the occasion, and proud as if bearing the Queen of Sheba, who verily declares that not half the truth concerning Minnesota has been told unto her. Such a general time of speechifying seldom comes—Minnesota has orators of the genuine Western stamp. Speeches were made by Gov. GORMAN, Ex-Governor RAMSAY, Col. DESTIN, N. F. NEWSON, and about twenty others. The best hotel in St. Paul, the American, kept open house, with their usual liberality. Their bill of fare would do no discredit to the St. Nicholas.

Last week I rode up to Fort Snelling, and the Falls of St. Anthony. The Fort is situated seven miles above St. Paul, and commands a magnificent prospect. It is on a bluff about a hundred feet high, and at the confluence of the Mississippi and Minnesota Rivers. The land in the Military reserve will be sold next month, and the rush after it will be like waters tumbling over Niagara.

The Falls of St. Anthony are surrounded by picturesque landscape, and, connecting past associations along with them, look tolerably decent. On the whole, they resemble a large unmanageable mill-dam, more than anything else. The water falls about sixteen feet. They are no more worthy of comparison with the Falls of Genesee, than is your best farming land in Monroe with the Prairie land around St. Paul.—About three miles hence is the Min-ne-hahu or Falls of Soughing Water, the most perfectly wild and beautiful that I have ever seen. Two miles from St. Paul we have a mammoth cave, with springs of water in it as clear as crystal.

Saint Paul flourishes and waxeth great. Every steamer that lands here brings us an accession of population. We have some six churches, eight banking houses, twenty lawyers, four daily and four weekly papers, eight or ten hotels, three book-stores, and but few loafers. For a town of five years' growth, where will you find one to rival it? Rochester men are constantly arriving here,—some settle.

A word here to young men who are looking toward this Goshen of America. *Marry* before you start. Matrimonial chances here are slim,—but about eighteen unmarried girls in St. Paul, and ten of them engaged,—four hundred young bloods anxiously looking around for wives.—With a wife, industry and economy, a man can land here without a dollar, and in ten years be in comfortable circumstances. I know four instances of this character, of men residing in this city who are now worth over a hundred thousand.

The lakes of Minnesota are unapproachable in beauty, and full of fish. This will be called the Lake State. They are generally from three to five miles long, with clear sandy shores and bottoms. Go to Italy, Galilee or anywhere else, and you will find nothing to equal them. Come ye consumptives, and inhabit the land of health. Come and set down by running waters, pure as crystal, and live like the Patriarchs of old. Well, if you won't come, stay away, and make room for better men, who are on the way from all quarters of the world.

St. Peters is mostly owned by a wealthy and enterprising land company, President of which is Gov. GORMAN. Steam Saw and Grist Mills are now going up there. There is a fine chance for an enterprising Rochester sawyer to settle there and go to the Legislature this winter. Let strangers landing here go up the Minnesota River, if they would get any rational idea of the country. Capt. Dean, one of the oldest settlers in the Territory, has a fine horse and buggy, and will be gratified to show you the sights around the Jerusalem of the West. W. M. H.

STRANGE SUICIDE.—A pair of very foolish and wicked lovers, named ISAAC P. NASH and ADELIANNA B. SAMPSON, committed an act of joint suicide at East Abington, Mass., last week.—They hired a horse and buggy, drove to a pond in the night, fastened the horse to a fence, and after tying themselves together with cords, walked into the pond and were drowned. The rash and wicked act seems to have been one of great coolness and deliberation, as they left letters announcing their purpose, and declaring their sanity and full knowledge of what they were about to do. When found, they were clinging around each other's necks. Any person who, in his own mind, commits an act of self-destruction, is as guilty of murder in the sight of God as he who takes the life of his fellow man.

TOTAL DEPRAVITY.—The *State Register* of Thursday, contains the following:

"A wealthy gentleman from Western New York died in this city yesterday afternoon, at one of our hotels. An only son, and the only relative present at his decease, while the corpse was yet warm, offered to sell the boots of the dead to the porter of the hotel at which they were stopping. He deserves immortalizing."

And his "memory would be embalmed in the hearts of his countrymen"—if they only knew who he was!

Congressional.

As the time draws near for final adjournment, so much evil and so little good has been done,—so many bills remain to be acted upon, and so little time to act,—that Congress has commenced holding Saturday sessions, and the Senate meets at 11, instead of 12 o'clock, as heretofore.

The principal subjects of discussion and action in the Senate, have been the introduction by Senators SUMNER, CHASE and ROCKWELL, of petitions for the repeal of the Fugitive Slave law. The bill granting lands to aid in constructing a Pacific telegraph was passed by the Senate. Mr. CHASE introduced a bill to prohibit slavery in the territories of the United States. The Homestead Bill and the Canadian reciprocity treaty were discussed, but the latter with closed doors. A large number of post office and other appointments were confirmed.

In the House, BENNETT'S Land Bill was postponed until next session. An appropriation for the improvement of rivers and harbors was passed by thirty majority, and sent to the Senate, probably to be either killed by that body, or vetoed by the President. A committee of the House are engaged in investigating an interesting case of alleged bribery, in which it is charged that COLT and his agents have been tampering with members for the purpose of obtaining an extension of his patent on revolving firearms. Most of the week was consumed in the discussion of the Appropriation Bills.

Mob Violence.

A FEW days since the itinerant street preacher, ORR, who is nicknamed *Gabriel*, in consequence of his calling together audiences by means of a horn, preached in the street at Bath, Maine, in his usual vituperative spirit, denouncing Catholics and foreigners in his accustomed strain. A mob was raised in consequence, and the Catholic Church in the place sacked and burned. This vindictive and intolerant spirit is just the thing for which the Catholics themselves are denounced, and its manifestation against them is a cause of just reproach to our people. It does no good,—makes no converts from a false religion—but on the other hand, kindles a spirit of violence and vindictiveness in return that threatens the worst possible consequences.

DEMOCRATIC STATE CONVENTION.—The Adamantine wing of the Democratic party held their State Convention at Syracuse on the 12th, and nominated the following ticket:

For Governor—Greene C. Bronson, of New York city.

For Lieutenant Governor—Elijah T. Ford, of Erie.

For Canal Commissioner—Clark Burnham, of Chenango.

For State Prison Inspector—Abram Vernam, of Livingston.

The vote on Lieutenant Governor stood 81 for Ford to 29 for E. Darwin Smith, of Rochester.

A letter was received from Judge Bronson, peremptorily declining the nomination, but it was not read until just as the Convention was about to adjourn, and no action was taken in reference to it.

A series of resolutions were adopted endorsing the Nebraska Bill, but denouncing the Administration.

PHILLIPS' FIRE ANNIHILATOR is becoming a popular institution hereabouts. In several instances of late, fires have been checked or entirely subdued by this machine, before fire engines could be made available. The Annihilator is a good investment to be placed in factories, stores, and other valuable establishments, and private dwellings—especially such as are not within immediate reach of other means of extinguishing fires. Thus believing, we direct the attention of all interested to the advertisement of Mr. AMSDEN, in this paper.

WIVES WANTED.—Marriageable girls are quick in the Minnesota market. We quote from a letter in the Boston *Daily Advertiser*:

"Several leading and wealthy citizens of St. Paul have married Indian squaws—aboriginal ladies, perhaps I ought to say. These matches are caused less by romance than by the necessity of having a wife, and the scarcity of white women. When there is an importation of the latter commodity from the East, it is eagerly seized. I heard of a gentleman from our part of the country who came out to settle with his three daughters. In two weeks he was alone, but his family was increased by the addition of two sons-in-law."

THE MARK OF CAIN.—The editor of the Philadelphia Courier says:—While at the Burning Spring, near Niagara, a few days ago, we were requested to enter the names of our party in the Visitor's Register, and while complying, we observed that the registry had been suspended at about two-thirds down on the left-hand page, and then continued at the top of the right. On seeking the cause, we found the last entry as follows:

"*Matt. F. Ward, Brother and Servant.*"

Of course, that name had cast a blight upon the page forever; no honest man would add his name beneath that of the Cain-branded fugitive, but underneath was written, as by the hand of some recording angel, or crime pursuing Nemesis,

"THE MARK IS ON HIM!"

JOSIAH HOLBROOK, who was for a long period a resident of New York, and was engaged in professional pursuits to simplify science—especially geology—to the capacity of youthful minds, was drowned a few weeks since, in Virginia, his body having been found in the Black Water Creek, as we learn from the Lynchburg "Virginian." It is supposed that he met his death by falling down a cliff, while searching for geological specimens.

THE work of erecting a national monument to the memory of the immortal Washington, has been suspended for want of funds.

News Paragraphs.

☞ It is stated that in the bombardment of Odessa, the Congreve guns played the most important part in the action. They were found to carry their exploding charge at a distance where the Russian balls could not reach. The officer who directed this part of the service, received a promotion, for the precision and efficiency with which he accomplished his duty, and this is the first promotion which has occurred in the combined forces since the commencement of hostilities.

☞ From the Patent Office report for the year 1853, we learn, says the Louisville Journal, that the quantity of clover seed saved in Ohio in that year exceeded 100,000 bushels, which, at the average market price, brought a return to the farmers of that State of over half a million of dollars. The estimate of the entire annual crop of clover seed in the United States, is set down at 1,000,000 bushels—worth $5,000,000.

☞ Some idea of the importance of the perfumery trade in France may be formed from the fact, that one manufacturer employs each year 5,000 kilogrammes of orange peel, 37,000 kilogrammes acacia flowers, 27,000 kilogrammes violets, 6,000 kilogrammes lilac flowers, and about a similar quantity of mint, thyme, lavender, and other odoriferous plants.

☞ The Bangor Mercury states that considerable excitement was caused in that city on the 10th, by the discovery of cabalistic characters marked in lead pencil over the bell pulls on the doors of houses. It turned out to have been done by a German peddler, who wished to reconnoitre places where he had left his wares for inspection.

☞ The American Board of Missions and the Bible Society are "short." The Board fears a deficit this year of not less than $15,000; the expenditures have been so much greater than usual. The Bible Society states in a circular letter, that it has incurred a debt of $30,000 for July, and $10,000 for August must be added.

☞ The Cleveland Plain Dealer says there was a great meeting of Spiritualists at Bainbridge on Sunday last. It is estimated there were 8,000 present. They expected to meet Gov. Tallmadge and Judge Edmonds, who were not there. This assembly was gathered with little or no public notice.

☞ A new discovery has been made to relieve deaf persons. Two artists in London have invented an instrument, which is placed within the ears, without projecting, and, being the same color as the skin, is not perceptible. It enables deaf persons to enjoy general conversation, to hear distinctly at church and at public assemblies.

☞ On Tuesday morning week, as the lightning train was passing the flag station at Allen's Creek, on the Central Railroad, a stick of wood fell from the tender, struck the rim of a wheel, and was thrown with such force as to kill the flagman, who was standing at the door of his house.

☞ The Worcester Spy announces that Mr. Pano has overcome the difficulty arising from electrical explosions, and that he has perfected his invention for producing light, heat, and motive power from the decomposition of water.—This announcement will be received with great incredulity, and is, without much doubt, a humbug.

☞ Quite an excitement was caused at Piqua, says the Cincinnati Gazette, on the 5th inst., by the hoisting of a cross over the American flag on the Catholic church. The priest was immediately advised to take it down, and he complied with the advice. Had he refused, the citizens would probably have torn down the church.

☞ The Boston Atlas states that the clothing business of Boston amounts to about $15,000 annually. There are four houses which give employment directly or indirectly to about five thousand persons, scattered throughout the New England States, in most of which they have agencies.

☞ A young lady contemplated eloping with her sailor lover in Philadelphia Saturday night, but the train left, and they were caught. The young sailor behaved so well that the angry parents invited him to spend the night with them. He will probably accomplish his wishes some time hereafter without an elopement.

☞ The Japanese would not agree to the recent treaty with the United States, until it was stipulated that an American woman should be allowed to set her foot on the Japanese territories. This was a concession they probably thought due to the Japanese women.

☞ Mr. Stephenson's tubular bridge over the Nile, at Benha, will be fit to rank by the side of the imperishable monuments of ancient Egyptian industry. It is to have ten arches, and will be 870 feet in length. Unlike the Britannia bridge, the railway will pass over the top.

☞ A singular matrimonial mistake—the blushing bride having been married to the gentleman who acted as "father" on the occasion—took place at Wurtley, England, recently. The mistake was rectified by the clergyman performing the ceremony over again.

☞ The first railroad in Brazil was thrown open to the public on the 30th of last April, the inauguration ceremonies taking place in presence of the emperor and empress, and an immense concourse of the leading personages of the empire.

☞ The Montreal Gazette complains that the Railroad agents and conductors in Canada are forming a combination to influence the result of the approaching elections in the Province. It warns them against the consequences of such a combination.

☞ The Board of Health of New York city reports the total number of deaths for the week ending July 15, as 817—being the largest mortality of any week this season; of which there were 147 of cholera—an increase of 45 over the preceding week.

☞ Our Western exchanges give sad accounts of the cholera. The fearful epidemic is prevailing to a serious extent in many quarters, and already the victims may be counted in the aggregate by hundreds.

☞ It is stated in the Washington Star that Miss Mary Ann Beachler, daughter of Mr. John Beachler, of Washington City, has fallen heir to $100,000, by the death of a relative in Germany, on condition that she marries on arriving at the age of 18.

☞ A Buffalo wheat buyer invested $3,000 in wheat with the design to give the resulting profits to the cause of religion. On closing up the accounts, he found a gain of fifty per cent., and handed over $1,500 to Dr. Lord.

News Brevities.

—— A horse died from hydrophobia in Boston on the 4th.

—— An express train is to run from Philadelphia to Pittsburgh in thirteen hours.

—— Extensive Locomotive Works are about to be erected at Dunkirk.

—— The corner stone of the Elmira Female College was laid on the 4th.

—— The Mayor of Hudson has fined several persons in that city for selling liquor on Sunday.

—— Of the 65,872 inhabitants of Chicago, 35,879 are of foreign birth.

—— Barnum has resigned the Presidency of the Crystal Palace on account of ill health.

—— Detroit has now a population of 40,127, an increase of 5,691 since last year.

—— All the American Army and Navy Officers on furlough in Europe, have been recalled.

—— The Mississippi recently overflowed the county of Bolivar. Loss $250,000.

—— A lot in Chicago for which the owner paid $75 in 1834, was sold on the 1st for $51,000.

—— Texas advices state that a revolution is about to break out in Matamoras.

—— Volunteers are to be raised to protect the Texan frontiers against the Indians.

—— The honor of a Baronetcy has been conferred upon the Chief Justice of Upper Canada.

—— The total number of deaths in the city of Boston for the past week were 112, including 32 by cholera.

—— William Bixby, a hand employed in the powder mill at Spencer, Mass., was killed by an explosion of the mill.

—— John Smith, one of the Mormon patriarchs, brother to the celebrated Joe. Smith, died at Deseret on the 23d ult.

—— Judge Dade, Chief Justice of R. I., died July 15th, after an illness of 21 hours. His disease is said to have been cholera.

—— The Kansas Free Democrat is to be issued at Fort Leavenworth about a month hence. A complete office is now on the way thither.

—— A Mexican boy, who killed his mother in Texas a few weeks since, fled to Mexico. He has been arrested.

—— It is said that there is a dog in Detroit who watches the arrival of the ice man, and pushes the lump into the shade until called for.

—— A lady, supposed to be dead, recovered as her friends were placing her in the coffin. She is now convalescent, in Detroit.

—— The lightning struck Messrs. Dean & Hale's store in Cincinnati, on the 7th. It was consumed. Loss $20,000.

—— The Governor of Michigan has appointed John T. Clark, Esq., of this State, Chief Engineer of the Sault Ste Marie Canal.

—— The Skylarks imported from England have multiplied in Delaware, and are daily heard over a tract of six miles in extent.

—— A man named Brown was killed at Avon on the 4th, by the premature discharge of a cannon.

—— The New Hampshire House of Representatives has ordered the Liquor bill to a third reading. It will be defeated in the Senate.

—— The Steuben Courier says that the crops in that county are suffering severely for the want of rain.

—— R. S. Burrows, Esq., of Albion, has given $3,000 to the Neander Library of the Rochester University.

—— The New York Teachers' Association will commence a three days' session at Oswego, on the first Tuesday in August.

—— Two daughters of Frederick Howes, of Boston, were accidentally killed by the railroad train, at Danvers, July 17.

—— A Catholic Church at Keesville has assumed a position similar to that which led to the excommunication of the St. Louis Church at Buffalo.

—— It is stated upon good authority, that the President intimated that he should veto the river and harbor appropriation bill, passed by the House last week.

—— The Cleveland Herald says that the Racine and Beloit Railroad Company have been cheated out of all the iron for their road by the Schuyler fraud.

—— Elder Richard Willard, one of the Mormon Saints, died recently in Utah, leaving 20 disconsolate widows to mourn their irreparable loss.

—— The East Genesee Conference of the M. E. Church commences its next annual session at Geneva, on the 17th of August. Bishop Janes is to preside.

—— Passengers who arrived at Louisville on the 11th July, per train from Chicago, report that there were 130 deaths from cholera in that city on Sunday.

—— The Walker divorce case in New York, after a sixteen days trial, has ended in a disagreement of the jury. They stood 11 for Mrs. W., to one for Mr. W.

—— A committee of physicians have reported against using colored candles. They are poisonous—many of them being colored with paint in which lead is used.

—— As no Senator was elected in New Hampshire, Mr. Williams' seat, held by appointment from the Governor, becomes vacant, under the rule laid down in the Vermont case.

—— The Directors of the Baltimore and Susquehanna Railroad, have removed Mr. Winchester from the post of Superintendent, on account of the collision on the 4th inst.

—— A crowd listening to a street preacher in Williamsburg on Sunday week, was run into by an engine company returning from a fire. Seventeen of the company were arrested.

—— Gov. Baker, of N. H., has vetoed a bill for the charter of the city of Concord, because it contained a clause giving the City Council power to prohibit the sale of all intoxicating drinks.

—— The New Hampshire Legislature has adjourned *sine die*. The bills not acted upon have been laid over till next session. No choice of U. S. Senators was made.

—— Dr. Barges, Ex-President of the Republic of Venezuela, died in New York, July 13th. The deceased was an intimate friend of the Patriot Bolivar, and of Gen. Miranda.

—— The tower of the new Congregational church at Waterbury, Conn., fell on the 6th.—No one was hurt, but the damage is estimated at several thousand dollars.

—— A sad accident occurred in Madison, O., on the 4th. Two men had their eyes blown out by the premature discharge of an anvil, which they were using in lieu of a cannon.

Commencement at the University.

THE Commencement exercises at our University came off on Wednesday, the 12th, as announced by us last week. Corinthian Hall was opened for the reception of ladies at 8 o'clock in the forenoon, and very speedily the seats specially set apart for them were densely filled, and presented a most pleasing and brilliant spectacle, such as would melt the heart of an anchorite—setting out of the account the intense heat of the atmosphere.

The procession formed at the University at 9 o'clock, headed by the Marshal and Scott's Brass Band, which, after arriving at the Hall, discoursed eloquent music at intervals during the progress of the ceremonies. The procession was long and imposing, and in the midst of it the President of the institution was conspicuous in his black silk robes and quaint college-cap.

The following was the programme of orations, &c., at the Hall:

MUSIC.

Prayer—By Rev. Dr. Dean, of China.

MUSIC.

1. Latin—*Oratio Salutatoria*...R. C. Brant, N. Y.
2. Republicanism of the Anglo-Saxons...G. Anderson Bergen.
3. Balance of Power...J. M. Baily, Middlebury.
4. The Creative in Man...T. C. Burden, Benton Centre.
5. Historical Favoritism...J. A. Barrett, Kingsville, Ohio.

MUSIC.

6. Treachery of the Girondists...A. L. Farr, Albion.
7. Adversity, the Test of Greatness...E. J. McKendrie, Morrisville.
8. Action, the Law of Being...J. H. Phelps, Pittsburgh.
9. The Lost Senses.....R. H. Fenn, Rochester.
10. Mirabeau, the Orator.....G. M. Condon, Boston, Mass.

MUSIC.

11. German—*Donner und Blitz*.....S. P. Fenn, Rochester.
12. "All is Fair in Politics".....L. L. Gage, New Woodstock.
13. Dignity of Self-Reliance.....S. Keyes, Jr., Norwich.
14. Intellectual Sloth.....H. Lloyd, New Glasgow, C. E.

MUSIC.

15. Greek—*Tis*.....J. C. Overhiser, New York.
16. Metaphysical Science and Christian Doctrine.....J. D. Merrill, Flemington, N. J.
17. "Who Reads an American Book?".....N. Robinson, Battle Creek, Mich.
18. The Sceptical Era, its Cause and Effects...H. Strong, La Porte, Ind.
19. The Occasion.....G. Webster, Cincinnati, O.

MUSIC.

Conferring of Degrees.

Doxology, the audience joining in the sacred song.

BENEDICTION.

President ANDERSON, after presenting the degrees to the *Baccalaureates*, made them a brief and eloquent address, in which words of advice fitly spoken were interminglied, and a good deal of feeling manifested, as, on their exodus from their *Alma Mater*, he bade them farewell.

The degree of Master of Arts was conferred upon George Byron Brand, Jacob E. Spencer, Andrew L. Freeman, William D. Hedden, Levi O Grenell, Jacob H. Pratt, Edward Webster,—all being previous graduates of the institution, except the one last named, who graduated at Dartmouth College.

The Honorary degree of A. M. was conferred upon the following persons:—Dr. Henry W. Dean, of Rochester; Rev. Justin A. Smith, Chicago, Ill.; Rev. William Hewson, Beamsville, C. W.; Oliver Morehouse, Albion; Rev. M. G. Hodge, Albany.

The degree of Doctor in Divinity was conferred upon the following persons:—Rev. J. H. McIlvaine, of Rochester; Rev. W. G. Howard, of Rochester; Rev. Edward Lathrop, New York; Rev. J. N. Murdock, Hartford, Conn.

The commencement exercises of the Theological Seminary connected with the University, took place on Thursday at the 1st Baptist Church, at which time nine young gentlemen graduated after delivering orations. Some of them are intending to engage immediately in the field of foreign missions.

Foreign Intelligence.

Arrival of the Asia.

THE Asia reached New York July 12.

Nothing of startling importance from the seat of war. Napier's fleet is anchored 25 miles from Cronstradt. The allied squadrons have been ordered to blockade Russian ports in the White Sea by the 1st of August.

The Austrians in ten days will have an army of 300,000 men stationed from the frontier of Dalmatia to Bukobina.

Three British ships shelled Bomarsund on the 21st. The buildings were burnt and much other property destroyed.

The French and English have 60,000 troops between Varna and Shumla.

It is stated that in an encounter at Silistria between the Russians and Turks, the latter lost 1400 and the former 1500.

The pontoon bridge at Katarnsch had been destroyed by a storm, and 500 Russian soldiers drowned.

ENGLAND.—The conclusion of the Fishery Treaty between the U. S. and Great Britain, had been announced in Parliament. In the House of Lords the Canada Bill had passed in Committee. The position Austria had just taken is looked upon with great distrust, and there are many who believe the object in taking possession of the Turkish Principalities is to aid the Emperor. She is strictly watched, however, by both England and France.

FRANCE.—Little of importance from this country. Prince Charles Lucien Bonaparte fell from his horse and fractured his leg.

THE LATEST.—The Czar has left St. Petersburgh for the South, and an allied expedition against Crimea is filling out. The flight of the Russians from the Principalities is confirmed.

The Austrian loan will be 350,000,000 florins.

The works on the fortifications at St. Petersburgh are carried on incessantly.

The French papers deny that Russia evacuated the Principalities out of respect for Austria, but that she preferred a peaceable evacuation to being driven out by the combined forces of England and France.

LIVERPOOL MARKETS.—There was a fair attendance to-day. Flour saleable at Tuesday's rates, the decline since that date having been recovered.

Wheat dull. Indian corn in good demand at the reduced quotations.

Flour—Western canal 36s6d@37s; Philadelphia 37s@37s6d; Baltimore 37s@37s6d; Ohio 40s@42s.

Wright, Gamby & Co. say:—The grain markets throughout the kingdom are now influenced by the weather prevailing, this continuing all that could be desired. The depression in prices and eagerness to realize form the ruling feature of the trade. Buyers, however, act on the reserve.

A decline of 2s per bbl. on flour, 2d on wheat, and 2s per qr. on Indian corn, would have to be submitted to.

Arrival of the Steamer Franklin.

NEW YORK, July 18—9 A. M.

The steamer Franklin left Cowes on the 5th. She went ashore on the Long Island beach, off Moriche's, on the morning of the 17th, in a dense fog. The passengers were all got ashore in safety, and 13 arrived in the city at midnight, together with the mails. The Franklin brings dates from London and Southampton to the 5th.

THE WAR.—The collision between the Austrian and Russian forces in Moldovia is imminent. The Russians had defended the Sereth, and the Austrian commander had gone to the seat of war, with orders to insist on the evacuation of Moldovia, which the Russians refused.

SPANISH INSURRECTION.—A military insurrection, headed by O'Donnel, had broken out in Spain. Four thousand of the Madrid garrison had marched out toward Toledo. Madrid is covered with barricades. The garrison fraternizes with the insurgents. Gen. Campurana, director of the artillery, had refused to attack them, although assuring them of his fidelity to the Queen. Gen. Lara had also refused, on the pretext that he could not rely on the garrison. O'Donnel, leader of the insurgents, it is said, summoned the Queen to change her Ministry, and that unless she did so, he would attack the town the same evening. The populace were crying out, death to Sartorious. The abdication of the Queen was under discussion, and the formation of a Regency of which Narvoez should be members. On the other hand, the Patria declares the news received from Spain to be favorable to the Government, and that the insurgents, after having been defeated, had marched to Toledo. A dispatch from the Spanish Government, of the 2d, states that on the 1st, at 4 P. M., the Queen's troops attacked the insurgents, and gained a signal advantage over them. The latter was routed, and many officers and privates asked permission to return to their duty.

THE BALTIC.—A despatch dated Hamburg, July 4th, states that on the 29th ult. the Anglo-French fleets were lying before Cronstadt, and that they expected a general attack the next day.

The bombardment of Bomarsund began at 5 P. M. on the 21st ult. About 7 o'clock the masked batteries were dismounted, and at 10 the Russian magazines were in a blaze. A bomb-shell fell on the deck of the Hecla, and Midshipman Lupas threw it overboard before it burst.

Admiral Napier was near Cronstadt with 12 screw-line-of-battle ships, 9 French ships-of-the-line, and several French steam corvettes.

SECOND DISPATCH—LIVERPOOL MARKETS.—The latest reports of the Liverpool markets quote American descriptions of flour at an advance of 6d to 9d over the rates of Friday, at which a steady business was doing. The stock was much reduced, and the weather, since the close of the week, quite stormy. Wheat was held at high rates. Indian corn in favor of buyers.

Reports are current of a partial blight of the new potato crop.

The Crops and the Harvest.

WAPELLO, Iowa, July 4.—The wheat crop in this section exceeds anything we have had before. Corn is immense.

Columbia Co., Pa., July 8.—Farmers are now cutting wheat. The weevil has destroyed about half. Rye is good, grass very good, oats and corn fine.

Edgefield, S. C., July 6.—We have had about ten days' drouth and then copious showers, which insures a great crop of corn.

Columbus, Ga., July 7.—I don't think I ever saw finer crops before. We had a great rain the first four days of July in the country round about. Corn is already made, and cotton growing finely.

Ashtabula Co., O., July 5.—The weevil, which has destroyed the wheat in the surrounding counties in Pennsylvania and this State, are at work in this State.

Springfield, O., July 7.—Harvest has commenced and so has the weevil in this county.—Some fields are badly injured.

Schuyler, N. Y., July 8.—The weevil are destroying the wheat in this county. It has become a very precarious crop, and may as well be given up.

Lebanon, Ohio, July 7.—Our wheat crop is an average one. Farmers are now busy in their fields. The weather is awful hot. Barley, oats, corn, all are good. We shall have a good yield of fruit.

Leesburgh, Va., July 7.—I hear complaints of rust in the wheat in this section. I saw some fields on the road badly damaged.

Indianapolis, Ia., July 8.—I am told the wheat crop in Marion county is an average one, notwithstanding the rust and fly in some of the fields.

La Porte, In., July 7.—Our wheat crop is good and the corn looks well. Oats and grass are also good. This is the case in all the northern counties.

Plymouth, Ohio, July 7.—Notwithstanding we have all thought the wheat entirely ruined, there will be about one-third of the usual yield.

Allegan Co., Mich., July 6.—I believe the wheat crop of this county is larger than ever before. Haying will be late, but grass and oats look well. We have a good prospect of peaches.

Racine, Wis., July 6.—We shall get nearly twice as much wheat this year as last. It is ripe enough to cut.

Independence, Mo., July 1.—Our wheat is harvested and the yield an average one. Hemp is excellent, oats and beans good, corn always so. The weather hot and sultry.

Commercial.

BUSINESS AND FINANCE.

THERE is nothing of special interest or change in financial circles since our last report. The Star of the West has arrived bringing $1,000 000 on freight and several hundred thousand in the hands of passengers. Her news was anticipated by the previous arrival of the Geo. Law.

The total amount of specie shipped from New York during the week, was $529,819 73. Total amount for this year is $17,534,979 07.

According to the Tribune, the aggregate imports of the week are $4,916,000 against $4,681,000 last year. The exports of the week, exclusive of specie, were $1,100,936 against $1,353,360 same week last year.

Another railroad development has taken place since our last, it being stated that EDWARD CRANE, of Boston, President of the Vermont Central Railroad, has made another over issue of 8,000 shares of stock of that corporation and resigned his office. This railroad, with a nominal capital of $10,000,000, has, so far as the stock is concerned, nearly faded out of the market, its par value being originally $100. It now sells at 84½, and is undoubted a very hard bargain to the purchaser at that. The bonds are also selling at an immense discount. A very general distrust seems to pervade the community in reference to railroad securities, and people holding them are led to inquire how soon they too may be fleeced by some rascal standing in a high place.

The Erie and several other roads have been investigating their stock ledgers, and issue cards that they have been found O. K.

Market Intelligence, &c.

RURAL NEW-YORKER OFFICE,
Rochester, July 19, 1854.

VERY little Wheat offered in the market. Small lots have been purchased in the street at $1,83. Corn and oats lower and dull, the former selling at 68c, and the latter at 47 cents.

Hay is a little better, now, bringing to-day $8 to $12, according to quality. Prices of other products essentially unchanged.

The wool market holds out no better inducements to the seller as yet. Prices unchanged and very little offered.

Rochester Wholesale Prices.

A CHOICE FARM FOR SALE,

ABOUT 1¾ miles from the city line, nearly equally divided between a sandy loam (proved by experience to be the most profitable land in Western New York, for every kind of early vegetables and fruit—no rotten potatoes or blasted wheat grown on it,) and a deep black muck, perfectly drained and a few acres of clay land. About one-fourth is wood, abundantly watered with living springs of soft water. About 300 Apple and Peach trees in bearing of choice fruit; a large barn and new house; about ¾ of the fence board and picket nearly new. Price low for a first class farm.

A. G. SMITH, Front st.
Rochester, N. Y., July, 1854. 237-3t

SHEEP FOR SALE.

I HAVE Sheep (both Bucks and Ewes) of the following breeds, for sale, at reasonable prices. French and Spanish Merinos, pure bred; also, crosses of the two breeds, from ¾ to ⅞; also, Leicesters and South-Downs, pure bred, and crosses of the same. These Sheep are from, or descended from the flocks of the well known breeders of pure bred Sheep, Messrs. Jewett, Burritt, Avery, Wakeman, McIntyre, Beadle, &c. For further particulars, address me (post-paid) at Belleville, Jefferson Co., N. Y.

THE WOOL GROWER AND STOCK REGISTER.

VOL. VI.—ENLARGED AND IMPROVED!

THE WOOL GROWER AND STOCK REGISTER is the *only* American journal devoted to the important and profitable branches of *Wool and Stock Husbandry.* It contains a vast amount of *useful* and *reliable* information on the above and kindred subjects, and should be in the hands of every owner or breeder of Sheep, Cattle, Horses, Swine, or Poultry—whether located East or West, North or South, for the most of the matter given in its pages is equally adapted to all sections of the Union, the Canadas, &c. The Sixth Volume, commencing July, 1854, will be

Enlarged to 32 Octavo Pages Monthly!

And Improved in both Contents and Appearance. Among other matters of interest to Wool Growers, Breeders, Graziers, Dairymen, &c., the new volume will contain PEDIGREES OF PURE-BRED Cattle, Horses, Sheep, etc., and the Names and Residences of the principal Breeders and Owners of Improved Stock throughout the country. It is published in the BEST STYLE, and ILLUSTRATED WITH MANY ENGRAVINGS—including Portraits of Domestic Animals, Designs of Farm Buildings, &c., &c. The careful REVIEWS OF THE WOOL AND CATTLE MARKETS, given in each number, are alone worth many times the price of the paper.—To Wool Growers this feature is invaluable.

TERMS—Only Fifty Cents a Year;

Five copies for $2; Eight for $3,—*in advance.* Any additional number at 37½ cents per copy. Club papers will be sent to different post-offices, if desired. ☞ Back volumes (well bound in paper, for mailing) furnished at above rates.

☞ NOW IS THE TIME TO SUBSCRIBE and form Clubs. Money, properly enclosed, may be mailed at our risk, if addressed to D. D. T. MOORE, Rochester, N. Y.

Rochester, June, 1854. 233-1t

THE DANSVILLE MODEL WATER-CURE,

Is one of the most capacious, convenient, and best arranged establishments in the country. The situation for health, and beautiful and romantic scenery is unsurpassed. The main building is 100 feet by 40, and four stories high, with bath rooms on every story, furnished with the *softest* and *purest* water in the world. In front of the building are four piazzas, making in the aggregate, a promenade of four hundred feet in length. The medical attendance is all that can be desired, and experienced and capable persons are employed as bath attendants. Mrs. STEPHENS female physician, has had several years experience in the treatment of diseases of her own sex. The proprietors and physicians intend to spare no means that can be employed, that will hasten a sure and permanent cure of their patients, and that can render their stay at their establishment pleasant and agreeable.

Address Dr. W. M. STEPHENS,
236-2t* Dansville, Livingston Co., N. Y.

A NEW TRUSS.

THE above Truss, patented January 17th, 1854, has been successfully used in a large number of cases, both in old and recent ruptures. It can be applied to children as well as to older persons, to a rupture of the navel, as well as to one of the groin. The pads and spring can be adjusted so that a greater or less degree of pressure can be brought to bear upon the rupture, at the desire of the wearer. It seldom fails to give the greatest amount of ease and comfort, and in recent cases curing the patient in the course of six months or a year.

This Truss can be obtained of the subscriber, at Moscow, Livingston county, N. Y., where all orders will be promptly attended to (236-3t) L. B. WHITE.

ENGLISH CATTLE.

To Agricultural Societies, and others requiring the best bred Cattle from England, embracing pure blood Horses, Short Horned Cattle, Devons, Herefords, Ayrshire and Alderney Cows, pure bred South Down, Cotswold and Leicester Sheep, Suffolk, Essex and Berkshire Swine. Orders received for Guano, by applying to
234-13t THOMAS BETTS, 35 Wall St.

KEDZIE'S RAIN WATER FILTERS,

MANUFACTURED BY

J. E. Cheney & Co., Rochester, N. Y.

THE use of water impregnated with lime and other mineral substances, in the opinion of all medical men, is one of the chief exciting causes of many diseases incident to the varied climate of this country.

These Filters have been fully tested, for many years, by hundreds of families in this city and in various parts of the country, and have in all cases given the highest satisfaction.

Rain water, of whatever color, taste, or smell by this means becomes as clear as crystal 236 1amtf

THE GREAT RED DRAGON,

OR, THE MASTER KEY TO POPERY.

BY ANTHONY GAVIN,

CATHOLIC PRIEST, OF NARAGONNA, SPAIN.

BOOK AGENTS WANTED,

TO SELL the work which is now ready, and surpasses in detail and interest any other work on the subject of Popery ever issued. The terrible revelations which it contains will startle every Protestant with horror, as coming from one who was a participator in the bloody deeds, and who has had the best opportunity ever possessed by any man to unveil the mysteries of the Great Babylon of Popery.

Finely Illustrated. Address immediately,

SAMUEL JONES, Publisher,

HOME PROTECTION.

TEMPEST Insurance Company, Capital $250,000, Organized December 24, 1852; Chartered March 1, 1853. Homes only insured by this Company. No one risk taken for more than $3,000.

Many distinguished persons have insured their homes, to the amount of $3,000 each, in this Company, among whom are Ex-President VAN BUREN, Kinderhook; Ex-Governor SEWARD, Auburn.

AUBURN, May 16th, 1853.

To whom it may concern:—We are personally acquainted with many of the Officers and Directors of the Tempest Insurance Company, located at Meridian, Cayuga Co., N. Y. In our opinion they are among the most wealthy and substantial class of Farmers in this county.

J. N. SPARIN.
ELMORE P. ROSS.
THOMAS Y. HOWE, Jr.

The above gentlemen will be recognized as the Cashier of Cayuga County Bank, Auburn; Postmaster, Auburn, and Ex-Member of Congress, Auburn, Cayuga County.

N. B.—The public are cautioned to bear in mind the name, (*Tempest,*) and not submit to an imposition daily practiced by two-by-four Mutual Co's.

234-4t T. R. HUBY, Secretary.

A VALUABLE FARM FOR SALE.

SITUATED in the town of Conquest, 4 miles northwest of Weedsport, a good market on the Canal, and 32 from Rochester & Syracuse street Railroad. Said Farm contains 163 acres; 140 improved and in a good state of cultivation; well adapted for all kinds of produce, and well situated for two farms if desirable, as there are two houses and two barns, two orchards containing a good variety of fruit, also a wood lot on each end of the farm. Thirty-five acres can be put in to wheat this fall. Said farm can be had cheap; terms easy, and possession given when desired. Stock and farming implements can be had if desirable. For further particulars inquire of the subscriber on the premises.

234-240 JACOB EAKER.
Weedsport, Cayuga Co., N. Y., June 19th, 1854.

VALUABLE FARM FOR SALE,

In the town of Penfield, Monroe Co., N. Y., containing 57¾ acres, 50 of which are under improvement; with a good stone house and out-buildings, good fruit of all kinds, 8 acres of wheat, 5 acres of corn and potatoes, 12 acres of oats and 6 acres of grass on the premises. The farm is pleasantly located, on a good road, 10 miles east of Rochester, 100 rods north of Lovell's Corners, 3 miles from Fairport Depot, a pleasant village, and in sight of the schoolhouse and brick church. Price, $3,000; one-third of the purchase money can lay on bond and mortgage for a term of 5 years.

Also, a house and lot, with good fruit and well of water, at Lovell's Corners, for sale cheap. Inquire on the premises for further particulars, or address S. D. WAIT.

Penfield, Monroe Co., N. Y., June, 1854. 234-4t

MILL AND FARM PROPERTY FOR SALE.

THE subscriber wishes to sell his Mill property in Yates, Orleans Co., N. Y. It consists of a Grist Mill and Saw Mill, both in complete running order; seven acres of tillable land; two houses on the premises and a good orchard. He has also a farm of 154 acres of choice land, adjoining the Mills, good buildings, variety of fruit, plenty of running water, and under a good state of cultivation, which he will sell with the Mills if desired. The Mills can be had at a bargain. Inquire of the subscriber on the premises, two miles east of Yates Centre, N. Y., or address to

GAFFNEY, BURKE & CO.,

IMPORTERS, WHOLESALE AND RETAIL DEALERS IN

Foreign and Domestic Dry Goods,

No. 53 Main Street, and Nos. 1 and 3 North St. Paul Street,

GAFFNEY'S BLOCK, ROCHESTER,

Have now in store one of the largest stocks of Dry Goods ever brought to this city, in which may be found every desirable article of Ladies' and Gents' Dress Goods, adapted to the season. Their improved facilities for IMPORTING, and the great advantage of having a resident partner in New York, daily attending the Auction Sales, enable them to offer to Merchants and Dealers, by piece, case or bale, as cheap as can be purchased in the New York and Boston Markets.

WHOLESALE ROOMS NOS. 1 & 3 NORTH ST. PAUL ST.,
GAFFNEY'S BLOCK, ROCHESTER.

Summer Dress Goods.—We have just opened a very large stock of Summer Dress Goods, consisting of a fine assortment of Brilliants, plain and figured Barèges and Tissues, plaid and striped Pongee Silks, Muslins, plaid and striped Lawns, Printed Jaconets, &c., &c. The styles are entirely new and beautiful.

GAFFNEY, BURKE & CO., 53 Main St., Rochester.

Broche and Crape Shawls.—We have now on hand a very large stock of Broche and Crape Shawls, all colors and qualities, which we are selling at very great bargains, as they were purchased much less than cost to import, at an Auction Sale.

GAFFNEY, BURKE & CO.,
Gaffney's Block, 53 Main St., Rochester.

More New Silks.—We have just received another large assortment of Summer Silks, from an Auction Sale, which were purchased CHEAP FOR CASH, and will be sold at less than cost to import. The styles are very handsome and entirely new. We have also just received 40 pieces of those celebrated BLACK SILKS, which we are selling as cheap as usual. GAFFNEY, BURKE & CO.,
53 MAIN ST., GAFFNEY'S BLOCK, ROCHESTER.

THE PEOPLE'S PATENT OFFICE.

THIS well known establishment is still carried on under the personal superintendance of the undersigned, by whom all the necessary drawings, specifications, and documents, for Patents, Caveats, Designs, Foreign Patents, &c., are prepared with the utmost fidelity and dispatch, on very moderate terms.

Persons wishing for information or advice relative to Patents or Inventions, may at all times consult the undersigned *without charge*, either personally at his office, or by letter. To those living at a distance, he would state, that all the needful steps necessary to secure a Patent, can be arranged by letter, just as well as if the party were present, and the expense of a journey be thus saved. When parties wish to be informed as to the probability of being enabled to obtain Patents, it will be necessary for them to forward by mail a rough outline sketch and description of the inventions. No fee or charge is made for such examinations.

Private consultations held daily with Inventors from 9 A. M. to 5 P. M. All consultations and business strictly private and confidential.

Models from a distance may be sent by express or otherwise. For further information apply to or address, post-paid, ALFRED E. BEACH,

Editor and Proprietor of the People's Journal, Solicitor of American and Foreign Patents. People's Patent Office, 86 Nassau-street, New York 227-13t

THE PEOPLE'S JOURNAL, a record of Science, Mechanics, Invention and Agriculture. Published Monthly.—Every number contains 32 pages, beautifully printed on fine paper, and *profusely illustrated with splendid engravings*, forming at the end of every year two fine volumes, comprising nearly 400 pages, with about six hundred elegant engravings. Terms, only ONE DOLLAR A YEAR, sent by mail. Specimen copies 12½ cts. Address as above.

Poetical.

(Written for Moore's Rural New-Yorker.)

CLOUDS AND SUNLIGHT.

To A Young Friend — By E. Webster.

Do not look for joy and gladness
Free from sorrow, pain and care,
Darksome days and hours of sadness,
Come to mortals every where;
Providence in the allotment,
Mixed with pleasures, ills rife;
Sickness, suffering, disappointment,
Crowd the path of human life!

But the hopeful heart, and cheerful,
Takes from sorrow half its sting;
Smiles commingled with the tearful,
Rainbow tints o'er darkness fling:
Heaven bestows on those a blessing,
Who unmurmuring bear their pain;
And, the ills of life redressing,
Sheds bright sunlight o'er the heart!

Rural Sketch Book.

THE UNFORGIVEN.

One of Life's Lessons.

BY FLORENCE MARCH.

"It is the last time, Edward," said a voice of strange calmness, "and if you refuse me your obedience, you are no longer my son."

With these words, the haughty woman fixed her dark eyes earnestly on his face, while her imperious nature displayed itself in every movement. So cold, so stern, she sat there, with no trace of that sweet womanly impulse, or the deep, fond love of a mother, on the high forehead, round which the raven bands were worn in such graceful waves. Well might Edward Harris feel that his appeal was hopeless, and yet he spoke, and firmly; though a deep paleness gathered over his noble face.

"Mother, hear me yet once more. As you have said, it is the last time. You will cast me out from your heart, and close upon me the doors of your house. You will take from me the rich inheritance of my father, and send me forth a beggar, because I cannot perjure myself at God's holy altar, by promising unchanging love and fidelity to *one* while my heart and honor are in the keeping of *another*. I cannot wed Laura Morgan. In her cold nature, I can find no answering voice of sympathy; for the temple so beautiful without has no sacred fire within. My heart and hand are pledged to another, and I *must* redeem the pledge. Oh, mother, if you would but look upon her again—if you would but hear of her goodness and purity, from those to whom she has been a ministering angel, you would surely love her; and for her own sake!"

Still she heard him, without one shade of emotion on her face, and her voice was as firm and scornful as ever, as she said:

"And so, Edward Harris will turn from luxury and ease to poverty and woe; and all for a pretty sewing girl. Pray, where did your paragon learn her purity and goodness! From her drunken father, perhaps."

"They were the gift of her richly endowed nature," replied the young man, while a slight flush crept over his cheek, "and the circumstances of her wretched lot but showed them in brighter colors. Mother, why did you send for her, why did you place her in almost angel loveliness before me continually, if not to win me to love her. Think yet again, mother, and do not cast your only son from you. Let her be dear for my sake, until she wins your love for her own."

"Edward Harris, listen to me."

She *stood* before him now, with her queenly form thrown back, and her dark eyes flashing keenly upon him. Her face was calm, but very pale, and the folds of her crimson velvet robe quivered as she spoke:

"Years ago I was young and beautiful—perhaps I should say, proud also. I loved Algernon Lee, wildly,—deeply,—and he was cold to me. I saw him bowing at other shrines, lavishing the gems of his rich intellect before those less worthy of them than I. I was wild with agony, and I sought him,—poured out the burning torrent of my love at his feet, and sued for his in return. With a stern, haughty look he regarded me, and without one word of reply left me, with that scornful smile still upon his lips. I was young," and her lips quivered, "full of impulses, which guided aright would have made me a fond, affectionate woman; but that hour froze my heart into ice, and from that time I have lived only for revenge. Step by step I have watched his downward path, and exulted in his ruin. Through long years I never lost sight of him, but saw him going down, still *down* to misery. It was to add a more intense suffering, that I brought his daughter here; that he might still more feel his degradation, when he depended on me for the bread he ate. Edward, you are my only child, — my only hope,—but I would rather see you in your grave than that you should wed his daughter."

The crimson flush faded from her cheek, and her voice grew stern and cold again, as the words fell from her lips.

Her son still stood before her: the changeful expression of his face testifying to his surprise. In a moment he spoke eagerly:

"But why should the punishment due the guilty fall on the head of the innocent? Surely, the cup of your revenge is full already, without sacrificing her to its fury. Oh, mother, look on her pure, innocent face, and forgive the father for the sake of the child."

"Were she *thrice* as beautiful, were she thrice as pure, you should not marry her.—Here are the broad lands of your father; here all the luxury of your early home. Will you leave it and go to ruin with her? Do not think that I shall relent; for the hour that sees you bound to that girl, sees all this wealth and your mother's love pass from you, and—forever."

He looked on her earnestly, and his face though very pale, had a firm, resolute expression settling on every feature. His voice was clear, though very scornful.

"And this is your resolve, mother. Is there no appeal?"

"None," she answered, deliberately.

He came slowly to the spot where she was still standing, folded her to his bosom, pressed his lips to the white forehead, and with the murmured words, "May you forgive yourself, mother, as freely as I forgive you," he was gone.

She stood listening to the sounds of his retreating footsteps, and her features worked convulsively, and after a moment the smile came to her lips again with the words, "Foolish boy, but he will soon be back again," she turned to the silver-framed mirror, and stood adjusting the braids of her hair, apparently unconscious of all the suffering she had caused.

Edward Harris left his mother's presence with every hope crushed in his heart, and turned his back upon his princely home, with a chill feeling of despondency, creeping over his whole frame. He walked rapidly on, unheeding whither he went. At length with a more quiet step, he proceeded down a narrow street, stopped at the door of a small house, and lifting the latch passed in. A soft, clear voice fell on his ears, as he went up the staircase, warbling a simple Scottish melody. His face brightened still more, when he stood within the room in which the singer sat.

She was bending over her work, and did not see him, and he paused once more to look on loveliness which had grown so very dear to him. A sunbeam rested in the brown curls which clustered round her pure white forehead, tinging them with gold; the dark lashes shaded soft blue eyes, with a deep, quiet tenderness breathed within their depths, that only rests there with a happy heart; her features were small and regular, and the extreme whiteness of her skin would have seemed almost sickly, had not the rich crimson of health rested so rosily on her rounded cheek. A moment, and the little hand was a prisoner in the loving clasp, as Edward seated himself beside her.

The morning light came through the thick, crimson curtains, and bathed in its subdued radiance, the interior of Mrs. Harris's dressing room. Into the white hearts of the japonicas, nestling among its white leaves, it cast a rosy hue—crept over the sculptured limbs of the Hebe in the corner, and gave a richer tinge to the lady's cheek, as she sat in the luxurious depths of an easy chair. A week had passed, since in that very room she had parted with her son, and a troubled look began to take the place of her usually self-satisfied expression.—Even now she was questioning herself as she sat alone. Once or twice she arose and nervously paced the room; but at length the old, haughty expression came back to her face, and she resumed her seat and the book that had fallen upon the floor in her hasty walk. A step sounded behind her, and a note was placed in her hands. She broke the seal carelessly, and read:

"Mother, I have gone as you commanded me, never to look upon your face again. I have not willingly disobeyed you, but you bade me do that at which my whole soul revolted, and I could not. I am married. My wife, *Linda*, stands beside me, and as I look into her pure eyes, more than ever comes back the wish that you had known her better, for you must have loved her. My path is henceforth one of sufferings and trials, but with His aid, who is above all, they shall be bravely met. We are going to San Francisco, hoping to find in that golden land the plenty which is denied us here. Farewell, mother, a long farewell. I have not thus written to reproach you, but in hope that my words may lead you to look more tenderly upon your son,

EDWARD HARRIS."

She waved the servant from her with an imperious motion, and sat still until the door closed upon his retreating form. And then her limbs relaxed, and she fell heavily to the floor. Every sense was quickened by the keenest agony, and she writhed upon the rich carpet, weeping warm tears above the senseless scroll.

Hours went by in the fierce strife—hours that were ages in the suffering. The daylight faded but she heeded it not, and far into the night broke the sound of her stifled sobs.

The moonlight grew paler, and disappeared before the dawn of day; but on what a changed face the sunbeams fell. She started as she passed before a mirror, and then turned away with a low, wailing cry. Then she stopped in her walk, pressed both hands convulsively above her heart, crushed back the tears with her heavy lashes, and stood quivering in every limb with the effort. Five, ten minutes went by, and then she unclasped her hands with a heavy sigh, moved quietly to her dressing-table, touched the silver bell, and when the smiling woman answered the summons, proceeded quietly to her toilet. There was no haste, no quivering of the nerves.

The rich bands of hair were folded as smoothly as ever around the graceful head, and every fold of the heavy dress disposed with the same care—the bracelet and the brooch were as calmly clasped, and, save the pallor of the beautiful face, and a suffering expression around the lips, there were no traces of her recent struggle. As calm, as proud as ever, she appeared to the world, but from that hour her son's name never passed her lips, nor were any found bold enough to mention it in her hearing.

Three years had passed; again Mrs. Harris sat alone in her chamber. The light streamed through shades of ground glass, until subdued by the same medium, it fell, with a dreamy, moonlight radiance over her figure. The breath of many flowers was on the air, and the soft measure of music stole tremblingly thro' the room, while ever and anon the ringing laughter of some of the gay throng below, came softened to the ear. Many a fairy form flitted through the dance, many a bright face "blushed at the praise of its own loveliness!" but were as unapproachable in their proud beauty as she, mistress of the revels, who sat now alone. Time had not touched her face or figure, save to impart a richer bloom to her cheek—a more graceful symmetry to her form.

The snowy satin robe that shaded her shoulders, was not whiter than the neck upon which it rested, and the diamonds which gleamed in her raven hair, were not more lustrous than her flashing eyes. She sat seemingly in deep thought, listlessly folding and unfolding her jeweled hands, while a look of deep sadness overspread her features.

At length she arose, and the full lips curved into their usual smile, as she caught the reflection of her form in the long mirror; but as she turned away, she saw one of the papers of the day that lay upon the table. She took it up, and carelessly scanning the columns read:

"We regret to announce to his numerous friends in this city, the sudden death on shipboard, of Mr. Edward Harris, late of San Francisco."

The light was gone from those proud eyes now. One long, thrilling shriek, and all was still. They found her lying in that sleathly swoon, the jewels flashing in mockery above her pallid brow, while from her lips, and down the corsage of her snowy robe, a crimson current was slowly stealing. They laid the stricken woman on a couch, and many a face grew pale with fear as they looked upon that unmoving form. There was a bustle of departing guests, and then the dwelling was hushed and still. Through the gorgeous, flower-wreathed saloons, where so lately the voice of mirth had been, only a few frightened servants crept noiselessly along, speaking in under-tones, and starting at every sound. In the darkened room above the hours went wearily by, as they watched that face, gleaming out from the velvet cushion on which it rested, watching in vain for any token of life.

At length the heavy stillness was broken.—There was a trend of many feet, low voices, seemingly subdued by some fearful event, and then in the parlor below a burthen was laid down.

A moment's pause, and the footsteps went softly out, and the door shut with a dull sound. The noise came muffled through the rich hanging, but a slight convulsion passed over the pale face of the sufferer—her dark eyes unclosed, and with a great effort she spoke:

"Has he come?"

"My dear lady, be very calm," said the old physician, with tears falling on his cheeks, "he has come."

She arose from the bed, stepped lightly to the floor, and passed through the doorway before they could prevent her. Down the staircase and through the hall, with a quick, uneven step she went, and stood without the room where they had laid him. She saw the glare of many lamps, but they only lighted her to one object.

There it stood, the gloomy centre of all the desolation that fell upon her who gazed thereon. She moved slowly forward until she looked upon the face of her only child. Death had not marred his glorious beauty. And beside him was another—her fragile form resting on the loving arm that had encircled it through life—Linda lay in her young beauty. Her long, brown ringlets mingled with his dark curls, like gleaming, golden threads; the bright features were very calm, and around the mouth there was a celestial smile. One little hand was clasped within his icy fingers; the other lay pure and white upon his bosom. So had they lain in death's embrace, so reverent hands placed them in their coffined sleep, and so she looked upon them, that *wretched* mother.

The moments went by unheeded as she gazed upon them, not a tear dimmed her glazed eye, not a sigh told of the fierce agony within. By-and-by her grasp on the side of the coffin relaxed, and she fell heavily backward, with a low, heart-broken moan upon her blood-stained lips.

Edward Harris and his gentle wife were borne from that proud mansion, and weeping friends laid them beneath the sculptured stone, but she knew it not. For days there was no sound, no consciousness, save that constant wail. Like the plaint of a crushed spirit it went fearfully up, till the fierce delirium of fever came upon her. Months passed before she arose from that bed of suffering, but oh! how changed was she then! The deep lines of agony were stamped as if in marble upon her brow, and a look of premature age had settled upon her face. But there was a gentle, sorrowing expression in her eyes, never there before, for as she looked along the dark pathway where her beloved had trodden, the angels rolled back the gates of life, and the light of heaven streamed upon her soul.

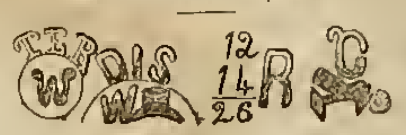
The places that have known her, know her now no more. By the bedside of the poor, in the dark, crowded alleys, where crime and suffering meet together, her form may be seen.—The blessings of the lowly rest upon her head, their grateful tears would wash away all sorrow from her pathway, but in her stricken heart there ever murmurs, like an accusing spirit, "May you forgive yourself, mother, as freely as I forgive you," and that memory often banishes the smile from her lips.

The peace that rests upon her furrowed brow is not of this world. And so she walks on, waiting till the angels shall lift the crown of thorns from her bleeding forehead, and grant her a re-union with the *unforgiven*.—*Olive Branch.*

A Word to Boys.—Who is respected?—It is the boy who conducts himself well; who is honest, diligent and obedient in all things.—It is the boy who is making an effort continually to respect his father and obey him in whatever he may direct to be done. It is the boy who is kind to other little boys, who respects age, and never gets into difficulties and quarrels with his companions. It is the boy who leaves no effort untried to improve himself in knowledge and wisdom every day; who is busy and active in endeavoring to do good acts towards others. Show me a boy who obeys his parents, who is diligent, who has respect for age, and if he is not respected and beloved by every one, then there is no such thing as truth in the world.

Youth's Corner.

ILLUSTRATED REBUS, NO. 31.



☞ Answer in two weeks.

[Written for Moore's Rural New-Yorker.]

MISCELLANEOUS ENIGMA.

I am composed of 14 words and 60 letters.

My 2, 8, 20, 15, 53, 28, 30, 3, 45, 17, 25, 56 is a stratagem of war.

My 42, 23, 34, 26, 60, 49, 33, 46, 41, 1 is high sounding.

My 51, 47, 16, 12, 54, 13, 52, 7, 44 is step by step.

My 59, 3, 48, 4, 32, 6, 31, 38, 36 is living in the country.

My 5, 11, 22, 18, 10, 40, 14, 27, 58 is a plant.

My 19, 39, 55, 37, 9, 44 is untenable.

My 57, 29, 43, 50 is a part.

My 24 is forty-nine inches.

My 35 is the beginning and ending of a word which signifies elevation.

My whole is a truthful and eloquent saying.

☞ Answer next week.

[For the Rural New-Yorker.]

Mathematical Problem.—If seven pedestrians start at the same time and point, to travel around a circular plot of ground one hundred and twenty-eight feet in circumference, and travel respectively, three, five, six, seven, nine, ten, eleven feet per minute, at what time will they all be together at point of starting?

☞ Answer next week.

The Nine-Digit Question.—By *two* additions the nine digits will make just a hundred. Adding them all at once will never do it. Try on it for a week, and then, if you do not succeed, we will show you how it is done. T.

Answer to Illustrated Rebus No. 29.—*The mahogany bridge on the Nicaragua route is a hollow log.*

Answer to Mathematical Question in No. 28.—A. travels 60 miles, B. travels 80 miles.

Answer to Miscellaneous Enigma in No. 28.—*A Miscellaneous or Geographical Enigma.*

Wit and Humor.

Obeying Orders.—"Edward," said his mother to a boy of eight, who was trundling hoop in the front yard, "Edward, you mustn't go out of that gate into the street."

"No, ma, I won't," was the reply.

A few minutes afterward his mother had occasion to go to the window. To her surprise she saw Edward in the street, engaged in the very edifying employment of manufacturing dirt pies.

"Didn't I tell you," said she, angrily, "not to go through the gate?"

"Well, I didn't, mother," was the very satisfactory reply. "*I climbed over the fence.*"

A Speech.—"Fellow Citizens—I am no speech maker, but what I say I'll do. I've lived among you twenty years. If I have shown myself a clever fellow, you know it without a speech. If I'm not a clever fellow, you know that, too, and wouldn't forget it with a speech. I'm a candidate for the legislature; if you think I'm the clear grit, vote for me; if you think Major R. of a better stripe than I am, vote for him. The fact is, either of us will make a good Representative!"

A gentleman was promenading a fashionable street with a bright little boy at his side, when the little fellow cried out,

"O, pa! there goes an editor!"

"Hush, hush!" said the father; "don't make sport of the poor man—God only knows what you may come to yet!"

A negro being caught stealing from a hen-roost, excused himself by saying, "Dat he only came dar to see if de chickens sleep wid dar eyes open."

"I am going to the post-office, Bob, shall I enquire for you?" "Well, yes, if you have a mind to, but I don't think you will find me there."

A Western editor says:—"A child was run over by a wagon three years old, cross-eyed, with pantalets on, which never spoke afterward."

A country paper lately got up an account of a fire, headed,—"Destructive fire—eleven buildings, ten horses and one cow in ruins."

DRILLING IN WHEAT.

Moore's Seed Planter, or Grain Drill.

Patented July 2, 1861.—This valuable implement of husbandry, which has been thoroughly tested in many places, is most for planting Wheat, Rye, Corn, Oats, Barley, Beans, &c. It operates equally well on all kinds of land, and is not injured by coming in contact with rocks, roots, &c; and it is believed, is superior to any other implement of the kind in use, as may be seen by the well-mounted many of the best farmers in the State. There are several advantages in drilling over broad-cast sowing; among which are these:—It is most expeditious; it saves labor, which is money; it completes the process of seeding wherever it moves; and experience has proved that more grain is obtained, of a heavier berry, and with less seed, owing to its being covered at any required depth, where every kernel has moisture and a chance to germinate.

Drilling Wheat.—Edward Stabler, in his admirable essay on the advantage of drill seeding, states that after examining its results in some 500 or 1,000 acres, and making experience on his own land, he finds there is not a single instance where it has not proved the most profitable.—First, in the saving of seed, and secondly in the increased product of the grain, amounting to from six to seven bushels to the acre. He had known the increase, in one case, by careful comparison of the two modes, to amount to nine bushels per acre in favor of drilling. He relates an interesting incident:—A farmer offered a drill for the increase in a crop of 60 acres of wheat, to be determined by sowing a few strips broad-cast for comparison; but before the harvest, the farmer preferred paying the hundred dollars for the price of a drill, with interest. On carefully ascertaining the increase, he found it to be one hundred and fifty-three bushels.—*Albany Cultivator.*

Extract from the N. Y. Tribune, Feb. 3, 1853, article on Industrial Exhibitions at the World's Fair, London:

"Those who understand the subject, know that at least one-third of the seed may be saved, and a wealth added to the crop by DRILLING, as contrasted with the old, slovenly process of sowing by hand. The annual saving by the general adoption of drilling in this country, would be equal in value to all the gold we receive from California."

The highest premiums have been awarded to this Drill at the Agricultural Fairs in Delaware, at Philadelphia, Baltimore, Detroit, in Maryland, and at various County Fairs in Pennsylvania, Ohio, Michigan, and other States.

TESTIMONIALS.

To E. W. Hudnut & Co.:—The Grain Drill which we severally purchased of you in 1852, works to our entire satisfaction. Its simplicity, and certainty of distribution, together with its cheapness, commend it in preference to any Drill with which we are acquainted. Samuel Lewis, Esq., York, Liv. Co., N. Y.; Wm. W. Fletcher, Jr., Chas. Hazelton, Elijah Armstrong, Geo. W. Uhl, Lemuel Clark, Henry C. Chas. Henderson, Andrew Boyd, Rich'd Johnson, Groveland.

Extract of a letter from Mr. McCrone, near Newcastle, Delaware:—"Your Drill stands unrivalled, as is admitted by all Farmers in the neighborhood, that have seen it in operation."

"This is to certify, that we, the undersigned, have used Lewis Moore's Improved Grain Drill, and we believe that for simplicity, durability, cheapness, ease, speed and regularity of sowing, it surpasses anything of the kind heretofore in use among us, and we do recommend it to farmers as being a machine the best adapted to their wants."—Signed, Wm. Linville, Lancaster Co., Penn., and thirteen other farmers.

Orders will be received for these machines by the subscribers, who have purchased the right to make and sell them in the Counties of Monroe, Ontario, Wyoming, and Livingston.

Cash prices at the shop,—8 teeth Drills, 8 in a part, $65; 9 teeth do., 7 and 8 in a part, $70; 10 teeth do., 8 in a part, $75; 11 do., 8 in a part, $80. E. W. HUDNUT & Co.

Geneseo, Livingston Co., N. Y., June, 1854. 230-31

PURE WINE.

The Subscriber has on hand between sixty and seventy barrels of Wine from one to four years old, manufactured by himself from native American grapes, which he offers to Physicians, Druggists and others, for Medical or Communion purposes. Warranted *pure*—not containing a particle of drugs of any kind, or alcohol except that created by fermentation. The impression has gone abroad that Wine can not be made that will keep, unless some spirit be added—but it is a mistake. I have made Wine from the grape, where I now reside, between twenty and thirty years, and have never used a drop of ardent spirit. I have kept it until twelve years of age, when it was perfectly fine.

It is well known that nearly all the Wines of commerce are made up of materials entirely foreign to the grape, containing many things very deleterious to health, which persons with weak nerves and delicate health, requiring a cordial, can not use. Many have hesitated for fear after trying to find no use Foreign Wine when recommended, they have procured Wine of me, and it answered all the purposes for which Wine was needed.

I have six or seven different kinds of Wine, made from as many different grapes,—among which are the Catawba, Isabella, Port, Muscat, Early York, Empire, &c; also young Vine Roots of the above varieties for sale.

My Wine is sold also by W. R. Walker, Druggist, Geneseo, N. Y.; Whitney & Kellogg, H. W. Miller, Mt. Morris; Dr. H. H. Clayton, Lima; H. A. Chapman, Canandaigua; Edward Niles, Hamilton; S. D. Spring, Brockport; Dr. D. Campbell, Caledonia; S. S. Bryant, LeRoy; Landing & Judd, Warsaw; S. & B. B. Higgins, Perry; M. H. Dales, Cuylerville; J. Bryan & Co., Rochester; Dr. O. Davis, Albion; G. B. Taylor, Shelburn Falls, Massachusetts; Bidwell & Woodbury, Adrian, Michigan.

SAMUEL WARREN.

York, Livingston Co., N. Y., July 5, 1851. 230-41

FARM FOR SALE.

The subscriber offers for sale the farm on which he now resides, situated in the town of Portage, Liv. Co., N. Y., containing 109 acres. The farm is about 4 miles from the village of Nunda, 3 miles from the famous Portage Bridge, and ½ mile from Hunt's Hollow Station, on the Buffalo and N. Y. City Railroad,—within 14 hours ride of New York city and 2 hours of Buffalo. The soil is of the *first* quality, well suited to wheat or any crop usually raised in Western New York, and well watered. On the premises is a choice selection of fruit of the various kinds usually cultivated, in good bearing condition. The buildings are good and convenient. Any one wishing to engage in the Nursery business, would find it a very desirable location, as the soil is admirably adapted to the culture of fruit trees and every variety of fruit. It will be sold on most reasonable terms—most of the purchase money remaining 8 or 9 years if desired. H. WING,

Hunt's Hollow, Liv. Co., N. Y., July, 1854. 233-3t

CAVEATS.—Inventors and others desiring to apply for Patents, are informed that all the necessary drawings and papers are prepared by the undersigned, with the utmost dispatch and on the most moderate terms. All other Patent business promptly attended to.

Persons wishing for information or advice relative to Patents or Inventions, may at all times consult the undersigned *without charge*, either personally at his office, or by letter. ALPHEUS E. BENCH,

Solicitor of American and Foreign Patents, People's Patent Office, 86 Nassau st., New York. 235-41

PATENT AGENCY.

Inventors can have their drawings and papers prepared under their own inspection, by applying to

JOHN FINN, C. & M. E. Agent for procuring and for the sale of Patents, 16 Buffalo St., Rochester, N. Y.

Particular attention paid to rejected applications, and to Chemical Patents.

Will also send the claim of any invention patented within the last 14 years, on receipt of one dollar. Patent Rights for Sale. 230-41

MOORE'S RURAL NEW-YORKER,

IS PUBLISHED EVERY SATURDAY,

BY D. D. T. MOORE, ROCHESTER, N. Y.

TERMS, IN ADVANCE:

Subscription—$2 a year—$1 for six months. To Clubs and Agents as follows:—Three Copies one year, for $5; Six Copies (and one to Agent or getter up of club,) for $10; Ten Copies (and one to Agent,) for $15; Twenty Copies for $25, and any additional number, directed to individuals at the same rate. Six months subscriptions in proportion. As we are obliged to pre-pay the American postage on papers sent to the British Provinces, our Canadian agents and friends must add 25 cents per copy to the club rates of the Rural,—making the lowest price to Canadian subscribers $1,50 per year.

☞ Subscription money, properly enclosed, may be sent by mail at the risk of the Publisher.

*** The postage on the Rural is but 3½ cents per quarter, payable in advance, to any part of the State—and 6½ cents to any part of the United States,—except Monroe County, where it goes free.

Advertising.—Brief and appropriate advertisements will be inserted at $1,50 per square, (ten lines, or 100 words,) or 15 cents per line—*in advance*. The circulation of the Rural New-Yorker is several thousand greater than that of any other Agricultural or similar journal in America. Patent medicines, &c., will not be advertised in this paper on any terms.

☞ All communications, and business letters, should be addressed to D. D. T. Moore, Rochester, N. Y.

VOLUME V. NO. 30.] ROCHESTER, N. Y.—SATURDAY, JULY 29, 1854. [WHOLE NO. 238.

Moore's Rural New-Yorker:

A QUARTO WEEKLY

Agricultural, Literary, and Family Newspaper

CONDUCTED BY D. D. T. MOORE,

ASSISTED BY

JOSEPH HARRIS, in the Practical Departments:
EDWARD WEBSTER, in the Literary and News Dep'ts.

Corresponding Editors:

J. H. BIXBY,—H. C. WHITE,—T. E. WETMORE.

THE RURAL NEW-YORKER is designed to be unique and beautiful in appearance, and unsurpassed in Value, Purity and Variety of Contents. Its conductors earnestly labor to make it a Reliable Guide on the Important Practical Subjects connected with the business of those whose interests it advocates. It embraces more Agricultural, Horticultural, Scientific, Mechanical, Literary and News Matter, interspersed with many appropriate and handsome engravings, than any other paper published in this Country,—rendering it a complete AGRICULTURAL, LITERARY and FAMILY NEWSPAPER.

☞ FOR TERMS, &c., SEE LAST PAGE. ☜

Rural New-Yorker.

Progress and Improvement.

THE AGRICULTURAL PRESS of America is becoming powerful and popular, and undoubtedly accomplishing a vast amount of good—directly benefiting the people and the country. Its weekly, semi-monthly, and monthly issues, are extensively circulated among the most enterprising and intelligent farmers in all cultivated portions of the Union. Nearly every State and Territory has at least one paper primarily devoted to the Agricultural Interest, while from New York, Massachusetts, and Ohio, emanate several Agricultural and Horticultural journals which circulate generally—a number of them having what may be termed a National sphere and influence, their readers and correspondents extending from Maine to Minnesota, and from Canada to California.

The utility of judiciously-conducted periodicals devoted to the promotion of Rural Interests, is no longer doubted; for the great mass of farmers who formerly ridiculed the idea of "book-farming," so called, have either become convinced of their folly, or sleep with those whose practices were their chief guide—their fathers. Throughout the land, the young and middle aged, and even the venerable men now on the stage of action, very generally concede the necessity and value of the Agricultural Press, and cordially lend it substantial support and warm encouragement. Many a farmer who, only a few years since, could not be induced to subscribe for a periodical devoted to his own business, now takes, pays for, and reads from two to ten agricultural papers, and considers the expense a good investment. But the best and most numerous supporters and advocates of Rural Literature, are the Young Men—those who have commenced farming for themselves within five or ten years—and it is to this class that, more than any or all others, the Ag. Press is indebted for its elevated position, and present and prospective prosperity.

But we designed to speak of the character and influence of Agricultural Journalism, rather than of its supporters. And in these respects, we conceive honor to be due our cotemporaries all over the land,—for, as a general rule, our journals are able, practical, and high toned. As a whole, though comparatively young in years, the Agricultural Press of America will suffer nothing by comparison with the organs of any other interest or profession—Religious, Political, Literary or Scientific. Indeed, we do not believe there is an agricultural paper published in this country, that is not worth far more than its subscription price to any discriminating farmer—and rarely one which would not be both safe and valuable as a family instructor on many important subjects. Their *practical* and *useful* character is especially worthy of consideration, and affords a marked contrast with papers devoted principally to political topics and ephemeral reading,—and instead of ranking next to political or literary journals, they ought (on the principle that the useful should be preferred to the ornamental, and business precede pleasure,) to take precedence in the estimation of every husbandman.

The mission of the Ag. Journal is to inform, advise and instruct the farmer, *and his family*, on essentials of every-day concernment, including questions and practices, the elucidation and discussion of which require experience, observation and good judgment. It should be the medium of communication between the best and most experienced cultivators, observers and investigators, and the great mass of agriculturists. Earnestly aiming to promote the best interests of community, it should ever avoid and expose error and deception in every form. A desire to benefit their fellow men—to enhance improvement, and enrich the people and the country—should be, as we trust it generally is, the paramount object of Agricultural Editors. With such a purpose, and an energy and zeal commensurate to the work, any and every man connected with the Rural Press of the country, can exercise a lasting influence upon the welfare of community. The teachings of such men as BUEL, FESSENDEN, SKINNER, GAYLORD, DOWNING, and others, did not cease with their departure from earth—their "good deeds live after them," and will continue to benefit mankind for centuries.—May their surviving contemporaries and successors prove equally useful to their fellow men and the country—each striving to excel in promoting the good cause of Rural and Mental Progress and Improvement.

CULTIVATION OF WHEAT.—NO. II.

THE chemistry of vegetable physiology has made rapid progress during the last quarter century; but it is still in its infancy, and we can take scarce a single step without treading on doubtful ground. In the case of wheat, although we know more respecting its requirements than we do of any other of the cereals, yet the little light we have only serves to show a still more extended circumference of darkness. Thus, by supplying a given quantity of ammonia, phosphoric and sulphuric acid, alkalies and alkalien earths, we are enabled annually to obtain large crops of wheat, but we soon attain the point beyond which an increased supply of these fertilizers proves injurious rather than beneficial. In Mr. LAWES' wheat experiments, the most skillful and scientific combination of fertilizers did not produce more than 40 bushels per acre. It is true that it is something to know how to obtain, on the same soil, from 35 to 40 bushels of wheat per acre every year, but when we know that there are well authenticated instances where 50, 60, 70, and even 80 bushels have been obtained per acre, it is sufficiently plain that there are conditions of soil, and combinations of substances required to produce a maximum crop of wheat, of which we are totally ingnorant. We may term these immense yields "chance crops," depending as they do on a variety of combinations, which we have not sufficient skill and knowledge to imitate. But style them what we may, the fact remains that, at present, we obtain, by accident, crops which we cannot equal by a combination of all known means of increasing the wheat crop. We believe that had the time and money spent in soil and other analyses, been devoted to *inductive* investigation, we should not at this day have been compelled to acknowledge our inability to produce, by artificial means, crops which the most illiterate cultivator occasionally raises by accident.

Chemists frequently tell us that by supplying the required "amendments," or the organic and inorganic constituents of plants, we may grow just as large a crop as we please, but they appear to forget that we do not know in what way these substances are taken up, and whether or not the food of plants has to be *cooked, masticated*, and *digested* before it can be assimilated. We believe it needs to undergo some kind of preparation, but of what character, and by what agencies it is brought about, we can only surmise.

Wheat and oats frequently fall down on rich alluvial soils, and some learned Professor cuts short all discussion and experiment on the matter, by telling the suffering farmer that it falls down because it lacked silica in the straw, and therefore had not strength to stand,—the *cause of all this being that the soil is deficient of silica*. To remedy this, an application of lime is confidently recommended, on the ground that it will render the silica of the soil available to the plant, and thus prevent its being laid. This is all very well as a *suggestion*; but why speak so confidently when nothing is really known on the subject? Even if lime does stiffen the straw, that is not *proof* that it is owing to its supplying the plant with silica. To our mind there is one formidable objection to this theory of a deficiency of silica, &c. It is well known that on these very soils immense crops of Indian corn are raised; and it is equally well known that an average crop of Indian corn contains *much more silica* than an average crop of wheat. If, therefore, during its shorter period of growth, Indian corn can obtain all the silica it requires, why is it that the wheat plant cannot obtain even a much smaller quantity? The same question may be asked in regard to phosporic and sulphuric acids, lime, magnesia, potash, soda, and indeed of all elements of the wheat plant, for all of them are required in greater quantity by a crop of Indian corn, than they are by a crop of wheat.

A certain class of writers tell us that the New England States, the eastern counties of this State, and many other parts, formerly produced excellent crops of wheat, but that, *from the exhaustion of the mineral elements of plants*, the wheat crop cannot now be grown. If we are rightly informed, these soils still produce excellent crops of Indian corn, which, as we have before said, contains more of all the elements of the wheat plant than does a crop of wheat. If the maize plant can obtain all the substances it requires, why cannot the wheat plant? We have thought much on this subject, but can come to no satisfactory conclusion; and are convinced that nothing but a systematic series of field experiments can clear up the difficulty. It is not very improbable that the maize plant takes up its food, although of the same kind, in a different form or combination to what the wheat plant requires,—and, if so, it is not impossible but that the double silicates referred to by Prof. VAN, may be required by the wheat plant, and not by the maize plant.

FARMING AS AN OCCUPATION.

THROUGHOUT the entire country, farming is an employment which, properly conducted, is sure to pay. The vicissitudes, revulsions and revolutions, that like epidemics visit periodically nearly every other branch of industry, fall comparatively harmless upon the agricultural community. Unexampled success and pecuniary ruin come alternately upon the merchant, the manufacturer, the miller, the speculator;—at one time elevating them upon the crest-wave of fortune, and then again plunging them into the vortex of irretrievable bankruptcy.

In some cases, a merchant continues to amass a fortune even to old age, and then some unforseen event, or some disastrous adventure, sweeps away the accumulations of years. How many instances can be mentioned where millers have made fortunes and lost them again. The profits which the farmer made by raising wheat, the miller four times doubled in its manufacture and sale; and the first-named has sometimes, perhaps, been a little envious of the latter's prosperity; but in a single season thereafter, the miller's entire fortune is swallowed up in losses, while the farmer, if he does not increase his substance that year by reason of a hard market, at least lives through it, and saves his previous accumulations.

All farmers, however, do not make money commensurate with their labors. There is no employment where economy, intelligent management, activity, a wise forethought, and a vigilant supervision, are more necessary to success. A load of debt, expensive habits, too much fancy farming, too little attention to the main points, viz., good tillage, drainage, manuring, rotation in crops, early seeding, and proper harvesting, will inevitably keep the cultivator of the soil under the teeth of a worse harrow than the one used to break up the clods of his own fallow. No absolute set of rules can be laid down for general guidance, but the above vade mecum is well worthy of being conned.

A farmer must not owe too much money If he is able to pay, or if competent nearly to pay, for a farm in the Valley of the Genesee, or any other equally valuable farming locality, then he may be sure, with proper management, of doubling his money within a few years; but as a general thing, it is folly for one possessing only a few hundred dollars, especially if he be young, to think of buying land in such a region. He may expect to labor like a slave for the benefit of his creditors, and be ground out at last in the mill of some ruthless money-shaver. Let such a man push off West, and select a farm judiciously, improve it as rapidly as is consistent with his means, and he will be sure to secure a competence within a few years. If every dollar he obtains above the ordinary and proper expenses of his family, be for years expended upon the farm in clearing off the necessary fields, draining out wet places, putting on good buildings and fences, setting out fruit trees, accumulating first class farming implements and utensils, obtaining and rearing the best domestic animals, the money could not possibly be more safely and profitably invested.

As a general thing, the farmer should not base his income upon a single branch of agricultural production. Setting aside the necessity of a rotation in crops for the good condition of his fields, there are other considerations equally important. The wheat crop might in one year prove a failure, or the market be low, when beef and pork, and wool, would sell readily, and at remunerating prices, or vice versa. Root crops sometimes yield well and profitably, and at others do not pay for the seed. The profits on fruit some seasons will line a man's pockets with the needful, while occasionally it barely brings any return to the producer. It is scarcely possible, however, to miss a market on some crop, if the farmer has an ordinary and proper variety, while still more frequently all will pay.

Intelligence and mental culture are as important to the agriculturist as to any other class of men. Hence, good schools and good opportunities for acquiring knowledge, should be early established. Every man who advertises his farm for sale, understands the enhanced value by reason of such advantages; besides, it gives him an opportunity to educate his children, and place them in a position to do honor to themselves and their country.—Book and newspapers should be obtained and read in every farmer's family; and above all, next to the Bible, those treating upon agriculture and its cognate subjects, should be carefully, thoughtfully, and regularly perused. The American agriculturist has a great mission to perform, and it is a solemn responsibility resting upon him to see that he performs it rightly. His position is a happy as well as an important one, and he who cultivates his own ground, and eats the fruits thereof under his own vine and fig-tree, has no occasion to envy the lot of any other mortal.

RANCID BUTTER.—IMPURE SALT.

A RECIPE, credited to a "French Scientific Journal," has "been the rounds" of the papers, which stated that rancid butter could be made sweet and good by working it over in water mixed with chloride of lime. Appended to it was another "said to be" effectual mode, which was to churn the old butter over with milk until the old salt and bad taste are removed, and then work and salt afresh.

Now these and many other proposed methods of making rancid butter sweet, will be found, on trial, utterly ineffectual. We do not believe it can be rendered fit for eating by any process, and should advise (as others have done) that it be put along with the soap grease. Good butter, salted with pure salt, and properly packed, can be kept sweet for years, and there is no need of so much foul stuff coming into market. There is little need of its being made, if its causes were properly understood by those who make it.

Impure salt is too often used in the manufacture of butter. Analyses of the salt made at the Onondaga brine springs have repeatedly been published, showing its purity; but they were generally made by those interested in its manufacture, and do not agree with those made in other localities of salt bearing the Syracuse brand. There is not the least doubt that good and pure salt can be made there, but it is to be feared that the "dairy salt" has often been adulterated, or manufactured without sufficient attention to its purity, for it is often found showing, on the application of the appropriate tests, the presence of lime, magnesia and sulphuric acid—a combination with which it is impossible to make sweet butter. Liverpool salt is no better, if as good.

A simple test for the purity of salt, is found in the following process:—Take distilled water, or, if it cannot be easily procured, rainwater caught in a clean vessel under the open sky, and dissolve a portion of the salt. To half a gill of the solution, add three or four tea-spoonfuls of *carbonate of soda*, and boil in a glass dish or well-tinned vessel, and then pour into a tumbler. If the solution become milky and a white sediment form, the presence of lime or magnesia, or both, is certain. Into a wine-glass of another portion of the fluid put, drop by drop, a solution of *chloride of barium*, and if the liquid become milky, and a white precipitate form, the presence of sulphuric acid is certain. If the milky tinge in either case is but slight, the salt will answer for butter; but if not, it is unfit for dairy use. This test is given by a writer in the *Providence Journal*, who is also our authority for the rejection of the recipes above named. R. N. Y.

FARM OF D. D. T. MOORE, WATERVLIET.

A FEW days since, in company with Mr. WARREN, of the *Country Gentleman*, we visited the farm of Mr. D. D. T. MOORE, of Watervliet, near Albany, N. Y. This farm may be considered a good specimen of much of the so-called "exhausted soil" of New England, the Middle States, and the eastern counties of this State. When Mr. MOORE purchased it, the farm had been in the hands of a tenant farmer for sixteen years, and was perfectly worn out, so much so, that though the rent was merely nominal, ($100 for 160 acres,) it was at length impossible to raise enough to pay it. Much of the soil was a blowing sand, an attempt to cultivate which the oldest inhabitants pronounced perfect infatuation. The buildings and fences had nearly all rotted down. *Now*, it is one of the best farms in the United States, and what is still more praiseworthy, Mr. MOORE made out of the soil all the money he has invested in improvements. The farm-house, buildings, fences, &c., are of a first-class order. There are 1,800 young and vigorously-growing apple trees, principally Rhode Island Greening and Baldwin; 5 acres of peach trees, thrifty, healthy and productive; 1½ acres of strawberries; an acre of asparagus and carrots, gooseberries, and other fruit in like proportion.

How this farm has been transformed from a sterile sand to highly profitable productiveness, is an interesting question, either in a scientific or practical view. *Growing large quantities of red clover, and plowing it in*, lies at the foundation of the improvement. We have so often given our views of the *rationale* of the action of red clover and other leguminous plants, that it will be unnecessary at this time to recur to them. It is plain, whether our views of the destruction of ammonia by the cereals, and of its retention by leguminous plants, are correct or not, that in this case nothing could have been added to the soil, by growing and plowing in clover, but organic matter derived from the atmosphere. How far this organic matter, or, in other words, the clover, helped to render the inorganic matter of the soil *available*, we will not now examine. It is evident to our mind, that the poverty of the soil was in consequence of a deficiency of organic or atmospheric, rather than inorganic or earthly constituents of plants. Mr. MOORE's results in this respect are similar to the result of the introduction of extensive turnip-culture on the sterile sand of the County of Norfolk, in England, formerly the poorest, as it is now the richest, agricultural district in England.—The turnips introduced nothing on to the land but organic matter. In Virginia and other Southern States, it is found that the cultivation of peas affords one of the best means of renovating their worn-out soils. In this case, likewise, nothing but organic matter is introduced.

But we must not dwell on this interesting subject; and only allude to these facts as collateral evidence of the correctness of an opinion, formed from scientific experiments, that all "exhausted soils" are deficient in organic, rather than inorganic matter.

But, though Mr. Moore raised his farm to high productiveness by the growth of clover, he does not now *confine* himself to this means of enriching the soil. This year he has used four tons of Peruvian guano. He used considerable last year, and was satisfied that it was a "splendid manure," while superphosphate of lime did no good. (Is not this additional confirmation that it is organic, not inorganic, matter that is wanted, and also that it is ammonia and not carbon which is the valuable part of this organic matter?) This year Mr. M. has sown 800 lbs. *per acre* on five acres of carrots, which look well, as indeed they should from such a dressing. On corn, 250 lbs. per acre, on the poorest soil in the field, gives promise of a greatly increased crop. The line of demarkation between the guanoed and unguanoed portion of the field, is most distinctly visible at a considerable distance,—the plants on the guanoed portion being at least six inches higher and of a darker green color than that where no guano was used; while another portion of the field dressed with barn-yard manure, spread on the surface, shows, at present, no improvement over the part where nothing was used. Last fall, one acre was dressed with thirty loads of barn-yard manure, and six acres with 250 lbs. of guano, and all sown to wheat—the wheat winter-killed, and the field was sown to oats this spring. The oats on the guanoed part looked quite as well as on the manured portion.

Mr. Moore thinks highly of the bean crop. He has fifteen acres this year, which look remarkably well; in fact, we never saw better. They were planted the last week in May; rows thirty-three inches apart and two feet in the rows, with six plants in a hill. Mr. M. has had thirty-one bushels per acre, but considers twenty-five a good crop. He thinks the fodder equal to good hay. One portion of his fifteen acre field of beans was after a two-year-old clover sod; another portion after oats without any manure, and the remainder after oats which were dressed with 250 lbs of guano per acre. The beans after the unmanured oats were *good*, but there was a decided improvement both on the part after the clover sod and where the oats were guanoed. Why do not farmers raise more beans? They are a *profitable* crop, and probably less impoverishing to the soil than any other except clover and peas.

Mr. Moore uses mules, preferring them altogether to horses. He has one pair for which he paid $500, which are the finest we have seen.

Owing to the severe weather last winter, Mr. M. lost quite a number of the finest varieties of his dwarf pears. He is afraid that they will not prove so valuable as on the pear stock. His gooseberries, of which he has a large quantity, are very badly mildewed. Currants he makes into wine, which sells readily at $1,50 per gallon. Asparagus he finds quite profitable, having sold for several years $100 worth from a quarter acre.

WEATHER AND CROPS IN STEUBEN.

Eds. Rural:—We are experiencing a desolating drouth. Since early in May there has been nothing like a respectable rain. Wheat, grass, and spring grains are scarcely a one-third yield, and will be hardly sufficient for home consumption. Even corn, which did look well, is giving out, and without rain very soon, will have to be cut up for fodder. Indeed, I hear that some has been already secured.—Wells, which never failed before, are dry.—Forests are on fire in different places about, and green pine and hemlock trees of stately size are burned out at the roots and felled to the ground. The later sown crops, such as buckwheat, turnips, &c., have a sorry look.—The prospect ahead is gloomy enough—worse by far than ever was known before. We have heard of such drouths elsewhere, but never before experienced one here. Pasture is nothing—the wonder is how stock live at all—and farmers are selling as fast as they can. For several days the mercury has ranged from 90° to 104°, and no present prospect of an abatement of the heat.

Am happy that it is not everywhere as here and hope those localities that have been blessed with genial showers and general rains, will have a feeling of sympathy for us, sweltering under a scorching sun, upon *barren* soil, with the ghost of maturing debts without the wherewithal to meet them, agitating our daylight meditations, and disturbing our midnight dreams. The counsel of the Rural to farmers to raise as much as possible, in view of the prospective prices for agricultural products, and the timely hints therein put forth in reference to the manner and mode of increasing the yield and enhancing the profits of farm labor, are lost to us for this year of grace 1854.

Prattsburgh, Steuben Co., July 21, 1854. W. B. P.

LETTER FROM YATES CO.—THE CROPS, &C.

Mr. Moore:—How do you stand it to be pent up within the brick and mortar walls of the city, this extremely hot, dry, famishing weather? We *boys*, back in the rural fields where fresh air is a common element, think it fatiguing and incongenial to nature's designs. Heave, what can be your answer?

Wheat is nearly harvested. The ravages of its enemies are not apparently so destructive as many imagined. The *weevil*, the chief of its enemies is bad—more destructive in some localities than others. I notice that wheat grown on elevated lands is less injured. One great cause, and probably the only one, why wheat is so little injured, compared to last season, is the extreme hot, dry weather, and the brisk, continuous breezes, which have served as a barrier against its destruction in a very great measure.

Barley is light. There are several pieces which have passed my observation that are not worthy the reaper; while many other fields are fair. This is owing to the drouth which has been almost perpetual since the fore part of May, with the exception of one tremendous shower of rain and hail, which lasted an hour or more. This did not, however, reach all parts of the county. Where it was severe, it did some damage to corn, by washing the uneven portions of fields away. It is well headed, and will yield well for the season. It is fit, and being harvested.

Corn, as the Hoosiers say, "looks sorry."—It came up very uneven, except that which was planted early. The early planted looks well for the drouth it has thus far encountered. But now its leaves roll under the dry, parching rays of the sun, and I notice it begins to be impervious to the moisture of night. Can it survive long?

Oats, potatoes, &c., bear as marked an affinity to sorry as their kindred.

Grass is very light, with a few rare exceptions. Pasturage is almost or quite a nullity with us.

July 15th, I passed through the towns of Gorham, Hopewell, Phelps, and Manchester, Ontario county, which I found to have been more favored with rain, although dry now.—Wheat was nearly all harvested. I should judge from what I saw standing, and from information, that the crop is quite encouraging. Barley looked well—also corn looked thrifty, though not large. The book of books promises us a "seed time and harvest," and we should willingly rest content in the fulfillment of our duty, and leave the things of fate in the hands of Him who doeth all things well.

At Clifton Springs, the lovers of luxury and ease, as well as those of good health, are thronging the public retreats, both *medically* and *pleasurably*. Friend Parke's house, and the Water Cure, are full. Edwin Croswell, of Albany, is staying at the Cure, and is measurably regaining his health. Politics is a bore, therefore I bring these hasty notes to a close.

Respectfully, C. W. Hobart.

Yatesville, July 18, 1854.

FIELD TURNIPS.

Mr. Moore:—As the time has arrived for commencing to sow turnip seed for main or field crops, I wish to suggest to those interested, that this crop should not be neglected.—Those who have not reserved land exclusively for turnips, should not fail to sow their corn fields. I raise all my turnips among my corn. Seed may be sown from this date to the 15th of August, but generally the seed should be sown before the 1st of August, or as soon after the 25th of July as favorable weather comes. I have, however, had good crops from seed sown as late as the 15th of August. In corn fields it is best to sow a day or two or just before a shower. It will not be necessary to plow nor rake the seed in, unless the soil is baked. If from any cause all my turnips are not large enough to pull when the time comes for that labor, I turn my sheep in and let them do the work. It gives them a fine start for winter. There is no crop that pays me so large a per cent. on cost as the turnip.

A. Subscriber.

Hendon, N. Y., July 15, 1854.

Sowing Turnips.—Do not forget that about the last of July is a good time to sow a patch of common turnips. The soil for turnips should be moist, rich and mellow. Ground where corn has failed, or stands too thin, will answer, if clear of weeds and well stirred.—Or, a piece of clean wheat stubble may be plowed for the purpose; also, patches in the garden where peas or early potatoes have been harvested. Turnip seed is plenty and cheap in most stores where seeds are sold. It is best to buy enough at once to re-sow with in case dry weather or the fly should destroy the first sowing. The seed, if fresh, will keep for three or four years.—*Ohio Cult.*

The Wheat Crop has all been gathered in Ohio, and is much better than was anticipated. We felt sure that the accounts of the ravages of the fly were greatly exaggerated, and we could now publish two columns of extracts on the subject, from our exchanges, which would materially modify those published two weeks since.—*Ohio Farmer, 22d*

Agricultural Miscellany.

STOCK FOR THE WEST.

Mr. J. W. Dickinson, formerly of Caledonia, N. Y., now of Hillsdale, Mich., is at present in this section selecting blooded stock for the West. In April last, as was stated in our daily papers, Mr. D. sent to Hillsdale a superior stock of Durham breeding mares, numbering some fifteen or eighteen. More recently he selected from the fine herd of Mr. E. P. Bean, of Wyoming, several head of thorough bred Devons, for the purpose of breeding them pure and distinct. He has also obtained a number of Durhams from the choice herds of the Genesee Valley, all of which, in such hands, will eventually prove of great benefit to the farmers of the West. Mr. D. is an intelligent and enterprising farmer, and has purchased a large tract of land, with the intention of breeding improved stock extensively. He will be very likely to convince our Michigan friends that some things can be done *better* than others.—May success crown his efforts.

By the way,—speaking of Stock and the West,—the farmers of Mich., Ind., Ill., Wis., and Iowa, are making rapid progress in the matter of introducing and rearing improved animals of the various breeds. Ohio, heretofore the great Stock State of the West, must look to her herds and flocks, or she will soon be distanced by competitors who have recently entered the arena. The cheap lands, and railroad facilities for reaching market, give our friends in what was but a few years ago termed the "Far West," peculiar advantages for the production and transportation of live stock, meats, and the products of the dairy. And the present and prospective demand and prices indicate that the business will continue profitable.

Cost of Importing Stock.—The cost of importing stock from Great Britain to this country by steamer, including commission, insurance, keep on board and freight, is, for a horse, $305; for a cow, $250. By a sailing vessel, it would be from $50 to $75 less. This appears high, yet, we believe, all the Importing Companies have made money. The Tuscarawas (Ohio) Stock Company have recently sold their imported stock at an advance of 15 per cent., while some companies have made enormous profits.

BASIS OF GOOD FARMING.

Mr. Isaac Moore, who farms one hundred and fifty acres of clay loam, with limestone diffused through it and in position (and surely no better soil could be desired than this,) on Clover street, Brighton, near Rochester, N. Y., writes us that his usual averages per acre are as follows:

Indian Corn—75 bushels; extra yields, 80, 90 to 100.

Potatoes—formerly 250 to 400 bushels; latterly 200.

Wheat—(20 acres,) 25 to 35 and 40 bushels, rarely 50.

Oats—(little sown) once 489 bushels from five acres; next 82 bushels.

Hay—2 to 3 tons; once 4½ tons.

These are large crops; and we are not surprised to learn that Mr. Moore has built the "Clover Street Seminary," and endowed a Professorship out of the profits of such farming.—But how he does it is the important point.—The natural richness of his soil is unlimited; but a majority of farmers on just such soil do not obtain half so large crops. Here is the explanation:

"I never sell straw; this goes back in some shape to the land. My barn-yard yields me many hundred wagon loads of manure; what I fail to get on to my lands in the spring of the year, I keep as a 'bank deposit' till autumn.

But clover and plaster are the great fertilizers of the soil of Western New York. When I sow wheat, oats or barley, I sow ten to twelve pounds of clover to the acre. Any farmer who will follow this process for fertilizing need never go to Peru to obtain guano. His farm will never run down. I have cultivated roots but little. What I have done I have found profitable. Many neighboring farmers cultivate largely of carrots, beets and turnips for stock and teams."—*N. Y. Tribune.*

Hanssome Corn.—Messrs. H. Nason & Co., offered on 'Change to-day a sample of 20,000 bushels of western corn, the finest parcel which has been exhibited this season. The color is a very bright yellow, and the corn is not only sound, but very clean. It came from Mason Co., Illinois, and we take the more pains to notice it, because of our former articles in reference to the slovenly manner in which most of the western corn is mixed and prepared for market. This sample in question would have brought to-day fully 8 cents per bushel above the best sample of western mixed offered. If farmers at the west could see the importance of cleaning their grain, and forwarding it in good condition, they might enhance its value here sufficiently to cover all the commissions and charges at this port.—*N. Y. Jour. Com.*

High Manuring.—Prof. Nash, in a recent letter to the *Connecticut Valley Farmer*, of which he is the Editor, writes that in England, by high manuring, fairly beating the ground with manures, making it like a hot bed, many farmers manage to get two crops a year from most of their land. A Mr. Adams last year raised two crops of potatoes on 350 acres, equivalent to one crop on 700 acres. So too of onions. He plants these two crops about the first of January and July.

GRAND NATIONAL CATTLE SHOW.

A National Cattle-Show will be held on the 25th, 26th, and 27th days of October, under the direction of the United States Agricultural Society, in the city of Springfield, Clark county, Ohio. No less than *six thousand dollars* will be distributed in premiums, for the best stock of the various breeds of cattle there exhibited. We commend it to the attention of all who can be present.

The following circular has been issued in relation to the proposed Exhibition:

The Executive Committee of the United States Agricultural Society have been careful to select a time that will not, so far as they are aware, conflict with any of the State Fairs or other meetings of general interest; and after due deliberation have selected this place as the most eligible for holding the Cattle Fair.—Springfield is centrally located as regards the cattle region; it is most convenient of access by railroad from almost every point of the compass. The means for accommodating, at very moderate charges, a large number of persons, are ample. Private houses will be opened for the reception of guests. There are also eighteen cities and towns within an hour's ride on the railroads, on which extra trains will be placed to accommodate such as wish to go elsewhere for lodgings.

About twenty acres of ground have been enclosed, and more than three hundred stalls will be prepared for the shelter of cattle during the Convention.

It is expected that very liberal arrangements will be made by all the railroad companies, both for the transportation of cattle and the conveyance of passengers to and from the Fair

We respectfully solicit your attendance on the occasion, and that you will furnish such aid as you may feel disposed in making known the objects, time, and place of the Convention; and if you have improved stock of cattle, of any description, we cordially invite you to enter them for competition.

A list of premiums and a copy of regulations will shortly be published.

J. T. Warder,

Chandler Robbins,
} *Local Ex. Com.*

SOUTH DOWN SHEEP.

Mr. T. B. Buffum, of Newport, R. I., in a late number of the New England Farmer, thus speaks of this breed of sheep:—"I keep South Down sheep, and like them much; they are quiet, thrifty, and handsome. I sold to one of my neighbors 26 last fall, and a short time since I called to see them, and they had 48 as fine lambs as need be; one sheep had three, and all doing well. I sold the wether lambs from them last year at $4 per head, to the butcher—my neighbor will probably get more than that for them this year (and there is no doubt at all but he can if he chooses). We will say that he gets $200 for lambs, and allow say $40—a low figure—for wool, gives $240, a handsome return for only 26 sheep. The sheep were nearly all half blood, except three, perhaps, that were nearly full bred. I have now a flock of full blood consisting of 30, that have now living and about two months old, 48 lambs (if I count right), the same number as my neighbor gets from his 26 mixed breed.—The mixed breed seem as hardy, and about as productive, as the full bloods; perhaps they are more profitable for practical purposes, as they generally shear considerably heavier fleeces. I get more for my lambs when I sell them, on account of the breed. I sold all the bucks I had last year, at prices varying from 7 or 8 to 25 dollars, as for quality and size, and bought one of L. G. Morris, for $50. I have this year a few nice lambs sired by an imported buck now owned by J. Thorne, of Duchess county, that sold in England for $650; they are good lambs, but a stranger could not, I think, select them from among the others."

OLD TURKEYS BEST FOR BREEDERS.

Every turkey breeder is not aware of it but it is a fact, that of either sex, one old turkey is worth two yearlings for rearing young ones. A turkey does not arrive at its full growth and maturity till the next fall after two years old, and of consequence, to its full strength and vigor for breeding in the best possible manner. The continual repetition of keeping young gobblers and pullets for breeding, as some people do, reduces the size of their young until they arrive at scarcely half the weight they should do. Besides, the young of these immature birds are exceedingly tender, and much more difficult to raise than of old birds. We have tried this thing thoroughly, and are convinced of the difference. Were we to choose our birds for the best breeding, both cocks and hens should not be less than three years old, and then the cock should be from a different stock from the hens. We think turkey's bear breeding from close affinities less successfully than any other fowl—at least we found it so—and we would never breed a cock to hens very closely related, if it could be helped.—*American Agriculturist.*

Whey for Pigs.—A neighbor, extensively engaged in the manufacture of cheese, uses the whey of his dairy, with an admixture of meal from corn, oats, and any grain that he has to spare, as feed for his pigs, and thinks that they thrive upon it very much indeed.—The meal is sometimes stirred into the whey in the raw state; at other times it is boiled in the whey, making a thin pudding; and at other times still, the whey is heated and poured upon the meal, and then stirred. A little salt is used in the latter modes of preparing this food, about as much as would make a pudding palatable to human beings. Do not many waste their whey? Might not those who make cheese on a large scale, make the raising and fatting of pigs an appropriate accompaniment to their dairy business?—*Country Gent.*

A SHAKER BARN.

The Enfield Shakers are building a granite barn for their cows. It is to be two hundred and fifty feet in length, fifty feet wide, and will probably cost $15,000. Mr. Elkins, the architect, gives the following description of the edifice:

"The location and arrangements of this barn edifice, are in many respects admirable. Its outer walls are of stone and its roof of slate. It is located across a gentle ravine, opening from bank to bank, and is so arranged that teams laden with hay or straw, may enter at either gable, precipitate the load to the hay below, pass on, and make their egress at the other end. Such a situation has enabled them to extend a cellar its whole length for the reception of the manures, both solid and liquid, which are kept from filtration or otherwise escaping downwards by a plank floor laid upon a stratum of clay, wrought as a bed of mortar. The descent of the ground upon the back part of the barn renders ingress and egress to and from the cellar convenient and easy for carrying point muck and manure. The cows will be tethered all upon the south side of the barn, and in one continuous longitudinous stable sixteen feet in width, with walls plastered inwardly with lime mortar, and leaving a wall behind the gutters, of four feet in width, and a corridor or passage between the cribs and mows upon the north side, (which mow preserves the warmth of the barn throughout,) sufficiently wide for a horse and cart to pass, which is often convenient, when feeding with green fod.

The scaffolds above the cows are the best depository for litter, which is let down through a trap door in the rear of the cows; and also when partitioned into rooms, serve as a place for a herdsman's office. All these arrangements render it perhaps the most convenient, and it is undoubtedly the most expensive barn in America. Its height to the eaves, upon the back side, is to be thirty feet; stables, eight feet, (including timbers) and scaffolds, sixteen feet. Flooring for teams framed four feet below the eaves."

THE EARLY AGRICULTURE OF ENGLAND.

When Cæsar arrived in England about 55 years before Christ, he described the Cantii, or inhabitants of Kent, and the Belgæ, inhabiting the modern Somerset, Wilts, and Hants, as much more advanced than the rest of the people in the habits of civilized life. "They cultivated the soil, employed marl as manure, stored their corn unthrashed, and freed it from their chaff and bran only as their daily demands required. The inhabitants in the interior lived chiefly upon milk and flesh, being clothed and fed by the produce of their herds. The country, adds Cæsar, is well peopled, and abounds in buildings resembling those of the Gauls, and they have a great abundance of cattle.—They are not allowed to eat either the hen, the goose or the hare, yet they take pleasure in breeding them. Cicero says, there is not a scruple of money upon the island, or any hopes of booty, but in slaves—a description which the industry and intelligence of succeeding ages has rendered singularly inapplicable.—The first steps in that improvement were owing to the Romans themselves, and agriculture was certainly the first instrument in imparting to the Britons the improved art and civilization of the Romans; and that agriculture was one of those arts in which they so rapidly improved, is attested by the fact, that in the fourth century the Emperor Julian having erected here granaries, in which to store the tributary corn that he exacted from the natives, at one time sent a fleet of 600 large vessels to convey away the store they contained. Julian himself particularises the transaction. If, says Gibbon, we compute these vessels only at seventy tons each, they were capable of exporting 120,000 quarters, and the country which could bear so large an exportation, must have attained an improved state of agriculture.

EGYPTIAN WHEAT.

For no plant was Egypt more celebrated than for wheat. Every reader will remember the journeys of Joseph's brethren to that country, that they might obtain corn. It was once regarded by Rome and Constantinople as an inexhaustible granary. In the present day, Arabia brings her corn out of Egypt, and the caravans which leave Upper Egypt for Cosseir—a port on the Red Sea—are freighted with wheat, which is thence transported to Judia.—"There is corn in Egypt," has long been a proverb among ourselves, to indicate that there is a plentiful store of any article. A species of bearded wheat, well known in Egypt in ancient times, has continued to the present day. As it is supposed to be a native of that country, it is called "Egyptian wheat," and it also bears the name of "many-spiked wheat."—Though allied to the summer and winter wheat, the spike is four times as large, and is found in length formed of spikelets, in two rows, from nine to ten in number, the lower ones being the shorter, and the upper ones large and erect.—*Jewish Chronicle, an English paper.*

Fence throwing Cattle.—In the last *Agriculturist* is an inquiry about an implement to put in the nose of cattle accustomed to throw fence. A cheap one, and one that I have tried and proved effectual, is to take a common cord, put it through the nose; then run each end up to the point of the horn, and fasten it, drawing it up tight enough to be straight.—This will, I think, produce the desired effect; at least, it did in the case I saw tried.—*American Agriculturist.*

The English Quarter of Grain.—There is some misapprehension existing, says an exchange, as to the quantity of grain contained in an English quarter. It is eight bushels, but not eight Winchester bushels, which is our measure. The quarter contains eight Imperial bushels, about eight and a quarter of our bushels. The Winchester bushel was the standard in England until 1826, since which time the Imperial bushel has been the standard.

Orchard and Garden.

PLANTING OUT STRAWBERRIES.

There are some advantages in planting out beds of strawberries the present month, which may not be generally known; hence we recur again to the subject. We need say nothing of the delicious character of this fruit, of the ease with which it may be produced, or its value either for market or home consumption. They are all well known, though, we fear, not generally considered and put actively in operation.

Plants set in April do not produce until the next season, and are often checked in growth, if not wholly dormant, for two or three months of the heat and drouth of midsummer. Then, again, it is a task of considerable severity, to keep them free from weeds through May and June, when weeds will grow, however frequently they may be destroyed—no time sufficient for their vegetation can be allowed to pass without their springing up abundantly. And strawberry plants set in September do not root sufficiently to escape injury from the frosts of winter, and should they do so, but a partial crop will be produced the ensuing season. Such, at least, is the general experience.

July is probably the best month for planting out strawberries—watering and mulching, of course, being attended to. Let the ground be deeply and frequently spaded, during the previous part of the season, or if now first thought of, let it be well prepared—thoroughly broken up, and mellow, at least ten inches deep. Level off the soil, and set the plants, two in a stool, eighteen or twenty-four inches apart. Then mulch, forthwith, the whole ground, including the walk, with an inch and a half deep of old tan-bark, saw dust, or well-rotted manure, and then thoroughly water them, and keep them sufficiently watered to insure a constant and vigorous growth, which is not a task, if well mulched." But few weeds will appear, and if set early in July, a full crop for next season may be expected. If delayed until August, they will not root as well, and if planted in September, will not be likely to yield more than one-fourth of a crop.

The length of the strawberry season may be extended by frequent watering—keeping the ground constantly well moistened from the time they commence blossoming until no more blossoms appear, and the last fruit is pretty well advanced. The fruit is also much larger and more delicious.

As to varieties of strawberries for cultivation, some do much better than others, and in this vicinity, *Early Scarlet* and *Burr's New Pine*, are taking the lead.

The Pennsylvania *Farm Journal* says that several new beds in different gardens near Philadelphia, have failed to bear, though prepared with much pains and expense, and growing abundant leaves. The roots were taken from bearing beds, producing abundantly; and treated according to the most approved directions, and yet no berries, or but a few imperfect ones, were produced. Such has been our own experience, but we intend to try it again, and hope to have better luck this time. If we do, or do not, our readers shall know the result.—E.

VENUS' FLY-TRAP.

The distinction between vegetables and animals was rather nervously, but still indistinctly expressed, by the great Linnæus, who tells us that "stones grow, plants grow and live, animals grow, live, and feel." When we look at the sponge, the oyster, and the sensitive plant, in the light of these definitions we see that it is incomplete, we are at a loss in which kingdom to place these animals without feeling, and the plant so sensitive to the touch. Others make the difference in food mark the distinction; an animal requiring organized substances, and a plant feeding altogether on inorganic substances, such as water, earths, gases, &c. But the best definition is that of Bonnet, a Genevan philosophor, who says:—"Plants and animals are organized bodies, nourished by means of roots, which in the former are placed externally, while those (*the lacteals*) of the latter are placed internally,"—a plant differing from an animal chiefly in being turned inside out!

In recounting, some months since the "Wonders at Kew Gardens," we spoke of the American or Venus' Fly-trap, (*Dionæa muscipula*) as one of their choicest curiosities. Herewith we give an engraving of the plant, and repeat (with some addition) our description of the same. The leaves are furnished with double semi-oval appendages, which are the chief seat of irritability, and close upon the least touch from without. The edges of the lobes of each leaf are furnished with strong prickles, which interlock when they come together, like the teeth of a steel trap. The moment an insect (or any extraneous body) touches the hairs or spines on the disc, the two lobes close firmly and press the luckless intruder to death—the struggles of the victim only hastening his own destruction. The traps are baited with a sweet liquid, exuding from secreting glands on the upper surface of the lobes. As soon as the insect ceases to struggle and dies, the top opens, ready to continue the work of destruction.—The force with which it closes is usually sufficient to kill the insect, but if not, the interlocked edging prevents its escape, and holds it a prisoner until it perishes from the pressure and want of food.

The facts are not novel, but are too wonderful ever to become stale, and whenever we review them, we ask, what is the purpose of this vegetable insect catcher? Many surmises have been made by naturalists on the subject. Some have supposed it another of the many contrivances for checking the superabundance of insects, and entirely unconnected with the physical economy of the plant; others have been confident that, in this manner, the plant obtains a necessary supply of animal manure. Either of these seems reasonable, but there is no positive proof that they are the true ones. We cannot decide or define, but we can wonder at the strangeness of nature.—E.

THE GUAVA.

(Psidium Cattleyanum.)

This graceful shrub is a native of the West Indies, and, where known, is esteemed as a beautiful ornamental window-plant. Its numerous pendant branches are thickly covered with firm, glossy, dark-green foliage, presenting at all times a handsome appearance, but one especially attractive when full of the fine deep claret-colored berries it bears. This fruit is something of the consistence and flavor of the strawberry, though the kind that grows best in common rooms is of small size. Other species, by a special course of hot-house treatment, may be made to bear abundant fruit,—the berries nearly as large as a hen's egg, but of coarser texture and less delicate flavor. As far south as Philadelphia, they have sometimes been kept over in a cold grapery, and have then borne abundantly in common rooms,—particular attention being given to watering the foliage, as well as the roots of the plant.

But the *Cattleyanum* will do well with the treatment usually given to house-plants. It is propagated by cuttings, by layers, or by ripe seeds planted before becoming dry. The pots should be filled with light, rich mould, and it is better to have them rather small—only removing to larger when they are full of roots—as the berries will be more abundant, and more likely to hang on until ripe. They are most fruitful when three or four years old, and ripen their berries better than when younger—but young and old require a temperature of not less than 60° to ripen them perfectly.—Growing plants require frequent watering, and we need not repeat that their glossy leaves should be kept free from dust to show their full beauty.—o.

Note.—The above article was given two weeks ago, in connection with a cut of *Venus' Fly-Trap*—and hence is now re-published with the proper illustration. We also give the article which should have accompanied the cut—thus inserting the two articles, and illustrations, in proper order. This is the first mistake of the kind which has ever occurred in the Rural—and could the Editor always personally superintend the "making up" of the paper as he usually does, there would be no occasion for this correction.

THE ORCHARD.

It is said that the fruit trees will now be groaning under the weight of their fruit. Thin it out, pick up all the defective fruit that falls, and give it to the hogs; by this means a great many destructive insects will be destroyed for another year. The Miller that makes the peach worm will still be laying her eggs—"an ounce of prevention is worth a pound of cure;" keep her from laying the egg in the bark near the ground; chicken manure or guano, placed close around the base of the tree, will deter the insect from laying. Brown paper wrapped close around the tree some eighteen inches high, will prevent the Miller's laying her eggs; and if there are no eggs there will be no peach worms next season. If there are no worms, there will be no black gum exuding from the base, and if there be no black gum, there will be fine fruit. All diseased parts of trees should be carefully taken off this month, and burned. Guard against the sun this month, or the apple trees will blister and die. Do not allow a good fruit tree to sucker. The young suckers are worthless to propagate from, and injure the bearing qualities of the tree.—*Soil of the South.*

Tomato.—There are as many ways of cooking this vegetable as there are tastes. We find the following answer to our purpose:—Drop the fruit into scalding water, which will cause the skins to come off easily; place them in a brass or porcelain vessel with a tablespoonful of sugar to every quart of skinned tomatoes, and stew; when the tomato is well done, take up, add some crumbs of light bread with a lump of butter; place in shallow vessels and bake, they are very nice when stewed, but when baked are delicious.

Bees and Fruit Trees.—A writer in a literary journal of Paris, states that the bees greatly improve the fructification of fruit trees. Orchards in which several hives are kept, always produce more fruit than those in which there are none. In the provinces on the Rhine, the fruits are more abundant and finer than in any other part of Germany, and there it is the custom to keep large quantities of bees.—Plants, too, which bees visit, thrive better in the neighborhood of hives.

Cucumbers.—Who ever heard of cooking a cucumber? we hear our readers exclaim!—Try it; and then tell your neighbors how well a poor man may live in this country. Take the cucumber just as it begins to turn yellow, peel and slice it into salt and water; drop it into cold water and boil until tender. Season with salt and pepper—mix with butter and fry. Few can tell it from egg plant.

"Tompkins County Apple."—A new apple by this name is described by Mr. Horey as follows:—"It is a very superior variety, somewhat resembling, in general appearance, the Hubbardston Nonsuch, but even larger than that fine variety, and keeping till February.—It is well worthy of extensive cultivation."

The tomato is a native of South America, and was first introduced, to cultivate, in Europe, in 1569. The French and Italians are said to have been the first to adopt its extensive use. It is now in common use everywhere.

Domestic Economy.

To Clarify Sugar for Preserves.—Put a half pint of water to every pound of sugar. Stir it well together; put in the beaten white of an egg. Five whites will do for a dozen pounds of sugar. Stir all together thoroughly, and let it boil. When it rises towards the top of the kettle, put in a spoonful or two of water, and let it boil up again. Repeat this process two or three times, and then set the kettle aside. After fifteen minutes, take the scum very carefully from the top, and pour off the syrup so gently as not to disturb the sediment. Have the kettle washed, and return the syrup, and add the fruit. Some persons always strain the syrup through a flannel bag, but if the above directions are observed, it is not necessary. To use a flannel bag, always wring it every day in hot water. This prevents a waste of the article strained.

To make Fruit-Pies.—No *under crust* should be made to apple or any fruit-pie. It is always heavy and not fit to eat. Place a narrow rim of paste around the edge of the plate, and fill with the fruit, either raw or stewed, and cover it. The juices will be retained much better, and will save a *sight* of flour and butter, which is no trifling consideration in these days, and what is of more consequence, save *dyspepsia*, which costs more.—After cutting, they are taken out with a spoon.

To clean Kid Gloves.—Take white soap and make a very thick "lather" with a soft brush, such as gentlemen use in shaving, and put the glove upon the hand; cover it with "lather" and rub it off quickly with a clean flannel till it is dry. Repeat the process till the glove is clean, being careful that it is done so quickly as not to saturate the kid, and "they will look as nice as new."

To Cure Boils.—The leaven of gingerbread placed on the boil, and left there until it bursts, has been found to be a good remedy. When the matter is removed, place some more leaven on the part. Another, and perhaps easier mode is the application of the nettle-geranium leaf to draw the boil, and the smooth side to be applied to heal it.

To Sweeten Rancid Butter.—It is said that washing rancid butter in milk, and afterwards in water, will restore to former sweetness. The experiment is easily tried, and the consummation devoutly to be wished, for surely nothing is more repulsive than rancid butter.

Mechanic Arts, &c.

THE CRYSTAL PALACE AT SYDENHAM.

The following description of the Crystal Palace at Sydenham, England, a most stupendous and expensive work is copied from Rutledge's Handbook:

The Crystal Palace stands nearly north and south, on the summit of the Penge-hill, its length being 1608 feet, its greatest breadth at the central transept 384, and at the smaller transepts 336 feet. The general width of the body of the building, between the transepts, including the glazed and open corridors, is 312 feet. In the old building the greatest width was 456 feet, and at the transept it was 408 feet. The ground upon which the building stands slopes very much towards the park, and rows of brick piers are run up to support the front rows of columns. The nave consists of a grand arcade, nearly double the width of that of St. Paul's Cathedral, and more than three times its length; it is 72 feet wide, and 1608 feet long, and crosses the transepts at right angles. At a height of 68 feet from the floor, there springs a semi-cylindrical vault 72 feet in diameter, which stretches away from one end of the nave to the other. The central transept has a vaulted roof of 120 feet span, extending for a length of 384 feet. The span of this noble arch is about 20 feet greater than that of St. Peter's at Rome, and nearly 40 feet larger than that of St. Paul's in London. The space covered by this colossal vault is considerably larger than the whole Minster at York. The walls of St. Paul's Cathedral is 14 feet thick—those of the Crystal Palace 8 inches; St. Paul's was thirty-five years in building—the People's Palace has been constructed in little more than twice as many weeks. At a distance of 528 feet on each side of the central transept the nave is intersected by two smaller transepts, each of which are, however, of the same dimensions as that which formed the great feature of the late exhibition building. They are 72 feet in diameter, and spring from the same height as the vaulted roof of the nave, that is 68 feet. At the point of intersection of the nave with the end transepts the roof is flat, and forms a parallelogram of 72 square feet. On each side of the nave are aisles of 24 feet in width, formed by the columns which support a portion of the building. Beyond these first aisles, and parallel with them at a distance of 48 feet are second aisles, 43 feet in height, and again beyond these and at the same distance, are third aisles of the same width and height. At alternate distances of 72 feet and 24 feet, columns project 8 feet into the nave, which, continued up nearly to the roof, support an upper gallery, which runs completely round the building, and sustain also the arched girders which carry the semi-circular roof of the nave. A gallery, 24 feet in width, runs entirely round the building, on the sides nearest the exterior and round four courts, 48 feet by 120 feet, which abut on the central transept. This lower gallery is reached by eight double staircases, four being placed in each portion of the building, divided by the central transept. From the first or lower gallery access is obtained to the upper 8 feet gallery by eight spiral staircases, one being placed at each end of the three transepts, and one at each end of the building. The second tier of columns supports in the transepts only a platform, or landing place, 24 feet in width and 72 in length, with the exception of the larger one in the centre, the length of which is 120 feet; and from these platforms a continuation of the spiral staircase leads to the second and upper galleries. The passage along this gallery is through a series of ring or "bull's eye" girders, 7 feet in diameter, resting upon the columns which project into the nave, at alternate distances of 24 and 72 feet. The palace, exclusive of the wings, is supported on the ground floor by a nearly equal number of cast and wrought iron girders; the former building in Hyde Park rested upon 1060 columns, or 92 more than the present edifice. The second tier of the building is formed of 898 columns, and the third of 340 columns.

The entire length of the building is occupied by 68 columns, placed 24 feet apart; and at intervals of eight feet between these columns are placed half columns of wood, of the same form and appearance as the iron columns, and being 136 in number on each side of the building.—The greatest number of columns in the direction of the breadth of the building is 17, and there are six rows of those near the transepts. In every part of the building the columns are placed either at distances of 24 feet apart, or multiples of that number. The columns which project into the nave are 8 feet, or one-third of 24 feet; in the larger courts, they are so placed as to form courts of 48 by 72; the nave and end transepts are colonnades of 72 and 120 feet, and the wings of the building range in width from between 32, 48 and 96 feet; and they are each 576 feet in length. At the points of connection with the main building the wings are 96 by 24 feet; they then assume the dimensions of 72 by 48 feet. Next, a long avenue of 384 feet in length (the same as the great transept) by 32 feet in width. Each wing terminates in a cross of 96 by 48 feet at the centre of intersection; and on the summit of the wings are water-tanks 48 feet square, capable of containing 800 tons of water.

According to the published reports of the company on the 28th of February last, the estimated expenditure upon the whole undertaking, had amounted to a sum of nearly one million, which appears to have been thus appropriated:

Purchase of land (after deducting sums received for re-sales)	£50 340
Construction of building	300,176
Erecting grand terraces and water-works	305,384
Fine Art Courts	102,600
Sculpture	32,000
Natural history and geology	18,176
Fittings and internal decorations	39,450
Roads and approaches	10 350
General charges	66,686
Total	£926,962

We have 25,000 miles of Railway in the Union, and $200,000,000 invested in them.

AN UNDERGROUND RAILROAD.

"Agricola," in his last letter to the Boston Evening Gazette from London, says:

"While I am speaking of city improvements, I may as well say something of a stupendous project which has just been set on foot here.—The House of Commons on Friday evening last granted a charter to a new corporation, styled the "Northern Metropolitan Subterranean Railway Company." This road, which is to be entirely subterranean, is to run from the General Post Office at St. Martin's le Grand to Paddington—a distance of four miles and a half—communicating with the stations of the Great Western, the Great Northern, and North-western Railways. The trains are to run every five minutes, and the rates of fare will be 6d, 4d. and 2d., for the three classes of carriages respectively. Street railways are an impossibility in any of the streets of London east of Charing Cross, and this is the only method by which the great thoroughfares can be relieved of a press of vehicles which sometimes renders them impassable. The cost of this undertaking is estimated at one million of pounds. It involves the removal of a large prison, and the erection of another further out of town to replace it, of sufficient capacity for the accomodation of fifteen hundred prisoners—but beyond this, the amount of property to be purchased will not be large, as nearly three-quarters of the distance will be run underneath the street."

IMPROVED HARNESS BUCKLE.

Much peril as well as painful annoyance has resulted from the old-fashioned harness buckles by reason of their liability to break or draw out during accidents, which their own defects not unfrequently cause, and also from the difficulty of release to falling horses, occasioned by the tightening force of the animal's weight. Christian and Lewis B. Oyster, of Chambersburg, Pa., have jointly claimed an improvement in buckles, which will completely revolutionize the principle of their action, if found applicable as designed by the inventors. It is proposed to dispense entirely with the tongue holes in traces and other straps, and to rivet the tongue to the leather instead of the buckle. The bar of the buckle is furnished with a number of rachet-shaped teeth or stops, and corresponding cavities are cut in the tongue, but having reversed catches. The desired length of the trace is adjusted by bringing these teeth together at a given point, and securing them with a set screw. The screw puts the unhitching of the horse under the instantaneous control of the driver in cases of falls or other perilous entanglements.—*Sci. Am.*

New York Crystal Palace.—At a meeting of the Directors of the Crystal Palace, on the 10th inst., P. T. Barnum gave in his resignation as President. His reasons for so doing is stated to be ill health, caused by over exertion in endeavoring to resuscitate the affairs of the Association. He really has labored nobly and spiritedly for this purpose, and deserves great praise for what he has done. His resignation was accepted, and J. H. White was elected President, *pro tem.* It has been resolved to close the Exhibition on the 31st of October next, and to appoint a committee with power to dispose of the property of the Association, deliverable on or after the 1st of next November. What will be done with the building is the most prominent question that now presents itself to us. Had the original managers been men of good judgment in such matters, they would have erected a building, as we suggested, that could have been easily removed and re-converted into buildings.—*Sci. Am.*

Cotton Factories at Sault Ste. Marie.—The Lake Superior Journal proposes that Cotton Factories be established at Sault Ste. Marie, at the outlet of Lake Superior. It says that cotton can be transported, even from New Orleans, to Ste. Marie, as cheaply as it can be to Lowell; that the water-power at Marie is unlimited, and that the entire region around and west to Washington Territory, can be more easily and cheaply supplied from the proposed factories than from any Eastern establishments; and that the region alluded to is so rapidly filling up with inhabitants, as to render the proposed erection of factories at the Straits well worthy of the immediate attention of capitalists.

Salt Your Chimneys.—In a building chimney, put a quantity of salt into the mortar with which the intercourses of the brick are to be laid. The effect will be that there will never be any accumulation of soot in that chimney. The philosophy is thus stated:—The salt in the portion of mortar which is exposed absorbs moisture from the atmosphere every damp day. The soot thus becoming damp, falls down to the fire-place. This appears to be an English discovery. It is used with success in Canada.

Fountain Brush.—An improvement has been made in self-supplying brushes, by J. B. Wentworth, of Lynn, Mass., who has made application for a patent. The nature of the improvement consists, 1st, In placing a brush at the end of a tube, and filling the tube with the necessary marking or painting fluid, and regulating the supply to the brush by a valve. 2d, In placing the brush within a socket provided with a strainer, for the purpose of preventing the brush becoming clogged, and filling up with impurities.—*Scientific American.*

Migratory Bird's Nest.—As the person employed for the purpose on the N. N. H. & S. Railroad, was examining the freight cars a few days since, he found a robin's nest containing three eggs. The nest was safely located on one of the trucks, and every appearance indicated that it had been there for a long period, but whether the parent bird follows its nest in its travels is an unsettled question. The car has been used regularly for a year past. The nest was not disturbed.—*Hartford Times.*

Educational.

[Written for Moore's Rural New-Yorker.]

"COMMON SCHOOLS." — WHY NOT MORE GENERALLY APPRECIATED?

In reading an article on the subject of Common Schools, in No. 21, Vol. V., of the RURAL, the above inquiry presented itself to my mind.

It cannot, I think, be denied, that there are some who, from early life, possess a kind of natural taste, love, or fondness for study. Examples are not unfrequent, of young men who rise to eminence in the literary and scientific world, notwithstanding the greatest difficulties. Such will appreciate every school, common or higher, that offers them an opportunity of indulging in a favorite pursuit.

There are many, however, whose talents and tastes appear for a time to lie dormant, and who do not themselves appear to know the bent or tendency of their own minds, until circumstances make it known. The common school, if what it ought to be, could hardly fail to develop this trait of character.

"If what it ought to be"—"The tree is known by its fruit." A school that does not awaken in the young mind a love for knowledge, is *not* what it ought to be. I do not say that such should be the effect on every one. A long experience in teaching, and an observation extending through many years, have satisfied me, that all have not naturally the same tastes, talents, and capacities, and hence the best school cannot be expected to excite in all the same thirst for knowledge, the same love for the same pursuits, &c. But what I mean to say, is, that those are the best schools which awaken the most general and extensive desire for improvement of every kind, mental, social, moral,—that best cultivate all the faculties of our nature, and do most towards training the young for respectability and usefulness in the world.

Since coming into this State, I have had some opportunity of judging of the character of the common schools, and my knowledge of the same has satisfied me of the reason why so few appreciate them, or any other opportunity of receiving instruction. The children are taught according to the mechanical principle. Almost everything is made a matter of memory. The mental powers are rarely called into exercise; and the consequence is, that education consists in the acquisition of words and names, not of ideas. Few that I have seen, appear to know in what learning consists.—They have not yet learned *how to learn*; and those that have advanced a little in the right way, seem satisfied with a kind of "jumping process," by which they may arrive at the result without the labor of investigation. Hence their operations are *un*-systematic, and they themselves are unable to explain their own works, thus showing a want of mental culture—one of the principal objects of education.

We have here, then, a reason why so few comparatively appreciate the common school. It does not awaken their minds to investigation. It does not call out their intellectual energies—it does not *teach them to think*.—Hence, one of the most difficult and laborious tasks of the intelligent teacher is, to convince them of their error; yet this must be done before he can accomplish anything in the way of improvement.

H.

Out West, June, 1854.

TEACHERS' INSTITUTES.

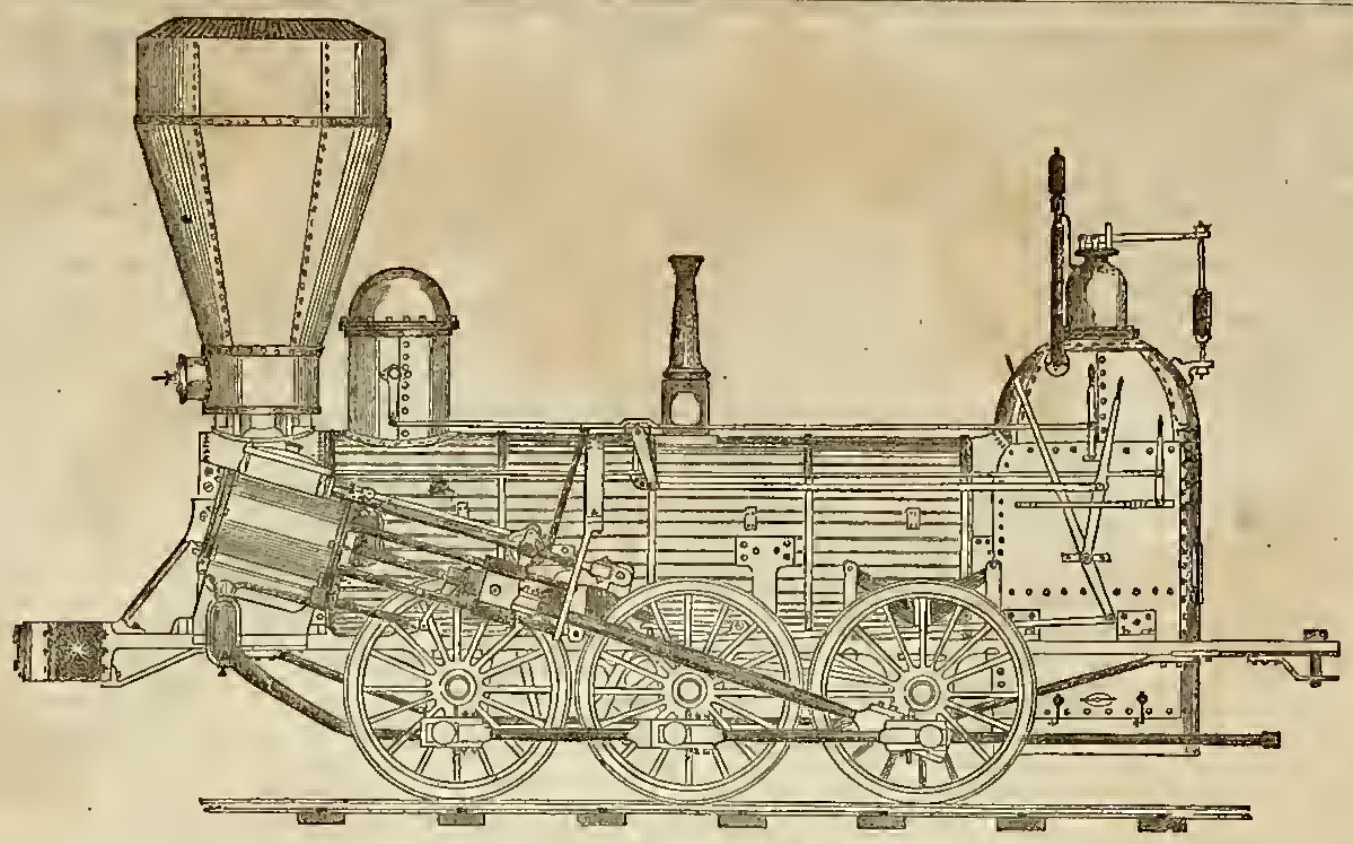
Among the many agencies designed to enlarge the teacher's qualifications, and to elevate his profession, teachers' institutes stand quite prominent. They serve to create a community of interest among teachers; to diffuse among all the experience and improvements of a few; to awaken the slumbering; to encourage the desponding; to inform the inexperienced; and to establish those who are in the right way.

They also benefit the patrons of schools and the community in general, by showing the wants of schools, and the importance of giving a generous support to those who are deputized to mould the minds and characters of the rising generation. It has been proved by experience that the holding of a successful institute in a community results in an increased interest in educational progress.—*N. Y. Tribune.*

SELF-EDUCATION.—We all of us have two educations, one of which we receive from others; another, and the most valuable, we give ourselves. It is this last which fixes our grade in society, and eventually our actual value in this life, and perhaps the color of our fate hereafter. All the professors and teachers in the world would not make you a wise and good man without your own co-operation; and if such you are determined to be, the want of them will not prevent it.—*Randolph to his Nephew.*

"TAKE CARE," recommended a father to his children, "when you find yourself in the presence of persons who see you for the first time, to display only the best qualities of heart and mind. They will always judge you under this first impression." That father knew the world.

GOOD QUALITIES, like great abilities, are incomprehensible and inconceivable to such as are deprived of them.



THE AMERICAN LOCOMOTIVE.

PHILOSOPHICAL LECTURE.

IN our last lecture to you, boys, on the use of steam as a motive power, we promised to explain its application to that important machine, the locomotive; a cut of which is here presented to your view. It differs slightly in construction from the ordinary locomotive as now used, but the principle is the same. All the wheels in the above cut are drivers, that is, they are all united, as you see, by connecting rods, on crank pins in each wheel, so that the steam power which is applied directly to the last wheel, is by those connecting rods transmitted to the other two, and therefore all of them must turn simultaneously. This gives more bite upon the rail, and enables the engine to drag heavier loads and surmount steeper grades; but there are disadvantages also in this construction. The engine now most used has two driving wheels on each side, both set further back than in the cut, while the fore end of the boiler is held up by a truck with two small wheels on each side, like those under an ordinary passenger car.

You see the steam cylinder, or, as we have called it heretofore in illustration, the *churn*, on the forward end. It is inclined or slanted downward, so that the piston rod, or *churn dasher*, when straight, would point exactly to the center of the hind wheel. The piston rod is fastened to the crank pin in that wheel, inside of the rod which connects it with the other wheels. The wheels are now a quarter of the way around from the point where the piston rod would be in a straight line; and the piston head, or *dash head*, is about in the centre of the cylinder.

Suppose while the engine is standing in this position, the engineer, by means of a hand lever attached to the engine, lets the steam into the upper end of the cylinder. It would of course push the piston head down to the bottom, which would in its descent revolve the wheel until the crank pin stands exactly opposite the centre of the shaft. Now, after it has passed the last named point, if the steam be let in *below* the piston head, it will push it up to the top of the cylinder, which, as a necessary consequence, by drawing in the piston rod, will give the wheel half a revolution.—Then again, letting in the steam above will push out the rod once more, giving the wheel another half revolution, and so on, *ad infinitum*. Now if the wheel bites upon the rail, so as not to slip, any one can see that the whole engine must move forward just as much as the wheel turns; and in doing so, it will drag along a train of cars attached to the rear.

Do you understand it boys? I am anxious that you should; and if you have failed fairly to master the explanation, go over it carefully again, looking at the plate as you do so; and if it is not sufficiently plain, ask your father or older brother to explain it to you in his own language and way, and do not abandon it until you see through it as plainly as you see that two and two make four.

If at the time of starting, the steam should be let into the lower end of the cylinder first, while the wheels are in the position represented in the cut, or into the upper end, in case the wheels were standing with the crank pins above the shaft, it is plain to be seen that the engine would commence *bucking*, instead of running forward; so that it is just as easy for the engineer to give the machine a reverse as a direct motion. There are two points in the revolution, called the *dead points*, where the steam can exert no power to revolve the wheels. One is when the crank pin is exactly behind and in range with the piston rod and the centre of the shaft, and the other is when it is before and exactly opposite the first named dead point. These two points occur when the piston head is at the top or at the bottom of the cylinder, and the steam is about to change its direction. Suppose the engine to come to rest upon one of these points, how is it to be started again? On the other end of the axles, are three other wheels, the exact counterparts of the three in sight. They are fastened upon the axles so that the crank pins are one-quarter of a revolution further forward than the three in sight, and are worked by another steam apparatus like the one in view. When one set of wheels, therefore, is at a dead point, the other is doing its greatest work, and *vice versa*. When the one set gains one quarter of its full power, the other has lost one quarter; when one gains one-half, the other has lost an equal amount; and so on through at any point of a whole revolution. The sum of both working powers is a constant quantity equal to the greatest power of *one cylinder*, and may be represented by unity. Thus, one set at the dead point, the other at full power, makes the formula 0 plus 1 equals 1. One of them having gained one quarter, and the other having lost the same amount, makes the formula stand ¼ plus ¾ equals 1. Again, in the same way, ½ plus ½ equals 1, and so on through the entire revolution.

Of course the steam valves and all the apparatus are connected with and worked by the engine itself, after it is once set in motion.

MAN'S FOOD.

WHAT do men really live upon? The answers will be various enough. The Guacho, who in the wild pampas of Buenos Ayres, managing his half-wild horse with incredible dexterity, throws the lasso, or bolas, to catch the ostrich, the guanaco, or the wild bull, consumes daily from 10 to 12 pounds of meat, and regards it as a high feast day when in any hacienda he gains a variety in the shape of a morsel of pumpkin. The word bread does not exist in his vocabulary. The Irishman, on the other hand, regales himself in careless mirth on his "potatoes and point," after a day of painful labor, he who cannot help making a joke even of the name he gives to his scanty meal. Meat is a strange idea to him, and he is happy indeed if, four times a year, he can add a herring to season the mealy tubers. The hunter of the prairies lays low the buffalo with sure bullet; and its juicy, fat-streaked hump, roasted between two hot stones, is to him the greatest of delicacies. Meanwhile, the industrious Chinese carries to market his carefully fattened rats, delicately arranged upon white sticks, certain to find a good customer among the epicures of Pekin; and in his hot, smoky hut, fast buried beneath the snow and ice, the Greenlander consumes his fat, which he has just carved, rejoicing over the costly prize, from a stranded whale. Here the black slave sucks the sugar cane, and eats his banana; there the African merchant fills his wallet with sweet dates, his sole sustenance in the long desert journey; and there the Siamese crams himself with a quantity of rice from which an European would shrink appalled. And wheresoever over the whole inhabitated earth we approach and demand hospitality, in almost every little spot a different kind of food is set before us, and the "daily bread" offered in another form.

THE setting of a great hope is like the setting of the sun. The brightness of our life is gone. Shadows of evening fall around us, and the world seems but a dull reflection—itself a broader shade. We look forward into the coming lonely night. The soul withdraws into itself. The stars arise, and the night is holy.

THE ordinary employment of avarice, is the mark of a petty mind; and it almost always happens that he who uses it to cover himself in one place, uncovers himself in another.—*La Rochefoucauld.*

THE NEW TERRITORIES.

KANSAS.—This territory comprises all that district of country west of Missouri and East of New Mexico and Utah, lying between the 37th and 40th degrees of north latitude. It is 180 miles in breadth, and extends west about 800 miles. Its southern boundary is on a line parallel with the mouth of the Ohio river, or about fifty miles south of the southern part of Indiana. The line of the 40th degree of north latitude, which is the north line of the Territory, is about ten miles north of Indianapolis. It crosses the Missouri river about 30 miles north-west of St. Josephs, near the mouth of the Great Nemeha. The eastern part of the Territory is unsurpassed in beauty and fertility. Timber at some points is scarce. The country is dry, and the soil rich and productive. The Missouri washes the eastern boundary for 180 miles. The Kansas, a noble river, navigable for steam-boats for about two hundred miles, flows through the centre of the Territory. The southern portion is watered by the Neosha, a branch of the Arkansas, and the head waters of the Osage. The Arkansas river rises in this Territory, but flows into the Cherokee country, about 150 miles west of the Missouri line.—The country is well watered by never-failing streams. Lime stone rock and stone coal is found in abundance at different points. The following tribes of Indians now reside in this Territory:—Ottoes, Missouries, Iowas, Sacs, Foxes, Kickapoos, Delawares, Shawnees, Miamis, Weas, Pinkeshaws, Pottawatomies, Wyandots, Kanzas and Osages. The Pawnee, Comanche, and other wild tribes reside in the western portion of the Territory.

NEBRASKA.—This Territory comprises all that country lying north of the 30th parallel of latitude, up to the British Possessions, and between the Missouri river and the Rocky Mountains. The Nebraska or Great Platte is the principal river. The Missouri washes the eastern boundary. Much of the country is a vast plain covered with grass; but wholly destitute of timber. The south-western portion of the Territory is a very desirable country, especially that part in the vicinity of Council Bluffs, which has recently been acquired by purchase from the Omahaw Indians. Council Bluffs will soon become an important point for the trade and commerce of the Upper Missouri, and Western Iowa.

KEEP YOUR PROMISES.

WE have often been shocked by the reckless disregard which many persons manifest for the fulfilment of their promises. They are ever ready to make engagements for the future, but when the time arrives for their fulfillment, they seem to have forgotten it entirely—or at least treat them as though they involve no obligations whatever.

Such conduct is highly injurious in its influence on society, inasmuch as it necessarily tends to destroy the confidence of man in man, which is so essential to the happiness of the community. It is especially detrimental to the interest of the individual himself, who is guilty of it, as he thereby forfeits the respect and confidence of his fellows. His word, accordingly, is not relied upon, and he is obliged to suffer all the unhappy consequences. This singular and injurious habit is one of the most inexcusable of which any man can be guilty.—In ninety cases out of one hundred there is no absolute necessity whatever, for any one to break his word.

No one should ever make a promise unless he looks well into the circumstances before hand, and has every reason to believe that it will be in his power to fulfil his promise. And whenever a promise has been made, it should be his fixed determination to keep it, and with a peculiar reference to this, his subsequent conduct should be shaped.

Were this course faithfully pursued, not only would the serious evil resulting from a disregard of one's word be avoided, but also the confidence of those around speedily gained and enjoyed, and a character thereby established that will be of more value than "ermine, gold or princely diadem."

NOTHING begets confidence sooner than punctuality. Nothing so well becomes true feminine beauty as simplicity.

A DIRGE FOR THE BEAUTIFUL.

BY D. ELLEN GOODMAN.

Softly, peacefully,
Lay her to rest;
Place the turf lightly
On her young breast,
Gently, solemnly,
Bend o'er the bed
Where ye have pillowed
Thus early her head.

Plant a young willow
Close by her grave;
Let its long branches
Smoothly wave;
Twine a sweet rose tree
Over the tomb;
Sprinkle fresh buds there—
Beauty and bloom.

Let a bright fountain,
Limpid and clear,
Murmur its music,
Smile through a tear—
Scatter its diamonds
Where the loved lies,
Brilliant and starry,
Like angels' eyes.

Then shall the bright birds
On golden wing
Lingering ever
Murmuring singing;
Then shall the soft breeze
Pensively sigh,
Bearing rich fragrance
And melody by.

Lay the sod lightly
Over her breast;
Calm are her slumbers,
Peaceful her rest.
Beautiful, lovely,
She has but given,
A fair bud to earth,
To blossom in heaven.

[Written for Moore's Rural New-Yorker.]

THE GARDEN.

ALL nature is hushed, and in quiet reposing. The chill dews are upon the open fields, and the shining orbs adorn the sky. A little company, led by their Divine Master, seek the seclusion of the Garden of Gethsemene, a hallowed spot, rendered sacred by the voice of prayer. The disciples, weary with the toils of the day, seek repose in sleep. They are all unconscious of the dreadful burden that their Saviour is about to bear. To Him it is an hour of trial, of agonizing prayer, and extreme anguish.

A load of guilt, not His own, presses with overwhelming weight upon His soul. Now, surely is the cup of His sorrow full. Humanity is ready to sink, and ask release from this bitter cup. He pleads, and pleads again; yet with holy resignation He exclaims, "Not as I will, but as Thou will." Can it be that His Father, who is all love, will disregard this earnest entreaty? Yes, for it is appointed for the Son to bear the load of human guilt, and secure a ransom from impending woe. Who can measure the depth of that love, which prompts to pay *such* a price for the salvation of dying man? But the scene has not yet ended. Behold an armed band coming to this secluded spot! What purpose has brought them hither at this midnight hour? Have they come to share in the holy meditations of the hour, or to hear words of peace from a Saviour's lips? No; they come with fiendish purpose, to seize the suffering Son of God.—Without resistance, he is led away to the palace of the high priest.

Thus ends this last visit to that consecrated and oft-frequented garden. It has been the scene of holy meditation and of ardent prayer. Here have the disciples received many a word of comfort from the lips of their Divine Master. Here have they enjoyed the refreshing breeze, and the still more refreshing presence of their Lord and Redeemer. But now how changed the scene. The quiet of the hour is broken, and sorrow fills every heart. Their fondest hopes seem blighted, and despair is seen in every face. But there is a hand by them unseen, controlling every act, bringing light out of darkness, and joy out of extreme anguish. This night of the world's blackest crime, is an important epoch in the history of human redemption. This hour of the Saviour's grief, is the dawn of a new life, even salvation forevermore.

A. D. W.

University of Rochester, July 11, 1854.

THE CHURCH BELL.—Among the many incidents which cause the mind to revert to the scenes of "long, long ago," none make more pleasing recollections, or tell more of "Auld Lang Syne," than the sound of the old church bell, whether in the city or country. Swinging in its tower, the sounds are always eloquent to the reflective mind. In childhood, its mysterious yet touching tones are the first source of wonder, and in after years are sweet, sacred music to the soul. It has rung the funeral dirge for father, mother, brother and sister, and yet it still rings on, its sounds no less thrilling than when for the first time it broke upon the perfect stillness which has so often echoed its well-known voice. Wonders have ceased to be wonders in thy hearing, old bell, and thou hast rung until thy voice is as familiar as that of an old and dear friend. How many of them will think of this, and pause for a moment's reflection, when the old church bell shall again ring from its tower.—*Albany Transcript.*

LET you be ever so pure, you cannot associate with bad companions without falling into bad odor. Evil company is like tobacco smoke—you cannot be long in its presence without carrying away taint of it.

Miscellaneous.

[Written for the Rural New-Yorker.]

SUMMER.—A PASTORAL.

How with delight my ardent bosom thrills,
Warm with the hope this pleasant hour instills,
While 'round me all with open hearts and ears,
The intelligent of youth and riper years;
Pure as the joy returning Summer brings,
Pure as the stream that from the mountains springs,
The soul's deep gratitude unconscious flows,
Dissolving hearts in Nature's kindred glows.

Lo! from the South the lovely season flies,
Borne on the breeze to these more genial skies,
Fair as the morn in silvery gems adorn'd,
The soul of nature—life of all things form'd.
With wealths ambrodial, soft her brow is pressed,
And golden fruits her bosom rich invest;
And earth and skies with sweetest smiles suffus'd,
High lift their voice to tuneful praise unused.

Now varied charms possess the ravish'd sight,
And op'ning grace the senses well delight;
Reviewing wide, the plains in softest green,
Extend afar most happy to be seen;
And field by field the ripening harvests stand,
All waiy now by gentle breezes fann'd;
While with the first gray light of balmy dawn,
Ere Phœbus rushes upon the lifted hills;
The farmer, joyous with the lark's gay song,
Is heard far down the mead, with round throng,
Whose jocund laugh and merry ringing steel,
Loud rise upon the air in many a peal.
The flitting bobolink with crazy haste,
Quick rising, twirls on easy wing chair,
As wild with glee he strains his polish'd throat,
In some short prelude, or melodious note.
The red-breast, cheerful with the morning sun,
Resumes his scale with peremptory run;
While, seized with mirth at each vain warbler's strain,
The mimic cat-bird sings them o'er again.

But come into the wood, or leafy glade,
While the air is fresh and cool with shade;
Come, while with praise the wildwood deep resounds,
And birds pour forth their clear mellifluous sounds.
Thee, love, thro' every spray pure harmony breathes,
And gladness issues from the ravish'd wreaths;
And valleys, charm'd, to valleys give reply,
And 'gen the rocks, reverberating, cry.

Deep in the forest, from noisy stir remote,
In wild vastness thro' which cool breezes float,
O hasten on, nor cease where grandeur dwells,
My wand'ring steps;—the narrow winding dells,
The wide-extending grotto, horrid, deep,
Where screeching owls, their nightly revels keep;
The cliffs high towering, dashing with the sea,
The mountain, down whose sides the torrents run,
Hoarse thundering, spreading devastation round,
Commingling earth and trees, fierce sweep the ground
In rare dense rushing mass: these, these sublime,
Entrance the sight, and feast the soul divine.

But see! at high meridian walks the noon,
And Nature, languid, sinks in general swoon!
The husbandman, with steps relax'd and slow,
Reseeks the shade his weary members know;
The lolling ox—submissive friend of all—
Unharness'd, seeks, beneath the sunbeam's fall,
The cooling pool, sweet umbrage and repose,
And there enjoys the dear forig'rate screen;
The bleating flocks along the fences trail,
And low'd, their faces 'neath the bushes veil,
From teasing flies, and insects gay with heat,
Infesting long, most bold in sanguine feat.

The hawk alone, on towering wing, ascends,
Thro' glowing ether high above the plains,
And in confined circles cuts the air,
Or, darting, drops as with the lightning's glare,
From lofty poise, his deadly taloas spread,
And swoops the wretched dove, transfix'd with dread,
And bears him quivering to the fatal wood,
A victim, mangled and chill'd with blood.
Perch'd 'pon a branch the wily villain rest,
Best o'er his prey with claws deep in its breast,
Oft peering, guarding with distended eye,
As tho' in fear some foe were lurking nigh.
Hid thus from view the murderous wretch delays,
And at his leisure 'pon his victim preys.

But now the circling hours begin the sky,
With crimson, azure golden tints that lie
Skirting the calm horizon, soft'ning, mild,
As sinks the day-god, dancing o'er the hills,
Yet peaceful verge of night. The shadows flit,
Fantastic o'er the checker'd lawn, where sit,
Cheer'd with the scene, and music of the hour,
Perchance in amorous mood, 'neath some sweet bow'r,
The sylvan youth, and his bright charming fair,
Cheerful and lovely as the twilight air.

'Tis now, delighted most, oh bear me hence,
To some enchanting spot, some grove immense,
Or thro' ambrotial gardens, broadly spread,
Give me to stray by some fair Flora led;
When Nature woos, benignant in her bloom,
Charging the zephyrs with hallow'd perfume;
When murm'ring by, the purling rills rejoice,
Dancing to music of the Naiad's voice;
'Tis then sweet music lends her holiest charms,
And Love and Harmony go arm in arm.

Thus pass'd the hour, the evening twilight spent,
Night draws her curtain 'round with kind intent;
Earth, left at last, reclaims that she hath given,
And quiet, drinks the nectar drops of heav'n;
Infusing vigor, breathing peaceful sleep,
Thro' all creative life, imbuing deep
With renovating power, mankind the blest,
As worn with toil they calmly sink to rest. J. W. C.

THE BELLE BOY.

Two specimens *ejus nomenis* have already been presented, and there is one other yet to come, to wit., the Belle Boy; or, in other words, 'The Ladies' Man. In the ordinary acceptation, it is a term of contempt, and stamps upon a man a character as unenviable as it is contemptible. Who can not call to mind within the circle of his acquaintance, the Ladies' Man, decked out with finery, rings, and chains, perfumery and gloves; proud of his lily fingers and bear-greased pate, as destitute of brains as it is profuse in Mucassar. Smiling as a summer day, he lavishes his compliments upon young ladies, especially if they happen to be good-looking, or well dressed, or have honorable or wealthy papas!

Scorning honest labor, either of the hand or brain, if compelled by the force of circumstances to do something for a livelihood, he lets himself to a pin and needle vender, or some person of kindred employment, and introduces himself into a station which could much more appropriately be filled by the sex which is the pretended goddess of his idolatry; thus circumscribing the range of female employments, and compelling the poor friendless woman to receive lower wages for her toils. He affects to worship the sex, to be the champion of woman; while, at the same time, he stands in the path of her advancement, and looms up like a blighting shadow across her way. He would run after, and pick up a lady's handkerchief and present it to her, with all the grace of an Adonis; but his heart is too black and craven to save her from a yawning gulf. He would go down on his knees before a belle in silk, while, at the same time, he would spurn a starving beggar woman in the street. He carries himself loftily in the presence of the hard-fisted artizan, the bronzed agriculturist, the industrious student; and shows his delicately-moulded proportions off proudly beside their rougher-hewn exterior; but he turns no thought either to the paucity of his own head, or the vileness of his own heart. He can smile, and play the polite parts at an evening party or a public reception; but he knows nothing of that chivalrous devotion to the sex, such as distinguishes the true man from the false.

An honest admiration of woman, a high and holy reverence for her, a feeling of genuine friendship for the sex, such as would induce a man to sacrifice his own life for her protection; such as would cause him in case of a shipwreck, to place her upon the plank, and trust his own safety to the vigor of his arm; such as in a conflagration would prompt him to effect her rescue before his own; such as makes a man an obedient son, an affectionate brother, and a loving husband, is a true test of greatness of soul; but this test is by no means confined to the man of polished exterior, or aristocratic pretensions. It is not uncousonant with even a rosty garb and uncouth manners, although as a general thing, it goes hand in hand with high moral and mental cultivation. The lower a man sinks in the scale of being, the less consideration he feels for the female sex. The genuine savage is always the tyrant of his wife, and he only becomes her chivalrous protector, so far as he elevates himself in the intellectual and moral scale.

There is no trait in a young man's character more worthy of commendation than a true admiration for the character of woman; an admiration which would induce him to protect her from insult, shield her name from defamation, and remove obstacles from her pathway, too often hedged in by thorns. It shows unmistakably that his youthful training has been under the eye of a judicious mother; that he has been reared under the roof where female influence has shed its genial rays, and that the lessons of his childhood will not be lost upon him in after years. Such an one is not the "Belle Boy" it is our purpose to condemn.—We would hold the former up as an example worthy of imitation, the latter as one of contempt; pure gold in one case, glittering tinsel over a base metal in the other; and the touch-stone of adversity or peril would develop each in its true character. The former grows brighter the more it is rubbed; the latter blackens under the same process irretrievably.

[Written for the Rural New-Yorker.]

CHILDHOOD AND AGE.

There are, within the sound of my voice, two characters, showing the harmony of childhood and age, of summer and winter. Come, S., and watch them from my window. See how, with a woman's watchfulness, that man of eighty guards in her play the child for which even a mother has little anxiety, while attended by him. Mark how he leads her to the gravelled track, and while she plays with the pebbles, snatches to snatch her away at the approach of a carriage. How he must love that child, to control his aversion to dogs, and, for her sake, caress her "bow-wow," till at last he has learned to love the poor brute, which, without her, is only less lonely than himself—He shares her joys, and takes part in all her sorrows.

I know nothing of his history or character, save as exhibited in his devotion to that delicate child—for she is almost his only associate; but O! it is a loving heart against which she rests, as he bears her in his arms. Why did he never marry? Was there never one willing to gladden his heart by placing her image in its every chamber? Is this little child his first love? God can tell.

But I know many a woman is won by a man who, with all his superiority of intellect and polished address, loves far less purely than that simple old man, whose heart rejoices in the thought that there is one on earth for him to love. Sussac.

Good manners is the art of making those people easy with whom we converse. Who ever makes the fewest persons uneasy, is the best bred in the company.

Men are sometimes accused of pride, merely because their ancestors would be proud themselves were they in their place.—*Shenstone.*

"MARRIED YESTERDAY."

Every day in the journal that with the first gleam of the sun is flung within our portals, we read this little sentence:—"Married yesterday, So and So." Every day there is a wedding-feast in some of the mansions of earth; a clasping of hands and union of hearts in the dim aisles of some holy temple; a pledging of eternal love and constancy during all the hours that are yet to come down, like spring flowers upon life's pathway. Each day some new marriage-crown is put on, and she who wears it, leaning upon him whose love is the brightest jewel set amidst its leaves, steals away from the "dear old home," and nestles tremblingly in the fairy cot where Love's hand has trained the honey-suckle over the latticed porch, and placed Æolian lyres in all the casements.

"Married Yesterday."—There are pearls and gold shining now amid the flowers that fringe Love's pathway, and stars gleaming like great chandeliers in the firmament of Hope.—There are harps tinkling now whose melody is sweeter than the sound of evening bells, and joys falling like a shower of amethysts upon the hearts that yesterday were void. Life now is become beautiful; the soul soars upwards from the dust, like a dove loosed from its cage; there is melody in every breeze and every place; yea, there are angels in every path, with crowns for those who are pressing onward with song and prayer.

"Married Yesterday."—It seems now a long distance to the grave—a long road to the final rest. But soon the shadows will come, and life lose its summer bloom. Then, as the patter of tiny feet is heard about the grandfather's house, and little burns cluster about his knee, who were "married yesterday," mayhap will turn back to the records of the past, weeping silently the while, remembering that their summer is gone, their harvest ended, and that soon, gathering up their sheaves, they must pass beyond the gates of pearl, where will evermore be but one marriage—that of the Lamb with his chosen people.—*Newark Daily Mercury.*

Honest Labor.—Labor, honest labor, is right and beautiful. Activity is the ruling element of life, and its highest relish. Luxuries and conquests are the result of labor—we can imagine nothing without it. The noblest man of earth is he who puts his hands cheerfully and proudly to honest labor. Labor is a business and ordinance of God. Suspend labor, and where is the glory and pomp of earth—the fruit fields and palaces and fashionings of matter for which men strive and war! Let the labor-scoffer look around him, look at himself, and learn what are the trophies of toil.—From the crown of his head to the sole of his foot, unless he is made as the beast, he is the debtor and slave of toil. The labor which he scorns has tracked him into the stature and appearance of man. Where gets he his garments and equipage? Let labor answer. Labor makes music in the mine, and the furrow, and at the forge.

A Robin with Mechanical Tastes.—The Superintendent of the Portland Works, says they have a little overseer down there that commands the love of all the workmen. The boiler shop of an engine establishment, everybody knows, is just the noisiest place this side of Pandemonium—and yet this is the home which a robin has selected to bring up a flourishing family. She has built her nest right below one of the ventilators, through which she passes in and out. What could have possessed the creature to leave quiet groves and hedges, for a residence amid such an eternal clatter and hanging—is a question that would have stumped Audubon himself. But she seems to enjoy it—sits on her nest and feeds her young as unconcernedly as if she were in a deserted ruin. Perhaps Nature sent her there for the encouragement of the industrious fellows who are doing so much for the benefit and credit of our State.—*Port. Ad.*

Dialects of Birds.—I believe there is a dialect in the songs of birds. The song, for example, of a thrush near London, or even in any of the home countries, has little resemblance, except in tone and specific character, to that of the same in Devonshire, or near Exeter. The same notes, I suppose, will be detected, but they are arranged for the most part in a different tune, and are not sung in the same way. They are given with different valves, and the singing is pitched in a different key. One great distinction between the two cases is the number of guttural notes, of which the song of a Devonshire thrush is often made up, but which near London are heard only at the end of a bar, or even much less frequently; while those chief notes which mainly constitute the song of the other bird, and make it so impressive, are rarely pronounced by the Devonshire thrush.—*Jesse's Country Life.*

Seven Fools.—1. The envious man—who sends away his mutton, because the person next to him is eating venison.

2. The jealous man—who spreads his bed with stinging nettles, and then sleeps in it.

3. The proud man—who gets wet through sooner than ride in the carriage of an inferior.

4. The litigious man—who goes to law in the hopes of ruining his opponent, and gets ruined himself.

5. The extravagant man—who buys a herring, and takes a cab to carry it home.

6. The angry man—who learns the ophicleide, because he is annoyed by the playing of his neighbor's piano.

7. The ostentatious man—who illuminates the outside of his house most brilliantly, and sits inside in the dark.—*Punch.*

Dr. Arnold wrote poems on principle, but he never published them. Tom Moore tells of a gentlemen who, when he was short of money, always threatened his family with the publication of his poems. The immediate result was as much cash as he wanted.

Ladies' Department.

CONDUCTED BY A——E.

OF HOME.

BY ALICE CAREY.

My heart made pictures all to-day
Of the old homestead far away,
It is the middle of the May,
And the moon is shining full and bright—
The middle of May and the middle of night.

Darkly against the southern wall,
Three cherry trees so smooth and tall,
Their shadows cast—we planted all,
One morning in March, that is long gone by,
My brother Marian and I.

I hear the old clock tick and tock
In the small parlor,—see the thick
Unfeathered wings of bats, that flirk
To the moon-lit windows, and see the mouse,
Noiseless, peering about the house.

I'm going up the winding stairs,
I'm counting all the sacred chairs,
And softly saying, "They were theirs,
The brothers and sisters, who, no more
Go in and out at the homestead door."

I hear my sweet-voiced mother say,
"Leave, children, all the work to-day,
And go into the fields and play."
And the birds are singing where'er we go—
How beautiful to be dreaming so,

And yet, while I am dreaming on,
I know my playmates all are gone;
That none the hope of our childhood keep
That some are weary and some asleep;
And that I from the homestead am far away
This middle of night and the middle of May.

[Written for Moore's Rural New-Yorker.]

COUNTRY MOONLIGHT SCENES.

A little white cottage, partially hidden by trees, exceedingly "simple and unpretending" in its appearance,—one that would scarcely be noticed by a careless observer. Upon the left side of the walk leading to the door, may be seen a splendid, time-honored Mountain Ash, which has enjoyed the sunshine and firmly borne the storms of many years—has been the pride and admiration of at least two generations, and yet it stands and yet it flourishes. Though its first admirers have long since been laid in the tomb, and the fair lips which spake its praise long since silenced, yet the hearts which now beat beneath its branches are not insensible to its beauty. The innumerable stars are all up, gemming the blue vault above our heads. In this very same spot years ago, with the very same shiners for witnesses, may have gone up to heaven, and been recorded, many a "whispered tale of romance." 'Neath these widely spreading branches stands a rustic seat, and upon it three figures are reclining—a guitar lying near, though as yet the strings remain silent, except an occasional vibration caused by the fanning wings of some careless zephyr, as it hastens to its frolicking among the misty, delicate foliage of the locust. Not a harsh sound dare break the holy quiet. Only the lulling roar of old "Kanyahoora," and the faint, happy chirp of the cricket may be heard.

"Come," says cousin James, (the only gentleman of the party,) who had remained some time in silent meditation, "what say you for a sail, girls? 'Tis not well to allow this splendid moonlight to pass unimproved; and see, the river is calm and quiet to-night as an angel's brow."

"Is it not too late?" says Madge, (a sprightly little black-eyed Venus.) "The town clock has already struck the hour of eleven, and that ought to be a sufficient admonition for me to return to my home."

"Pshaw!" says James, "'tis never too late to enjoy such an evening as this. Come, come you sad paragon of propriety; do not think of wasting this glorious night in idle slumber.—I'll settle it with old Morpheus."

James has at last proven, to his own satisfaction, that his persuasive powers are mighty. A moment more and the trio are seated in a little skiff and pushing from the shore. The great "Universal Beautifier" never shone upon a happier group. The sky was as clear and radiant as the eye of childhood, and pure as if made for angels to travel. Each ripple was mirrored in the bosom of the clear stream o'er which we so gracefully glided. Our sagacious little boat, guided by an experienced oarsman, seemed not afraid to venture to the very edge of the rocks, over which the merry ripples seemed dancing a hornpipe. The edges of the rocks o'er which the water poured, were silvered with "fairy moonlight," and the proud old queen of night, casting not a whit for our steady, impertinent gaze, seemed quite conscious of her own beauty. Indeed the longer we gazed the more expanded her honest Yankee countenance seemed to grow,—for it was now at its full.—The stars, "mansions built by nature's hand," seemed also to look down and twinkle more brightly upon observing the reflection of their bright eyes; and the stars in the water tried in vain to rival in brilliancy those of the heavens. Alexander Smith's beautiful lines seemed only *too* applicable upon this romantic occasion:

"Sorrowful Monat seeming so drowned in woe,
A queen whom some grand battle day has left
Unkingdomed and a widow, while the stars,
Thy hand-maidens, are standing back in awe,
Gazing in silence on thy mighty grief."

In vain did the mountains of clouds threaten to hide from our view her radiant face, for each time did she emerge from them and stand forth in brilliant defiance. O'er many a dark cloud did she "throw a silver lining," nod though for awhile nought but dense darkness could be discovered, there would at last roll up a bright silver edge, showing us that behind many a dark frown there is hid away a soul-cheering smile. How much we enjoyed the victorious rising of some tiny cloud, over a huge one that threatened to destroy it, so like a timid soul just rising from obscurity, treading on (unperceived) toward the intellectual horizon. For a time it may not be noticed, so small is its appearance, so unostentatious in its display, yet suddenly it rises, as by magic, and supersedes in its brilliant career many a huge cloud which had long defied its approach.

We could have watched those clouds forever. They fill one with such towering ambition, lofty hopes, and heavenly aspirations. On the shore opposite (called the "sand-bar,") stand several magnificent elms, whose branches, gracefully veiling their ancient trunks, kissed the moonlighted water. Under the soft shadow of these (the most graceful of all our trees) we finally halted; the shining oar was carefully laid upon the edge of our bark, we sang a sweet farewell ode to moonlight, and paddling for our own shore, returned home to ramble down to dreamland through a path shaded with pleasant thoughts.

Can the intellectual *stars* of Maple Grove, Idle-wild, or Sunny-side, with all their ardent admiration of Moonlight, Music and Love, (for we had them all,) find in their suburban retreats a more romantic spot than Valley Home and Old "Kanyahoora?" S. W. E.

Newport, July, 1851.

THE LAND BEYOND THE RIVER.

It was a lovely day. The balmy breath of June wafted the rich fragrance of the summer flowers, while the warbling songsters of the grove chanted sweetest melodies in their Creator God: and in their most melodious strains, vied with all created nature in rendering praise to the Fountain of all blessings. The golden orb of day was just sinking behind the western wave, and its last lingering rays, as though loth to leave the scene, still shed their halo of mellow light upon it, lighting up the arch of heaven, and gilding the fleecy clouds with the tints of Paradise. The whole scene is one of surpassing loveliness. But, kind reader, while your heart is filled with praise and love to the bountiful Giver of all good, go with me and learn to adore his richer love.

Little Ella was dying. Pain no longer racked her weary limbs. Under the touch of the icy hand of death, the fever that for days had been drying the blood in her veins was rapidly cooling, and the flush was fading from her thin cheek. The dying little one was dear to many hearts; theirs was the grief too deep for utterance, and in the silence of bitter, tearless agony, they stood around her dying couch, for they knew that she was departing. The father and the mother and the kind physician stood bending over the form of the lovely child, watching her labored breathing. In apparent sleep, she had for sometime been silent, and they thought that it might be thus she would pass away. But suddenly her blue eyes opened, and a smile of heavenly sweetness rested upon her features. She looked eagerly forward at first, then turning her eyes upon her mother's face, said in a sweet voice—

"Mother, see that beautiful country beyond those dark rushing waters. O, how beautiful! What is the name of that country, mother?"

"I can see nothing, my child," said the mother.

"Look there, dear mother," said the child, pointing again, "can you not see it now?"—See how those angry waves dash against those rocks; and oh! what a beautiful country beyond—the sun shines so pleasantly, and I see such beautiful flowers, and the birds sing so sweetly; oh! they are so near me now, I can almost touch them with my hand, and the people all look so happy there. Oh! papa, can you not see beyond the river? Tell me the name of that land."

The parents exchanged glances, and replied together. "The land you see is heaven, is it not, my child?"

"Oh, yes, that is its name; I thought it must be heaven. Oh, let me go. But how shall I cross that deep, dark river? Father, carry me, will you not? See, the angels are waiting for me on the other side; they are holding out their arms for me. Oh, father, take me in your arms, and carry me across the river. I must go."

A solemn awe pervaded the room, as if they stood upon the very verge of eternity—as if the curtain was about to be withdrawn that concealed the unknown glories of the eternal world.

"My child will you not wait with us a little longer?" said the father; "stronger arms than mine will soon bear you across the river. Stay with your mother a little longer—see how she weeps at the thought of losing you."

"Dear mother, do not cry, but come with me and cross the stream. Come, father, come—angels are whispering in my ears, and I see one standing upon the other shore who is smiling upon me, and stretching out his arms to take me. Now he is coming down into the river to carry me across. I must go—come with me!" And stretching out her little arms for the last embrace, she said, "Good-bye, father—good-bye, mother. Don't you be afraid; he has come to carry me safely across the river."

And these were her last words. Gently did they lay her fair form back again upon the pillow, and kneeling at the bedside, those grief-stricken hearts thanked God for this lesson of love, and prayer for resignation, saying, "The Lord gave and the Lord hath taken away, blessed be the name of the Lord."

MOORE'S RURAL NEW-YORKER

ROCHESTER, JULY 29, 1854.

Extreme Heat.—The Cholera.

During a portion of last week, the heat of the weather was greater in this, and many other localities, than for several preceding years. On Thursday and Friday the thermometer rose to 95° and 98° in the shade, in this city. In eastern cities—Albany, New York, Philadelphia, Boston, etc.—the range was from 96° to 102° in the shade—the hottest weather recorded for eight or ten years. Letters from farmers in various parts of Western New York, speak of the recent weather as the hottest and most oppressive they ever experienced—greatly impeding harvesting, and other out-door labor.

The prevalence of the cholera in other localities has induced the Rochester Board of Health, and the citizens generally, to take extraordinary measures against the epidemic; and thus far their efforts have been crowned with the most gratifying results. It is true that a few scattering cases of the disease, or something very nearly resembling it, have occurred during the past week, and some of them proved fatal; but the victims were mostly foreigners, addicted to intemperance, inhabiting filthy localities, and making use of improper food. As a general thing the city has rarely, if ever, been more healthy during the warm weather, than at present.

Fight between Irish Leaders.

Thomas F. Meagher, the Irish patriot, who last year escaped from the British penal colony in Australia, and has since been lecturing in this country, as also publishing a paper in connection with John Mitchel in New York, and James A. McMaster, the editor of the *Freeman's Journal*, the Roman Catholic organ in New York, had a street fight in that city last week.

McMaster has been publishing in the *Journal* articles against Meagher, in that strain of peculiar and vindictive bitterness for which he is so famous. This fired up the temper of the patriot, and he sought out and attacked McMaster in the street. The latter, expecting an assault, had provided himself with a loaded cane and a revolver; the former was wrenched from his hand by Meagher, who applied a cow-skin vigorously to his shoulders, and finally knocked him down. McMaster, in the melee, fired off one barrel of the revolver, the ball of which grazed Meagher's forehead, and the powder blackened his face. As he was about to fire the second shot, however, a boy standing by wrenched the pistol out of his hand, and his antagonist, as above stated, knocked him down. The police at this time coming up, took both parties into custody, and a "Squire" put them under bonds to keep the peace.

The *Journal* man with the revolver, came very near performing what has hitherto been considered an impossible feat, to wit: making a *know-nothing of an Irishman*, in which case it would probably have been inserted in the next catalogue of miracles, *Ex Cathedra*.

Great Drouth.—*Fires in the Woods.*—We regret to learn that a severe drouth is prevailing in Steuben and Allegbany counties, and other southern portions of this State, and adjacent localities in Pennsylvania. The drouth is said to be intense—no rain having fallen for weeks.—The editor of the American, who has recently returned from Potter county, Pa., passing thro' a portion of Allegbany county, says the streams are dry, and the fields parched and sere.—Thousands and thousands of acres of woodland are on fire, and great destruction of property is taking place. The inhabitants are out fighting the fire, which slowly and resistlessly is moving on to further ruin, and threatening houses and barns. Fires also are raging in McKean and Warren counties, Pa., in the extensive lumber districts of that wild region. It is fearful to see a vast section of country thus given up to destruction. One may ride for forty or fifty miles together, and never be out of sight of the fires that rage in every direction. A drenching rain will put an end to the ravages of this element.

The Havre steamship Franklin grounded in a fog, on the south shore of Long Island, during her inward trip last week Tuesday. Her cargo has been taken out, a portion of it in a damaged state, but the steamer is likely to prove a total wreck. She has been driven by the tide over the outer bar, and lays straining and cracking broadside to the force of the surf.

This line of steamers has been exceedingly unfortunate, as the Franklin's consort, the Humboldt, was lost in a similar manner a few months since, near Halifax. The loss on the Franklin is probably covered by insurance.

The New York & Erie Railroad have issued an order to their conductors to charge all passengers ten cents extra who pay their fare in the cars. The object of the regulation is to induce travelers to purchase tickets at the stations, as it facilitates the business of conductors, and gives them more time to look after the duties of running their trains. It also furnishes an effectual check against the peculations of dishonest conductors, if any such are there to be. The New England roads adopted a five cent extra charge of the kind years ago.

Congressional.

The cholera has not been sufficiently malignant in Washington to frighten Congress out of the Capitol. The Senate have done some good things, as well as some bad ones, during the week, the following being the principal of each kind, named indiscriminately, and leaving the reader to give each the characteristic, good or bad, as suits his own conscience or fancy. Mr. Spooner presented memorials asking the repeal of the Fugitive Slave Law.

Mr. Pettit, of Ind., asked that the Committee on the Judiciary Affairs be discharged from further consideration of petitions for the repeal of the Fugitive Slave Law, as he was of the opinion that any legislation upon the subject at the present time was wholly inexpedient. The request was complied with.

The bill making provision for the better preservation of life and property from shipwreck or other disasters on the coast of the United States, was passed, as also was the resolution fixing the compensation of the employees of the Senate, and the joint resolution fixing the pay of officers and messengers of both Houses of Congress, and prohibiting extra pay for services.

Senator Pettit's resolution to print 20,000 copies of the Nebraska and Kansas bill, was adopted.

The most important bill passed was the one known as "The Homestead Bill," which gives 160 acres of land to persons settling in the territories, who will locate upon and cultivate the same for five years. This bill, it is rumored, will receive the Executive veto; and it is quite probable, judging from the fate of the grant of land for the benefit of the indigent insane. The Civil and Diplomatic bill, and the Texas Indemnity bill, were considered, but not finally acted upon. A number of private bills were passed.

In the House, Mr. Phelps asked leave to introduce a bill in favor of incorporating the territory acquired by the Treaty recently concluded with Mexico into New Mexico.

Most of the week has been consumed in discussions on the Army Appropriation Bill, and in considering and disposing of amendments thereto. The bill reported by Mr. Olds from the Post Office Committee, proposing to raise the rates of postage on newspapers and periodicals, was decently interred by a vote to lay on the table, 76 to 67.

The examination into the alleged attempt to bribe through an extension of Colt's patent on revolving firearms, is still in progress.

Notes by the Way.

The People's College—Southern tier of Counties—N. Y. and Erie Railroad, and its Superintendent—Binghamton, &c.

I had occasion to attend the annual meeting of the stockholders of the People's College, held at Binghamton, on the 12th inst. Few who have only been in the central and western part of the State, have any adequate idea of the beautiful country which is found in what has been so long known as the southern tier of counties. I do not believe there is a more charming ride in the Union at this season of the year, than from Hornellsville to Binghamton, on the New York and Erie Railroad. The meeting of the stockholders was much larger than had been anticipated. Among the new trustees elected, are Gov. Hunt, Horace Greeley, D. C. McCallum, the celebrated Superintendent of the N. Y. & E. R. R.; and let me make a note of it now, since his appointment, the road has become one of the best managed in the Union. Its trains move with remarkable accuracy; and the promptness with which all property is now carried over it has largely increased its efficiency and success. Few men possess the requisite qualifications for the successful superintendence of a railroad. Among that few, however, Mr. McC. is first and foremost. His directions to the engine drivers, of "*safety first, and speed afterwards*," has given the public a confidence in the road never before possessed, especially since he showed that there was a power and a will to make every man upon the road responsible individually.

But I intended to say something about Binghamton, and the business which is going on there. I was very much gratified to see that a large and rapidly increasing trade has sprung up on the Chenango Canal, which terminates here. Iron ore is brought from Clinton county, by the way of our canals, and shipped hence to the iron works in Pennsylvania, while the coal from her beds is shipped to the north by the return boats, many of which were waiting for loads, the Scranton Railroad not being able to deliver it as fast as wanted. Ultimately, a large business must be done here in coal and iron.

The Syracuse and Binghampton Railroad is in a forward state, and will be completed at a very early day. This will be of great importance to that part of the State between those two points, as it is now rather isolated.

The crops are more or less injured by the dry weather, and the weevil, that almost universal pest of the wheat crop this year. If Dr. Fitch, who is engaged by the State to hunt up all the bad bugs, can put us in the way of getting around this little vagabond, he will have done a great service. Yours, P.

Seymour's Grain Drill is a superior machine, and possesses some peculiarities and advantages not claimed for others. His Broadcast Sower is also a valuable and popular machine, worthy the attention of grain-growing farmers. We have heretofore strongly recommended these machines to the public, and would now direct the attention of all interested to Mr. S.'s advertisement in this paper.

Sight Notes from the West.

Waukegan City, Lake Co., Ill., July, 1854.

Friend Moore:—Having just returned to this city, from a five weeks' tour through the great State of Wisconsin, I propose to discourse about the country, soil, crops, &c. Could and would write a long yarn, but not being a "man of letters," propose a *Belle*-letter of small items in a practical way.

The crops here in Northern Illinois are excellent—never better. The land north of this place, and between this and Milwaukee, is of two general varieties; from this to Kenosha (old Southport), the land is level, and chiefly of the Prairie sort—burr oak openings, soil black and deep—distance fifteen miles. Kenosha was one of the *fast* cities, but now they "sort to give out;" now it is on the rise, and we are assured is going ahead in a proper, direct course, and sure of a permanent locality—with a *live* prospect of adding, and at a rapid pace, to its present 6,000 active population. The city has many excellent buildings, a splendid park, and many valuable and permanent fixtures of a desirable character.

The soil and crops further north—a distance of eleven miles to Racine—are quite similar to those south.

The soil between Racine and Milwaukee, near the Lake, resembles that upon Lake Ontario, in the best portions of Orleans and Niagara counties, New York. The crops are generally good—the winter wheat plenty and excellent. The land from Racine to Burlington (twenty-three miles west,) is chiefly rolling prairie, and of the best kind for all sorts of farming—average price $2# per acre. In some places in the town of Burlington, the wheat is badly "used up" by the locusts. Have seen no locusts except in this vicinity. In the edge of Walworth county, town of Hudson, the crops are excellent. The town is made up of prairie and openings. Here the Mormons flourished years ago. Lime of a superior quality is made here, and quarry stone, for buildings and pavements, is found in great quantities. Waukesha, or the south, is a "timber" county, and a good one for farming and fishing. (All the counties I have traveled thro' abound in beautiful lakes, located, apparently, "expressly for family use.")

Dodge is also a prairie and "openings" county, with a good sprinkling of "timber" land.—Has valuable iron ore beds in it, which are now being worked with good success. A good quality of cast iron ("litters of pigs") is made at $9 a ton. This mineral abounds in great abundance, and is wrought with much profit. Juneau, the capital town of the county, is in an oak grove of great beauty; it is as yet a small village, but, like all the rest, growing. Its principal men are eastern—enterprising and progressive. Fond du Lac, bordering upon Dodge on the north, is really a good county—the southern part is prairie, as is the northern portion of Dodge. At Waupun, on the county line, is the State Prison. This prison would compare favorably with the jail and yard in Orleans county, N. Y., though more numerously inhabited with vile animals, most of whom claim to be "down easters." Marquette, northwest, is a rich farming county, more than half prairie, of the best kind, and has a stout share of Western New Yorkers among its enterprising population. These are *all* good workers and rich livers. The crops are uniformly excellent and abundant.

This county abounds in magnificent lakes, delicious fish, prairie chickens and pork, while butter is said to be an indigenous commodity.

My next "epistle" will tell of Waushara, one of the newest and best counties in the State.—The *facts* in regard to it will prove interesting to farmers commencing on a limited capital, who desire ease and riches, and are willing to accept "an opportunity" on the other side of Fox River. Truly yours, Peter Saxe.

A Lazar House.

In consequence of various rumors concerning a large number of deaths by cholera at the Poor House in Buffalo, a large party of physicians and citizens visited the house on Saturday, July 21st, and found everything connected with the establishment in the most horrible condition.

Within twenty-four hours fifteen insane persons and seven sane persons had died of cholera, and four more were then in a collapsed state. The house was found to be so foul and filthy, that it was almost impossible for persons to enter it. Its inmates are in the most awful condition imaginable. On inquiry, it was found they had been kept on insufficient food, and that of the worst quality. Their regular diet has been—for breakfast, a piece of bread cut in pieces about five inches square, with coffee made from barley, and a piece of salt pork; for dinner they had the same fare, with the exception of the coffee, and for supper they had bread and tea. This is the kind of food the poor inmates have been accustomed to. Scurvy was also found to be raging in the building, as well as cholera. Several deaths from actual starvation had taken place, particularly among the children.

Filial Devotion Rewarded.—Mention is made in a Paris paper of the filial devotedness of a soldier named Chassard, who, after having served for seven years in Africa, found, on his return home, his mother in great distress for the means to pay 1,400 francs, for which she was very closely pressed—and who immediately enlisted as a substitute for 1,500 francs, paid the creditor, and giving the remaining hundred francs to his sister, then set out to join his new regiment. The Emperor, on hearing the facts, ordered him to be admitted to the Imperial Guards.

The soil of Siberia, at the close of the summer, is found still frozen for fifty-six inches beneath the surface, and the dead that have lain in their coffins for one hundred and fifty years, have been taken up unchanged in the least.

News Paragraphs.

The Attorney General has decided that an officer of the army is subject to trial for one and the same act by the civil courts, as for a violation of the ordinary law of the land, and also by a court martial for a violation of the military law. Thus, where an officer was indicted for murder on account of the death of a soldier, and acquitted, he may still be tried by court martial and punished.

Dr. Linton, formerly surgeon in the United States Navy, shot two men at Laredo, Texas, recently. He was subsequently seized by a mob, and hung on a gallows erected upon the public plaza. Linton, it is said, was on board the United States brig Somers when young Spencer was hung by Commander McKenzie.

Pittsburg, with a population in the city proper of 70,000 persons, only averages about 20 deaths in a week! Not a single case of cholera has occurred in that city during the present season. There seems to be something in the coal smoke and atmosphere of Pittsburg that is conducive to health.

A truly Californian incident occurred on the north fork of Yuba early in June. A man was detected stealing gold from a company, and it being his first offence, the boys frightened him considerably with a preliminary process of lynch law, and then presented him with a purse of money and gave him a hint to leave. He took the purse and the hint, and left.

Foote, the individual who once drew a pistol upon "Old Bullion" in the U. S. Senate Chamber, has been at his old tricks at the California bar. Feeling himself agrieved by some remarks of the District Attorney, Mr. Ingo, Foote made a violent effort to use his knife upon that official in open court. The Californians did not appear to relish this slish of chivalry.

A beautiful mirage was witnessed, says the Kenosha Telegraph, on the lake on Sunday. Vessels were seen at immense distances, apparently sailing in the air, occasionally duplicated, and sometimes triplicated. The Michigan shore was said to be visible a part of the day, whilst some insisted that they could distinguish the sand hills, trees and bushes.

A former writing in the New York Evening Post, says he once cut and shocked one-half of an acre of wheat thirteen days before the remainder in the field was supposed to be ripe enough to cut, and when he thrashed that first cut, sixteen days after, found it in prime order.

Alfred Huntington, of West Killingly, Ct., lately had a fight with a warlike rattlesnake, which he succeeded in dispatching. The reptile had eleven rattles, and in the course of the fight inserted his fangs through Mr. Huntington's pantaloons, barely missing the flesh of the leg.

The press-house of Brayton, Walworth & Co.'s powder manufactory, near Cleveland, exploded July 17, killing one man and a horse, and destroying some property. There were but 600 pounds of powder in the building—1,000 pounds had been removed but a short time before the explosion. The cause is not yet known.

The town council of Marion, Alabama, have raised the price of license to retail liquor to three thousand dollars. The council at first raised the price to fifteen hundred dollars, but hearing that it would be paid, they concluded to double the sum.

A young man at Bayonne has just invented a mode of electric telegraph, by which the despatch is printed in ordinary letters or conventional signs, by the telegraph itself, at the point of departure, at the end, and at several intermediate stations simultaneously.

The Waterbury (Conn.) American says that two beds of pear have recently been discovered about two miles from that city, and that two joint stock companies have been formed, with abundant capital, for the purpose of supplying it as fuel.

The water of Lake Michigan, at Milwaukee, Wis., was recently so clear and transparent, that it is said a pin could be seen at the bottom in fifteen feet depth, and several lost articles of merchandise were thus discovered and fished up.

M. M. Howes, of New Milford, Ct., who was sent to State Prison for ten years on a charge of attempting to kill a school-mistress in his neighborhood, died in the prison at Weathersfield on Sunday week. He had been confined about two years.

Philip C. Scott, a Lawyer of Providence, was taken in the streets of Boston dressed in fashionable female attire. When taken by the Police, he said he had purchased the outfit for his wife, but having a fancy for that sort of thing, concluded to wear it a few days himself.

Owen O'Brien, aged 80 years, has just been sent to State Prison from Boston, for three years, for polygamy. The accomplice of his crime, Caroline White, a young woman, was sent to the House of Correction for 15 months.

Mr. Crane, who recently confessed to having issued fraudulent railroad bonds in Boston, last winter subscribed one million to the Philadelphia & Sunbury road. To raise the ten per cent. required, probably, with other things, induced these fraudulent issues.

The aeronants who went up at Hartford on the 4th, say that as they reached a great height over the river, the water became perfectly pellucid, and they could see any object in it, even to the bottom, as distinctly as they could look through clear water.

A late work on Utah and the Mormons, says a Mr. Woodruff, of Avon, Conn., has risen to be one of the Twelve Apostles in Utah, and that he is "constantly marrying new and young women."

Some dwellings in the western part of Syracuse, together with about 4,000 cords of wood, the property of the New York Central Railroad Company, also the buildings containing it, were entirely destroyed by fire on Saturday, the 15th. Loss about $20,000.

The Charleston, S. C., Christian Advocate makes mention of an interesting religious revival among the colored people in that city. More than a hundred have professed conversion. The meetings are crowded and increase in interest.

An English church is about to be established at Constantinople, as a Christian memorial of the English ministry at present in that country, and the Episcopal Bishop of Gibraltar is now on a visit there for that purpose.

John Randolph once said he "expected to live to see the time when slaves in Virginia would advertise for runaway masters, as it took all the corn to feed the hogs, all the hogs to feed the negroes, and there was nothing left the planters."

News Brevities.

—A second emigrant party for Kansas will leave Boston on the 1st of August.

—In Chicago there is said not to be a single American in the municipal government.

—Grisdrill, of the N. O. Picayune, is now in Paris, *en route* for the seat of war in the East.

—The Russians have lost 50,000 men by battle and disease since they set foot in the Principalities.

—Ohio is the greatest corn-growing State in the Union, growing in 1850 upwards of 59,000,000 bushels.

—The John Arnot, a fine steamer, is plying on Seneca Lake, much to the gratification of the citizens of Geneva.

—Some of the New York papers assert that Tammany Hall has been purchased by the St. Patrick Society.

—A car on the Northern Railroad, loaded with cotton, was burned with its contents, on Friday week, at Troy.

—Madison County Jail was tenantless for some days, and the Morrisville Observer says it has now only a solitary inmate.

—Dr. John P. Gray has been appointed Superintendent of the State Lunatic Asylum at Utica, by the Board of Managers.

—The Middlesex, Mass., Cattle Show, Plowing Match, &c., will take place at Concord on the 3d and 4th of October.

—Edward Mulligan, the local mail agent at St. Louis, has been held to bail in $400, on a charge of purloining letters from the mail.

—Senator Seward is in Saratoga, acting as counsel in the great railroad spike case, on trial there before ex-chancellor Walworth, referee.

—The New Hampshire Legislature, which has just adjourned, passed a law to prevent the fraudulent issue of railway stocks and bonds.

—The Edinburgh Review is just fifty years old; the Quarterly, 41; the New Monthly Magazine, 33; Blackwood, 38; and Fraser, 21.

—A petition for the repeal of the Fugitive Slave act, signed by 600 citizens of Worcester, Mass., has been forwarded to Washington.

—The St. Paul Minnesotian says, that a press and types have been sent up the Minnesota, to start a paper at St. Peter's City, Gov. Gorman's new town.

—A contract has been made with Gilbert & Secor, of New York, for the construction of a marine basin and railway near San Francisco, for $240,000.

—Mr. Graham, late Secretary of the Navy, is said to be a candidate for U. S. Senator from North Carolina, in place of Mr. Badger, who goes out a year hence.

—Twenty-one journeymen tailors were arrested at Toronto on a charge of conspiracy against a draper, who refused to pay the prices of the trade society.

—In Jeffersonville, Tazewell county, Virginia, good butter is selling at eight cents per pound, fresh eggs six cents per dozen, and fat chickens one dollar per dozen.

—John G. Metzger, a barber in the shop of Mr. Packard, at the Quincy House, Boston, has received the title to an estate in Germany worth $25,000.

—A well known colored man in Detroit, by the name of Mitchell, 101 years old, died of cholera on the 18th. He had eaten very freely of cherries.

—Mr. Burnap, a well known agricultural writer, says that the fences in the United States cost more than twenty times the specie that is in it.

—Four journeymen printers have been held by a Philadelphia Alderman for conspiracy to injure the business of the proprietors of the Evening Register.

—Gov. Matteson, of Ill., has commuted the sentence of the three Lasalle rioters to imprisonment for life. It will be recollected they were convicted of murder.

—The ladies who took part in the liquor riot at Baraboo, Wis., have had their examination and were discharged on the ground that no crime had been committed.

—We hear of many cases of sun-stroke during the hot weather of last week. In some instances hirmen and other mechanics were obliged to suspend work.

—James Hewitt has been convicted at the Albany Circuit Court of incest, and sentenced to ten years' imprisonment in the Clinton State prison.

—Rev. Henry Ward Beecher declines in advance being nominated for Congress. He says from the pulpit to Congress, is a little too long a slide for a first venture.

—The "Angel Gabriel" preached at Kingston, Canada, on Sunday week, and a terrible row was the consequence. A large number of arrests were made.

—The Charleston (S. C.) News says in a late number:—"We saw this morning a small soup bean, the produce of a seed from the inside of an Egyptian mummy."

—Dr. Smith, of Bingham, Pa., has a night blooming cereus, upon which three magnificent flowers simultaneously bloomed, flourished and fell, on the same stalk.

—"Wild Maggie," who fills an interesting part in the celebrated "Hut Cabin Stories," is now one of the pupils of Miss Leavitt's school for young ladies, at West Stockbridge.

—The Syracuse Journal says that 300 cases of tobacco, raised on a farm in the town of Cato, Onondaga county, were lately sold to a dealer in France, to be shipped forthwith.

—The French have strongly fortified New Caledonia, and have hoisted their flag on the Isle of Pines, intending, probably, to bring all the neighboring islands under their dominion.

—The approaching Anniversary of the University of Vermont, will be one of more than common interest. The special meeting of the Alumni to celebrate the 50th commencement.

—Wm. H. Arrison, who stands accused of having sent the box containing a bomb to Mr. Allison in Cincinnati, the opening of which resulted in the death of the latter and his wife, has been arrested in Iowa.

—Forty-one of the traveling preachers connected with the M. E. Church South, have died during the past year. The increase in membership for 1853 and '54 was near 30,000. One-fourth the increase is colored.

—Matt. Ward is to sail shortly from New Orleans for Europe. Before leaving Hot Springs, Ark., where he went for his health, he threw aside his crutches, was able to dance and waltz, and seemed to be in fine spirits.

Commencement at the Normal School.

The commencement exercises at the Normal School came off last week, and are represented to have been of a very interesting and satisfactory character. The first three days were devoted to a thorough examination of the classes under the supervision of the State Superintendent, members from the Board of Regents of the University, and other distinguished gentlemen.

The ceremonies closed on Thursday week, at which time original essays and other compositions were read by the young ladies about to graduate, and an address on education delivered by Hon. Erastus Brooks, editor of the *N. Y. Express*. Speaking of the address, the *Argus* says it was "characterized by pleasing diction, and abounded in wholesome and pertinent suggestions." Prof. Woolworth conferred the diplomas in his usual felicitous manner, upon the following individuals, numbering fifty.—This is the largest class that has been graduated in several years:

Julia Abbott, Hamburg, Erie Co.; Harriet E. Abbott, Syracuse, Onondaga; Huldah A. Allen, Schenectady, Schenectady; M. Elizabeth Attwood, Amanda S. Brach, Julia Collier, Abby H. Lee, Mary A. McElown, Eleanor J. Miller, Juliette Newman, Catharine A. Swan, Catharine A. Vanderzee, Albany, Albany; Clara L. Baldwin, Syracuse, Onondaga; Meriba A. Babcock, De Kalb, St. Lawrence; Sarah T. Bowers, Emeline C. Davis, Lydia K. Keyes, Josephine S ewart, New York, New York; Harriet N. Brand, Van Buren, Onondaga; Adaline M. Brown, Rutland, Jefferson; Phebe A. Case, Middlesex, Yates; Frances V. Dix, Newfane, Niagara; Mary A. Ford, Lyman C. Wilder, Hoosick Falls, Rensselaer; Cornelia H. Gaige, Duanesburgh, Schenectady; Cornelia W. Huntington, Buffalo, Erie; Julia E. Kennedy, Broadalbin, Fulton; Louisa Linderman, Crawford, Orange; Lucinda S. Miles, Watertown, Jefferson; John A. Smith, Parma, Monroe; Ellen L. Taggart, Lawrence, St. Lawrence; Ellen O. Turner, Frances J. Woolworth, Syracuse, Onondaga; Priscilla Wylie, Macedon, Wayne; John C. Burdick, Johnsburgh, Warren; Henry C. Baker, Stafford, Genesee; Richard D. Carmichael, Sandlake, Rensselaer; Lewis A. Curtice, Chautauque, Chautauque; Mark Cummings, Homer, Cortland; Wm. M. Knapp, Lyme, Jefferson; d. Hervey Miller, Dansville, Steuben; Henry A. Phillips, Martinsburgh, Lewis; Albert G. Robison, Gilboa, Schoharie; Daniel H. Skidmore, Jr., Setauket, Suffolk; Geo. D. B. Stacy, Nicholville, St. Lawrence; Wm. M. Stark, Edinburgh, Saratoga; Henry S. Stebbens, Collins, Erie; David Van Etten, Beekman Van Gaasbeek, Kingston, Ulster; Jared G. Wood, Bedford, Westchester.

Prof. Bowen, our own able "Albany Correspondent," we regret to announce, has been compelled to resign his professorship in the institution, by reason of ill-health. He retires from the responsible position he has filled so satisfactorily, accompanied by the regrets and kindest regards of the pupils, as the following testimonials, which we copy from the Albany *Argus*, will show:

On Thursday evening, at the re-union of the pupils, as usual at the close of the term, they took the occasion to present him a most valuable and substantial testimonial of their affection and regard. After spending an hour or more in social enjoyment, Prof. Woolworth, at the request of the pupils, called to order and presided over their deliberations. Mr. J. C. Burdick, of Warren county, read a series of resolutions which had been prepared by a committee previously appointed by the pupils. These resolutions, being put to vote, were unanimously adopted, as follows:

Whereas, Severe ill-health has rendered it necessary for our highly esteemed teacher, Prof. T. H. Bowen, to sever his connection with the Normal School. Therefore,

Resolved, That we, his pupils, tender to him on this the evening of his final separation from this institution, our sincere regret occasioned by his resignation.

Resolved, That we shall ever cherish feelings of the deepest regard for his unceasing efforts to promote the cause of education; and that we earnestly hope the sacrifice of health which his untiring labors in this great cause has cost him, may be amply repaid by a corresponding improvement of the school system of our State.

Resolved, That as the bonds of unity which have so long strengthened our connection as teacher and pupils, are now to be dissolved, that our highest esteem and earnest hope for his welfare shall accompany him through all the vicissitudes of life—while we retain in our hearts our love for him as a friend, and admiration and respect for him as a *teacher*, a *citizen*, and a MAN.

Resolved, That we shall ever cherish the remembrance of this connection among our brightest recollections, and trust that to him whose labors have rendered it so profitable, the memory of the hours just past, may bring, in his latter days, that contentment which belongs only to a life well spent.

Mr. Burdick then introduced Miss A. M. Brown, who in the following brief and appropriate remarks, presented to Prof. Bowen, a beautiful gold watch and chain, valued at $110:

"As you have resigned the station which you have so long occupied in this institution, I have been authorized by the students, to request your acceptance of this Watch and chain, as a parting gift and a slight testimonial of their regard and esteem—and of their gratitude to you for your untiring efforts in the promotion of their good."

Prof. Bowen replied in a feeling address to the pupils, in which he reviewed the history of his connection with the school, and assured them of his kind recollections of his intercourse with all his associates and pupils, and of his continued regard for them, though obliged now to sever the ties that had so long bound him to his Alma Mater. The scene was one that will be long remembered by all who were participators or witnesses.

Mr. Woolworth followed in a cordial approval of the course pursued by the pupils, and expressed his deep regret at Prof. B.'s retirement from the Faculty. Prof. Davies made a few remarks to the pupils, and they were then left to close their entertainment by the usual parting civilities.

Foreign Intelligence.

Arrival of the Niagara.

The steamship Niagara, from Liverpool on the 8th inst., arrived at Halifax July 18th.

From the Baltic.—Sir Charles Napier's fleet was lying in line of battle before Cronstadt, but up to June 29 no attack had been made.—The English frigate Desperate fired some shots, which the batteries returned.

Bomarsund was a second time bombarded on the 26th and 27th of June, and the fortifications destroyed.

Black Sea.—On the 28th of June, eight Russian steamers came out of Sebastopol and attacked three of the allied ships at the ballerues. The allied ships engaged were the Furious, Terrible and Descartes. The affair seems to have been a running fight. The Furious was considerably damaged.

The main body of the allied fleet was at Baldjik.

Some English boats taking soundings at the mouth of the Dnieper, had exchanged fire with some Cossacks.

The Danube.—On the 21st and 22d ult. an important battle was fought. The particulars are derived from a despatch stating that the Turks and Omette Meher Pacha fell on the Russian rear guard of 25,000, near Silistria, on the 21st. The battle lasted during two days, and the Russians lost 2,5000 men. They, however, made good their retreat.

The Russians continued their concentrations towards the Sereth and Pruth, but apparently mean to return to Maishin, Isakisha and Tultscha, on the right bank of the Danube.

The plan of the campaign, and the movements of the allied army are kept profoundly secret. The cavalry are supposed to be advancing by land to the Balkans.

A telegraph was being built from Constantinople to Varna, Shumla, Widdin, and Gallipoli. Thirty thousand Anglo-French troops are still at Varna, and St. Arnaud and Prince Napoleon are also there. Gen. Bosquet's French division has left Adrianople for Shumla.

On the 22d, the cannonade in the attack on the Russian rear guard was heard by the French, and Gen. Canrobert sent two squadrons to reconnoiter.

Communications from the Danube are kept open as far as Sistova by the Turkish flotilla.

On the 1st July, Gortchakoff removed his headquarters from Kalarash to Wiynsent.

General Baraguay de Hilliers commands the divisions of the French army presently to embark for the Baltic.

The English line-of-battle ships St. Vincent, Royal William, Algiers, Hannibal, Termigant, steamer Sphynx, and others, are embarking the force at Cherbourg.

Asia.—From Asia the news is bad. On the 19th June the Turks met with a severe check in attempting to storm two redoubts between Nourgnel and Kulais.

The Russians attacked them in the flank during the assault, and defeated them with 1500 to 2000 killed. Thirteen cannon, thirty-five standards, and the entire camp equipage was captured.

The crew of the English steam frigate Sanspareil, are fortifying Shukum Kale, and the crew of the English frigate Sampson are fortifying Eutrinchid at Redout Kaleh.

Great Britain.—The official returns of the quarter's revenue to July 5th, is unfavorable, showing a falling off of £812,000 on the quarter, £5111,000 on the year.

Nothing important has transpired in Parliament.

Independence day was celebrated by a banquet at the Star and Garter Hotel, Richmond, given by Geo. Peabody, to 150 guests.

Kossuth addressed a large meeting at Glasgow on the 5th, at which resolutions were adopted to petition the Crown for the re-establishment of Poland.

Spain.—The insurrection continued and government was severely pressed. The Queen had thrown herself on the protection of the troops. It is impossible to come at the truth. From statements published by Government, the insurgents numbered 70000, of whom 2000 were cavalry. They demanded the dismissal of the ministry and the Queen's favorites.

The ourbreaks, as yet, have been entirely military.

Letters from Italy say that the alliance of Austria with France and England has greatly damaged the prospects of the revolutionary party in Lombardy and the Roman States. The harvest had commenced in Lombardy, and was unusually abundant.

Arrival of the Pacific.

The Pacific arrived at New York, July 24.

No battle of importance has transpired.

Russia was forcing Austria into new negotiations. Suspicions were still entertained of Austria's feelings towards the allies. Russia has sent a special envoy to Austria, to refrain from further steps with England and France, and to join her in new negotiations for peace.

The Turks had crossed the Danube in large force. An action occurred on the 5th at Gieurgebo. 100 Russians were killed, and 300 wounded.

It was rumored that the combined fleet attacked Cronstadt on the 30th, but further accounts say that the fleet was at anchor, and no engagements had taken place.

The Danish fleet has put to sea.

Four hundred cases of cholera are reported to have occurred in one day at St. Petersburg.

Liverpool Markets.—No new feature in provisions. The transactions in cotton are heavy, and rule in favor of the buyer. The grain market continues heavy. The crops look well.

California News.

Arrival of the North Star.

The steamship North Star, arrived at New York, July 23d.

The Illinois arrived on the 15th at 10 A. M., left Aspinwall on the 15th at 11 o'clock P. M. with 273 passengers, 105 in cabin, and $200,000 in gold dust. For the first three days encountered strong N. E. gales with a heavy sea.

On the 22d, at 7 A. M. lat. 35 30, lon. 74, passed a steamship supposed to be the Empire City, steering south by west.

The outward passengers were conveyed to the Summit Station, six miles further than passengers have ever been conveyed by railroad before. The Isthmus is healthy, and the road progressing rapidly. With the energetic and successful labors of Col. Totten, passengers may soon expect to cross from ocean to ocean in a few hours.

Market Intelligence, &c.

Rural New-Yorker Office,
Rochester, July 26, 1854.

No old wheat has been offered in the market for many days past, and consequently there is no fixed price. New wheat has not yet made its appearance, except in limited quantities, as premium sales, and as a rarity to the faithful consumers of "first fruits." Although the latest news from abroad quote breadstuffs at a farther decline, we leave our last week's price standing, in the absence of any positive market price. Corn and oats are both lower.

Mess pork is lower than heretofore quoted.

Old potatoes are scarce and high, in consequence of the Board of Health having prohibited the sale of unripe new, as a preventive against the possibility of the cholera visiting our city.

Wool dull and unchanged.

Finance.—In the money market, times are easier, although railroad securities and stocks continue to be depressed. The N. Y. Central has declared a dividend of 4 per cent., but the corporation have borrowed the money to aid in construction, for which they are to pay the stockholders interest after the 1st prox.; the dividend and interest to be paid to the stockholders so soon as the state of the money market will enable the company to negotiate their $3,000,000 construction loan at par.

NEW YORK MARKET—July 24

Flour—Market firmer, with a fair demand for export and home trade, and some speculative demand. Sales at $8,25@8,37½ Inferior State; $8,50@8,7 com to straight do; $7,12½@8,37½ choice and favorite do; $7,25@8,31½ mixed to fancy West.

Grain—A moderate export demand for wheat, and the market does not show any important change. Sales at 162 @163 upper lake; red 150½@180; new South on p. t.—Rye quiet and firm at 123@125. Corn a shade firmer, with sales at 64½@69 unsound; 70@74 sound mixed West; 72 @76 sound yellow. Oats plenty and heavy, at 46@48 State and Western.

Provisions—The Pork market is heavy, with sales at $10,37½@11 for prime. Sales mess made deliverable in September, at $12,50, at seller's option. Lard—sales at 9¾@9¾. Butter and cheese without change to notice.

ALBANY MARKET—July 24

Flour and Meal.—We notice a firm market, with a good inquiry for the better descriptions of Western and State flour at full previous prices. Wheat Flour, from Barhoit's Mills, Wheatland, 12 miles south of Rochester, at $11; $7,37@8 for common to good State and Western. Corn Meal is selling at $1,44.

Grain—Nothing doing in Wheat. Corn commands improved prices. A sale of one cargo of Western Mixed at 70c. In other grains nothing was done.

BUFFALO MARKET—July 24.

Flour—Market firmer for choice brands, with a fair inquiry and moderate receipts. Sales good to choice Southern Ohio at $7,15@8; extra Indiana at $8,50; Ohio at $7,-62½; good do. at $7,75, and good to choice Ohio at $8@ 8,12½.

Wheat quiet and market firm. There were no sales.

Corn in active demand and tendency upwards; sound at 67@68c, and warm at 61c afloat. The market is firm for damaged, and 61c afloat readily realized.

Oats firmer and in fair demand; offering 35 cents, while sellers ask 36 cents—part 35½ afloat.

The Wool Market.—We learn from the Philadelphia papers that the Wool Market continues dull. Supplies of the new clip continue to come in slowly, but the demand is limited, and prices are unsettled. Sales of 30@40,000 lbs. at 24 up to 50 cents per lb. 5 mos., mostly fine at 48@ 50 cents, and a lot of Smyrna on terms not made public.

NEW YORK CATTLE MARKET—July 17.

At Washington Drove Yard—Offered to-day 2,347 Beef Cattle; during the week 2,460. Beef continues in large supply; there is a fair demand. We quote Beef Cattle $8@9,50; Cows and Calves sold at from $30@50; Veal Calves (live weight) 4½@6¾; do gross 1½@3; Sheep (on foot) $3 to $7; Lambs $3 to $6,50; Swine (corn fed) $4,60@4,75.

At Browning's—Prices at this market for Beeves have also declined, say about $1 per 100 lbs. Sales of $7,50@9 per 100 lbs. for Beeves; Cows and Calves at from $30 to $46; Veal 4¾ to 6¾c. per lb., live weight. Sheep and Lambs in large supply, and prices declined. Sheep range at from $2 to 4,50@5,75. Lambs from $2 to $4,50; some extra at $6. All sold.

At Chamberlain's—Market for Beeves very heavy, but prices falling low. Prices of Beef ranged at from $7 to $9 per 100 lbs. Cows and Calves from $30 to $50; Veal Calves from 4½ to 6c per lb. Sheep $2,50 to $7; Lambs $1,75@4,50.

At O'Brien's—Market dull. Beef has declined $1 per 100 lbs. Sales of Beeves at $7@8,50 per 100 lbs. Cows and Calves from $40 to $55, as to quality—a decline. Veal 4½@6c.

ALBANY CATTLE MARKET—July 24.

At W. Woolford's Bull's Head, Washington street.—Beef Cattle—350 at market. Prices—Extra $8,00; 1st quality $7@7,50; 2d do, $6,50; 3d, $5,50@6.

Cows and Calves—8 in market. Prices range from $30, 35@40.

Sheep and Lambs—970 in market. Prices range from $3,50 to $4 for Sheep, $2,50, 3@3,75 for Lambs.

Swine—Not in market—rather dull.

CAMBRIDGE CATTLE MARKET.—July 19.

At market 643 Cattle—600 Beef Cattle, 43 Stores.

Prices—Market Beef—Extra $8,00 per cwt.; 1st quality, $7,50; 2d do, $7,00@7,25; 3d, do, $6,50; ordinary, $5@6. Hides, ₩ cwt. $6,00@6,50. Tallow $8,50@9,00. Pelts, 87½@ 95c. Calf Skins, 15c ₩ lb. Veal Calves $5 to $9.

Stores—Working Oxen—$70 to 140@172.

Cows and Calves—$24 to $51@62. Two years old—$22 to $31@37. Three years old—$32 to $38@04.

Sheep and Lambs—2,732 at market. Prices—Extra—$4,50 to $6@7. By lot—$2,25 to $3,50@4,12

Swine—None.

BRIGHTON CATTLE MARKET—July 20.

At market 1300 Beef Cattle, 20 Working Oxen, 90 Cows and Calves, 4,600 Sheep, and 400 Swine. Several hundred Beef Cattle and 200 Swine unsold.

Prices—Beef Cattle—The market is dull; Beef Cattle sell quick. Extra $8,00@8,25; first quality, $7,25@7,75; 2d, $6,50@7,00; 3d, $5,50@6,25.

Working Oxen—No sales noticed.

Cows and Calves—Dull; Sales $24 to $60. Sheep—Sales of small lots $3,25 to $5,50@6,25.

Swine—Dull; no lots sold to peddle; small selected lots 4½ and 5 for sows, 5½ and 6 for barrows. At retail from 5 to 7c.

Deaths.

In Lyons, Wayne Co., N. Y., on the 8th inst., HENRY KIRKLAND HOLLEY, of Madison, Wis., oldest son of the late John H. Holley, aged 26 years.

In Buffalo, on the 12th inst., of congestion of the brain, Hon. SAMUEL BARSTOW, of Detroit, aged 41 years.

In Hastings, N. Y., June 5th, 1854, ELIZABETH CHAPIN, in her 85th year. Mass. and Ohio papers please copy.

In Junius, Seneca Co., June 23d, SAMUEL D. MARSHALL, aged 72 years, father of F. H. Marshall, of this city.

WILBUR M. HAYWARD,
Attorney and Counsellor at Law,
Office at the Banking House of Wm. Brewster & Co.,
SAINT PAUL, MINNESOTA.

Advertisements.

SYRACUSE NURSERIES, SYRACUSE, N. Y.

The Subscribers would most respectfully call the attention of Nurserymen, Fruit Growers, Venders, &c., to their *very large* Stock of Fruit and Ornamental Trees, which they offer for sale the coming fall and spring.

We are issuing from the press—

No. 2. A New Fruit Catalogue, which, with

No. 3, Containing the Ornamental Department, and

No. 4, The Green-house Department, will be forwarded to all pre-paid applications, enclosing a *one cent* stamp for each.

Also, a *New Wholesale* Trade List, for persons wishing to trade by the quantity.

A fresh Importation of the *very best Dutch Bulbous Roots*, from Haarlem, in Holland, will be ready for delivery in September. We will also offer for sale, *very low*, the following stock, on a piece of ground which must be cleared this fall:

2,500 assorted Dwarf Pears, 1 year old from the bud.

2,500 to 5,000 assorted Standard Pears, 1 year old from the bud.

1,500 assorted Plum Trees, 1 year old from the bud.

500 assorted Plum Trees, 2 years old from the bud.

15 to 18,000 assorted Apple Trees, 2 years old from the grafts.

The above are all thrifty and will be sold at a bargain. Prices given upon application.

THORP, SMITH, VANCHETT & CO.
Syracuse, N. Y., July 18, 1854. 238-7t*ow

SUFFOLK PIGS.

The Subscriber has three pair of pure bred Suffolk Pigs for sale. Also, a Boar of the same breed, thirteen months old. The above Pigs are from Sickney's imported stock, of Boston. Address C. B. HOLT,
July 17, 1854. 238-2t Elba, Genesee Co., N. Y.

A CHOICE FARM FOR SALE.

About 1½ miles from the city line, nearly equally divided between a sandy loam (proved by experience to be the most profitable land in Western New York, for every kind of early vegetables and fruits—no rotten potatoes or blasted wheat grows on it,) and a deep black muck, perfectly drained and a few acres of clay land. About one-fourth in wood, abundantly watered with living springs of soft water. About 500 Apple and Peach trees in bearing of choice fruit; a large barn and new house; about ¾ of the fence board and picket nearly new. Price low for a fancy farm.
A. G. SMITH, Front st.
Rochester, N. Y., July, 1854. 237-3t

FARM FOR SALE.

In the town of Arcadia, Wayne county, N. Y., 2½ miles south-east of Newark, containing 31½ acres of superior land, pleasantly situated. House built only a few years; barn needs some little repairs. Orchard contains over 150 Apple trees, 30 Peach, also Plum and Cherry trees. Those wishing a small farm, please call and see. There are chances for additions if wished for. For further particulars inquire of the subscriber on the premises.
ALPHEUS S. THOWBRIDGE.
Arcadia, Wayne Co., N. Y., July, 1854. 237-4t

PIPE AND TILE-DRAINING MACHINES.

John Purdie, Founder and Machinist, Waterloo, N. Y., has for sale four Improved Tile Machines, made all of Iron. Price, $200 with all the dies, $25 added if supplied with a table. With one of these machines two men can turn off 5,000 pipe or tile a day.

Waterloo, N. Y., July 10, 1854. 237-13t

A NEW TRUSS.

The above Truss, patented January 17th, 1854, has been successfully used in a large number of cases, both in old and recent ruptures. It can be applied to children as well as to older persons, to a rupture of the navel, as well as to one of the groin. The pads and spring can be adjusted so that a greater or less degree of pressure can be brought to bear upon the rupture, at the desire of the wearer. It seldom fails to give the greatest amount of ease and comfort, and in recent cases curing the patient in the course of six months or a year.

This Truss can be obtained of the subscriber, at Moscow, Livingston county, N. Y., where all orders will be promptly attended to. [236-3t] L. B. WHITE.

MILL AND FARM PROPERTY FOR SALE.

The subscriber wishes to sell his Mill property in Yates, Orleans Co., N. Y. It consists of a Grist Mill and Saw Mill, both in complete running order; seven acres of tillable land; two houses on the premises and a good orchard. He has also a farm of 154 acres of choice land, adjoining the Mills, good buildings, variety of fruit, plenty of running water, and under a good state of cultivation, which he will sell with the Mills if desired. The Mills can be had at a bargain. Inquire of the subscriber on the premises, two miles east of Yates Centre, N. Y., or address to
234-5t J. C. PARSONS, Yates, N. Y.

ENGLISH CATTLE.

To Agricultural Societies, and others requiring the best bred Cattle from England, embracing pure blood Horses, Short Horned Cattle, Devons, Herefords, Ayrshire and Alderney Cows, pure bred South Down, Cotswold and Leicester Sheep, Suffolk, Essex and Berkshire Swine. Imported on commission by Messrs. Thos. Betts & Brothers, Herts, England. For information apply to J. M. Miller, 37 Maiden Lane, N. Y. City, who is fully authorized to act as our agent.
Orders received for Guano, by applying to
234-13t THOMAS BETTS, 35 Wall St.

HOME PROTECTION.

Tempest Insurance Company, Capital $250,000, Organized December 24, 1852; Chartered March 1, 1853. Homes only insured by this Company. No one risk taken for more than $3,000.

Many distinguished persons have insured their homes, to the amount of $3,000 each, in this Company, among whom are Ex-President Van Buren, Kinderhook; Ex-Governor Seward, Auburn.

Auburn, May 16th, 1853.

To whom it may concern.—We are personally acquainted with many of the Officers and Directors of the Tempest Insurance Company, located at Meridian, Cayuga Co., N. Y. In our opinion they are among the most wealthy and substantial class of Farmers in this county.

J. N. STARIN.
ELMORE P. ROSS.
THOMAS V. HOWE, Jr.

The above gentlemen will be recognized as the Cashier of Cayuga County Bank, Auburn; Postmaster, Auburn, and Ex-Member of Congress, Auburn, Cayuga County.

N. B.—The public are cautioned to bear in mind the name, (*Tempest,*) and not submit to an imposition daily practiced by two-by-four Mutual Co's.
234-4t T. R. TIMBY, Secretary.

A VALUABLE FARM FOR SALE.

Situated in the town of Conquest, 4 miles northwest of Weedsport, a good market on the Canal, and 3½ from Rochester & Syracuse direct Railroad. Said Farm contains 163 acres; 140 improved and in a good state of cultivation; well adapted for all kinds of produce, and well situated for two farms if desirable, as there are two houses and two barns, two orchards containing a good variety of fruit, also a wood lot on each end of the farm. Thirty-five acres can be put in to wheat this fall. Said farm can be had cheap; terms easy, and possession given when desired. Stock and farming implements can be had if desirable. For further particulars inquire of the subscriber on the premises.
234-24p JACOB EAKER.
Weedsport, Cayuga Co., N. Y., June 19th, 1854.

THE PEOPLE'S PATENT OFFICE.

This well known establishment is still carried on under the personal superintendance of the undersigned, by whom all the necessary drawings, specifications, and documents, for Patents, Caveats, Designs, Foreign Patents, &c., are prepared with the utmost fidelity and dispatch, on very moderate terms.

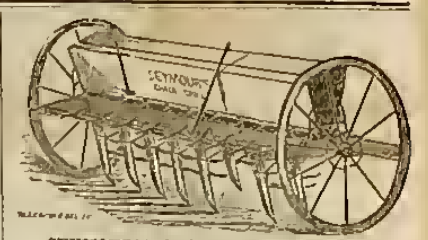
Persons wishing for information or advice relative to Patents or Inventions, may at all times consult the undersigned *without charge*, either personally at his office, or by letter. To those living at a distance, he would state, that all the needful steps necessary to secure a Patent, can be arranged by letter, just as well as if the party were present, and the expense of a journey be thus saved. When parties wish to be informed as to the probability of being enabled to obtain Patents, it will be necessary for them to forward by mail a rough outline sketch and description of the inventions. No fee or charge is made for such examinations.

Private consultations held daily with inventors from 9 A. M. to 5 P. M. All consultations and business strictly private and confidential.

Models from a distance may be sent by express or otherwise. For further information apply to or address, post-paid,
ALFRED E. BEACH,
Editor and Proprietor of The People's Journal, Solicitor of American and Foreign Patents. People's Patent Office, 86 Nassau-street, New York. 227-13t

THE PEOPLE'S JOURNAL, a record of Science, Mechanics, Invention and Agriculture. Published Monthly.—Every number contains 32 pages, beautifully printed on fine paper, and *profusely illustrated with splendid engravings*, forming at the end of every year two fine volumes, comprising nearly 400 pages, with about six hundred elegant engravings. Terms, only One Dollar a Year, sent by mail. Specimen copies 12½ cts. Address as above.

BONE DUST.—We can supply a few barrels of genuine coarse bone dust, at $2,50 per barrel.
227 H. C. WHITE & CO., Buffalo Ag'l Warehouse.



SEYMOUR'S PATENT GRAIN DRILL.

This is emphatically the *Premium Drill* of our country, having taken the First Premium at every Fair of the New York State Agricultural Society, since its first introduction, in 1849, including the Highest Prize and Diploma at the great trial of Agricultural Implements, made by this Society, at Geneva, in July, 1852.

The machinery is remarkably simple, permanent, and easily kept in repair, and all the parts are so clearly presented to the view of the operator, that he can readily see if any thing is not correct; and the grain falls from the seed box to the tubes, (a space of several inches,) in full view, so that in passing over the field, he may be constantly assured that the seed is deposited as is designed. The usual size is made with nine teeth, eight inches apart; but any other size, and teeth any other distance apart, can be made to order. *This drill, with nine teeth, runs easier than some drills with only seven teeth.* The teeth are all placed in one rank, unless ordered to be put in two rank. It is believed by those who have made experiments, and given the subject their careful attention, that the evils caused by lumps, stones, &c., being thrown by the teeth in the blind rank into the furrows made by the teeth in the front rank, are, in most cases, far greater than the advantages gained. This fact has induced the inventor to construct his *Double-ranked Drill*, so that the teeth can all be placed in one rank, at pleasure, thus obviating, in this drill, the objection to all other two-ranked drills. The price of the drill, with teeth in two ranks, is ten dollars higher than those with teeth in but on rank.

A Valuable Improvement has been made in the drill this season, (1854,) which prevents the shrinking and swelling of the wood from affecting the correctness of its operation. This drill is made small enough to be drawn by hand for garden purposes, when ordered.

The following are the advantages this drill possess over other grain drills, viz:—It sows all grain and seeds, from grass and corn, to grass seed, as well as any other drill sows wheat, not failing thus to perform in sowing even beet or carrot seed; and it is difficult to clog it with any of the trash and foul stuff commonly found in grain, such as straw, chaff, stems of tare or other weeds. It will also sow any grain soaked and rolled in lime, plaster, ashes, guano, poudrette, &c., &c. It also sows lime, plaster, ashes, and all dry fertilizers which are fine enough to pass through the Machine. Whatever it will sow to drill, it will just as readily sow broadcast, by removing the drill tubes, which is very easily done. It is remarkably simple in its construction, and very durable. It is easily understood and kept in order by common laborers, or repaired by common mechanics, such as are at hand in nearly every neighborhood or town.

The price is but little in advance of any other approved grain drill, and quite below that charged for many which are far less adapted to the wants of the farmer or planter than this,—and in view of its utility, simplicity, convenience and durability, it is believed to be by far the cheapest drill in the world.

When ordered, the following extras are added to the drills:—1. A "Feeder," to prevent clogging in sowing damp plaster and other fertilizers. 2. A "Grass Seeder," which is a box and fixings for sowing Grass Seed broadcast, in front of the drill teeth, while drilling; or it may be used while sowing plaster broadcast from the main box. 3. A set of Hoeing Hoes to cultivate the wheat in the spring. The drill teeth are removed and the hoes put in their place. With these extras added, the Machine is capable of sowing grass seed, hoeing the wheat, (which also hoes in the grass seed,) and sowing plaster all at once.

Extract from the Report of the Hon. B. P. Johnson, Secretary of the N. Y. State Ag. Society, who was the Agent of the State of New York, appointed to attend the Exhibition of the Industry of all Nations, held in London 1851.

"There were various drill machines very perfect in their construction and arrangement, yet too complicated and expensive for introduction into this country. They do not possess any material advantage over our own drills, which are afforded at one-third the price of the best English drill."

Extract of a letter from Mr. Brewer of Onedia Co.

Mr. Seymour, *Dear Sir:*—I enquired of the Hon. Benj. B. Johnson, Sec. of N. Y. State Ag. Society, where I could get the best Grain Drill, and he directed me to you. You will therefore please send me one, &c.

I have used several kinds of grain drills, among which was Seymour's Drill, and I find it to be the best one I have ever seen. I have used it two seasons and it has never yet been out of repair. S. G. Patterson.
Marengo, Michigan 1853.

Hon. C. H. Carroll, of Lic. Co., N. Y., *Dear Sir:*—I bought of Mr. Seymour, of East Bloomfield, one of his grain drills last season, with which I sowed my wheat last fall, my barley and my oats in the spring and also drilled in a piece of corn, and in every case I found the drill to perform as I desired, doing its work as Mr. Seymour has represented it to do in his advertisements. Respectfully,
July, 1853. S. C. Culbertson.

Judge Carroll says Mr. Culbertson's word is as reliable as that of any man in the county.

Mr. Seymour, *Sir:*—With the grain drill which I purchased of you, my son a lad 15 years of age, has put in about 50 acres of wheat, and with some of it about a bushel and a half per acre of ashes and lime dusted was mixed, and all to my entire satisfaction, and I must say I prefer it to any I have ever seen. Ira Peck.

Mr. Seymour, *Dear Sir:*—The eleven-tooth drill you exhibited at the Ontario Co. Fair last fall, and sold to me, I have fairly tested, in putting in my spring crops, and find it works admirably, and answers my fullest expectations. I have drilled in 70 bushels of oats, and as much barley, and my buckwheat, which are now up, and growing finely. Although the drill has eleven teeth, I do not think it any too large for a common team, and it is wide enough to put in three rows of corn at once. E. Stephens,
Hopewell, July 8, 1852.

Prices—Drill with 7 teeth $80; 9 teeth $90; 11 teeth $100. Extra—Feeder $6; Horse Hoes $2 each; Grass Seeder $15.

SEYMOUR'S PATENT BROADCAST SOWING MACHINE.

This Machine is well known in Western New York, also in many other parts of the United States, and is universally acknowledged to be the best implement in our country for the purposes for which it is intended. It sows correctly all kinds of grain, (and any desired quantity per acre,) from peas to grass seed, including wheat, rye, oats, barley, buckwheat, rice, hemp, flax, clover and timothy seed; also plaster, lime, salt, ashes, bone dust, &c., &c. It is capable of dusting every inch of ground on an acre of land, with less than half a bushel of plaster, and thirty or forty bushels of lime may be thus evenly applied to the same amount of land. It sows ten feet wide, or may be made narrower to order. This machine has been much improved by substituting iron in several important parts, in the place of wood, making it a very durable article. It has received the highest recommendations from hundreds of the best farmers in our country, and received eight premiums from Agricultural Societies, besides the Highest Prize and Diploma at the trial of Agricultural Implements, held at Geneva, July, 1852.

The following is from the Albany Cultivator of June, 1853:—"This cut represents Seymour's Sowing Machine, advertised in our last. It has been extensively used in Western N. Y., and is much approved. We saw many acres of various kinds of grain on the farm of John Delafield, Esq., near Geneva, last season which had been sown with this machine, and we never saw grain stand more evenly on the ground. Mr. Delafield assured us that he could sow anything—lime, plaster, poudrette, guano, &c., or any seed from grass seed to peas or Indian Corn, with perfect exactness, graduating the quantity per acre to a pint."

Mr. P. Seymour—*Dear Sir:*—I have been familiar with the operation of your Broadcast Sower and your Grain Drill, for some years, and justice requires me to say that I think them equal to any machines of the kind, in *all respects*, and *far superior in the most important*, viz: the *manner of discharging the grain, plaster manure, &c from the hopper*
Yours truly, Enos Boughton.

Those who know Mr. Boughton will put the most implicit confidence in his commendation. These machines are in use by many of the first farmers in the States of New York, Ohio, Indiana, Illinois, Missouri, Iowa, Wisconsin, Michigan, Pennsylvania, Maryland, Delaware, New Jersey, Tennessee, Virginia, Kentucky, and North Carolina, and also in Canada, to all of whom we refer for their reputation, believing that all who have given them a fair trial will commend them.

☞ Price $35. Directions for using accompany each Machine. All communications promptly attended to.
C. H. SEYMOUR, Manufacturer,
P. SEYMOUR, Palmyra.

Poetical.

[For Moore's Rural New-Yorker.]

FAME.—A CONTRAST.

BY WILBER H. CLUTE.

Fame is a phantom which men chase,
With anxious heads and hurried pace,
Along the world's high ways;
'Tis sought by Hella's flowing spring,
Where bards their sweetest songs inspired sing,
And on the field of strife the same;
They ever chase the phantom Fame,
In hot pursuit of praise.

'Tis joy indeed to break the roll,
That's raised by keen oppression's nod,
With hands imbued with blood,
When on the field of heated strife,
The patriot yields up his life,
And dies a nation to redeem—
His throbbing pulse impels the stream,
And fame flows in the blood!

And thus it is, a fame men gain,
Through battles rude inhuman reign,
Oy selfish ends impelled;
And when their day of strife is done
The honors which they sought are won,
They've gained a name which men revere,
And render up their steward-ship here
To be by glory knelled.

While he who in an humbler sphere,
Relieves a woe, or dries a tear,
Oppression's hand hath brought;
When beaten on the foege of years,
No martial hand his dust reveres,
But for his love to make stones,
The *high* bell lowly untely moan's,
And he is quick forgot!

Yet he who thro' paternal love,
Doth stem these torrents from above,
And brave without a fear;
Will feel as much the chilling blast
That 'round his lowly doom is cast,
As he who in a nation's cause
Strives eager for a vain applause,
In glories whil career.

Pavilion, N. Y., July, 1854.

Rural Sketch Book.

[Written for the Rural New-Yorker.]

THE TWO FARMER BOYS.

BY W. H. GARDNER.

On one of those sultry summer days in June, when all nature seems imploring the Great Disposer of Events for water to relieve the earth of its thirst, and prevent its becoming barren from drouth, two boys were at work in fields adjoining. They were farmer boys, and thus far through life had passed much of their leisure time together.

A scene of beauty, of surpassing beauty! surrounds them. It was a home scene—a scene which, go where they will in after life, will ever remain enstamped upon the tablet of the memory. Broad acres of beautiful farming land, covered with luxuriant growing crops, was displayed in all their magnificent beauty before them. 'Twas such a scene as only farmers behold, and few beside farmers are fully capable of enjoying.

Let us approach and make the acquaintance of these farmer boys, whom we have said were at work. Martin Brown is the son of an affluent farmer;—Jerry Freeman was the child of poor parents, but he is now an orphan.—Martin has had superior advantages; Jerry's opportunities for acquiring knowledge have been meagre. But hear them, that ye may judge; for they are approaching the place where we stand by the fence, each at the same time.

"A fine day," declares Jerry, leaning on the handles of his cultivator; raising his hat, and wiping the sweat from his high forehead.

"A plague on such fine days—so hot—corn all drying up—I would like to know what there is particularly fine about this day?" replies Martin.

"We have a beautiful place to work in here,"—at the same time, with his eye, noticing the surrounding beauties of hill and valley,—"and can see much to enjoy," observed Jerry.

"Well, I would like to know who could enjoy this, and be hard at work! I can see little to enjoy," responds Martin.

"Why, we may enjoy the scene about us—the lovely view of wide spreading fields of grain, meadow, and forest; and yonder are the distant hills, looking so beautifully blue beyond the clouds."

"Pshaw! Jerry," answered his companion, with a derisive laugh, "I can see nothing in the view you have pointed out, worthy a look or thought. We *have nothing in this town* worthy ones attention, and I am getting tired of the intolerable lonesome life I am leading."

"I am contented," responded Jerry. "I find much time for reading, and subjects of wonder, inquiry, and admiration, daily present themselves to my notice." A laugh followed this expression of content by Jerry, and the boys separated.

We have heard enough of this conversation, as above, to learn that while at work different thoughts, feelings, and incentives to action, possess them. Observe closely and you will discover in the look, air, and manner of the one, evidences of contentment, and a desire to become acquainted with more of the world than what his own eyes rest upon—speaking plainer than words, that he is happy. The other wears no look of sunshine, his eye gives forth no light, and the manner in which he does his work, shows it to be prompted by any love save that of his calling.

An hour later and we will discover the secret of this difference. The air, which has hitherto been sultry, begins to move—the corn leaves, which were wilted, rolled, and dry, begin to rustle—and a roar of distant thunder breaks the stillness. Low down in the western horizon dark clouds begin to appear—they increase, and in dark masses roll on, covering the sky. The wind freshens—the leaves turn up—the swallow flies rapidly, darting here and there—the thunder wars more continuously—'twill rain—it rains—much needed, welcome rain is falling. The boys, anticipating but a slight shower, retreat to a grove near by, where, sheltered by the leafy branches, they await its cessation.

"How beautiful!" remarked Jerry, as the rain came pouring down, and falling on the parched earth raised clouds of misty vapor.

"Beautiful!" exclaimed his friend, with an accent not to be misunderstood. "Fog goes up skipping, rain will come down dripping."

"Come, Jerry, let us turn out our horses, and go up to the corners; for I think it will rain all the remainder of the day."

"No!" replies the other. "I have reading at home, and would rather read, than pass my hours in *such* conversation as I would hear at the corners."

"*Reading!*" replies his friend, with another peculiar emphasis; "let your reading go till some other time; we will have fun up there, with the boys who always assemble there on rainy days." Jerry was firm, and Martin ceased to urge. Here is the secret revealed. Martin has lost all relish for thought or observation, and is only happy while in company with others of kindred habits. Reading he hates, and up he goes to the corners.

Who has not witnessed the change that now came over Martin Brown. It was not a rapid change—great changes never are. It was a gradual, radical change. First it blinded him to the beauties of nature, and religion, and then to the enjoyments of home,—until finally he saw beauty only in the achievments of the clown, or in being the chief actor in a bar-room club, or some kindred amusement. * * * Great was the change in taste, worth, and influence, of our friends in ten years. Arrived at manhood, and assuming its responsibilities and duties, Mr. Freeman was a man of knowledge, talent, worth, and influence. Mart. Brown was yet a loafer—a loafer in language, habits and appearance,—his influence gone, his person neglected, his property squandered; he presented a sad spectacle of the result of spending his youthful leisure hours "*at the corners*."

THE THIRTY-NINE DOLLAR MARE.

Four or five years ago, while traveling in the State of Maine, I chanced to halt at an out-of-the-way tavern in those parts, in the bar-room of which, during the evening, I heard the substance of the following story related. It may divert a portion of your readers, and so I write it out for you.

Speaking of horses—remarked the leading talker of the evening—Speaking of horses reminds me of a mare I knew a long time ago, when "three minute nags" were'n't so plenty as we hear about now-a-days.

There was a blacksmith in the town where I then lived, who was a very fair judge of horses and who generally owned a "rusher" for those times—though almost his entire fortune was ordinarily invested in his "crab." He sold his old mare one day, and kept his eye open for another beast, when the right kind of an animal might fall in his way.

It chanced soon afterwards, that there came to the door of his little shop, one day, a gray mare—a long, lean-bodied wench—the owner of which desired to have her shod. The blacksmith looked in her mouth, (as horsemen sometimes will,) and then he tried her dock. He stood in front of her, and then beside of her, and then examined her feet—and then went to work to shoe her.

"How old is she?" he asked quietly, as he proceeded to pare and trim her hoofs.

"Nine years come spring," said the owner.

The blacksmith looked in her mouth again, and said: "Yes, you can warrant that."

"Warrant? well, she's a good beast, anyhow," responded the owner.

"Is she sound?"

"As a fresh hick'ry nut."

"Kind?"

"As a cosset sheep."

"Maybe you'd sell her?" continued the blacksmith, slowly, as he finished her last foot.

"Yes," replied the owner, handing the blacksmith a dollar for his job. "Yes, I'll sell her."

"How much money—cash down?"

"Forty-five dollars."

"Five and forty. She must be a good 'un, then."

"She is a good one."

"Say forty, stranger, and I'll ventur' to take her."

The bargain was closed, the stranger walked away with his old saddle on his arm, and the gray mare walked into the blacksmith's little shed stable. It was a heap of money for him to put into a single horse, but he thought she had good points in her making-up, notwithstanding the fact that she hadn't been over-fed, of late, or too carefully groomed.

A little care and grooming very soon developed her more satisfactorily, and the purchaser chancing to be a dozen miles from home one night, "hurried up her cakes" on his way back, and led a noted three minute pelter straight into town, like open and shut!

"Well done! Well done, old Thirty-nine," said the blacksmith, enthusiastically, as he applied two huge straw whisps to her reeking sides—nor left her while a single hair was turned upon her body. "Well done, old 'oman! I'll take you round to Walnut hill, and will see about this."

And he did take her there—once, twice, thrice—fifty time; but he said nothing, only that "the mare was a good creeter to draw, and he was content with her."

At the end of four or five months the old man took a leather pouch, shut up shop, and rode his grey mare in Boston—halting at the old Eastern Stage House, in Ann street.—Here he remained quietly for three or four days scarcely showing himself, and never speaking of his mare.

One evening he overheard some of the "boys" in the bar-room "talking horse," and he listened earnestly.

"Go?" said one of them, "I rather think he can—in two-fifty, sure!"

"Ha-ha!" roared the rest, (for three-minute horses, even, were not very plenty at that period.)

"I'd like to match him against something that can trot. Your wigglers and rackers and runners are not the thing."

"Give me a square trotter and I can just leave him!—that's all."

"Ken you?" asked a voice near by, modestly.

The company turned about, and saw an unshorn, rough-visaged man sitting in his shirt sleeves, to whom the young bark did not reply at all. Our blacksmith (for it was he) continued to smoke his pipe. The boys put their heads together for a lark—and the foremost asked;

"Perhaps you have got a horse that you would like to exercise a little?"

"Yass," responded the rude-dressed stranger, "I don't mind a little exercise for the old mare—but you don't bate nothing on it, I take it."

"Why, yes. Just for the name of the thing, we'll go five hundred or so."

"Five hundred what?" exclaimed the green 'un, jumping from his chair and smashing his pipe at the same moment.

"Five hundred dollars, to be sure."

"O, git out! You're jokin'."

"No—we can't trot Jim short of that; it wouldn't pay."

"Wal, now look here, mahur, I'll tell you what I'll do; I'll trot hoss agin boss—yourn agin mine—in harness."

"No, sir, that won't do."

"But five hundred! Come, say fifty. That's enough railly."

But there was no other way, and the blacksmith placed his money at last in the landlord's hands, which the sharpers instantly covered.

"Do you know him?" they asked, as the old fellow moved off.

"No," said the host. "He has just come in from Salem he says."

The preliminaries were quickly arranged, and the afternoon but one following, was agreed for the trot—over the Upper Mill Dam road. Everybody had heard of the queer bet before the next evening and the road was lined with pedestrians and carriages. The challenging party lived in Charlestown, and the horse they had named was the crack of the time; so they cared nothing about what was to trot against him, and asked no questions.

The day was clear and cool, and the blacksmith had been upon the ground full two hours. His grey mare stood at the roadside in a wretched harness and worse gig, (though the latter was light and strong,) and several times, as the company gathered, she had been moved and buffetted for being in the way of gentlemen. She bore her persecution meekly however, and the blacksmith, in his shirt sleeves, said nothing.

"Where's your horse?" asked the confident jockey who was to drive his competitor.

"She'll be here in time, now. Don't go to givin' yerself any extra trouble about her now, cause you'll hev your hands full, I'm thinkin', by-and-bye. Wot'd yer give fer that ere skillit you've got on your head?"

"That's my riding cap, Sawney."

"Eelsackly. And them silk fixins—ar'n't them rather costly?"

"Where's your horse? Time's up."

"Out of the way with that old crow-bait," shouted one of the fast boys, hauling up at this moment, and seeking to get the place occupied by the blacksmith's team.

But there stood the mare, with her head drooping almost to her feet, seemingly jaded and woe-begone, when the blacksmith hopped into the gig, looked at his watch and said—

"'Ere we are, then, mister."

"But where's the horse that you are going to trot?"

"Here she is."

"Well, I don't trot with no such skeleton as that, mind you," said his opponent, "not by a long chalk."

And a furious roar of merriment went up from the crowd, who were in ecstacies.

The blacksmith insisted, however. He'd trot his mare, or claim the money. And the animals were called to the start—mile heats, from the crossing, best two in three.

At the word, away they went; the horse fairly leaning the way. The mare kept behind up to the half mile post, fell off on the third quarter, and the horse came in to the post a splendid winner, in 2:42—the mare barely saving her distance, coming home at a half gallop and half trot, amid the yells of the crowd.

The blacksmith had a "friend" in the congregation, who had a "pile of the ready." To be sure, no one knew this, and he was evidently a rich man. He took all the side bets he could muster, at big odds against the mare.—She blowed badly at the stand, and the blacksmith looked haggard and earnest. The crowd roared again, at the second start, but the roar was brief this time.

"Now, go, 'Thirty-nine!'" screamed the blacksmith, as they went away on this heat.—And she did go. Instantly taking the pole, stretched right along, passed the half-mile mark, finished the third quarter without a misstep, and came home five lengths ahead in 2:40.

Money began to change hands again! But the horses came up for the third heat, and at the words "now, go, 'Thirty-nine,'" the mare made an awful gap between herself and her competitor. The mare led the way—aye, every foot of it—from the start, and skimming her rival, passed the winning post, well in hand, clear down in the thirties. She was a good "un," added our narrator.

"And what became of this beast?" we asked.

Oh, he sold her for a thousand dollars before he left Boston. She went South, but died soon afterwards. She cost him, (with her new set of shoes, valued at one dollar,) forty dollars. He called her "Thirty-nine."—*Yankee Notions.*

Famous does'nt stop to consider what may be agreeable to its followers. It goes on regardless of their feelings, and at a speed that is truly appalling. It has so nearly exhausted colors and shapes, that we shouldn't be surprised to see ourselves, after a few years, in drop veil pants, green boots, and a hat like the segment of a pumpkin.

Youth's Corner.

ILLUSTRATED REBUS, NO. 33.

☞ Answer in two weeks.

[Written for Moore's Rural New-Yorker.]

MISCELLANEOUS ENIGMA.

I am composed of 39 letters.
My 13, 21, 23, 31, 11 is the name of an editor.
My 33, 26, 16, 17, 35, 38, 39, 30, 23, 12 was the name of a noted man.
My 27, 14, 37, 8, 28, 32, 2, 33 has caused great excitement.
My 4, 32, 5, 9, 11 is the name of a village.
My 36, 24, 14, 19 is used by hunters.
My 1, 6, 22, 35, 16, 36, 37, 31, 15, 29 is a girls name.
My 20, 32, 5 is a troublesome insect.
My 10, 28, 25 has to be used to accomplish my whole.
My whole is a scientific art gained by practice.

The Sheep Problem in No. 26.—A large number of solutions have been sent in, some of them varying widely from the one below; but those most logical, and it is believed nearest right, correspond very nearly, and some of them exactly, with the one here given:

Messrs. Editors:—I find in the Rural of July 1st, the following Problem, viz:—One thousand pounds of sheep were put out to double in four years, but by mutual consent they were returned in three years. Required, the number of pounds the owner must receive. I think I have effected a solution, demonstrable as follows:

Let X represent a ratio, which, when raised to the fourth power, will be equal to the first power of 2, the ratio of increase. Then X fourth power = 2; and X = the fourth root of 2. Extracting the fourth root of both sides of the equation; X = 1.1892+. This ratio raised to the third power, will give the ratio of the sum to be returned, as follows:—X third power = 1.68176264; and 1.68176264 × 1,000 lbs. gives 1681.76264 + lb., answer. For two years the amount due would be 1414.19664 + lb. For one, 1189.2 + lbs.

Lodi, Seneca Co., N. Y., 1854.

DRILLING IN WHEAT.

Moore's Seed Planter, or Grain Drill.

Patented July 2, 1850.—This valuable implement of husbandry, which has been thoroughly tested in many places, is well for planting Wheat, Rye, Corn, Oats, Barley, Grass, &c. It operates equally well on all kinds of land, and is not injured by coming in contact with rocks, roots, &c.; and it is believed, is superior to any other implement of the kind in use, as may be seen by the testimonials of many of the best farmers in the State. There are several advantages in drilling over broad-cast sowing, among which are these:—It is most expeditious; it saves labor, which is money; it completes the process of seeding whenever it incurs; and experience has proved that more grain is obtained, of a heavier berry, and with less seed, owing to its being covered at any required depth, where every kernel has nourishment and a chance to germinate.

Drilling Wheat.—Edward Stabler, in Pennsylvania, early on the advantage of drilling, states that after examining the results on some 500 or 1,000 acres, besides large experience on his own land, he finds there is not a single instance where it has not proved the most profitable.—First, in the saving of seed, and secondly in the increased product of the grain, amounting to from one to seven bushels to the acre. He had known the increase, in one case, by careful comparison of the two modes, to amount to nine bushels per acre in favor of drilling. He relates an interesting incident:—A reader uttered a doubt in the increase in a crop of 50 acres of wheat, to be determined by sowing a few strips broad-cast for comparison; but before the harvest, the farmer preferred paying the hundred dollars for the price of a drill, with interest. On carefully ascertaining the increase, he found it to be one hundred and fifty-three bushels.—*Albany Cultivator.*

Extract from the N. Y. Tribune, Feb. 3, 1853, article on industrial Exhibitions at the World's Fair, London:

"Those who understand the subject, know that at least one-third of the seed may be saved, and a fourth added to the crop by drilling, as contrasted with the old, slovenly process of sowing by hand. The annual saving by the general adoption of drilling in this country, would be equal in value to all the gold we receive from California."

The highest premiums have been awarded to this Drill at the Agricultural Fairs in Delaware, at Philadelphia, Baltimore, Detroit, in Maryland, and at various County Fairs in Pennsylvania, Ohio, Michigan, and other States.

TESTIMONIALS.

To E. W. Burnut & Co.:—The Grain Drill which we severally purchased of you in 1852, works in our entire satisfaction. Its simplicity, and certainty of distribution, together with its cheapness, commend it in preference to any Drill with which we are acquainted. Samuel Lewis, Esq., York, Liv. Co., N. Y.; Wm. W. Fletcher, Jr., Chas. Hazelton, Elijah Armstrong, Geo. W. Uhl, Leander Clark, General; Chas. Hendershott, Andrew Boyd, Rich'd Johnson, Groesbeck.

Extract of a letter from Mr. McCrone, near Newcastle, Delaware:—"Your Drill stands unrivalled, as is admitted by all Farmers in the neighborhood, that have seen it in operation."

"This is to certify, that we, the undersigned, have used Lewis Moore's Improved Grain Drill, and we believe that for simplicity, durability, cheapness, ease, speed and regularity of sowing, it surpasses anything of the kind heretofore in use among us, and we do recommend it to farmers as being a machine the best adapted to their wants."—Signed, Wm. Linville, Lancaster Co., Penn., and thirteen other farmers.

Orders will be received for these machines by the subscribers, who have purchased the right to make and sell them in the Counties of Monroe, Ontario, Wyoming, and Livingston.

Cash prices at the shop,—8 teeth Drills, 8 in a part, $65; 9 teeth do., 7 and 8 in a part, $67; 10 teeth do., 8 in a part, $68; 11 do., 8 in a part, $80. E. W. BURNUT & CO.

Geneseo, Livingston Co., N. Y., June, 1854. 236-8t

THE GREAT RED DRAGON,

OR, THE MASTER KEY TO POPERY.

BY ANTHONY GAVIN,

Catholic Priest, of Saragossa, Spain.

BOOK AGENTS WANTED,

To sell the work which is now ready, and surpasses in detail and interest any other work on the subject of Popery ever issued. The terrible revelations which it contains will startle every Protestant with horror, as coming from one who was a participator in the bloody deeds, and who has had the best opportunity ever possessed by any man to unveil the mysteries of the Great Babylon of Popery.

Finely illustrated. Address immediately,

SAMUEL JONES, Publisher,

235-5t 80 Washington St., Boston, Mass.

PURE WINE.

The Subscriber has on hand between sixty and seventy barrels of Wine from one to four years old, manufactured by himself from native American grapes, which he offers to Physicians, Druggists and others, for Medical or Communion purposes. Warranted *pure*—not containing a particle of drugs of any kind, or of spirit except that caused by fermentation. The impression has gone abroad that Wine can not be made that will keep, unless some spirit be added—but it is a mistake. I have made Wine from the grape, where I now reside, between twenty and thirty years, and have never used a drop of ardent spirit. I have kept it until ten years of age, when it was perfectly pure.

It is well known that nearly all the Wines of commerce are made up of materials entirely foreign to the grape, containing many things very deleterious to health, which persons with weak nerves and delicate health, requiring a cordial, can not use. Many have informed me that after trying in vain to use Foreign Wine when recommended, they have procured Wine of me, and it answered all the purposes for which Wine was needed.

I have six or seven different kinds of Wine, made from as many different grapes,—among which are the Catawba, Isabella, Port, Muscat, Early York, Empire, &c.; also young Vine Roots of the above varieties for sale.

My Wine is sold also by W. R. Walker, Druggist, Geneseo, N. Y.; Whitney & Keeling, H. W. Miller, Mt. Morris; Dr. D. D. Dayton, Lima; D. A. Chapman, Canandaigua; Edward Niles, Dansville; S. D. Speling, Brockport; Dr. R. Campbell, Caledonia; S. S. Bryant, LeRoy; Lansing & Judd, Warsaw; S. & B. D. Higgins, Perry; M. H. Dales, Cuylerville; J. Bryan & Co., Rochester; Dr. O. Davis, Attica. G. H. Taylor, Shelburn Falls, Massachusetts; Bidwell & Woodbury, Adrian, Michigan.

SAMUEL WARREN.

York, Livingston Co., N. Y., July 5, 1851. 236-4t

CAVEATS.—Inventors and others desiring to apply for Caveats, are informed that all the necessary drawings and papers are prepared by the undersigned, with the utmost dispatch and on the most moderate terms. All other Patent business promptly attended to.

Persons wishing for information or advice relative to Patents or Inventions, may at all times consult the undersigned *without charge*, either personally at his office, or by letter. ALFRED E. BEACH,

Solicitor of American and Foreign Patents, People's Patent Office, 86 Nassau st., New York. 235-4t

PATENT AGENCY.

Inventors can have their drawings and papers prepared under their own inspection, by applying to

JOHN PHIN, C. & M. E., Agent for procuring and for the sale of Patents, 16 Buffalo St., Rochester, N. Y.

Particular attention paid to rejected applications, and to Chemical Patents.

Will also send the claim of any invention patented within the last 14 years, on receipt of one dollar. Patent Rights for Sale. 235-tf

MOORE'S RURAL NEW-YORKER,

is published every Saturday,

BY D. D. T. MOORE, ROCHESTER, N. Y.

TERMS, IN ADVANCE:

Subscription—$2 a year—$1 for six months. To Clubs and Agents as follows:—Three Copies one year, for $5; Six Copies (and one to Agent or getter up of club,) for $10; Ten Copies (and one to Agent,) for $15; Twenty Copies for $25, and any additional number, directed to individuals at the same rate. Six months subscriptions in proportion. As we are obliged to pre-pay the American postage on papers sent to the British Provinces, our Canadian agents and friends must add 25 cents per copy to the club rates of the Rural,—making the lowest price to Canadian subscribers $1,50 per year.

☞ Subscription money, properly enclosed, may be sent by mail at the risk of the Publisher.

*** The postage on the Rural is but 3½ cents per quarter, payable in advance, to any part of the State—and 6½ cents to any part of the United States,—except Monroe County, where it goes free.

Advertising.—Brief and appropriate advertisements will be inserted at $1,50 per square, (ten lines, or 100 words,) or 15 cents per line—*in advance*. The circulation of the Rural New-Yorker is several thousand greater than that of any other Agricultural or similar journal in America. Patent medicines, &c., will not be advertised in this paper on any terms.

☞ All communications, and business letters, should be addressed to D. D. T. Moore, Rochester, N. Y.

MOORE'S RURAL NEW-YORKER

Moore's Rural New-Yorker:

A QUARTO WEEKLY

Agricultural, Literary, and Family Newspaper.

CONDUCTED BY D. D. T. MOORE,

ASSISTED BY

JOSEPH HARRIS, in the Practical Departments:

EDWARD WEBSTER, in the Literary and News Dep'ts.

Corresponding Editors:

J. H. Bixby,—H. C. White,—T. E. Wetmore.

The Rural New-Yorker is designed to be unique and beautiful in appearance, and unsurpassed in Value, Purity and Variety of Contents. Its conductors earnestly labor to make it a Reliable Guide on the important Practical Subjects connected with the business of those whose interests it advocates. It embraces more Agricultural, Horticultural, Scientific, Mechanical, Literary and News Matter, interspersed with many appropriate and handsome engravings, than any other paper published in this Country,—rendering it a complete Agricultural, Literary and Family Newspaper.

☞ For Terms, &c., see last page. ☜

Rural New-Yorker.

Progress and Improvement.

CULTIVATION OF WHEAT.—NO. III.

We consider Western New York one of the best wheat growing regions in the world; yet how frequently do we see crops that will not yield more than from 12 to 15 bushels per acre. Indeed we question if the wheat crop of this highly favored district will average 15 bushels per acre. Mr. Lawes, in his wheat experiments, has obtained on the acre continuously unmanured for ten years, and annually sown to wheat, a crop averaging over 15 bushels per acre. This yield he considers the normal produce of the soil; or, in other words, the quantity of wheat it will annually produce by good tillage alone is about 15 bushels per acre. He finds, moreover, that to increase this yield to 30 bushels, all that is necessary is simply to add about 80 lbs. of ammonia per acre in some form readily available to the plant. We believe there are few farms in Western New York which, if properly underdrained and tilled, would not, for many years, *annually* produce 15 bushels of wheat per acre; and we have no doubt if it was supplied with about 80 lbs. of ammonia per acre it would, for some time at least, produce 30 bushels per acre.

The quantity of nitrogen (ammonia or nitric acid) which annually falls on an acre, has been variously estimated. If we recollect right, Liebig estimates it at more than 100 lbs.; and, more recently Boussingault and Way found less than 50 lbs. If we take the lesser quantity, and consider with Mr. Lawes, that wheat requires for its production five times as much nitrogen as it contains, the rain supplies sufficient ammonia annually for from 8 to 10 bushels per acre. Now, when we summer fallow a clay soil, a portion of the inert nitrogen of the soil will be rendered available, and the rain which falls during the year it is fallowed will supply it with sufficient ammonia say for 8 bushels per acre, and which, on an underdrained, well tilled clay soil, we have no doubt is nearly all retained for the next year's crop. If, therefore, the normal produce of such a soil is 15 bushels per acre, by the aid of summer fallow it should be 23 bushels, plus an extra bushel for each five pounds of nitrogen rendered available from the inert matter of the soil, by tillage.

The same end is attained by growing clover. Wheat, as we have frequently said, destroys ammonia, but clover, peas, &c., do not. If therefore, on a soil which, by under-draining and proper tillage, derives annually, from decomposition and rain, sufficient ammonia for fifteen bushels of wheat per acre, clover be sown, and one year's growth plowed under, the next wheat crop should be 30 bushels per acre.—Growing clover and plowing it under as manure, is very much akin in its results to summer-fallowing. There is this important difference, however: sandy soils, or soils which do not contain the double silicates before alluded to, do not contain, to any great extent, the ammonia of rain water, and, therefore, summer-fallowing will benefit them but little; while clover will absorb the ammonia of rain as it falls, and organize it, and when this clover is plowed under or consumed by animals, and the manure returned to the soil, the ammonia thus saved from evaporation will be assimilated by the growing wheat. On clay soils, so far as increase of ammonia is concerned, the benefit of growing clover and plowing it under is comparatively small, but on sandy soils it is very great. Many farmers think clover plowed under on clay soils has a beneficial mechanical effect, and doubtless this is the case; but how far it is equal to summer-fallowing is an open question. We are, however, inclined to think that, in this country, where soil is so readily pulverized, plowing under a good crop of clover when in bloom, even on the stiffest clay, and frequently cultivating it before seed time, is, at least, equal to ordinary summer-fallowing; and there are those who, claiming to have tried both ways, think it is far superior.

Some of our readers will ask whether such a course of tillage will not speedily exhaust the soil of the inorganic elements of plants. If the wheat, and straw, and corn, and hay, and potatoes, &c., are all sold off a farm, it must soon be greatly impoverished of mineral matter; but if nothing but wheat is sold, and the straw, stalks, hay, &c., are converted into manure and returned to the soil, we have no doubt that there will be found sufficient mineral matter in the soil for many years to come; in fact, we believe there will be an actual increase of *available* inorganic food of plants from the disintegration of soil induced by constant tillage and the unseen carbonic acid given off from the decomposition of the clover plowed under. Whether it would not be more profitable to convert the clover into hay and consume it on the farm by sheep and other stock, is a question which involves so many considerations, and depends so much on the price of wheat, wool, &c., that no general answer can be given. We should be glad, however, if our correspondents would give their views, and on this point.

NOTES OF A TRIP THROUGH LEWIS CO.

From Rome to Sacketts Harbor, a distance of about 76 miles, there is a plank road, laid with four-inch hemlock plank. The grading and laying cost 93 cents per rod, or $287 per mile. The whole cost of the road was about $1500 per mile. For the first five or six miles after leaving Rome, the land is under excellent cultivation. Finer crops of wheat, corn, oats, and grass, are seldom seen. The next twelve or fifteen miles the land is either naturally very poor, or has been worn out by a miserable system of farming. It has seldom been our lot to ride through a harder looking country. There are a great many taverns, few good farm houses, and no churches. As you approach Constableville the country gradually improves. The cows show some little care in selection and breeding. There are some good open ditches running through the low land, and in one or two instances stone drains are being laid; board and stone fences are occasionally seen—a large, substantial barn and neat farm house, like an oasis in the desert, here and there delight the eye, while the cupola of a distant church, as it glistens in the setting sun, tells us we are approaching a better country.

Constableville is a flourishing village, situated in a rich valley, occupied with a highly intelligent and wealthy class of farmers. We visited the farm of John Constable, Esq. It contains upward of 400 acres, most of which is used for dairy purposes. Around the house is a beautiful lawn, of some 70 acres, studded with fine trees, reminding one of the parks of "merrie Old England." There is about a mile of white and buck-thorn hedge, which not only makes an admirable fence, but adds greatly to the beauty of the landscape. Mr. Constable informed us that he had used a number of plants for hedging, and found that the buck-thorn was much the best. The Osage Orange, he says, does not stand their severe winters.—This farm had been in the hands of tenants, and was considerably run down when Mr. C. devoted his attention to it, some five years ago. It is now one of the neatest and best farms in Lewis county. Mr. C. mentioned a striking advantage of underdraining. He had a meadow which annually produced about half a ton of very indifferent hay. Two years ago he cut some drains through it, three feet deep, and laid them with stone. This year the meadow produced two and a half tons of excellent hay per acre.

From Constableville through Turin, Houseville, Martinsburgh, Lowville, &c., is a rich agricultural district, devoted almost exclusively to dairying. For the past three years they have suffered much from drought. The pastures are completely burnt up, and few of the dairies we visited were making two pounds of cheese per day from each cow. The hay crop is exceedingly light. We question if it would average half a ton per acre. We were pleased to see Ketchum's Mowing Machines so extensively used, and quietly cutting their ten acres a day, cleaner and better than is generally done with the scythe. From the scarcity of hay, it is supposed that cattle will be ruinously cheap here this fall. This spring, hay sold for $12 per ton on the farm, or, as one gentleman said, "you could get as much as you had cheek enough to ask for it." Very few sheep are kept. The reason assigned is that the winters are too long and severe, and cows are more profitable. We cannot but think that a few sheep, at least, might be kept with considerable profit. The pastures abound with white daisies, and all seem anxious to know how to get rid of them. We recommended them to try pasturing with sheep. Few hogs are kept. At this we were very much surprised. Whey, though not in itself very fattening, is one of the best auxiliary foods we know of. Instead of keeping up in the pen a few hogs solely on whey, as is here the case, would it not be more profitable to keep a greater number, allowing them to run in clover, &c., having the whey simply as a *drink?* Some farmers think it pays better to give the whey, while sweet, to the cows than to the hogs.

Barley appears to do better in this "Black River country" than in the "Genesee country." This year, though so dry, the barley crop is very good. As we were passing the farm of Mr. John Strong, of Turin, we observed a remarkably heavy crop of barley, and on inquiry found that it had been dressed with about 100 lbs. of guano per acre. Mr. Strong also showed us some corn which he had top-dressed with guano, and which was much taller and heavier than where it was not used.

Corn, where the land was plowed deep and "the cultivator has been kept going," looks well, and will be more than an average crop. Much corn not so treated, is suffering greatly from drought. Winter wheat is not grown. Spring wheat looks exceedingly well. The *Black Sea* is the favorite variety. Oats and peas are sown together to a considerable extent. They are usually thrashed and ground together as food for horses, &c. Oats, peas, barley and vetches are frequently sown together in England, and yield immense crops. They are not thrashed, but are fed in the straw to horses. When cut up, the horses do better on them than on the best of hay.

KEEPING SWEET POTATOES.

One great drawback against the cultivation of the sweet potato here at the North, is the difficulty and trouble of keeping them sound and good. Mr. George D. Norris, of New Market, in the northern part of Alabama, writing to the *Farmer's Companion*, expresses the opinion that sweet potatoes may be kept as well, or better, here than at the South.—Mr. Norris has cultivated them quite extensively for a number of years, and so successful is he in preserving them, that he has not usually over a peck of rotten ones in 400 bushels.

His method is to make a single shed of boards, by placing crotches in the ground, leaving the sides open for the free circulation of air. The shed should front the south, and stand six feet high—declining to the north to within three feet of the ground. A shed twelve feet wide is sufficient, and may be as long as desired. It should be placed on an elevated piece of ground, trenched all around so as to be effectually drained. He recommends, as soon as the leaves are killed by the frost, to dig—*carefully handle* and pour in piles—here at the North—say of ten to twenty bushels; cover them immediately and thickly with good wheat straw, for light injures the roots as much as cold, and place over that a covering of earth, say a foot in thickness.—The shed and everything should be in readiness before the digging is commenced. When wanting the potatoes for use in the winter, select some warm, open day, and remove carefully one of the heaps to the cellar. Some keep them entirely in cellars, but frequently a loss is sustained from their rotting.

Mr. Norris goes on to say:—"Our climate is very changeable, sometimes freezing the thermometer below zero, and again in two or three days, it will become so warm you cannot have a fire about the house. Last winter was remarkable with us for extreme cold. My potatoes did not have a covering of more than three or four inches of earth, yet when I opened my seed bank the first of March, they were perfectly sound, and had sprouts several inches long. The principal difficulty in keeping them, seems to be a want of care in putting them up, as well as in digging,—for, as I said before, light injures them as much as cold.—Corn is produced where ground. You would not keep it buried in the earth, but expose it to air and light. The opposite is the case with the potato. A sweet potato should be covered entirely in the ground, under an open shelter to keep off the rain. Leave no air holes, but cover entirely. I care not how cold the weather is, if you cover first with good sound straw—not hay—then with earth, and then let there be a free circulation of air. The potatoes, when placed in bulk, undergo a sweating process. This moisture is retained when packed in barrels with sand, or in a pit, and so rots them. Now, in my method, the moisture is all evaporated, and leaves the piles dry. On very cold days my heaps smoke like coal-kilns, and the heat keeps them of a proper temperature. Such is my theory, and by twenty years' practice I have proved it correct. We have eating potatoes yet (May 20) in abundance, perfectly sound, and sweet as honey."

The reason Mr. Norris recommends small heaps, is, that exposure to light and air while using them is liable to rot the whole heap, whereas, if the heap is small, it is used before they take injury.

Regarding their cultivation: Mr. N. never manures his land, as he thinks the leaves supply a sufficient quantity of the right kind. He has planted the same land for twenty years, and sees no change except for the better. He never fails of having large and fine potatoes. If he were to use manure, he would use leached ashes and decayed wood, as animal manures will not answer. T. E. W.

INDIAN CORN IN 1620.

The Corn plant, *(Zea Maize)* was unknown until the discovery of America, and the Pilgrim Fathers found it extensively cultivated among the Indians; indeed, if it had not been, they would have suffered far more severely for food, than they were compelled to do. They soon learned its uses as well as the method of cultivation from the Indians, and it is interesting to turn back two and a-quarter centuries to learn how the Indians or rather squaws, raised corn—now, as then, the staple agricultural product of the country. We gather our information from Prof. Flint's *Report of the Mass. Board of Agriculture.*

The *farming* of the natives, as well as most of the hard work, fell to the lot of the women, assisted, sometimes, by old men and little boys. Their tools were very imperfect, as they consisted only of rude hoes, made by tying the shoulder blade of a deer or bear, or a large clam-shell, to a pole or stick; and stone axes with which they girdled trees, or scraped the charred surface of the logs to hasten their burning.—The land, when selected, was cleared by keeping up a fire around the foot of each tree until it was burned so that it would die. When a tree fell, it was burned into lengths so that it could be rolled into heaps and burned into ashes. Thus in the course of years a piece was wholly cleared of its timber. In some instances the trees were girdled and left standing until dry, when they were burned down as above described.

The finest ears of corn were collected for seed, and particular attention given to planting at the proper season. Holes were dug with the hoes mentioned above, about four feet apart, and those living near the sea-shore then put into each hole a horse-shoe crab or two, upon which they dropped four and sometimes six kernels of corn, and then covered it with the implement with which they had dug the hole. In the interior a few small fishes in each hill were used as a fertilizer. Beans were planted with the corn after it had come up, and grew up supported by it. Great attention was paid by them to the culture and protection of their growing crops. Not a weed was to be seen in the fields, and the corn was carefully guarded against destruction by insects and birds. To prevent loss by the latter, a small watch-house was erected in the midst of a field of corn, in which one of the family, often the oldest child, slept, and early in the morning rose to watch the blackbirds. It was their universal custom to *hill the corn* about two feet high, for its support, and spots may be seen at the present day, which were evidently cultivated by them. The colonists very generally imitated this custom, and it has been continued down to our own times.

It would be interesting to know if the custom of *topping* and *suckering* corn was not likewise derived from its original cultivators. They made no use of the stalks, and hence would not be likely to take the amount or quality of the fodder into consideration. It has been seen that they practiced *manuring* and *clean culture*, the great principles of growing corn in the nineteenth as well as the seventeenth century.—E.

NOTES FROM MY CORRESPONDENCE—NO. III.

SQUASHES AND BEANS.

Dr. Thaddeus Wm. Harris, in acknowledging the receipt of specimens of beetles injurious to fruit trees, and also a sample of seeds of the Apple Squash, thus remarks upon the history, &c., of Squashes:

"Accident led me some four years ago to undertake the investigation of the history of squashes and pumpkins, which has led to quite interesting results. Most of the older and well known species and varieties were by modern botanists supposed to have come originally from Asia, and particularly from India.—This I have proved to be an error; and have shown that these fruits were wholly unknown to the ancients, no mention being made of them in the Scriptures, nor by Greek and Latin authors; the writers of the middle ages, while they describe, or take note of, other cucurbitaceous plants, entirely omit pumpkins and squashes; and these did not begin to be known and noticed in Europe till after the discovery of America. Early voyagers found them in the West Indies, in Peru, in Florida, and even on the coast of New England, where they were cultivated by our Indians before any settlements were made here by the Europeans. The old botanists, who flourished during the first century after the discovery of the New World, or the West Indies, begin to describe them for the first time, and give to them specific names indicating their Indian (that is, American, as we now term it) origin. Hence arose the mistake of modern botanists in referring these plants to the East Indies and to Asia.

From a study of the history of the plants, I went next to a study of the species, with particular reference to their botanical characters; and to this end have been cultivating and examining, every year, all the kinds accessible to me. I think I have established the facts that all the fruits known by the names of pumpkins and squashes are of American origin; that there are three distinct groups of them; the first including summer squashes that have shells when ripe; the second the winter squashes and pumpkins with deep, five-furrowed fruit stems; the third the winter pumpkins and squashes with short cylindrical and longitudinally wrinkled (but not five-furrowed) fruit stems.—The last group was probably originally confined to tropical and subtropical parts of the western side of this continent, from California to Chili. The most esteemed varieties now

cultivated in New England, belong to this group; and the best of them are the *autumnal, marrow* and *acorn* squashes."

Mr. H. B. Magiathan thus writes of beans, and more particularly of a bush bean known as the

Golden Eyed Bean.—"In my experience with bush beans, I have discovered a very fine variety—a beautiful grower, and very prolific. It is rather early, and all the pods ripen at once, when the leaves drop off and leave the stalks thickly hung with bright ripe pods. The leaves are longish in shape and of medium size; in color white, with a dull yellowish eye.

I am also pleased with a small pea bean, a prolific bearer, with great profusion of vine. I have a sort of perpetual bearer, the earliest and latest of bush beans, but as it almost always blasts more or less, it is hardly worth recommending. The Yellow Cranberry, China Red-eye, Brown Six Weeks, Black Mexican, Turtle Soup, and some other early beans, I have found inferior to the Golden Eye above spoken of."

We have a sample of the Golden Eye, from Mr. Magiathan, under cultivation, which is giving full promise of all he speaks for it.

T. E. W.

A GOOD HAY CROP.

Ens. Rural:—I have just finished my haying—and from a field containing, according to careful measurement, 2¾ acres, I drew *thirteen good-sized loads of hay*, which at a low estimate would be between nine and ten tons—say *three and a half tons per acre.* This field has been treated as follows: Two years since, after corn, I covered it with coarse straw manure, plowed it in and sowed to oats and barley, of which I got rather a moderate crop. I then plowed it from eight to ten inches deep, and harrowed it, so that whatever seed had self-sown would come up before sowing to wheat. Before sowing I harrowed it again, and then put on two bushels of wheat per acre, and gauged it in. I then sowed half a bushel of timothy seed per acre, and rolled the ground down. The next spring I sowed one peck of clover seed, which was, however, about half thrown out by the frost the following winter. The wheat yielded about 28 bushels per acre, for which I received $2 per bushel.

W. G. Holmes.

Elba, Genesee Co., N. Y., July 27, 1854.

A CALF WITH ONLY THREE LEGS.

Friend Moore:—As you have published from time to time curiosities and freaks of nature in your most excellent paper, I will give you an account of a natural curiosity that we have on our farm. It consists of a calf *with only three legs;* the fore leg on the right side is wanting. There is a small piece of the shoulder blade and the front bone of the shoulder to which a leg should be attached, but instead of a leg there is only a dew-claw, and that is in the skin loose, right at the end of the front bone before mentioned. It is a heifer, and is now four months old, and is as square and nice a calf as you will often see.—It is from a Durham bull and a native cow. It can get up and run and caper as fast and lively as any other calf. It is quite a curiosity, and draws quite a number of visitors to see it. We shall raise it just as a curiosity.—J. M. T., *Pekin, July 27, 1854.*

Oregon Pea.—Crops in Michigan.—I saw in the Rural of July 8th, a notice of a new kind of pea, called the *Dragon Pea.* I wish to know where they may be had, as I would like to try them for soiling.

Wheat is harvested, and will be a fair yield. Oats very heavy. Corn promises to be a good crop. I wish the Western New York farmers, who think they are in the garden of the world, could have one look at these prairies in the South-west of Michigan, at this season of the year, as they are covered with a luxurious growth of the various kinds of grain that they even with all their high cultivation, little dream of. But I did not desire to write about anything except the *Dragon Pea*, so let us know all you can about it.—E. Buell, *Little Prairie Ronde Mich., July* 23, 1854.

Sowing Clover among Corn.—Having seen the inquiry in your paper respecting sowing clover among corn, I will just say that I have tried it, and it proved of great value. I sowed it at the same rate as I would for pasture, not less than 14 lbs. to the acre, every day after hilling, while the ground was loose and mellow. I use no plow in the corn, and do not make much of a hill. The ground should be free from weeds and grass, as the seed will not take well in grass. I did nothing to the ground after seeding.—S. W., *Mendon, N. Y. June* 22, 1854.

Great Drove of Sheep.—A drove of sheep numbering 11,000 head passed through Edwardsville, Illinois, on the 8th inst. They were from the State of Tennessee, and are to be wintered in Missouri, when they will be driven to Salt Lake.

Agricultural Miscellany.

DEATH OF AN AGRICULTURAL EDITOR.

In speaking of the Agricultural Press, and the responsibilities and duties of its conductors, last week, we little imagined that it would so soon become our painful duty to chronicle the decease of one of the ablest and most esteemed of our contemporaries. But scarcely had our paper gone to press ere we learned that the Rev. Charles Fox, senior editor of the *Farmer's Companion*, died at Grosse Isle, near Detroit, Mich., on the 24th ult. An Englishman by birth and education, Mr. Fox was by profession an Episcopal clergyman,—and he was officiating worthily and acceptably in this vocation, when we (while conducting the *Mich. Farmer*, some ten years since,) first made his acquaintance. For several years past Mr. F. has devoted his time and talents to the promotion of Agriculture and kindred branches, in which department his efforts were eminently successful, and becoming widely known and appreciated. Some two years ago, in connection with Mr. C. Betts, Mr. F. established *The Farmer's Companion*, and last winter published "The American Text-Book of Agriculture." He was also Lecturer on Agricultural Chemistry in the University of Michigan. His decease in the prime of life, and while engaged in a career of extensive usefulness, is a loss to the country, and especially to Michigan, which will be greatly felt and sincerely deplored—while the Agricultural Press loses one of its brightest ornaments.

—Though prostrated by illness, and unable to write as or what we otherwise would, we were constrained to attempt this brief tribute to the worth and memory of a most useful and enthusiastic promoter of Agricultural improvement.

Irrigating Wheat.—The *California Farmer* says it is the practice of several farmers in San Jose county, to cut their wheat previous to jointing, and "thus throw back the strength into the roots again, retarding the growth for a time." It is said wheat so treated was "unusually strong in the straw," and gave great promise of an abundant yield.—When on the Rothamstead farm, England, some years ago, a field of wheat, sown early on purpose for the experiment, was divided into several portions, some being left untouched, others eaten down two or three times with sheep, and others mown before jointing as in the case above alluded to. There was no striking difference in any of the several portions, but, if we recollect right, the portions untouched were the best, and those *mown the worst.* The Summer, however, was unusually dry, and therefore unfavorable to the portions eaten off by sheep, or mown down.

Stowell Corn.—The Ohio Cultivator gives the following method of treating this corn so as to make it good for winter use, the old mode of trying to keep it green in the husk having generally proved a failure:

"Gather the ears when in full milk, and strip off all but a thin covering of husk; lay these in a moderately heated oven or cooking stove long enough to scald or stiffen the milk, when the grains are shaved off and kept in a close bag or canister. Boil in the usual way when wanted for use. Thus treated, the corn is said to be very fine."

Wheat Crop in Eastern Virginia.—Throughout the whole of Eastern Virginia, the wheat crop has proved exceedingly light; there are many counties where the Joint Worm has totally destroyed the crop. A "Joint Worm Convention" has recommended to burn the stubbles in order to check the propagation of these pests. Grass and spring crops, though injured somewhat by drouth, are ordinarily good.

The Crops—Harvest Hands Wanted.—We are glad to learn, from various quarters of the State, that the violent storm of Thursday did but comparatively little injury to the growing crops. The winter wheat is, in many places, already fit to cut, and almost everywhere out of danger. It promises a luxuriant yield.

We hear many anxious inquiries for harvest hands. Farmers tell us that labor of this sort is very scarce, and will command almost any price. For the next thirty days, good harvest hands can earn two dollars a day, in this State. If there are any able-bodied men, willing to work, and without occupation, in and about our city, let them go to the first farmers they meet and hire out for a month.—*Milwaukee Sentinel.*

Crops in Wayne Co.—The wheat crop in this county has been secured, and it is found to be excellent in quality, and nearly if not quite a usual yield in amount. The crop of hay is fair. In truth the farmers of Wayne have no cause to complain. Almost every product of the farm has done reasonably well.—*Wayne Co. Whig, July* 26.

Heavy Fleece.—Foxwell Kelley, of Westhaven, Vt., sheared from a three-year-old sheep, a few days since, 20 lbs. of wool, of one year's growth. The sheep was of the common Merino blood. Who can beat this?—*Whitehall Democrat.*

MEATS IN NEW YORK MARKET.

The Tribune Reporter gives the number of beeves slaughtered in New York market for the second quarter of 1854, as 37,324. Average number for each market day, 2,340. Total number for six months, 78,573. These, at an average weight of 6½ cwt., give a total of 47,822,460 lbs. of beef, which, at 9½ cents per lb., which is below rather than above the average price, makes $4,543,128 for our beef bill the first half of 1854. It also shows the average price of all the cattle per head, $61.75, which we presume no one will say is above the fact. The price for the last quarter will average 10c., and net 7 cwt., or $70 per head.

It appears that for the first 26 weeks in 1854, we have slaughtered upward of four hundred thousand animals in this city; or at the rate of 15,419 per week, or 2,202 5-7 per day; and that of this number seventy-three thousand, five hundred and seventy-three were beeves. In the same time we have destroyed the seed of forty-three thousand, five hundred and thirteen other beeves, by murdering that number of calves; forty thousand of which probably before they were a week old, or any more fit for food than young kittens. We have also consumed over nine hundred sheep every day, without counting those butchered out of the city and brought here in carcass.—It must be conceded that New York contains a meat-eating population.

In regard to beeves sold here, we believe from personal observation of nearly the whole of them that the farmers could have added an average of $10 per head to their value for an expense of less than $2 each. This would have made a sum of $735,720, and of which $580,584 would have been profit at $8 per head.

These tables do not include a host of animals that come to the city upon the boats from New Jersey, Long Island and Connecticut, besides a good many sold to city butchers upon the Jersey side of the river. The cows, too, all go into the city consumption, and more city fatted hogs than are dreamed of in any body's philosophy. Vast quantities of butchered meat is also received by market boats and rail cars.

Per contra, we ship a small number of the animals included above, principally to Bermuda, and a considerable portion of the pork is salted; otherwise the whole is eaten fresh in this city and vicinity, or upon ships leaving this port. The quantity sent out of the city fresh, bears no comparison to the quantity of dead meat brought in; as it is now a common thing to bring mutton from Ohio in winter; and we hope the day will come when all the animals will be butchered in the country, and the vast amount of offal go to enrich the land instead of the Atlantic Ocean.

Below we give the number of beeves from each State sold at Allerton's during the last quarter, which will show us whence we derive our principal supply:

New York, 4,671; Pennsylvania, 1,826; Virginia, 635; Ohio, 12,945; Kentucky, 4,103; Indiana, 456; Iowa, 306; Illinois, 4,116.

This gives a total of 21,916 head of western beeves out of 28,448, or more than three-fourths of the whole number. The number stated from this State does not give the full number, as three-quarters of those sold at the small markets are New York cattle, and most of the others from New Jersey. Nine-tenths of the swine and large numbers of sheep come from Ohio. It will be noticed that the Ohio cattle average almost a thousand a week.

Breeding from Broken-down and Diseased Mares.—This not uncommon practice is one great cause why there are so many horses of unsound constitutions, so ready to break down or take on disease from overworking or other errors in management. True, a horse of the soundest and strongest constitution will break down under bad treatment—such treatment as it pains us to witness not unfrequently—but the produce of an old diseased mare will break down under bad treatment more readily than that of sound and healthy parentage. For example, it is well ascertained that broken wind can be propagated, when either sire or dam is affected with that disease; and that, when inherited in either case, there is a very high probability that when any produce of such diseased animals is set to work, it will soon become thick in the wind, and become broken-winded at an early age. It is poor policy, therefore, to breed from an old broken-down or broken-winded mare. Better to shoot the old creature, and breed from a young and perfectly sound mother. The colts will be worth enough more to cover abundantly the difference in the cost.—*Country Gent.*

Large Field of Corn.—On the west side of the Scioto, just below Columbus, there is a field of six hundred acres of bottom land planted in corn. Fifteen shovel plows and three cultivators, worked by eighteen men and twenty-five horses, are kept in constant requisition; and the result is, that scarcely a weed can be seen in the well-plowed furrows. Twenty-five German girls follow the plows, and do the hoeing, for which they receive 62½ cents per day. The Journal says this corn is the tallest in the neighborhood. On our prairies it takes a locomotive in some places, nearly three hours to pass through a continuous corn field. And all the labor that is required to cultivate it is in the planting and picking of the crop.—*Chic. Jour.*

Sheep Killed by Lightning.—The Rutland (Vermont) Herald states that 47 sheep and 14 lambs, worth some $300, were killed near a tree in that town on the 15th ult., by a discharge of lightning, the direction of which was evidently from the earth, as locks of wool were driven into the tree along which the fluid passed, and the fibres of the wool were brushed upward; and also that the bodies of animals killed by lightning decay very rapidly, as there was only a heap of wool, and of dry, fleshless bones, left of the 61 sheep, when found a few days after they were killed.

TRENCH AND SUBSOIL PLOWING.

When the common two-horse plow alone is used by farmers, it pulverizes the soil only a few inches in depth, and its own weight, and the tread of the horses on the bottom of the furrow, gradually form a hard crust at that depth, through which the roots of plants and the moisture of rains do not easily penetrate. Hence the roots have only a few inches of good soil on the surface of the earth for their support and nourishment; and when heavy rains fall, this shallow bed of mellow earth is soaked and injured by surplus water. Again, in time of drouth, this shallow bed of moisture is soon evaporated, and the plants suffer in consequence.

But, on the other hand, when soil is made deep, it absorbs, like a sponge, all the rains that fall, and gradually gives off the moisture as it is wanted during hot and dry seasons.—For this reason, deep soils are not so easily injured by excessive wetness, or by extreme drouth, as shallow ones. In addition to this advantage, they allow a deeper range for the roots in search of nourishment.

Soils are deepened by *trench-plowing* and by *subsoiling.* By trench-plowing, the common plow with a mould-board is made to enter the earth to an unusual depth, and to throw up a portion of the subsoil, covering with it the top-soil which is thrown under. A subsoil plow, on the contrary, only *loosens* the subsoil, but does not lift it to the surface.

When a mixture of the subsoil with the surface tends to render the whole richer, trench-plowing is best; but when the subsoil is of a more sterile character, it should be only loosened with the subsoil plow, and more cautiously intermixed with the richer portion above.

"It often happens that the subsoil plow is very useful in loosening the soil for the purpose of allowing the trench-plow to run more freely through it.—*Thomas's Farm Implements.*

IS FARMING PROFITABLE?

We often hear the affirmative of this derided, and by persons too, whose opinions are entitled to credit. We do not prefer to discuss this subject, but to give a practical illustration of it, and let our readers make the application.

Den Brooks Shattuck, of Bedford, bought and moved upon his farm eleven years since.—It was a rough farm, for which he paid $2,300. He was a manufacturer and had shattered his health in a mill at Lowell. He paid in cash $900, leaving a debt to be paid from the farm of $1,400. During that eleven years he has supported a large family, educated his children, having one son in college; has contributed liberally to the charities of the day; has been a liberal supporter and patron of Agricultural Societies, spending time and money freely, to further these objects; in a word he has been an active *book farmer.* Now mark the result. He has sold from his farm $100 worth of land and $300 worth of wood, timber, &c., standing upon the same, which may not be reckoned as the result of agricultural labor. He has paid the $1,400, and a few weeks since sold his farm for $3,700,—giving a balance on his farm of $1,500, for improvements and rise in value of lands. To recapitulate, receipts from farm,

Land, wood and timber sold,	$400
Debt and interest paid,	1500
Balance on sale over cost of farm,	1600
Leaving the snug little sum of	3,700

For the receipts on the purchase and carrying on a farm for eleven years, besides the support of a large family. In addition he has *recovered his health*, so as to labor daily upon his farm. Is there profit or not in books?—*Granite Farmer.*

Farming in California.—Three years ago it was *thought* by most people that California would produce nothing but gold. Now, it is *known* that it is the most productive country in the world, or can be made so. The trouble now is that we produce too much; things are too plenty, and, as a natural consequence, too cheap. Potatoes have rotted in the field, because they would not pay for being carried to market. Barley was offered yesterday for sale at a cent per pound, and no one stood ready to buy. There are now one or two vessels loading with flour for Australia. Think of all this, when only two or three years ago many of these articles were worth from twenty to fifty cents per pound. Here is a change not beneficial in all cases to the producer, but showing clearly that with proper exertion California can sustain a dense population, and that time and labor only are required to give us all the advantages which older sections of the country possess.—*California Chronicle.*

Raising Canary Seed.—A writer in the Ohio Farmer strongly recommends the farming people to raise canary seed, which is said to be an operation attended with no more trouble than the culture of oats. Now that mother and Ann Eliza keep a canary bird or two, what is the use of paying ten cents a pound for seed, when it can be raised from a man's own ground, and be found, (it is said,) an excellent food for horses. The head is large and heavy, resembling millet. Our writing friend says he has raised two crops of this seed in a single season—saving the first for seed, and getting a second crop on the same ground. Who is the enterprising farmer that will furnish an item next year by becoming the pioneer in the matter of raising *canary grain* for market?

Spring Wheat Blighted.—We regret to hear that throughout Northern Illinois and Wisconsin, the recent hot weather has extensively blighted the crops of spring wheat—Many fields show nearly a third of the heads of the grain in this condition, which is indicated by its whitened appearance. In Wisconsin, where the crop was not so far advanced as in Illinois, many fields will not yield enough to pay the expense of harvesting.—*Chicago Tribune.*

SEASONABLE HINTS.

There are a few important items in the farmer's practice, which are not unfrequently omitted from forgetfulness, at the present busy season of the year, and of which it may be useful to remind some of our readers at the present time.

Weeds in pastures are often overlooked, till they have ripened their seed, and scattered enough for a plentiful crop another year.—Some of them will be destroyed by cutting with a scythe before or when in blossom—others will need grubbing at the roots. A few hours expended in this way will not only prevent a loss to the soil by growing unnecessary herbage, but give the fields a neatness of appearance, which every good farmer ought to take pride in seeing.

Ruta bagas and other root crops often cost double in cultivation by leaving them at the first hoeing till the weeds have got the ascendency. The first dressing should be given when the plants are not more than an inch in height.

The best hay is that which is made without becoming too dry: but to prevent moldiness, it should be moderately salted. The intermixture of salt is more perfect when it is frequently applied in successive layers. One peck to a peck and a half is not too much for a ton of hay. Let farmers see that a sufficient supply of salt is on hand before commencing haying, and then it will not be so likely to be neglected.—*Country Gentleman.*

Inquiries and Answers.

ABSORBENT POWER OF CHARCOAL.

I observe in a late No. of the London Ag. Gazette, a report of Prof. Way's experiments on the absorbing power of charcoal, in which it is stated that charcoal loses all power of absorbing ammonia, &c., when its pores are filled with water. I wish to inquire if charcoal, soaked with water, as it must be as soon as mixed with wet soil, loses all its virtues as an absorbent? I observed a statement many years ago in Silliman's Journal, of an experiment with 45 lbs. of animal charcoal, applied to a tank of excessively fetid water, 9 feet in diameter and 3 feet deep, which the charcoal rendered perfectly sweet. I cannot reconcile this experiment with Prof. Way's statement, and would be glad to see an explanation.—A Novice.

Charcoal retains ammonia, not because it enters into chemical combination, but simply because the pores of the charcoal absorb it.—Liebig says that "*every* porous body—rocks, stones, the clods of the field, &c.—imbibe air;" and it is well known that spongy platinum will absorb 800 times its volume of oxygen gas.—In this case, and in that of charcoal, which absorbs upwards of 90 times its volume of ammonia, it is plain that the gases must be greatly condensed, and it is supposed this is effected simply by the pressure which the attraction of such an immense surface induces. It is, however, probably increased by chemical affinity between the substances. It has been computed that a single cubic inch of beech-wood charcoal has a surface of at least one hundred square feet. We cannot, therefore, be surprised that it will absorb and condense between 80 and 90 times its volume of ammoniacal gas.

Charcoal made from animal substances, and which has fewer pores, possesses a higher absorbing or condensing capacity than that made from wood, especially the lighter or more spongy kinds, in which the pores are larger.—It is known, too, that new made charcoal is more effective than that which has been exposed to the air for some time; and it is also proved that by exposure to the air charcoal absorbs a large amount of water. If, therefore, the absorption of a portion of moisture lessen the absorptive power of charcoal, it is quite probable that when the pores are filled with water, the power will be entirely lost.—We were, therefore, not at all surprised at the statement of Prof. Way; and since he has been latterly devoting much time to investigating this and other kindred subjects, he is doubtless correct in his assertion. How to reconcile it with the effect animal charcoal is said to have on fetid water, when mixed with it, is not clearly perceived, but it may be that the sulphuretted hydrogen (for which the charcoal has a great affinity, absorbing 55 times its volume) and other gases were absorbed and condensed in the pores before the water could gain entrance, for the pores are so fine that water would not be readily absorbed. As our correspondent says, however, when charcoal has been for some time mixed with wet soil, the pores would be filled with water, and its power of absorbing ammonia nearly if not entirely destroyed.

Wine from Native Grapes.—In your last No. you gave your readers a first rate recipe for currant wine, which I doubt not hundreds will avail themselves of. Will you not in your next, or some future No., give the process of making wine from the *native grape?* Thereby you will confer a great favor on your readers in this section of Ohio, as we have a soil and climate peculiarly adapted to grape culture, and I suppose the best way to dispose of them is to make from them a wholesome wine.

P. S.—All the crops in this section are good, except *wheat;* that was destroyed by the *weevil.* —H. B., *Toledo, July* 26, 1854.

Orchard and Garden.

HORTICULTURAL HINTS.

Grass on Garden Walks.—Much difficulty is often experienced in keeping the walks of gardens and yards free from grass, which will spring up through a considerable layer of gravel if not prevented. Various remedies have been proposed, such as sprinkling with salt, or forming the under layer of the walk of leached ashes, but neither are permanently effectual. The *Practical Farmer* says that *gas tar* is used in Great Britain, and being found absolutely fatal to vegetable growth, a coating of it spread over a walk keeps it clean as long as it remains. The best manner of applying it is to have the walk made and rolled hard; then put on the tar with a brush, and cover it with a coating of gravel, which will become incorporated with it, and form a dry and tidy walk.

The Pear or Cherry Slug.—A correspondent of the *Ohio Farmer* gives a more complete description of this pest than was contained in our recent reference to it. The perfect insect is a fly about one-fifth of an inch in length, of a glossy black, the first two pairs of legs clay-colored, with blackish thighs, and the hinder ones black, with clay-colored knees. The wings are four, rather coarse and crumpled on the upper side; transparent, with a band across the middle of the first pair.—They emerge from their winter quarters in the ground in May; and lay their eggs singly on the body of the leaf, these hatching in two weeks. They undergo several transformations, and become perfect flies in time to produce a second brood of spoilers.

Good Fruit without Grafting.—The *Germantown Telegraph* endorses the following, as made by a fruit grower of celebrity, who would like likely to know something of its truth and value. "In every perfectly ripe apple, there will be found one, and sometimes two *round* seeds, the others having one or more *flatted* sides. The *round* ones, it is said, will produce the *improved* fruit from which they are taken; while those with *flatted* sides will produce the fruit of the *crab*, upon which the graft was inserted." Have any of our readers observed anything to confirm this statement?

Pears on Quince Stocks.—Much complaint is made at the West about the failure of dwarf pears on quince stocks—the quince dying out, especially on light soils. At the East, where the same loss is experienced, no soils are exempt, and it is suggested that as the pear shoot grows most rapidly, it exhausts all the nutriment, and the quince cannot secure enough to expand its roots. We shall have to return yet, to the practice of growing the pear on its own roots, if this difficulty is not overcome.

Charcoal for Blooming Plants—Charcoal dust placed around roses and many other plants cultivated for their blossoms, will increase the size and number of their flowers; but where fruit is the object, it is thought to be injurious in throwing too much of the vigor of the plant in this direction, so that the blooms will fail to be productive. We are not sure this is always the case, but throw out the hint for the consideration of those interested.

Grapes as House Plants.—A Maine nurseryman has succeeded in growing grapes of extraordinary beauty on dwarf vines, in flower pots. They are spoken of as ornamental beyond any geranium or cactus, and retain, it is said, all their peculiar fragrance and flavor, more perfectly than any other fruit thus grown.

Budding or Inoculation. — The process has been so frequently described, that most persons interested understand it—yet it may be of use to say that about now is the time to attend to it. Buds sometimes fail from not being sufficiently matured, but they also fail from being inserted late—the autumn drouth diminishing the supply of sap in the stock.—B.

CURIOUS MARINE PLANT.

A writer in *Putnam's Magazine* gives a description of a wonderful aquatic plant, the *Valisnera*, which grows on the bottoms of rivers. It consists of long, elastic cords, twisted like a cork-screw, and sends some branches up to the surface, while others remain below and are completely submerged. These last sometimes flower, but they cannot exhibit the beauty of their frail blossoms, so they begin to stretch and twist as if they longed for the bright sunshine above, and at last they succeed in breaking loose from their dark and gloomy home. In an instant they rise to the surface, being lighter than water, expand there, and mingle their dust with other flowers already floating. Here they remain until the seeds are beginning to ripen, when the elastic stems once more contract, and carry the seed vessels down to the bottom of the stream where alone they can hope to find all the requisites for their future growth and welfare.

GRAPE VINES.—SUMMER AND AUTUMN PRUNING.

In a previous No. of this volume, (Jan. 14, '54) we gave an article on winter pruning, proposing at the proper season to add a few remarks on the summer management of grape vines. The practice of pinching off the ends of the shoots and picking off a portion of the leaves, is carried to a much further extent in England than in this country—much further, indeed, than is found beneficial here. Still, as remarked in the "Fruit Garden," "If a vine is left to itself all summer, or from one winter pruning to another, it will be found that a vast quantity of useless wood has been produced, and that to the serious detriment of the bearing shoots for the following year." Every few weeks, therefore, it is advisable to attend to the growing vine,—tying in the shoots, checking the strongest, and rubbing off the superfluous ones, and keeping every part in its proper place, and in a proper degree of vigor. It must never be forgotten, however, that the *full growth* and *perfect ripening* of the FRUIT, depends wholly on healthy, well-developed LEAVES, to furnish food to the forming berries.

Some weeks later, say in September, when the branches begin to slacken their growth, it is proper to pinch off the ends of the growing vines, because growth at that season is needlessly at the expense of matter forming in the other leaves. The newly-formed leaves have not time to become properly developed, and their energy may better be thus directed to the perfection of the grapes. The shoots, also, will be better perfected for bearing next year and less liable to injury from the cold of winter.

We copy above an illustration from Thomas's "Fruit Culturist," showing the mode of pruning recommended, for autumn. The two right hand fruit spurs *a* and *b*, show the ordinary length they are allowed to grow before the ends are pinched off, the upper one being already shortened, and the lower showing the point at c where it should be nipped.

We believe the grape crop of the present year promises to be a remarkably fine one.—B.

THE PRINCIPLE OF GROWTH IN PLANTS.

"Plant a tree, Jock, it will e'en grow while ye are sleeping." This well-meaning advice of Sir Walter Scott, we see too frequently noted upon, by our horticultural friends. The tree is planted, and left to grow whilst we *sleep*.—Had that truly great man finished his advice to Jock, he would have said—and after you have planted the tree, Jock, consider well what you want from it, whether it be fruit, flowers, or simply shade; whichever it is, Jock, you must learn what kind of food the fruit, flowers, or wood, most delight in, and if the soil abounds in it, you may go to bed, the tree will take care of itself, whilst you sleep; but if there is any thing lacking you must supply it before you sleep. Sir Walter did well in that he advised to plant a tree at all; but he would have done better, had he told what to have done with it when planted. The solidifying of the wood and the formation of fruit, are two processes entirely dissimilar, brought about by different means, and for different purposes, each requiring a specific food. But, like the food taken into the human stomach, one portion goes to make the bone, another the muscle, another the fat, and so on. There seems to be less information on vegetable physiology than any other science, and yet it is one that should command the most universal attention, for there is not a man, woman or child in the universe, that is not deeply interested in the principles of vegetable growth and production, and yet how few can tell what the wheat has fed upon, that makes the light, nourishing bread; what the potato has eaten, that makes almost the staff of life; what the tree feeds upon, that gives shelter and fruit; what the flower feeds upon, that gives it its deepest dyes. The elaboration of sap into wood, fruit and foliage, is one of the most beautiful of nature's mysteries; but the special process by which it performs it, may and should be understood, at least by every cultivator. We say with Sir Walter, plant trees, but first know what you plant them for, and then, how, where, and when to plant them. We refer our readers to Liebig for the whole process which nature performs, in transforming the various substances of the earth and air, into wood, fruit and flowers.—*Soil of the South.*

TAKE GOOD CARE OF THE ROSES.

Roses will well repay a little attention at this season. They have just exhausted themselves by profuse bearing, and if the seed vessels are allowed to ripen on them, they become well nigh prostrated for the season. This should not be permitted. To remedy this in a measure, a little care is necessary in first judiciously pruning off a part of the oldest wood, and next in digging about and stimulating the roots to recover their former vigorous tone.—Liquid manure is excellent for this purpose, if prepared in this manner, viz., a half bushel of fresh cow manure, and half the quantity of hen manure, if at hand; put into a barrel, which may be filled with water; stir it up, and after twenty-four hours' soaking, pour the liquid freely around the bushes, and fill the barrel again with water, for another application a week hence, and the process can be a number of times repeated with the same manure.

We think this fertilizer the best we have tried for all annuals, perennials, and summer flowering shrubs. We like also to shower our rose-bushes frequently with strong soap suds from the wash.

Most of our best roses, now-a-days, are hybrids, or other perpetuals, yet we know of many who have paid large prices to obtain choice varieties, and then by sheer neglect, after spring blossoming, they prevent another rose from appearing to gladden them again during the season.—*Am. Agriculturist.*

Pruning Evergreens.—Levi Parker, of Wilmington, states that pines and other evergreen trees pruned in the latter part of May or early in June will not bleed or be injured by the operation of pruning. He has tested them by many trials.

Domestic Economy.

TO PRESERVE BEANS AND PEAS.

A new method for keeping the above fresh for any length of time, so that they shall lose neither the taste nor original softness, has been lately introduced to notice by A. Albert, of Paris. Take the beans when not much larger than peas, and pursue the following directions for both vegetables:

Plunge them for a minute in boiling, and afterwards in cold water; spread them out for several hours on canvas frames. Then place them in an oven, slightly heated, on frames covered with paper; leave them long enough to be at the same warmth as the oven, and then expose the frames to a current of air till the articles are cold. The frames are then replaced in the oven and again exposed until the beans are perfectly dry, not so as to break, but almost like beans dried naturally.

The articles should be gathered and dried the same day; if not, they should be left during the night in the oven. They should be kept in dry and clean bottles, and to each bottle of beans there should be added a bunch of dry savory. Before using the vegetables they should be steeped some hours, in tepid, or even night in cold water; if they are beans the water is thrown away, and they are cooked in the usual manner, but if peas, they are only just covered, and they are cooked like green peas. Vegetables prepared in this manner are quite as good as if they had been just gathered.

Cure for Summer Complaint.—We are indebted to a friend for the following recipe for making blackberry syrup. This syrup is said to be almost a specific for the summer complaint. In 1832 it was successful in more than one case of cholera. The fruit is now in market, and the present is the proper time to prepare it:

To 2 quarts of juice of blackberries, add
1 pound of loaf sugar,
½ oz. nutmeg, ½ oz. cinnamon, pulverized,
½ oz. cloves, ½ oz. allspice, do.

Boil together for a short time, and when cold add a pint of fourth proof brandy.

You will save many bitter tears by publishing the above in your valuable paper. From a tea-spoonful to a wine-glass, according to the age of the patient, till relieved, is to be given. It may spoil practice, but it will save life.—*N. Y. Eve. Post.*

Dropped Egg.—For a person recovering from sickness, and not able to take meat, this is an excellent article, and much lighter for the stomach than eggs cooked in any other way.—Put a saucepan of water with some salt in it upon the coals; as it boils up, drop in a fresh egg not beaten; as soon as the white is hardened, take it up with the skimmer carefully, so as not to break the yolk; have ready a slice of toasted bread, dip it into the water in which the egg was boiled, put it upon a plate, spread with a little butter, and lay the egg upon it.—Add more salt, if it is not enough seasoned by the water. A dozen eggs boiled in this way, make an ample breakfast for a large family.—In this case more butter should be used than when the dish is prepared for an invalid.

How to Get Rid of Mosquitoes.—The oil or essence of Pennyroyal (the oil is the best) sprinkled around the room, and over the bed clothes, before retiring to bed, has been found to answer admirably in correcting these rowdy insects of their *calithumpian* and *bill-sticking* propensities. It is a volatile article, and therefore can do no injury to the clothes, while the aromatic flavor is by no means disagreeable.

To Prevent or Remove Rust.—If wire fence, or any rusty wire or iron, is rubbed with boiled oil in which some red lead has been mixed, on a warm day, the rusting process will be arrested.

Mechanic Arts, &c.

LIST OF PATENT CLAIMS

Issued from the United States Patent Office,

For the week ending July 18, 1854.

Wm. E. Bird, of Cahawba, Ala., for improved steam boiler.

Israel T. Brown, Columbus, Ga., for improvement in cotton gin ribs.

Leander W. Bryton, South Coventry, Conn., for improvement in machines for preparing blocks for felting.

Hugh Burgess, Kentish Town, Eng., for method of coating iron with brass or copper.

Lewis R. Concord, Philadelphia, for improvement in block slide valves for steam engines.

Thos. Crossley, Boston, for improved method of making printing blocks.

Saml. Champion and Thos. Champion, Washington, for improvement in bridge.

Joel A. H. Ellis and Alex. Gordon, Rochester, for improved mode of operating excavating machines.

Jacob Erdle, West Bloomfield, N. Y., for improved wind mill.

Roswell Enos, Woodstock, Ill., for improvement in tanning.

Geo. W. Griswall, Carbondale, Pa., for process of separating impalpable powder for paints.

F. Huston, New Orleans, for improved mode of mixing vessels.

Wm. R. Palmer, Elizabeth City, N. C., for improvement in horse powers.

J. A. Rose and J. Lee, Philadelphia, for improvement in machines for weaving piece goods. Patented in England, Feb. 17, 1854.

E. Sturdock, Albany, for improvement in cutting tobacco.

Wm. G. W. Jaeger, Baltimore, for manufacture of lamp black.

James Spratt, Cincinnati, for improvement in hermetical sealing.

Thomas Stubblefield, Columbus, Ga., for improvement in steam gauges.

H. C. Stevens, Georgetown, Ky., for improvement in washing machines.

Jacob Sennett, Philadelphia, for improvement in shearer's heddles.

Wm. W. Smith, Marshall, Mich., for improvement in buckles.

A. Snyder, Hawley, Pa., for improvement in railroad car trucks.

Geo. H. Smith, M. D., Rochester, for improved process for making steel direct from the ore.

Peter Spilman, Richmond, Va., for improvement in apparatus for laying off the scye in cutting garments.

J. F. Snyder, Culpepper, for improvement in metallic fire-places.

S. Tomlison, Pleasant Valley, N. Y., for machines for holding docks of horses.

P. B. Tyler, Springfield, Mass., for improvement in winding rope, cord, or yarn.

Chas. Watt, London, and Hugh Burgess, of the city of London, Eng., for improvement in the manufacture of paper from wood. Patented in England Aug. 19, 1853.

Geo. F. Wilson, Providence, and Jas. M. Whitney, North Providence, N. I., for improvement in machines for threading screws. Patented in England, July 18, 1854.

Mary Burns, of New York, administratrix of Robert Burns, Jr., deceased, late of New York, aforesaid, for improved carriage springs for light vehicles. Patented in England, June 7, 1853.

G. J. Wardwell, Andover, Maine, assignor to himself and Elmer Townsend, of Boston, Mass., for improvement in machines for pegging boots and shoes.

Albert H. Tingley, Providence, R. I., assignor to himself, Edmund W., and Harvey F. Tingley, of Providence, aforesaid, for improvement in machines for sawing stone and marble.

RE-ISSUES.

Chas. R. Fox, Chicago, for improved sawing machine. Patent dated May 9, 1854.

ADDITIONAL IMPROVEMENTS.

Samuel Eccles and James Eccles, of Philadelphia, for improvement in looms for weaving figured fabrics. Additional to original letter patent, No. 9,168, dated Aug. 3, 1852.

New York Crystal Palace.—At a meeting of the Directors of the Crystal Palace, on the 10th inst., P. T. Barnum gave in his resignation as President. His reason for so doing is stated to be "ill health," caused by over-exertion in endeavoring to resuscitate the affairs of the Association. He really has labored nobly and spiritedly for this purpose, and deserves great praise for what he has done. His resignation was accepted, and J. H. White was elected President, *pro tem.* It has been resolved to close the Exhibition on the 31st of October next, and to appoint a committee with power to dispose of the property of the Association, deliverable on or after the 1st of next November. What will be done with the building is the most prominent question that now presents itself to us. Had the original managers been men of good judgment in such matters, they would have erected a building, as we suggested, that could easily have been removed, and re-converted into buildings.—*Sci. Am.*

Improved Windmill.—Daniel Halliday, of Ellington, Ct., claims an improvement in windmills. This consists of the attachment of wings or sails to rotary movable spindles, furnished with levers. These levers are also attached to a head which rotates with the sails upon the same shaft. Another lever is attached to the head. This is connected to a governor which slides upon the shaft, so as to cause the levers to turn the wings or sails. The necessary resisting surface being thus presented to the wind, a uniformity of velocity is attained. The proper regulation of the *obliquity* of the sails, so as to adapt them to the varying motive force of the atmosphere, is represented by the inventor to be thus secured, without difficulty, to a degree which renders his mill more constantly available than those hitherto employed.—*Scientific Am.*

Silver Pointed Lightning Rods.—The Livingston County Republican, of the 29th ult., states that the house of Mr. Cushing, about a mile north of the village of Geneseo, in that county, was struck by lightning during a storm on Thursday the 22d. What is singular in the case, the house was protected by three silver-pointed lightning rods, of most approved construction, which rods, it seems, afforded no protection.

CHAIN AND WIRE BRIDGES.

The following extract from an article in the Niagara Falls Gazette, elicited by a controversy with the Buffalo papers on the subject of the suspension bridge at the former place, which is being converted into a railroad viaduct, contains some facts quite interesting to the general reader.

"The instances cited in the article which we are noticing, of bridges which have fallen and been the occasion, some of them, of great loss of life, have little or nothing to do with the question. All of them with a single exception, were European structures, and on the old and discarded system of employing chain instead of wire cables. We have just had demonstrated, by a practical engineer of much experience in wire bridge business, the all-important difference between these two means of support.

In the chain cable everything depends on the soundness of each individual link, and the constant friction between them at their points of contact mutually affects their strength, to say nothing of their gradual wear. In the wire cable, each and all of these difficulties are avoided, and every strand composing any one of the cables, may be severed at certain intervals without diminishing the strength of the whole by more than the loss of a single strand. This result is secured by the adhesive strength created by the external binding wire and coating, and secures one of the most signal triumphs in portal architecture. The other case mentioned is that of a suspension bridge at Wheeling. We are surprised that an instance of this kind should have been brought in for illustration. The question under consideration was the durability of Iron Wire bridges for railroads and other ordinary legitimate purposes.

The bridge at Wheeling was destroyed in no such manner. It was lifted from its foundations and wrenched by the resistless power of a tornado, twisting off its cables with the sudden fury of a whirlwind. It would have been just as properly introduced, as an example, had the two opposite banks on which its foundation rested, been upturned and removed by an earthquake. It is stated, moreover, that this disaster might, in all probability, have been prevented by a better system of guys; on this point, however, we are not reliably informed."

HARDWARE BUSINESS OF BOSTON.

We have not time or space to go into a detailed statement of all the myriad branches of the hardware manufacture of Massachusetts; we will, however, mention a few of the more prominent items. Nine years ago the value of nails annually made in Massachusetts was $1,502,275; hollow ware and castings, $1,280,141; scythes, $113,935; axes and hatchets, $95,441; cutlery, $158,175; butts and hinges, $25,390; latches and door handles, $3,200; locks, $60,070; tacks and brads, $253,687; shovels, spades, forks and hoes, $275,212, besides large quantities of chains and other wrought iron articles, machinery of all kinds, plows and other agricultural implements, iron railings to fences, safes, &c.

With the astonishing impetus all the manufacturing interests of the State have lately received, the manufacture of hardware has sympathized to the fullest extent, and undoubtedly has, since the date to which we refer, doubled in the aggregate, and in respect to some particular branches has more than trebled or quadrupled. The Douglass Axe Company, for example, now turn out $300,000 worth of axes per year, against $94,000 worth made throughout the State in 1845. The well known goods of this establishment are sold exclusively in Boston. Against $275,000 worth of shovels, spades, forks, and hoes, we have now one manufactory, that of O. Ames & Sons, North Easton, making shovels alone, to the amount of $700,000 annually. The manufacture of tacks and brads has doubled since then; and the same rates of increase apply in regard to many other kinds of goods.—*Boston Atlas.*

FLOORING FOR STABLES—WALLS FOR OPEN CISTERNS, &C.

Those who live easily accessible to cities, or where gas tar may be obtained, may make a hard and water-proof coating, by a mixture of gas-tar and coarse sand. We have seen compact floor-like walks in gardens and pleasure-grounds, made in this way, at a moderate cost, and on sloping surfaces, it possessing the eminent advantage of not being liable to wash.—As the water does not enter it, it is not cracked nor affected by frost. Water-lime cisterns answer a good purpose for retaining water, where the water cannot reach them; but one freezing completely ruins them. This is not the case with the tar and sand; hence it may be used for open reservoirs, small ponds in ornamental grounds, &c. Impervious stable floors may be made in the same way, which will possess the advantage of carrying off without waste all the liquid portions of the manure, to tanks, reservoirs, or absorbents placed for this purpose. Common tar would probably succeed better than gas tar, but is much more costly—we have known where a small portion of tar had escaped from a barrel on a bed of sand, a compound formed as hard as sandstone, and which was not in the least affected by the freezing and thawing of successive winters.—*Country Gentleman.*

Dyeing with Light.—An English artisan proposes to employ the chemical agency of light in dyeing or staining textile fabrics: the cloth, whether wool, silk, flax or cotton, being first steeped in a suitable solution, then dried in the dark, and subsequently exposed to the action of the light, those parts which are to form the pattern being protected by pieces of darkened paper or some other suitable material, fastened to a piece of glass. When the desired effect is produced, the time for which varies from two to twenty minutes, the fabric has to be restored, in order to undergo a fixing operation, whilst a fresh portion of it is exposed to light.

Educational.

HONOR TO WHOM HONOR IS DUE.

BY ALICE CAREY.

Honor him whose hands are sowing
Seeds for harvest in their time—
Reverence those whose thoughts are growing
Up to ultimates sublime.

All the progress of the ages
May be traced back to their hands—
All the illuminated pages
Of the books, into their plans.

Every worm beside you creeping,
Every insect flying well,
Every insect in earth's keeping,
Has a history to tell.

The small, homely flower that's lying
In your pathway, may contain
Some elixir, which the dying
Generations sought in vain.

In the stone that waits the turning
Of some curious hand, from sight,
Fiery atoms may be burning,
That would fill the world with light.

Let us then, in reverence bowing,
Honor most of all mankind,
Such as keep their great thoughts glowing
Deepest in the field of mind.

SCHOOL VACATIONS.

The vacations of our city schools commenced last week; the teachers have shut up shop, dismissed the young customers for their intellectual wares, placed a bolt upon the schoolroom door, and made a "barring out," not only of themselves and the school authorities generally, but of the pupils also, who are usually the mischievous actors in all such rebellious demonstrations.

The summer vacation is a necessary period of recreation, both to the teacher and the taught, and it is a question worthy of consideration whether the length of this vacation ought not to be made *longer at both ends*—that is to say, whether it ought not to commence earlier and continue later than at present fixed. It is a notorious fact, that our primary schools are kept more hours in the day, more days in the week, and more weeks in the year, than any other class of schools; and that the extent and variety of studies are much greater for a boy twelve years old in a district school, than for a young man of twenty in college. We do not say he gets his lessons better, or pursues his studies more thoroughly; indeed, it would be impossible for him to do so. We have known a district school boy pursuing at the same time, reading and spelling, arithmetic and grammar, writing and geography; and that same school boy, in after years, when he became a student in college, with a mature mind, reciting but three times a day, for five days in the week, and three terms, amounting in the aggregate to but thirty weeks in the year; and that too, at one of the oldest, most thorough, and most celebrated literary institutions in this country.

Why is this distinction made between primary and higher institutions? Why is the tender mind of the young lad crammed with intellectual pabulum, while that of the comparatively matured youth is moderately fed? Why is the tender physical organization of the little boy or girl confined on hard forms six hours in the day, while the bone and muscle of the college student is similarly construined but three? Why is the former kept at school forty or more weeks in the year, while the latter is kept within college halls but thirty, and frequently not that? There is one consolation, if these views are condemned by parents, guardians and school committees; and that consolation is, the teachers and the boys are on our side.

PASSION FOR LITERARY PURSUITS.

Any one who will talk with Publishers or Editors, will soon satisfy himself that an increasing large number of young men are disposed to enter upon Literature as a profession. The causes producing this state of things, are worthy of notice. Intellectual ambition is certainly growing at an unusual rate in our country, and its chief direction appears to be in the way of literary writing. The most of our cultivated young men are indulging the thought that editing newspapers, furnishing articles to magazines, and traveling to write books, are most desirable employments—highways, broad and smooth, to fame and fortune—compromises between the curse of labor, and the luxury of idleness. Then, too, others from certain intellectual habits at college, that overpower their will and enslave them to personal tastes for retired life and meditative reflection. Nor is this at all surprising. As our higher education is now conducted, young men acquire a positive dislike for the real world, counting it unworthy of strife, and evading its rough commerce as death to all fine sentiments. The prevailing system makes them students; there is no doubt of that; but unfortunately it is contented with that achievement. Alumni and books are wedlocked, and henceforth they are one in the affairs of human experience.

But this is not all. The various professions, once so honorable and so lucrative, are not quite so attractive. Party politics interfere sadly with Lawyers and Judges, and the popular crowd is the final arbiter of their merits. The most aristocratic of the old professions is a "caste" no longer, and "green bags" must now be stuffed with election tickets. The people have willed the lawyers down to the democratic level, and a very uncommon number of them have to perfect their accomplishments with the art of stump-speaking. They take this reluctantly, as much so as the "cloud-compelling Jove" would yield himself to the task of rising a blast in the streets; and lo, the young men resent the democratic dogma, and turn to other visions. They will have no rainbows that rest on the earth, and sweep no arch higher than Tammany or Metropolitan Hall.

Doctors disagree about theories, and fight over facts. They use the lancet less, and the tongue more. Poisons are not so popular as formerly, but gall and wormwood are appreciated. Cauterization is fashionable. Doctors practice much on each other. Allopathy, Homœopathy, Hydropathy, are all alarmed at the diseases they find in one another, and they have taken to curing or killing one another.—Moreover, patent medicines build palaces; Jack-all-cures understand advertising, and twenty-five-cent pill-boxes are ponderous offsets to expensive visits. A doctor no longer stands on his own merits except with certain classes and cases. Temptations to trickery are multiplied; and clever young men draw back from a bustling, fussy rivalry, that has no higher end than the claims of ipecac or lobelia.

And so, things conspire to encourage taste and talent to look in the direction of newspapers and books. But alas! the secrets here will soon be learned. Parnassus is a very bleak mountain. Editors and publishers are overstocked with applications. Brains to hire remain unhired, and manuscripts by the measure that sells potatoes, command nothing in the market. A sad prospect this for so many aspirants, but really the supply exceeds the demand. But so it must be until parlors are much more numerous than garrets, and renders far surpass writers. For it must be remembered, that manufacturers and agriculturists have the advantage over literary men.—Cotton and cloth soon wear out. Hats and shoes are not transferable to the next season.—Flour and rice are promptly consumed. But the Books of the past live. Publishers are the immortalizers of preceding ages. And the few works for which there is room in this crowded world, can only come from a few men. The main trouble is to get a hearing; and only a select class of writers can make any sort of a business calculation on it.

Let the young men think awhile. It is easier to be a genius in some things than in others, and, as a general rule, it is much more practicable where men are liberally paid and generously honored. Architecturing, civil engineering, statuetire art, are now rising into the first rank of professions. The thrifty world needs the help of such talents, and it is glad to pay for them, because thereby it ministers to its own pride, luxury, gratification. Men are determined to multiply great and gorgeous buildings. Fine houses were never so popular. Bridges, viaducts, churches are in the ascendant. Tunnels and railway wonders fill all eyes. The literature of solid masonry is the uppermost charm, and magnificent poems are spanning rivers. Mechanic art rules the day and adorns the night. And so, young men, if you want to take your place among sun, moon and stars, go to work at once, and bravely too, and convert granite and marble into the practical English language of the year '54; and thus do your own printing and publishing for the benefit of society and your empty pockets. —*New York Times.*

The Dignity of the Teacher's Work.—It is a pleasant fancy of Swedenborg, that angels in heaven are employed in teaching the youthful spirits that enter prematurely the sphere of immortality. It is no childish fancy that would assign the teacher's work to the choicest spirits of earth, and exalt this work to the rank of the most angelic of human employments. A proper idea of the dignity of his work is needful to the teacher as a motive to fidelity, in his perplexing, and often ill-requited labor; and especially to reconcile him to an employment, which by some strange mistake has come to be generally rated immeasurably below its proper rank. It is not easy to account for the fact, that the calling of the teacher is generally ranked, not only below the other professions but even below some of the more common industrial pursuits. The origin of this preposterous notion may be found far back in some barbarous feudal age, when all peaceful occupations were held in contempt: when the office of *chaplain* and *king's fool* were interchangeable, and when some "Dominie Sampson" or "Ichabod Crane" was the impersonation of pedagogical dignity. But such a preposterous idea does not belong to an age of refinement. Public sentiment has considerably improved, of late years, and the employment of teachers has received a much more generous consideration.

War vs. Schools.—While millions have, in a few months, been expended in the prosecution of the justifiable war against the despotic Czar, it appears that the total amount of public money, in support of popular education in England, granted from 1833 to 1850—a period of seventeen years—was only £1,000,000 sterling, only £750,000 of which were actually expended either in defraying the cost of buildings, the purchase of school apparatus, or in aid of efficient masters, mistresses and teachers. From the tenth annual report of the Ragged School Union, (just published,) it appears that there are now in connection with the Union 129 Ragged Schools, attended by 13,100 children on Sundays, 900 on week days, and by 630 in the evening.

A true history of human events would show that a far larger proportion of our acts are the results of sudden impulses and accidents, than of that reason of which we so much boast.—*Cooper.*

There is no distinguished genius altogether exempt from some infusion of madness.—*Aristotle.*

A CAFUSOS WOMAN.

The tribe of people termed Cafusos by the Portuguese of Brazil are a remarkable race, sprung from a mixture of native Americans and the negroes imported from Africa. They appear to have been separated from the then inhabitants of the country, and many families of this singular tribe now live in the solitary plains bounded by the forest of Taramma.

They present the combined physical peculiarities of both the parent races in a remarkable degree. But what gives these Mestizoes a peculiarly striking appearance is the excessive length of their hair, which, especially at the ends, is half curled, and rises almost perpendicularly from the forehead to the height of a foot or a foot and a half, thus forming a prodigious and ugly kind of a perruke.

This strange head of hair is the consequence of mixed descent, and is the mean between the wool of the negro and the long, stiff hair of the American. This peruke cannot be combed, and is so high that the wearers are compelled to stoop low to enter the usual doors of their huts. They resemble much, in this respect, the Papuas of New Guinea, a mixed race, descended from the Malays and the negroes. Their hair is of such length and worn so much frizzled about their heads, that its circumference measures about three feet, and when least, at two and one-half feet.

Dampier styled them "The Mop-headed Papuas." The shape of their skull resembles the Malay's, with some differences. They afford an example of a mixed breed of men who retain certain characteristics derived from their double ancestry. These characteristics are permanent, and transmitted through many generations, since they seem to have been fully developed in the time of Dampier.—*American Phrenological Journal.*

Useful Olio.

PHILOSOPHICAL LECTURE.

In olden times, when common roads were first laid out, the science of engineering, and it would almost seem, the *science of common sense*, was very indefinitely understood. Up hill and down hill, across gullies, over swamps on log bridges, and turning aside at no obstacle, the surveyor of a highway followed the line indicated by the needle, tending neither to the right hand nor to the left. He seems to imagine that the length of a kettle bail was greater when laying down than when erect; and hence, if a huge conical hill interposed itself in the line of direction, he never dreamed of flanking it by a graceful and horizontal curve around its base, until he came again upon the right line on the other side, but went straight forward up the steep ascent on one side, and down again on the other. How many readers of the Rural are there, who can look at the highways in their own immediate neighborhood, and not see steep hills to this day, notwithstanding that twenty or thirty years of road taxes and labor have been expended in grading down the summits and filling up ravines? and yet, almost within a stone's-throw of the same highway, a valley may be seen curving around the hill, and crossing the road on *both sides of the summit!*

It is difficult to make desirable changes in after years, as farm-houses and school-houses, churches and country stores, post-offices and taverns, board fences and stone walls, orchards and gardens, have grown up and been erected along the old line, and cannot be disturbed; hence such highways are standing admonitions of the necessity of doing things right in the first instance. In laying out a highway, it is very important to understand thoroughly the topography of the country. Then, after surveying the through line so as to get the general direction, detours may be made to the right and to the left, always keeping a record of the latitudes and departures, so as to come out right in the end. In this way, a comparatively easy highway can be made through even a mountainous region, while a neglect of such considerations will make a hilly road anywhere, except over a level plain.

The construction of railroads on scientific principles, affords an excellent general pattern for the laying out of a common highway; always making sufficient allowance for the difference of expense to be involved in each. The former rarely makes a curve of less than a thousand feet radius; the latter, if occasion requires, can do it within a hundred. The former will run a long way out of its course, tunnel a mountain, or cut away a ledge, in order to avoid a grade of over forty-five feet to the mile; the latter can go over almost any hill, if it cannot be flanked.

No railroads could be constructed, if a dead level or an undeviating straight line were indispensable; but an approximation to such conditions are desirable, and the nearer they can be approached the better. It is true there are cases, as on a section of the Great Western (C. W.) Road, where a tangent of fifty or sixty miles, and nearly a dead level, is obtained, but such cases are of rare occurrence. On the other hand, many roads are run successfully on very high grades and sharp curves, of which the Western Road in Massachusetts is an example, the road-bed of which rises fifteen hundred feet from the Connecticut river valley at Springfield to the summit in Berkshire county; and this, too, on very sharp curves up a mountain gorge, at a grade of eighty feet to the mile. The railways of New Hampshire and Vermont, the Delaware section of the New York and Erie, and many others, are also illustrations in point. But in a railroad, all these things are detrimental, and admitted only as unavoidable necessities; the locomotive power has to be increased at no immensely greater ratio than the grade and curvature, the wear and tear of rolling stock is much enhanced, the velocity must be proportionately less, and the peril comparatively more.

But since these conditions are unavoidable, the practical question arises how railroad cars are made to turn a curve? and on this question we leave our young friends to speculate until we find leisure to write for them another philosophical lecture.

COST OF THE MAMMOTH CAVE.

Col. Crogan, to whose family it belongs, was a resident of Louisville. He went to Europe some twenty years ago, and found himself frequently questioned of the wonders of the Mammoth Cave—a place he had never visited, and of which he had heard but little at home, though living within ninety miles of it. He went there on his return, and the idea struck him to purchase it and make it a family inheritance. In fifteen minutes bargaining, he bought it for $10,000, and shortly after he was offered $100,000 for his purchase. In his will he tied it up in such a way that it must remain in his family for two generations, thus appending its celebrity to his name. There are nineteen hundred acres in the estate, though the cave probably runs under the property of a great number of other land owners. For fear of those who might dig down and establish an entrance to the cave on their own property, (a man's farm extending up to the zenith and down to the nadir) great vigilance is exercised to prevent such subterranean surveys and measurements as would enable one to sink a shaft with any certainty. The Cave extends ten or twelve miles in several directions, and there is probably many a backwoodsman sitting in his hut within ten miles of the Cave, quite unconscious that the most fashionable ladies and gentlemen of Europe and America are walking without leave under his potatoes and corn!

Men will have the same veneration for a person who suffers adversity without dejection, as they will for demolished temples, the very ruins of which are reverenced and adored.—*Fenton.*

Sunday Reading.

(For Moore's Rural New-Yorker.)

EFFECT OF REPEATED ILLNESS.

We say the strong are in danger of forgetting, in their vigor, that they too must die, that a breath is enough to blanch their cheeks, and that before the pulsations shall have ceased in the feeble heart of him who leans on their strong arms, they may be called to lie down in the grave.

It is well. They do need to be reminded of the grave toward which they are moving. But are there not others, who cling more desperately than the strong, to life? Are there not those who, from the fact that what the strong do thoughtlessly, in the bustle of business, they do considerately, need even more than they to be reminded of the grave which will open in their path, however carefully they may strive to hide it from even their own eyes?

The soldier on the battle field sees one and another cut down at his side, and feels that he stands upon the brink of eternity, which the next shot may unveil to his eyes. But he escapes. Again and again he approaches the abyss, but the hand of the Omnipotent draws him back, an invisible shield turns the whistling balls from his heart, till at last he forgets that he too is mortal. As he escaped before, so he thinks to do again, and in that expectation puts far from him the thought of death, as a matter with which he has nothing to do.

So is it, sometimes, with the poor invalid whose life hangs upon a hair, who stands, as it were, with one foot in the tomb. In all his path of life he seems, instead of going forward, to have circled around the grave, as the fascinated bird is said to do around the head of the snake into whose mouth it is soon to fall.—Time after time has he bent over the tomb, as if about to make his bed in that last of earth's resting places. But the hand of the Most High has raised him, to repeat once more those gyrations around that gaping grave, which will close only over his pulseless heart. Others, no stronger than he, have died, at a good old age, and as he has come back again and again from the grave, why may he not do it once more?—Why may not he too elude once more the cold hand of death, and live long on the earth, like others as weak as himself? This may not be very often the case; but one who, more than once, has been expected to go forth no more, till borne to his grave, may be permitted to say, it is sometimes true.

Well is it for the poor sufferer if, instead of persuading himself he shall again rise from his bed, he remembers that every circuit he makes around his grave is narrower than the one before, bringing him ever nearer to that last point in earth's pilgrimage; and so strives to secure a beam of heavenly light, which alone can illumine the dark recesses of the tomb.

Sussao.

THE LESSON.

On a beautiful evening in spring, a father said to his wife, "Let us go into the fields and rest on the hill, to enjoy the sight of the setting sun. It will be a lovely evening." When his two children—a boy and a girl—heard this, they said, "We will go before you and wait for you on the hill." And with these words, they skipped on before. Soon after the grave father and the kind mother followed them, talking of the beauties of creation and of their children—the father speaking from the treasure of his wisdom, the mother from the simplicity of her heart. When they came to the hill and ascended it, the children were there already, and ran joyously towards them with a white pet lamb, which they had taken with them. When the sun went down in glory, the parents looked on with emotion, and the father lifted up his voice and spoke to the children of the creation of the universe, of the host of the stars, and of the sublime Creator of nature, who has made heaven and earth, and the sea, and all that therein is; and he made them look at the sun in his glory, saying, "It is now time to teach them heavenly wisdom." When the father had finished speaking, the children exclaimed suddenly "Oh, see, dear father, and dear mother, how pretty — how lovely!" They had adorned their lamb with flowers like a bride, and it ate the herbs of the hill out of their hands. The father looked at the mother, and shook his head with a grave gesture. But the mother smiled and said, "Ah, my beloved! let them continue in their child-like simplicity. They need not yet the knowledge of rising and setting worlds, and the deep word of wisdom; they need only love, and of them is the kingdom of heaven." Then the father and the mother caressed the two children and rejoiced with them at the gayly-decked lamb.—*Krummacher.*

Let me Die in the Country.—O let me die in the country, where I shall not fall, like a leaf of the forest, unheeded; where those who loved me need not mask their hearts to meet the careless multitude, and strive to forget me! Bury me in the country, amid the prayers of the good and the tears of the loving; not in the dark, damp vault, away from the sweet-scented air, and the cheerful sunshine; but in the open fields, among the flowers that I loved and cherished while living.—*Fanny Forrester.*

Many actions, like the Rhone, have two sources—one pure, the other impure.

Miscellaneous.

[Written for Moore's Rural New-Yorker.]

TWILIGHT MUSINGS.

BY HORACE S. HOMERY.

The sun is sel behind the western hills,
The shadows of the night are falling fast,
A deep solemnity my spirit fills,
While thinking of the days forever past.

The joyous days, when every nerve was thrilled,
With that sweet pleasure health alone can bring,
Yes, when the heart with ecstasy was filled,
When soared young Hope upon exulting wing.

When 'round me thronged a gay and youthful band,
With spirits lithe and buoyant as the bee;
The world to us was like a fairy land,
As we tripped lightly o'er the flowery lea.

But "change" is written on each earthly scroll,
"Passing away" upon each beauteous flower,
Loved ones are leaving as the seasons roll,
Their music wakes no more the sylvan bower.

Some perished wandering in a foreign land,
Some laid them down on California's shore,
Where the Pacific laves the golden sand,
Chanting their requiem forevermore.

And some within the village church-yard lie,
While friends were weeping near, they passed away;
Now oft is heard the agonizing sigh,
O'er the fresh mounds where slumbereth their clay.

In youth, an elder sister was my guide,
In her the graces blended, sweetly shone;
In life's glad prime, alas! that sister died,
And left our hearts all desolate and lone.

A younger sister still was left to me,
She loved me with a sister's fondest love,
Her form on earth, oh! nevermore we see,
She too hath joined the angel band above.

How changed is earth since they have passed away!
Nature hath lost her wondrous power to please,
Drear as December seems the balmy May,
The zephyrs sigh among the forest trees.

In manhood's morn there fell a withering frost,
And blighted all my hopes of earthly joy,
Wan is my cheek, my health forever lost,
But there is left what nothing may destroy.

Life's sun is sinking in the beauteous West,
A glorious hope dispels the coming gloom,
A trust in God, the weary shall find rest,
Beyond the confines of the silent tomb.

Elmira Water Cure, N. Y., 1854.

BEAR UP BRAVELY.

We like the man—aye, and the woman too—who bears up bravely under worldly trials and disappointments; who, when some unforeseen and sudden blow knocks a prop from under him on which he leaned, and prostrates him suddenly in the dirt, gets up again with all convenient despatch, wipes the dust from his face, adjusts his torn garments with as good a grace as possible under the circumstances, and sets himself at work cheerfully to repair the damage that may unfortunately have been done. What good does it do one to bewail his misfortunes? to sit down under a load of accumulated evils, which grow none the less while we are idle, and cry out for help to those who are busy helping themselves?

Æsop's fable of the carter, conveys an admirable lesson. The carter finding his team unable to move the vehicle through a slough, sat down by the roadside and earnestly invoked aid of the gods, one of whom appeared in a cloud, and reprimanded him sharply, telling him to help himself if he would have aid from the gods; to whip his horses and apply his own shoulder to the wheel, and then he might expect to obtain the desired assistance, and not otherwise.

There is a man in this city, a hard-working mechanic, with a family, who, ten years ago, was turned out of a house which he had bought and paid for with the earnings of his own hands; and not only that, but he was left also several hundred dollars in debt, by becoming surety for a man who pretended to be his friend. It was a disheartening occurrence, but he did not lie down supinely under his misfortunes. With earnest energy he has since paid the debt, acquired another and a better house, and owns one or two other city lots besides, which are rising in value on his hands. He has an interesting family of children, orderly, industrious, and well educated for their years; and if not wealthy, he is at least placed beyond the contingencies of want or pecuniary embarrassment. What would have been the consequences both to him and them, if, under the pressure of what he deemed, and justly too, a great misfortune, he had given way to despondency or despair? The grave of the drunkard or the suicide to himself, and ragpaney or the penitentiary to his children! Thank God! with a cheerful and hopeful spirit, and a determination to bear up bravely, all those terrible consequences have been averted. His bark has not only weathered the storm, but is now sailing over a prosperous sea, without a spar sprung or a sail rent; and the bitter experience he has had, will teach him hereafter to keep afar off from the rocks on which he well nigh foundered.

The golden calf is one of the chief gods of American idolatry—and the high priest of that divinity, in the shape of a gigantic railroad speculator and stock gambler, prostrates before him, wherever he goes, a crowd of worshipers. Let him once fall, however, from his high and giddy place, and that same crowd stand ready to tear him limb from limb.

[Written for Moore's Rural New-Yorker.]

A BACHELOR'S REVERIE.

Heigh ho! This is a lonely life to lead!—Here it is, past nine o'clock, and dark and damp out of doors, and I yet linger in the silent but comfortable work-room, dreading to start for home. Heart what a mockery it seems to dignify the lonely room of a bachelor in a boarding house with the sacred name of home! What is there like going home in starling out at this time o'night for a half-mile tramp, reaching the door, climbing three pair of stairs, to No. 23 front, entering a dark room and groping round for lamp and matches, stumbling over a chair, perhaps, and smelling brimstone before you can see where you are? What is there home-like in the loneliness, in the scattered books and papers, in the dusty walls and windows, in the ragged carpets and counterpanes, in the miscellaneous array of ill-assorted furniture before you? If sad, who shall cheer you? If sick, who shall nurse you? If weary, who or what shall put away the thoughts of care or toil? Your thoughts, your books, and your sleep, are your most reliable friends.

Heigh ho! before I seek "tired nature's sweet restorer," let me try to picture some scene more inviting than this. A home to go to where a welcome should meet me, scattering care and weariness to the winds, and sending bright sunshine to cheer and bless my heart! A true home, and *my best friend* there! Ah! I linger no longer dreading to leave the comfort of my work-room; I set out at once thinking of my humble cot, bright, cheerful, and dear to me, like her who presides there—who is expecting me, and knows my step at the gate, and greets me with a sunny smile as I enter. While I have been absent she has thought of me, for she has made every object redolent of welcome and comfort. There are a hundred quiet subjects of talk for us—toil seems lightened with a loved sharer in its results—and our books seem more genial and entertaining that we read and talk of them together. Our friends are dearer, and our hearts closely trined together, have less of selfishness and more of purity that the joys of home are given unto us, a blessing beyond all price. H.

FEEBLE FOLKS.

Quick, open the window, let the wind fan him! The poor fellow is faint! He has walked a couple of miles, and it is too much for him. His father could follow the plow all day, and walk three miles to a husking, without feeling tired. His mother, after churning before breakfast, washing before dinner, and ironing till supper time, would go to the north side, at least a mile and a half, to fetch the cows, just by way of breathing herself, and getting a little exercise. But their son, for some reason or other, is more delicate—his constitution is feeble, though he was a great frolicking boy, and promised to make a stout man until he took to wearing kid gloves, shading collars, and fine cloth coats. Whether they have caused the debility or not we cannot say. It has come on gradually. For a season he thought nothing of walking across town before breakfast, and a cruise along the upper parts of the city he used to enjoy of a Saturday afternoon. But he has so much to do, and his time is so precious, that of late he steps from his office into the cars, and, indeed, pays fifty dollars more for the privilege of residing within half a block of the track. He revives a little. Let us be duly thankful, for he is one of the strong men among the Young Americans. He said in a speech lately, that he was willing to bare his breast to the tide of the world's tyranny. He proposed to "roll the burdens off of enslaved nations," and "buckle on the harness" for the world's deliverance.

It is all nonsense. Mind is not worth a copper in this latitude, if the gearing between it and the material world is not in operation, and not more than a shilling if the body it has to work through is feeble, puny, and contemptible. The burdens afflicting this weary world are to be rolled off by men who have muscles as well as good will. It is not worth while for short breathed men to bare their breasts to waves that have much swell in them; and ladies' fingers are not the things to undo the heavy, rusty shackles that cramp and confine society. So the young men who aspire to look pale and delicate will please be warned that they will not do any great shakes for their generation. They'd better take to binding shoes, selling tape, or some such light work.—This is a day for men who can digest anything that a butcher has the conscience to offer for sale, can leave India rubbers and umbrellas at home on a foggy day without taking cold, and walk from the Battery to the Bible House without feeling obliged to be at charges for a bottle of rheumatic liniment. We give a toast—fill your coffee cup afresh, good reader, and let the baby in her high chair, who drinks milk, have another mug—"The health of all who have a will to work, and don't object to a ruddy cheek and a big hand; and the memory of the old folks, who would walk a mile while their young ones are quarreling about which shall go out into the cold to order the coach."—*N. Y. Times.*

One can no more judge of the true value of a man by the impression he makes on the public, than we can tell whether the seal was gold or brass by which the stamp was made.

When a man dies, people generally inquire, "what property has he left behind him?"—The angels will ask, "what good deeds has he sent before him?"

POOR CARTER.

Some of the students of the Indiana State University were suspected to be in the habit of drinking brandy. Where they obtained it, was a mystery. Dr. Daily determined to ferret out the mystery. Calling into a small drug store, the proprietor asked him "how that sick student, Mr. Carter, came on!"—Smelling a rat, the doctor answered in an evasive manner, and soon drew out of the apothecary that the students under suspicion had been in the habit of purchasing brandy for a sick student by the name of Carter; that he was quite low, and that he was kept alive by stimulants; that the young gentlemen seemed very much devoted to him. Now the secret was out. This Carter was a fictitious character, and the doctor had the secret.

However, he kept his own counsel. The next time the students assembled in the chapel for prayers, he cast his eyes over the crowd and satisfied himself that Carter's nurses were all present. The devotions were duly conducted, and then he called the attention of the students, remarking that he had a mournful task to perform—as president of the university it became his duty to announce the death of their fellow student, Mr. Carter. After a lingering illness of several weeks, a portion of which he was only *kept alive by stimulants*, he breathed his last! He had no doubt this announcement would fall sadly on the ears of those who had attended so faithfully to his wants, but he hoped they would bear it with resignation—he hoped they would reflect upon the oft-repeated words, "*memento mori*,"—that he would now no longer detain them, but leave them to their own reflections!

The result of this announcement was startling. None of the professors, and but few of the students, had ever heard of Carter. "Who is he?" was whispered. None knew but the "kind friends who attended him," and they wouldn't tell; and the president seemed so *deeply affected* they didn't like to ask him.

THE SERFS OF RUSSIA.

The Marquis de Custine, in his recently published work on Russia, devotes a chapter to the Serfs. He says it is difficult to form a just idea of the real position of this class of men, who live in the possession of no acknowledged rights, and who yet form the nation.—In many parts of the empire, the peasants believe themselves to belong to the soil, a condition of existence which appears to them natural even when they find difficulty in understanding how man can be the property of man. Not unfrequently the peasants, when about to be sold, send a deputy to some far-off master, of whose character for kindness reports have reached them, imploring him to buy them, their lands, their children and their cattle.—And if this lord, so celebrated for his gentleness, be without money, they provide him with it, in order to be sure of belonging only to him. In consideration, he exempts them from taxes for a certain number of years, and thus indemnifies them for the price of their bodies, which they have paid to him in advance, by furnishing the sum that represents the value of the domains to which they belong, and to which they have, as it were, obliged him to become their proprietor. The greatest misfortune which can happen to these vegetating men, is to see their native fields sold. They are always sold with the glebe, and the only advantage they have hitherto derived from the modern ameliorations of the law is, that they cannot now be sold without it. The fortune of a wealthy man is computed by the heads of his peasants. The man who is not free is coined, and is equivalent, on an average, to ten roubles a year to his proprietor, who is called free, because he is the owner of serfs. There are districts, however, where each peasant brings three or four times this sum to his master.

THE HALLUCINATIONS OF THE GREAT.

Malebranche declared that he distinctly heard the voice of God within him. Descartes, after a long seclusion, was followed by an invisible person, who urged him to pursue his researches after truth. Byron sometimes imagined himself to be visited by a spectre; but he said it was owing to the over excitability of the brain. The celebrated Dr. Johnson clearly heard his mother call Samuel; she was then living in a town at a great distance. Pope, who suffered much in his intestines, one day inquired of his physician what arm that was, that appeared to come out from the wall.—Goethe asserts that he one day saw the counterpart of himself coming towards him. The German psychologists give the name of *Autoscopie* to this kind of illusion. Oliver Cromwell was stretched fatigued and sleepless on his bed—suddenly the curtains opened and a woman of gigantic size appeared, and told him he would be the greatest man in England. The Puritan faith and the ambition of Cromwell might have suggested, during those troublesome times of the kingdom, some still stronger idea; and who can say, whether, had the phantom murmured these words in his ear, "Thou wilt one day be king!"—the Protector would have refused the crown, as did Cæsar at the Lupercalian feasts?—*De Boismont's Hallucinations.*

The Household of Sympathy.—Happy, thrice happy, the families in whose narrow circle no heart can grieve or rejoice alone—no glance, no smile, can be unreturned—where friends can say to each other daily, with actions rather than words, "Thy joys, thy happiness, are mine, too." Beautiful is the peaceful, the quiet home, which protectingly encloses the weary pilgrim of earth, which collects around its friendly blazing hearth, the old man leaning on the staff, the strong, middle-aged man, the loving wife and happy children, who dance and sport around in their blessed, earthly heaven, and who finish a day passed in innocence with grateful prayers upon their smiling lips.

Ladies' Department.

CONDUCTED BY A——E.

GENTLENESS.

If thou hast crushed a flower,
The root may not be blighted—
If thou hast quenched a lamp,
Once more it may be lighted;
But on the harp or on the lute,
The string which thou hast broken,
Shall never to sweet sound again,
Give to thy touch a token!

If thou hast loosed a bird,
Whose voice of song could cheer thee,
Still, still, he may be won
From the skies to warble near thee;
But if upon the troubled sea,
Thou hast thrown a gem unheeded,
Hope not that wind or wave shall bring
The treasure back when needed.

If thou hast bruised a vine,
The summer's breath is healing,
And its clusters yet may grow
Thro' the leaves their bloom revealing;
But if thou hast a cup o'erthrown,
With a blight drop filled—O, never
Shall the earth give back that lavish wealth
To cool thy parched lips' fever.

The heart is like that cup,
If thou waste the love it bore thee,
And like that jewel gone,
Which the deep will not restore thee—
And like that string of harp and lute
Whence the sweet sound is scattered—
Gently, O gently touch the chords
So soon forever scattered!

[For the Rural New-Yorker.]

WOMAN'S RIGHTS AND DUTIES.

We hear much said, at the present day about woman's rights and duties. It is an undeniable fact, that woman has certain rights which she may justly claim; and certain duties which, when she will have rightly performed, the world will advance in wisdom. Already has woman many more duties devolving upon her than she can rightly perform, and more, perhaps, than justice demands. Then why should she ask for more? It is not surprising that a true and noble-hearted woman, who is inspired with love and zeal for the prosperity of her country, when she views its doleful condition, and the innumerable errors which are creeping in at every change in our form of government, should earnestly wish to take the helm in her own hand, that she might guide the ship safely into the harbor, and shun those rocks and breakers upon which she is in danger of being wrecked. But let her pause and reflect, for one moment, before she proceeds. Has she had nothing to do with our governmental affairs?—nothing to do in stamping the character of its rulers? We answer, yes,—much, very much. Although she may not act directly upon our government, yet, she acts indirectly with a power almost incalculable.—Who is it that makes the first and most vivid impressions upon the mind of the child,—impressions which form, or materially aid in forming, the basis of character? Does woman have no part in this work? How many of our great and good men have acknowledged that they owed their eminence to the early influence and training of pious mothers? John Q. Adams, that great statesman, of whom our nation has cause to be proud, acknowledged this; and it is said of him, that he never omitted to repeat nightly, through life, the little prayer taught him in his infancy, by his mother.—Such is the result of the influence God has entrusted to mothers.

Were you to rear a forest according to your own taste, you would not select one where there were an innumerable variety of trees,—pine, hemlock, oak, basswood, thorn, &c., all mingled in one confused mass, and grown to maturity at that, with a bough shooting this way, and a knar that way. You could not expect to produce anything like order and beauty from such a mass. You would rather select young and tender trees, that could be trained to your liking; for it is a faithful saying, and worthy to be received, that,

"Just as the twig is bent, the tree's inclined."

You cannot expect, by your teaching and influence, to do much in reforming the present actors in our government; with many of them the fountain is corrupt; the stream must necessarily be impure. They have imbibed erroneous notions of law and order, and act accordingly. Hence the hope of the nation is in the young. By placing before them the proper stimulus, and training them to just and religious principles, they may do what their fathers should have done. Here, then, is a large field of action, in which many must be employed; and who can labor in it more advantageously than woman, who has the child almost wholly under her influence in its infancy and childhood, when the mind is susceptible of deep and lasting impressions? The clay is in her hands in its plastic state; she may mould it at her will. Notwithstanding she may meet with counteracting principles and influences, yet, if she execute her charge faithfully, in nine cases out of ten she will triumph—the victory will be hers.

Woman stands upon an equality with man; her sphere of action is different from his, but not less important. Although she is not admitted to the full privilege (?) of the elective franchise, she may do much for her country by training her sons to vote right. Woman possesses a power unequaled in many respects by man. Then awake to duty! arise, and no longer worship at the shrine of human vanity! How many thousands there are, who have almost wholly neglected the physical, intellectual, moral, and religious education of the child, and sacrificed their time and means to frivolous amusements, or made themselves slaves to some foolish fashion, which should be despised by every woman possessing true nobleness or dignity of character. Teach your sons and daughters that life is a reality—that they must leave an influence which will last long after they have passed away. Labor to inspire in them a desire for true greatness, which lies only in righteousness, and you will exercise rights and perform duties which will vastly elevate and improve society and the world.

Hartsville, July, 1854. E. P.

GETTING INTO SOCIETY.

The Philadelphia Ledger, in a very sensible article, speaking of Americans who do all they can to nourish a feeling of social caste in this country, which they call "society," says:

It is principally with the female sex that this mania rages. A young man marries a half-educated girl, both being, perhaps, not worth a thousand dollars. In time, partly by good luck, and partly by good management, the husband amasses a fortune. Now all at once, the wife, hitherto anxious only for money to bring up their children properly, and to smooth their old age, begins to talk about "position." But, instead of seeking that position, by cultivating the mind and manners, she thinks to obtain it by securing admission into this or that set of arbitrary exclusives. To be invited to Mrs. Flummery's balls, or to have Mrs. Pretension on her visiting list, is what the deluded woman believes to be getting into "society." What slights she endures, what meanness she descends to, what intrigues she undertakes in order to achieve these ends! She follows Mrs. Potiphar to Newport, and takes a box at the opera behind Mrs. Dash. She puts her coachman into livery, hires a French nurse for her children, and purchases a pew at the church of the Rev. Mr. Cream Cheese. By-and-by she flatters herself, because she knows all these silly people, that she has obtained a "position," that she has got into "society." And yet she is, perhaps, just as illiterate, as mean, and as vulgar as ever; for her French dinners do not make her less selfish, nor one whit less polite at heart. In truth she is often more hard to her servants, more the slave of envy, and altogether less worthy than when she was comparatively poor, and when she thought more of her husband and family than getting into "society."

FLORAL LANGUAGE.

Every opening bud, or simple flower, is a page where we may read the finer thoughts and sentiments which cannot be expressed by the most select and chaste dialect. God, who gilds the insects' wings, and teaches them to bask in the genial rays of a summer sun, and sip the nectar from each opening flower, has planted in man a love for the beautiful.—There's not a flower that decks the margin of the gentle brook, but has language more eloquent to the heart than the poet has yet found to express. The study of nature presents, in a lively and forcible manner, the power and wisdom of the Creator, and appears to the enlightened mind a never-failing source of the most pure and refined enjoyments. Delightful, indeed, are the reflections of a cultivated mind, alternately investigating, admiring and praising the works of God. Floral language is simple, but chaste. Many have been the vows of love breathed through a modest flower. Flowers! lovely flowers! there is music in the name, beauty in their forms and colors, and sweetness in their fragrant odors. I love the little modest flower that timidly raises its head to kiss the golden rays of the sun, and thereby receives a brighter hue. Their beauty is transient, but who forgets them when nothing but a faded form is seen? the heart still communes with them as when they shone in all the variegated colors of the rainbow.—*Texas Presbyterian.*

Slander.—Against slander there is no defence. Hell cannot boast so foul a fiend, nor man deplore so foul a foe. It stabs with a word, with a nod, with a shrug, with a look, with a smile. It is a pestilence walking in darkness, spreading contagion far and wide, which the most wary traveler cannot avoid.—It is the heart-searching dagger of the assassin. It is the poisoned arrow whose wound is incurable. It is as mortal as the sting of the deadly arrow; murder is its employment, innocence its prey, and ruin its sport.

Do all in your power to teach your children self-government. If a child is passionate, teach him by gentle means to curb his temper. If he is greedy, cultivate liberality in him. If he is sulky, charm him out of it by encouraging frank good humor. If he is indolent, accustom him to exertion, and train him so as to perform even onerous duties with alacrity. If pride comes in to make disobedience reluctant, subdue him, either by counsel or discipline. In short give your children the habit of overcoming their besetting sins.

Some one, who has a pen for the thing, thus tells us of a mother's love:

"Sweet as the image of the brooding dove!
Holy as heaven a mother's tender love!
The only love that on this teeming earth
Asks no return from pardon's varied birth."

MOORE'S RURAL NEW-YORKER

ROCHESTER, AUGUST 5, 1854.

The Cholera.

The Cholera has made its appearance in nearly every city, and in many country localities heretofore considered proof against its ravages. Niagara Falls, Cape May, and even the granite hills of New Hampshire, have been visited by the scourge, which has put to flight the multitudes that congregate at those places during the warm season.

Up to this time the epidemic has, thanks to a Merciful Providence, kept aloof from this city. True, there have been a very few sporadic cases, some of the sufferers being non-residents, who brought with them the seeds of the disease, and the others directly traceable to intemperate habits, carelessness in diet, or filthiness of person or of residence. No prudent and sober citizen has even been attacked, and in no part of the city has the disease assumed the form of an epidemic.

Some of our country friends who read the papers, and observe that the Board of Health have prohibited the sale of certain crude vegetable productions and unripe fruits, and have empowered the police to seize and destroy articles coming under the ban of the wise provision, hence conclude that some terrible cause must exist amongst us unconfessed, which has caused the Supervisors of the Public Health to take such summary action in the premises.—Under these impressions, they shun the city as they would a rabid dog, and tremble at the idea of crossing the imaginary line which separates *urbs* from *suburbs*, as if they were about to enter a district infested with everything loathsome and terrible.

All these *fears* are totally unfounded. The epidemic may be impending over, but it has not fallen upon us with any force; and it is with a view to avert the possibility of its presence, that these sanitary measures have been taken. They are entered upon for the purpose of *averting*, not *removing*, the cholera from among us. They are *preventive*, not *curative*, measures; and we would say to all those who have business in the city which they desire to do, to come and do it without fear and without haste. Be temperate in diet and potations, avoid exposure to excessive heat of the sun, beware of over-exertion physically, or over-excitement mentally, and you are as safe from death or sickness in Rochester to-day, as you are while breathing God's free air in the open fields.

Destruction of Greytown.

The United States sloop-of-war Cyane, Capt. Hollins, has, under the instructions of our Government, been engaged in an affair which, under present appearances, strikes the press and the country generally as an ignoble act, viz., the bombardment and burning of Greytown, on the Mosquito shore.

It seems that our Minister to Central America, Solon Borland, of Arkansas, saw fit while a passenger going through Greytown, some time since, to stand between an American named Smith, who was charged with murder, and the authorities of the place; for which interference the Minister was himself arrested, and kept under restraint for a portion of a day. For this alleged violation of the privileges of a Minister, Capt. Hollins was despatched by Government with instructions to demand an apology and pecuniary satisfaction; and in case of refusal to destroy the town.

The demand having been made, and no apology given, the place was utterly destroyed; 200 shot and shells having been thrown into it, and the torch afterwards applied to the wreck of the buildings. No lives were lost, as the inhabitants were notified to withdraw, which they did. Not a shot was fired in return, as the foreign residents withdrew on board various ships in the harbor, and the poor *Mosquitoes* had not so much as a quiver of arrows to defend themselves with.

Eighty houses were destroyed, and the houseless inhabitants are represented to be in great suffering for the want of food, and of clothing, and protection from the weather. They stretched up sheets for tents, and many were obliged to sleep in the open air.

The British are stigmatized in American history as barbarians, for burning Buffalo and Washington during the last war; but the destruction of an unresisting and defenceless town in time of peace, will probably be heralded as a deed of transcendent glory.

State Teachers' Association.—The Association of Teachers held their 8th Annual State Meeting at Oswego on the 1st, 2d and 3d of August. The Hon. V. M. Rice, State Superintendent of Public Instruction, delivered the opening Address. Many of the Railroad and Steamboat lines carried delegates at half fare, and a large number of teachers were present from all parts of the State. Our own city sent out a respectable delegation by way of Lake Ontario.

☞ The first coffer dam, preparatory to the construction of the mammoth bridge at Montreal, has just been sunk and pumped out. A party took lunch inside the dam on the 22d. It was a novel place for a feast.

Congressional.

Various pressing matters have occupied the Senate during the week. The Appropriation bill, and the River and Harbor bill have received the chief attention. Many amendments were made to the two bills as they came from the House. The bill providing for a final settlement of accounts with Revolutionary officers, was taken up and then postponed until next session. The House bill to create a new collection district at Dunkirk, making that a port of delivery, and also Cattaraugus Creek a port of entry, was passed. A resolution was passed giving to Edward Riddle $26,000 for his expenses in fitting the American department of the World's Exhibition in London. The salaries of U. S. Ministers to England and France were increased to $15,000. The bill providing for the payment to Col. Fremont of $183,000 for beef furnished by him to the Indians in California, was passed. A resolution was adopted calling upon the President for information, correspondence, &c., respecting the bombardment and destruction of Greytown. Mr. Hunter, of Va., reported back the Army and Post Office Appropriation bills. A large number of House bills were read and referred.

House.—A fraud has been discovered in the Minnesota Land bill, which grants certain public lands to that Territory for Railroad purposes. Certain material alterations have been made in the bill since it passed the House, and a Committee has been appointed to inquire into the matter. They have not yet reported. The Navy Appropriation bill was amended, on motion of Gerritt Smith, so as to prohibit the use of intoxicating liquors as a beverage by either the officers or men. The vote upon agreeing to this amendment stood, ayes 84, nays 65.

Mr. Bardsdale, of Mo., asked leave of the House to introduce a bill granting the President of the United States the sum of $10,000,000 to enable him during the recess of Congress, to preserve the tranquillity, integrity and honor of the country, in the existing difficulties with Spain. Numerous objections being raised, leave was not granted.

On motion of Mr. Wentworth, of Mass., the Committee on Commerce was directed to inquire into what legislation is necessary to regulate or prohibit the introduction of insane and blind foreigners.

Mr. Elliot, of Mass., moved a suspension of the rules to enable him to introduce a bill, having for its object the repeal of the Fugitive Slave Law. A vote being taken upon the motion, it was decided to be lost—yeas 45, nays 130.

Genesee Valley Canal and Railroad.

The long delayed completion of the Gen. Val. Canal is now likely to be consummated, much to the gratification of the friends of the Canal generally, and the southern counties and this city in particular. The valuable pine regions of the Allegany will then be accessible to our northern cities, by a water communication, locking into the above named river at Olean. The upper sections have lately been let by the Canal Board, and when completed the summit level and the lockage this way will be fed from Oil creek and the Ishua, branches of the Allegany, instead of borrowing so much water from the Genesee.

The troubles in regard to the Valley Railroad are also reported to be adjusted, and the injunction is to be at once removed, so as to allow the early opening, at least of the northern sections. We shall then have two routes to New York from this city.

Street Preaching.—During the past week, our city has been visited by itinerant sermonizers, and our streets have been made musical by the soundings of Gabriel's horn. The veritable Orr himself, preceded a day or two by another of the same stamp, preached from the steps of the Market House and other public places several evenings in succession. Quite large crowds assembled to hear him, but no disturbances occurred; the Roman Catholics, under the advice of their priests, it is said, very wisely and commendably abstained from all demonstrations.

There is nothing in the conduct of Orr that need stir up strife or enmity, for he is a mere ranter, half lunatic and half buffoon. The only reason why Americans sustain him, is the fact that attempts have been made to put him down by mob violence, and the determination is manifested to sustain freedom of speech at all hazards.

Melancholy Bereavement.—Miss Abby Fillmore, aged 22 years, the only daughter of the Ex-President, died last week of cholera at Aurora, Erie county. She retired in comparative health at night, and awoke, it is stated, in the collapsed stage of that terrible disease. A dispatch was sent immediately to Buffalo, fifteen miles distant, for her father and brother, but the progress of the disease was so rapid that she had become insensible before their arrival, and died soon after. Miss Fillmore is spoken of in high terms by the Buffalo papers. A telegraph dispatch has also been received in that city, stating that Charles Fillmore, brother of the Ex-President, recently died at St. Paul, Minnesota.

A Good Appointment.—We are gratified to announce that the Superintendent of Public Instruction, Hon. Mr. Rice, has tendered a clerkship in his office to Prof. T. H. Bowen, and that Prof. B. accepts it in the hope that his health may be restored without an entire withdrawal from the educational field of labor to which he has so long devoted himself. Our citizens will join in this hope.—*State Register.*

Workingmen's State Convention.

The following notice is published in various of our dailies here and elsewhere:

To the Mechanics and Workingmen of the State of New York:

In May last your State Central Committee resolved to call a General Convention of Delegates, to meet in the city of Rochester during the month of July. They have concluded, owing to unforseen circumstances, to postpone the general meeting until further notice.

The members of the various councils, clubs and associations throughout the State will use all due exertions for the promotion of such men to Congress who may be relied upon as being true to the cause of *Land Reform*. Address John Williamson, Rochester.

T. C. Wittenberg,
Chairman of State Gen. Com.

Rochester, July 10, 1854.

Negro Literature.—The New Orleans *Delta* complains of the number of works of fiction after the pattern of Uncle Tom, which are circulating throughout the South. It says:

"Some impertinent publisher has sent us a copy of a new nigger novel, entitled 'The Master's House,' or 'A Tale of Southern Life,' one of that myriad of infamous fictions and libels upon the South, which are scattered broad-cast over this Union. We think that the laws of the State, in regard to the sale and circulation of these books, ought to be put in force. Here, in New Orleans, a Southern city, there is not a book store where these books are not exposed for sale."

Uncle Tom, *et id omne genus*, may be hard to take, but like a dose of pica to an ailing man, it will undoubtedly do the patient good.

The Carriage-Road to Mt. Washington.—A friend who has recently returned from the White Mountains, informs us that the Mountain Road is in progress, and contractors are examining the plans, considering it a perfectly feasible undertaking. The mountain path, as now traveled from the Glen House, is about five miles, but this road, by its windings, will be about eight miles. The average rise will be about one foot in eight—the greatest rise being one foot in five, and in many places it is level. The road is to be constructed of a good width, to be made of the large stones or boulders found on the spot, and filled in with broken, or small stones, and then covered with a coat of earth and cement. The carriages are to be so constructed as to be level when ascending or descending. The estimated cost of building is about $5,000 per mile. We have an engraved view of the house projected on Mount Washington, as it will appear when erected, and also of the road as constructed. It is also contemplated by the enterprising projectors of this undertaking to have the telegraph extended to the hotel on top of Mount Washington.—*Boston Transcript.*

The Red Flannel Drawers.—The Buffalo Express says:—"Our readers will remember an incident that we published in May last, relative to Mr. and Mrs. Horton, of Owego, who finding that a tree had fallen across the track of the N. Y. & Erie Railroad, took measures to warn the approaching train, and thereby saved many lives and much valuable property. Mr. Horton took off his red flannel drawers, tore them asunder, and with one-half signalled the down train while his wife, with the other half, signalled the up train. We are gratified to see that the company have not suffered this noble conduct to go unrewarded, and have sent to Mrs. H. a beautiful silk dress, accompanied by a life pass for the worthy pair over the road."

A Fruitful Neighborhood.—In Wayne co., Pa., in a circle of seven miles, there live thirteen families, which boast the aggregate number of one hundred and ninety-five children. They are distributed as follows:—Jonathan Adams, 18; Jacob Kellum, 14; John Kellum, 10; David Eaton, 15; Eben Brown, 15; James Adams, 14; Josiah Cole, 13; Thomas Tood, 29; John Phillips, 12; Oliver Bulling, 13; James Brown, 10; Wm. Tyler, 10; Amos Tyler, 22. Total, 195.—Except Thomas Tood, none of these worthy citizens has had more than one wife. There may be more aristocratic, more wealthy sections in the State; but we doubt if any other portion of the *whole Union* can produce a population more distinguished for *good breeding*.

Nursery for Infants.—Close by a ship-yard in Portugal street, there is a nursery for infants. Here parents who are obliged to work during the day can leave their children, on payment of a small sum. They are well cared for, in a clean, well-ventilated place, lodged in snug little beds, and supplied with playthings, and that best of instruction for early years, kind and pleasant words. It is painful to witness the bleached countenances of the most healthy of these little ones. We have traced a few of them to their homes. Poor babies; alas for the future! No wonder they are pale. Plant a potato in a dark cellar, and see the result.—*London Builder.*

Tunnelling Chicago River.—A committee of the Chicago Councils, have resolved to accept the plan for tunneling Chicago river as proposed by the American Sub-Marine Tunnel Company, of New York. It is to be finished by May 1st, 1855, made of cast iron; entrances on a grade not exceeding one foot fall in nine. The plan to be two wagon tracks, each ten feet wide, and two foot-ways, each four feet wide, the former eleven feet high, and the latter seven feet. The top of the tunnel to be not less than twelve feet below low water mark for one hundred and fifty feet in the center of the river.

Slaves for Kansas.—The following paragraph from the Arkansas Intelligencer shows the feeling with which the settlement of Kansas is regarded in the northern part of that State:

"We hear of some talk among our farmers about getting up a company to go to Kansas.—We hope they will do so and take their negroes along. The South ought to make an effort to secure a slave State out of this territory. Arkansas is especially interested. If Kansas becomes a free-soil State, farewell to slave property in North-west Arkansas."

The Boston Herald says a colored man who called himself Charles Shadrack, and who has resided in Boston about fourteen years, ascertained a day or two since that his former owner was in town, making particular inquiries respecting him. He took passage in the Admiral yesterday morning for St. John, thinking that the air of the provinces would be more congenial at this season of the year than the variable climate of Boston.

News Paragraphs.

☞ A letter from Bordeaux, France, dated June 25th, says,—We had a visit yesterday from the widow of Aaron Burr. Her business here is the marriage of a niece to a gentleman of this place, named Perry. She gives $100,000 as a marriage gift; and Mr. Percy, the father of the young man, gives the same amount. Mr. Bowen, the U. S. Consul, has been requested to be the trustee of the money. Mrs. Burr is the American lady who created such a sensation at the balls in Paris last winter.

☞ A London correspondent of a New York paper announces that Mr. Charles Dickens is hopelessly bankrupt—and has had even to flee the constables lately to escape imprisonment for a paltry debt of a hill. The writer charges that this humiliating condition of the novelist's affairs is the direct result of his notorious personal extravagances, and altogether portrays the author of "American Notes" in colors far from enchanting.

☞ It is not known generally, and but for facts would hardly be credited, that more officers have died violent deaths, arising from accidents or explosions, on the Coast Survey, than on any other branch of the public service. Some of the most active and talented officers of the navy have perished on duty, when engaged on the Coast Survey. Mr. Bache, the Chief of the Survey, lost two brothers on this service.

☞ Two young Lawyers, named Hazelrigg and Easley, being recently candidates in Kentucky for the office of County Attorney, canvassed the county (Morgan) for influence and votes, and in their stump speeches were very personal and abusive toward each other. On the 30th of June, this ended in Hazelrigg shooting Easley through the head with a pistol.

☞ Wm. Sullivan, alias Hoxford, the ex-deputy U. S. Marshal who made the murderous assault, upon Richard H. Dana, Jr., was arrested, forfeited his bail and ran away, was pursued and re-arrested at New Orleans, arrived at Boston in custody of an officer lately. He was well known at New Orleans, having formerly resided there as a sort of curb-stone bully.

☞ A great fire occurred last week in the woods near the State Line Railroad, between Dunkirk and Silver Creek. In some places the fences were destroyed, and large quantities of cord-wood burned. The fire also extended to the ties and timbers of the road, burning them, and warping the iron rails so much as to render them impassable.

☞ A steamboat captain on Lake Superior relates that in a recent trip he saw directly in the course which his boat was pursuing, what appeared to be a reef of rocks, which, on a nearer and fearful approach, was discovered to be only what he termed a "reef of lilies." The "reef" was many rods in length, and several feet wide.

☞ Among the novelties advertised to take place at Huntsville, Texas, on the 4th, was a foot race between "three boys, the oldest of whom was born in 1775, the second in 1786, and the youngest in 1795." The contest between these "juveniles" was looked forward to with much anxiety by the fun-loving and sporting fraternity.

☞ Prof. Gibbs, of the Free Academy, has received an invitation to become a Professor in the Antioch College, Ohio. Mr. Gibbs was the candidate urged by the Alumni of Columbia College for the Professorship made vacant by the resignation of Prof. Renwick, and was rejected, as has been charged, for being a Unitarian.

☞ The Columbia (Ohio) State Journal says that there will be more grass cut this season in that county, than at any former period. Thousands of bushels of new wheat have been offered by the farmers in that county at $1 per bushel, but the millers decline making contracts at that price.

☞ It is stated, on the authority of the Demerara Royal Gazette, that paper of a good quality has been successfully manufactured in that region from the plantain, whose spontaneous growth in almost every country renders it a cheap substitute for the articles at present used.

☞ Two negro men belonging to C. M. Fort, of Pickens county, Ala., between whom a grudge had long existed, went out on the bank of a small stream, on the night of the 24th ult., where they were found the next morning, dead. It is believed that they killed each other in a fight.

☞ Dr. Avery Downer, the last survivor of the battle of Fort Griswold, died at Preston, Ct., lately, aged 91 years and 8 months. He was at Fort Griswold with his father, who was also a physician, at the time of the massacre, and assisted to dress the wounds of the soldiers.

☞ Alex. Dumas' chateau of Monte Christo, built by himself, on an Island of the Seine, near St. Germain, has been sold at auction. It cost the romancer over 450,000 francs, and is a charming residence for those who love the fantastic. It brought but 31,000 francs.

☞ A correspondent of the National Era says: We have now some ten or twelve anti-slavery churches established in Kentucky, in good condition, and there are few but admit that the time is not far distant when Kentucky will be free. May God speed the day.

☞ The ex-collector at Oswego, N. Y., Mr. Jacob Richardson, has been indicted by the grand jury of the United States Court for Northern district, for defalcation under the sub-treasury law. The amount is said to be about $100,000.

☞ Mr. Jas. Wilgus has discovered a sycamore tree at Danville, N. J., which he estimates to be 2,000 years old. It measures at the butt 20 feet in diameter. A room has been cut in the trunk capable of holding fifty persons.

☞ A drove of sheep numbering eleven thousand, passed through Edwardsville, Ill., on the 8th ult. They were from the State of Tennessee, and are to be wintered in Missouri, then they will be driven to Salt Lake.

☞ One of the jurors in the celebrated Ward case, has been expelled from the Baptist Church, it having been proved to the satisfaction of his brethren that he had expressed an opinion previous to the trial.

☞ The N. Y. Herald states that Capt. Ericsson has abandoned his hot air project for propelling steamers. It has had a fair and full trial, and if abandoned, it will be because there is no substantial virtue in it.

☞ G. W. Burbank, Esq., of this city, one of our most successful millers and moneyed men, has given the liberal sum of five thousand dollars to the endowment fund of the University of Rochester.

☞ The whole amount of the land in Canada West, owned by fugitive slaves, is stated at 55,000 acres. It is estimated that there are over 35,000 colored people now in Canada.

News Brevities.

—— The Maryland coal trade of last week amounted to 19,000 tons.

—— There is a movement in Ohio to secure a free emigration to Kansas.

—— If built, the Wheeling bridge must be 111 feet high. Former height 94 feet.

—— The Cooperstown Journal says the Hop crop promises to be very fine in that county.

—— While hunting near Petersburgh, Va., a boy aged 13 accidentally shot his brother, aged 9.

—— The Senate's resolution for the meeting of Congress, will designate the 1st of November.

—— Lieut. Randolph, of the U. S. Navy, returned from Japan, died recently at Washington.

—— Two British deserters were shot and badly wounded, near Kingston on the 18th of July.

—— Judge Nicholson, of the Washington Union, declined the appointment of Governor of Nebraska.

—— A Post Office has been established at Lower Black Rock, and Henry Bennett appointed Postmaster.

—— It is said that the clergy in Canada East discourage the growth of hemp, because it is not a titheable product.

—— A Virginia paper says that in 20 years 211 slaves have escaped from Wood county, valued at $211,200.

—— Mr. Gen. Peabody, of London, has contributed $1,000 towards the completion of the Washington Monument.

—— Four Sisters of Mercy died in St. Louis last week. They had been very devoted in their attendance on the sick.

—— Dr. J. B. Webster, a well known physician and surgeon, of this State, died of dropsy in Louisville on the 18th ult.

—— Nearly an average of 1,000 emigrants have arrived at the port of New York each day during the four weeks ending the 24th.

—— A facetious New York paper says the mercury in the thermometer is the only thing which has gone up in Wall street recently.

—— The morning papers in Buffalo are hereafter to dispense with Sunday labor. The Monday papers will be printed Saturday nights.

—— The Cincinnati Columbian says that the Cincinnati cabinet establishments turn out 300 bureaus, 200 sofas, and over 6,000 chairs a week.

—— The Swamp Lands of Michigan were to be sold on the 18th ult., but the sale was postponed by injunction, to the chagrin of some 200 shavers present.

—— The French war steamer Chimere, lately arrived at Norfolk from Havana, had to lie at quarantine because suspected of having yellow fever on board.

—— A gentleman in Cleveland recently recovered $191 damages and also costs of suit against the owner of a dog which had attacked and injured him.

—— The N. Y. Commercial publishes a letter from London, stating that there is still an enormous demand for iron, and that the price is likely to advance.

—— A sprightly looking little girl passed through Buffalo on the 25th ult., in charge of the American Express Company. She was destined for Joliet, Ill.

—— The Whig candidate for Governor of Iowa is actively engaged in canvassing the State. He has appointments for every day (Sundays excepted) until after election.

—— The Schenectady Cabinet records the death by cholera within a fortnight, of Thomas Phillips and wife, two sons and two daughters, mother-in-law, and sister-in-law.

—— The corner stone of the new Court House at Corning was laid on the 20th of July, with the usual ceremonies. Hon. T. A. Johnson made an appropriate and eloquent address.

—— The Rev. Samuel Dunwody, one of the oldest members of the South Carolina Conference of the M. E. Church, died at his residence in Cokesbury, on Sunday, the 9th ult.

—— It is said that fifty or sixty families from Vermont are about ready to start for Kansas. They will probably go out in August, under the auspices of the Emigrant Aid Society.

—— The last census shows that out of nearly 28,000,000 only 2,246,280 are foreign born; and while there are 28,000 Protestant, there are but 1100 Roman Catholic places of worship.

—— A desperate character called "Butcher Metcalf," knocked down the jailor at Hudson, the other day, and, with a negro, escaped. Metcalf was afterwards arrested in New York.

—— Henry G. Perkins, Collector on the Boston and Worcester Railroad, while dining at a saloon in Boston, on the 22d ult., had a wallet containing $500 abstracted from his pocket.

—— The Lake Superior Journal of the 15th speaks encouragingly of the prospects of the Ship Canal. The excavation is in a forward state, and the locks are going forward briskly.

—— The salary of Mayor Conrad, of Philadelphia, has been fixed by the Councils at $6,000 per annum, and the annual cost of the whole city government is estimated at $700,000 a year.

—— The N. Y. Mirror says that an Irish woman named Nancy Phillips, died from the effects of *sixteen quarts of beer* and a quantity of rum and brandy, drank by her on Wednesday week.

—— The Troy Whig says,—We regret to learn that Judge Bronson has lost nearly the whole of his fortune by the failure of the Empire Stone Dressing Co., of which he was President.

—— The Jonesboro' (Tenn.) Republican states that Gen. A. E. Jackson has a lead mine about ten miles south of that place, from which ore is taken that yields from 60 to 95 per cent. of lead.

—— Indiana gave seven votes for the Nebraska bill. One (Smith Miller) of the seven Members who gave those votes has secured a renomination, but it took two days and fifty-two ballots to effect it.

—— An agent from an American Company has lately been in Copenhagen to request the permission of the Danish Government to lay down wires over Iceland and Denmark, as part of the line from America to Europe.

—— The Wisconsin University at Madison, Wis., is now in process of erection. It is to be built of stone. It stands on an eminence of 1000 feet, a mile west of the Capitol, in a park of fifty-five acres. It has a fund of $40,000.

—— The Alta California says that the proprietors of a San Francisco steamboat line advertise to send out two boats on Sunday to a certain place not far distant, one boat to carry passengers to a camp meeting, the other to a bull fight.

Literary Notices.

SANDWICH ISLAND NOTES. By a HAOLE. New York: HARPER & BROS.—1854.

THE proposed annexation of the Sandwich Islands to the United States, makes this volume particularly opportune, and the reader will here find much interesting information in regard to their present condition and resources, and also their past history. The writer resided in the Islands the past year, and seems to have taken much pains to obtain reliable information of the true state of affairs, and presents it in a very independent tone, though his style of writing is not always to be commended. Sold by E. DARROW & BRO., Rochester.

SIR JASPER CAREW, Knt.; His Life and Experiences.—With some account of his over-reachings and shortcomings, now first given to the world by himself. By CHARLES LEVER. New York: HARPERS.

ANOTHER novel from the popular author of "The Daltons," "Maurice Tiernay," &c., &c. DARROW & BRO.

HARPERS' STATISTICAL GAZETTEER OF THE WORLD. With special reference to the United States and British America. By J. CALVIN SMITH. New York: HARPER & BROS.

WE have received the 1st and 2d Nos. of this Serial—a work undertaken to supply, in a compendious form, the latest information upon the statistics and geography of North America. It is to be completed in ten parts, at 50 cents each, comprising in all about 1800 pages, with seven fine maps, in one Royal octavo volume. Sold by DARROW & BROTHER.

THE NORTH BRITISH REVIEW for the current quarter, and *Blackwood's Magazine* for July, have been received at DEWEY'S. New volumes of the four Reviews and Blackwood now commence; all works of permanent interest and value.—New York: LEONARD SCOTT & Co. Blackwood and any one of the four Reviews, $5—the whole, $10 per year.

THE BOSTON OLIVE BRANCH, one of the very best literary and family papers in the nation, has recently passed into the hands of E. A. NORRIS, Esq., son of the former editor and proprietor. The O. B. is always excellent in both contents and appearance, and well deserves, what we cordially wish it, increased success under its present management. Weekly—$2 a year.

THE HORTICULTURIST for August is a capital number—embracing an excellent variety of valuable articles, the leader treating upon "Strawberries and their Culture." J. VICK, Jr., Rochester—$2 a year.

THE KNICKERBOCKER for the current month—a rich issue of course—has been received by DEWEY.

PUTNAM'S MONTHLY for August, presents an admirable table of contents. McMAHON, Rochester.

Foreign Intelligence.

Arrival of the Steamship Africa.

THE Africa, with three days' later news, arrived at New York July 27.

A new defeat of the Russians on the banks of the Danube, and the confirmation of the news of a severe check to the Turkish army in Asia, have been the principal events of the war since the departure of the last packet.

The new success of the Turks on the Danube has consisted, according to report, in the taking of Giurgevo. This fortified place, which is situated on the Wallachian side of the river, nearly opposite Rustchuk, has been an object of severe contest throughout the entire campaign, the Turks having constantly assailed the Russians in the neighboring Island of Mokan with the view of obtaining a permanent point whence they could direct their attacks. These assaults were attained with varied success, but although the Turks incessantly worried their opponents, and inflicted great losses upon them, they were never able to overcome them sufficiently to dislodge the garrison of Giurgevo. According to the statements now circulated, however, Omar Pasha, on the 7th July, crossed the river with 40,000 men, took the Island of Mokan, surrounded and captured Giurgevo, and inflicted a loss in killed and wounded of 900 men upon the Russians, who were able to escape only by cutting their way through at all hazards—an operation which involved, among other casualties, the death of many officers, and the loss of an arm by the commander, General Churleff.

The news of this fresh disaster having reached Prince Gortschakoff, he was said to be advancing from Bucharest, by forced marches, with 30,000 men, to protect his defeated comrades.

The desire for the commencement of a combined attack by land and sea on Sebastopol, for the purpose of wresting the Crimea from Russia, and thus accomplishing the object which, more than any other, is looked upon as essential to any future arrangement for peace, is still uppermost in all minds. But the commencement of that plan seems to have been temporarily interfered with, not only by a change in the tactics of Russia, but also by the non-fulfilment on the part of Austria of her avowed intention to occupy Wallachia.

There is nothing new from the Baltic. French troops to the number of 40,000, are about to be sent thither, with the view, it is believed, of supporting Sweden, which government is disposed to declare for the allied powers.

In relation to the Spanish insurrection, the last news from Madrid states that General O'Donnel and his insurgent troops were retreating toward Andalusia, that he had been joined by General Serrano, one of the former favorites of the Queen, and that risings in his favor had occurred at two places in the province of Valencia. On the other hand, the Government accounts describe his retreat as being rendered fatal by numerous desertions, while they also affirm, with regard to the defection of General Serrano, that that officer had been unable to carry over any men with him. On the whole, there can be little doubt that the rebels have not met with the support they anticipated; but whether their cause is yet wholly lost, is a question not at present to be decided.

Arrival of the Steamship Andes.

THE British steamship Andes, with four days' later news from Europe, arrived at Boston July 31st.

Flour has declined 6d@1s. Wheat also lower.

She left Liverpool on the 18th, and has papers to that date. Also London and Paris advices to the 18th. On the day of her departure from Liverpool, she reports speaking, off Great Orm's Head, the U. S. mail steamer Atlantic, from New York the 8th, bound in. She would make the passage in 11 days.

LIVERPOOL MARKETS.—BOSTON, July 31.—Breadstuffs very unsatisfactory, as a large decline in wheat and flour is reported. The former is quoted by the papers at 6d per 60 lbs. lower, and the latter 2s@3s lower.

Trade at Manchester was somewhat depressed, and both goods and yarns were being offered at a reduction from previous rates.

THE WAR.—A despatch by telegraph in the 2d edition of the London Times, states that the Russian troops were returning from Moldavia to Wallachia. The Russian troops returned to Lesser Wallachia, says a dispatch from Widdin, and on the 12th crossed the Danube at several different points, and occupied the principal places in order to prevent the Turkish troops from crossing at Alata.

Advices from St. Petersburg of the 8th inst., announce that 300 young nobles had been arrested on the charge of expressing sentiments of opposition against the government.

It is rumored from Vienna, in a despatch of the 17th, that Prince Paskiewitch is dead.

The whole garrison at Beaila is marching on to Bucharest.

The Russians are reported to be cutting down and destroying all the crops of wheat in Wallachia.

The Servian Government has finally been compelled to give satisfactory assurance to Austria.

Accounts from Bucharest of the 14th, mention that in consequence of a dispute having arisen between the Emperor Nicholas and the heir to the crown, the latter will not join the army.

The allies are in full march for the Danube. A body of French troops have arrived at Rustchuk, and a force of English troops at Emblar.

ENGLAND.—In the House of Commons on the 18th, Lord John Russell gave notice that he should move in the course of the ensuing week a vote of credit for the purpose of carrying on the war.

FRANCE.—The intelligence from France is not important. There was quite a fluctuation in the Bourse on the 18th, and the rentees declined nearly one price. The share market was also depressed.

SPAIN.—The insurrection was proving to be spreading throughout the entire country, notwithstanding the strenuous efforts of the government to put it down. The regiments of Navarre and Gandalacarra had taken the initiative amid loud acclamations from the populace.

The latest advices are dated Paris 18th, and report that Barcelona has pronounced against the government.

Arrival of the Canada.

THE Canada arrived at Halifax July 30. The attack on Sebastopol was indefinitely postponed. The attack on Constadt will not take place this year.

LATEST FROM MADRID.—The Gazette publishes the list of the new Ministers. Gen. Cavagal is appointed commander of calvary in Madrid. A battle was fought between O'Donnell and Blazer. The later was defeated, wounded, and taken prisoner. The populace sacked the palace of Christiana at Salemanca, near Grenada.

Accounts from St. Petersburgh state that the Czar is determined not to yield, but discontent prevailed in the capitol.

THE BLACK SEA.—On the 7th the combined fleets were seen off Akermann, sailing.

It is reported that Admiral Bruot forced an entrance to Novorsich.

ASIA.—Kerim Pasha surprised 12,000 Russians and defeated them, capturing from them six guns and 400 men at a pass in the mountains.

California News.

Arrival of the Prometheus.

THE steamship Prometheus, Captain Turner, from Punta Arenas, with 383 passengers, and $866,853 in specie on freight, arrived at New York on the 25th.

The Prometheus arrived outward on the morning of the 15th, at 8 o'clock, having touched at Kingston for coal. Found in the harbor the United States ship-of-war Cyane, commanded by Captain Hollins, which had arrived at San Juan del Norte on the 11th inst., in 21 days from New York, commissioned to settle certain difficulties between American citizens and the local authorities. Also, to demand a full and satisfactory apology for an insult given, a short time since, to Hon. Solon Borland, our Minister to Central America.

The authorities and residents of the town refused to make the slightest apology. After giving ample time, and no reply having been received, Captain Hollins, on the 12th inst., issued a proclamation to the authorities and residents, that, unless an apology was made by 9 A. M. on the 13th, he should, without further notice, proceed to bombard the town. No apology came! He, in the meantime, took possession of the Transit Company's steamers, and sent them to the town, offering protection to all persons who chose to accept. And, within one minute of the time designated by Capt. H., the cannonading commenced, and continued, with short intervals, to 3 P. M. During the intervals, no disposition was manifested on the part of the inhabitants to come to terms for the saving of the property. At 4 P. M., a party landed, commanded by a Lieutenant, and burned the town.

THE Rappahannock Virginian states that a gentleman near that place informs the editor of a strange circumstance which took place at his house a few days since. Having occasion to trim some peach trees, he left the branches lying in the yard. A number of young ducks partook of the leaves, which caused instant death. The leaves and kernels of peaches contain prussic acid in sufficient quantity to endanger the life of persons or animals partaking of them.

CANADA ELECTIONS.—The Montreal Gazette of Wednesday week, has returns of the election of ten Ministerial and twenty-three Opposition members of Parliament. The Ministry about divides the Lower Canada members, but in the Upper Province the Opposition seems to have a decided advantage.

Deaths.

On the morning of the 1st inst., RACHAEL, only daughter of Edwin S. and Lucy E. Hayward, aged 9 weeks.—Funeral at the house, on the 2d inst., at 10 o'clock A. M. Friends of the family are respectfully invited to attend.

Commercial.

BUSINESS AND FINANCE.

THE whole amount of incoming specie and bullion during the week has been $1,050,000 and the export during the same time has been $985,000.

The import of merchandize for the week was about four and a half millions.

The New York subtreasury which was nearly depleted by the payment of the Mexican appropriation, is slowly recovering, and now contains near five millions.

There has been another burst up among the railroad men. Mr. TUCKER, president of that huge corporation the Reading (Pa.) railroad has failed, it is stated, for the modest sum of a million and a half. Much to his credit be it spoken, however, that the trusts committed to his hands are not involved in the shape of over issues, &c., and he comes out of the ordeal, in this respect, without the smell of fire upon his garments. The failure, however, affects railroad securities still more, bad as they were considered before.

The money market would be easy enough if confidence in the stability of speculative business was once restored, which is not likely to be soon under present inauspicious developments.

The Commercial, and the Farmers and Mechanics bank of this city, have each declared a semi-annual dividend of five per cent., payable early this month.

Market Intelligence, &c.

RURAL NEW-YORKER OFFICE,
Rochester, August 2, 1854.

THE foreign news by the Andes, at Boston, July 31st, quotes breadstuffs at a decline. It does not however affect our market, and new Genesee wheat commands readily $2 in the street. Very little is offered as yet, the farmers being too busy, and confident of fair prices hereafter, to break off their work for the purpose of throwing their wheat into market.

Most other articles of farm produce remain unchanged

Wool does not come in to any amount and prices continue low. It believed that not a pound has been sold here this week. On Monday a couple of loads were in the street for which the buyers offered 30 cts; but the sellers not being pressed for cash, took the wool home again to await more propitious times.

Rochester Wholesale Prices.

Candles, box	14½	Trout, bbl	8,00

NEW YORK MARKET—July 31.

FLOUR—The decline brought by the Andes, has thus far had no material effect on the market. Sales at $6,75@7,75 for inferior to choice State; $7,37@7,75 for com. to good Western; $8,50@9 for choice Ohio. Canadian is held at $7,75. Rye flour is selling at $6 for fine; $7,25@7,75 for superfine.

GRAIN—Grain market steady for wheat, with only a moderate business doing. Sales red Missouri at $1,66@1,68; fair Southern $1,86. Rye $1,22. Corn market easier, with large receipts and falling off in distilling demand.—Sales at 65@73c for unsound; 74@77c for good to sound Western. Oats selling at 45@49c State and Western.

PROVISIONS—Market for mess Pork heavy and steady—with moderate home trade demand. Sales $10,37½ for prime, and $12,25@12,37½ for mess. Lard firm with sales at 9¾@10c. Butter and Cheese unchanged.

ALBANY MARKET—July 31.

Flour and Meal—There is a moderate business doing in Western and State Flour. Some holders of choice brands of extra Ohio have put up prices 25c ₱ bbl., and some sales have been made at the advance. Sales at $7@8 for com. to good State and Western; $8@9 for good to choice do.; $9,25@10,25 for fancy to extra Western, and $9,50@10,50 for do. Genesee. Corn Meal is unchanged and is selling at $4,44.

Grain—We notice a sale of 2,800 bu. good white Western at $2,10 for local milling. This is the first sale that has been reported in our market for several days, and the figure exhibits a decline. Corn is in fair supply and the market easier and more active. Sales western mixed at 71@72 afloat and delivered in car lots. Oats are unchanged in rates and in steady request; sales Western and Chicago at 48@49c.

BUFFALO MARKET—July 31.

Flour—A fair demand for Flour for the local and interior trades. The receipts, however, are light and much diminished. Sales at $7,50@8 for good to choice Ohio and Michigan, $8,75 for Black Rock.

Grain—In wheat there is no change; the market is quiet and no sales. Corn in good request, and prices firmer.—Sales at strictly prime Illinois river, at 66c; some holders ask 69½c. Oats rather dull, with sales at 36c.

Canal Freights—On Corn 11c, and Oats 7½c to Albany.

NEW YORK CATTLE MARKET—July 24.

AT Washington Drove Yard—Offered to-day 1,900 Beef Cattle; during the week 2,141. For Beef Cattle the market is 50c per 100 lbs. higher on the qualities than last week, but other descriptions are unchanged. We quote Beef Cattle $8@10; Cows and Calves at $40@60; Veal Calves (live weight) 4@6c; do. grost 2½@3½c; Sheep (on foot) $2@7; Lambs $2,50@5,50; Swine (corn fed) $4-50@4,75.

At Brownlng's—Prices at this market for Beeves have taken a very wide range. Sales at $7,50@10 per 100 lbs. for Beeves; Cows and Calves lower, and sold at from $30 to $40; extra at $60. Veals 4½ to 6½c. per lb., live weight. Sheep and Lambs in large supply, and prices declined.—Sheep range at from $2 to 3,50@7. Lambs at $2 to $4,50; some extra at $6. All sold.

At Chamberlain's—Prices of Beef ranged at from $7,50 to $10 per 100 lbs. Cows and Calves from $30 to $50.—Veal Calves at from 4½ to 6c per lb. Sheep $2,50 to 6,50. Lambs $2,50@5.

At O'Brien's—Sales of Beeves at $7@9 per 100 lbs.—Cows and Calves at from $35 to $50, as to quality—a decline. Veal 4@5c. per lb.

CAMBRIDGE CATTLE MARKET—July 26.

At market 661 Cattle—600 Beef Cattle, 61 Stores.

Prices—Market Beef—Extra $8,00 per cwt.; 1st quality, $7,50; 2d do, $7,00@7,12½; 3d, do, $6,50; ordinary, $4,75@5,25. Hides, ₱ cwt. $6,50@7. Tallow $8,50@9,00. Pelts, 37½@62c. Calf Skins, 16c ₱ lb. Veal Calves $4,50 to $8.

STORES—Working Oxen—$70 to 135@140.

COWS AND CALVES—$21 to $51@62. Two years old—$18 to $20@35. Three years old—$32 to $51@62.

SHEEP AND LAMBS—3,405 at market Prices—Extra—$4,50 to $6@7. By lot—$1,87 to $3@3,50

SWINE—Wholesale, hard fat hogs 4¾@4¾c per lb.

BRIGHTON CATTLE MARKET—July 27.

At market 800 Beef Cattle, 20 Working Oxen, 60 Cows and Calves, 4,800 Sheep, and 400 Swine.

PRICES—Beef Cattle—An advance on last week, viz:—Extra $8,00@8,50; first quality, $7,50@8; 2d, $6,50@7,25; 3d, $5,50@6,25.

Working Oxen—Sales $75 to $110@145.

Cows and Calves—Sales $25 to $58. Sheep—Sales $3,25 to $5,50@6,50.

Swine—One lot of still hogs 4¾c; old hogs 4¼c; shoats 5@5½c. At retail from 6½ to 7c.

THOMAS' NEW FARM BOOK.

FARM IMPLEMENTS, and the principles of their construction and use, with 200 Illustrations. By J. J. THOMAS.

The following are only a few out of the many commendatory notices which this work has already received from the press:

We wish to see this work placed in the hands of every farmer and farmer's son, as an indispensable book; and school commissioners should see that it has a place on the shelves of every rural district school library. It is admirably adapted for popular use as a text book. The illustrations are ample and excellent; and every statement is made in such a straightforward manner that even a child could not mistake the meaning. Mr. Thomas has done the agricultural community a good service in the preparation of this book.—*Horticulturist.*

This is an invaluable work for the practical agriculturist, affording as it does the theory of mechanical forces as applied in machinery used in farm labor; it will enable farmers to construct many indispensable articles, and to understand the principles and construction of all agricultural machines."—*Boston Herald.*

We have never seen so much philosophy brought to bear in a practical manner on the ordinary concerns of life.—*Presbyterian Banner.*

Just the book for farmers who wish to perform their labor intelligently and efficiently.—*Zion's Herald.*

This is an interesting and invaluable work for the farmer, and should be in the hands of every farmer in the country. *Ohio Farmer.*

We should be glad to see the book in every one of our schools and popular libraries.—*N. Y. Agriculturist.*

Published by HARPER & BROTHERS, New York, and sold by booksellers generally. 239-3t-ow.

SYRACUSE NURSERIES, SYRACUSE, N. Y.

THE Subscribers would most respectfully call the attention of Nurserymen, Fruit Growers, Venders, &c., to their *very large* Stock of Fruit and Ornamental Trees, which they offer for sale the coming fall and spring.

We are issuing from the press—

No. 2, *A New Fruit Catalogue*, which, with

No. 3, Containing the Ornamental Department, and

No. 4, *The Green-house Department*, will be forwarded to all pre-paid applications, enclosing a *one cent* stamp for each.

Also, a *New Wholesale* Trade List, for persons wishing to trade by the quantity.

A fresh importation of the *very best Dutch Bulbous Roots*, from Haarlem, in Holland, will be ready for delivery in September. We will also offer for sale, *very low*, the following stock, on a piece of ground which must be cleared this fall:

2,000 assorted Dwarf Pears, 1 year old from the bud.
2,500 to 5,000 assorted Standard Pears, 1 year old from the bud.
1,500 assorted Plum Trees, 1 year old from the bud.
500 assorted Plum Trees, 2 years old from the bud.
15 to 18,000 assorted Apple Trees, 2 years old from the grafts.

The above are all thrifty and will be sold at a bargain. Prices given upon application.

THORP, SMITH, HANCHETT & CO.

KEDZIE'S RAIN WATER FILTERS.

MANUFACTURED BY

J. E. Cheney & Co., Rochester, N. Y.

THE use of water impregnated with lime and other mineral substances, is the opinion of all medical men, is one of the chief exciting causes of many diseases incident to the varied climate of this country.

These Filters have been fully tested, for many years, by hundreds of families in this city and in various parts of the country, and have in all cases given the highest satisfaction.

Rain water, of whatever color, taste, or smell, by this means becomes as clear as crystal. 236-1emtf

DRILLING IN WHEAT.

Moore's Seed Planter, or Grain Drill.

PATENTED July 2, 1850.—This valuable Implement of husbandry, which has been thoroughly tested in many places, is used for planting WHEAT, RYE, CORN, OATS, BARLEY, BEANS, &c. It operates equally well on all kinds of land, and is not injured by coming in contact with rocks, roots, &c.; and it is believed, is superior to any other implement of the kind in use, as may be seen by the testimonials of many of the best farmers in the State. There are several advantages in drilling over broad-cast sowing, among which are these:—It is most expeditious; it saves labor, which is money; it completes the process of seedling wherever it moves; and experience has proved that more grain is obtained, of a heavier berry, and with less seed, owing to its being covered at any required depth, where every kernel has moisture and a chance to germinate.

DRILLING WHEAT.—Edward Stabler, in his admirable essay on the advantage of drill seeding, states that after examining the result on some 500 or 1,000 acres, besides large experience on his own land, he finds there is not a single instance where it has not proved the most profitable.—First, in the saving of seed, and secondly in the increased product of the grain, amounting to from one to seven bushels to the acre. He had known the increase, in one case, by careful comparison of the two modes, to amount to nine bushels per acre in favor of drilling. He relates an interesting incident:—A veader offered a drill for the increase in a crop of 50 acres of wheat, to be determined by sowing a few strips broad-cast for comparison; but before the harvest, the farmer preferred paying the hundred dollars for the price of a drill, with interest. On carefully ascertaining the increase, he found it to be one hundred and fifty-three bushels.—*Albany Cultivator.*

Extract from the N. Y. Tribune, Feb. 3, 1853, article on Industrial Exhibitions at the World's Fair, London:

"Those who understand the subject, know that at least one-third of the seed may be saved, and a tenth added to the crop by DRILLING, as contrasted with the old, slovenly process of sowing by hand. The annual saving by the general adoption of drilling in this country, would be equal in value to all the gold we receive from California."

The highest premiums have been awarded to this Drill at the Agricultural Fairs in Delaware, at Philadelphia, Baltimore, Detroit, in Maryland, and at various County Fairs in Pennsylvania, Ohio, Michigan, and other States.

TESTIMONIALS.

To E. W. HUDNUT & Co.:—The Grain Drill which we severally purchased of you in 1852, works to our entire satisfaction. Its simplicity, and certainty of distribution, together with its cheapness, commend it to preference to any Drill with which we are acquainted. Samuel Lewis, Esq., York, Liv. Co., N. Y.; Wm. W. Fletcher, Jr., Chas. Hazelton, Elijah Armstrong, Geo. W. Uhl, Leaming Clark, Geneseo; Chas. Hendershott, Andrew Boyd, Rich'd Johnson, Groveland.

Extract of a letter from Mr. McCrone, near Newcastle, Delaware:—"Your Drill stands unrivalled, as is admitted by all Farmers in the neighborhood, that have seen it in operation."

"This is to certify, that we, the undersigned, have used Lewis Moore's Improved Grain Drill, and we believe that for simplicity, durability, cheapness, ease, speed and regularity of sowing, it surpasses anything of the kind heretofore in use among us, and we do recommend it to farmers as being a machine the best adapted to their wants."—Signed, Wm. Linville, Lancaster Co., Penn., and thirteen other farmers.

Orders will be received for these machines by the subscribers, who have purchased the right to make and sell them in the Counties of Monroe, Ontario, Wyoming, and Livingston.

Cash prices at the shop,—8 teeth Drills, 8 in a part, $65; 9 teeth do., 7 and 8 in a part, $70; 10 teeth do., 8 in a part, $75; 11 do., 8 in a part, $80. E. W. HUDNUT & CO.
Geneseo, Livingston Co., N. Y., June, 1854. 230-8t

STARR'S PREMIUM PIANO FORTES.

EVERY person in this vicinity, desirous to purchase a Piano Forte, will be *more than paid*, by visiting my rooms, where he can *buy directly from the manufacturer*, save the commissions of an agent, and select from the largest assortment in Western New York, as I have constantly on hand from 15 to 20 finished Instruments, and from 60 to 100 others in process of construction, of various sizes, patterns, and prices, from $230 to $700 each. They embrace such a combination of excellencies, in their beauty, finish, strength, (to keep in tune,) exquisite touch—soft, deep, rich, full and melodious tones—as induces the belief, so often expressed by those who have bought, or used them, that "they surpass all others in the market." Their superiority was acknowledged when one of the most intelligent musical committees which ever acted on a similar occasion, *awarded us the three highest premiums*, when in competition with Chickering, Gilbert, Bacon & Ravens, Wm. Hall & Sons, at the New York State Fair for 1851.—And the number since sold, with their daily *increasing celebrity*, fully justifies the report of that committee. They are manufactured of the best materials, in the most perfect manner, with metallic plates upon the Iso Chordal scale, with the Iso Hasson Damper, and French Grand Action, *expressly for retailing*—(numerous applications at wholesale, being constantly refused,) and can only be had at my rooms, where the instruments will be shown, and all orders promptly attended to. As it is fully settled that *a good Piano is cheap at almost any price*, and a poor one only a nuisance; and as I rely alone upon their merits to secure them favor with the public, I invite for them, the most careful examination and scrutiny, by all who wish to buy at my manufactory and show rooms, Nos. 45, 47, 49 & 51 Orphean Buildings, Main st., 2d Floor. Every instrument will have upon it the name of the subscriber, and be *warranted to please the purchaser.*

Rochester, June, 1854. FREDERICK STARR.

THE WOOL GROWER AND STOCK REGISTER.

VOL. VI.—ENLARGED AND IMPROVED!

THE WOOL GROWER AND STOCK REGISTER is the *only* American Journal devoted to the important and profitable branches of *Wool and Stock Husbandry.* It contains a vast amount of *useful* and *reliable* information on the above and kindred subjects, and should be in the hands of every owner or breeder of Sheep, Cattle, Horses, Swine, or Poultry—whether located East or West, North or South, for the most of the matter given in its pages is equally adapted to all sections of the Union, the Canadas, &c. The Sixth Volume, commencing July, 1854, will be

Enlarged to 32 Octavo Pages Monthly!

And Improved in both Contents and Appearance. Among other matters of interest to Wool Growers, Breeders, Graziers, Dairymen, &c., the new volume will contain PEDIGREES OF PURE-BRED Cattle, Horses, Sheep, etc., and the Names and Residences of the principal Breeders and Owners of Improved Stock throughout the country. It is published in the BEST STYLE, and ILLUSTRATED WITH MANY ENGRAVINGS—including Portraits of Domestic Animals, Designs of Farm Buildings, &c., &c. The careful REVIEWS OF THE WOOL AND CATTLE MARKETS, given in each number, are alone worth many times the price of the paper.—To Wool Growers this feature is invaluable.

TERMS—Only Fifty Cents a Year; Five Copies for $2; Eight for $3,—*in advance.* Any additional number at 37½ cents per copy. Club papers will be sent to different post-offices, if desired. ☞ Back volumes (well bound in paper, for mailing) furnished at above rates.

☞ NOW IS THE TIME TO SUBSCRIBE and form Clubs. Money, properly enclosed, may be mailed at our risk, if addressed to D. D. T. MOORE, Rochester, N. Y.

THE GREAT RED DRAGON,

OR, THE MASTER KEY TO POPERY.

BY ANTHONY GAVIN,

CATHOLIC PRIEST, OF SARAGOSSA, SPAIN.

BOOK AGENTS WANTED,

TO SELL the work which is now ready, and surpasses in detail and interest any other work on the subject of Popery ever issued. The terrible revelations which it contains will startle every Protestant with horror, as coming from one who was a participator in the bloody deeds, and who has had the best opportunity ever possessed by any man to unveil the mysteries of the Great Babylon of Popery.

Finely Illustrated. Address immediately,
SAMUEL JONES, Publisher,
235-5t 86 Washington St., Boston, Mass.

CAVEATS.—Inventors and others desiring to apply for Caveats, are informed that all the necessary drawings and papers are prepared by the undersigned, with the utmost dispatch and on the most moderate terms. All other Patent business promptly attended to.

Persons wishing for information or advice relative to Patents or Inventions, may at all times consult the undersigned *without charge*, either personally at his office, or by letter. ALFRED E. BEACH,
Solicitor of American and Foreign Patents, People's Patent Office, 86 Nassau st., New York. 236-4t

PATENT AGENCY.

INVENTORS can have their drawings and papers prepared under their own inspection, by applying to

JOHN PHIN, C. & M. E. Agent for procuring and for the sale of Patents, 16 Buffalo St., Rochester, N. Y.

Particular attention paid to rejected applications, and to Chemical Patents.

Will also send the claim of any invention patented within the last 14 years, on receipt of one dollar. PATENT RIGHTS FOR SALE. 235-tf

GAFFNEY, BURKE & CO.,

IMPORTERS, WHOLESALE AND RETAIL DEALERS IN

Foreign and Domestic Dry Goods,

No. 53 Main Street, and Nos. 1 and 3 North St. Paul Street,

GAFFNEY'S BLOCK, ROCHESTER,

Have now in store one of the largest stocks of Dry Goods ever brought to this city, in which may be found every desirable article of Ladies' and Gents' Dress Goods, adapted to the season. Their improved facilities for IMPORTING, and the great advantage of having a resident partner in New York, daily attending the Auction Sales, enable them to offer to Merchants and Dealers, by piece, case or bale, as cheap as can be purchased in the New York and Boston Markets.

WHOLESALE ROOMS NOS. 1 & 3 NORTH ST. PAUL ST.,
GAFFNEY'S BLOCK, ROCHESTER.

LAND PLASTER

AT Canandaigua, Victor, and Fisher's Railroad Depots. The subscriber has on hand at each of the above Railroad Stations, 500 tons of pure, fresh ground land Plaster.—Farmers can depend upon getting their Plaster at the above places, of a superior quality and not kiln dried.

217-4m. JOHN ROWLEY.

Poetical.

A COUNTRY HOME.

Oh! give me a home in the country wide,
And a seat by the Farmer's wood fireside,
Where the fire burns bright,
On a frosty night,
Where the jest, and the song, and laugh are free,
Oh! the farmer's home is the home for me.

Oh! give me a home in the country wide,
When the earth comes out as a blushing bride,
With her buds and flowers,
In the bright spring hours,
Her bridal song ringing, from fresh-leared trees,
And melody floats on the perfumed breeze.

In summer, a seat in the shady nook,
And close by the side of a cooling brook,
Where the violet grows,
Or the pale swamp rose,
Fainting and sick, 'neath the sun's scorching beam
Dips her petals in the cooling stream.

Oh! give me a home in the country wide,
In the golden days of the farmer's pride,
When the barns are filled
From the fields he's tilled,
And he feels that his yearly task is done,
Smiling at winter, he beckons him on.

[*N. Y. Tribune.*

Rural Sketch Book.

MY DUEL WITH CAPT. ELLIOTT.

A PLEASANT STORY.

"My duel with Captain Elliott," said the Doctor, lighting a fresh cigar, "took place during the war with Mexico. But before I proceed, I must give you a short account of my previous history.

Elliott and I had been rivals and enemies from our very boyhood. We were educated at the same public school. Before I arrived, he was the pet, the hero, the Napoleon, so to speak, of the school; the leader alike in study, in sport, and in mischief. He was a proud, imperious, overbearing boy, though with many generous and endearing qualities; and, out of school, his will was law to the boys, as much as that of the teacher was in school.

When I arrived, however, being about his own age, and a lad of considerable spirit, I refused to submit to his authority; and there being many malcontents in the school who secretly disliked him, they one by one enrolled themselves under my standard, and we were thus divided into separate factions. Numberless were the pitched battles which we had, as well as the personal conflicts for supremacy; numberless the 'bloody and cracked crowns;' numberless the reprimands and even more tangible inflictions of the teachers. Elliott and I were, in fact, always at variance, always crossing each other, and agreeing in nothing except in hating each other cordially.

When we left school, he went to West Point, and I to the Medical College, and we lost sight of each other for some years. In due course of time, I commenced practicing as a physician; but finding it did not pay very well, and being besides of a somewhat roving and adventurous disposition, I applied for and obtained the appointment of army-surgeon, and was immediately ordered to Fort ——.

I had been there but a short time, when the Commandant, brave old Gurley, whom some of you doubtless remember, died of fever. An officer of the name of Elliott, was appointed to succeed him; and you may judge of my mortification when I found it was my old enemy. Much as it galled my pride, I was obliged here to submit to his authority; but I did, I assure you, with a very bad grace.

Elliott was essentially changed since I had last known him; the impetuous, overbearing boy had become a grave, quiet, reserved man, who could, if he chose, render himself a very agreeable companion, but who seldom took the trouble to do it. Many of the officers, however, and all the men, liked him very much; but, somehow, there seemed to be an impassable barrier fixed between him and me. I disliked his reserve, which I attributed to pride; and he complained of my boisterousness, as he was pleased to call it. He did, indeed, make some efforts to conciliate me at first, but seeing I repulsed them, he withdrew himself behind his entrenchments, and treated me ever after with a coldness absolutely freezing.

Things were in this state, when an uncle of Elliott's, with his wife and daughter, stopped for a short time in the vicinity of the fort, on their way to Washington. The daughter, Miss Eveline, was a charming young lady, and every unmarried man in the garrison immediately fell in love with her. It would weary you to enumerate the pic-nics, the water-parties, the drives and balls that were given in honor of her. A good-natured rivalry prevailed among us for preference; and the bets were taken as to whether Duvil, or Jones, or the Doctor, or the Commandant himself, had the best chance.

For myself, I was, I do think, seriously in love with the charming girl. To be sure, she did not give me much encouragement, but I tried to encourage myself. I rode with her, walked with her, danced with her, and kept by her as much as I possibly could. I saw that Elliott scowled darker than ever upon me, but I did not care for that; in fact, I was glad of an opportunity of giving him pain, and showing him that his dislike for me was not shared by his connections.

On the evening of her intended departure, there had been a farewell ball. I had danced with her the whole evening, while Elliott, who did not dance at all that night, sat moodily conversing with her father. I was so fascinated with her, and so grieved at the thought of her leaving, that before I slept that night, I resolved to see her in the morning, and make her a tender of my heart.

Accordingly, as early as decency permitted, I called, and was, by the blundering servant, shown at once into her presence, where an extraordinary scene presented itself. On a sofa in a room, her face buried in the cushions, her dress disordered, her beautiful hair, which curled naturally, all in a tangle, and her attitude denoting the very prostration of despair, lay the charming girl I had parted from last night in the exuberance of youthful and light-hearted joy. On a table beside her, and on the floor, were scattered innumerable letters, and a portrait, a locket, a blue ribbon, and withered rose lay carelessly among them.

She rose on my entrance, and would have denied herself, but it was too late. Her eyes were bloodshot with weeping, and her fair cheeks swollen and discolored. I took her hand with much solicitude and inquired the cause of her sorrow. A fresh burst of grief was her only answer, and it was some time before she was sufficiently composed to give me an explanation.

It appeared that she had been for a long time engaged to her cousin Elliott; and that he had, in a fit of mad jealousy, returned her letters and tokens, and formally broken the engagement. "It was my fault," said she, sobbing, "all my fault. I did wrong to play with his noble nature."

"His noble nature," said I, bitterly, for, as you may suppose, I did not feel in the blandest of humors at the discovery I had just made.

"Oh, Dr. C——," said she, "you do not know him. He is the best, the noblest of men; and I have lost him—lost him by my own mad folly." Here she fell into a passion of weeping again, so that I forgot my own disappointment in my solicitude for her. I suggested, perhaps an explanation might be made.

"Impossible!" said she. It was my flirting with you, and Mr. Jones, and Mr. David, that offended him—and how could that be explained? I am sure it was not that I cared one cent for one of you," (fancy my feelings) "but I am naturally fond of admiration. I have tried to cure myself of it, but cannot. Oh! Mr. C——, my heart is broken! Here—read this note."

She gave me a piece of paper, crumpled with her burning hand, and wet with tears, on which I read as follows:

"MADAME:—In returning to you the letters and tokens which I have had the honor to receive from you, I wish you to understand that the engagement between us is broken off, now and forever. You are now at liberty to flirt with whom you please. I cannot share a heart with twenty others."

"Just like him," said I, with bitterness, when I had finished this laconic and sententious epistle, but she checked me with such spirit, that I was fain to hold my peace. I then offered, for her sake, to go to Elliott, and endeavor to explain the matter.

"Alas!" said she, "you cannot; he went off this morning before daylight, on a three months' furlough, leaving that cruel note and the packet of letters, to be delivered to me on awaking. He has gone, I presume, to New Hampshire, where his friends reside."

Here we were interrupted by the entrance of Miss Eveline's mother; and I took my leave, quite cured of my love-fit, and very thankful that I had not subjected myself to the pain of a refusal.

But I am spinning out my story entirely too long.

When Elliott returned from his furlough, he treated me with even greater coldness than before; in fact, we never spoke to each other at all, except when duty compelled us to do so. This made it so disagreeable to me, that I was on the point of applying for an exchange, when the war with Mexico broke out, we were ordered on active service, and private animosities were forgotten in our zeal against the common enemy.

Elliott had been left in charge of a large number of sick and wounded, while the rest of the army pressed on toward the Halls of the Montezumas. I, of course, was there, with several assistants. We were encamped in a picturesque little hamlet, situated in a wild, romantic neighborhood, and the country being pretty quiet, we were in the habit of venturing some distance from the encampment, shooting, sketching, or perhaps flirting; for you know, our fellows did not extend to the Mexican senoritas the hostile feelings with which they regarded the men. For myself, I cannot say that I admire them much; some of them were pretty, to be sure, but that abominable habit they have of smoking cigaritos, spoiled them in my eyes. I liked a good cigar myself," said the doctor, relighting the one he held, which had gone out, "but I don't like to see a woman smoking. I couldn't fancy Venus herself with a cigar in her mouth.

Well, one morning I had sauntered forth, portfolio in hand, for the purpose of taking some sketches; and in the course of my wanderings came upon a pretty little dwelling by the side of a waterfall, in a sweet, sequestered spot; on a mossy bench by the door sat a young girl of wonderful beauty, in a showy but picturesque dress, with a guitar in her hand, the sweet melody of which blended delightfully with the soft murmuring dash of the waterfall, and the gurgling of the stream beyond it. It was a picture of surpassing beauty and loveliness, and I immediately sat down, on a fallen tree, to commit it to paper.

While thus employed, a man was observed approaching, whom I soon found was no other than Elliott himself. As he neared the cottage, the young girl, who had evidently been expecting him, threw down her guitar and ran eagerly to meet him. He sat down beside her on the bench, when suddenly observing me, he started as if a serpent had stung him, and hastily approached me. He glared upon me with a look in which all the hatred that had been gathering for so many years seemed concentrated.

"This is the second time, sir," said he, fiercely, "that you have crossed my path—it shall be the last time! Follow me if you dare!"

"If by crossing your path," said I, "you mean an allusion to that young woman, I assure you I have not spoken to her, nor approached nearer to her than I am now."

"Must I call you a coward?" said he; "will you follow me or not?"

I threw down my drawing materials and followed him. He entered the chapparel, and led the way to a clear space near a running brook. Here he turned and drew his sword. "Defend yourself!" he exclaimed.

"Captain Elliott," said I, "although I am not conscious of having injured you, I am ready to give you the satisfaction you demand. But had we not better return to the camp, obtain seconds, and conduct the affair in the regular manner?"

"No," said he, "I will not wait. I will hold no further parley with you. Defend yourself!"

Thus adjured, I drew my sword; but had scarcely done so when something whizzed past me, a sharp report was heard, and with a wild cry Elliott fell at my feet. I looked for an instant behind me, and saw the dark countenances of half-a-dozen Mexicans as they prepared to reload their pieces, and then fled into the chappurel, "tarrying no longer to question." On—on I sped; this way and that way, through the tangled thicket, tripping my feet on long trading vines, scratching my hands on thorns; until, completely worn out, I climbed up a lofty tree and hid myself among its leafy branches. Here I remained for several hours, and heard my pursuers crashing amongst the underwood, shouting, swearing, calling to each other; but gradually the sounds died away, the chase seemed to be given up, and I was left alone in that wild, unbroken solitude.

The afternoon was far advanced when, driven partly by hunger, partly by the dread of passing the night in the chapparal, I ventured to descend from my leafy covert, where the mosquitoes had made a feast of me, and the monkeys had chattered at me with their strange, mocking gestures. By the aid of my pocket-compass, I found my way back to the clearing whence I had so suddenly departed. After carefully reconnoitering, to see that none of my Mexican friends were lingering near—(to this day I suspect that young woman of having sent them after us)—I advanced to the spot where poor Elliott had fallen.

He was lying on his face in a pool of blood, his hands clutching the grass, his hair and uniform dabbled in blood, and his fine, manly form (he was one of the finest looking fellows in the army) pierced with three or four ghastly wounds. "Ah! poor fellow! poor fellow!" said I, as I stood and gazed upon him; for though I was rid of a mortal enemy, I could not help feeling sorry that so brave a soldier should thus perish like a dog, shot down by an unseen foe. "But, thank God!" I ejaculated, with a thrill of indescribable pleasure, "thank God! I did not kill him!"

I had turned him over on his back, and as I thus stood moralizing, I thought I perceived his bosom heave. I placed my hand upon his heart, and found that he still lived. As I knelt by him, uncertain what to do, he opened his half-glazed eyes, and I saw his parched lips try to form the word "Water!" My first impulse was to run to the brook which flowed at a short distance; my next to stop short and consider. Should I restore to life the man who, a few minutes before, had been thirsting for blood? who had hated me all his life? who had wronged me, slighted me, and even called me coward? No, I would leave him to his fate which his own rashness had provoked.—I turned my back upon him; but suddenly as if traced with a finger of fire, there was borne upon my mind the words of Holy Writ, "If thine enemy hunger, give him food; *if he thirst give him drink!*" And fast upon them came the other divine sentence: "Inasmuch as ye did it not unto these, ye did it *not* unto ME."

I seized his cap and ran to the brook for water, with which I moistened his parched lips and bathed his gory temples. Taking my case of instruments from my pocket, I then proceeded to probe his wounds. The Mexicans, I forgot to mention, had rifled him of his watch and other valuables; but in tearing open his shirt, I found a small locket, suspended from his neck by a hair chain, which had escaped their search. I opened it. It contained his mother's portrait. (He was her only son, and she was a widow.)

"Thank God!" I again ejaculated; "that mother's curse will not light on me."

What to do with my patient, after having dressed his wounds, was what puzzled me. To remove him myself, was impossible; to leave him there, exposed to the wild beasts and to the burning rays of the sun, after having partially restored him to life, seemed cruel; however, there was no alternative. Before leaving him, I half carried, half dragged him into the shade of a tree about a hundred yards distant. It would be impossible to describe my sensations, when I found myself with my deadly enemy in my arms—two hearts so lately boiling over with malice and revenge, and all the darkest passions of our nature, now throbbing peacefully against each other; his, poor fellow, with a motion so faint as to be scarcely perceptible.

Well, I hurried to the encampment for assistance, and soon had him conveyed thither in safety. For many weeks, he lay hovering between life and death; for the pain of his wounds, which were very severe, the loss of blood, and the exposure to the sun, brought on brain fever, and nothing but the most unremitting care and attention saved his life. He bore his sufferings with that noble endurance which is true heroism, and which, let me tell you, is a much rarer article than mere courage in the field. In fact he displayed during his sickness so many admirable qualities that it was a mystery to me how I could have mistaken his character so completely. Whether it was owing to this, or to my having done him a service, I cannot tell; but insensibly the hatred all melted from my heart, and in its stead sprung up a strong feeling of regard. Curious, wasn't it?

But whether this feeling was reciprocated or not, I knew not; for although his entire manner was peculiarly soft and gentle, and his eyes would light when I approached the couch, he remained as taciturn and reserved as ever, and never made any allusion to the subject of our quarrel. I felt a little piqued at his silence, for I could not help thinking that my having saved him from an ignominious death deserved a few words of acknowledgment.—More than once he seemed on the point of broaching the subject—but he appeared waiting for me to begin it, and I waited for him.

At last he was so far recovered that my professional services were no longer required. As I arose to take my last leave, I signified as much to him, and added:

"Am I to understand, Captain Elliott, that we return to the same footing that we were on before?"

"The same footing as before? God forbid!" he exclaimed, with a sudden earnestness that surprised me.

"Because if you wish to finish the quarrel so inopportunely interrupted, you will find me ready at any time."

"Do you wish to renew that unhappy quarrel?" asked he, an expression of the deepest disappointment overspreading his fine countenance.

"Why? I? Most certainly not," said I, "but you demanded satisfaction, Captain Elliott, and, sir, until that demand is withdrawn, I must, of course, hold myself in readiness to grant it."

"I withdraw it now," said he, speaking very quick. "I ask your pardon for my rash and injurious words. If that will not satisfy you, I will bare my bosom to your sword, but I will never," said he with emotion, "raise my hand against the noble, the magnanimous preserver of my life!" Those were his very words. After a pause he added, "Dr. C——, we have all our lives misunderstood each other—believe me, had I known your worth sooner, I would have acknowledged it. We have been enemies long enough, let us now be friends. Will you try to overlook what is past? Will you be my friend?"

"My dear Captain Elliott," cried I, deeply touched by this generous speech, "I am your friend. Since I carried you in my arms into that lonely glade in the chaparal, I have become so much attached to you that I would as soon shoot my own brother as lift a finger against you."

I held out my hand to him, but he threw himself on my breast, and burst into tears, for his nerves were apparently weak with his recent illness.

There was no more coldness after that, no more distant reserve—all was open and above-board between us thenceforth; and I am proud to say that the more highly did we esteem each other.

I had the happiness afterwards of reconciling him to his fair cousin, to whom he was still attached, (notwithstanding the little episode of the senorita,) and

> When wild war's deadly blast was blown,
> And gentle peace returning,

I "assisted," as the French say, at their wedding, which took place at New Orleans. The very next day after this interesting event I was taken sick with yellow fever; and Elliott and his new-made wife spent their honeymoon at my bedside—the truest, kindest, most faithful and devoted friends that ever a man had in the world!

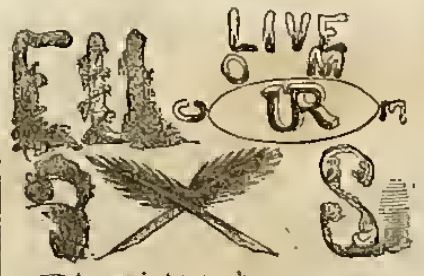
And that, (said the Dr., throwing the end of his segar in the fire,) was the upshot of my duel with Captain Elliott.

AFFECTION, like spring flowers, breaks thro' the most frozen ground at last; and the heart which seeks for another heart to make it happy, will never seek in vain.

TRUTH is the only real lasting foundation for friendship; in all but truth there is a principle of decay and dissimulation.

Youth's Corner.

ILLUSTRATED REBUS, NO. 33.



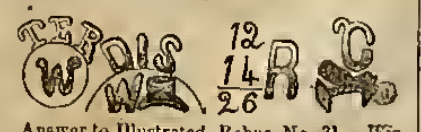
☞ Answer in two weeks.

[Written for Moore's Rural New-Yorker.]

MISCELLANEOUS ENIGMA.

I am composed of 10 letters.
My first is a personal pronoun.
My 2, 4, 5, 6 is an important part of a frame.
My 3, 4, 5, 6 is what every farmer should do.
My 4, 5, 6 is what we say of the sick.
My 2, 3, 4, 5, 6 is a *curse* in the land.
My 7, 8, 10 is a breach of the Ninth Commandment.
My 2, 10, 5, 6 was the Savior's command to a young lawyer.
My 1, 2, 7, 10 may be found in the sea.
My 7, 8, 9, 10 is the reason why we eat.
My 8, 2, 1, 3 is a question.
My 8, 3, 4, 2 is the answer.
My whole is the dying expression of a great man.

☞ Answer next week.



Answer to Illustrated Rebus No. 31.—*Winter discovers what summer conceals.*

Answer to Miscellaneous Enigma in No. 30.—*Fancy-hand penmanship for ornamental writing.*

A CHOICE FARM FOR SALE.

About 1½ miles from the city line, nearly equally divided between a sandy loam (proved by experience to be the most profitable land in Western New York, for every kind of early vegetables and fruits—no rotten potatoes or blasted wheat grows on it,) and a deep black muck, perfectly drained and a few acres of clay land. About one-fourth in wood, abundantly watered with living springs of soft water. About 800 Apple and Peach trees in bearing of choice fruit; a large barn and new house; about ¾ of the fence board and nicely new. Price low for a fancy farm.

A. G. SMITH, Front st.
Rochester, N. Y., July, 1854. 231-3t

FARM FOR SALE.

Is the town of Arcadia, Wayne county, N. Y., 2½ miles south-east of Newark, containing 31½ acres of superior land, pleasantly situated. House built only a few years; barn needs some little repairs. Orchard contains over 150 Apple trees, 30 Peach, also Plum and Cherry trees. Those wishing a small farm, please call and see. There are chances for additions if wished for. For further particulars inquire of the subscriber on the premises.

ALPHEUS S. THOWBRIDGE.
Arcadia, Wayne Co., N. Y., July, 1854. 231-4t

PIPE AND TILE-DRAINING MACHINES.

JOHN PURDIE, Founder and Machinist, Waterloo, N. Y., has for sale four improved Tile Machines, made all of Iron. Price, $200 with all the dies, $25 added if supplied with a table. With one of these machines two men can turn off 5,000 pipe or tile a day.

Waterloo, N. Y., July 10, 1854. 231-13t

PURE WINE.

THE Subscriber has on hand between sixty and seventy barrels of Wine from one to four years old, manufactured by himself from native American grapes, which he offers to Physicians, Druggists and others, for Medical or Communion purposes. Warranted *pure*—not containing a particle of drugs of any kind, or oil spirit except that caused by fermentation. The impression has gone abroad that Wine can not be made that will keep, unless some spirit be added—but it is a mistake. I have made Wine from the grape, where I now reside, between twenty and thirty years, and have never used a drop of ardent spirit. I have kept it until twelve years of age, when it was perfectly fine.

It is well known that nearly all the Wines of commerce are made up of materials entirely foreign to the grape, containing many things very deleterious to health, which persons with weak nerves and delicate health, requiring a cordial, can not use. Many have informed me that after trying in vain to use Foreign Wine when recommended, they have procured Wine of me, and it answered all the purposes for which Wine was needed.

I have six or seven different kinds of Wine, made from as many different grapes,—among which are the Catawba, Isabella, Port, Muscat, Early York, Empire, &c.; also young Vine Roots of the above varieties for sale.

My Wine is sold also by W. R. Walker, Druggist, Geneseo, N. Y.; Whitney & Kellogg, H. W. Miller, Mt. Morris; Hr. D. D. Dayton, Lima; O. A. Chapman, Canandaigua; Edward Niles, Hunsville; S. D. Spring, Brockport; Dr. M. Campbell, Caledonia; S. S. Bryant, LeRoy; Lansing & Judd, Warsaw; S. & B. B. Higgins, Perry; M. H. Dake, Cuylerville; J. Bryan & Co., Rochester; Dr. O. Davis, Utica. G. H. Taylor, Shelborn Falls, Massachusetts; Bidwell & Woodbury, Adrian, Michigan.

SAMUEL WARREN.
York, Livingston Co., N. Y., July 5, 1854. 230-3t

A NEW TRUSS.

THE above Truss, patented January 17th, 1854, has been successfully used in a large number of cases, both in old and recent ruptures. It can be applied to children as well as to older persons, to a rupture of the navel, as well as in one of the groin. The pads and spring can be adjusted so that a greater or less degree of pressure can be brought to bear upon the rupture, at the desire of the wearer. It seldom fails to give the greatest amount of ease and comfort, and in recent cases curing the patient in the course of six months or a year.

This Truss can be obtained of the subscriber, at Moscow, Livingston county, N. Y., where all orders will be promptly attended to. [230-3t] L. B. WHITE.

ENGLISH CATTLE.

To Agricultural Societies, and others requiring the best bred Cattle from England, embracing pure blood Horses, Short Horned Cattle, Devons, Herefords, Ayrshire and Alderney Cows, pure bred South Down, Cotswold and Leicester Sheep, Suffolk, Essex and Berkshire Swine. Imported on commission by Messrs. Thos. Betts & Brothers, Herts, England. For information apply to J. M. Miller, 81 Maiden Lane, N. Y. City, who is fully authorized to act as our agent.

Orders received for Guano, by applying to
234-13t THOMAS BETTS, 35 Wall St.

A VALUABLE FARM FOR SALE.

SITUATED in the town of Conquest, 4 miles northwest of Weedsport, a good market on the Canal, and 9½ from Rochester & Syracuse direct Railroad. Said Farm contains 143 acres; 140 improved and in a good state of cultivation; well adapted for all kinds of produce, and well situated for two farms if desirable, as there are two houses and two barns, two orchards containing a good variety of fruit, also a wood lot on each end of the farm. Thirty-five acres can be put in to wheat this fall. Said farm can be had cheap; terms easy, and possession given when desired. Stock and farming implements can be had if desirable. For further particulars inquire of the subscriber on the premises.

234-240 JACOB EIKER.
Weedsport, Cayuga Co., N. Y., June 19th, 1854.

THE PEOPLE'S PATENT OFFICE.

THIS well known establishment is still carried on under the personal superintendence of the undersigned, by whom all the necessary drawings, specifications, and documents, for Patents, Caveats, Designs, Foreign Patents, &c., are prepared with the utmost fidelity and dispatch, on very moderate terms.

Persons wishing for information or advice relative to Patents or Inventions, may at all times consult the undersigned *without charge*, either personally at his office, or by letter. To those living at a distance, he would state, that all the needful steps necessary to secure a Patent, can be arranged by letter, just as well as if the party were present, and the expense of a journey be thus saved. When parties wish to be informed as to the probability of being enabled to obtain Patents, it will be necessary for them to forward by mail a rough outline sketch and description of the Inventions. No fee or charge is made for such examinations.

Private consultations held daily with Inventors from 9 A. M. to 5 P. M. All consultations and business strictly private and confidential.

Models from a distance may be sent by express or otherwise. For further information apply to or address, post-paid, ALFRED E. BEACH,
Editor and Proprietor of the People's Journal, Solicitor of American and Foreign Patents. People's Patent Office, 86 Nassau-street, New York. 227-13t

THE PEOPLE'S JOURNAL, a record of Science, Mechanics, Invention and Agriculture. Published Monthly.—Every number contains 32 pages, beautifully printed on fine paper, and *profusely illustrated with splendid engravings*, forming at the end of every year two fine volumes, comprising nearly 400 pages, with about six hundred elegant engravings. Terms, only ONE DOLLAR A YEAR, sent by mail. Specimen copies 12½ cts. Address as above.

BONE DUST.—We can supply a few barrels of genuine coarse bone dust, at $2,50 per barrel.

MOORE'S RURAL NEW-YORKER,

IS PUBLISHED EVERY SATURDAY,

BY D. D. T. MOORE, ROCHESTER, N. Y.

TERMS, IN ADVANCE:

SUBSCRIPTION—$2 a year—$1 for six months. To Clubs and Agents as follows:—Three Copies one year, for $5; Six Copies (and one to Agent or getter up of club,) for $10; Ten Copies (and one to Agent,) for $15; Twenty Copies for $25, and any additional number, directed to individuals at the same rate. Six months subscriptions in proportion. As we are obliged to pre-pay the American postage on papers sent to the British Provinces, our Canadian agents and friends must add 25 cents per copy to the club rates of the RURAL,—making the lowest price to Canadian subscribers $1,50 per year.

☞ Subscription money, properly enclosed, may be sent by mail at the risk of the Publisher.

*** The postage on the RURAL is but 3½ cents per quarter, payable in advance, to any part of the State—and 6½ cents to any part of the United States,—except Monroe County, where it goes free.

ADVERTISING.—Brief and appropriate advertisements will be inserted at $1,50 per square, (ten lines, or 100 words,) or 15 cents per line—*in advance*. The circulation of the RURAL NEW-YORKER is several thousand greater than that of any other Agricultural or similar journal in America. Patent medicines, &c., will not be advertised in this paper on any terms.

☞ All communications, and business letters, should be addressed to D. D. T. MOORE, Rochester, N. Y.

Progress and Improvement.

CHEESE-MAKING.—NO. I.

A VARIETY of circumstances, such as distance from calving, breed, climate, food, &c., affect the quality as well as the quantity of milk; so that it is impossible to state what is its average composition. HENRY and CHEVALLIER found in the first milk or *beistings*, 15 per cent. of casein or curd and only 2½ per cent. of butter. The same chemists give, as the composition of ordinary cows' milk, casein or curd 4.48 per cent., butter 3.13, milk sugar 4.77, saline matter 0.60, water 87.02. The average of five determinations made by BOUSSINGAULT with milk from a French cow, fed each week on different food for five weeks, was: Casein 3.24 per cent., butter 4.06, sugar 5.38, salts 0.19, water 87.13. The average of four determinations of milk from a Swiss cow, fed each week on different food for four weeks, was: Casein 3.75 per cent., butter 3.75, sugar 4.75, salts 0.28, water 87.47. The average of nine analyses of the milk of a Short-horn cow, made by Dr. PLAYFAIR, for the purpose of ascertaining how far the quality of milk was affected by different foods, was: Casein 4.17 per cent., butter 5.00, sugar 4.12, salts 0.54, water 86.17. We do not give the results obtained from the different foods, because, *from the short period the cows were kept on any one food*, we do not deem them trustworthy indications of the milk, butter and cheese capacities of the several articles of food used. But we may take the results as indicating to some extent, the average composition of milk.

In studying the principles of cheese-making, it is especially desirable to possess a clear conception of the nature of the sugar of milk and its transformation into lactic acid, &c.—Every cheese-maker should make some of this sugar of milk, and study its characteristics. It may readily be obtained by taking a quart or two of sweet whey and heating it slightly, adding at the same time some white of egg. This will precipitate the curd and butter, which must be removed by filtering through a fine cloth. The whey will then be clear, and free from all impurities. If it is now poured into an earthen vessel and placed in a cool place, in a few days small crystals will settle on the sides and bottom of the vessel. These are *sugar of milk*. The Swiss shepherds obtain large quantities of this sugar from milk, and it forms in their country quite an article of commerce. If pure, either dry or in solution, it undergoes no change; but if a small quantity of curd or rennet be added, a chemical action ensues, and the sugar is converted into lactic acid. The same acid is produced by the fermentation of brewers' grains, cabbage (*sauer kraut*), and a number of other familiar instances. If the fermentation be allowed to proceed, carbonic acid is given off, and alcohol is formed precisely as in the fermentation of cane or grape sugar in the production of wine, whisky, beer, and all intoxicating liquors.

Casein, or curd, is insoluble in water, but readily soluble in water containing an alkali. When milk is drawn from the cow, it has a slightly alkaline reaction. This is owing to the presence of free soda, which holds the curd in solution. If a little muriatic or acetic acid (vinegar) be added to milk, it instantaneously coagulates. The cause of this is readily perceived. The curd is held in solution by free soda, and on the addition of an acid the soda is neutralized, and the curd, being insoluble in water destitute of free alkali, is instantly precipitated or coagulated. When fresh milk is kept at a warm temperature, it gradually loses its alkaline character, and in time coagulates and becomes sour. The change which takes place is simply this:—The sugar of milk, by the action of the curd, is transformed into lactic acid. This acid unites with the soda, forming a neutral salt—lactate of soda. The milk or whey being thus deprived of its soda, no longer possesses the power of holding the curd in solution, and so it coagulates, or, in other words, the curd is precipitated.

Two drops of lactic acid will instantaneously coagulate a quarter of a pint of *boiling* milk, though a much larger quantity added to cold milk produces no change. Thus when milk is kept for several days at a low temperature, it frequently has a sour taste, but does not coagulate. If, however, the temperature be raised, the curd is immediately precipitated. So, too, milk often appears sweet and clear till poured into hot tea or coffee, when it immediately curdles. It is impossible to have milk too hot for coagulation, when the acid is to be added extraneously, or is already formed in the milk; but no sugar is converted into lactic acid, if the milk is kept at from 150° to the boiling point, and it proceeds very slowly at 60°, and, it is believed, not at all from 40° to the freezing point. Freezing, or boiling the milk, checks for a time the transforming power of the casein, but it does not destroy it, as is the case with brewer's yeast and many other ferments, for when afterwards brought to the proper temperature, and kept for some time, the milk coagulates.

MANGEL WURZELS VS. RUTA BAGAS

IN an article on the "Cultivation of Turnips, Ruta Bagas, &c.," in the RURAL of June 24th, we incidentally said that "Mangel Wurzels are better adapted to this climate than Ruta Bagas or Turnips, while they are much more nutritious, produce more to the acre, and are not injured by insects; *but they require very rich land.*" An anonymous correspondent of the *Country Gentleman*, who writes "for the guidance and benefit of the farming community, in the capacity of Judge or Juryman rather than of an advocate," reads us a homily on the necessity of "candor *and a due regard to the interests* " of our readers; on the evil of giving only "*partial* information," and of not stating all the "disadvantages as well as the advantages of any particular article," &c. The foundation for these remarks is thus stated:

"The points in which the beet or mangel has a superiority over the turnip or baga are stated, but nothing is stated as to those points in which this root is inferior, unless the information, that mangels require very rich land should be so considered. Perhaps the writer did not know of any other drawback to the superiority claimed for the mangels. But if he has ever cultivated this root crop to any extent, he could scarcely fail to be aware that it is one, both troublesome and expensive to grow, and that the roots of the mangel wurzel are extremely liable to injury from frost, being in this respect about on a par with potatoes."

We *have* cultivated the Mangel Wurzel, Ruta Baga and common turnips to a considerable extent, and our preference for the Mangels in this country is formed after much deliberation. On an English farm, where one-fourth of the arable land is sown to roots, the greater portion of which are eaten in the field by sheep during the winter months—the fact that Mangels delight in very rich soil, and require to be gathered and stored before winter is an objection to their extensive cultivation; but even with these drawbacks they are highly esteemed by the more enterprising farmers.—

But let us examine the nature of root culture in this country. The farmer takes, at most, an acre or two of land near his barn-yard and manures it highly to grow a few roots for the use of his stock in early spring. No matter whether the root selected be ruta baga, turnip, carrot, beet, or mangold, it has to be gathered before winter and placed in a cellar. So that, even acknowledging that the mangold is more liable to injury from frost than other roots, we do not see that it is an objection to its cultivation in this country, for it certainly will keep as well in a cellar as ruta bagas or turnips, and be good in spring when they are musty and worthless.

That Mangels are less injured by drouth, and therefore better suited to this climate, cannot be questioned. We have known a good crop of Mangels flourish here, when Ruta bagas were nearly destroyed. We are in the habit of manuring highly for our root crop, and therefore the fact that it requires a rich soil is not a material objection, since there is at least a corresponding increase of nutritious matter obtained in the crop. Every farmer knows that he can obtain a much larger crop of Mangels than he can of Ruta bagas, but every farmer does not know that the Mangels are far more nutritious than the Ruta Baga and still more than the common turnip. Thus according to analyses made by the writer in the Rothamsted laboratory, a ton of Mangels contains 254 lbs. dry substance, while Skirvings, Ruta baga (the variety usually grown in this country) contains only 188 lbs., while a ton of common turnips contains only 158 lbs.—In other words, one ton (2000 lbs.) of Mangels are equal in this respect to 2,700 lbs. of Ruta bagas, and to 3,200 of common turnips.

Mr. E. S. HAYWARD, of Brighton, in this county, who has had much experience in the cultivation of roots, informed us recently that he has abandoned the cultivation of ruta bagas, finding that he did not obtain a *good* crop oftener than every third year, while Mangels he considers a sure crop, never being injured by insects, and seldom by drought. He finds no difficulty in keeping the Mangels, and little trouble and expense in growing them. They cost him about five cents per bushel. He has raised white turnips for 2½ to 3 cents per bushel; and when the weather is suitable, and a good crop is obtained, they are the cheapest roots he grows, but they are quite an *uncertain* crop.

We are as far from wishing to retard the cultivation of turnips and ruta bagas, as the correspondent of the *Country Gentleman* can possibly be, but we have our fears whether, from the nature of our climate in summer and winter, they can ever be extensively grown; and, therefore, knowing that the mangel wurzel is better adapted to this climate and our peculiar circumstances in regard to root crops, we believe our humble recommendation of its merits will result in benefit rather than injury "to those likely to be influenced by our recommendations."

NOTES FROM MY CORRESPONDENCE—NO. IV.

A FRIEND writing from Rock Island, Ill., gives some interesting notes of his trip from Xenia, Ohio, to the former place, and we quote them for the perusal of our readers.

"We (speaking of himself and companion) left Xenia after having closed our school, in the latter part of April, with many sweet memories behind us, and came to this city by the way of Cincinnati, Indianapolis, &c., and if we are not already in the extreme West, we are certainly near its great centre, the 'Father of Waters.' For beauty and grandeur old Niagara is 'daddy' to it, as a Yankee expressed himself a few days ago. Still it is a grand 'stream.' Of Xenia I have heretofore spoken. Thence to the 'Queen City' is some 55 miles. Having a few moments of leisure to spare, we ascended Mt. Adams, from the summit of which we have a good view of the whole city with its 200,000 souls. On a clear, dry day it is certainly a grand sight, over which some hours of profitable contemplation might be spent.

Forty years ago there was but a handful of 'dreamy adventurers' located here—now behold what a mighty, bustling city is mapped out here, with all its active life. The Ohio is lined with steam craft, and its banks for miles are alive with the busy stir of the merchant and artizan. All is life; and strife with a busy thought on the moneyed future. Just across the river are the two enterprising cities of Newport and Covington, and from Mt. Adams we have a view of the dwellings, workshops, &c., of at least 225,000 people.

We had only time to make a note of two or three of its many places of interest. Among these is the very fine gallery of paintings, belonging to the American Art Union. Some of the pieces show the unskillfulness of the young beginner, but more are of rare excellence, and from the best artists in the land. When you visit Cincinnati, be sure and feast yourself with a view of this gallery, which you can do for the insignificant sum of a dime. Another place of interest is the Mercantile Library, supported by an annual tax of $3 each, on some one thousand thinking heads. Is this a 'poll tax?' If so, the poll gets the benefit, rather than the roads or the town. At present the Library contains some 13,000 vols. A Reading Room is also connected with it, where many resort for the news of the day. The Central High School is another place of interest. The building is a splendid one and a model of neatness throughout. It is truly an ornament to the city.

From Cincinnati to Lawrenceburg the Railroad passes near the river, and presents to the traveler much beautiful scenery. In my more youthful days I have heard Abolition lecturers dwell on the vivid contrast which Slavery on the one hand and Freedom on the other, gave to the appearance of the opposite shores of the Ohio, and hence was not prepared to behold the bountiful fields, and luxuriant orchards and gardens that presented themselves on the Kentucky side. In contrast with the discolored waters of the river, the sight was truly pleasing. The sky was clear, and the sun shone upon the receding bluffs at an angle that added much to heighten the charms of the scene. Though still in April, the trees and shrubbery were nearly as thick with foliage as in mid-summer. Lawrenceburg is located on the Ohio, but a short distance from the State line, and gives promise of being a town of considerable note.

We found the Railroad from this place to Indianapolis, some 88 miles, now and exceedingly rough. It passes through a heavily timbered country, and though now new and but sparsely settled, it will some day rank as farming lands of the first quality. Like every other Western town, Indianapolis is growing rapidly. The surrounding country is nearly level; yet for beautiful scenery and a 'happy' upland location, this city is rarely excelled. It is a great Railroad centre, and cars are daily, might almost say hourly, leaving for every point of the compass. This gives to it a busy air that was little dreamed of a few years ago. Our stay was very short, and we were precluded from visiting the several State Institutions located here, except the Asylum for the Blind. At present there are some 40 pupils in attendance.

Thence to Lafayette is 65 miles. This city, containing some 10,000 or 12,000 inhabitants, is situated on the Wabash, and we noticed much life and hustle as we passed through it. Between L. and Michigan City, a distance of some 90 miles, are some fine rolling prairies, yet there are many flat ones, that I should think were underlaid with an impervious subsoil, as hundreds of acres of them were covered with water, in part owing to the heavy rains that had then recently fallen. From this latter town to Chicago, our ride was in the night. But I find my sheet is full, and I must defer the rest till another time." T. E. W.

HINDOO BARLEY.—In a letter of recent date, Mr. I. W. BRIGGS, of West Macedon, New York, says he obtained a few seeds of Hindoo barley this spring, which he "submitted to a thorough trial." It has no beards or awns, and is skinless. It is now growing luxuriantly, and apparently will ripen about the first of August, which he considers a great advantage, as wheat will be harvested before it is ready to cut. If it proves hardy, and adapted to this climate, he thinks it will be a most valuable variety. If any of our readers have given this barley a trial, we should be glad to hear from them on the subject.

MISCELLANEOUS NOTES.

WHEAT Culture; enthusiasm of Science—Watermelons—Nature's mysteries; her kindness to early tillers—Crops of Seneca Co.—A good Pennsylvania farmer; the secret of his good crops in a bad season—Jos. Wright's tobacco, corn and fat cattle.

EDS. RURAL:—Your articles on wheat culture are in the life. 'Tis true, and pity 'tis, 'tis true, that agricultural chemists are too much in love with theory to give heed to that practice which nature always requires of him who would scan her mysteries. A great historian has said that "to doubt was the beginning of wisdom." Faith in the result of a single experiment but too often increases that enthusiasm of mind, which is always at war with patient investigation. The resulting evil is this: When a farmer follows the prescription of a Liebig, and it fails, he makes no allowance for the fallibility of the man, but vents his spleen at the whole written science of agricultural chemistry. Such is the weakness of our nature, that no mortal could compass the study necessary to make him a master, if it were not for his soul-kindling enthusiasm for his great calling, as necessary to man as high steam is to great machinery—although the one may at times produce irregularity of mind, as an excess of the other does of motion.

To be sure of a few watermelons, I this spring dug a hole three feet deep by six across, put in unfermented stable dung at the bottom, filling up with two feet of rich, virgin, sandy loam. The plants grew lazily, although there was that just equipoise of heat and moisture that would have given Indian corn a mammoth growth. Per contra, the largest watermelons are now growing larger, in a low, sandy situation, heretofore grown up to weeds—being too wet for early planting. A ditch opened early this spring below this patch of melons, and a little hog manure spaded into the patch, was the only amendment to aid in this great result.

Why is it, that in the high mountainous regions of this State, the only crop of winter wheat that can be grown, is the first sowing after the land is cleared and burned off. I well remember when the fat, plump, thin-skinned wheat of this county was pronounced by the miller as "new land wheat." In those days, wheat was put in with a slovenly hand, but nature was kind to the poor, long-suffering pioneer. Now, in the plethora of his wealth, she is more exacting in her favors. The crops this season in Seneca county are very unequal, the odds altogether in favor of the enterprising farmer; hence some crops of oats, barley, flax and corn will be large, while others have been sadly pinched by drouth. Wheat was more injured by winter-killing than by the insect. Less wheat, but much more corn, will be grown this year than usual. Hay is a light crop, yet some farmers boast of good clover hay cut before harvest. Here is a Pennsylvania *Deutsche* farmer, who says no crop suffered with him but his timothy. He says if he had known the benefit of pipe underdrains ten years ago, and he could have got the earthen, he should now have been a rich farmer. He now gets ditches dug 2½ feet deep, for a shilling a rod, and buys pipe for thirteen cents a rod. The secret of his great corn and other good crops is in keeping his fine calcareous loam alive by carbonaceous matter, in the shape of rank green clover plowed in, to which is added all the manure he can make in his stables with its nitrogen intact until plowed in. It is needless to add, that this man uses up his own hay, stalks, and straw; and that he *grows his own clover seed*, with some to sell.

It would do you good to look upon JOSEPH WRIGHT'S seven acres of tobacco. We read of twin roses on one stalk, but here are seven acres of surface, covered with plants of a growth so uniformly large, that not one has precedence of the other. His corn for the cereal crop, and his corn in drills for fodder, cannot be beat. His soil is a bluish loam, composed of fine sand and calcareous clay, amended by the manure of cattle fatted on still slop, which they themselves hauled from the distillery to the farm; after which, their fat, monstrous carcasses were sold at one shilling a pound live weight, delivered at the depot here. S. W.

Waterloo, July 29, 1854.

Communications.

RURAL "SUNDRIES" FROM ILLINOIS.

CICADA SEPTEMDECEM.—This singular insect made its appearance at the usual time, (early in the month of May,) though its coming seemed to be retarded by the copious and frequent rains. Their numbers were considerable—so much so that, for a time, they appeared to be the principal food of hogs, hens, &c. Yet I am not aware that they did any harm, till near the end of June, when they deposited their eggs, or *nits*, which they did on, or rather *in*, the small branches of the oak, (chiefly,) killing the same outright; so that many trees appeared to have nearly one-half of their foliage killed thereby. During their stay the whole air resounded continually with their music. It is difficult to see why this animal should be called *locust*, as it is really a large *fly*, instead of a *grasshopper*, or anything of the kind. *C. Septemdecem*, i. e. the 17 year "cicada."

LOSS OF VITALITY IN GRAIN, &c.—In the spring of 1853 I brought with me, from Connecticut into Illinois, a quantity of garden seeds, among which were several ears of sweet, and of Tuscarora corn, Stowell's evergreen, (the growth of 1852,) &c. As they did not arrive till about the middle of July, I did not plant any of them except the evergreen, and of this only one or two hills, merely for the purpose of ascertaining whether it would germinate. I have reason to believe that every kernel grew. The ear had been picked before the kernels had all attained their full size. The portion planted consisted of the kernels from the small end of the ear. Last spring, (1854) I planted six hills of the same, from nearer the middle of the ear, but not a single kernel of it came up. I then planted again from the same ear, putting into each hill two or three dozen kernels, only four or five of which came up. Those that did come up, produced very slender, feeble plants, and it was several weeks before they assumed a strong and healthful appearance, and only one or two of them now promise well. The same was the result with one ear of fine, large-grained Tuscarora corn, except that two or three grains of the first planting came up, and perhaps two in a hill, of the second. Appearance the same as above. The result was nearly the same, with two or three varieties of sweet corn. Can these phenomena be attributed to climate? I have never before found it necessary to use only new seed.

I have been told that the eastern yellow flint corn, if brought into this western country, will seldom retain its vitality beyond the first summer.

REAL ESTATE.—The value of real estate has nearly doubled within the last six months.—Lands, which in '53 were valued at $20 per acre have since been sold for $30, $35, and some still higher; and some which were sold last autumn for $20 per acre, or even less, could not now be bought for $30. A similar advance has also been made in the price of stock. Hence, many who were thought to be "below par," one year ago, now feel themselves rich.

SCHOOLS.—The want of good teachers in this country is pretty generally felt and acknowledged; and yet it is not always easy for a good teacher to find immediate employment in a situation to which his qualifications justly entitle him. This arises from two causes: 1st. All the places are *filled* with teachers, "such as they are;" and 2d. The people, knowing no others, seem satisfied with what they have, (though, strange as it may appear, complaining of poor teachers, the state of the schools, &c.,) and seem not to think that there can be any change.—Besides, good teachers introduce changes, (as they must necessarily do,) and these are not acceptable to all. Some would have improvement without progress, reformation without change.

It may also be added, that many seem either unwilling to risk a change, or feel too little interested in the matter to attempt any, (and therefore pay their bills as a matter of course;) for with all that is said, it is manifest that there is really much less *felt* on the subject, than one would at first believe. An evening school was commenced in this place last winter, but was abandoned soon after for want of encouragement, although the charges were intended only to cover the expenses of fuel and light.

Kendall Co., Ill., July, 1854. H.

INQUIRIES OF A JERSEY FARMER.

MR. MOORE:—I see that the columns of your invaluable paper, (which I commenced to take last April,) are open to queries, and as I am a beginner in agriculture, I find many things in relation to which I am not theoretically or practically posted up; therefore I wish to tell a few things of, and ask a few questions about matters here in Jersey.

The soil in this neighborhood, is a sand, formed by the disintegration of trap and granite rocks, from a branch of the Blue Ridge, which lies about two miles north, running northeast and south-west. Underlying this is a shale or red clay, containing much oxide of iron, very easily crumbled when exposed.—This crops out in many places, forming of itself a soil very subject to drouth, but with sand, a very pretty soil, easily tilled, yet requiring considerable manure to make it very productive. I am a New-Yorker, from the bottom lands of old Otsego, and not a Jersey Blue, although the blues may affect me a little at present—considering this is my first year of farming since a boy, and that I commenced with no manure, it being high, and not being used to the requirements of the soil. My land is sandy, and having been run quite hard, my crops look rather small.

But to the question. Here is a part of this a light sand, with little alumina or vegetable mould, and part is wet with quicksand bottom. I desire to sow this, next fall, with rye, and seed down to clover, and am fearful the land is too poor for the clover to take well.—I wish to add a manure which will be the cheapest and most likely to make the clover take best, and remunerate for the labor in the rye, whether it be ashes, guano, barn-yard manure, &c. Leached ashes, here, are worth $12 the hundred bushel, at the factory, 7 miles; guano, $60 a ton; barn manure, $1 a load.—Will it do to sow rye after the corn is taken off in the fall? If not, would clover take good with peas in the spring? Would tan-bark aid these objects? What is the best mode of applying tan-bark to the soil, and what soil will it benefit most, and what crops is it best adapted to? It costs here, $1 per hundred bushels; at that price, will it pay as a manure?—or oak turning chips, at one shilling a load, how will either or both do, to put in the bottom of barn-yards?

Haying and harvesting is nearly over here. Hay has been uncommonly good; wheat nearly destroyed by the insect. Some pieces, that bid fair for an abundant yield two weeks before harvest, were hardly worth the cutting. Rye was good; oats pretty good for Jersey; corn is no more than middling. Fruits of all kinds are very scarce. Blackberries, yesterday, in New York, were $10 a bushel. The cholera has been raging around us to some extent, but is abating; no deaths in this neighborhood.—

Any information about the above questions, either by you or correspondents through your paper, will be gratefully received. Please send me specimen numbers of the WOOL GROWER if convenient, that I may form another good acquaintance. H. C. COOK.

New Market, N. J., Aug. 4, 1854.

WILLARD'S BROMUS.

OUR readers have seen notices of what has been claimed as a "new kind of grass," under the name of "Willard's Bromus." Samples of the seed have been distributed in this vicinity, by officers of agricultural societies, it has been recommended by agricultural papers, and the man who thinks he *discovered* it, has condescended to dispose of it at the rate of *four dollars a bushel*, to such persons as would oblige themselves not to save the seed!

In a former article, we stated that on comparing the seeds of "Willard's Bromus" with those of common cheat or chess (*Bromus secalinus*), no difference could be perceived, and that we were confident they were identical.—But to be able to pronounce with *certainty* on this point, it was necessary that plants from both lots of seed should be examined while in flower. This has now been done, and we have the best botanical authority for saying that "Willard's bromus" is merely *cheat!*

Farmers who have contended with this pest in their wheat-fields, well understand its worthless character. It is an annual, but as the seed readily falls, it is continued in the same soil, more or less, for several years, though it is mostly choked down by perennial grasses.—Some people have believed that wheat degenerates into this plant—an idea which is too unreasonable to need comment.

Dr. Darlington, speaking of the Bromus genus, says:—"There are one or two other foreign species [besides B. secalanius, cheat or chess] partially naturalized in our pastures, and two or three native ones occur in and about our open woodlands, but none of them are of much importance in an agricultural point of view."—*Agricultural Botany.*

We charge no one with improper *motives* in regard to the dissemination and sale of "Willard's bromus," but have felt it a duty to state the foregoing facts. It is surprising, as well as lamentable, that such a degree of ignorance has prevailed with the agricultural public, that deception or error in so common a thing should not have been detected at once.—*Boston Cultivator.*

THISTLES FOR CATTLE.—The Agricultural Society of Clermont (Oise) recommend thistles as a good substitute for green food, especially for milch cows. It states that before being given for food, the thistles ought to be washed, and then placed in heaps until they heat, which generally takes place in twenty-four or thirty hours, and has the effect of softening them, and causing the prickly portion to be no longer troublesome. Oxen eat the thistles with great appetite when in this state. If the vegetation of the thistles be somewhat advanced, they should be chopped, scalded, and given as a sort of mash.

IT is estimated that the annual loss to American farmers, by the practice of exposing their manures to the action of the weather, is $20,000,000.

Agricultural Miscellany.

SONG OF THE HARVESTERS.

BY S. D. HARRIS.

We gather them in—the bright green leaves,
With our scythes and rakes to-day,
And the stem grows big, as the pitcher hearse
His lifts in the sweltering bay,
O but I shield I for the mower's scythe
Hath a ring as of destiny,
Sweeping the earth of its burthen lithe,
As it sings in wrathful glee.

We gather them in—the nodding plumes
Of the yellow and blended grain,
And the flash of our sickles' light illumes
Our march o'er the vacqolished plain.
Anon we come with the sleed-drawn car—
The cunning of modern laws,
And the acres stoop to its clinging jar,
As it reeks its hungry jaws.

We gather them in—the mellow fruits
From the shrub, and vine, and tree,
With their russet, and golden, and purple suits,
To garnish our treasury.
And each hath a juicy treasure stored
All aneath its tinted rind,
To cheer our guests at the social board,
When we leave our cares behind.

We gather it in—this goodly store,
But not with the miser's gust,
For the Great All-Father we adore
Hath but given it in trust.
And our work of death, is but for life,
In the wintry days to come,—
Then a blessing upon the Reaper's strife,
And a shout at his Harvest Home.

[Ohio Cultivator.

FAIR OF ROYAL AG'L. SOC. OF ENGLAND.

THE Annual Exhibition of the Royal Agricultural Society of England, was held at Lincoln from the 18th to the 21st of July. Lincolnshire is acknowledged to be one of the best, if not *the* best farmed counties in Great Britain; and, as was expected, the exhibition, as a whole, was the best ever held by the Society. In Short-horns, the show was remarkably large and good, but, in the language of the *Mark Lane Express*, without "any animal of really surpassing merit." Herefords were poorly represented, "the number of animals altogether shown in the various classes not exceeding nineteen, and few of them of first-rate character." The show of Devons was not so good as on some former occasions, but still decidedly good, comprising some 38 animals in the different classes, and those of a character "fully calculated to keep up the reputation of the breed."

The show of sheep, particularly of Leicesters, and of Lincolns and other long wools, was very large. Mr. T. E. PAWLET, of Beeston Beds, carried off both prizes for Leicester Rams. The show of South Downs was good, notwithstanding the absence of Mr. JONAS WEBB's celebrated animals. Mr. H. LEGAR, of Hengrave, Suffolk, took the first prize for shearling Rams, in this class, and the Duke of Richmond the second. In the class of Long Wools, Mr. W. LANE, of Northleach, exhibited some very large and fine Cotswolds; one of them, which had the largest girth of any sheep in the yard, clipped in three years 51½ lbs. of wool.

In implements, the exhibition showed that considerable improvements were yet being made. In the trial of Reaping Machines, Crosskill's Bell was pronounced "at last to be fairly beaten." Hussey's Machine, manufactured and improved by Mr. DRAY, carried off the premium. We may be able to gather some other items of interest to our readers when fuller accounts of the exhibition reach us.

THE BIGGEST STORY YET.—A correspondent at South Livonia, N. Y., sends us the following account," with liberty to publish," of a wonderful cow. "She made in one year, 299 lbs. of butter. She was also excellent for breeding. She was only seven years old, and had raised fourteen calves! She never had a heifer calf, *and the cow she came of, never had a heifer calf!*"

DESTRUCTION OF THISTLES.—There are several species of thistles, most of which are only annual or biennial. The species known as the Canada thistle, however, has a biennial root.—It is a troublesome plant over a large portion of the northern section of the country. Where it occurs in arable grounds, the best way to extirpate it is to keep the top down by cutting it off frequently by the plow or a sharp cultivator. One season's operations on this plan will usually kill it, as it cannot live long, no more than other plants without leaves. In pastures, or permanent meadows, it is best to mow it close to the ground, when in full blossom.—This will kill it, more or less, in the outset, and if followed up for two years—repeating the cutting towards autumn when the few struggling stalks that survived the first cutting have again shot into flower—they will be nearly exterminated. They frequently occupy the richest spots, and if closely cut down, the grass thickens and forms so close a sward, that the growth of the thistles is obstructed. Sheep will eat them so much as to keep them down somewhat, but unless the thistles are cut down as described, will not wholly destroy them—*Bost. Cult.*

CLAY is now proved to be the best means of retaining manure. Sewerage water filtered through it comes out destitute of smell, and what is better, minus the valuable salts of ammonia, alkaline, phosphate, and other soluble fertilizers, which are retained by the clay.

THE WHEAT CROP IN GREAT BRITAIN.

THE following extracts from the *Mark Lane Express*, of July 24, will be read with interest:

A week of extraordinary fine weather has wrought a great improvement in the appearance of the growing corn crops; and, should there be no return of wet, we may have harvest sooner than was contemplated earlier in the month. With regard to the probable yield opinion varies materially. That there is a good deal of blight is certain; and some mischief has also been done in different parts of the country, by the heavy rain in the early part of the month having beaten down the crops. Making full allowance for these defects, we are still inclined to think that the produce may, with favorable weather for harvesting the crops, prove a full average; but we do not agree with those who calculate on an unusually large yield to the acre.

The close approach of harvest, and the conviction that stocks of old wheat will hold out until the new can be rendered available, have had the effect of increasing the anxiety of those who have any to dispose of to realize, and though the deliveries from the growers have continued small, the quantity brought forward has proved more than sufficient to satisfy the consumptive demand. In this position of affairs buyers have been enabled to purchase on materially reduced terms, and the decline has in many instances been important.

The primary cause of the downward movement is the determination of the principal millers, dealers, and bakers in all parts of the kingdom to remain out of stock until after harvest; this is carried so far that many are unwilling to purchase sufficient to supply the wants of a single week, and as they have thus far profited by pursuing this course, they are not likely to adopt any other so long as nothing occurs to give rise to uneasiness in regard to the result of the ensuing harvest. It is therefore, more than probable, that the downward movement which has now fairly set in, may continue until prices shall have reached a point deemed tolerably safe. What this point may be, it is impossible at present to foresee; *but there are circumstances which induce us to think that the range of quotations after harvest will not be so low as is now generally considered likely.* In the first place old stocks are reduced into a narrower compass all over Europe than has been the case for years. The scarcity in France is so great that prices have been maintained in the face of fine weather, and with harvest in full progress.—Belgium is actually forced to purchase small quantities of wheat in the English markets, though the new crop is being gathered. The stocks at the leading Baltic ports are now so trifling as scarcely to be worth naming.—Meanwhile there is not much prospect of the war with Russia being brought to a speedy termination; and the enormous resources of that country for supplying the rest of Europe are, therefore, unavailable. America, it is true, has not been so completely exhausted of old stocks, as the advices from thence some months ago were calculated to make us believe: and the harvest there, as well as on the continent of Europe, may be said to promise a full average yield; but, after the high rates foreign shippers have for the last twelve months been accustomed to, they are not likely to consign very freely, unless pretty certain of better prices than present appearances promise to give. We have, consequently, come to the conclusion that the importations into Great Britain will, during the next three months, be on a much less liberal scale than they have been hitherto, and that the comparatively small stocks of old foreign remaining will pass into consumption more rapidly than may at present be generally imagined.

TURKISH HORSES.—The Turkish horses are admirable for speed, endurance, and activity, but are so light and small that under a man of 12 stone (168 lbs.) with his accoutrements they are perfectly useless either in a charge or on the march, and to place our men on them would deprive our cavalry of one great cause of its excellence, the weight and muscle of the man and the animal. The Chasseurs d'Afrique, decidedly the finest body of light cavalry in the service, have been sent here without their horses, and we shall see them this campaign mounted on ponies, so diminutive as to be all but worthless in the hands of a European cavalier, at least for many months.—*Letter from Varna.*

PROPAGATE only from the best. If you have a poor or mal-formed animal, kill or sell him at once; if you have poor grain, dispose of it at the most advantageous price, and purchase the best you can procure. In this way you will consult your own interests, and gain, assuredly, far more in the end than you lose.

IT is a singular fact that the use of milk was unknown on this continent at the time of its discovery by Columbus. The cow and horse which now swarm in countless multitudes on the table-lands of North and South America, were introduced by the Spanish conquerors.

TO KEEP HENS FREE FROM LICE.—Clean out and whitewash their houses thoroughly; whitewash the inside of the boxes in which their nests are placed; make their nests fresh, and have plenty of ashes, sand, or loose dirt, in which the fowls can at all times dust themselves.

COOKSVILLE, (Miss.) JULY 22D.—The corn crop is now in effect made, and is one of the best, if not the very best ever made in the country. The cotton has, so far as I have heard, no worms, and is as good as has ever been seen in the country.

EXPERIMENTS made with Indian corn, show that farmers should not select the largest ears for seed, but rather those that grow nearest the ground.

CULTURE OF RICE.

THE culture of rice in Louisiana appears to be increasing. There are immense tracts of swamp land in that State well adapted to the growth of this crop. There is land enough along the Lafourche to grow more than all the rice plantations of South Carolina, which can be easily watered from that branch of the Mississippi. Good rice land will produce from 60 to 112 bushels of paddy (rough) rice to the acre, and a bushel will yield on an average 29 pounds of clean rice, worth one dollar, while the broken rice and meal will pay for hulling. This shows a profitable crop, but not above facts. We know rice planters on the Cape Fear River, North Carolina, that have averaged 112 bushels per acre, with pretty rough culture; and on the Cooper River, South Carolina, 75 bushels is a common average.

It will be discovered some day that when Congress gave away the "swamp lands," it gave away the very best part of the public domain.—*N. Y. Tribune.*

HOW TO CLEAN ANIMALS AND PLANTS OF VERMIN.—The "Agriculture" publishes a letter from M. Rapsail, giving an account of a plan for destroying vermin on animals, and also on trees and plants. The process he recommends is to make a solution of aloes (one grammie of that gum to a litre of water,) and by means of a long brush to wash over the trunks and branches of trees with this solution which will speedily, he says, destroy all the vermin on them, and effectually prevent others from approaching. In order to clean sheep, or animals with long hair, they must either be bathed with this solution, or be well washed with it. The writer mentions several trials which he made of the solution with the most complete success, and very strongly recommends it to general use.—*London Advertiser.*

IT is mentioned as a curious fact that a farmer in Connecticut, who recently took up a fence after it had been standing fourteen years, found all those posts solid which had been inverted from the way in which they originally grew, while all those which had been set as they grew were rotted off at the bottom.—Heads down, therefore, seems a specific against decay.

WE published the above years ago, but it is again going the rounds of the press, and may be new to many readers.

Inquiries and Answers.

SEEDING WITH OATS.—You ask farmers to write their experience upon practical subjects connected with farming. I have often thought of trying my hand at it; but my experience is so small that I hardly know what to write; and the RURAL seems to anticipate my desire for information on every subject, so that I get no chance to ask questions. But there is one thing that I know from experience, and that is, that I cannot get clover or birds grass to "catch," when sown with oats according to the time-honored custom in this part of the country. Some of your correspondents advocate sowing grasses in the fall; and I intend to try it the coming fall. I have a lot of 7 acres, now in oats, which I wish to seed down; and I wish to know about what time to put in the seed. Also, which will be the best way; to sow the seed alone on the stubble, or to plow it up and sow with winter wheat.

I have noticed in the RURAL one or two remedies for the scratches in horses; and as in a multitude of counsellors there is wisdom, allow me to present another. Make a salve of one tea-cupful of lard, two table-spoonfuls of sulphur, and a little tar. Melt them together, and keep the part affected well anointed with the salve.—J. B. P., *Madison, Ohio.*

Will some of our correspondents give us their views on the subject of the above inquiry?

ABOUT KANSAS.—I am getting somewhat of a Kansas fever. Will you give some information through the RURAL about Kansas, its soil and climate, both summer and winter, its health, &c.?—whether it is adapted to all kinds of grain, grasses and fruit—and such other information as will be interesting to a farmer, and whether there are any emigrant aid societies or companies that are going there from these parts, and when? Any information respecting emigration to Kansas, will be thankfully received, through the RURAL or otherwise.—S. CLARK, *Canadaia, N. Y., Aug. 7, 1854.*

We will endeavor to give, in a future number, an article on the soil, climate, products, &c., of Kansas, which will furnish the information desired, and also prove interesting to our readers generally. Meantime, we refer Mr. C., and others looking Kansas-ward, to the circular of the "Monroe Co. Kansas Emigration Society" in the advertising department of our present number.

WEEVIL.—Through the columns of your truly good and practical paper, I wish to offer a practical question, one which interests farmers—viz: Shall farmers sow their wheat fallows in those localities where the weevil has partially destroyed the present crop? Farmers living in districts where the weevil has totally destroyed their crops, can speak by experience of the progress of the weevil, and furnish information to the uninformed.—CHAS. MCCOLLUM, *Newfane, Niagara Co., N. Y.*

SEED RYE.—Can you or any of your numerous readers inform me where I can procure rye for seed?—J. W. WILLIS, *Yates, N. Y., July, 1854.*

E. D. HALLOCK, of this city, has some Winter Rye which he sells at $1,50 per bushel.

Orchard and Garden.

HINTS AND GLEANINGS.

"Scraping and Washing Trees."—The Report on this subject by a Committee of the Mass. Horticultural Society, is ridiculed and condemned by the *Pa. Farm Journal*, *Boston Cultivator*, and the *Horticulturist*, on the ground of its contradictions, and want of sense. In our opinion, the report originated in the abuses of the practice, and will be useful in calling attention to the subject. Don't scrape or smear your trees till they need it, and you will not waste your labor. In the matter of *masses*, the true remedy, it will be found, must go more than bark-deep.

Gooseberry Mildew.—Another remedy for this disease is given in the *Am. Agriculturist*, from R. T. Haines, of N. J. It is to remove the earth from around the roots, thickly mulch with salt meadow hay, and then cover it with the earth. He has tried many other methods, but this has been the only one generally successful. His favorite variety is Whitaker's Whitesmith, and it is very productive. *Query.* Where salt hay is not to be had, would not salt be found equally useful?

Growing Cedars from Cuttings.—A correspondent of the *Home Journal*, writing from Louisiana, says the cedar can be readily grown from cuttings. Cut from small trees or bushes twigs from twelve to fifteen inches long, trim about half their length, and plant early in spring in a well prepared, pliable soil, which should be kept well-worked and moist during the summer. Shoots from bushes which grow in or near water will succeed most readily.

Saving Flower Seeds.—The lovers of flowers should remember now, that many fine varieties are ripening their seeds, and it is the best time to secure them. Put them up in neat papers, mark their names legibly upon them, and put them away in a dry place; and next spring you will be glad that you have taken this slight trouble.

The Lawton Blackberry.—The New Haven *Register* in alluding to a late exhibition of the Horticultural Society at that city, mentions some Lawton Blackberries which measured four inches in circumference one way and three and a half the other—"being nearly as large as a common hen's egg."

THE CURCULIO.

An effectual preventive to the ravages of this villainous little enemy, has long been a desideratum universally desired. Many remedies have been proposed, and each, perhaps, in some particular instances, may have been partially successful. But a remedy, convenient, practicable, and uniformly successful, has not, so far as I can learn, hitherto been discovered, and made public. I have not succeeded, within the past five years, in raising a single crop of plums or apricots, from thrifty trees of the finest sorts, and in the best bearing condition. Agreeably to the suggestions of the Rural, made at an early day, I have, this season, sprinkled water on the trees, and then dusted them over with ashes, twice a week, from the first formation of fruit till it has attained half its full size. But the plum and apricot have fallen, and the ground has been covered with the perforated fruit. I know little of the habits and character of this enemy; but understand that in the shape and appearance of the maggot, he leaves the fruit after it has fallen and ceases to afford him sustenance, and enters into the ground, from whence he emerges in the spring, and with the aid of wings, which he receives in his vernal metamorphosis, ascends the tree to renew his depredations.

I am indebted to the call of a friend, and the incidental mention of fruit, for a suggestion on this subject, that has impressed me deeply. Indeed, I see no reason why the remedy should not be effectual. The regret is, that it comes perhaps too late to benefit the crop of the next season. It has been practiced a few years by my informant, who thus secured uniformly, and without a single failure, fine crops of plums and apricots. It is, to pick up daily all the perforated fruit as it falls from the tree, and effectually to destroy it. To be effectual, it has been burned in the furnace. The result is plain. No worm has entered the ground from the injured fruit, and no fly, of course, has arisen in the spring from the ground, to ascend the tree. And unless by the aid of its wings, which are small and not very efficient, it is able to migrate from one orchard to another (which can hardly be the case), I cannot see why this practice should not be an effectual remedy.

To my great regret, I find this season the curculio has attacked my peaches. The ground is covered with fallen fruit. On examination, I perceive the scar where he perforated the peach; and on cutting it open, have found the worm at work in his chamber alongside the stone. The crop is destroyed. The trees adjoin the apricots and plums, so that access to them is easy and convenient. Not aware that the curculio ever attacked the peach, I have been ignorant of the fact till perhaps too late to apply this remedy, so as to be effectual for the next season. I have confidence, however, in diminishing the evil, by collecting and destroying, even now, the injured fruit, so far as it is possible. Farmer D.

Remarks.—The above remedy is an old one, and valuable, though not *always* effectual.—Planting the trees over running water, paving the ground beneath them, or using the plum garden as a yard for pigs and poultry, are all recommendations founded on the same principle, and prove, like this, in some instances, effectual remedies. The ravages of the curculio are not confined to the plum and apricot.—Cherries, peaches, and apples often suffer seriously from them.—E.

Tobacco for Peach Grubs.—*Inquiry.*—J. W. C., of Lafayetteville, N. Y., wishes information about the use of tobacco as a preventive of the worm in the peach tree; and asks if it has been practically tried? what quantity needs to be applied? when? how? &c. Can any of our readers enlighten him?

Meanwhile we would refer Mr. C. to an article in the Rural of April 29, 1854, on "Peach-Grub Treatment." We opine that in large orchards, this will be found the only practicable remedy.

North-Western Pomological Convention.—The next Annual Meeting of this Association will be held at Burlington, Iowa, commencing on the last Tuesday (the 26th) of Sept., at 10 o'clock A. M., and continuing four days. Communications in any or all branches of Horticulture are solicited—which, together with any boxes of specimens may be directed to the "N. W. Pomological Convention, care of Messrs. Avery, Burlington, Iowa."

By order. P. K. Phœnix, Cor. Sec.

NEW-ROCHELLE OR LAWTON BLACKBERRY.

The *Am. Agriculturist* gives the following information on this valuable fruit; gathered in the course of a visit to the grounds of Messrs. Geo. Seymour & Co., of Norfolk, Ct.:

"They have fruited this variety for seven years, and we think its value may now be considered so far settled, as to allow an expression of opinion upon its merits. It is evidently quite different from the common wild varieties, and also different from any that have been cultivated. It is much larger, more uniform in size, and more prolific than other varieties; it has less seeds, a good flavor, and is a good keeper. It is also thought to be better adapted to poor soils. On this point we cannot speak as positively from our own observation. One thing seems certain, that it has not deteriorated by cultivation during eight or ten years.

As to its size, it will surprise most persons who see it for the first time. At Norwalk we saw several stalks bearing five to eight quarts each. We tried some that had been gathered over forty hours, and found the flavor quite good. A quart of them numbered 111 berries. We picked a quart from vines which had received no manure for ten years past, and from which the largest bud just been selected for the New Haven Horticultural Society, and found that 72 of them filled a quart measure.

The vines grow quite large—many of them over an inch in diameter, and the fruit hangs in thick clusters—in size more like very large Green Gage plums, than like the ordinary blackberry. The flavor is not apparently diminished by its large size, and the few seeds is not its least recommendation. We think this berry a valuable acquisition to our domestic fruits, and worthy of a place in every garden. We have watched this blackberry in several localities for some time past, and are thus particular in describing it, in order to answer the numerous inquiries we are continually receiving in regard to it.

In transplanting it, Messrs. Seymour & Co. recommend selecting plants from two to three feet high, and to set them about the first of November or the middle of April, in this latitude. They may be put out on almost any ordinary soil, at a distance of four to six feet. When getting out, it is desirable to cut off the vine at four to six inches from the ground.—For field culture, they recommend preparing the ground by plowing in an ordinary coating of barn-yard manure. Two or three experiments with guano, dug in around the hill, have been quite successful."

New Mode of Planting.—We read in *Galignani* that the following mode of planting has been acted on with success by a Bohemian arboriculturist. In place of using the process of grafting, he takes an off-shoot of any fruit tree—an apple for instance—and plants it in a potato, both being carefully placed in the soil, so that five or six inches of the shoot shall be above ground. This latter takes root, grows with rapidity, and produces the finest fruits.

Manure for Pear Trees.—If it is conceded (as it seems to be) that iron filings, blacksmith's cinders, bone dust, (or some constituent of the kind) and unslacked lime, are the best ingredients to apply to pears on quince stocks, and we may add, pear trees generally; giving the stems of dwarf trees a good washing with soap, oil, and lye, not too strong, will add greatly to their health.—*Maine Farmer.*

Shallow tilled gardens are among the signs that "fail in a dry time."

TIME FOR BUDDING.

The nurseryman meets with but few, if any, more difficult tasks than that of deciding the best time for budding his young trees. As no two seasons are alike, no particular time can be established for performing the operation; but, if the seasons were alike, the locations of nurseries, and their treatment, are so various, that while some would have advanced to a proper stage of growth several weeks before the stated time, others would be as many weeks after; it therefore depends, almost entirely, upon the judgment of the cultivator, as to the best time to commence budding.

Experience has proved to me that there is a certain stage of growth which is most preferable to all others for setting buds; many suppose that any time will do, if the trees are in a thriving condition. It is true, buds can be set whenever the bark will peel, but it is equally true, that there but a few days that they can be budded to advantage; if set at the proper time, a skillful operator will make 75 per cent. live. Trees budded early, so far as my experience teaches, do not take so well as those budded later in the season.

Trees intended for budding should be kept in a good state of cultivation, and well mulched previous to the commencement of the dry weather in July, thus securing a good August growth. For the past ten years I have budded apples from the 7th to the 20th of August. He who fails to make his young trees grow in August, will, in my opinion, never make a successful nurseryman.

The strings on trees budded at the right time should not be removed until the following spring, thus leaving a protection for buds during the winter. I have found nothing better for strings than cotton wicking; the cost is but 25 cts. per thousand buds.—H. Hersey, in *N. E. Farmer.*

PINCHING CUCUMBER VINES.

I had a narrow border, not more than two feet and a half wide, on the edge of a paved yard, enclosed by a high fence. I planted three cucumber hills in the border, and laid some brush (such as is used for pea vines,) between them and the fence. As soon as they crept up to the top of the brush, I pinched off the ends of the vine which thickened rapidly around the roots, and in every direction throwing out the most vigorous foliage and a profusion of flowers.

I did not allow the cucumbers to grow, but pinched them, and such as I wished to reserve for the table, I picked as soon as they became of proper size; all the rest were gathered every day for pickles; every day pinching off the bud at the end of each shoot. In this way the hills continued fresh and productive until they were touched by frost. Some judgment can be formed of the value of this practice when I add that more than a barrel of pickles were made from the three hills, besides allowing a supply for the table.

Whenever a leaf began to look rusty or yellowish, it was removed, and every cucumber and leaf was cut off with large scissors, so as not to disturb or wound the vine. There is an advantage in having them run up on brush instead of trailing over the ground; because they are much injured by being trodden on, and by being kept fair on the bushes they can be easily and thoroughly examined every day, which is essential, because if one or two cucumbers are overlooked, and grow very large, it stops the yield of that vine.—*Cor. Horticulturist.*

The Butterfly Flower.—There is a plant growing in the tropical regions, which bears a flower almost exactly resembling one of the largest and most beautiful of the butterfly species. It has large painted wings, spotted and curiously variegated. Its body is covered with a soft silky down, similar to that upon the insect; and the whole appearance of the flower is so wonderfully like the butterfly as to completely deceive the eye at first sight.

Domestic Economy.

Stewed Apple Pudding.—Cover with apples pared and cored to the depth of two inches, a deep basin or pan; add water sufficient to stew them. Make a crust as for common biscuit, roll to an inch in thickness, cut a hole in the centre and cover with it the apples.—Set the dish on the stove or coals to cook, covering closely to prevent the escape of steam. Twenty or thirty minutes will be sufficient.—Serve with sauce made of water, butter, and sugar, thickened with flour, and seasoned with nutmeg.—*Michigan Farmer.*

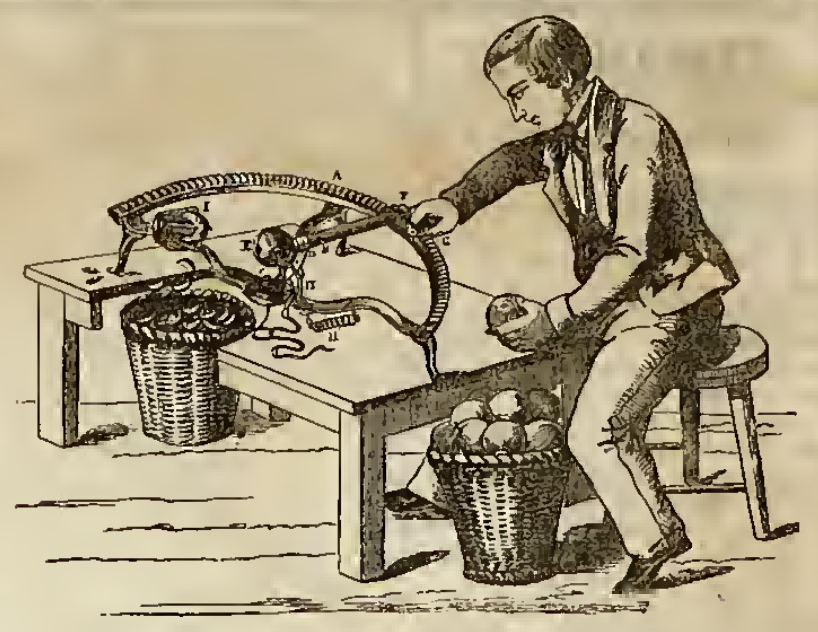
To Destroy Bed-Bugs.—We have made use of the following simple, yet efficient means of destroying bed-bugs, and similar vermin, for several years, and found it to be complete in its extermination.

Remove from the room every thing which is not infested; then take a small quantity of sulphur and set it burning in an old kettle, keeping the room closed tight until the smoke has all disappeared. After this, thoroughly ventilate the room, and the smell of sulphur will pass away.—*The Cultivator.*

To Kindle a Fire.—To start a fire in the morning, take a piece or two of rosin, the size of an ounce ball, or chestnut; wrap it loosely in paper, and set the paper on fire. About one cent's worth will last a week.

An Indian meal poultice covered with the leaves of young hyson tea softened in hot water, will take the pain out of burns and scalds, and prevent blisters from rising, if applied in time.

To Dry Cherries and Plums.—Stone them and half. Pack them in jars, strewing sugar between each layer.



SMITH & FENWICK'S FRUIT SKINNING AND CUTTING MACHINE.

Many a visitor at the Crystal Palace has noticed with interest a machine for paring, coring and slicing apples, peaches, pears, quinces and other fruits. You put an apple on the prongs, push a little handle, and in a twinkling the skin is taken off, the core extracted and the fruit cut into slices, the latter falling in one direction, the cores and skins in others. After being placed on the fork the apple is not touched again, but in an instant is stripped of its skin, and drops from the machine cored and quartered, ready for drying for pies! It is seldom that so much work is accomplished by so small a piece of mechanism. The machine is only 4 inches high and 10 in diameter. In our engraving, however, the machine looks much larger, by reason of its connection with surrounding objects. The machine is extremely simple in its parts, cannot easily get out of order, and is constructed entirely of metal.—There is no snapping of springs or turning of knives as in other implements for this purpose. It pares, cores, and slices *three bushels* of apples in an hour! The machine is very rapidly coming into general use.

The N. Y. *Scientific American*, the best possible authority, says:

"This machine presents manifold advantages over anything of a similar nature, both with respect to cheapness, durability, and also saving of labor as well as time, it being capable of performing almost double the amount of work in a given time that can be done by any other. Among its advantages is the use of a traversing handle instead of a crank, by which it has a horizontal instead of a rotary motion, thus rendering the operation quicker and also easier to be effected. All the parts of this machine can be made as strong as desired, and not one of them is liable to get out of order."—*People's Journal.*

Mechanic Arts, &c.

NEW PATENT.—MEAL BARRELS.

Mr. Thos. Pearsall, of Nichols, Owego, has discovered a means by which corn meal can be kept perfectly sweet and good for any length of time, and exported to any distant land and be received there in as good a state as the day it left the mill. Corn meal, as almost all know, is very liable to heat, and, in a few days, turn sour, and thus become altogether useless for food, either for man or other animals. This has totally prevented the exportation of meal, and consequently corn has been by no means as valuable a crop as it otherwise would have been, if meal could have been exported with the same safety as wheat flour.—But Mr. Pearsall has, by an invention in the formation of the barrel, entirely destroyed this tendency to heating, and thus he can ship corn meal flour to any country in perfect safety.

The principle is, that any substance packed like meal or flour, begins to heat at the centre, the spot most distant from the barrel, or that which contains it, and from that point extends outward until the whole mass is corrupted.—Now Mr. Pearsall's invention very philosophically meets the difficulty, just at the point of commencement. He inserts a tube of thin sheet-iron, 2½ inches in diameter, open at both ends, through the whole length of the barrel, fixing it closely at either end through each head. Now iron is the best conductor of heat that we know, and, this tube being open to the air through its whole length, it follows that the center of the barrel thus constructed is actually the coolest place.

Mr. Pearsall has tested his invention in the most satisfactory manner, having ground flour very fine from the commonest corn, and kept it barreled in the new kind of barrel some five or six months, and on opening, has invariably found it perfectly sweet and good. He has secured a patent not only here but also in England, and expects to do the same shortly in France.—*Owego Times.*

The Causes of Chain Lightning.—In a discourse recently delivered before the Royal Academy, by W. R. Grove, it was stated and proved by experiments, that the effects of rarefactions upon gases, either as produced by the air pump or by heat tend to render discharges of electricity more facile, and to enable them to pass across much larger spaces than would otherwise be the case. So strikingly was this evidenced with flame, that when the flame of a spirit lamp was held near one of the terminal points of the coil apparatus of Ruhmkorff, the terminals being separated to a distance far beyond that at which the spark would pass in cold air, the spark darted to along the margin of the flame, and could be curved or twisted about in any direction at the will of the experimenter, giving a perfect illustration of the crooked form of lightning, and the probable reason why it does not pass in straight lines—the temperature of the air being different at different points of its passage, and much of this variation of temperature being, in all probability, occasioned by the mechanical effects of the discharge itself upon the air.

Thin, light clouds are elevated above the tops of the highest mountains, and heavy ones touch the tops of steeples, trees, and even the ground; but the general height is one and two miles. Thin streaky clouds, and those devoid of electricity, are sometimes five or six miles high; while clouds which contain electricity, will be higher or lower, according to the electricity they contain.

A NEW MOWING MACHINE.

Mr. Fisk Russel, of Boston, a practical mechanic of large experience, has invented a mowing machine which differs in several particulars, both in principle and construction, from those now in successful operation, and decided advantages are claimed for it. The driving wheel is the same as in Ketchum's: but the vibratory motion is obtained from a wheel consisting of a series of cams, by the undulating rim of which a lever is made to move the knives. The knives are each separate, and play upon a steel pivot, acting as they vibrate, like a pair of shears. The frame of the machine is supported by a second wheel of the same size and attached to the driving wheel, which renders the movement of the machine more steady, and obviates in a great measure the side draught.

The machine was tried last week on the farm of B. B. Kirtland of Greenbush, and did its work admirably. There was no clogging, and apparently less power was required to operate it than other machines. It is simple in its construction, and works with very little friction. Mr. Russel intends to devote the remainder of the hay season to experimenting with perfecting his machine, and it will not be offered for sale till another year. Any judgment as to the superiority of the machine would be premature until further trial has been made, but it certainly promises to be a valuable labor-saving implement.—*Bost. Cult.*

Another weapon of destruction has been invented in France. It was thus described before the Academy of Science:—"It consists of a long hollow lance, filled with some combustible compound. To this lance is attached a buckler, which protects the head and breast of the soldier from the bullets of the enemy.—Thus protected, the man may advance to within eight, ten, or twelve yards of the enemy, and deliver his fire. The fire is communicated to the lance with as great facility as to a gun. It exercises its action directly by fire properly speaking, and will cover with a sheet of flame a horizontal surface of ten or twelve yards. The fire tenaciously attaches itself to every thing and object it encounters, burns with rapidity, and gives so powerful a volume of flame, that it is as dangerous to the second and third ranks of the enemy as to those in front. Besides this first effect, the lance continues for some time to give an uninterrupted jet of flame accompanied with a loud whistling noise."

An Improved Piano.—I have hardly space left to allude to a new and remarkable invention. It is a contrivance for giving to the piano the only quality it wanted—a prolonged sound. For ten years it has been sought for in vain. It was impossible to make the piano sing, by obtaining from it a sustained note, like the human voice or the violin. Thalberg's great merit, besides his unrivaled execution, was his manner of at least approaching, upon the piano, the "sostenuto," indispensable in many kinds of music. The invention is very simple, and it is efficient and infallible. The inventor is M. Alexander, the manufacturer of the Organ Melodeon, and the first specimen of it is intended for Liszt.—*Paris Letter to the N. Y. Times.*

Peat for Fuel.—The Waterbury American says that two beds of peat have recently been discovered about two miles from that city, and that two joint stock companies have been formed, with abundant capital, for the purpose of supplying it as a fuel for market.

Piano-Fortes were invented by J. C. Schroder, of Dresden, 1717.

Educational.

COLLEGE COMMENCEMENT.

The new college year is deemed to commence immediately at the close of the summer term, and the beginning of the long vacation. It is at this time the graduating class receive their baccalaureate honors, the class below is advanced to the position of Seniors, the Sophomore puts on Junior airs and dignity, and the Freshman makes a lofty vault into the seven-leagued boots of a Sophomore.

It seems anomalous to an outsider, that the *end* of a college course, and the closing up of the year should be called a *commencement*; but if it is borne in mind, that the new year begins at the time the old one ends, the anomaly is easily accounted for. It is necessary to fix the time of commencement at the close of the year, as at that time the annual examination takes place, and the members of the graduating class are about to go forth into the world. It would work a great hardship in their case to be called back at the beginning of the succeeding term, and hence all the ceremonies of closing the old year and beginning the new take place at the same time.

It is a gratifying evidence of the advancement of science and the progress of the people in liberal arts and education, to witness the increased attention bestowed upon college commencements. In times past, the interests of such a ceremony were confined to a narrow circle of the wealthy and high-born. The advantages of a college course were scarcely open to the youth of humble means and parentage, unless his tastes and convictions of duty led him to enter upon the study of theology; in which case, to the credit of the various churches be it spoken, if worthy, a helping hand was usually extended to him. Now, however, the liberally educated man can be found in every department of life. Not only the members of the so-called (but now inaptly) learned professions, but also the engineer, the architect, the editor, the Common School Teacher, and many members of the mercantile and the agricultural professions, can show their diplomas and bring honor to the name of their *alma mater*.

The papers throughout the land, for several weeks past, have teemed with accounts of college commencements, and nearly every institution of liberal learning in the land is well supported and prosperous. Full classes have graduated on every hand, and gone forth to do honor to the land of their birth. If a record of those graduates could be obtained, it would appear that a large majority of them would be found to belong to the humble ranks of life; the sons of farmers, mechanics, and tradesmen; young men who have contributed essentially to the expenses of their course by the works of their own hands, teaching in the winter, and laboring at the harvest during the long summer vacations. These young men are made of the right stuff, and in the arduous struggles of after life, will leave the lily-fingered gentry, who disdain labor, and the man who performs it, out of sight. There is no royal road to learning and honor in our republic; the laws of primogeniture and hereditary titles find no place in our statute books; and consequently, if a man would reach a lofty elevation he must himself climb for it.

RAPID RECKONING.

It was our privilege, a few days since, to go through the Quincy school, Boston, which is under the charge of Charles E. Valentine, Esq. It is one of the largest schools in the city, numbering some over 800 pupils. We had but little time to stop, but in one of the rooms, under the care of Miss Simonds, a real *live* teacher, we saw a little the tallest specimen of rapid mental reckoning that it was ever our privilege to witness. For instance, the teacher gave out the following question or something like, it for we only speak from memory. Take 64—add 20—divide that by 2—multiply that by 8—add 12—add 50—subtract 100—add 44—divide by 3—multiply by 8—add 16—subtract 80—divide by 2—divide by 2 again—subtract 49—add 10—divide by 6—Answer. *In an instant* every hand was up, though the problem had been put as fast as even a woman could talk. So ready was the answer, that we could not believe those lads capable of reckoning so rapidly, and supposed they had often had the same question before, and answered merely from memory. But after repeated questions, we were convinced it was no cheat, though, to save our life, we could not answer as they did. There was one boy especially, who eclipsed all the "ready reckoners" we ever saw. His name was Timothy Crowley, the son of an Irish laborer, and on being asked his age, he answered, "Nine, next *Fourth of July*, sir," with a bit of commendable pride sparkling in his eye, as he mentioned our country's natal day. He was worthy of being born on that day, and we will warrant him to make a true American, who will be able to "keep his reckoning" when he becomes a man. This drilling to which we have hastily referred is a practice of great utility, and the facility which even young pupils thus acquire is really surprising. We hope our visiting friends will go and see for themselves what we saw.

Virtue is not the less venerable for being out of fashion.—*Sir R. L'Estrange.*

POVERTY OF AUTHORS.

Mrs. Inchbald, so well known as the author of the Simple Story, and other novels, as well as in her capacity of editor, dragged on, as we are told, to the age of sixty, a miserable existence, living always in mean lodgings, and suffering frequently for the common comforts of life. Lady Morgan, so well known as Miss Owenson, a brilliant and accomplished woman, is now dependent altogether upon the public charity, administered in the form of a pension of less than $500 a year. Mrs. Hemans, the universally admired poetess, lived and died in poverty. Lamun Blanchard lost his senses and committed suicide, in consequence of his being compelled, by his extreme poverty, to the effort of writing an article for a periodical, while his wife lay a corpse in the house. Miss Mitford, so well known to all of us, found herself, after a life of close economy, so greatly reduced as to have been under the necessity of applying to her American readers for means to extricate her little property from the rude hands of the Sheriff. Like Lady Morgan, she is now a public pensioner. Leigh Hunt is likewise dependent on public charity. Tom Hood, so well known by his Song of a Shirt, the delight of his readers and a mine of wealth to his publishers; a man without vices, and of unwearied industry—lived always from day to day on the produce of his labor. On his death bed, when his lungs were so worn with consumption that he could breathe only through a silver tube, he was obliged to be propped up with pillows, and with shaking hand and dizzy head, force himself to the task of amusing his readers, that he might thereby obtain bread for his unhappy children.

With all his reputation, Moore found it difficult to support his family, and all the comforts of his declining years, were due to the charity of his friend Lord Lansdowne. In one of his letters from Germany, Campbell expresses himself with joy to hear that a double edition of his poems had just been published in London. "The unexpected fifty pounds," says he, "saved me from jail." Haynes Bayley died in extreme poverty. Similar statements are furnished us in relation to numerous others, who have, by the use of their pens, largely contributed to the enjoyment and instruction of the people of Great Britain. It would, indeed, be difficult to find many cases in which it had been otherwise with persons exclusively dependent on the produce of literary labor.—With few and brilliant exceptions, their condition appears to have been, and to be, one of almost hopeless poverty. Scarcely anything short of this, indeed, would induce the acceptance of the public charity, that is occasionally doled out in the form of pensions on the literary fund.—*Carey on International Copyright.*

IMPROVISATORE.

An Italian word, signifying a person who has the talent of composing and reciting a suite of verses on a given subject immediately and without premeditation. This peculiar talent, thus restricted, appears to belong, almost exclusively, to the Italian language and people. Much, no doubt, of the facility of these improvisatori, which appears almost preternatural to one unaccustomed to hear them, arises from the peculiar ease and flexibility of their language, and its richness in rhymes. But this circumstance will not wholly account for so singular a national faculty; for, about the time of the revival of letters, Italy possessed improvisatori in Latin as well as Italian. Many poets have enjoyed considerable celebrity in their day from their success in this mode of composition; but we are not aware that any of their poems have acquired a permanent celebrity, although often taken down from their recitation. Tuscany and the Venetian States have been most famous for the production of improvisatori, especially Sienna and Verona; in which latter city the talent seems to have been perpetuated by succession. The chevalier Bernardine Perfetti, the most famous of all these reciters, was of Sienna; he flourished in the first half of the 17th century. He is said to have possessed unbounded erudition, and to have been able to pour forth extempore poetical essays on the most abstruse questions of science. There have been many distinguished females possessed of this talent (improvisatrici). Corilla, the most celebrated of these, was of Pistoia, in Tuscany. She was the original of Madame de Stael's *Corinne*. She received in 1776 the laureate crown at Rome, an honor which had also been accorded to Perfetti.—Germany is said to have produced one noted improvisatrice, Anna Louisa Karsch. There appears no reason why the term improvisation should not also be applied to the delivery of unpremeditated discourses in prose. It is the exertion of a very similar faculty, perfected in the same manner by habits to a degree almost inconceivable by those not accustomed to witness its exercise. It is, however, much more general. The American Indians are represented to possess it in a high degree. In Europe, it is most generally to be found in the pulpit. Public secular oratory of this unpremeditated description, is far more common in England, and the power much more sedulously cultivated, than in any continental country.

A Word to Boys.—You were made to be kind and generous. If there is a boy at school who has a club foot, don't let him know you ever saw it. If there is a boy with ragged clothes, don't talk about rags in his hearing. If there is a lame boy, assign to him some part of the game which does not require running. If there is a hungry one, give him part of your dinner. If there is a dull one, help him to get his lessons. If a larger or stronger boy has injured you, forgive him, and request the teacher not to punish him. All the school will show by their countenances, how much better it is to have a great soul, than great fist.

Wise Men mingle mirth with their cares, as a bold either to forget or overcome them; but to resort to intoxication for the ease of one's mind, is to cure melancholy by madness.

THE FLYING-FISH.

A voyager to Brazil, "the land of the cocoa and palm," speaks of the pleasure and interest afforded by the pretty creatures pictured above, while crossing the "flying-fish latitudes." Few nights passed, or evenings closed in, without some coming on board, allured by the cabin lights; and our engraving is a portrait of one of the visitors. The writer (Prof. Edwards) proceeds:

"Flocks of from twenty to two hundred spring up as the ship plows in among them.—They seem to take the air for pleasure, as well as to escape danger; groups and individuals being observed leaping and making short trips, as if in mere wantonness. They fly low, seldom mounting higher than six or eight feet; but they have the power to rise and fall with the bearing surface, and to change their direction laterally. While the greater part of a flock goes off in a straight line, individuals turn aside and pursue different courses, just like birds disturbed in a rye or wheat field. The distance they pass over varies with the impulse that rouses them. While some descend not far from you, others, more timid, dart far away. Their ordinary flight is about two hundred feet; but some proceed three or four times that distance. I have seen single fish pass over three hundred yards. Kirby, Roget, and other naturalists, who teach that the wings of flying-fish are only buoyant, not progressive organs, are mistaken—decidedly so."

Natural History.

THE DOGS OF ST. BERNARD.

Most of our readers are aware that the passage of the Alps between Switzerland and Savoy are the most dangerous of the whole range of the natural "cloud-capped towers" and that on the slight table-land afforded on the top of the Great St. Bernard, an hospice has stood for ages. It is supported by the voluntary distinctions of all nations. Catholic and Protestant, Mussulman and Hindoo, Christian and Pagan, all find there a neutral ground for the flow of that charity which difference of creed, or race, or climate, can never wholly dry up. And truly, it is a noble institution—for the hospitable monks, though their revenue is scanty, open their doors to every stranger that presents himself. And this is by no means a rare occurrence, for in these lofty regions the traveler is often overtaken by the most severe weather, even after days of cloudless weather, when the glaciers glitter in the sunshine, and the pink rhododendrons appear as if they were never to be sullied by the tempest. On these dreadful occasions, the storm comes on with the swiftness of lightning, drifts of snow choke up the roads, and dreadful avalanches sweep into the valleys, carrying trees and fragments of rocks before them. In these scenes of awful grandeur they mingle, doing their sacred, God-like ministry. They devote themselves to the dangerous task of searching for those unhappy persons who may have been overtaken by the sudden storms; and they are assisted in these sacred offices by a breed of dogs peculiar to the establishment, and whose renown is as universal as that of the chivalrous monks. The sagacity of these animals is remarkable. When the traveler, benumbed with cold, and wearied in his search for the lost track, yields to the stupefying influences of frost, and sinks to the ground for the snow drift to cover him—it is then that the exquisite docility and keen scent of these admirable dogs is called into action. They are sent out in pairs, and though the perishing man be twenty feet beneath the snow, the delicacy of smell with which they can trace him, offers a chance of escape. They scratch away the snow with their feet, then set up a hoarse, solemn bark, which brings the monks and laborers of the convent to their assistance. To provide for the chance that the dogs, without human help, may succeed in saving the unfortunate traveler, one of them has a flask of spirits around his neck, to which the fainting man may apply for support, and the other has a cloak to cover him. The dog of the Great St. Bernard, a spot 8000 feet above the level of the sea, is indeed, a beautiful and wonderful animal. He belongs to the spaniel breed, but is peculiarly large and powerful, particularly high upon the legs, and generally of a milky white, or a tabby color. The breed having been cultivated with immense care and assiduity for such a number of years, and the natural faculties of this fine specimen of the dog having been sharpened by generations of training and experience, it is not surprising that their intelligence should be so highly developed, that actually a kind of language has been established between them and the monks.

The instructive intelligence of these dogs is shown by the curious fact, that if a whelp be placed upon the snow for the first time, it will begin to scratch, and snuff about as if in search of something. As in the human community, so in the canine, there are degrees of excellence; and among the dogs of the Great St. Bernard this rule is strikingly apparent. The sagacity of some of the dogs is absolutely astonishing.

Some men are very entertaining for a first interview, but after that they are exhausted, and run out; on a second meeting we shall find them very flat and monotonous; like hand-organs, we have heard all their tunes.—*Colton.*

A man only takes satisfaction and revenge, when he humbles his enemy, and forces him to submission.—*Charron.*

THE ANCIENT GIANTS OF FINLAND.

Before the French—so runs the legend—there were the Giants; a good while before, we should think, by the account the Finns give of their departure. The Finnish tradition declares—a giant child came one day to her giantess mamma, and showed her a curious insect she held in her apron, and had picked up on the plain. It was a plow with team and driver. "Alas, my child," said mamma, "this is a token of grief to us. Where this thing appears—small as it looks—are of the old race cannot long abide." And so it proved; and so we may form some near guess as to when the Finnish Giants went away. For their legacy—so runs the legend—they left the immeasurable masses of ore which were their prodigiously hot ovens and stores, but which are known to the tiny race of their successors as inexhaustible iron mines. They left, the people say, such an interior warmth in that particular tract of soil that corn grows and ripens during the short summer several degrees north of the points, in Siberia and Canada, where no corn is formed. The flax is the finest known in the world; and even the modern potatoes ripen in the hoarded warmth of those ancient fires. The monstrous salmon that come wedge-like up the clear frothing rivers were the minnows with which those giants angled for the marine monsters that roll and tumble in the Arctic Seas. The wild swans were their little singing birds; and, if the swan note be now held discordant, it is through its grief for its departed patrons, and tales are told of the sweetness of that music when heard far away over the boundless swamp, accompanied by the lyre accompaniments of miles of pine forest swept by the night breeze.

GROWTH OF THE UNION.

The census of 1850, as compiled by Mr. De Bow, develops some wonderful and interesting facts in regard to the rapid growth and extent of the United States. In 1701 the colonies contained a population of only 262,000 souls. In 1749 another estimate was made, and the result was a population of 1,046,000. In 1775 the report was 2,803,000—being nearly 300,000 less than the present population of New York! In 1790 under the first census, the population was 3,929,827. There were then seventeen States and territorial governments; in 1800, twenty-one States and Territories; in 1810, twenty-five; in 1820, twenty-seven; in 1830, twenty-eight; in 1840, thirty; and in 1850, thirty-six. We have now thirty-nine, having added to the list Nebraska, Kansas, and Washington.

Our territorial extent, says Mr. DeBow, is nearly ten times as large as that of Great Britain and France combined; three times as large as the whole of France, Britain, Austria, Prussia, Spain, Portugal, Belgium, Holland, and Denmark together; one and a half times as large as the Russian Empire in Europe; one-sixth less only, than the area covered by the fifty-nine or sixty Empires, States, and Republics in Europe; of equal extent with the Roman Empire, or that of Alexander, neither of which exceeded three millions of square miles. We have an ocean and a gulf shore line of 12,609 miles, an inland shore line of 9,247 miles, a tidal flow of 11,213, and an inland river steamboat navigation of 47,355 miles.—*Washington Sentinel.*

Wonders of the Insect World.—In a work published about 1836, the object of which was to indicate to the weavers, inlayers, and embossers of woods and papers many sources from the vegetable and animal worlds whence they might derive beautiful and striking patterns, not a few instances were taken from the form, reticulation, and beautiful arrangements of colors in many of the insect tribes; and there is every reason to believe that if ingenious men would examine microscopically the many saws, darts, knives, and other cutting, piercing, and tearing pieces of apparatus with which many of the members of the insect world are furnished, great improvements in our tools would be the result.—*Adam White.*

Sunday Reading.

BLESSINGS.

Every day will I bless thee; and I will praise thy name forever and ever.—*Psalm* cxlv. 2.

For thousand, thousand mercies new,
At dawn and vesper hour;
The early and the latter dew,
The sunshine and the shower;
For founts of ever-springing bliss,
For hope's unclouded ray;
For life's thrice-blessed sympathies,
We bless Thee day by day.

For fond affection's richest lore,
For household tones of mirth,
For melodies that hourly pour
From hearts of kindred birth;
For many a fireside thrill of love,
For many a joyous lay;
For peace that emblems peace above,
We bless Thee day by day.

For untold sympathy that dwells
Enshrined in love's fond breast;
For springs that sorrow's tears reveals,
Thrice hallowed and thrice blest!
For wares of blessedness that sleep
Our lot in mid-heat day;
For happiness unknown and deep,
We bless Thee day by day.

For hope of better things above,
Through Him who died for all;
For love divine,—eternal love,
That raised us from our fall;
For all the Christian's holy dower,
His anchor, hope, and stay;
For all, our God of love and power,
We bless Thee day by day.

[Written for the Rural New-Yorker.]

RURAL MUSINGS.

I am now seated, undisturbed (save by the soft breeze which plays gently around my brow), gazing in quiet thoughtfulness upon the cool, beautiful expanse of a placid lake, whose deep waters teem with all the majesty of nature's power, having the soft and sandy shore at the foot of one of the beautiful hills of Tully. Now and then a merry bird tries his tiny wings, and skims across the silvery waves, occasionally dipping a portion of his plumage, as if to cool himself in the blue waters, until at last he arrives at his island home, where he chirps his merry song, undisturbed by aught save some of his own species.

I am now enjoying a country visit, among friends and cousins, and participating in every blessing which the hand of God has bestowed upon us; sometimes wandering beneath the lofty trees, or among the lovely flowers, upon the sides and on the tops of some of their lofty hills, which are very beautiful indeed to me; for I can see the hand of the Great Creator in every nook and corner, and can see his smiles on every hill.

What a striking difference between a city home and a home in the country! How much more beautiful it is to behold nature in all her glory, ever welcoming you with a smile, than the busy din of a noisy city, where nought is seen but what the hand of man hath portrayed!

Oh! give me a life amid nature's own beauties, where all is love and tranquillity—where I can recline beneath her own foliage, undisturbed by any creature, and pour forth my thanks to Him who has watched over and protected me through life—to Him who has been my guardian friend; aye, more than guardian friend, my Saviour and my God, hoping ever to live so as to merit his approbation. E. A. R.

Tully, N. Y., July 18, 1854.

THE REPRESENTATIVES.

A rich youth in Rome was suffering from a dangerous illness; at length he recovered and regained his health. Then he went for the first time into the garden, feeling, as it were, born again; and praised God with a loud voice. He turned his face to heaven, and said: "O, thou all-sufficient Creator, could I no recompense Thee, how willingly would I give Thee all my possessions!"

Hermas, who was called the herdman, heard this, and said to the rich youth: "All good gifts come from above; thither thou canst send nothing. Come, follow me."

The youth followed the pious old man, who took him to a dark hut, where was nothing but misery and wretchedness. The father was stretched on a bed of sickness, the mother wept, the children were destitute of clothing, and crying for bread.

The youth was deeply touched. Hermas said: "See here an altar for thy sacrifice.—See here the Lord's brethren and representatives."

Then the rich youth assisted them bountifully, and provided for the sick man's wants.—And the poor people blessed him and called him an angel of God.

Hermas smiled, and said: "Thus turn always thy grateful countenance first to heaven and then to earth."—*Krummacher.*

Beautiful Extract.—"Whatever we can do of good in this world with our affections or our faculties, rises to the eternal world above us, as a song of praise from Humanity to God. Amid the thousand, thousand tones ever joining to swell the holy music of that song, are those which sound loudest and grandest *here*, the tones which travel sweetest and purest up to the Imperishable Throne, which mingle in the perfectest harmony with the anthem of the angel choir? A solemn and awful question!—Let your own heart answer it: and then say, may not the obscurest life be dignified by a lasting aspiration, and dedicated to a noble aim?"

Miscellaneous.

LIGHT.—A POEM.

Read at the Examination at Clarer Street Seminary, April 14th, 1854.

BY MISS ELIZABETH GRIFFEN.

Lo! when through chaos' penetrating gloom
Appeared a ray of purer light,
It shrunk as one who dies a tomb—
Paused a moment, then passed from sight.
Yet not in vain,—for thousands more
In quick succession faintly glare,
Were gathered from their misty forms,
When, lo! a brilliant gem was there.
Soon in the placid vault of heaven
The bright and beauteous orb was placed,
Whose tap'ring beams through darkness passed
With beauties more than man could trace:
Earth,—in whose breast no seed was sown,
(And much it seemed a desert waste,)
No emerald carpet there had grown
To mark it as a dwelling-place,—
Conceived, and from her cold, dark bosom rose
The fragrant leaf and blushing flower,
That slumbered there in sweet repose
Full many a long and silent hour.
The Grass, the foremost in the lengthy train,
Bathed in the crystal dews of early morn,
From dark terraqueous depths innocuous came—
It knew not how, or by what force was drawn.
Next in the train, with timid tread,
The Violet stepped, so beautiful and fair!
Gracefully it drooped its modest head,
Its form was scarce sustained by balmy air;
Soon a deep'ning glow suffused its cheek,
A velvet garb its leaves assume,—
Thus the modest flower which nothing seeks,
The richest, brightest rays illume.
Then came the Rose, with proud and lofty mien,
Its perfume scatt'ring on each passing gale:
Who'd ever in a flower more beauty seen,
Or thought that earth could rear it in her breast?
It came—it saw—it blushed a crimson hue,
When in the gall'ring rank its place it took;
It seemed to say, "I am beauty too!"
And at the Violet cast a haughty look.
Last, not least, of all this Alexandrian train
Which came to greet the new-born sun,
With smiles, and tears, and happy strain,
Was th' modest Lily's lingering tone—
With bowed head and stainless robe
It wailed silently its due reward;
All Nature's motion seemed to cease!
What charm was there its beauty could increase?
A golden beam on airy pinions bright,
Fell like into whose leading chord it gone,
Upon that flower whose charms made darkness light—
Her light was Nature's, kept for her alone.
At length, as though a purer, holier thought
Had tuned the harp in strains more rare,
The Light replied, "My charms to these are nought—
No Titian hue thy magic beauty can compare—
Thou shalt among thy sister-flowers abide,
Till the voice of Time shall cease to be,—
A queen in all their feasts preside,
Emblem of Hope and Purity!"
Then as the coxeless traveler passed along
Through Eden's cool and shady bower,
Or by some pearly stream whose spirit song
Was tinged by every passing shower,
It paused awhile, then with renewed strength
Along the dusky labyrinth it ran—
Hush! listen! silence breaks at length,—
It pourtrates the soul of man.

[Written for Moore's Rural New-Yorker.]

POPULARITY.

"O breath of public praise,
Short-lived and rain; oft gained without desert,
As often lost."

The love of fame and popularity, is one of the strongest passions that rage in the human heart, and one, perhaps, the most dangerous, if uncontrolled in its operations; yet if prompted by pure and virtuous motives, it is one of the noblest aspirations of the soul.—Springing up as it does in early life, it grows in the fruitful soil of the heart, with that exuberant rankness and vigor, so emblematic of its hollowness and corruption, till it withers every flower of virtue, and desolates the purity of the heart. Like the poisonous Simoom of the desert, sweeping over the burning sands and fertile plains, it withers, desolates, and destroys—it breathes its noxious influence over the mind till every principle of honor is corrupted, and virtue is basely sacrificed at the hollow shrine of depraved ambition's god.

The love of immortality and renown, is an inherent principle of our being, implanted in the human breast by the All-wise Creator on the morning of creation, and as it then existed, was one of the highest and noblest aspirations of the soul; but with the fall of man, it lost its original purity and loveliness, and we now behold it disrobed of its primitive beauty;—its glory and brightness of character gone. In its ruthless blasts, it no longer recognizes the priceless worth of virtue, or hesitates to resort to the lowest and basest means, to accomplish its ambitious designs, regardless, alike, of the sacrifice of character, and the warnings of a troubled conscience.

Many, endowed with talents of the highest order, and possessed of rare intellectual attainments, who but for their inordinate thirst for popularity, might have acted a brilliant part in the history of the world, been ornaments to their native land, and enrolled their names high on the records of enduring fame, with a galaxy of other immortal names, whose memory will ever be cherished in the hearts of an adoring people, whose virtues will be perpetuated by millions yet unborn, and whose very names send a thrill of joy that vibrates in every bosom. How often do we see individuals, ambitious of distinction, plunging madly into the vortex of political strife, willingly sacrificing every principle of honor, virtue, and integrity, to gain what the world calls popularity—that delusive bubble which perishes with a breath! But though by their subtle schemes they may acquire the object of their aim, yet their fame has only an ephemeral existence, and like the corsecations of the dashing meteor, it may dazzle the eye for a time with its deceitful brightness, and then expire in darkness and oblivion; while honest fame, like the pure, unchanging star, shines serenely on, growing brighter with the lapse of time, and shedding a halo of immortal glory and beauty around the memory of its possessor. But the sweet consciousness that ever attends the faithful discharge of duty, the approbation of the wise and good, and the pure smiles of an approving conscience, are a nobler and sweeter reward, than all the empty honors and gaudy pageantry of popular favor, purchased at the price of virtue. The love of popularity exists among all classes of society, from the lowest depths of barbarism to the highest stages of civilization, and this desire is proportionally elevated and ennobled, as the faculties of the mind are developed, and its aspirations become more refined and exalted. The ardent thirst for fame is only a delusive phantom, luring the ambitious mind with its artful wiles, only the more perfectly to complete the destruction of all that once was pure and virtuous in the heart. Better live and die in obscurity, than thus pervert the noble faculties of the soul, and purchase distinction at the infinite sacrifice of virtue and sacred honor. HENRY CLAY, though gifted with a massive intellect, surpassing powers of eloquence and unrivaled statesmanship, was not a popular man; the reason for which was based upon the uncompromising fearlessness with which he ever defended the principles of truth, regardless of consequences. While the surges of political corruption were rolling nigh around him, we beheld him like another Apollo, firm as a rock, amid the raging elements, unyielding and unwavering in every thing that involved a principle, or the exercise of duty, repelling the artful wiles of his adversaries, while the poisonous shafts of treachery and disunion fell harmless at his feet. It was a feeling of satisfaction in view of his past life, that prompted this—one of America's greatest statesmen—to utter, in his dying moments, that noble declaration, worthy to be engraved in characters of gold on the tablet of every heart,—"*I had rather be right than be President.*"

Were this the universal motto, how changed would be the aspect of the world! Virtue would no longer be degraded to gratify the ambitious desires of popularity, honor no more be stained with the breath of corruption, and the furious blasts of popularity no longer desolate the purity of the mind, and wither the flowers of truth and affection, or strew them on the ground to die. The world would rise from its darkness, and shake from itself the mantle of corruption that envelops it; peace, prosperity, and happiness, would dawn with transcendant brightness on the glory of nations, and shed a pure lustre o'er the beauties of a lovely world.

U. B. A.

Southport, 1854.

WAYSIDE THOUGHTS.

"YES, I'm coming," rang out the silver voice of a child, through the half-opened door of a house on our street, as we were passing the other day. We saw no one, but the sweet musical tones still lingered in our ears as we passed on, and we thought to ourself, yes, my child, you are "coming." Coming from the guileless sunny flower garden of childhood's glory, and beauty, and joy, into a world of thorns, and sin, and suffering—from the sweet harmony of infantile melody and gladness, into a world of harsh discords, and human deformity—coming from the warm lips and kindly embraces, and gentle words of a mother's love, into air made poisonous by the breath of the slanderer's lungs—a world full of rude jostlings—where the traveler need be firm in nerve, and strong in sinew, or he is pushed aside, or trampled under foot—a world full of cursing and bitterness, that almost turns to gall the few cups of Eden's nectar still kept pure from the effects of the fall. Coming from the sweet peace of your loved heaven of home, into a "strange land," where there are backbiting, and envyings, and falsehoods—man striving to overreach his neighbor—yes, neighbor, whom he daily greets with a smile and profession of friendship—all hurrying, running, snatching, clutching after yellow gold; envied with its serpent charm, forgetting the very ties of nature, and locking up forever all its kindly sympathies. Coming alas! to be avaricious, and vain and cold-hearted as the rest of mankind; and coming too, into the same narrow home to which we all hasten.

Ah! sweet child, may your "coming" be such, that when your hour is come, and the angels beckon you away, you may look up with joy and exclaim again: "Yes, I'm coming."—*Mich. Expositor.*

LOOK UP.—"Look up," shouted the captain of a ship to his boy, as he grew dizzy while gazing down from the topmast. "Look up!" The boy looked up, and returned in safety. Man—woman, look up, and you will succeed. Never look down and despair. Leave dangers unheard for, and push on. If you falter, you lose. "Look up! Do right, and trust in God."

BE slow in choosing a friend, and slower to change him; courteous to all; intimate with few: slight no man for poverty, nor esteem any one for his wealth.

TWILIGHT SHADOWS.

AY, 'tis true! "There can be no companionship for loneliness of heart." Friends are round me, the kind and true. Smiles greet, and kind words welcome me at the social circle; but I heed them not; my heart is buried in the past. I am alone! I smile, but 'tis a feigned one. Joy has no place in my heart; Grief holds its revels there. How changed I am!

When a child, none was happier than I. I gathered flowers and chased the butterflies; but the flowers have withered, and the butterflies flown. Darkness is on my path; the one who made life to me all sunshine lies 'neath the sod; the lark sings above his grave, and the pale primrose mingles its fragrance with the evening air.

Oh! that I had been near him, when the wing of the Dark Angel swept past, and the news of Night gathered on his brow!

But the deep, blue ocean rolled between us. To-day, the funeral of a babe passed my window; a smile came to my lips, and I said, sweet child! thou hast escaped the storms of life, and gone to mingle with the band of white-winged worshipers round the throne. God pity the heart-broken mother! How she will miss the voice of her child, and the eloquent language of its violet eye! In this solemn twilight hour, comes a form of manly grace and dignity. "I cannot make him dead!" I see the high, expansive forehead, whereon are written high and holy thoughts; the love in those deep eyes; and hear the voice, which ne'er to mine replied, but in tones of kindly cheer.

'I bear about with me a haunted heart. But hark! I hear a low, sweet voice, murmuring, "There smiles a hand, where sorrow breathes not in the air—

For from the breathings of changeful skies,
Over the seas and the gnarled ties,
Where the day of the lightning and cloud is done,
And joy reigns alone as the lonely sun."

CARRYING BUNDLES.

MANY people have a contemptible fear of being seen to carry a bundle, however small, having the absurd idea that there is a social degradation in the act. The most trifling as well as weighty packages must be sent to them, no matter to how much inconvenience of others. This arises from a low kind of pride.—There is a pride that is higher; that arises from a consciousness of there being something in the individual not to be affected by such accidents; worth and weight of character. This latter pride was exhibited by the American son of Jerome Napoleon Bonaparte, while he was in college at Cambridge. He was one day carrying to his room a broom he had just purchased, when he met a friend, who noticing the broom with surprise, exclaimed, "Why did you not have it sent home?" "I am not ashamed to carry home anything that belongs to me," was the sensible reply of young Bonaparte. Very different pride was this from that of a young lady whom we know, who always gave her mother all the bundles to carry when they went out together, because she thought it vulgar to be seen with one herself.

EXTRAVAGANCE.—There is not a country in the world where the people are becoming so extravagant in the mode of dressing and living as in the United States. It is one of the worst signs of the times. The habits of the mushroom aristocracy are really disgusting. How ludicrous it looks to see boys sporting diamonds by the thousand dollars' worth at a time, whose fathers were accustomed to wheelbarrows, and whose children are pretty certain to be in the work-house. And girls—silly, simpering things, weighed down with jewels and bracelets—whose mothers broke their backs at the washing-tubs, scouring floors and picking oakum. The real, substantial aristocracy never indulge in such fopperies and fooleries.

LIFE.—We bring into the world with us a poor, needy, uncertain life, short at the longest and unquiet at the best. All the imagination of the witty and wise has been perpetually busied to find out the way how to revive it with pleasures, or relieve it with diversions—how to compose it with ease, and settle it with safety. To some of these ends have been employed the institutions of lawgivers, the reasonings of philosophers the inventions of poets, the pains of laboring, the extravagancies of voluptuous men. All the world is perpetually at work about nothing else, but only that our poor mortal lives may pass the easier and happier for that little time we possess them, or else end the better when we lose them.

HUMAN LIFE.—Ah! this beautiful world. Indeed, I know not what to think of it. Sometimes it is all gladness and sunshine, and heaven is not far off; and then it changes suddenly, and it is dark and sorrowful, and the clouds shut out the sky. In the lives of the saddest of us, there are bright days like this, when we feel as if we could take this great world in our arms. Then come the gloomy hours, when the fire will neither burn in our hearts or on our hearths, and all without and within is dismal, cold, and dark. Believe, every heart has its secret sorrows, which the world knows not; and oftentimes we call a man cold when he is only sad.—*Longfellow.*

MARGARET FULLER beautifully says:—"It is a marvel whence this perfect flower (the water lily) derives its loveliness and perfume, springing as it does from the black mud over which the river sleeps, and where lurk the slimy eel and speckled frog, and the mud turtle, which continual washing cannot cleanse. It is the very same black mud out of which the yellow lily sucks its obscene life and noisome odor. Thus we see, too, in the world, that some persons assimilate only what is ugly and evil from the same moral circumstances which supply good and beautiful results—the fragrance of celestial flowers—to the daily life of others."

Ladies' Department.

CONDUCTED BY A——E.

DAILY DUTIES.

Our daily paths with thorns or flowers
We can at will bestrow them,
What bliss would gild the passing hours,
If we but rightly knew them.
The way of life is rough at best;
But briers yield to roses,
So that which leads to joy and rest,
The hardest path discloses.

The weeds that oft we cast away,
Their simple beauty scorning,
Would form a wreath of purest ray,
And prove the best adorning.
So in our daily paths, 'twere well
To cull each gift a treasure,
However slight, where love can dwell
With life-renewing pleasure!

Communicated thro' Moore's Rural New-Yorker.

EPISTLE NINTH.

STRASBOURG, July 5th, 1854.

DEAR KATEY:—One of the most delightful excursions we made while in Rome, was upon the Appian way, that venerable thoroughfare, itself a relic of no ordinary interest, and flanked on both sides, for miles in extent, with ruins of every description. Conspicuous among these constructions, are the monuments for the dead. The old Romans, men of iron mold, whose swords awed nations into trembling submission, did not affect green, quiet cemeteries, far removed from the haunts of busy life.—Rome had no Greenwood, no Mount Auburn for her illustrious dead. Her warriors and statesmen died as they had lived, amid the din and bustle of military and political achievements, and their tombs, decorated with all the magnificence that wealth and pride could devise, were the ornaments of the stateliest avenue that led to the imperial city's gates.—With a touch of the same superstition that causes the Indian to deposit by the side of his lifeless brother the bow and arrows which he fancies will still serve him in the happy hunting grounds where he now wanders, the Romans's funereal urn was placed where his ashes might be stirred by the trend of pompous processions, and the roll of stately chariots, and, more than all, where the lofty monumental pile might bear witness to the splendor and power which had surrounded his life. We afterwards saw the same arrangements at Pompeii, the principal street that entered the city being lined with tombs, as perfect in general form, and often in minute detail, as when first covered by the *destroying*, or, rather, *preserving*, ashes. Not so, however, with the monuments which are strewn so thickly along the Appian way. Most of them are now but shapeless masses of Roman brick, others retain their subterranean apartments, while all that was above ground has disappeared. Of this latter number is the tomb of the SCIPIOS.

A door in the wall that skirts the road, gives admission to a vineyard. A bronzed Italian woman meets you as you enter, conducts you into a species of grotto, the first apartment of which serves for her own humble dwelling, and without a word prepares the bundles of tapers which are to light you through the dismal passages. You follow her, traversing long, winding avenues cut in the solid rock, and ever and anon she pauses before some niche, where a huge stone sarcophagus still remains, its half-obliterated inscription rehearsing the name and titles of some one of the long line of illustrious Scipios whose bones once reposed here. But Time, whose "effacing finger" has passed over the stately monument which once crowned this resting-place of the dead, blotting its strong walls from existence, and leaving no trace of the statues whose marble forms peopled its exterior, has not spared the ashes of its occupants. The desolation of Rome is complete; "her very graves are tenantless."

Near by, in the same vineyard, is a Columbarium, or small subterranean chamber, containing the remains of slaves and freedmen. These humble tombs were ordinarily placed near the family monument, and here were gathered the relics collected from the funeral pile of the slave, enclosed in earthen pots, and placed in little niches, several rows of which encircle the wall. This Columbarium was discovered in 1830, and is quite perfect. Many of the pots are half filled with fragments of bones, and the inscriptions upon the niches are still legible. These give simply the title and occupation, with an epithet of endearment sometimes attached to the name of a favorite servant.

Thus we passed, within a few paces, from the tomb of the noble Roman to that of the humble slave,—gazed upon the massive sarcophagus of the former, and the simple urn of the latter, and what a world of emotions crowded upon the mind at the sight! Alas! for human pride, which seeks to perpetuate its memory by monuments perishable as the ashes they enclose. The tomb of the Scipios, leveled to the dust, despoiled of its relics, and valued by its possessors only as a means of extracting money from the curious traveler, preaches eloquently the futility of such attempts. And what more enduring foundation has national pride? Could the race of heroes buried here be restored to life,—could they see their very tombs overgrown by the vine and inhabited by peasants,—could they glance around upon this city of ruins, and mark the changes which time has wrought, would they not exclaim in sorrow and amazement, "And is this *Rome*, that sat upon her seven hills, and from her throne of beauty ruled the world?"

But other sights awaited us, and casting off our sombre mood, we emerged from the close, damp atmosphere of these gloomy vaults, into the warm sunshine, and were soon rolling again along the Appian way. We passed beneath the arch of Drusus, then out the city gate. Upon each side we beheld a constant succession of ruins, sarcophagi, fragments of columns, mutilated statues, &c., most of them found upon or near the very places where they now lie, and forming a museum of Roman antiquities more impressive than could be one contained within the four walls of any hall, however vast. These objects are all numbered, and a certain degree of care is taken of their preservation and arrangement by government. We rode slowly along, passed on our right the church of St. Sebastian, with its immense catacombs, stretching away for miles beneath the soil, stopped to examine the temple and circus of ROMULUS,—the latter in a state of almost perfect preservation, though fifteen centuries have elapsed since its erection,—and finally reached the tomb of CECILIA METELLA, the most unique and imposing of any of the monuments which exist upon the Appian way.

It is a large, round tower, its walls pierced by no aperture except the strong, arched door which gives admission to the interior. The top was originally closed by a vaulted roof, but this has, in part, fallen in, and the building is now encircled by a row of battlements,—an addition made during some one of the many wars which have desolated Rome, and which have reduced her noblest monuments to serve as forts or barracks. An inscription in marble, conspicuously placed near the top of the tower, on the part which faces the road, informs us that it is the tomb of CECILIA METELLA, daughter of QUINTUS CRETICUS, and wife of CRASSUS. A large marble urn of beautiful workmanship, was found near by, and now graces one of the museums of Rome, but other trace of the occupant of this enormous structure there was none. The monument which pride or affection reared, still stands firm, but the ashes it was designed to guard are scattered to the four winds of heaven.

We entered the tomb, looked down into its subterranean vault, and up at the broken roof. Wild flowers and vines festooned the opening, and through it the bright sunbeams poured down into this deserted dwelling of the dead. The contrast was vivid between the aspect of nature, clad in all the beauty and freshness of spring, rejoicing in eternal youth, and the desolation and decay stamped upon this monument of human pride and power. In returning, we diverged from the Appian way, and visited the famous Valley of Egeria, and the sacred grove where NUMA retired to converse with the friendly nymph. The grove and fountain still remain,—the former frequented by cows, who find it a very agreeable promenade, judging from the numerous paths worn by their feet which traverse it in every direction; the latter, a favorite resort for washerwomen, of whom several were at work in close proximity to the reclining marble statue which adorns the spot. We drank of the fountain, and found the water remarkably warm and insipid, as it invariably is in all famous springs, so far as my experience extends, and, I assure you, KATEY, my opportunities for judging have not been very limited, for I have drunk of not less than half a dozen miraculous springs which Rome possesses, dating back to the times of PETER and PAUL, to say nothing of the lake of Avernus, and other classic localities which shall be mentioned hereafter.

At present, I spare you anything further, unless it be an item of news, which illustrates most strikingly the utilitarian tendencies of the age. The Appian way is about to be converted into a diligence route, and is being MacAdamized for this purpose. Those who are obliged to travel over it, will, no doubt, find the change an improvement, for those portions of the old Roman pavement which still exist, have little besides their antiquity to recommend them; but when the stone-breakers approach the city, and commence operations among the tombs which stand like sentinels guarding the passage, I can fancy the very dust of those heroes of the olden time quivering with indignation. So wags the world at present. We show but little respect to the bones of our ancestors when they stand in the way of modern improvements, and what can the old Romans expect who have been dead and buried a thousand years and more?

Your affectionate MINNIE.

ROCHESTER, AUGUST 12, 1854.

Adjournment of Congress.

The long, long session of Congress has come to an end at last; the members have pocketed their pay and departed on a furlough of three months, to re-assemble again in November.—Most of them have gone home to stand trial before their constituents for the evil they have done; and *mene, tekel, upharsin*, is written on the wall over against them. Not one out of ten of the Northern men who voted for the repeal of the Missouri Compromise will ever hold a place in Congress again. Some of them voluntarily retire, afraid to test a trial at the polls; some of them have been unceremoniously laid on the shelf at nominating conventions, and the few who have succeeded in obtaining renominations, magnanimously come forward to lay their own heads upon the block. If the newly elected members could take their seats at the commencement of the next coming session, such a revolution would appear in the house as was never before seen; but unfortunately the present incumbents hold on until the close of the next session. That, however, by a Constitutional provision, must take place on the 3d of March, as the political year commences on the 4th. There are few men of any party, especially at the North, who uphold the acts of the present congress; and the support of a few office holders is just sufficient to suggest the anxious inquiry of one of old; "why, what evil have I done that these men praise me?"

The Weather and its Concomitants.

The weather continues here uncommonly dry. There have been rains around us, in all directions, but scarcely any has fallen within the city limits for weeks. On Sunday an intense black cloud arose in the west, threatening torrents of rain; but the storm slid along the horizon, leaving us outside its track—although within a few miles of us, it is stated, there was a powerful and refreshing shower. The evenings are very cool, and Monday night was uncomfortably so; high winds have prevailed occasionally for several days past.

There have been a number of deaths from cholera during the week, several of the victims being children. Some of the fatal cases were very sudden, with scarcely any alarming premonitory symptoms, and they should serve as warnings to our citizens to be doubly watchful over themselves and their children. The slightest indications of a diarrhea should be attended to at once, and medical advice procured. One of our best medical advisers recommends in such cases perfect rest from all labor and exercise, and a dose of twelve drops of laudanum and eighteen of camphor, on a little sugar, repeated, if necessary; in the meantime, a physician should be consulted.

No special alarm exists in the community, but an ounce of prevention is better than a pound of cure.

The President has returned the River and Harbor bill to the House of Representatives, with objections to its becoming a law, on constitutional grounds. This result has been foreshadowed by his antecedents as a member of the House and the Senate in years past, by his veto, this session, of the Insane Land bill, and the remark made in connection with his signing the bill to improve Cape Fear River, that he approved it on the ground *that the obstructions resulted from acts of the government*. Still this veto will produce much dissatisfaction and disappointment to all those interested in Lake and River commerce. The bill, among other things of special interest to our State, appropriated $150,000 more for clearing out and extending the harbors of Buffalo, Dunkirk, the mouth of the Genesee, Sodus Bay, Oswego, and Lake Champlain.

The Canal Enlargement.—The Canal Board closed an important session at Albany on the 2d inst. Three millions additional work, making six millions in all, is ordered to be put under contract. It is distributed as follows:—On the Western Division of the Erie Canal, to the extent of $1,718,000; Middle Division, $125,000; Eastern, $125,000; Oswego Canal, $228,000; Cayuga and Seneca, $136,000; Black River Canal, $68,000.

The work thus far has been let on very favorable terms, at least 15 per cent. below the estimates. An additional loan of $1,250,000 has been directed by the Commissioners of the Canal Fund—proposals to be received until the 31st inst. The Canal Board adjourned to 12th Sept.

Shameful Assault.—On Saturday evening last, as the President was descending the steps of the Capitol, at Washington, he was accosted by three men (probably with the intention of insulting the Chief Magistrate) and invited by them to take a drink. On his declining to do so with the remark that he did not take drinks, he was hit by an egg thrown by one of the trio and his hat knocked from his head.

There is no doubt that the three fellows were drunk. One of them lives in Charleston, one in St. Louis, and the other in New York. It was the South Carolinian who threw the egg, and he was immediately arrested. It is said the President has sent a request for his liberation.

State Teachers' Association.

The N. Y. State Teachers' Association met in Oswego on the 1st inst., adjourning on the 3d, after which they made a brief excursion on Lake Ontario in a steamer. The occasion is spoken of as one of much interest, and we give below a brief summary of the proceedings:

The Association was called to order by its President, Hon. V. M. Rice, State Superintendent of Public Instruction, and a business and other Committees appointed. The Report of the Treasurer of the *New York Teacher*, was read by T. H. Bowen, of Albany. It shows the receipt up to Aug. 1st, of $1,585.75, and the disbursement for the same time of $1,361.75, leaving the balance in the treasury of $124. Mr. Valentine, the Resident Editor, gave the history of the Association and of the *Teacher*, and stated that not a single dollar had been paid for editing that periodical. This should not be so.

A State Agent, at a salary of $1,000 per year, was proposed, and finally appointed. His duties are as follows:

1. To assist in organizing Teachers' Institutes.
2. Report on School Systems.
3. To encourage Union Schools.
4. To awaken a general school interest.
5. To assist and co-operate in general with the State Superintendent.
6. To aid in circulating the *New York Teacher*.
7. To assist teachers in getting situations, and schools to obtain suitable teachers.
8. In general, to perform such duties as the officers of the Association may direct.

Two prize articles were read,—the first an Essay by Prof. M. Wilson, of Canandaigua, on "Radical Education;" the second, a poem, by Mrs. C. H. Gildersleeve, of Buffalo. Both are pronounced excellent, and premiums are offered for another year.

Upon the subject of officers, Miss Anthony, of this city, introduced resolutions that women be included among them, and so far carried her point, that two were included in the Board of Editors to the *Teacher*, and one as Vice President. The following is the list:

Oliver Arey, of Buffalo; J. M. Bulkley, Williamsburgh; A. J. Upson, Clinton; T. H. Bowen, Albany; S. W. Cole, Plattsburgh; L. R. Satterlee, Rochester; J. Winslow, Waterlown; M. Wilson, Allen's Hill; J. N. McElligott, New York; Delos Gary, Oswego; Mrs. Emma Willard, Troy; Mary P. Tenney, Binghamton.

Horace Greeley made a speech on "Practical Education," at the Evening Session of the second day. Other gentlemen lectured at different times.

On the third day, the officers were elected. Mr. R. D. Jones, of this city, was chosen President. The Vice Presidents elected are: H. M. Aller, of Elmira; I. B. Poucher, Oswego; S. S. Kellogg, Buffalo; Mrs. H. B. Hughes, Syracuse. Corresponding Secretary, John H. Fanning; Recording Secretaries, D. S. Heffren, of Utica, D. Cameron, of Johnstown; Treasurer, M. H. Brach, Seneca Falls. State Agent, James Johonnot, of Syracuse.

Congressional.

In the Senate various matters have been disposed of, and others brought up for consideration. Among the first is the ratification of the Reciprocity treaty, and the Fortification appropriation bill, also the confirmation of sundry Presidential nominations, among them our city Postmaster. A memorial has been presented and referred, from a number of American citizens, wherein is set forth their sufferings by the bombardment and burning of Greytown, by the sloop-of-war Cyane, and praying that Congress grant an indemnity for the losses sustained.—The Post Office appropriation bill has also been under consideration. Committees of conference have been appointed to arrange a basis of agreement on several bills reported back from the House non-concurred in.

House.—The bills from the Senate constituting the ports of Lakeport, La., and others, ports of entry, were passed, as were also the bills for the same creating a collection district in Texas and New Mexico, and one granting the right of way over, and a depot upon, the grounds of the military reserve at Fort Gratiot, to the Port Huron and Lake Michigan R. R. Co. The Army, and River and Harbor bills, were received from the Compromising Committee, and passed.

Murder in New York.—Col. Loring, of California, was instantly killed on the 2d inst., by being run through the body with a sword-cane in the hands of R. M. Graham, of New Orleans. Col. L. was stopping with his family at the St. Nicholas Hotel, and being much disturbed by the disorderly conduct of some drunken persons in the hall, came out of his room, and found it was Graham making the noise, and requested him to desist. He then went in, but had soon to come out and repeat his request, and was stabbed and killed as above related. Graham is in custody.

The Canadian Elections.—The result of the recent Parliamentary elections is stated as promising the ultimate triumph of the friends of Constitutional Government. Up to the 1st inst. 64 Reformers to 22 Conservatives had been returned, but some of the papers say this is an unfair classification—that the Reformers are still further ahead.

☞ The Quebec Mercury is in the receipt of a private letter from St. John (N. B.) stating that Sir Edmund Head has received the appointment of Governor-General of British North America.

Sight Notes from Wisconsin.

Waushara Co., Wis., July 29, 1854.

Friend Moore:—In compliance with a request, and my promise, I commence my *third* epistle.

Waushara Co., Wis., is bounded on the East by Winnebago, on the North by Waupaca and Portage, on the West by Adams, and the South by Marquette—the county I *closed* upon in my last epistle. Waushara has a vast variety of soil, timber and game—including *fish!* The western third is timber, the central oak openings, and the western prairie. The central portion I examined most particularly. At Saxeville—(the name of the place and Post Office,) in the town of Ontario, is a loaded three-story grist-mill, a good saw-mill, store, &c. At this point, Capt. Edwarn Saxe, and his brother Jacob, (formerly of Shelton, Vt.,) have erected the buildings above named; also a good dam across Fine River, and have a sure and enduring water-power, and a large one, having power to spare, for double their present amount of machinery. The river is quite rapid, and the banks bluff and good. Saxeville is twenty miles northwest of Berlin, formerly called and known as "Strong's Landing." This is the terminus of steamboat navigation on the Neenah, or Fox River, 35 miles west of Lake Winnebago. A good passenger and freight steamer arrives and departs daily. Saxeville is ninety miles west and north of Sheboygan, which is on Lake Michigan. Sheboygan has the best dock or wharf I have seen on the lake, and about as good a harbor. The variations of whitside in the lay of the land, discernable to the common eye, is about thirty feet, and the soil is loam and sand, with a gravelly bed about two and a half feet below. The soil is quick, strong, and very fertile. Springs abound, and the wells are of the best kind. This county is in latitude 44°, and the climate is said to be excellent. On the 2d July the heat was *only* 105° in the shade!

Winter wheat is the kind that is grown here, and is a sure crop. Thirty bushels are raised to the acre upon the first plowing, and thirty-five bushels after is the common yield. Corn is four weeks in advance (says Mr. Pike, who has just arrived from Utica) of that growing in Oneida Co., N. Y. All kinds of grain excellent. Land here can be had to a considerable extent at $1,25 per acre, and from $4,50 to $5 per acre from second hands. This is the most favorable section I have seen "in the west" for young and enterprising farmers with $300 to $500 in money to help themselves with, and I believe a better cannot be found. The first "breaking" is done easily with three yoke of oxen. By the way, the working oxen and other cattle are, through the entire summer and fall, in good beef condition, and hold their own. The grasses start early in the spring, and are so nutritious as to fatten cattle in spite of the excessive labor they are required to perform. The face of the soil resembles prairie, and differs only by the many fine and valuable oaks growing upon it. These trees are deep-rooted, and do not hinder the plowman. Pine lumber is sold here for $8 to $10 per M.

"Stephens' Point" is thirty-two miles further north, and is *at the* "Pinery." Just here-abouts are thirty-five to forty good saw-mills.—The village has 600 inhabitants, and is about four years old. This section affords a good and extensive market for the products of Northern Wisconsin. At "Strong's Landing" (Berlin) the surplus is sent east, via Lake Winnebago and Fox River to Green Bay. A Railroad is chartered, and put under contract, being worked, and soon to be finished (excepting accidents,) from Harrison in Dodge Co., to Berlin. Another R. R. from Berlin northwest to Stephens' Point, is surveyed, and will soon be "*put through*." This "air-line" road will pass through Waushara Co., and within a mile of Saxeville, which place, by its location, is destined to be permanent head-quarters of the county.

The lands along the lake from Sheboygan through Ozaukee (old "Port Washington") to Milwaukee, fifty-five miles, are timber lands, worth, average, $20 per acre. The crops upon them are excellent. The crops en route to Madison—(West a "spell" 100 miles from Milwaukee,) are not uniformly good; as you approach the city, they are very good. The grasses of the State, tame and wild, or native, are good—generally very good. Madison is a *Capitol* place, the "pride of the west," and as a *place*, the great *beauty* of nature and of North America. Its citizens are very intelligent, fast, permanent and hospitable. The Milwaukee & Mississippi Railroad is *complete* as far west as Madison—is an excellent road, as well manned by officers, conductors, &c., as the New York Central or Michigan Southern. The cars on this road have been *conducted* for an average of three years without an accident to any person. From each and all of the cities along the west side of Lake Michigan, including Chicago and Sheboygan, there are good plank roads extending west from fifty to ninety miles. These roads pay bounteously to their shareholders, and prove a great convenience to settlers and explorers.

At all the *places* in Wisconsin, from North to South and East to West, 'twas my fortune to meet with A. C. Sooville, Agent of the Michigan Southern and Northern Indiana Railroad—a large, active, *clever* man. What is his business? thought I. What good thing is he *trying* to do? A close inspection satisfied me that this "gem" of an agent was all the time working for his road, and getting almost *all* the business of the east and west to go and come by *his* road. Of this we didn't wonder—for 'twas our fortune to come west upon it, and upon their steamer "Northern Indiana." Our family aver that the boat and road are delightful, accommodating, sure in time, and character above suspicion or question. I regret now, for the sake of my kind, that I did not make mention of *this* line in my first epistle. At the time, I was fully satisfied that these westerners were *all* men—fast, gentle and sure. Try 'em, friend Moore, and believe me yours, sincerely,

Peter Saxe.

News Paragraphs.

☞ A fire originated at the farm of Mr. Martin Dunphy, in the upper part of Roxborough, Pa., a few days since, under the following curious circumstances:—A girl was frying some fish, when the melted fat ignited, and in removing the pan, the blazing fluid fell upon a cat. The animal ran into the hay stack, and the hay was immediately in a blaze; the barn caught fire, and was soon consumed; and the flames extended to the dwelling of Mr. Dunphy, which narrowly escaped destruction. The total loss is estimated at $500.

☞ The fly-wheel of the rolling-mill at South Boston, burst on Thursday night, Aug. 3. It weighed ten tons, and broke into hundreds of fragments, doing great damage to the building. A piece was thrown across the yard and descended through the roof of the main building, where two hundred people were at work, but no one was injured. The damage amounts to several thousand dollars.

☞ The N. Y. Evening Post of July 29th, devotes more than two columns to a table, showing the name, age, residence and nativity of all the persons who died of cholera in that city, from the first appearance of the disease, a period of nine weeks, ending on the 22d July. The footing shows a total of 624 deaths, of which 502 were foreign, and 122 native-born citizens.

☞ It is reported that nearly 2,000 dogs have been slaughtered at the public pound, New York, since the Mayor's edict went forth on the 20th ult., and that nearly an equal number have been redeemed alive by their owners. Over $3,000 have been paid to the dog-catchers. The war against unmuzzled dogs will be continued until the 1st of September.

☞ A suit, in which damages are laid at $20,000, has been instituted by a gentleman of West Roxbury, against Mayor Smith, Marshal Freeman, Gen. Edmands and others, for injuries sustained on the occasion of the rendition of the fugitive slave, Anthony Burns. Writs have been served on the above parties for their appearance at court.

☞ The Oswego Journal notices that the cholera appears almost exclusively in low, wet and filthy localities, and takes off the intemperate and imprudent. The Journal adds:—"It seems to be a terrible schoolmaster, sent to teach the nations the great lessons of morality, cleanliness, temperance and prudence in all things."

☞ The Philadelphia Sun says that Mr. George Serenus, rectualer, Second and Lombard streets, whose maiden aunt, some months since, left him £9,000, received intelligence recently that £5,000 of the money had been sent him by the steamer Glasgow. There was no insurance upon the money, and it is a total loss.

☞ One man near Cambridge, Mass., raised this year, on eight acres of ground, strawberries which sold for near $10,000, and yielded a net profit of $3,000. The encouragement was such that the same man is stocking eight acres more with the plants. The picking, weeding, &c., are all done by German women.

☞ It is estimated that since the appearance of the cholera at Jessore, in British India, in 1817, not less than eighteen millions of the human family have fallen victims to it—about fifteen to sixteen millions of whom have died in India and other parts of Asia, and the remainder in Europe and America.

☞ At one of the salt wells on the Muskingum river, opposite McConnelsville, gas is emitted of sufficient strength to throw the water to the surface of the earth, and of such an inflammable nature as to require only two bushels of coal a day to furnish heat enough for all manufacturing purposes.

☞ The Dahlia is a native of the marshes of Peru, and was named after Dahl, the famous Swedish botanist. It is more than thirty years since its introduction into Europe, and it is now the universal favorite of florists. The number of known varieties is about 500.

☞ The Litchfield Republican says that Lorenzo Wheeler, while at work on a road in that town, a week or two since, found a hollow dish of soap stone, probably used by the Indians for cooking. It weighs nearly 30 lbs., and has a handle on each side.

☞ An alligator four feet in length was captured in one of the streets of Savannah a few days since. He had crawled out of the river, and was quietly taking a survey of the town, when he was discovered by a watchman, who arrested him on suspicion.

☞ Coffee is now regularly served to the French soldiers when in active service or in camp; and new hay and oats are no longer prohibited to the horses of the army, recent scientific examination having exploded the idea of their being injurious.

☞ The Turks at Varna were recently much surprised by the appearance of the young and beautiful Countess of Ernst, who accompanies her husband, a Captain in the English Rifles in the campaign. In her belt she sticks a brace of Colt's revolvers.

☞ Easter, a negro woman, the property of Mrs. Eliza F. Carter, near Upperville, in Fauquier county, died on the 16th July, having attained the age of one hundred and forty years. This is one of the most remarkable cases of longevity on record.

☞ Mrs. Lovina Baker, of Guilford, Chenango county, N. Y., who is now in her ninetieth year, has spun from the flax, and woven the present season, forty-four yards of kersey cloth which for smoothness and fineness is pronounced unequaled.

☞ The valuable water power and factory property at Harper's Ferry, Va., was sold on Tuesday last for $25,000—A. H. Herr, Esq., the purchaser. This property, including machinery, &c., for a cotton factory, cost the company about $100,000.

☞ The Carrolls, of Carrollton, have recently enlarged the church at Carrollton, and built a monument to their heroic old ancestor of revolutionary memory, who was so determined that his place of residence should not be mistaken.

☞ Six counterfeiters, three men and three women, have just been arrested in Buffalo.—Large quantities of bogus coin were found in their possession. Their manufactory was in a log hut six miles from the city.

☞ It was stated in the House of Lords on Tuesday, on the authority of Lord Cokr, that a marriage had once been set aside because the husband had upon one occasion stood godfather to the second cousin of his wife!

☞ The Deaf Mutes have contributed $2,500 for a monument to Rev. Thos. H. Gallaudet, the originator of deaf mute education in this country. The monument will be erected in Hartford on the 6th of September.

News Brevities.

—— One column of advertising in the London Times is worth £6,000 a year.

—— There is a Bible in the library of the University of Gottengen, written on 5,476 palm leaves.

—— A man in Wheeling, Va., the other day, rendered himself a cripple for life, by taking a cold bath while sweating.

—— The sum of $38,802 has been expended in street cleaning in New York during the last three months.

—— A Yankee has been in Copenhagen to get permission of the Danish Government to lay down telegraph wires.

—— The grasshoppers, in some parts of Vermont, have eaten the pastures so close that they look like a dry road.

—— The Utica Herald says a number of gentlemen in that city are endeavoring to get up a Know-as emigrating party.

—— The cholera is making sad ravages at St. Peter's Orphan Asylum, Cincinnati. There is an increase of cases in the city.

—— More than thirty of the students of the University of Georgia have made a profession of religion during the past year.

—— The Louisville Democrat advertises for a "teacher wanted." The sporting season is probably about to commence in Kentucky.

—— The Utica Herald says there are between 800 and 900 Know-Nothings in that city, and 100 members of the Guard of Liberty.

—— The electric telegraph is now in operation between Calcutta and Bombay, a distance of over a thousand miles in a direct line.

—— It is proposed to drain Beaver Lake, in Indiana, and thus bring nearly one hundred square miles of rich arable lands into cultivation.

—— It is said that a quarter of a million of money was expended upon the dresses of the image of the Virgin Mary in the city of Rome.

—— Three head of young cattle belonging to H. T. Phillips, of Royalton, N. Y., and valued at $80, were killed by lightning on the 1st inst.

—— Subscriptions for the relief of the suffering families of the ill-fated passengers on board the City of Glasgow, are going on in Philadelphia.

—— It is stated that the authorities of the various States of Germany are beginning to be alarmed at the immense emigration to the United States.

—— The people of Hartford have voted not to appropriate any money to buy liquor to be sold by the Town Commissioner for medicinal purposes.

—— The longest railway in the world, is said to be the Illinois Central, which is 731 miles in length, and is very rapidly approaching completion.

—— Sir Allan McNab, of the steamer Caroline burning memory, has been elected to the Canadian Parliament, for Hamilton, by a large majority.

—— The Universalists are soon to have a college in Somerville, Mass., to be presided over by Hosea Ballou, D. D., now in Europe purchasing a library.

—— Thos. W. Sweetzer, late of Salem, Mass., has left a bequest of $10,000, for the purpose of furnishing the poor inhabitants of that city with cooking stoves.

—— Last year by far too large an amount of goods were imported; the Custom House statistics indicate a falling off this year of nearly $20,000,000.

—— Cassius M. Clay has just completed an oratorical tour of Northern Illinois. He has made some twenty speeches, and always to large and attentive audiences.

—— The Vicar of Peterborough, who has commenced a system of open air preaching, announces his intention to persevere in it during the summer months.

—— The official statement of the U. S. Treasurer's Department for the last quarter, shows the receipts to have been $16,854,793, and the expenditures $23,745,102.

—— Bodry Cart, a laborer, while digging a cellar in Louisville, Ky., found a box under the ground which contained gold and silver coins to the amount of $1,000.

—— Princeton College numbers among its graduates more than six hundred clergymen, and more than ten hundred judges, statesmen and members of Congress.

—— It is said that French troops form at present the larger portion of the garrisons of Rome, Athens, and Constantinople, the great capitals of the ancient world.

—— Zebina Mundy, of Granby, Mass., while spreading hay, almost stumbled backwards over a rattlesnake, four feet long with fourteen rattles. The man captured the snake alive.

—— Mr. James Smith, of New York, is building an engine for Eagle Engine Company No. 4 of Brooklyn, which will cost the Company, when completed, nearly or quite $7,500.

—— The offer of a bounty of 160 acres to each single man, and 320 to each family settling in Oregon, holds good till December 1st, 1855, having been extended by the last Congress.

—— It is said by a physician that beer-drinkers in London can scarcely scratch their fingers without risk of their lives. Every medical man in London dreads a beer-drinker for a patient.

—— A Presidency of a College is about to be established in Calcutta, having the power to confer degrees. Pupils from all government schools throughout Bengal are to be admissible.

—— Among the Swedish emigrants who arrived at Boston last week, were one hundred and fifty Mormons, on their way to Salt Lake City. Their leader glorified in four buxom wives.

—— Since the first discovery of gold in California the yield has averaged about $60,000,000 yearly, or $5,000,000 a month, $1,250,000 a week, $178,571 a day, $7,440 an hour, or $124 per minute.

—— Bathing is recommended as one of the best modes of preventing cholera. Among the 16,000 who frequented the public baths of Paris, during a cholera season, it is said that but two died of the epidemic.

—— The native congregation, under the care of the missionaries at Beyroot, Syria, sent 1,000 piastres, and the church at Hasbeiya 700 piastres, to aid in furnishing a million copies of the New Testament for the Chinese.

—— The Buffalo Courier is informed that the Rev. Dr. Lord, of that city, preached his farewell sermon to the congregation of the Central Presbyterian Church, on Sunday week. He has preached in that church for twenty years.

Literary Notices.

DANIEL BOONE, and the Hunters of Kentucky. By W. H. BOLLART. Auburn and Buffalo: MILLER, ORTON & MULLIGAN. 1854.

No more thrilling story of adventure is to be found, than that here first given, in an accessible form, to the reading public. BOONE was not only a bold hunter and warrior, but he was a resolute, adventurous, and self-reliant hero—a forest knight worthy of honor in the annals of his country. The volume before us is well got up, and illustrated by several engravings. Sold at DEWEY'S.

AMERICAN PHRENOLOGICAL JOURNAL, a Repository of Science, Literature, and General Intelligence. New York: FOWLERS and WELLS. Monthly, $1, per annum.

This neat and valuable monthly has just commenced a new volume—the August number being the second of Vol. Twenty. It is the standard Journal in matters Phrenological, and may be consulted with profit by all interested in the reforms of the age.

THE WATER-CURE JOURNAL, and Herald of Reforms, Devoted to Physiology, Hydropathy, and the Laws of Life. New York: FOWLERS and WELLS. Monthly, $1, per annum.

A new volume of this popular Journal commenced with the July issue. It contains a large amount of reading on the Water-Cure, Vegetarianism, the Dress-Reform, Horticulture, &c., &c.; and, like the Phrenological Journal, is amply illustrated by appropriate engravings.—D. M. DEWEY, receives subscriptions in this city.

THE WESTMINSTER REVIEW, for July, contains articles on Cardinal Wolsey; The Board; The Civil Service; The Russo-European Embroilment; Wycliffe; Compte, &c. New York: L. SCOTT & Co. DEWEY, Agent.

Foreign Intelligence.

Arrival of the Atlantic.

THE Atlantic arrived at New York Aug. 5, at 9 P. M.

Flour declined 1s, wheat 3d, and corn 1s.

Prince Gortschakoff had announced his intentions of defending Moldavia and Wallachia with 200,000 men. His head quarters are at Slobodzie.

Gen. Luders had concentrated his forces at Kalarsh.

The official documents published in the Principalities in the name of the Czar, bear the words "Protector of the Danubian Principalities."

Three steamers of the allied fleet have appeared before Odessa, and destroyed some of the works there.

The Greeks had attempted the assassination of Lord Raglan, the English Commander-in-Chief. The ring-leaders were seized and hung. Three interpreters of the British army had been found guilty of correspondence with the enemy and shot.

Omar Pasha appears still to avoid a general action with the enemy.

The cholera has nearly disappeared from the Baltic fleet. The French expeditionary force had arrived at Helsingfors, and Gen. de Hilliers and staff directly proceeded overland to Copenhagen. The British squadron in the Baltic was lying at Kioge.

SPAIN.—The infant Don Fernandez, brother to the King, is dead.

The Junta has re-established the municipality of 1843. The members of the Corps Diplomatic had been called together at the Palace.

It is Queen Christina that has fled from Madrid, and not Isabella. The former was arrested at Sabastion, and placed in the castle of that town.

The Carlist movement is said to have broken out at Navarre. The French government is about to establish a corps of observation on Pyrean frontier.

Madrid dates of the 19th state that on that evening Madrid was in the hands of the populace, and that a Provisional Government had been proclaimed.

A Vienna dispatch states that a battle was fought on the 19th at Giorgeno, in which the Russians were defeated, and two of their prominent Generals killed. In the battle the Russians had 2,000 killed and 4,000 wounded. The Turks, it is stated in a Russian account, had 5,000 killed and wounded. On the following day the Russians undertook a forced reconnoissance, but were repulsed with loss. The retreat was so hurried that a portion of their number were without food for several days.

Several new bridges have been thrown across the Pruth, near Squina, and during six entire days the Russians marched across into Moldavia. Bands of Cossacks were traversing the Dobrudscha, killing the inhabitants and burning their villages, for displaying sympathy for the Turks.

During the debate in the British Parliament on the war credit, incidentally raised by demands on both houses for explanations, the important declaration was extracted from Ministers, that in the settlement of the question at issue, whenever it might arrive, there was no intention upon their part of retaining the "Status quo," and Lord John Russel even went so far as to intimate that Russia would not be allowed to maintain the menacing attitude that she had hitherto done by keeping so large a fleet at Sevastopol.

The Portuguese government has prohibited the export and authorized the import of Indian corn until the 25th of Sept.

Later from Europe.

We stop the press to announce the arrival of the steamer Arabia, which reached New York on the evening of the 8th, with three days' later news from Europe.

Flour has advanced from a sixpence to a shilling sterling per bbl., and wheat three to four pence a bushel. Corn is also higher one to two shillings per quarter.

The political news possesses nothing of a startling interest.

Gortschakoff is withdrawing a portion of his army to Bucharest, the mouth of the Danube being no longer tenable.

A dispatch from Dantzic states that the Hecla and Bulfrog have commissioned Boomerang, but without loss in either vessel.

Gen. Hillers has sailed for the Baltic. No news from Sir Charles Napier.

From India there is nothing important.

California News.

Arrival of the Star of the West.

The Nicaraugua steamer Star of the West, arrived at New York July 7, with two weeks later news from California.

She brings $663,000, and 130 passengers.

There were several British vessels of war lying at San Juan.

Destructive fires had occurred in San Francisco, Sacramento, and Columbia. Loss about $1,500,000. The fire in San Francisco occurred in the lower part of the city, and laid three squares in ashes. The steamers Yankee Blade, Brother Jonathan, and Sierra Nevada, narrowly escaped destruction.

The fire in Sacramento consumed nine squares, bounded by J, K, and 3d and 4th sts. The Court House, recently occupied by the Legislature was destroyed.

Destructive fires had also occurred at San Jose, Benicia, Marysville, Grass Valley, Diamond Springs, and Minnesota. The latter town, with the exception of three houses, was entirely destroyed. Nearly all these fires were the work of incendiaries.

The Democratic party in California is completely split up, and it is stated positively that there will be two conventions, two party organizations, and two tickets. The position of the party is similar to that in New York. The Democrats were to meet at Sacramento on the 8th ult., and the Whigs on the 25th. The latter are confident of carrying the State.

Trade was depressed. Flour selling at retail at 10½@10¾. Provisions were declining.—Lumber was abundant and lower, as also were dry goods, boots, shoes, &c. Real estate declined.

DAMON.—The only news of importance is the immense discovery of gold at Port Oxford.—Many miners were getting $50 per day.

The Star of the West reports great excitement at Kingston, Jamaica, in consequence of the bombardment of Greytown. The feeling against the Americans was immense. The Journal insinuates that Com. Hollins was grossly intoxicated all the while. It also states that among the first houses destroyed by the Cyane's guns was that of the British Consul. All the papers denominate it the most cowardly transaction on record. The Journal calls on the British Government to send a fleet to bombard New York or Boston in retaliation, and says that Greytown was under the British Protectorate, and therefore the British Government must vindicate itself, no matter what might ensue.

Meetings had been held to raise funds for the people of San Juan. A British frigate had taken possession of Punta Arenas, and other British vessels had arrived to maintain the blockade. The English flag had been hoisted at Greytown.

A rumor was current at Kingston when the Star left, that a British and French vessel of war had been sent in pursuit of the Cyane, which had sailed from Pensacola.

In relation to the affair, Capt. Tinklepaugh, of the Star of the West, comes out in a card in the New York evening papers, denying that Punta Arenas is held by the British, and adds that all was quiet at Greytown when he left, and that everything was in a satisfactory condition.

The cholera was rapidly subsiding in Jamaica. It had disappeared from Falmouth, Stuart Town, and Rio Bueno. From Barbadoes we learn the cholera was also abating, though its ravages had been fearful—the total deaths being between 12,000 and 15,000.

Congress—Its Action.

Though the business of Congress was pretty much closed yesterday, its Session is protracted till Monday. The following are among the most important laws:

The regular Appropriation bills.
The Kansas and Nebraska bill.
The bill providing for first class war steamers.
The Ten Million bill of the Gadsden treaty.
The Homestead bill for Kansas and Nebraska.
The bill extending the warehousing system.
The bill to give effect to the Canadian reciprocity treaty.
The Senate has approved of the following treaties:
The Gadsden treaty.
The British Colonial Reciprocity treaty.
The Commercial treaty with Japan.
The Neutrality treaty with Russia.

Sundry treaties extinguishing the Indian titles in Kansas, Nebraska and other Territories.

Many important and *expensive* schemes for expending money that passed the Senate, either lay over or have been rejected by the House of Representatives. Among these were numerous Railroad Land Appropriations and the Eight Million Texas Debt Bill.—*Evening Jour. Aug. 5.*

Marriages.

In church at Utan, N. Y., by Rev. N. CLARKE, on the 17th June, 1854, Prof. HENRY F. HAKEN, of the "Water Vocalists," and Miss MARTHA H. LOOMIS, eldest daughter of Dr. H. Loomis, of Utan.

Also, at the same time and by the same, JOHN W. MURRAY, Esq., of Jefferson, Ohio, and Miss JOSEPHINE S. LOOMIS daughter of Dr. Loomis.

Prof. BAKER is one of the four celebrated Brothers—and one of the *very best* singers—and having joined the *favorite* of the numerous family of his *father-in-law*, more and merrier music is anticipated during the next quarter century.

Deaths.

In Pomstock, Mich., of consumption, IRA, youngest son of JOSEPH T. and HEPSEY ANN SMITH, aged 22 years and 6 months.

He was noble, kind and generous, and well it may be said, "None knew him but to love him. None saw him but to praise."

Commercial.

BUSINESS AND FINANCE.

In the financial world things move on as usual. The Star of the West brought in on the 5th $663,000, and the Union, the Niagara, and the Pacific took out upward of a million and a half.

Total imports of foreign goods at New York, for the seven months ending the 31st ult., is $113,307,000, an increase over the same time last year of $1,638,000. Export of domestic produce during the past seven months, is $34,861,000; increase over same time last year, $5,480,000.—Specie exported thus far this year, $19,168,000. Increase, $5,071,000.

The extensive Railway Banking House of GILBERT COE & JOHNSON, of New York, have suspended payment, and others will most likely follow suit. Stocks continue much depressed.

Market Intelligence, &c.

RURAL NEW-YORKER OFFICE,
Rochester, August 9, 1854.

WHEAT and Flour have declined both at home and abroad. In our market new Genesee Wheat sells to-day at fifteen shillings, and Flour at $5,50@10,75. Corn unchanged,—but Oats are lower, selling at 30cts.

Eggs lower, selling in the dealers at a shilling.

New fruits do not sell readily at this time, owing to caution on the part of consumers from fear of epidemics. New Apples bring in the market three to four shillings per bu.

Wool dull and unchanged.

Rochester Wholesale Prices.

NEW YORK MARKET—Aug. 7.

FLOUR—Market without material variation. Transactions small. Demand is confined to the home trade, and common kinds are exceedingly dull. Sales in the aggregate 4,000 bbls. at $6,37½@6,50 for inferior State; $6,75@7,25 for com. to strict do.; $7,50@8,00 for com. to fancy Wis., Mich. and Ohio. The market for Canadian fair with fair demand. Sales 600 bbls. $7,87½ in bond, and 100 bbls. at $7,50 duty paid. Corn meal selling at $3,75@3,81 for Jersey in small parcels. $4,00@4,12 for Brandywine.

GRAIN—Wheat not very fair. The receipts not large, but more than sufficient to supply demand. Sales 2,000 bushels red upper lake at $1,50, and 2,200 bushels white southern $1,81. Parcels prime western and poor white Canadian were rumored sold. Corn lower for prime, and without change for inferior. Sales 4,500 bus. at 65@65½c for unsound; 68@70c for sound. Oats dull and lower; sales at 43@44c for state and western.

PROVISIONS—Pork unchanged, with moderate demand for home use. At the close buyers had slightly the advantage; sales 400 bbls. at $12@12,12 for mess, $10,37@50 for prime. Lard firm and active. Butter active and the better kinds are firm; Ohio 12@15c., ordinary State 16@20c. Cheese unchanged.

ALBANY MARKET—Aug. 7.

The market opened dull. The transactions in Flour and Grain have been limited, though the receipts are small, and prices are not materially changed from our last report.

Flour—We have only to notice a limited business doing in western and State flour at former rates. Sales 600 bbls. $6,81@$7 for com. to good State and western; $7,69 for good to fancy brands of do.; $8,50@10,50 for extra Genesee. Corn meal is in steady request at $4,44.

Grain—Wheat in moderate request, and the market is without material change. Sales 600 bus. white Genesee at 2,30. Corn is quiet and dull. Rye is quiet. Oats are freely offered with but few buyers at the present market rates. Sales 3,000 bus. Chicago on p. t., and 1800 bus. dried at 40c.

BUFFALO MARKET—Aug. 7.

Flour—The market is very quiet this morning, but without any change to note in quotations. The sales are 500 bbls. at $8@8,50 for good to choice Ohio. On Saturday night 300 bbls. Black Rock was sold at $7,12½, and resold at $7,25.

Grain—Wheat, none offering on market. Corn dull and lower; sales 8,000 bus. Toledo at 57c. Oats quiet and dull.

NEW YORK CATTLE MARKET—July 31.

At Washington Drove Yard—Offered to-day 1,337 Beef Cattle; during the week 2,141. For Beef Cattle the market does not vary materially from last week. We have of some extra bringing as high as $10,50, but the fair market average must be taken at the figures below. We quote Beef Cattle $8@10; Cows and Calves at $30@75; Veal Calves (live weight) 4@6c; do. grass 2½@3½c; Sheep (or fort) $2@4,50; Lambs $2,50@5,50; Swine (corn fed) $4,75@5.

At Brownlog's—Prices at this market for Beeves have taken a very wide range. Sales at $7,50@10 per 100 lbs. for Beeves; Cows and Calves lower, and sold at from $30 to $45; extra at $60. Veals 4½ to 6¾c. per lb., live weight. Sheep and Lambs in large supply, and prices declined.—Sheep range at from $2 to 3,50@; Lambs at $2 to $4,50; some extra at $5. Unsold 200.

At Chamberlain's—Prices of Beef ranged at from $8 to $11,50 per 100 lbs. Cows and Calves from $30 to $50.—Veal Calves at from 4½ to 7c per lb. Sheep $3,00 to 7,00. Lambs $2,50@6.

At O'Hara's—Sales of Beeves at $8@9,50 per 100 lbs. Cows and Calves at from $35 to $40; extra, $50 to 55.—Veal 4½@6c. per lb.

CAMBRIDGE CATTLE MARKET,—Aug. 2.

At market 631 Cattle—887 Beef Cattle, 50 Stores.

Prices—Market Beef—Extra $8,50 per cwt.; 1st quality, $8,00; 2d do, $7,00@7,25; 3d, do, $6,50; ordinary, $5,50@6,00. Hides, ₩ cwt, $6,50@7,00. Tallow $8,50@9,00. Pelts, 5½@6c. Calf Skins, 15c ₩ lb. Veal Calves $3,00 to $7. STORES—Working Oxen—$62 to $95@98.

SHORT-HORN BULL FOR SALE.
THE subscriber offers for sale his pure bred Short-horn Bull, "Sir Arthur"—color mostly red, calved Aug. 11, 1851; bred by Geo. Vail, Esq. He is a fine animal, of large size and fine symmetry, and descended from some of the best animals on record in the English Herd Book. Or I will exchange for a good thorough bred Short-horn cow. For further particulars address JAMES MERRIMAN,
Oriskany, Oneida Co., N. Y.,
240-8t 7 miles west of Utica by Railroad.

A VALUABLE FARM FOR SALE.
SITUATED 2½ miles north-east of the village of Centerville, Allegany Co., N. Y. Said farm contains 178 acres; 140 acres improved and in a good state of cultivation; well adapted for all kinds of produce, and well situated for two farms if desirable. There are good buildings on the farm, and an orchard that contains a good variety of fruit. Also plenty of good rail timber. The farm is abundantly watered with living springs of soft water. Said farm can be bought cheap. Terms easy, and possession given when desired. For further particulars inquire of the subscriber on the premises. MICHAEL GODDRICH.
Centerville, Allegany Co., N. Y., Aug. 2, 1854. 1t*

WALWORTH ACADEMY.
THE next term of this Institution will open Wednesday, August 9th, and continue 14 weeks, under the direction of John F. Severance, A. M.

The institution has been entirely refitted and furnished with all the means requisite for an Institution of the first class, and no pains will be spared to make it one of the best Institutions in the State.

Tuitions, $4, $5 and $6, according to the branches pursued. E. YEOMANS, President.

L. J. HICKS, Secretary.
Walworth, Aug 1, 1854. 240-2t

MONROE COUNTY KANSAS EMIGRATION SOCIETY.

ROCHESTER, New York, July, 1854.

THE Monroe County Kansas Emigration Society has been formed for the purpose of aiding in the settlement of the newly organized Territory of Kansas, by industrious, intelligent, and liberty-loving inhabitants. It will act as an auxiliary to the Emigrant Aid Company, which has recently been organized under a charter granted by the Legislature of Connecticut, by the appointment of ELI THAYER, of Worcester, Mass., as President, and a Board of Directors, including Amos A. Lawrence, of Boston, Moses H. Grinnell, of New York, and other gentlemen, whose high reputation for integrity, business capacity and pecuniary responsibility, furnish a guaranty to the friends of the enterprise, for an honest, energetic, prudent and successful discharge of their trust. Under their auspices, a pioneer party of emigrants took their departure from New England on the 17th of July, and are now in the territory, engaged in making explorations, selecting sites, and making arrangements in the erection of temporary dwellings, mills, &c., for the accommodation of their successors when they shall arrive. The directors are confident, from the applications they have received and the information which has reached them, that they will be able to transport as many as 20,000 emigrants to Kansas before the close of navigation this season. A line of clipper ships is now being built at Boston by Donald McKay, the celebrated ship builder of that port, designed to run to Germany under the auspices of the Company, for the purpose of bringing out emigrants, to whom passengers in the German ports will sell tickets, providing for their transportation, for only one the ocean, but over the land to their ultimate home in Kansas.

The purpose of the Emigrant Aid Company is, by making railroads on a large scale, to secure transportation for emigrants at greatly reduced rates of fare—to protect them from frauds and delays, by providing trusty agents at the leading points upon their journey, who may furnish them with information and pilot them on their way, and to provide as far as possible for their temporary shelter upon their arrival in the territory, and to furnish sawmills, grist-mills, blacksmiths' forges, and such mechanical establishments as are most needed in a new settlement, and from the wants of which great inconvenience is usually suffered by the first occupants of a country. In short, it is the object of that Company to apply their capital in such a manner as to establish full grown communities in the Territory, supplied, as far as possible, with the appliances of an advanced stage of civilization; and their capital can only be obtained by securing for it a fair rate of profit. It is impossible, therefore, for that company to extend any assistance to individual emigrants, partaking of the character of charity bounty. The emigrants are to transport themselves, and to support themselves; but they will have the aid of a large capital in reducing their expenses to the lowest practicable figure, and to rendering their labor profitable.

The object of the Monroe County Kansas Emigration Society, and of similar auxiliary societies, is to serve as an organ of communication between the individual emigrant and the Emigrant Aid Company. Its Secretary will be supplied with transportation tickets, to be sold at the same reduced rates obtained by their purchase at wholesale in large quantities. He will be advised of the time when each successive party will set out for Kansas, so that those desirous of joining may await themselves of the mutual aid and protection resulting from their travelling together in considerable numbers. He will be furnished with the latest intelligence respecting the state of affairs, and the progress of exploration and settlement in Kansas; and in a general way with such information in regard to routes, outfit, chances for employment, &c., as the emigrant will naturally be desirous to obtain. The officers of the Society give their services without any other remuneration than the hope of aiding in preserving Kansas as the heritage of free labor, and in guarding it from the blight of Slavery; and *all* its funds will be sacredly devoted to promote these objects. How much encouragement it may be able to extend to emigration, and whether it shall be able by temporary loans, to expedite those who are desirous of going, but are delayed by a present difficulty in converting their property, depends upon the number who may unite with it, and the amount of their contributions.

We respectfully solicit your aid in extending these to the attention of your personal friends and the friends of this most practical movement for extending the area of freedom.

We respectfully suggest for your consideration whether it may not be advisable to establish a Branch Society in your town, with the object of extending a knowledge of the Society's plans, of collecting the names of persons who wish to emigrate, and sustaining the interest which is generally roused at this time. If this is not thought advantageous, we invite subscribers in your town to designate one or more persons from their members to represent them, and propose that the subscriptions in the funds of the society in your town should be appropriated for emigration according to the wishes of your own members as indicated by the committee, under their instructions, or applied by the Directors to the general purposes of the society. The officers of the society will be happy to receive any communication from you or from such committee, and to furnish them with any information in our possession. The importance of the exigency presented in the settlement of Kansas, is such as to make the utmost promptitude of action among the friends of free institutions particularly essential. It is with the view that our Society completed its organization by the immediate election of a board of officers, to hold for a short term, (till the first Tuesday of September,) at the expiration of which we hope to have numerous members to participate in the election. Large parties will be on their way to Kansas by that time, and it was deemed quite important to present the nucleus of a temporary organization in the interval.

WILLIAM S. BISHOP, Pres't.
JAMES P. FOGG, Sec'y.

CONSTITUTION.

Article 1. Any person may become a member of this Society, by signing his name to this Constitution and paying to the use of the Society, the sum of one dollar, and shall continue to be a member so long as he shall pay such sum annually.

Art. 2. The officers of the Society shall be a President, Vice President, Treasurer, Secretary, and nine Directors, to be elected, in the first instance, immediately, and thereafter, on the first Monday in September, annually, at a meeting held in Rochester. The President, Vice President, and Treasurer shall be, *ex officio*, members of the board of Directors.

Art. 3. The officers shall perform such duties as shall appertain to their respective situations, and such, also, as shall devolve upon them, under the By-Laws of the Society.

Art. 4. It shall be the duty of the Secretary to receive and keep the names of all persons desiring to emigrate to Kansas, from Monroe County and its vicinity; to agree upon the time and conveniences for their departure, and to confer with the Emigrant Aid Company, so as to make the best arrangements for their conveyance to Kansas, and their location there.

Art. 5. The moneys of the Society shall be appropriated to promote such emigration into the above-named territory, as shall be opposed to the introduction of slavery into the same; or, if slavery shall be introduced, as shall be in favor of repealing all laws tolerating the same; and also for such means of promoting free emigration as the Directors may direct.

Art. 6. Suitable By-Laws shall be adopted, at the first meeting of the Society, and the same may be altered or amended at any meeting, after having been proposed at a previous meeting. The Constitution may also be amended at any meeting held for that purpose, upon public notice of the proposed amendments which shall have been offered at a previous meeting.

Art. 7. It is the design of this Society to co-operate with the Emigrant Aid Company, in the colonization of Kansas with freemen.

Art. 8. The Directors shall have power to fill any vacancies in their board, or in the list of officers, antecedent to the annual meeting of the Society.

BY-LAWS.

Art. 1. A majority of the Board of Directors shall be a quorum for the transaction of business, and a majority shall reside in the city of Rochester.

Art. 2. It shall be the duty of the Treasurer to keep safely all moneys of the Society, and to pay the same over, from time to time, on the order of the President and Secretary, in pursuance of an appropriation by the Board of Directors, and not otherwise.

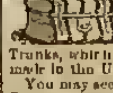
Art. 3. The Secretary of the Society shall also be Secretary of the Board of Directors.

OFFICERS OF THE SOCIETY.

President—WM. S. BISHOP. Vice President—O. H. PALMER. Secretary—James P. Fogg. Treasurer—Frederick Starr. Directors—Edwin Pancost, Joseph Field, E. Peshine Smith, Samuel D. Porter, Jerome B. Stillson, Prof. J. H. Raymond, Isaac Butts, Frederick A. Whittlesey, and E. H. Elwood. 240-1t

SUFFOLK SWINE.
I have for sale a few good Suffolk pigs, now about three months old. Price per pair, properly mated, from different litters and families, caged, supplied with food, &c., is $40. Also, my last year's stock Boar "Boston" price $75.
Sennett, Cayuga Co., N. Y. 2w* JOHN B. PAGE.

TRUNKS AND VALISES.



THE subscriber would inform the citizens of Rochester and the public generally, that he is manufacturing exclusively, a very superior article of sole leather and steel spring Trunks, which he will guarantee to be equal to anything made in the United States.

You may see at PRITCHARD'S Trunk Depot and Sales Room, 78 State street, 1850 Trunks and Valises, and he is now adding to this large stock from 125 to 150 per week—among which you may find Trunks varying from one dollar to fifty. If you should want anything in this line, give him a call, for his motto is, "Large sales and small profits."
A. B. PRITCHARD, No. 78 State St.
Rochester, N. Y., Aug., 1854. 240-tf

THOMAS' NEW FARM BOOK.
FARM IMPLEMENTS, and the principles of their construction and use, with 200 Illustrations. By J. J. THOMAS.

The following are only a few out of the many commendatory notices which this work has already received from the press:

It is a most valuable work; is admirably adapted to the wants of the farmer; and there is no more desirable book for our Common Schools.—*Journal of N. Y. State Ag. Society.*

We wish to see this work placed in the hands of every farmer and farmer's son, as an indispensable book; and school commissioners should see that it has a place on the shelves of every rural district school library. It is admirably adapted for popular use as a text book. The illustrations are ample and excellent; and every statement is made in such a straightforward manner that even a child could not mistake the meaning. Mr. Thomas has done the agricultural community a great service in the preparation of this book.—*Horticulturist.*

This is an invaluable work for the practical agriculturist, affording as it does the theory of mechanical forces as applied in machinery used to farm labor; it will enable farmers to construct many indispensable articles, and to understand the principles and construction of all agricultural machines.—*Boston Herald.*

We have never seen so much philosophy brought to bear in a practical manner on the ordinary concerns of life.—*Presbyterian Banner.*

Just the book for farmers who wish to perform their labor intelligently and efficiently.—*Zion's Herald.*

This is an interesting and invaluable work for the farmer, and should be in the hands of every farmer in the country.—*Ohio Farmer.*

We should be glad to see the book in every one of our schools and popular libraries.—*N. Y. Agriculturist.*

Published by HARPER & BROTHERS, New York, and sold by booksellers generally. 239 3teow.

DRILLING IN WHEAT.
Moore's Seed Planter, or, Grain Drill.

PATENTED July 2, 1850.—This valuable implement of husbandry, which has been thoroughly tested in many places, is used for planting WHEAT, RYE, CORN, OATS, BARLEY, BEANS, &c. It operates equally well on all kinds of land, and is not injured by coming in contact with rocks, roots, &c.; and it is believed, is superior to any other implement of the kind in use, as may be seen by the testimonials of many of the best farmers in the State. There are several advantages in drilling over broad-cast sowing, among which are these:—It is most expeditious; it saves labor, which is money; it completes the process of seeding wherever it moves; and experience has proved that more grain is obtained, of a heavier berry, and with less seed, owing to its being covered at any required depth, where every kernel has moisture and a chance to germinate.

DRILLING WHEAT.—Edward Stabler, in his admirable essay on the advantage of drill seeding, states that after examining its result on some 500 or 1,000 acres, besides large experience on his own land, he finds there is not a single instance where it has not proved the most profitable.—First, in the saving of seed, and secondly in the increased product of the grain, amounting to from one to seven bushels to the acre. He had known the increase, in one case, by careful comparison of the two modes, to amount to nine bushels per acre in favor of drilling. He relates an interesting incident:—A reader offered a drill for the increase in a crop of 50 acres of wheat, to be determined by sowing a few strips broad-cast for comparison; and before the harvest, the farmer preferred paying the hundred dollars for the price of a drill, with interest. On carefully ascertaining the increase, he found it to be one hundred and fifty-three bushels.—*Albany Cultivator.*

Extract from the N. Y. Tribune, Feb. 3, 1853, article on Industrial Exhibitions at the World's Fair, London:

"Those who understand the subject, know that at least one-third of the seed may be saved, and a tenth added to the crop by DRILLING, as contrasted with the old, slovenly process of sowing by hand. The annual saving by the general adoption of drilling in this country, would be equal in value to all the gold we receive from California."

The highest premiums have been awarded to this Drill at the Agricultural Fairs in Delaware, at Philadelphia, Baltimore, Detroit, in Maryland, and at various County Fairs in Pennsylvania, Ohio, Michigan, and other States.

TESTIMONIALS.

To E. W. HUDNUT & Co.:—The Grain Drill which we recently purchased of you in 1852, works to our entire satisfaction. Its simplicity, and certainty of distribution, together with its cheapness, convinced it to preference to any Drill with which we are acquainted. Samuel Lewis, Esq., York, Liv. Co., N. Y.; Wm. W. Fletcher, Jr., Chas. Hazelton, Elijah Armstrong, Geo. W. Ubil, Leaming Clark, Geneseo; Chas. Hendershott, Andrew Boyd, Rich'd Johnson, Groveland.

Extract of a letter from Mr. McCrone, near Newcastle, Delaware:—"Your Drill stands unrivalled, as is admitted by all Farmers in the neighborhood, that have seen it in operation."

"This is to certify, that we, the undersigned, have used Lewis Moore's improved Grain Drill, and we believe that for simplicity, durability, ease, ease, speed and regularity of sowing, it surpasses anything of the kind heretofore in use among us, and we do recommend it to farmers as being a machine the best adapted to their wants."—Siegrid, Wm. Linville, Lancaster Co., Penn., and thirteen other farmers.

Orders will be received for these machines by the subscribers, who have purchased the right to make and sell them in the Counties of Monroe, Ontario, Wyoming, and Livingston.

Cash prices at the shop,—8 teeth Drills, 8 in a part, $65; 9 teeth do., 7 and 8 in a part, $10; 10 teeth do., 8 in a part, $75; 11 do., 8 in a part, $80. E. W. HUDNUT & CO.
Geneseo, Livingston Co., N. Y., June, 1854 230-8t

FARM FOR SALE.
In the town of Arcadia, Wayne county, N. Y., 2¾ miles south-east of Newark, containing 81 acres of superior land, pleasantly situated. House built only a few years; barn needs some little repairs. Orchard contains over 150 Apple trees, 30 Peach, also Plum and Cherry trees. Those wishing a small farm, please call and see. There are chances for additions if wished for. For further particulars inquire of the subscriber on the premises.
ALPHEUS S. TROWBRIDGE.

PATENT AGENCY.
INVENTORS can have their drawings and papers prepared under their own inspection, by applying to
JOHN PUIN, C. & M. E. Agent for procuring and for the sale of Patents, 16 Rufala St., Rochester, N. Y.
Particular attention paid to rejected applications, and to Chemical Patents.
Will also send the claim of any invention patented within the last 14 years, on receipt of one dollar. PATENT RIGHTS FOR SALE. 235-tf

ENGLISH CATTLE.
To Agricultural Societies, and others requiring the best bred Cattle from England, embracing pure blood Horses, Short Horned Cattle, Devons, Herefords, Ayrshire and Alderney Cows, pure bred South Down, Cotswold and Leicester Sheep, Suffolk, Essex and Berkshire Swine. Imported on commission by Messrs. Thos. Brite & Brothers, Hexes, England. For information apply to J. M. Miller, 51 Maiden Lane, N. Y. City, who is fully authorized to act as our agent. Orders received for Guano, by applying to
234-13t THOMAS BETTS, 25 Wall St.

FARMERS' AGENCY.
BEING a Practical Farmer, and having considerable experience in the selection and use of Farm Implements, and living in the vicinity of extensive Seed and Implement Stores and Agricultural Implement Manufactories, and extensive Nurseries of the choicest fruit and ornamental trees and knowing the difficulties that farmers have to contend with in the selection of these in the busiest seasons of the year, I will select, purchase and carefully forward any thing in the above line for a small compensation. Satisfactory reference given in all cases when required, and the money promptly returned to all cases where the wishes of the sender cannot be complied with. 232-1am-tf
Address L. A. CLARK, Marion, Wayne Co., N. Y.

WOOD AND COPPER PLATE ENGRAVING.
MILLER & MIX, Designers and Engravers, No. 16, third story, Arcade, Rochester, N. Y., will be happy to exhibit specimens of their work, embracing a great variety of book Illustrations, views of public and private buildings, landscapes, portraits, machinery, society seals, &c. Particular attention given to engraving Agricultural Implements, Portraits of Domestic Animals, &c.

Invitation, Wedding, Visiting and Business Cards Engraved and Printed at short notice, and on a style to give entire satisfaction. Orders by mail will receive as prompt attention as though tendered personally. L. C. MIX.
232-tf JOHN MILLER.

BONE DUST.—We can supply a few barrels of genuine coarse bone dust, at $2,50 per barrel.
237 H. E. WHITE & CO., Buffalo Ag'l Warehouse.

Poetical.

[Written for Moore's Rural New-Yorker.]

THE POETRY OF NATURE.

'Tis in the wild-bird's song,
Hymned in joyous rhyme,
Keeping time
Zephyr-fann'd leaves among,
Eden's earliest song!
Every day a richer lay
Than mortal ever sings,
Through the forest rings.

There's poetry in flowers—
The harmony of God;
Bright cups of perfume given
From the native air of heaven;
An upper-sphere Elysian
Come down to our abode.

Those loveliest, purest things,
Earth from her bosom brings
Unfolded!
Come they from their Maker's hand,
A blushing paradisial band;
Wooing an infant's love;
To its young feeling
The old heart stealing.

The silvery ocean-ware,
As it dances
To the merry music of the gale,
The solemn tempest-wail,
Or giving starry glances
From a heaven-borrow'd sheen—
Here is poetry I ween.

At the twilight's stilly hour
The rill's low plaintive song
Hath a magic power,
As leisurely along,
Happy ever, ever,
Tiring never, never,
It lulleth its bosom-treasure
With strange, poetic measure.

Aye, 'tis Nature's lyre,
Where burneth poetic fire;
Unswept by mortal hand,
Its heaven-strung chords
Have their own vibration—
Poesy without words—
A diviner inspiration,
Meet for an angel band!

Reed's Corners, July, 1854. C. ANNETTE HARRIS.

Rural Sketch Book.

THE SOPHOMORE'S CONFESSION.

BY EDWARD WEBSTER, ESQ.

THE Society of Lone Men met as usual at their rooms, in the manner and for the purpose heretofore described. One of the latest initiated members was called upon by the President for the history of his misfortunes, and, in the language of MARK ANTONY, those of the society "who had tears to shed prepared to shed them now!"

It is more than a year, he commenced, since as a student I entered these classic halls. I have risen from the low estate of a Freshman, to the lofty dignity of a Sophomore; and in reaching that position, have passed through the usual ordeals so necessary to make those honors sit gracefully upon me. I have been wet down divers times when passing in and out of the recitation hall, by buckets of water thrown from a third story window; have been salted in my seat at the chapel; have had my door blockaded with a stack of fresh-cut hay; my shins kicked upon the football ground; my toes trodden upon in a rush from the crowded porch; and I have suffered with freshman and becoming meekness, the thousand and one annoyances which yearlings in college know so well how to inflict upon new-comers. My experience is consonant with yours; and while to the condition of a recipient of Sophomore indignities, need I say to you, gentlemen, that my soul revolted at them? but now that it comes to be my turn to inflict the torments upon my successors, a great change has come over me upon these points. I can contemplate with infinitely more grace, the prospect of seeing my animal hook another's ox, than to observe him the meek and unresisting recipient of the born! I am thoroughly convinced, in the language of that renowned military tactician in Bleak House, "that discipline must be maintained." I pledge to you, gentlemen, my sacred honor, that the salt shall be duly scattered, the Freshmen properly baptized, and the full measure of annoyances and discomforts meted out to them. They shall be guarded, jostled, kicked, and cuffed all in due order and degree. But my enthusiasm upon the subject leads me astray from the thread of my narrative. It is never agreeable to dwell upon a personal adventure where you yourself have cut a ridiculous figure, but there ought to be some expiation given in all such cases, and due confession made, in order to obtain absolution.

I was raised upon a farm in a somewhat retired neighborhood, and knew very little of the world and its ways. Somewhat unsophisticated and verdant, which—which—

"Which you hav'n't got over yet," suggested a Junior, by way of a prompter.

"Will the president please keep order while a member is speaking?" exclaimed a sympathizer with the narrator; whereupon the presiding officer very properly rapped the head of the disorderly Junior, instead of the desk.

Somewhat verdant and unsophisticated, which rendered me very susceptible to female charms, and very incompetent to make myself agreeable in female society, I was perpetually falling in love with the rustic beauties which blossomed in quiet cottages of our neighborhood, and continually getting myself laughed at for my folly. I was a large, raw-boned, and uncouth youth, slow of movement as well as of speech, and, in short, anything but an Adonis in person; but I had a heart—oh! how soft; and a head—

"Oh! how soft, too," suggested the Junior.

No, sir; anything but that! I fell out of a second story window when I was but four years old, and hit my head upon a stone, with my heels projecting in the air like a forked stake. I carry the marks of that fall upon my head to this day. The concussion drove one of the bumps completely in, so as to produce upon the cranium a minus phrenological development. A lecturer once examining my head in public in our village, called it a *lusus naturæ*. "No sir!" said I (that was before I could read Latin), "'taint no such thing; it's only a stone bruise!" Do you call such a head as that soft, gentlemen? and now that I have vindicated myself from what the national administration calls orthodoxy in New York politics, but heterodoxy somewhere else, let us proceed with the chief incident of our narrative.

There resided in the village, some two miles from where I lived, a handsome black-eyed girl, my junior by a year or two, who had won not only my boyish fancy, but that also of many of the village beaux. She was what the country people call a *smart girl*, somewhat vain of her charms, it must be confessed, and proud of the admiration which she elicited from the young men; but she was really kind-hearted, and, I think, not disposed to inflict upon others unnecessary pain. But her vanity and coquetry occasionally carried her too far, and made her enemies where she would otherwise have possessed fast friends. I was one of her blinded and willing slaves, and subjected myself unwittingly to many an exaction, just because my own honesty of purpose failed to perceive they were experiments upon my facile temper. I was jealous of her favor to others, and would have given half a dozen of the village boys sound thrashings, if I had not been restrained by fear of her displeasure. My heart aches now, even at this late day, to think of what I suffered; but the wound has become cicatrized, and will trouble me no more.

I had one especial rival for the lady's favor, in a young college student, who came into our neighborhood to teach a winter school. He had the advantage over me in many respects, and was disposed to make the most of it. Besides the prestige of a college name, he was good-looking, easy in manners, audacious, impudent; never at a loss for words in conversation, and self-conceited beyond measure. He would thrust himself forward at the breaking up of a singing school or an evening party, and carry off the prize before my face, while I, like a whipped cur, would sneak home across the fields, chagrined and disappointed.

Becoming at length fixed in the belief that my rival's success arose from the fact of his being a college student, with all the honors and degrees of a literary institution in *prospectu*, a circumstance which he was in the habit of lugging in on all possible occasions, in order to increase the amount of consideration shown him in our rural community, I resolved to fight him with his own weapons; in short, to become a college student myself. Accordingly I gravely announced to the old folks one evening after supper, the startling intelligence that I was going to college. The old lady dropped a pan of new milk on the floor in the extremity of her amazement, while father rubbed a glass out of his spectacles, in his haste to call them into requisition. Both believed me seized with sudden lunacy; but the sober earnestness of my manner at length removed all doubts about my sanity; and being an only son, I finally prevailed upon them to aid me in my new-formed enterprise. I laid before them the dignities, the honors, and the glories, which would be showered on our heretofore plebeian house, in case the feat could once be accomplished; albeit, the principal motive was kept carefully out of sight.

After a couple of years' fitting at a preparatory school not many miles distant, I was declared competent to become a candidate for the Freshman class, and accordingly made preparations to depart for this our venerable *alma mater*. The old folks strained a point to fit me out respectably with a new suit of homespun, a goodly bundle of socks and linen, and a moderate amount of cash. In the mean time, I had been over clandestinely to the residence of my lady-love, in order to make a last appeal to her kindly regards before entering upon the field of my literary labors. Her mother, however, when she found I was about leaving the place for a four years' absence at least, had been working very diligently to countermine all my strategic operations; wisely concluding it was neither well for the young lady nor myself to become involved in entangling alliances which the vicissitudes of time and change might subsequently render disagreeable and embarrassing to both. I urged my suit very eloquently, gentlemen, I assure you, but all in vain. I entreated the girl at least to correspond with me during my absence, but she declined on the pretence of the village gossip it would produce; and all the vantage ground I gained was permission to call on her the evening of my final departure.

That evening, having bidden farewell to the old folks, tearful on the part of my poor, disconsolate and doting mother, I hastened with a palpitating heart over the fields toward the residence of the mistress of my affections.—The mother, however, as I afterwards learned, had, with much persuasion, induced the daughter to retire, leaving the farewell ceremonies to be performed by proxy. Knocking at the door, after two or three turns up and down the street, in order to quiet my nerves and muster up my courage, I was shown into the snug little sitting room, where a very kindly greeting awaited me from the father and mother. The daughter did not come. We talked upon common-place subjects for some time, I wondering all the while why the special object of my visit did not make her appearance, but not having sufficient courage to inquire for her.—At length the mother volunteered to hint quietly, "that the poor girl was quite unwell that evening, and had bidden her (the mother) give me her kind regards and best wishes for my success in college." The old lady then arose, shook me by the hand, bade me good evening on her own behalf, and withdrew, leaving the old gentleman and myself alone.

You may call me a dunce, or what you like, but I assure you solemnly, the idea that I was expected to withdraw never crossed my mind. The previous positive promise of the girl to see me, had taken such complete possession of all my faculties, that I verily believe nothing short of a direct declaration that I was expected to leave, would have awakened me to the proprieties of the time and the occasion.—The clock struck ten—eleven—and was fast verging on to twelve. The old gentleman grew sleepy, nodded in his chair, and at last unable to stand it longer, said:

"Well, Mr. JONES, it is getting late, and I must be up in the morning betimes; if you wish to say anything to me before you go, you can do so now, and then I must bid you good bye."

The old gentleman spoke innocently, for he was not in the plot, and supposed I wished, from some cause, to consult with him.

The idea that I had been victimized, or rather that I had victimized myself, flashed suddenly across my mind, and grasping the old gentleman's extended hand, I exclaimed:

"I have nothing to say, except to humbly ask your pardon, which I do most sincerely!"

"My pardon! for what?"

"For thus boring you, and making a fool of myself!" and then seizing my hat, I rushed headlong out of the house. The moon was shining gloriously, and lit up the quiet scene around in all the beauty of a summer night; but heedless of all this, I was hurrying along a passage lined with shrubbery towards the gate, when I stumbled accidentally upon a man who was stealing up the walk in an opposite direction. We were both somewhat taken aback by the collision, and paused a moment to gaze upon each other. The rays of the full moon fell upon his face, and revealed at once to me the features of my rival. He had a guitar in his hand, and was about to commence a serenade under the window of the girl of my heart. The fellow had just graduated, and returned a day or two before to the town, with a half yard square of parchment tied with a blue ribbon, which he had displayed with great eclat to the astonished rustics of the place.

Without a word spoken, I seized the guitar, wrested it from his hand, and broke it over his head. We then grappled in anything but a fraternal hug, and, rolling upon the ground, were making sad havoc with the plants and flowers, when the old gentleman hearing the noise, and thinking that thieves were in his fruit garden, let out his dog. The fierce animal made towards us with a savage growl, which had the effect instantly to make us release our hold of each other, and take to our heels; my antagonist leaving a portion of his coat skirt in the dog's mouth, as he leaped the fence, and I spraining my ankle sadly by a fall, as I rushed headlong through the gate.

That, gentlemen, is the beginning and end of my love affairs. I left next morning on the early train, and by noon on the following day, I was at college, beyond the limits of my native State. My rival took out a warrant against me for Assault and Battery, but the constable, after diligent search, made a return of *non est inventus* to the writ. The girl, as I afterwards learned, gave the graduate also a summary dismissal, and married a young farmer, if possible more bashful, more unsophisticated, more innocent, and less in favor with the ladies generally, than even I was myself.

MEN of proud and passionate tempers, like those who have pestilential diseases, have only this advantage over their defects, that though they be not guilty of valor, yet they cause all the world to fly from them.—*Balzac.*

Youth's Corner.

ILLUSTRATED REBUS, NO. 34.

☞ Answer in two weeks.

[Written for Moore's Rural New-Yorker.]

GEOGRAPHICAL ENIGMA.

I am composed of 20 letters.

My 1, 8, 9, 14, 16, 15, 5, 11, 10, 20 is a town in Scotland.

My 2, 6, 12, 4, 10, 19, is a town in Ireland.

My 3, 15, 10, 6, 1, 9, 20 is a town in Russia.

My 4, 12, 11, 5, 4 is a town in France.

My 9, 6, 4, 10, 12, 20, 1 is a county in N. York.

My 10, 6, 13, 16 is a noted city in the State of Pennsylvania.

My 11, 5, 4, 19, 14, 2, 13, 5 is an island.

My 12, 2, 2, 13, 3, 12 is a village in New York.

My 13, 6, 13, 1, 15 is a sea.

My 17, 4, 4, 7, 14 is a lake in Ireland.

My 18, 5, 6, 13, 20, 5, 1 is a town in South America.

My 19, 4, 12, 1 is a town in Portugal.

My 20, 7, 1, 1 is a lake in Scotland.

My whole is the name of a very beautiful song.

Maple Vale, 1854. NELLIE.

ARITHMETICAL QUESTION.

(Dedicated to the boys who read the Rural.)

Three men, A, B and C, were sitting near a table. B and C were counting money. Said A to B and C, "I owe a certain amount, but if you will give me one half of your money, I shall be able to pay my debt and have $100 left.—Said B to C, "If you will give me one-third of your money, I shall be able to pay A's debt and have $100 left. Said C to B, "I owe twice as much as A, lacking $9.42 4-13, but if you will give me one-fourth of your money I shall be able to pay A's debt as well as my own, and have $100 left. How much did A and C each owe, and how much money had B and C respectively? KANUCK.

Dansville, C. W., July, 1854.

Answer to Miscellaneous Enigma in No. 31.—*I still live.*

Wit and Humor.

GLOSSING IT OVER.—Amongst other things which undergo adulteration, it would appear that silk forms no exception. A meeting has been held to decry the treachery of the trade, the material being neither up to the mark nor down to the weight. This verifies the statement of Dr. Watts, that,

"*Satin* over finds some work
For idle hands to do." [Diogenes.

"AH!" said Seraphina Angelica, speaking on some subject in which her feelings were enlisted, "how gladly would I embrace an opportunity!" "Would I were an opportunity!" interrupted her bashful lover.

A WESTERN editor has discovered that females of an uncertain age, use *plumpers*, which he defines to be india rubber or gutta percha made to wear inside of the mouth to make the cheeks look plump.

THE age is getting more refined. "Root hog, or die," is now rendered as follows:—"Penetrate the subsoil, my porcine friend, or early expect an obituary notice on your untimely demise."

"LABOR is honorable," says the Boston Post. It may be "honorable," but it is mighty "inconvenient," when the thermometer is about 90 in the shade.

A YOUNG man who has recently taken a wife, says he did not find it half so hard to get married as he did to get the furniture.

THERE are two colored persons "joined at the back," at Barnum's Museum. Barnum invented the "gum."

BEAUTIFUL extract—helping a pretty lady out of a mud puddle.

THE WOOL GROWER AND STOCK REGISTER.

VOL. VI.—ENLARGED AND IMPROVED!

THE WOOL GROWER AND STOCK REGISTER is the *only* American journal devoted to the important and profitable branches of *Wool and Stock Husbandry*. It contains a vast amount of *useful* and *reliable* information on the above and kindred subjects, and should be in the hands of every owner or breeder of Sheep, Cattle, Horses, Swine, or Poultry—whether located East or West, North or South, for the most of the matter given in its pages is equally adapted in all sections of the Union, the Canadas, &c. The Sixth Volume, commencing July, 1854, will be

Enlarged to 32 Octavo Pages Monthly!

And improved in both Contents and Appearance. Among other matters of interest to Wool Growers, Breeders, Graziers, Butchers, &c., the new volume will contain PEDIGREES OF PURE-BRED CATTLE, Horses, Sheep, etc., and the Names and Residences of the principal Breeders and Importers of Improved Stock throughout the country. It is published in the NEAT STYLE, and ILLUSTRATED WITH MANY ENGRAVINGS—including Portraits of Domestic Animals, Designs of Farm Buildings, &c., &c. The careful REVIEWS OF THE WOOL AND CATTLE MARKETS, given in each number, are alone worth many times the price of the paper.—To Wool Growers this feature is invaluable.

TERMS—Only Fifty Cents a Year; Five Copies for $2; Eight for $3,—*in advance*. Any additional number at 37½ cents per copy. Club papers will be sent to different post-offices, if desired. ☞ Back volumes (well bound in paper, for mailing) furnished at above rates.

☞ NOW IS THE TIME TO SUBSCRIBE and form Clubs. Money, properly enclosed, may be mailed at our risk, if addressed to D. D. T. MOORE, Rochester, N. Y.

HOME PROTECTION.

TEMPEST Insurance Company, Capital $250,000, Organized December 24, 1851; Chartered March 1, 1853. Homes only insured by this Company. No one risk taken for more than $3,000.

Many distinguished persons have insured their homes, to the amount of $3,000 each, in this Company, among whom are Ex-President VAN BUREN, Kinderhook; Ex-Governor SEWARD, Auburn.

Auburn, May 16th, 1853.

To whom it may concern.—We are personally acquainted with many of the Officers and Directors of the Tempest Insurance Company, located at Meridian, Cayuga Co., N. Y. In our opinion they are among the most wealthy and substantial class of Farmers in this county.

J. N. STARIN.
ELMORE P. ROSS.
THOMAS Y. HOWE, Jr.

The above gentlemen will be recognized as the Cashier of Cayuga County Bank, Auburn; Postmaster, Auburn, and Ex-Member of Congress, Auburn, Cayuga County.

N. B.—The public are cautioned to bear in mind the name. (Tempest,) and not submit to an imposition daily practiced by Two-by-four Mutual Co's.

234-tf T. R. TIMBY, Secretary.

GAFFNEY, BURKE & CO.,

IMPORTERS, WHOLESALE AND RETAIL DEALERS IN

Foreign and Domestic Dry Goods,

No. 53 Main Street, and Nos. 1 and 3 North St. Paul Street,

GAFFNEY'S BLOCK, ROCHESTER,

Have now in store one of the largest stocks of Dry Goods ever brought to this city, in which may be found every desirable article of Ladies' and Gents' Dress Goods, adapted to the season. Their improved facilities for IMPORTING, and the great advantage of having a resident partner in New York, daily attending the Auction Sales, enable them to offer to Merchants and Dealers, by piece, case or bale, as cheap as can be purchased in the New York and Boston Markets.

WHOLESALE ROOMS Nos. 1 & 3 NORTH ST. PAUL ST.,
GAFFNEY'S BLOCK, ROCHESTER.

Summer Dress Goods.—We have just opened a very large stock of Summer Dress Goods, consisting of a fine assortment of Brilliants, plain and figured Barèges and Tissues, plaid and striped Pongee Silks, Muslins, plaid and striped Lawns, Printed Jaconets, &c., &c. The styles are entirely new and beautiful.

GAFFNEY, BURKE & CO., 53 Main St., Rochester.

Broche and Crape Shawls.—We have now on hand a very large stock of Broche and Crape Shawls, all colors and qualities, which we are selling at very great bargains, as they were purchased much less than cost to import, at an Auction Sale.

GAFFNEY, BURKE & CO.,
Gaffney's Block, 53 Main St., Rochester.

More New Silks.—We have just received another large assortment of Summer Silks, from an Auction Sale, which were purchased CHEAP FOR CASH, and will be sold at less than cost to import. The styles are very handsome and entirely new. We have also just received 40 pieces of those celebrated BLACK SILKS, which we are selling as cheap as usual. GAFFNEY, BURKE, & CO.,
53 MAIN ST., GAFFNEY'S BLOCK, ROCHESTER.

THE PEOPLE'S PATENT OFFICE.

THIS well known establishment is still carried on under the personal superintendance of the undersigned, by whom all the necessary drawings, specifications, and documents, for Patents, Caveats, Designs, Foreign Patents, &c., are prepared with the utmost fidelity and dispatch, on very moderate terms.

Persons wishing for information or advice relative to Patents or Inventions, may at all times consult the undersigned *without charge*, either personally at his office, or by letter. To those living at a distance, he would state, that all the needful steps necessary to secure a Patent, can be arranged by letter, just as well as if the party were present, and the expense of a journey be thus saved. When parties wish to be informed as to the probability of being enabled to obtain Patents, it will be necessary for them to forward by mail a rough outline sketch and description of the inventions. No fee or charge is made for such examinations.

Private consultations held daily with Inventors from 9 A. M. to 6 P. M. All consultations and business strictly private and confidential.

Models from a distance may be sent by express or otherwise. For further information apply to or address, postpaid, ALFRED E. BEACH,
Editor and Proprietor of the People's Journal, Solicitor of American and Foreign Patents. People's Patent Office, 86 Nassau-street, New York. 227-13t

THE PEOPLE'S JOURNAL, a record of Science, Mechanics, Invention and Agriculture. Published Monthly.—Every number contains 32 pages, beautifully printed on fine paper, and *profusely illustrated with splendid engravings*, forming at the end of every year two fine volumes, comprising nearly 400 pages, with about six hundred elegant engravings. Terms, only ONE DOLLAR A YEAR, sent by mail. Specimen copies 12½ cts. Address as above.

LAND PLASTER

AT Canandaigua, Victor, and Fisher's Railroad Depots. The subscriber has on hand at each of the above Railroad Stations, 500 tons of pure, fresh ground land Plaster.—Farmers can depend upon getting their Plaster at the above places, of a superior quality and not kiln dried.

217-4m. JIREH ROWLEY.

☞ Mr. C. MOUNT, of Derry, Chau. Co., is authorized to act as Agent for the RURAL NEW-YORKER, and for the WOOL GROWER AND STOCK REGISTER, in the counties of Chautauque and Cattaraugus, N. Y., and Warren, Pa.

MOORE'S RURAL NEW-YORKER,

IS PUBLISHED EVERY SATURDAY,

BY D. D. T. MOORE, ROCHESTER, N. Y.

TERMS, IN ADVANCE:

SUBSCRIPTION—$2 a year—$1 for six months. To Clubs and Agents as follows:—Three Copies one year, for $5; Six Copies (and one to Agent or getter up of club,) for $10; Ten Copies (and one to Agent,) for $15; Twenty Copies for $25, and any additional number, directed to individuals at the same rate. Six months subscriptions in proportion. As we are obliged to pre-pay the American postage on papers sent to the British Provinces, our Canadian agents and friends must add 26 cents per copy to the club rates of the RURAL,—making the lowest price to Canadian subscribers $1,50 per year.

☞ Subscription money, properly enclosed, may be sent by mail at the risk of the Publisher.

. The postage on the RURAL is but 3½ cents per quarter, payable in advance, to any part of the State—and 6½ cents to any part of the United States,—except Monroe County, where it goes free.

ADVERTISING.—Brief and appropriate advertisements will be inserted at $1,50 per square, (ten lines, or 100 words,) or 15 cents per line—*in advance*. The circulation of the RURAL NEW-YORKER is several thousand greater than that of any other Agricultural or similar journal in America. Patent medicines, &c., will not be advertised in this paper on any terms.

☞ All communications, and business letters, should be addressed to D. D. T. MOORE, Rochester, N. Y.

Moore's Rural New-Yorker:

A QUARTO WEEKLY

Agricultural, Literary, and Family Newspaper

CONDUCTED BY D. D. T. MOORE,

ASSISTED BY

JOSEPH HARRIS, in the Practical Departments;
EDWARD WEBSTER, in the Literary and News Dep'ts.

Corresponding Editors:

J. H. BIXBY,—H. C. WHITE,—T. E. WETMORE.

THE RURAL NEW-YORKER is designed to be unique and beautiful in appearance, and unsurpassed in Value, Purity and Variety of Contents. Its conductors earnestly labor to make it a Reliable Guide on the Important Practical Subjects connected with the business of those whose interests it advocates. It embraces in one Agricultural, Horticultural, Scientific, Mechanical, Literary and News Matter, interspersed with many appropriate and handsome engravings, than any other paper published in this Country,—rendering it a complete AGRICULTURAL, LITERARY and FAMILY NEWSPAPER.

☞ FOR TERMS, &c., SEE LAST PAGE. ☜

Rural New-Yorker.

Progress and Improvement.

WESTERN NEW YORK AGRICULTURE.

SOME time since we received a request from an eminent English writer on the science and art of agriculture, to furnish him with an account of the expenses, profits, and general management of some of our best American farmers. We conceive Western New York to contain at least as good farms and as good farmers as any other district in the Union; and propose to give him, through the RURAL, some account of the management of such farms as it may be our good fortune to visit this fall, and whose owners will be kind enough to furnish us with the desired information.

Last week we visited the farm of the Messrs. HAYWARD, of Brighton, in this county. In 1851 these gentlemen were awarded the first premium for the best managed farm in the State, by the New York State Agricultural Society. In England large farms are generally the best managed, but the reverse is almost invariably true in this country. This farm contains only 78 acres, seven of which are in woods, and three in roads, buildings, &c., leaving 68 under cultivation. In 1851 the total receipts were $2,726.79. The total amount of expenses was $770.17, leaving a net profit of $1,956.62, or $28.77 per acre. Of course the interest on the money value of the land, or the "rent," has to be deducted from this.

We found the Messrs. HAYWARD busily occupied in drawing from the field an excellent crop of Poland oats, and thrashing them with a Railroad Horse-power Thrashing Machine, which, with two horses, thrashed the oats, carried the straw on to the stack, and winnowed the oats ready for market. Shortly afterwards they commenced drawing in and thrashing some Fife wheat, a somewhat new kind of spring wheat in this district, which appears to be superior to most other varieties. The winter wheat on this farm this year, was injured at least one-third by the weevil, and yielded only some fifteen bushels per acre. This spring wheat was but slightly affected, and will turn out better. Nothing can better indicate the difference in English and American climate, than the fact that wheat can be cut, thrashed, drawn to market, ground into flour, made into bread and eaten, in less time than most English wheat requires to be left in the field to season, before it is ready to stack, and where generally it must remain for several months before it is dry enough to grind.

To those well acquainted with the business, the cultivation of onions, lettuce, tomatoes, squashes, beets, mangel wurzel, parsnips, &c., *for seed*, is quite profitable, and the Messrs. HAYWARD devote a considerable portion of their farm to this branch of rural industry. They have now growing some two acres of black onion seed, which looks exceedingly well, and will probably yield about 300 lbs. per acre. An acre of beet seed is now ripe, and, as it is a very superior crop, it is expected to yield about 1000 lbs. The bug destroyed nearly all the *early sown* squashes, but they have an acre and a half of later sown *white scallop* and *crook-neck* squashes which, notwithstanding the great drought and heat of the past month, are growing finely. The latter seed is a fine crop, and a large yield of potato onions has just been gathered. Half an acre of carrots, sown in drills without any manure, are growing luxuriantly; and the beets, especially the *long blooded* beet, mangel wurzel, &c., look well, though somewhat injured by drought.

The Messrs. HAYWARD sow clover with all their wheat and barley, even though they intend to plow up the land next spring. They plow deep, and have sub-soiled much of the land, and stone drained the lower parts of the farm. The horse cultivator and hand hoes are kept constantly at work, not merely for the purpose of killing weeds, but for stirring the soil and exposing it to the decomposing, disintegrating, *moistening* influences of the atmosphere. It is to these several practices that are attribute the great fertility of this farm.

They have a fine orchard of the best varieties of apples, peaches, apricots, pears, nectarines, quinces, &c., which, besides affording an abundant supply for family use, brings in the snug little sum of six or eight hundred dollars per annum. Raspberries, strawberries, &c., are grown in rich abundance; and a considerable number of currant bushes flourish rampantly in the corners of a "worm" or Virginia fence. When properly ripened, mashed and pressed, with the aid of a little sugar and the mysterious agencies of fermentation, these currants are converted into a peculiar kind of liquid, "which none but they who taste it know" how good it is—*for medicinal purposes.*

CHEESE-MAKING — NO. 2.

No opinion is more general among dairymen than that the value of rennet depends on the *gastric juice* it is supposed to contain. It is never pleasant, and seldom politic, to attempt to controvert an old and fully established common opinion, but in this case truth requires a different explanation of the action of rennet. We have said that the casein, or curd of milk, will itself convert the sugar into acid and curdle the milk. Before it does this, the casein must have been exposed to the air, and hence the change, even at the proper temperature, proceeds slowly. If, however, curd be exposed in the atmosphere for a few days, and then added to milk, it coagulates it as quickly as rennet. Milk is also curdled by the juice of the fig or thistle, by a decoction of the dried flowers of the artichoke or thistle, and a variety of similar vegetable substances. All animal substances in a certain state of decomposition, act like rennet in curdling milk, and dried pigs' bladder is commonly used in some European countries, instead of the stomach of the calf, as in fact are a number of other substances in which it is impossible for gastric juice to exist. Gastric juice is a soluble substance, and when the stomachs are washed as they generally are, it would be dissolved and removed in the water. They are afterwards frequently kept for several months in a solution of salt, which is poured away, and a fresh quantity added several times. Does it not appear impossible that any gastric juice should remain in the stomach after such a course of treatment? It is known, too, that the stomach may be used over and over again for several years, simply by repeating the process of preparation, and after such treatment, it is certainly impossible that any gastric juice should remain in it.

When fresh, the membrane of the stomach is insoluble in water, but when it is salted and kept for several months, a portion of its surface is decomposed. This transformed, or more properly *transforming* portion, is soluble in water, and it is this portion of rennet which is the active agent in converting the sugar into lactic acid—in other words, of curdling the milk. It is a *soluble, highly nitrogenous* substance, having its elements in a disturbed state, and therefore highly effective in inducing change in the elements of other bodies with which it is brought in contact. We might mention many familiar instances of this transforming action, but they will readily present themselves to the reader. We trust that we have said enough to make the action of rennet perfectly clear. Its great prominence in the process of cheese-making, and the importance of a clear knowledge of the principles of its action, justify the space we have devoted to its consideration.

The transformation of sugar into lactic acid, or the souring of milk, is essentially a fermenting process, and like all fermentation, will not proceed at a high or low temperature—from 40° to 130° Fahr. may be considered the range; at from 90° to 110° it proceeds with great rapidity. The temperature at which it is best to have the milk when the rennet is added, is a subject upon which there is much difference of opinion among practical dairymen, from 80° to 100° being the extremes. At a low temperature the curd is long in coming, but is very sweet and tender; while at a high one it comes quickly, but there is danger of its being tough, hard and sour. At a low temperature more rennet is required, and there is danger that some of the curd will be left in the whey. This, however, may easily be ascertained by adding a little strong vinegar to a wine-glass of whey, and heating it a little. If it does not curdle, the coagulation of the milk has been complete. Whey, however, always contains a little curd. In the celebrated Cheshire cheese district of England, when none of the cream is skimmed off, the milk is raised to 95° before the rennet is added.—When it is set by mistake at a lower temperature, it is raised by adding heated whey afterwards, but in such a case the quality of the cheese is thought to be materially injured.—Speaking on this point, JOHNSTON, in his *Agricultural Chemistry*, page 373, says:—"To make the best cheese, the true temperature [he has previously given it at 95°] should always be attained, as nearly as possible, before the rennet is added." In this country, however, it is thought preferable to add the rennet at a low temperature, and "scald" the curd afterwards; that is to say, increase the temperature of the milk after it is coagulated and the curd broken. It is probably owing to this that American cheese is softer and more buttery-looking than the English. We have seen American cheese sell for one cent per lb. more than the best Cheshire in the English market, simply for this very reason. We do not suppose there was any more butter in the American than in the Cheshire cheese, but as it looked better, and sold for a higher price, it is fair to infer that the American process of cheese-making is the best. It must be remarked, however, that the American cheese found in England is far superior to that generally seen in this country.

RYE AND ITS CULTIVATION.

THE wheat crop has suffered so extensively and seriously from the midge or red weevil the present year, that many farmers are thinking pretty dubiously of their prospects for "bread timber" hereafter, and will read with interest—an interest which good crops of "pure Genesee" have prevented them from feeling heretofore—a few items on Rye and its cultivation. In the Eastern States it is of second importance only to the corn crop, and with that, enters largely into consumption as "rye and Indian" bread, the real "staff of life" to thousands of the inhabitants. It is grown pretty extensively among the Germans in Pennsylvania, and also on the light lands of Ohio and Michigan, but many of the younger inhabitants of Western New York never saw a field of it in cultivation.

Rye succeeds best on rich sandy loams, the strong clays in which wheat delights, seldom producing the best crops of this grain. In such soils there is too much water—it prefers a lighter, better-drained soil, and will grow freely on light sands and gravels, where oats and barley fail. Loamy soils on which wheat lodges will frequently produce excellent rye, its stronger stem enabling it to sustain itself under its luxuriant growth. The yield is in proportion to the adaptation of the soil and season, and varies from five to forty bushels per acre.

The preparation of the soil for rye is the same as that for wheat, but it is a less exhausting crop, and poorer soils may be employed. Pasture land or meadow, may be turned over neatly and deeply, and then worked fine with the gang plow or wheat-cultivator, as is practiced in once plowing for wheat. The proper time for sowing is the middle or latter part of September, and from one and a half to two bushels of seed is required per acre. The earlier it is sown the less seed is needed, as it tillers largely, if it has time, in autumn. If its growth is luxuriant it may be fed off both fall and spring without injury. It is sometimes sown mainly for the purpose of furnishing early pasture, but is then sown much thicker—at the rate of three or four bushels per acre.

Rye, like wheat, yields improved grain if early harvested. It is heavier, and gives more and whiter flour. Its value, as shown by the market reports, is about equal to that of Indian corn. For bread-making it is wholesome and palatable, and when mixed with Indian meal, and baked for a long time, it makes the famous "rye and Indian" or brown bread before named. The flour should not be ground too fine or closely bolted, and an aroma will be retained which is peculiar to this grain, and gives it a sweetness and flavor much admired, and which VON THAER says, "appears to facilitate digestion, and has a singularly strengthening, refreshing and beneficial effect upon the human frame." It has a larger per centage of sugar than wheat bread, and retains its moisture longer.

According to the *Boston Cultivator*, the straw constitutes an important item in the advantages of its cultivation. In the Boston market, its price averages $15 per ton. A crop of 20 bushels to the acre will give a ton of straw, and two tons to the acre have been obtained. The straw is used chiefly for the bedding of horses, but among the Pennsylvania farmers, who generally understand the economical management of horses, the grain is ground and the straw cut, and the two mixed together form the principal food of their noble farm horses.—R.

RECIPE FOR MAKING GRAPE WINE.

EDS. RURAL:—For the gratification of your correspondent, H. B., of Toledo, and perhaps other readers of your excellent paper, I submit for insertion the following mode of making Grape Wine. It may be affirmed that from the days of NOAH down to the present time, good wine, either from the juice of grapes or any other fruit, has been obtained only through the simple process of fermentation. My practice in making wine for the past twenty years, has been as follows:

When the grapes are fully ripe, and have been removed from the vineyard to the place assigned for making the wine, they should be assorted, and all the green and decayed ones removed. Then put them into a barrel, about a bushel at a time, stems and grapes, and pound them thoroughly till all the grapes are mashed. Continue the process till all are finished that you wish to make up at that time. The next process is to press out the juice or must. Then to every gallon add two pounds of sugar, and stir it thoroughly till all the sugar is dissolved. It is then put into barrels for the purpose of fermentation, there to remain, with frequent filling up to supply the waste, till the pomace is all fermented off. A supply of the must should be on hand for that purpose. The barrels should not be bunged up until the fermenting process is about completed. This may be easily ascertained by placing your ear to the bung. If in April or May the wine should be found clear, it may be racked off, but if unsettled it should be left till fall. If the wine is found to be just what you want it at the time of racking, bottle as much as you choose; but if not, let it remain on the lees, and the article will increase in character and strength.

I would remark that all grapes raised in this section of the country, do not contain enough sugar or saccharine matter to make good wine without the addition of sugar. H. N. L.

Near Rochester, August, 1854.

CLAY or marl on peaty or sandy soil not only benefits it by rendering it more compact, but also by introducing valuable mineral elements.

NOTES FROM MY CORRESPONDENCE—NO. V.

O. H. KELLEY, Esq., Secretary of the Agricultural Society of Benton Co., Minnesota, writes:

"The package of 'RURALS' came safely to hand, for which accept my thanks. I shall make proper mention of them at our next meeting. I am sorry to say 'book farmers' are few and far between; besides, they say it *costs* too much to take the papers. Yet I find that some of my papers (Agricultural in particular) sometimes do not reach me under six weeks after they are due, and then they come all cut and stitched, the pages badly soiled, and presenting the appearance of having been thoroughly read. However, our country is rapidly filling up, and everything relative to agriculture bids fair to improve. We are about starting a paper here, as I intend to *try* and improve matters somewhat—stop them from reading my papers *first*, at any rate.

Our territory is rapidly filling up, and I am thankful that I am one of the "*oldest settlers*," having been here for upwards of five years. I commenced farming four and a half years since, and though neighbors were some six and ten miles apart then, I find it impossible to travel a half-mile now without seeing evidence of increase in population and improvement; and I don't know but I shall have to cut my farm in two parts, so as to make a village of one-half. The excitement of Progress has interest in it for me, but sometimes I wish neighbors were as far off as they used to be. I love the quiet of frontier life, though we are deprived of many comforts and privileges.—Yet, if a man is so situated that he cannot help improving his condition and his purse, why, he ought to grin and bear it.

I am anxious to see the time when every farmer can boast of his fruitful orchard, neat buildings, good fences, improved stock, &c.—There is one great error committed by farmers, and that is this:—they place themselves too much in the power of speculators. The farmers ought to be so joined together in their agricultural societies, as to fix the prices for their crops themselves, and not be compelled to sell at ruinous rates—for, I believe if any class is entitled to the best pay and largest profits, it is that of the farming community. Now I make it a point, and have done so for nearly five years, to haul nothing to market. If any one wishes to buy my crop, it is in my store, or barn, where I sell at wholesale or retail; and if any one wants, they must come and buy it, as they go to the store of the merchant for his commodities. However, it would be an endless task to induce men enough engaged in agriculture to adopt such a plan. They ought, at least, to set their own club prices in every neighborhood, and stick to them. I have just introduced one of MANNY'S Reapers and Mowers, which has opened the eyes of some of my neighbors, and I think I can induce them to use machinery upon their farms. If I could once get them earnestly interested in reading agricultural papers, labor-saving inventions must follow in due time."

A correspondent at Fishkill, N. Y., W. B. WALDO, Esq., thus speaks of the want of proper means in farming:

"A certain amount of capital is necessary and indispensable to success in farming, and I can fully appreciate the feelings of him, who, with an ambition to excel in his calling, is cramped down for the want of it. Pecuniary means are as necessary for successful operations as sweat and breath, and the want of them too often occasions a sort of mental quagmire, from which vapors and fogs of discouragement rise to chill and dampen the ambition, and engender a reckless carelessness of the concerns of life. Such persons are doomed to grub along slowly until they acquire the capital, yet often when they do it is only in time to buy a coffin, through which to escape from, perhaps, a long life shorn of its pleasures."

Speaking of small farms, he adds:—"Thirty acres of good land is enough for one man to till. I should not worry about hay, which is a costly feed, and I do not believe as good as corn-stalks grown so thickly as not to ear; hence for provender I should sow corn in drills,

plant parsnips for hogs, carrots for horses, and ruta bagas for cattle, for on these roots such animals will do well and respectively fatten, and a small piece of land will supply a sufficiency."

Of grape culture he says:—"I have observed that the Isabella ripens its fruit beautifully when it escapes the knife of science, and strays off into the top branches of some tree. Last year they ripened better there than on the trellis. Why, then, may not your western farmers plant cuttings under your younger oaks, and thus coorert their 'openings' into splendid vineries?"

These suggestions are worthy of consideration, and grapes might be thus raised with scarcely an hour's trouble, while the trellis-trained vines could be looked after just as well as heretofore. T. E. W.

BREEDING FROM BROKEN-WINDED MARES.

In the RURAL of Aug. 5th, is an article from the *Country Gentleman* headed "Breeding from Broken-down and Diseased Mares," stating that broken wind can be propagated when either the sire or dam is affected with that disease. Now, having some experience myself in breeding from just such mares, and having been brought up from boyhood by a well-read horse farrier, allow me to give my opinion upon the subject. Instead of shooting the old creatures, I would turn them out to pasture and use them well, in which case I have never known broken wind or heaves to be transmitted by the dam to the foal. I have now on my farm an old, broken-down, heavy mare that has a colt by her side worth fifty dollars, and is in the habit of raising just such colts. She does no hard work, and but very little light work, and the keen eye of even the horse jockey would hardly perceive her unsoundness. So much for an old servant that the *Country Gentleman* would have me shoot, and breed from a young and sound mare. We here in Allegany had rather work our young mares, and breed from our old ones, and would say to all that have old mares, give them the same chance on your farm that you do your good cows, and no such disease as has been spoken of will be propagated.

A FRIEND TO OLD AGE.

Almond, N. Y., Aug. 7th, 1854.

REMARKS.—It is the opinion of the best and most experienced breeders that broken wind is transmitted to the offspring when either the sire or the dam is affected. It is true they may not show it for some time, but they are unquestionably more liable or predisposed to the disease than those bred from young and healthy mares. Fine, healthy looking horses may be occasionally obtained from old, broken-down, heavy mares, but depend upon it they are the exception and not the rule.—EDS.

CALVES AND COWS.—FEEDING, &C.

In the RURAL of May 13, copied from the *Maine Farmer*, the question is asked, "Is the first cow's milk poison?" meaning the first milk after a cow has calved; and it is answered in the affirmative by stating a few facts, where sows in pig were injured by it.

All rich food, when taken in too large quantities, produces injurious effects. Let a hungry ox eat too many raw potatoes, and they will kill him; let a horse have too many oats, or too much cold water when he is warm and thirsty, and it will founder him. Give a new calved cow, a pailful of rich mill-feed slop, and it will probably kill her, and it will have the same effect on a sow just pigged; too much raw whey will kill a pig, so will dry buckwheat when too much of it is eaten. But that is not evidence that all those nutritious and valuable foods are poison; it only proves the want of knowledge, or lack of prudence in the feeder.

Give a cow after calving half a pailful of her first milk, and it will be very beneficial to her, by loosening her bowels and promoting her cleaning. Cows' first milk is rich and very loosening, and such food is injurious to sows heavy with pig. Instead of giving the sow the first milk clear, had they put it into the swill-barrel, and mixed it with the other swill, it would have been very valuable to the sow.

The success of a breeder depends much on his prudence in feeding, to adapt the quantity and quality of the food to the wants of the animal. To produce the desired effect, at the least expense, requires much judgment and skill in feeding, and it has to be acquired by experience. W. GARBUTT.

Wheatland, N. Y., 1854.

SEEDING OAT GROUND TO GRASS.—I noticed an inquiry in your last number, in relation to seeding to herds grass or clover with oats; the gentleman says he has got seven acres in oats, and inquires whether to sow on the stubble, or plow and sow winter wheat. Now, according to my experience, when it is desired to seed to oats, my plan is to harrow the ground once over, before sowing the oats, and once afterwards, and then sow my grass seed and harrow it again. I have always had good success in this way, or if I wish to seed with winter wheat, I sow my seed before the early heavy spring rains.—*S. W., Chemung Co., N. Y.*

Agricultural Miscellany.

STATE AND COUNTY FAIRS FOR 1854.

We publish a list of the State and County Agricultural Fairs for the present year, so far as they have been announced. We shall be obliged to the Secretaries of our County Societies if they will send us information respecting their exhibitions, &c.

BROOM CORN SEED FOR SHEEP.—It is stated on good authority that broom corn seed is highly valuable for sheep. It is extensively used in some sections for fattening them, and they are said to be very fond of it, and to fatten more rapidly upon it, than upon Indian corn. An Eastern farmer thinks it worth more for feeding sheep than oats or any other grain, pound for pound. Hogs and fowls will also eat it, hence it is well worth saving.

NEW MUSEUM OF AGRICULTURE.—An apartment is provided in the new Crystal Palace, near London, for an extensive Agricultural Museum, showing different districts, their Geology, Products, and Manufactures, also their implements, manures, &c. There will be also stuffed specimens of all the different breeds of sheep in the country, the whole forming a collection of much interest to farmers as well as men of science.

THE DROUTH.—In this and adjoining counties, the potato and corn crop are suffering severely from drouth. In Irondequoit, the great potato town of this county, it is estimated that the crop will not average ten bushels per acre. Corn, too, is burnt up, one half of the stalks having no ears at all on them.—Peaches are quite abundant, but unless we have rain in a few days, they will be very small.

LARGE HERD OF CATTLE.—A farmer in Southern Illinois, who owns 23,000 acres of land, keeps from 1,000 to 4,000 head of cattle, and about as many hogs. He purchases cattle in the summer, and sells them the next spring, after wintering them; and in this way has made a fortune. He has this year about 950 acres of corn, which constitutes the principal cattle food, but little hay being raised.

NEW YORK STATE AG. FAIR.—The *Journal* of the State Ag'l Society, says that this promises to be the largest and best Exhibition ever held by the Society. The arrangements of the grounds will be more perfect than heretofore, and it is already ascertained that the Show of Horses will be of a character never equaled in this country.

SUFFOLK SWINE FOR OHIO.—Under date of August 1, P. MELENDY, of Mt. Healthy, Hamilton county, O., writes us that he has just returned from the east with some fine Suffolk hogs and Ayrshire cattle. The swine were purchased of the Hon. B. V. FRENCH, of Braintree, Mass., an eminent and very successful farmer and breeder.

WOOL GROWING IN CALIFORNIA.—According to the *California Farmer*, published at San Francisco, considerable attention is beginning to be paid to sheep and wool, which promise to be profitable, and samples of the flocks of the present year are being sent to market.

ERRATUM.—In an article on Canada thistles, copied from the *Boston Cultivator*, in last week's RURAL, it is said that the root is "biennial." This, we learn from the *Cultivator*, is a mistake of the types—it should be *perennial*.

APRICOTS were never so abundant or so fine in this region as they are this year. The curculio has injured them but little.

VETERINARY HOMŒOPATHY.

MR. MOORE:—I take the liberty of forwarding to you by mail, a small volume entitled "*Veterinary Homœopathy*," by RUSH, published in Philadelphia.

The *rational* treatment of Domestic Animals is gaining ground daily, and fast superseding the old and barbarous system. I have tried it to some extent, and find it acts more promptly on animals than on persons, for the simple reason that their food is not so artificial, and besides they have no imagination to draw upon. I have treated successfully various cases of acute colic, in horses, "hollow-horn" in cows, catarrh or influenza in the horse, even when it was supposed to be glanders; also the various stages of distemper, and other ailments too numerous to mention. All roweling, bleeding, drenching, and kindred heroic remedies can be dispensed with.

Though not a "graduate" nor a "practitioner," I have some small medical knowledge—and great desire to lessen the sufferings of both man and beast; hence I trouble you in this way, and, would bespeak for this beautiful system your candid consideration. I have received a medical education at the Homœo. Med. College in Philadelphia, but attended more as an amateur, than with a view of going into, and becoming a general practitioner,—for the reason, that I had too much other business on my hands, and was too old a man to undergo the fatigue of a country practice. I am well satisfied that the general introduction of this system amongst farmers, will be the means of saving the lives of much valuable stock, and eradicate many hereditary taints to which they are heir. J.

Tioga Co., Pa., 1854.

THE HARVEST AND CROPS IN CANADA.

The *American Agriculturist*, under date of Aug. 1, says:

The wheat harvest in forward sections of the country is now fast drawing to a conclusion.—From all we can learn, the crop will prove, upon the whole, an average, but in some exposed situations, the plant was much killed out by the severe spring frosts. All kinds of spring grain will prove abundant. Hay is not so heavy as was anticipated from the copious showers which fell in spring. The heavy storms which occurred last month in many parts of the Province, injured more or less the wheat, twisting it about, and causing it to fall where stout. This has rendered harvest operations tedious and expensive. Farmers experience great difficulty in obtaining hands, even at exorbitant wages; two, and even two and a-half dollars per day, being frequently given. Hops, we are told, are looking well, and potatoes and root crops generally are the same.

HOW TO KNOW THE AGE OF HORSES.

THE colt is born with twelve grinders.—When four *front*-teeth have made their appearance, the colt is twelve days old; and when the next four come forth, it is four weeks old.—When the *corner* teeth appear, the colt is eight months, and when the latter have attained to the height of the *front*-teeth, it is one year old. The two year old colt has the *kernel* (the dark substance in the middle of the tooth's crown) ground out of all the *front*-teeth. In the third year, the *middle front*-teeth are being shifted; and when three years old, these are substituted by the *horse*-teeth. The next four teeth are shifted in the fourth year, and the *corner*-teeth in the fifth. At six years, the *kernel* is worn out of the lower *middle front*-teeth, and the *bridle*-teeth have now attained to their full growth. At seven years, a *hook* has been formed on the *corner* teeth of the upper jaw; the *kernel* of the teeth next at the *middle fronts* is worn out, and the *bridle*-teeth begin to wear off. At eight years of age, the *kernel* is worn out of all the *lower front*-teeth, and begins to decrease in the *middle upper fronts*. In the ninth year, the *kernel* has wholly disappeared from the *upper middle front*-teeth, the *hook* on the *corner*-teeth has increased in size, and the *bridle*-teeth lose their points. In the tenth year, the *kernel* is worn out of the teeth next to the *middle fronts* of the upper jaw; and in the eleventh year the *kernel* has entirely vanished from the *corner*-teeth of the same jaw. At twelve years old, the crown of all the *front* teeth in the lower jaw, has become triangular, and the *bridle* teeth are much worn down. As the horse advances in age, the gums shrink away from the teeth, which, consequently, receive a long, narrow appearance, and their *kernels* have become metamorphosed into a darkish point; grey hairs increase in the forehead, over the eyes, and the chin assumes the form of an angle.—*Am. Agriculturist.*

CALIFORNIA PIGS.—The San Jose Telegraph a short time ago, stated that a sow in that neighborhood had brought forth, in one litter, 42 pigs. The same paper has since been informed that 36 are now living. This remarkable physiological fact is undoubtedly true; the sow, at one litter, gave birth to 42 pigs. The Stockton Republican says:—A French gentleman, formerly a resident of Chili, knew a sow to produce at one parturition 40 pigs; and we have learned that, in another instance, in this city, 32 pigs, at one litter, have been produced. California is ahead of the rest of the world, certainly, not only in the vegetable, but in the animal kingdom, and we should not be at all surprised to find that after the Anglo-American race becomes fully adapted to the country and climate, that the natural and ordinary product of the race should be *Doublets*.

Prolific country, that California.

THE FARMER'S HOMESTEAD.

IF NOW, finally, we go back with him from all these exterior liabilities to his own premises again, we shall need, by this time, to memorialize the farmer of what is required of him in his house. If the school has disciplined his thinking faculty and refined his taste; if the town meeting has awaked in him the exalting sense of citizenship; if the church has lifted his heart into communion with the father of all families, and inspired his conscience by the prophecy of life eternal, he will scarcely be content to live a driveling dullard life at home, to play the selfish tyrant in the little political economy of kitchen and parlor, or to be worse than an infidel by providing not for his own. By derivation, the significance of your common title, husband-man, holds you to do something. Husband-men, I suppose, are not bachelor-men. Now, as Nature has done her part towards furnishing a husband-man, by making you a man, she seems to presume you finish the business by making yourself a husband. Husband is house-band, or organizer of household life. Organize it by not only the sterling, homebred, domestic moralities, but by the binding charm of those thousand amenities that distinguish a cultured home from a barbarian's hut. The delicate angel of the beautiful knocks at your door and begs admission, as well as the strong angel of the useful. Is there the fine eloquence of order; is there the dispensing touch of taste; is there the simple and just adorning of nature round all your door-stones, in all your front lawns, on the walls, and tables, and furnishing of your dwellings? How many hours of a spring morning would it take to embower your windows with all that is graceful in green foliage, and winning in floral splendor? Plant trees before you purchase Venetian blinds and painted pickets. You will carry a tenderer, and therefore a manlier heart in your breast all day, if you pass out of a genial circle through the fragrance of lilies, and roses, and honey-suckles. See that the sons and daughters are interlaced by hands more spiritual than gregarious bipeds. Let the harmonies of evening music weave their souls into some gentle and lofty sympathies, gaining the boys over from coarser pleasures and doubtful companionships by the pre-occupying satisfactions of a cheerful, courteous, and hospitable fireside. Starve your palate, if need ever were for such denial, to stock your library. Raise the tone of farmhouse table-talk if you can, and let the ladies help, above stale gossip, common places of the day's work, and scandalous tattle. Hang the proceeds of your premiums at cattle-shows on the wall, not in battle-scenes, or daubed millinery, but in the shadings of some pleasing picture that reflects a glorious idea or a heroic sacrifice. Household life is not to unfold into grace and moral loveliness by accident, any more than the wealth of your garden or orchard. It must be cultivated. And I take it, Christianity speaks of that higher kind of economy as much as of butcher's meat and breadstuffs, when it pronounces him that provideth not for his own, worse than an infidel.—*Rev. F. D. Huntington.*

CHINESE FARMING.

PROBABLY in no part of the world is agriculture carried to a higher state of perfection than in China. The density of the population of that empire has caused much attention to be paid to that art, and the cultivation of much of the country approaches as near as possible to garden farming. A writer in Blackwood's Magazine says that "the hill and mountain sides are terraced, the rocky fragments are gathered off the slopes and formed into retaining walls, and the wonders of Chinese irrigation have never been equalled." The agricultural knowledge of China cannot indeed vie with ours in point of science, but is far more widely diffused. A uniform system of cultivation, the result of centuries of experience, is known to all, and in the matter of making the most of their land, they are unsurpassed by any people in the world. Agriculture, hitherto has been the national pursuit of the Chinese and until within a few years past all the rapidly augmenting population has gone to increase the wealth and resources of the State. "The farmer there rears his crop of rice, cotton or tea, dresses it, and turns it to his own use as food or clothing; and though he cannot succeed in laying by money, it is only in periods of famine or inundation that he experiences the pressure of want." The fare of the Chinese farmer consists chiefly of rice, fish and vegetables, and a sumptuous meal may be always procured for a few "cash,"—about twelve hundred of which are equivalent to a dollar.

CISTERNS.

LOOK well to your cistern. To any one who has examined the contents of a cistern, it is evident that the water and dirt at the bottom often have a strong stench in them, while the water in the upper part of it is comparatively sweet and pure. This is owing to the animal matter that settles to the bottom, forming a mass of putrid carrion.

In all rain, river, and sea water, there are immense numbers of animals so small as to be invisible to the naked eye. Infuse a little pepper into it, to give activity to them, and then place it under a microscope, and it will be alive with animals. They are called *infusoria*. They are short-lived, and from their immense numbers, often form one-fourth of the rich mud at the mouths of our rivers.

So with the mud in the bottoms of our cisterns. It is caused, principally, by the deposit of this animal matter, and undergoes decomposition, putridity, and produces stench, the same as any other animal matter. Unless it is cleaned out at least once a year, the water becomes the essence of carrion. To say nothing of the unpleasant smell, its use, undoubtedly, is often the cause of sickness and death.—*Ohio Farmer.*

FLAX *in the straw*, is now selling in England for $25 per ton. About a year ago it sold for $12.

Inquiries and Answers.

TOPPING CORN.—As a subscriber to your valuable paper, and a practical farmer, I desire information in regard to the topping of corn,—Why is it done? Do the ears fill and ripen better when the corn is thick and heavy? Or is the fodder better by cutting earlier? I never sufficiently understood the object of topping corn. Will you be kind enough to inform me the practical result? My corn this year is very thick and luxuriant, the leaves extend and cross between the rows, although the corn was planted about four feet apart one way [north and south] and about two feet the other. I fear that it will not ear well. Will topping, under the circumstances, benefit the crop; if so, when should it be done? Any information in regard to the above questions, either by you, or some of your correspondents, will be gratefully received.—W. B. CORYELL, *Waterloo, Sen. Co., N. Y., Aug.*, 1854.

There is much difference of opinion among practical farmers on the subject of topping corn. So far as we have seen, however, most of the numerous experiments which have been made on the subject resulted in favor of *cutting up* the corn below the ear and adverse to the practice of topping. Generally they have shown that there is a loss of fodder and of grain, and greater danger of injury from early frosts. We shall, however, be glad to hear the opinions and experience of our correspondents on this subject, and would be pleased to have them discuss the merits of the various other processes of harvesting corn. To be of service this season, however, they must be prompt.

LICE ON CHICKENS.—I observe an article in the RURAL, in respect to cleansing Poultry houses from lice. I have no poultry house, but my *chickens* are very much troubled with lice. There are hundreds of them on a small chicken I'am you inform me what will destroy them?—Also, can you give me a recipe for making hard soap from soft soap? An answer to the above inquiries will much oblige your subscriber.—THOMAS HARROP, *Thorne Hill, N. Y., Aug.* 9, 1854.

If healthy chickens are allowed free access to loose soil, where they can scratch and cover themselves with dust, &c., they are seldom troubled with lice. If they are, no application of lamp oil or any kind of grease under the wings and back of the neck will generally rid them of the parasite. To make hard soap see RURAL of April 22d. The hard soap made by adding common salt to soft soap is not of the best quality; the *chlorine* of the salt being injurious rather than beneficial. Hard soap, however, is made cheaply in this way, and answers a very good purpose.

PORTABLE CIDER MILL.—Will you please to inform me through your esteemed paper where I can buy the best Portable Cider Mill to go by horse power, and the price? You will thereby very much oblige—A SUBSCRIBER, *Lyons, N. Y.*

HURSON'S Mill can be obtained as specified in our advertising department. From the notices and recommendations we have seen, we have no doubt it is a valuable machine.

SUBSOIL PLOW.—Please to inform me through your RURAL, where I can get a subsoil plow, who to write to, and what the price will be.—W. B. C., *Jefferson, O., Aug.*, 1854.

You can obtain the article wanted on application to H. C. WHITE & Co., Buffalo,—and perhaps of CLARK & MACARTHUR, Erie, Pa.—The price will be from $10 to $13 according to size.

SAVING SUNFLOWER SEED.—Can you or some of your correspondents give me any information as to the best method of gathering the seed of the sunflower? If there were no difficulties in harvesting the crop it would be quite remunerative.—THOMAS CUNAN, *Humphrey, N. Y.*

Will some of our correspondents who have had experience in the matter answer the above?

LICE ON FOWLS.—Dr. Freeman, of Schoolcraft, Mich., a popular breeder of blooded fowls, writes us:—"Should lice infest your nests, sprinkle in them cut tobacco, and they will sleep to parts unknown instanter. Take my word for it, when I clean my chicken coops, I sprinkle in them a strong decoction, and will give every chick that a louse can be found on. I have cleaned sitting hens of them, where no tobacco had been used, that were covered with the larval critters—in four hours not one to be seen."

PEAR AND POTATOES.—In a recent sitting of the Agricultural Society of Saint-Marcellin, here, a curious fact was related. A farmer stuck a pen in a potato, and planted them together in March last. The pea produced a stalk which was covered with peaseods, and the potato gave eleven healthy roots. The farmer is of opinion that, by this system, it is possible not only to obtain a two-fold crop, but to prevent the malady in potatoes.—*Mark Lane Express.*

H. H. SACKRIDER, of Napoli, last week, showed us a head of wheat over six inches in length, well filled, which, together with 31 other heads of nearly the same dimensions, were the products of a single kernel. An exceeding prolific kernel.—*Randolph Whig.*

Orchard and Garden.

HINTS AND GLEANINGS.

Time of Budding.—On the question of the best time for budding, a correspondent of the *N. E. Farmer* says: "Being desirous to know which would do best, early or late budding, I inserted buds in the same stalks with my first budding, two or three weeks after the first budding, and found that the last buds mostly lived; whilst the first, but few survived, though some of them adhered to the stalks, and healed up and appeared green, and remained stationary through the first and second seasons, and the present season have sent out some very feeble shoots, showing that the bark will peel before the buds are old enough to germinate."

Killing Ants in Gardens.—These insects are often very troublesome in gardens, and many plans are employed to get rid of them. Mr. Jona. Foster, of this city, informs us that he has disposed of them in the following manner:—Level down their hills and place near them small pieces of board; in a few days the ants will collect under these, and form their nests and lay their eggs and larvæ near the surface. Then take a tea-kettle of boiling water, and, lifting up the boards, dash in a pint or so upon them. Repeat a few times and they will cease to annoy you.

Mulching Dwarf Pears.—The *Mich. Farmer* for Aug. has a letter from Jas. Dougall, of Windsor, who states that in his experience as a nurseryman, he has found that "to cultivate dwarf pears properly, and with certainty in this climate, they must be mulched twice a year—once in June or early in July, digging it in slightly in Oct.; and again in December, digging it in in April. The roots of the quince are so much nearer the surface than the pear, that they are more readily affected by the drought of summer and the frosts of winter."

STRAWBERRIES AND THEIR CULTURE.

The August No. of the *Horticulturist* has an article with this heading from the pen of the editor, and, of course, valuable, as drawn from practical experience. He declares it is a simple matter to cultivate the strawberry successfully, and that the great cause of failure is *negligence*. This plant is constantly sending out runners, which, unless checked, rapidly take possession of the ground around the parent plant. In a short time, therefore, the new plants occupy the whole space, the parent plants become exhausted, and the ground can no longer be stirred or kept in such a condition as is necessary to sustain their vigor. The plants become starved and weakly, choking up each other in a hard, uncultivated soil, and producing only a few insipid berries, that dry on their stalks before ripening, unless rain falls every day. Constant culture, among other things, is absolutely necessary to good crops.

Directions for the principal operations in strawberry culture are given as follows:

"We advise planting in rows not less than two feet apart, unless ground be very scarce, when eighteen inches might suffice, and the plants to be twelve to eighteen inches apart in the rows. In extensive field culture, the rows should be at least three feet apart, in order to admit the use of the plow and cultivator between them, or even the passage of a cart to deposite manures or mulching material. The spade and wheel-harrow are too costly implements for an extensive culture where labor is scarce and high, as with us. From the time the plants are set until the fruit is gathered, the runners should be cut away as they appear, and the ground be kept clean of weeds, and well worked.

In the fall, or before the setting in of winter, a mulching of half-decayed leaves or manure should be placed between the rows, coming close around the plants, leaving the crown or heart uncovered. This mulching prevents the plants from being drawn out and weakened, or destroyed by freezing and thawing in winter. We have sometimes covered the entire beds, plants and all, with newly fallen leaves; and by raking them off early in spring, the plants came out in fine order. In the same way we have covered with clean wheat straw, and found it answer well. In all the northern and western States, some winter protection is of great service, although not indispensable. In field culture, the earth might be plowed up to the plants, as is done with nursery trees, in such a manner as to afford considerable protection against the action of frost on the roots.

As soon as the fruit begins to attain its full size, and approach maturity, the spaces between the rows, which up to this time have been under clean culture, should be covered with straw, litter, or moss. This will serve the double purpose of keeping the fruit clean and retaining the moisture in the soil. When copious supplies of water are to be applied, which should be always done when practicable, stable litter is a good mulching, as the water poured on it carries down with it to the roots of the plants the fertilizing materials which it contains.

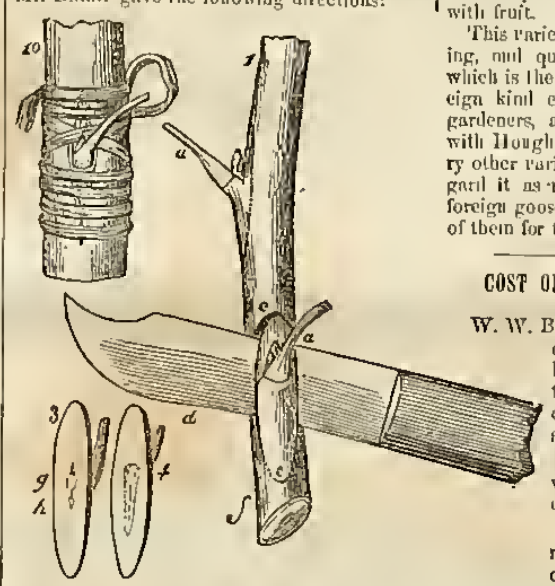
The application of water in abundance we must again recommend to all who want the finest fruit. Rains are very good, but they cannot be relied upon, and they always deprive the fruit of its flavor, while artificial waterings do not. On this account, the French gardeners say that the Strawberry 'prefers water from the well to water from the clouds.' It is supposed that the electricity which pervades the atmosphere during our summer rains, affects the flavor of the fruit.

When the crop has been gathered, the mulching material between the rows should be removed, and the ground be forked over, so that if plants were wanted to form a new plantation, their growth will be encouraged. The same plants should not be relied upon for more than *two* crops. The labor of making a new bed, save the trenching of the soil, is no more than that of planting a plot of cabbages.

As to the season for planting, we would recommend the spring for large plantations, because then there is comparatively no risk of failure. The amateur, however, who wishes only to plant a bed in his garden, may do it at any time that he can procure good plants. If the growth of runners is encouraged in July, after the fruit is gathered, good well-rooted runners may be had about the first of September, or it may be sooner. The young plants nearest the parent plant should always be chosen, if possible. In planting during the month of August or September, rainy weather should be chosen, if possible; but it may be safely done even in a *dry* time, by using water freely. Water the plants well before taking them up, as it injures the roots very much to draw them out of dry ground; then water the soil thoroughly where they are to be set, before planting. A sprinkling will be of no use; it must go down deep as a heavy rain would.—Set the plants in the evening, and shade them a few days with boards set on edge, forming a sort of roof over them. Mulch them, too, with short litter; and it will be well, if the plants be large, to remove some of the lower and larger leaves. Planting can be done safely in spring any time until the plants are in blossom—and all summer, for that matter, with proper care."

BUDDING,— AGAIN.

We have concluded to give again brief instructions for the operation of budding, as it is not too late in the season except for plums, cherries and roses. It should be remembered that in fruit trees of all kinds, the buds should be inserted so late as not to grow any the same year, as they are very apt to fail when they do so. In the *Genesee Farmer*, for 1850, Mr. Barry gave the following directions:



Take a young shoot (fig. 1) with good ripe buds, and strip the leaves off, leaving part of the leaf stalk as at *a*. The shoot is held in the left hand and the knife in the right; the lower part of the blade, say at the point *b*, is placed on the shoot at *c*, one-half to three-fourths of an inch above the bud; the thumb of the knife hand rests on the shoot at *f*, the lower extremity of the bark intended to be removed with the bud; the knife is then drawn towards you obliquely, parallel with the shoot, smooth and level, so that the bark and a very thin portion of the wood will be taken off. In cases where this wood is firmly attached to the bark, it is better to leave it; but where it is loose, or partly so, it may better be removed, which can be done by putting the edge of the knife under the wood, between it and the bark, and lifting it up. Care in doing this is necessary, to avoid pulling out the root of the bud, as in that case the bud is lost. Fig. 3 is a good bud; *g*, root of the bud, and *h*, root of the leaf.—Fig. 4 represents a bad bud, always thrown away.

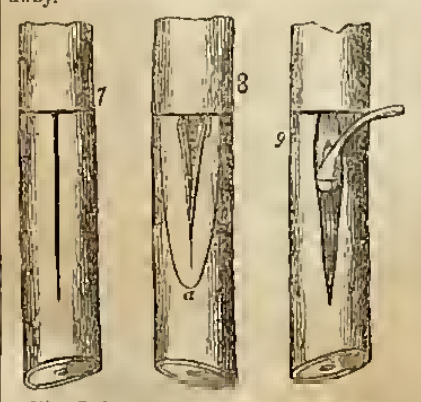


Fig. 7 shows the stock cut in the form of a T, to receive the bud. Fig. 8, the bark raised with the ivory or bone handle of the knife.—Fig. 9 represents the bud in its place. The top of the bud is always cut square, to fit the cross cut on the stock. Fig. 10 shows the bud tied with bark or other material. The operation should be done neat and quick.

GOOD FRUIT WITHOUT GRAFTING.

Messrs. Eds.—Under this head I notice, in the Rural of August 5th, an inquiry; and what I have to say upon the subject is from both hearsay and my own personal knowledge. About 1776, commercial difficulties rendering it almost impossible to obtain sugar, my uncle E. Potter, of Plymouth, Conn., gathered from some half dozen trees in his orchard some sweet cultivated apples, vulgarly called *belly bounds*—a very rich fruit—converted them into cider, and boiled it down as a substitute for molasses. He saved the seeds from the pomace, excluding all others; the refuse of which nursery I well recollect of seeing in my school-boy days, say 1798. From this nursery he set an orchard of about 130 trees, and left them to produce the natural fruit. With the orchard I was perfectly familiar, during the fruit season, for fifteen years, and visited it the last time, 6 years since, but found it in a state of decay. Not a single tree in the orchard produced the parent fruit, and nearly one-half were tart apples, all fine fruit,—early fall and winter varieties never before known,—and some of it very large, nearly double the size of that from which it sprung. Bearing scions originating from this seedling stock can now be seen in the orchard of Eli Potter, Esq., in Chili, Monroe Co., N.—L. P., *Gates, N. Y.*

HOUGHTON'S SEEDLING GOOSEBERRY.

Houghton's Seedling is probably the best variety of the gooseberry ever cultivated in this country. It is a cross between our native gooseberry and some foreign kind. The berry is rather small, oval, the skin thin, reddish brown; flesh fine, very tender, sweet, and of a fine delicious flavor. It is a very superior gooseberry for the dessert; it is also excellent for cooking, and it is in good condition for this purpose for about four weeks.

As a grower it excels by far all other kinds that we have cultivated; and as to bearing, every season, nearly all the growth of the previous year is covered with fruit. One to two quarts of fruit have been grown on bushes set the previous year. A plant well set in the spring, in a good soil, will make a large growth the first year, and the next year will be loaded with fruit.

This variety not only excels in growth, bearing, and quality, but it is free from blight, which is the destruction of almost every foreign kind cultivated in the country. Some gardeners, after having become acquainted with Houghton's Seedling, have excluded every other variety from their grounds. We regard it as not only superior to any kind of foreign gooseberry, but worth far more than all of them for this country of hot summers.—*Ex.*

COST OF APPLE-SEEDS IN OREGON.

W. W. Bristow, of Lane County, Territory of Oregon, (named we suppose, in honor of Gov. Jo.,) sent an order to Messrs. Fowlers & Wells of this city (New York) for a bushel of apple-seeds.

They sent to Ohio and had them washed out of pomace and forwarded to Mr. B.

In his letter acknowledging the receipt, he gives the following items of cost, viz:

Postage on letters in relation to the seeds	50
Cost of one bushel of apple-seeds in New York	$20 00
Adams & Co.'s Express transportation from New York to Portland, Oregon	33 50
Paid hire of a man to go to Portland	15 00
Paid hire of a horse for same	20 00
Paid for traveling expense of ditto	20 00
Total	$109 00

"Yet," says Mr. Bristow, "I do not grudge the cost, great as it is, for they are all growing finely, and will be worth a thousand-fold."

He inclosed money for other seeds, to be sent to him by mail, of various kinds of fruit, being willing to incur the heavy expense to introduce good fruit trees into that country.

Such a settler is worth about as much as a thousand mere politicians in a new country.—*N. Y. Tribune.*

Ripening Pears.—Many varieties of pears, if suffered to ripen on the trees are dry and worthless—but if picked before ripe and placed within doors in a warm room to ripen, they are melting, juicy, and of fine flavor. This we believe is applicable to nearly all varieties. The proper time to pick them is when they begin to change color, or when some of the imperfect ones fall to the ground. They should always be picked by hand, and never shaken from the trees.—*Mich. Farmer.*

Peach Worm.—Of all remedies recommended to prevent the ravages of the peach worm, we have tried none more successfully than the application of from one to eight quarts of leached or unleached ashes around the bole of the tree. Before applying the ashes destroy all the worms you can by picking them out with a large needle or pen-knife. Their presence is known by the gum that exudes from the tree where they are at work.—*Michigan Farmer.*

The Largest Lettuce on Record.—Mr. G. W. Seger, of Green Springs, Cal., writes to the California *Farmer*, June 13, that he has a head of lettuce, of the curly head variety, which measures *six feet* in circumference, (two feet in diameter,) and that it is as closely packed as a drum-head cabbage. What next from the golden State?

Pears on the Mountain Ash.—The *Maine Farmer* speaks of a five years' trial of Bartlett pears grafted on the mountain ash, as very successful, the trees bearing well, and the pears excellent.

Mechanic Arts, &c.

LIST OF PATENT CLAIMS

Issued from the United States Patent Office,
For the week ending August 1, 1854.

Elkan Adler, of New York city, for a machine for manufacturing friction matches.

William Little, of the Strand, Middlesex, Eng., a new lubricating fluid for machinery.

C. F. Ittnersfeld, Cincinnati, Ohio, improved bits for carving machines.

C. B. Baker, Troy, N. Y., improvement in brick presses.

R. C. Bristol, China, Mich., improvement in steam boiler tubes.

G. W. Cherry, New York city, improvement in stone saws.

Ephraim and J. R. Cushman, Amherst, Mass., improvement in drying thick paper.

William Gayer, Franklin, Tenn., improvement in door locks.

Jeremiah Garhart, New York city, mechanism for uniting plates of metal of unequal thickness.

John Curtis and Joseph Briggs, Utica, N. Y., improved cone to hot air furnaces.

Ari Davis, New York city, improvement in magneto-electric machines.

H. C. Deputy, Michigan City, Ind., new mode of draughting and modeling vessels.

John J. Elferink, Springfield, Ill., machine for sawing fire wood.

Thomas Emmons, New York city, machine for moulding crackers.

Josiah Ells, Pittsburg, Pa., improvement in rendering hemp fire arms.

John B. Earle, Leicester, Mass., new apparatus for moving and setting compasses and callipers.

W. R. Glover, Glasgow, Ky., improved steel pens.

Isaac Gregg, Pittsburg, Pa., improvement in brick presses.

B. F. Gold, New Haven, Conn., apparatus for lathing buildings.

Abram J. Gibson, Clinton, Mass., new mode of attaching thills and poles to vehicles.

A. J. Gibson, Clinton, Mass., new mode of attaching whiffletrees to vehicles.

Joseph Hyde, New York city, new form of washboards.

John M. Hathaway, New York city, improvement in shot pouches.

David A. Hopkins, Elmira, N. Y., improvement in railroad car couplings.

William F. Ketchum, Buffalo, N. Y., new form of submerged paddle wheels.

William Henry Morrison and M. W. E. Doran, Indianapolis, Ind., for simultaneous movement of augers and chisels in mortising machines.

Willis Mansfield, New Haven, Conn., switch-moving apparatus.

William Watson, New York city, improvement in stone and marble saws.

Benj. F. Ber. Harwich, Mass., feed-water apparatus to steam boilers.

G. W. Coats and J. Tassel, of Springfield, O., for improvement in machines for sticking card teeth.

Halvor Halvorson (assignor to H. Halvorson and Horace Barnes,) of Boston, Mass., apparatus for measuring cloth on looms.

S. T. Thomas and Eliza Ann Everett, (administrx. of Edward Everett, dec.) of Lawrence, Mass., improved method of warping and dressing yarns.

Chas. Mountz and W. N. Booth, Buffalo, N. Y., improvement in lamp fasteners.

Wm. S. McLean, Pittsburg, Pa., new form of car wheels.

W. M. Palmer, of Palmyra, Me., grain screens to thrashing machines.

B. S. and C. M. Pierce, New Bedford, Mass., new kinds of molds for cement or earthen vessels.

A. H. Petsch, Charleston, S. C., new improvement in dumping cars.

Samuford Stone, Kirkersville, Ohio, improvement in dumping carts.

S. Shearman, Goshen, Ind., new method of cleaning and feeding in grain to the mill stones.

John Stull, Philadelphia, Pa., improvement in saw mills.

Louis Schwingruber, New York city, spring clasp to shoe horns.

Geo. Souther, South Boston, Mass., for elastic ties for carriage wheels.

Eli Whitney, Whitneyville, Ct., new form of lock for fire arms.

Simon Willard, Cincinnati, O., for sheet metal heelstands.

Alban Wauth, New York city, improvement in fire curtines.

W. B. Walker, Bennington, N. H., machine for the manufacture of brooms.

Wm. Anderson, Ulysses, N. Y., improvement in setting teeth in harrows.

Thos. Daugherty, Erie, Pa., lasting instruments.

C. K. Farr, Auburn, Miss., improved method of setting cultivator teeth.

Robert Grant, New York city, new form of hydraulic press.

J. S. Hall, Manchester, Pa., improvement in mold board of plows.

Abraham Jackson, New York city, horse power hoisting machinery.

H. N. Black, Philadelphia, Pa., cylindrical perforated grain drillers for cleaning and drying grain.

H. M. Mansfield, Ashland, Ohio, improved screens for hulling clover seed and cleaning grain.

D. W. Shares, Hamden, Ct., improvement in the expanding cultivator.

J. W. Sikes, Plymouth, N. C., new cap or withe for masts.

J. W. Whittal and W. W. Pendleton, of Greenwich, Ct., improved material for felt hats.

D. F. Mellen, Wentworth, N. H., (assignor to himself, J. F. Augustus, of Somerville, Mass., and S. A. Eaton, of Boston, Mass.,) improved machine for planing metals.

A Cheap Barometer.—A correspondent of the Country Gentleman writes as follows:

For some years I have been in the habit of watching the condition of the gum in my wife's camphor bottle, which stands in our bed-room. And when not disturbed it makes a capital weather glass. It answers my purpose as well as a barometer that would cost me from $25 to $50. When there is to be a change of weather from fair to windy or wet, the thin flakes of the gum will rise up, and sometimes when there was to be a great storm I have seen them at the top. When they settle down clearly at the bottom, then we are sure of grand weather.—Any farmer who will watch his wife's camphor bottle first season, will never have occasion to watch the birds or locusts for indications of a change in the weather.

SELF-REGULATING WINDMILL.

Daniel Halliday, a mechanic in an obscure country village, Ellington, Connecticut, has done what a world of mechanics have sought for in vain for centuries. He has invented and put in successful operation a windmill with *self-furling sails*. The mill built by him has five feet wings, that is, the diameter of the windmill is ten feet, and it has been in operation for six months without a hand being touched to it to regulate the sails. It run fifteen days at one time without stopping day or night, and it has stood through some hard gales; the beauty of the improvement is, that it does stand still when the wind rages hardest, with the edge of the wings to the wind, and as it falls they gradually resume their position for a gentle breeze. It is so contrived that nothing but a squall of great severity falling upon it without a moment's warning can produce damage.

The mill mentioned has drawn water from a well twenty-eight feet deep, one hundred feet distant, and forced it into a small reservoir in the upper part of the barn, sufficient for all farm purposes, garden irrigation, and "lots to spare." The cost of such a mill will be $50, and the pumps and pipes $25. It is elevated on a single oak post a foot square, the turn circle being supported by iron braces.

The wings are made of one longitudinal iron bar, through which run small rods; upon these rods, narrow boards half an inch thick are fitted, holes being bored through from edge to edge, and screwed together by nuts on the ends of the rods. This makes strong, light sails, but as will be seen, are fixtures not to be furled or clewed up; but they are thrown up edge to the wind by a very ingenious and simple arrangement of the machinery, which obviates the great objection to windmills for farm use; the necessity of constant supervision of the sails to suit the strength of the wind.

Wind is undoubtedly the cheapest power that a farmer can use, and notwithstanding its inconstancy, if this improvement operates as well as it bids fair to in the single mill erected it will be applied to many valuable uses. By windmills swamps may be drained and upland irrigated. What an advantage would be the latter in such a drouth as now prevails in many parts of the country, besides the great amount of fertilizing matter in water at all times. The windmill could be used too for all grinding of grain for farm use, driving the washing-machine and churn, pumping the water from the well or spring—often one of the hardest kinds of labor about the house. Liquid manure and the solid excrement made into liquid, could be sent over a field through leading pipes by the same power.

We do earnestly hope for the success of this improvement—that it will not only be an ornament, but a thing of usefulness to many American farmers.

Domestic Economy.

USEFUL RECIPES.

To Destroy House Flies.—Amongst "the miseries of human life," during the warm season of the year, may be reckoned the tickling, and buzzing, and obtrusive familiarities of the common house flies. A correspondent of a British newspaper, tells us how to destroy these pests. He says:—"Pour a little simple oxymel (an article sold by druggists) into a common tumbler glass, and place in the glass a piece of cap paper, made into the shape of the upper part of a funnel with a hole at the bottom to admit the flies. Attracted by the smell they readily enter the trap in swarms, and by the thousands soon collected, prove that they have not the wit or disposition to return. I recommend this plan with confidence, for I have already destroyed great numbers."

Rat Killing.—Traps for catching rats or mice, ought to be baited with oat or Indian meal, and scented with oil of rhodium. This article, which may be had at the druggists, will attract rats and mice in great numbers—Bait the traps in this manner for two days, with the springs checked, and renew the composition when consumed. On the third day, they will enter freely; remove the check and commence the work of destruction. Be careful to remove the vermin as soon as caught.

How to cut India Rubber.—As this useful article is now much used in Rural districts, the following method for cutting it, neat and clean, may be useful:—Simply, dip the knife in water, and you will cut it like a piece of green cheese. N. D. R.

Tomato Sauce.—Peel and slice twelve tomatoes, picking out the seeds; add three powdered crackers, pepper and salt to your taste; stew twenty minutes.

To Make Blackberry Wine.—To make a wine equal in value to Port, take ripe blackberries, or dew-berries, and press them; let the juice stand 36 hours to ferment, and skin off whatever rises to the top; then to every gallon of the juice, add a quart of water, and 3 pounds of good sugar; let this stand in an open vessel for 24 hours; skim and strain it; then barrel it until March, when it should be carefully racked off and bottled.

Tomato Pies.—Cover the bottom with alternate layers of sliced tomatoes, ripe and sound, and bread crumbled fine, with butter and spice to taste, put it in a bake pan with loaf bread sliced fine, and sprinkle fine sugar over each layer of tomatoes as it is put in.—Cover with sliced bread, and bake as you do other pies.

Educational.

(For Moore's Rural New-Yorker.)

THE YOUNG SCHOOL MISTRESS.

With what sentiments of anxiety, of humble pride, and devotional concern, does the young school mistress enter her daily abode for the first time as teacher. She is about to enter a new field of experience, and take upon herself the responsibility of a noble and highly important trust. For the first time is she to be honored by the appellation of mistress; for the first time in her life her word is law, her call is to be obeyed, and she reigns sovereign and supreme over the youthful group around her.

With what affectionate emotion does she view her juvenile charge, sensibly aware of the confidence reposed by the parents who have furnished their children (the dearest object of their hopes) with means, and entrusted their young intellects to her tender care and training. Fair lady, yours is not an overwrought conviction of the responsibility of your mission. The early buddings of intellect and genius are springing up around you, and submitted at this critical period to your gentle culture. At this early age, you can imbue the mind with holy influences that matured years would forever exclude, and to a great degree the future instruments of State and Empire are placed under your affectionate dominion.

The instructor of early youth directs the habits of future years—not the instructing of the more rugged rules of intellectual science and mental discipline, nor is the pupil yet of sufficient capacity to receive it—but the more refined and noble sentiments of social kindness that a gentle spirit inspires; that benevolence and good will which the young educated female is by nature qualified to instill into the juvenile mind. From these spring the principles of philanthropy and of patriotism that mark the character of the truly great and honorable.

The new flowers and foliage of spring and summer, are emblematical of the juvenile throng who scatter them by the way going to and returning from school, and also the entrance of their young instructor upon the more arduous duties of life. Every part of the room is arranged with the utmost neatness and order, the windows are opened and curtained with branches of foliage, and the refreshing breeze of summer circulates the whole apartment.—Upon the stove is placed an old ewer (procured by one of the seniors) minus a handle and spout, and being a rare specimen of the fallacy of Yankee attempts to make broken crockery as good as new. This is used as a flower vase, and daily supplied with bouquets presented by the scholars to their teacher, which she receives with affectionate grace. Each has a desire to furnish the most acceptable. Little Jim, yet too young for much taste to be expected in the selection of his floral gifts, tries to imitate their example, and means to excel them all if possible. He presents his fair mistress with a large sunflower, which she takes with a suppressed smile, that James is quick to perceive, and he goes to his seat with the proud impression that the *school-maam* likes his posy the best of any. He is soon called up to read, and speaks with uncommon emphasis while gazing with intense earnestness at her finger rings. Reader, do you not remember, at that early age, how heavily trifling matters were impressed upon your mind? What confidence was placed in our fair guardian for redress when an older encroached upon our rights! How kindly did she bear our part in those petty difficulties soon forgotten! There was sorrow but firmness in correction, and clemency in punishment. How diligent and submissive when we were applauded, and how we loved our teacher for those kind words and affectionate treatment! Nor did a knowledge of the fact impressed upon our minds, that the rod of correction would be the consequence of disobedience, detract from our esteem or desire to please.

Who can tell the value of a smile accompanied with words of kindness? It radiates like a beam from heaven upon the soul of mortals, and kindles from eye to eye, and glows from heart to heart! Its influence is immortal. Those generous acts are seeds implanted in the youthful heart, which are destined to take root in adult age. They bud and blossom like the rose, and produce the noblest traits in our moral and intellectual character in manhood.

ALEX. H.

M'Donough, N. Y., 1854.

Common Schools.—In an oration at Williams College, Mass., Hon. Edward Everett once said:

"I would rather occupy the bleakest nook of the mountain that towers above us, with the wild wolf and the rattlesnake for my nearest neighbors, with a village school, well kept, at the bottom of the hill, than dwell in a paradise of fertility, if I must bring up my children in a lazy, pampered, self-sufficient ignorance."

What men want of reason for their opinions, they usually supply and make up in rage.

RAILROAD CURVATURE.

Useful Olio.

PHILOSOPHICAL LECTURE.

We closed our last lecture with a promise to our young friends, that in the following article of the series, an explanation would be given of the manner in which a railroad train is enabled to turn a curve. The illustration before us presents a view of such an occurrence, very common on roads, especially in a hilly or mountainous country. We see in the cut, the ocean in the distance on the right; and on its shore where the railroad undoubtedly terminates, is situated a commercial mart. The road at the point in view has reached a considerable elevation above the plain, and is flanking by its curvature a towering rock. By a combination of what scientific principles this is effected, we will now endeavor to explain.

There are couples of four-wheeled trucks under the cars, two wheels of each truck being in sight, while the two corresponding wheels on the opposite side are hidden from view by the body of the cars. These trucks are placed under the bodies on pivots, or other apparatus of a similar character, so as not to cramp the wheels against the rails; and thus they easily run around the curve, while the long car bodies take the position of chords, of which the successive portions of the rail are the arcs. To illustrate this point more fully, let a strong bow represent the rail, and then the bow-string will take the position of the body of the car.

Again, the outside rail is elevated above the inside one proportionately to sharpness of the curvature; so much so, indeed, that where very short curves are unavoidable, the sidling position which the car assumes is sometimes quite alarming to the passenger, he imagining that to be a dangerous position of the car, which is in reality an important element of safety. Every one who has seen an equestrian performer riding around a ring, has observed the becoming position he assumes inclining towards the center, while the horse is perambulating rapidly around the circumference of the circle. If the horse should stop while the rider is in this position, the man would inevitably fall within the ring. The skillful rider knows how to adapt his position to the curve and to the motion of the horse, and the skillful engineer, (not engine-driver) knows how, as far as circumstances will admit, to adapt the position of the rails to the curvature of the road bed, and to the mean motion of the trains.

There is, however, another arrangement of the wheels, simple in itself, but of momentous consequence to the economy of railroads—protecting the axles from torsion, or twisting in two, preserving the wheels and rails from wear and tear, materially lessening the amount of necessary locomotive power, and, above all, lending a powerful and effective aid to that all-important desideratum, viz., turning a curve with safety, and at a rapid speed. It is probably well understood by all, that the wheels of a car do not turn on an axle like those of a carriage, but are keyed upon the shaft, and revolve with it. As a consequence, the wheels on each end of the axle must turn together, and make an exactly equal number of revolutions. These wheels are not quite as far apart as the rails themselves, but leave an inch and a half or more for play and vibration. On the inside of each wheel is a flange, or rising rim of metal, which, coming in contact with the rail, as the car sways either to the one side or the other, keeps the axles in the proper position. The tire of the wheel is not flat like the tire of a wagon, but is smaller in diameter towards the outer edge; that is to say, it is turned down in the manufactory by means of an engine lathe, smaller from the flange outward, so that the face of the wheel is shaped like the side of a common washing-tub.

Now look at the cut, and observe what I say! The centrifugal force of the train in motion, throws the cars towards the outer rail, *and, as a necessary consequence, on to the largest part of the outside wheel and the smallest part of the corresponding inner one.* If the difference in size between the two circumferences be two inches, it follows that the left-hand side of the cars (looking in the direction the train is running) will be carried forward *two inches* further than the right-hand side, by a single revolution of the wheels. Of course, this is just what is wanted *to carry the cars safely and easily around a curve*, which is the point we are aiming to illustrate. Do you understand it, boys? Of course, if the curvature is in an opposite direction, the same action takes place on the other side. If the outside is carried along too fast, the motion itself regulates the disturbance, by running the outside wheel on a smaller portion of the circumference, and the inner wheel *vice versa*, which, as Euclid says, "*erat demonstrandum.*"

THE PHILOSOPHY OF RAIN.

To understand the philosophy of this beautiful and often sublime phenomenon, so often witnessed since the creation of the world, and so essential to the very existence of plants and animals, a few facts derived from observation and a long train of experiments, must be remembered:

1. Were the atmosphere everywhere at all times of a uniform temperature, we should never have rain, or hail, or snow. The water absorbed by it in evaporation from the sea and the earth's surface would descend in an imperceptible vapor, or cease to be absorbed by the air when it was once fully saturated.

2. The absorbing power of the atmosphere; and consequently, its capacity to retain humidity is proportionally greater in warm than cold air.

3. The air near the surface of the earth is warmer than it is in the region of the clouds. The higher we ascend from the earth the colder do we find the atmosphere. Hence the perpetual snow on very high mountains in the hottest climate.

Now, when, from continued evaporation, the air is highly saturated with vapor, though it be invisible and the sky cloudless, if its temperature is suddenly reduced, by cold currents descending from above, or rushing from a higher to a lower latitude, or by the motion of a saturated air to a colder latitude, its capacity to retain moisture is diminished, clouds are formed, and the result is rain. Air condenses as it cools, and, like a sponge filled with water and compressed, pours out the water which its diminished capacity cannot hold. How singular, yet how simple, the philosophy of rain! What but Omniscience could have devised such an admirable arrangement for watering the earth?

BRAZIL NUTS.—THEIR SHELL.

The fruit of this delicious nut is well known so rich, it is often called the "Cream Nut."—It began to be known more than two centuries ago, subsequent to the settlement of Brazil by the Spaniards. It was fully described, however, by Humboldt, in his travels in South America. It has a marked triangular prismatic form, and is contained in a large heavy, ligneous pericarp or woody fruit vessel—a very dense and hard fibre. From four to eight of the nuts attached to the central column, are found in this pericarp.

As this fruit grows on trees two feet in diameter, and often 120 feet high, and falls at a distance of 60 feet or more, the shells become very dangerous to persons frequenting the forests; and even animals learn to make caution quite a virtue or necessity at the period of their fall.

The tree was named after Bertholdt, a distinguished French chemist, Bertholletia excelsa, and is the well known Juvia of the Orinoco. It has been found only in South America.

These hard shells, four or five inches in diameter, of the size of a child's head, and resembling a small bomb-shell, containing the nuts, are now selling in our city, cheap as a curiosity. Just get one; carefully saw off the upper portion that you may see how carefully and neatly the nuts are laid up for use.—*Rock Advertiser.*

The Pewter Plate of George IV.—The coronation banquet of George IV. was one of the most splendid upon record, but there was a world of "leather and prunella" about it, in spite of its reputed splendor. Thus, for instance, the king's table was one gorgeous display of gold plate; but the plates and dishes at all the other tables were composed of nothing more costly than good, honest pewter.—The metal indeed was so splendidly burnished, that to the eye no silver highly polished could have been more dazzling. The truth remains, that the peerage that day dined off pewter; but the occasion gave value to the material, and the dishes, in their character of the relics of the glory of the last coronation banquet in Westminster Hall, are as highly prized and as reverently preserved as though they were composed of materials less strange to Potosi than tin, antimony, and a trifle of copper.

Wit and Humor.

WILD TURKEY SHOOTING.

Thorpe, in the "Hive of the Bee Hunter," says of the habits of the Wild Turkey:

We once knew an Indian, celebrated for all wood craft, who made a comfortable living by supplying a frontier town with game. Often did he greet the villagers with loads of venison, with grouse, with bear, but seldom, indeed, did he offer the esteemed turkey for sale. Upon being reproached for his seeming incapacity to kill the turkey, by those who desired the bird, he defended himself as follows:

"Me meet mouse; he stop to eat, me shoot him. Me meet bear; he climb a tree—no see Indian; me shoot him. Me meet deer; he look up—say may be Indian, may be stump—and me shoot him. Me see turkey great way off; he look up and say, Indian coming, sure; me no shoot turkey; he cunning too much." * *

"I rather think," said a turkey-hunter, "if you want to find a thing *very cunning*, you need not go to the fox or such varmints, but take a gobbler. I once hauled regular after the same one for three years, and never saw him twice.

I knew the critter's 'yelp' as well as I knew Music's, my old deer-dog; and his track was as plain as the trail of a log hauled through a dusty road.

I hunted the gobbler always in the same 'range,' and about the same 'scratchins,' and he got so, at last, that when I "called," he would run from me, *taking the opposite direction to my own foot-tracks!*

Now, the old rascal kept a great deal on a ridge, at the end of which, where it lost itself in the swamp, was a hollow cypress tree. Determined to outwit him, I put on my shoes, *heels foremost*, walked leisurely down the ridge, and got into the tree, and gave a 'call,' and, boys," said the speaker exultingly, "it would have done you good to see that turkey coming toward me on a trot, looking at my tracks, and thinking I had *gone the other way.*"

TOASTS BY THE TRADES.

From a list of professional toasts, said to have been made at the New England celebration at Milwaukee, we take the following:

By a Baker—"The Storm of Liberty"—It rose in the yeast—may it continue to give its light until it has leavened the whole world, and prepared for the last great baking.

By a Dry Goods Merchant—"Our National Flag"—may we never measure it by yards, nor sell it without a reasonable advance on its first cost, adding transportation and insurance.

By a Printer—"Plymouth Rock," the imposing stone on which the form of our liberties was made up—may it be a type of their perpetuity.

By a Tailor—"The American Union"—Buttoned up by the patriotism of our ancestors—may the needle of its virtuous indignation prick the first goose that attempts to rip it asunder.

By a Miller—"The Mayflower"—Ground from the grist of oppression, it turned out no shorts.

By a Forwarder—"The Boston Tea Party"—May its memory be stored away by all who attempt to exact illegal commission.

It is stated that when the gallant 88th (Connaught Rangers) landed at Scutari, their enthusiastic devotion to the Sultan's cause knew no bounds when they heard that the loftiest title by which he was known to the Turks was the "Paddy Shawl" (Padischah.)

A Distinction and a Difference.—The Emperor of Russia is at present an Autocrat. But with France and England against him, we think the odds are two to one that he will soon be made a Naughtocrat.—*Punch.*

A New Orleans editor, recording the career of a mad dog, says:—"We are grieved to say that the rabid animal, before he could be killed, severely bit Dr. Hart and several other dogs."

Punch advertises for a few smart handsome young gentlemen to dance at evening parties, on account of the great drain of Officers that the war has carried to the east.

"Have you any fish in your bogs?" asked a person of a fisherman, who was returning home. "Yes, a good *eel*," was the rather slippery reply.

There is a man somewhere in America who is so tall that he is obliged to rue up a ladder every time he brushes his hair.

The man that "*Oh'd!* for a lodge in some vast wilderness," has finally paid up.

Sunday Reading.

(Written for Moore's Rural New-Yorker.)

SABBATH IN THE FOREST.

BY G. J. CLARKE.

Alone in the leafy forest,
On this holy Sabbath day,—
While softly, through bending branches,
The gorgeous sun-beams play;

The leaflets are lightly rustling
While kissed by the wooing breeze,
And the birds make melting music
In their homes 'mong low'ring trees.

The stream beside which I'm lying
Goes singing on its way;
All things around and above me
Seem praising God to-day!

And here, in the summer forest,
With its leafy dome above,
To the great and glorious MAKER
Will I pray to be filled with love!

That my heart be pure and sinless,—
That when my voice I raise
To Him, it may be, like Nature's,
With thankfulness and praise!

N. Y. Conference Seminary, Aug., 1854.

(For the Rural New-Yorker.)

THE PERFECT LAW OF LIBERTY.

"For what is Freedom but the unfettered use
Of all the powers which God for use has given?
But chiefly this, Him first, Him last to view,
Through nearer powers and secondary things,
Effulgent, as through clouds that veil His blaze."

(Coleridge.

St. James denominates the Gospel *the perfect Law of Liberty*, (Jas. 1, 25,) and its influence upon those who are imbued with its spirit, may be contrasted with the thraldom of Sin, which, under the guise of freedom from restraint, ensnares its deluded victims—lending them chained and miserable slaves of their own unhallowed passions. Such there are

"who deem themselves most free
When they within this gross and visible sphere
Chain down the winged thought, scoffing ascent,
Proud in their meanness."

Obedience to the Law of Liberty results in a oneness of man's spirit with God's spirit—the desires and affections freely and harmoniously unite in the fulfilment of the Divine Will, with which the renewed human Will is now *at one* or coincident, and consequently conforms to righteousness, and dwells in purity and peace. Thus, the Gospel requirements act not as a restraint, but rather permit and incite constant and pleasurable action of the spiritualized Will—

"the unfettered use
Of all the powers which God for use has given;"—

its tendency and result being the fulfilment of the design of man's creation *after* God's *own image and likeness*—endowed with immortality and moral self-determination, the only possible image of His eternity and self-existence.* On the other hand, by the disregard of law and obedience to the promptings of the unsanctified heart, which brings us under the despotism of Sin and the bondage of evil passions; we fall into anarchy and disorder, and, destitute of strength of guidance, sink deeper and deeper among the lost.

Two pathways open before every accountable being—the one straight and narrow, but distinct, established by law, and *leading unto life*,—the other broad, rambling and uncertain, but with a show of allurement, and *leading unto destruction.* One with a fixed beacon, ever visible and ever beckoning and cheering us on,—the other with only a false and flashing glare, leading into danger and failing in our utmost need. The one path becomes more rugged and difficult, its lights more deceptive and bewildering, its burdens more galling and oppressive, its chains closer and heavier, its wretchedness more and more unalterable, until those who grope therein stumble over the soundless brink of utter ruin. The other—ah! happy they who seek a guiding Law rather than such freedom—the other is an established path, a fenced highway, which a comforting cloud overshadows by day, and a pillar of light, of guidance and protection, illumes by night. And they who walk therein journey not alone. A friend, true and powerful, provides for the wants and solaces every sorrow of mortality. The Way prescribed and provided by the Law of Liberty is one of ever increasing strength and delight, Faith, Hope and Love invigorate and bless, and it leads unto a heavenly land, of which we have heavenly glimpses even here, and *the end thereof* is everlasting happiness.

Whoso looketh into the perfect Law of Liberty and continueth therein, he being not a forgetful hearer, but a doer of the work, this man shall be blessed in his deed. Reflect on this, and in the name of God and by the help of His grace,

"Break from thy body's grasp thy spirit's trance!
Give thy soul air, thy faculties expanse,
Knock off the shackles which thy spirit bind
To dust and sense, and soar at large thy mind!
Then move in sympathy with God's great whole,
And be like man at first, 'a living soul.'"

[Rev. H. Dana.

Royalton, N. Y., July, 1854.

*See "The Friend," Coleridge's Works, Vol. II, p. 100.

Patience is the balm of suffering; while you, therefore, bear with firmness what you cannot avoid, submit with resignation to the will of the Almighty, who is just and merciful.

Miscellaneous.

[Written for Moore's Rural New-Yorker.]

"WE MISS THEE."

[DEDICATED TO MISS J. B. AND B. B. B.]

We've missed thee, we're missed thee since parting,
And mourned that thy absence should be;
Still the group of which thou wast a member,
In its heart bears a tribute to thee.
Though our circle, once whole, is now broken,
The waves of affection still roll;
For thee, dearest brother, the maternal
Wells forth from the depth of our soul.

We miss thee, all miss thee more deeply,
Since she who so late graced our band,
Hath severed life's fetters that bound her,
And soared to a better land.
Her absence makes thine more oppressive,
With thoughts of those bright days of yore;
Yet we cling to those memories with fondness,
Though we miss thee, all miss thee, the more.

We turn from the past and the present,
And picture the time when thou'll come,
T' again grace our kind loving circle,—
Join those of thy number at home.
Where spirits congenial will mingle
The pure and deep gushings of love,
And affection bind firmer our kindred,
Till we join those who miss us above.

We miss thee at evening's calm twilight,
We miss thee at morning's grey dawn;
The seat that was thine is now vacant,
The light of our home is now gone.
When the evening's repast is succeeded
By the "good-night" and kisses so free,
We sigh as we think of thy absence,
And cherish a *sweet kiss* for thee.

We know from thy fond, loving nature
Thou art true to thy brother's love;
That beneath the cold surface of manhood,
Lies a fountain that swells not above.
While the prayers of the home one enshrine thee,
And angels guide from their high home,
Accept—O, accept the assurance,
That we miss thee, *all* miss thee at home!

Fenner, N. Y. CARRIE CADY.

STRIVING TO RISE.

STRIVING to rise to a position of respectability in society, and to be known to our fellow men as high-minded, honorable, and trustworthy,—to have our world considered as good as our bond, and both equivalent to cash in hand,—to earn and save a competence sufficient to support our families, educate our children, and provide against the contingencies of sickness and old age, are duties which we owe to ourselves and to society; but striving to rise to the possession of a short-lived notoriety in political or fashionable circles; to buy votes, pack caucuses, traduce opponents, cheat like a gambler, and lie like a knave, for, the sake of being elected to the Legislature or to Congress for a term or two, and then slink back into the ranks a disappointed office-seeker or a branded political renegade; or to struggle in the face of poverty, a slender income, cheated creditors, and internal misery, for the sake of keeping up fashionable appearances and connections, is anything but honorable or noble.

The highest pinnacle ever yet reached by towering ambition, is only a bleak and desolate spot, swept by the winds and blasted by the tempest; a pedestal that affords a precarious standing for a brief period to a single pair of feet, which in the space of one human life, are tripped from their position by the great leveler, Death!

Look in our own country to the fierce struggle kept up for the so-called offices of trust and honor—President, Secretaries, Congressmen, Governors, Legislators, Judges, down, down through all grades and degrees, each competitor imagining that if successful, his name will be transmitted to posterity. And yet, what does it all amount to?—a breath—a bubble, seen a moment and then lost to view. What politician, even, can name one-half the honorable Secretaries that have made up the successive Presidential families during the past three-fourths of a century? Who, without reference to the record, can call to mind the names of men who have been judges of the Supreme Court? Who can name the successive Governors of his own State, not to mention those of other and more important commonwealths? And yet, by the way men strive for these offices, it would seem they imagined the world would hear of them through all coming time. Congressmen, with a few exceptions, live and die, politically, in two years, and their place and fame are assumed by equally evanescent successors, who follow them in turn.

These are all but illustrations of the pomp and honors of the world, which pass away like the morning mist. "One generation passeth and another generation cometh;" the paths trodden by one set of feet are soon trodden by another, which do not tarry long in the way.

[For the Rural New-Yorker.]

"I WILL."

WHAT a world of resolve—what a concentration of purpose may be crowded into those two words. There seems to be a magic influence at work, which bows down a pathway for that individual who takes "*I will*" for his motto. No undertaking is so great—no aspiration so high, but this simple expression can compass it. It seems to lend an undue strength to mind and body for the accomplishing of an object which seemed Herculean.

When we look about us, we are astonished at the eminence which particular individuals have acquired; and still more so when upon investigation we ascertain that those who have risen the highest, contended with the most formidable difficulties. It is in the overcoming of these very obstacles that their greatness consists. Here lies the secret of their success.—It was in that struggle to rise above the peculiar circumstances with which they were surrounded, that they acquired that strength of mind, the emanations from which shall stand as a glorious monument through time.

We do not realize the extent of the capacities with which we are endowed. They slumber within us, either for the want of opportunity, or the necessity to be drawn out; and often die from the imbecility produced by inaction. If we wait for especial opportunities to become great, or talented, we may wait till our death-knell resounds in our ears, and find at last that we have lived not the span of our earthly existence without the accomplishing of a single object. We must *make* opportunities; and commence the foundation of our characters like architects, by first removing the obstructions which may occupy the site.

Greatness is not a freak of nature; neither is it an *exception* to a general law. It is simply a mind, cultivated to the extent of its capacities—one which knows itself. It is our peculiar privelege to become equally eminent with any of our predecessors if we will. Birth and station do not pass current here; but *worth*, if worth we have, will be appreciated. A fixedness of purpose, a high resolve, and "I will," are all that is necessary.

Step by step we toil on in the paths of science, often wearied, yet every step brings us nearer the summit. As grains of sand make the mountain, so every new thought acquired helps to the perfection of mind. If we labor with zeal, we will ourselves be astonished at our progress; and find the ascent neither as steep or as difficult as imagination had pictured.

Young man! if you wish to rise in the world say to yourself "I will!" Fortune helps those who help themselves. Learn self-dependence. Rely upon your own resources, rather than upon the circumstances with which you may be surrounded. You may have a bevy of friends in prosperity, but who will stand by you in the dark hour of adversity? Fortify yourself against any emergency. Set your mark high, and press onward towards it. Be not dismayed though misfortunes come upon you, or difficulties surround; neither deviate from your course by the allurements which may be spread along your path. Success is the reward of perseverance. He who scales the Hill of Science will find that the compensation has more than repaid him for the toil.

A VACANT SEAT.

Around the hearth-side gather the family circle. For years it has known no vacancy.—The grey haired sire and aged matron, the scions of the respected two, with the younger branches of this group, have assembled thus for months and years. No rude hand has interfered to mar the pleasures of a scene so tranquil. Time has sped its way to eternity, and still no trace of sadness has left its imprint on those cheerful faces. Thanks to an All-Wise and overruling Providence, they have been guarded through trials and troubles, free from the afflictions of the world, having enjoyed exemption from the "ills that flesh is heir to," and escaped the perils that beset us through life. This scene *may* be changed. Clouds *may* obscure the sun of cheerfulness that for long, long years has illuminated it, and when the least expected the storm *may* rage with reckless fury.

* * * * * * *

A vacant seat! Gloom—sadness—sorrow—lamentation! The destroyer has laid a heavy hand upon the once joyous group.—From among them has been snatched a loved one, and mirth has taken flight to wander mid more congenial spirits. In the hour of greatest pleasure, when little dreaming of the lurking enemy, the work was done. Around the couch of sickness hover those who fear the denouement. Calm and serene the patient sufferer waits the summons of his master! Weaker throbs the fast declining pulse. The eyes, but yesterday beaming orbs of health and joyousness, are fixed and motionless! Fainter, fainter still, the heaving of that warm heart! A sob, a long drawn sigh, and angel messengers waft the weary spirit to the regions of eternity!

The chamber of death! 'Tis an awe-inspiring spot! In an instant the scenes of past life flit quickly before us. We reflect upon our errors—invariably promise improvement, hasten from the house of mourning, and soon forget the chamber of death! Not so with those who, day by day, were wont to meet the lost one. Months will pass ere that loved one can be banished from memory. Time, fleeting in its waywardness, works wonders, but cannot drive from the thoughts the dear one gone!

A vacant seat! Ever warning monitor of the fickleness of life, how little do we heed thy teachings! Beyond the precincts of affliction it is scarcely known, while to those who have suffered most, it is ever present and impressive.
Albany Transcript.

Most men judge according to their interests, and abound in their own sense. Let two be of contrary opinion, yet each presumes to have right on his side. But reason has always been faithful, and never had two faces.—*Gratian.*

THE BLESSINGS OF OLD AGE.

THE venerable Josiah Quincy, Senior, ex-President of Harvard University, having been toasted at the alumni dinner, made an excellent speech, from which the following is an extract:

"On every occasion, whether in public or private, an old man was sure to be reminded of his years. Why was this? Old age did not simply consist in length of days; for, as the President had quoted—

Wisdom is gray hairs in man,
And an unspotted life is his old age.

If it arose from sympathy, there was no ground for it; the sympathy was absolutely thrown away. So far as his experience reached, old age was the happiest period of life.—And why not! Had we not then got rid of the nonsense of love [laughter], the folly of ambition, the grumbling of envy, the delusions of hope? He repeated that old age was the happiest portion of life, provided that in youth and manhood the individual is obedient to the laws of nature regulating health and strength, and leads a life of respectability and usefulness. In order to be happy and long-lived, it was important that there should be a harmony between the beginning, the middle, and the end of life, and especially between the beginning and the end. The young man should cultivate and foster the qualities which he sees to be respectable and esteemed in the old; and the old man, on the other hand, should retain and seek to perpetuate the feelings and sincerity of youth."

The ex-President closed with this sentiment:

"The hoary hairs with which wisdom crowns the young, and the unspotted life which is the crown of man at every period of his existence. [Much cheering].

A SHORT STORY.—Dickens tells the following story of an American sea-captain:

In his last voyage home, the captain had on board a young lady of remarkable personal attractions—a phrase I use as being one entirely new, and one you never meet with in the newspapers. This young lady was beloved intensely by five young gentlemen, passengers, and in turn she was in love with them all very ardently, but without any particular preference for either.

Not knowing how to make up her determination in this dilemma, she consulted my friend the captain. The captain being a man of original turn of mind, says to the young lady, "jump overboard and marry the man who jumps after you." The young lady, struck with the idea, and being fond of bathing, especially in warm weather, as it then was, took the advice of the captain, who had a boat ready and manned, in case of accident.

Accordingly, the next morning, the five lovers being on deck, and looking very devotedly at the young lady, she plunged into the sea, head foremost. Four of the lovers immediately jumped in after her. When the young lady and her four lovers got out again, she says to the captain, "What am I to do now, they are so wet?" Says the captain, "Take the dry one!" And the young lady did, and married him.

TALENT ACQUIRED.

AS it is in the body so it is in the mind; practice makes it what it is, and most even of those excellences which are looked on as natural endowments, will be found, when examined into more narrowly, to be the product of exercise, and to be raised only to that pitch by repeated actions. Some men are remarked for pleasantness in railery, others for apologues and apposite diverting stories. This is apt to be taken for pure nature, and that the rather because it is not got by rules; and those who excel in either of them never purposely set themselves to the study of it as an art to be learned. But yet it is true, that at first some lucky hit which took with somebody, and gained him approbation encouraged him to try again, inclined his thoughts and endeavors that way, till at last he insensibly got a faculty in it without perceiving how, and that is attributed wholly to nature which was more the effect of use and practice.—*Locke.*

CURIOUS CHINESE PROVERBS—ON CONTENTMENT.—The ripest fruit grows on the roughest wall.—It is the small wheels of the carriage that come in first.—The man who holds the ladder at the bottom is frequently of more service than he who is stationed at the top of it.—The turtle, though brought in at the wrong gate, takes the head of the table.—Better be the cat in the philanthropist's family, than a mutton pie at a king's banquet.—The learned pig didn't learn his letters in a day.—True merit, like the pearl inside an oyster, is content to remain quiet until it finds an opening.—The top strawberries are eaten the first.—He who leaves early gets the best hat.—Pride sleeps in a gilded crown—contentment in a cotton nightcap.

COUNSELS FOR THE YOUNG.—Fight hard against a hasty temper. Anger will come, but resist it stoutly. A spark will set a house on fire. A fit of passion may give you cause to mourn all the days of your life. Never revenge an injury.

He that revenges knows not rest;
The meek possess a peaceful breast.

If you have an enemy, act kindly to him and make him your friend. You may not win him at once, but try him again. Let one kindness be followed by another till you have compassed your ends. By little and little, great things are completed.

Water falling day by day,
Wears the hardest rock away.

"ONLY ONE."—One hour lost in the morning by lying in bed, will put back, and may frustrate, all the business of the day.

One hole in the fence will cost ten times as much as it will to fix it at once.

One unruly animal will teach all others in its company bad tricks.

One drinker will keep a family poor and in trouble.

"One sinner destroyeth much good."

LIFE'S SUNBEAMS.

There are bright and happy places
In this dwelling-place of tears;
Sunny gleams, and merry faces,
Smiling hopes that conquer fears.

There are many sweets that mingle
In our cup of mortal woe;
Fairy bells that softly tingle
Sweetest music as they go.

There are blossoms rich and rarest,
Life's lone pathway to make bright,
And their gentle faces fairest,
Shine like rays of living light.

Yet there still are choicer blessings,
To beleek our weary way—
Friendship's warm and fond caressing,
Loved ones never can decay!

[Written for the Rural New-Yorker.]

THE HEART SECRET.

BY MELVA MAY.

A CHILL December blast moaned pitifully down the street, and seemed to linger amid the tall pines which clustered around the tasteful dwelling, making strange moanings, as though a writhing monster lay concealed within their dark folds. Now and then a dash of sleet would pit-a-pat against the window-shutters and a blast more furious, sweeping o'er the trees and shrubbery, would, with a howl of rage, circle round, and lift, and tug, like some huge giant who sought in vain for a crevice to clutch his hand upon, and to tell to those within that a storm of fearful power was gathering out upon the deep, and soon would sweep along the streets, and rush and swell o'er marble halls, and play wildly with the poor man's dwelling.

Within, a soft, warm light flashed out from a blazing grate, just enough to blend the rich colors of the window tapestry, and reveal the wilderness of leaves and flowers upon the soft matting. There was a large painting, too, upon the wall opposite; the light danced over it, and before the eye were the soft outlines of an Italian landscape. But there was not a sound within to break the rush of the coming storm.

As motionless as a statue sat a young girl before that grate. Her face was soft and fair, but O, how pale! Her gaze seemed fixed on something invisible to others, and her lips were painfully compressed. There she sat, as though a strong determination had crushed the life from her soul, or, as though some relentless destiny had blotted out the light of hope, and left her young heart in thick darkness.

The door opened, and a young girl entered and stopped short. "MADALINE," she said, twining her arms around the fair statue, "MADALINE, dear sister, why are you so pale, so sad? speak, speak, MADALINE!"

But MADALINE, with a convulsive effort, turned away from the loving embrace, and said, with strange calmness in her tone, "Leave me, dear IDA; I would be alone to listen to the storm."

IDA pushed back the thick curls from her brow, and gazed for a moment half startled, half reproachfully, on her elder sister.

"Go, dear IDA," said MADALINE again, but this time with something like her usual gentleness of manner, and stooping over to press a kiss on her fair brow, "go, and sweet be your slumbers, dearest; I would be alone!"

The young girl obeyed, and MADALINE threw open a window-shutter and seated herself by it, and gazed out upon the thick darkness.—She pressed her throbbing brow against the glass, and felt the cold sleet beating faster and faster upon the other side. Thus hours passed on, and then it seemed suddenly to cease, and noiselessly a white shroud fell upon the ground, the wind lulled, the clouds broke, and the moon peering from behind, as serenely fair as ever, looked down upon the earth, which, like a vast corpse in its grave clothes, lay cold and silent in the repose of midnight. It glanced through that window too, and, with a smile so calm and holy, that its mellow light seemed but a shade paler than the golden hues of sunset, lit up the features of the pale maiden.

"So it shall be!" she said, starting to her feet, with her eyes full on the gaze of the moon, "so it shall be! I will tear this love from my heart, and none shall know from what cause I suffer. O how like!" she continued with emotion, and tear-drops for the first time started in her dark eyes, and fell down upon her trembling hand, "O how like, is the storm that has swept the earth, to the one that raged within my own bosom. The rush of winds was not fiercer than the contending emotions within my soul, when I discovered that I was deceived in the character of the one I loved as I loved my life. And when I resolved to tear this love from out my heart, over my soul crept the freezing stillness of the shroud. O how I hoped that it was death! I longed to die! For what should I live? But duty, like the pale moon shone in upon the darkness, and won me back to life—though dead to love—yet to live and tread the path of duty!"

The morning found her calm, though pale, and to the oft-repeated inquiry if she was ill, she would answer with a sweet smile, that she was not well, but would be better soon, and with an effort at gayety blinded their solicitude; but as the day waned one might have seen her glancing hastily out the window, as though half expecting, yet dreading, that some one might come.

The street bell rang, and a gentleman called for MADALINE. He seemed to be no stranger, and was admitted. Ida looked displeased as she saw him passing through the hall, for somehow, in her little heart, she had connected the pallor on her sister's brow with him, and she was not displeased to find that his stay was short, for she half suspected that MADALINE loved him now no more.

In the same window where the moon-beams entered, stood MADALINE, gazing after the form of her lover. How beautiful he was! It was no wonder that he had awakened love in the heart of the gentle girl; but she saw him then only as she saw him the day before; reeling through the thronged street, and with companions a virtuous woman must shudder to think of. She heard the maudlin laugh, and even then it seemed ringing in her ears, and she turned away with an involuntary shudder.

The world jogged on, just as it jogged before. The sun rose, just as though there was not one more suffering heart roused to consciousness by his beams, and set with seeming indifference to the world and its vicissitudes. But HENRY MARVIN came there no more, and the world speculated, just as it always will speculate, on the pale brow of MADALINE,—that it proved to her as the "refiner's fire," for it made her more beautiful, more gentle and good. Her beauty seemed less of earth than heaven, but the girl's lightsome glad-heartedness came to her never again.

Many a widow's heart blessed the gentle MADALINE—many a sick bed was made cheerful—many a dying pillow softened by her presence—many an orphan face lit up with joy at her approach. Heaven bless thee, gentle MADALINE.

A LOVELY INCIDENT.

WHAT parent, on reading the annexed extract, can fail to reflect on the lesson it suggests? How important that, when the parent has departed, the example left behind may be such as the child can be thankful for. To watch for and train the budding thoughts of an artless child, is one of the noblest offices that father or mother can fill. Truly hath it been said, that "out of the mouth of babes and sucklings" strength hath been ordained. What could give greater strength to that widowed heart than such a scene with her little daughter:

She knelt at the accustomed hour, to thank God for the mercies of the day, and pray for care through the coming night; then, as usual, came the earnest "God bless dear mother, and"—but the prayer was stilled! the little hands unclasped, and a look of agony and wonder met the mother's eye, as the words of hopeless sorrow burst from the lips of the kneeling child,—"I cannot pray for father any more!" Since her little lips had been able to form the dear name, she had prayed for a blessing upon it; it had followed close after mother's name, for he had said that must come first; and now to say the familiar prayer, and leave her father out! No wonder that the new thought seemed too much for the childish mind to receive.

I waited for some moments, that she might conquer her emotion, and then urged her to go on. Her pleading eyes met mine, and with a voice that faltered too much almost for utterance, she said,—"O, mother, I cannot leave him *till out*, let me say, thank God that I had a dear father *once!* so I can still go on and keep him in my prayers." And so she always does, and my stricken heart learned a lesson from the loving ingenuity of my child. Remember to thank God for mercies past, as well as to ask for blessings for the future.

MUSIC AT HOME.

MUSIC serves to make home pleasant, by engaging many of its inmates in a delightful recreation, and thus dispelling the sourness and gloom which frequently arise from petty disasters, from mortified vanity, from discontent and envy. It prevents, for the time at least, evil thoughts and evil speaking, and tends to relieve the minds of both performers and hearers from the depressing effects of care and melancholy. Young people need and will have amusements. If an innocent and improving kind be not provided at home, they will seek elsewhere. If they find places more agreeable to them than home, that home will be deserted; and thus the gentle and holy influences which ought to encircle the family fireside, will be in a great measure lost.

"For surely melody from heaven was sent
To cheer the heart, when tired with human strife;
To soothe the wayward heart, by sorrow rent,
And soften down the rugged road of life!"

Let parents, therefore, take pains to encourage and gratify a taste for music in their children, and it will amply repay them for so doing.

THE most agreeable companion is a simple, frank man, without any high pretensions to an oppressive greatness, one who loves life, and understands the use of it; obliging alike at all hours; above all, of a golden temper, and steadfast as an anchor. For such a one we would gladly exchange the greatest genius, the most brilliant wit, the profoundest thinker."

FLOWERS and fruits make fit presents; because they are a proud assertion that a ray of beauty outvalues all the utilities of the world.

ROCHESTER, AUGUST 19, 1854.

Timely Topics.

To the great majority of our readers the most seasonable topics, just now, pertain to the weather, crops, and present and prospective prices of farm products. These matters are of far more importance to farmers and business men, than the result of the election in this or that State, or the manœuverings of any political party to secure the spoils, and "save the Nation" from the ruin of an opposing, but perhaps equally patriotic organization.

The excessive dry weather which has prevailed for several weeks, throughout a large extent of country—the drouth extending over considerable portions of New York, Penn., Ohio, Mich., Ind., Illinois, and other States,—has materially affected the crops and pastures, causing immense loss to the farmers. The damage from this source alone can scarcely be estimated, as it will amount, in the aggregate, to several millions of dollars. In some localities, the loss of individuals and communities will be so great as to check their prosperity for years. Their crops and pastures have been rendered almost worthless—and in addition to the loss already sustained, many will be obliged to dispose of their live stock at a sacrifice. We trust, however, that but few and limited sections have been so severely afflicted by the scourge which is prevailing, to a greater or less extent, over a large portion of the country.

The wheat crop was short in a considerable portion of the country now affected by the drouth,—and in not a few instances which have come to our knowledge, those who lost their wheat by winter-kill and the midge, now find their spring crops drying and starving, with a poor prospect for half a yield. In this region potatoes and corn are suffering greatly, though the drouth is less severe than it has been further South and in some portions of the Western States. Potatoes will probably command $1 per bushel in this market for a year to come.

The fruit crop is also likely to be materially affected by the drouth. The prospect is fair for a good Peach crop in Western New York, but it will be greatly lessened if the present dry weather continues. The yield of Apples will be less than usual, though the orchards promise well in some localities.

—As to the prospective prices of wheat and other farm products, opinions are various and conflicting. The shrewdest farmers and business men are at loggerheads in the premises, and editors, though perhaps as well posted as the wisest, are unable to scan the future, or determine what it will bring forth. For weeks our impression has been that wheat would ere long fall to $1,75 or $1,50 per bushel in Western New York, and that good Genesee wheat would not go below the latter figure until another harvest. Such is our present opinion, notwithstanding the prophecy of many that the price will be lower. The prices of corn, potatoes, &c., will rule higher than formerly.

The Cholera.

We are happy to announce an abatement of the epidemic in very many localities where it has heretofore existed throughout the country, and there is probably no place where the disease is still increasing. Active sanitary measures by the officers of cities, and prudent care of themselves on the part of the citizens, have tended much to an abatement of the scourge. In this city, very little of the malady has existed at any time, and that little seems to be now happily on the decline. One of the most extensive and respectable medical practitioners in the city, assures us that he has not had one case of genuine cholera in his practice this season, although he has met with many cases of the ordinary cholera morbus, most of which yielded readily to proper medical treatment.

Elections.—In North Carolina the elections have gone Democratic in all departments of the State government. Bragg (Democrat) is elected for Governor, and the Democrats have ten majority in the Senate and six in the House. This secures them a Democratic U. S. Senator, the first from that State for many years. In Missouri, Benton is defeated for Congress by Kennett (Whig.) The Anti-Bentonian Democrats also run a candidate, but voted largely for Kennett for the express purpose of defeating the "great Missourian." The Iowa election is doubtful. So far as heard from, the Whig candidate for Governor is some 300 ahead of his opponent, and the party have strong hopes of carrying the State, (which has heretofore been largely Democratic) on the Nebraska issue.

Odell Work.—The *Niagara Falls Iris* says that a slave escaping from servitude, arrived in that village last Tuesday week, and reached the ferry just in time to get into the little boat as it was prepared to leave for the Canada side. His master was on the same train in pursuit, and reached the ferry only in time to see his chattel midway across the foaming waters of Niagara. We learn that the slave was last seen by the master at Cleveland; yet, although both were on the same train, the slave succeeded in eluding his vigilance, and placing himself beyond pursuit.

Conflagrations and Suffering at Sea.

The American ship Tuscarora was consumed by fire, in the Pacific ocean, on the 15th of May. The crew and passengers took to the boats, with a small supply of provisions, but owing to the boisterous weather, two of the boats swamped soon after, and all on board (twelve in number) perished. The survivors in the other boats, after being at sea forty days, and suffering incredible hardships, landed on the uninhabited island of Massafuera, where they succeeded in getting a fire, also a few crabs and some dock leaves, which were the only things to be found.

Leaving this island in a single boat, the other becoming unseaworthy, they landed three days after at the island of Juan Fernandez, and were received kindly by the commander of the garrison, who immediately supplied them with food, which all so much stood in need of. They were also treated very humanely by the surgeon of the garrison, Mr. Joseph Butler, a native of Poland, who attended the sick, &c. They sailed a distance of 660 miles in open boats, and out of four boats only one reached its destination, and out of twenty-four that composed the number, only twelve remained alive!

The Spanish ship Victoria sailed from Buenos Ayres March 21, for Southampton, freighted with bones and animal guano, but was obliged to put into Montevideo, in consequence of damage from a collision with another vessel. A few days after leaving that port, the vessel took fire spontaneously, and was totally destroyed, the crew taking to a raft previously prepared, and to the only boat not disabled. After spending three nights and two days of boisterous weather in the fragile craft, the inmates of the boat were providentially rescued by the Sardinian vessel Profeta Elias, bounded for Montevideo, the captain of which afforded them every assistance, and landed them safely at St. Catherines, nothing being known of the fate of the captain and his companions on the raft.

The Drouth.

From all parts of the country we are receiving reports of excessive drouth. It does not seem to be confined to any special region either North or South, but extends itself, with occasional exceptions, in all directions. The corn and potato crops are likely to receive (if indeed they are not past remedy) extensive damage; the pastures are parched and dead, presenting to the eye a brown and very unpleasing aspect. The weather has been peculiar in this locality; first the sun shines out with intense and burning heat for several days; then clouds rise thick and fast, presenting the appearance of a threatening tornado or a heavy storm; then a stiff breeze scatters the vapors from the sky like a routed army, and anon lulls down again into a quiet, cold, almost frost-like night, to be succeeded by a cloudless day, and again repeated by the same routine of phenomena. Saturday last threatened rain; Sunday was cloudy, windy and warm, followed by a cool night and a cloudless sky on Monday.

Novel Case of Kidnapping.—C. C. Dennis, an employee on the State Line Railroad, has been on trial at Erie, charged with kidnapping a man named Cooper, under the following circumstances. During the troubles at Erie and Harbor Creek last winter, a train went up from Buffalo with hands to repair the damage to the road at the latter place. A party of rioters went on board the train for the purpose of seizing the person of Mr. Dennis, who thereupon signalized the engineer to put on steam and run back to the New York State line, which was done, and Cooper then ejected from the cars. The jury have found a verdict of guilty in the case, but the Court granted a new trial.

Information Wanted—Of James Burdick, who left his home in Beachville, C. W., on the 14th of June last, to see a Doctor at St. Mary's, which place he arrived at, and left on the 19th for London, C. W., since which no tidings can be had of him by his wife or parents. Any information respecting him, would be thankfully received by his afflicted wife and parents, and a numerous circle of friends. If alive, is supposed to have gone to some of the United States. Address Enoch Burdick, Beachville, C. W.

Amherst College.—The Springfield *Republican's* correspondence relative to the commencement at Amherst College, states that President Hitchcock has resigned his position as the head of the College. He has filled the post since 1845, and done much to place the College in its existing high, honorable and strong position, both intellectually and pecuniarily. He retires because his health will not permit the continuance of the heavy cares and duties which the place imposes.

Riot in St. Louis.—A fearful election riot occurred at St. Louis on the evening of the 8th, between the Irish and the Native American parties. It is rumored that five persons were killed, but the facts are not yet clearly ascertained. Some sixty houses, mostly Irish drinking groceries of a low order, were demolished. At last accounts eight military companies were in possession of the scene of the riot, and enforcing order.

Academies, &c.—Attention is directed to advertisements of the East Bloomfield and Walworth Academies. These institutions are well located, and in charge of competent principals and teachers. See announcement, also, of the Tracy Female Institute.

Military Encampment.

The Independent Military Companies of this city, consisting of one artillery, one cavalry, and four infantry companies, were last week in camp four days. The ground selected for the purpose was a level field, in the immediate vicinity of the House of Refuge; and the snow-white tents of the soldiers presented a very pleasing appearance. A large number of citizens and strangers visited the camp, and witnessed the daily drills of the citizen soldiery. On Friday afternoon, at four o'clock, the companies broke up the camp, struck their tents at a signal gun, and, forming in line, marched back to the city, where the members speedily transformed themselves from soldiers into citizens. The encampment was a very pleasant affair, both to the soldiers and to outsiders. Fine weather prevailed, and the health of the military during the time was excellent.

A Miser.—An old man named Bonno lived recently at St. Louis in a very wretched manner. No one suspected him of possessing any pecuniary means, from the penury of his appearance, particularly as he had no friends or relatives on whom to bestow his property. A few days since the old man died, and the public administrator, in pursuance of his duty, proceeded to his late residence for the purpose of taking possession of and selling his personal property to defray funeral expenses, &c., if, indeed, enough could be found to liquidate the debt. Under a pile of firewood was discovered a wooden box of considerable weight, which was broken open, and found to contain about $1,700 in gold. On instituting a further search on the premises, $1,000 in paper money, Missouri bills, was discovered wrapped in some old fragments of clothing near the fireplace. A bag containing $100 in specie was eventually added to the treasure, and other small sums, in the course of the exciting search, were brought to light, making the whole amount found about $6,300.—Death parted "the fool and his money!"

Successful Diving.—The Buffalo *Republic* says a gentleman who was passing out of the steamer Northern Indiana, at the wharf in that city, on Wednesday of last week, accidentally dropped his wallet into the water. He immediately offered one-half the contents to any person who would recover the lost treasure; whereupon four hands connected with the boat commenced diving for it. Three of them, after several unsuccessful dives, gave up the undertaking; but the fourth, the barber of the boat, persisted, and at the eighth dive brought up the prize. The gentleman, true to his word, immediately counted out to the lucky barber one-half the money, which amounted to between four and five hundred dollars.

Diarrhœa as a Precursor of Cholera.—In addition to the evidence already in possession of the faculty, that cholera occurs without the premonitory symptom of diarrhœa, more or less severe, two important proofs are referred to in the last number of the N. Y. Medical Times.—One is a letter from Dr. McLoughlin to the Registrar-general of England, stating that in 1849, 3902 cases of cholera were examined into, and not one was found where the disease had come on without being preceded by diarrhœa. The other is a letter from the same gentleman to Dr. Mott, of New York, dated in December last, in which he says that of 900 deaths from cholera which took place in London during the preceding four months, not one had occurred without the previous existence of diarrhœa, which had lasted from some hours to several weeks.—*Med. and Sur. Journal.*

Affecting Incident.—An English paper says, that while the 46th regiment were in rank in the barrack square at Windsor, prior to marching out for conveyance to Southampton, en route to Constantinople, a motherless child, six years old, clung to its father's legs. He was peremptorily ordered to send it away, but resolutely answered, "I will not." Lieut. Hutton, touched with the scene, took the child and placed two ten pound notes in its hand, with the hope that some one would befriend it. This, however, proved unnecessary, for having afterwards made his own mother (who was staying at Windsor) acquainted with the circumstances, she adopted the little fellow, in time to give the father an assurance that the child should be well cared for.

A Rich Contract.—The Paris correspondent of the Tribune writes that Mr. Beverly C. Sanders, of San Francisco, who left Paris for the Russian capitol in the month of January last, has succeeded in effecting an arrangement with the Russian Government which will secure to him an immense fortune, if he is permitted to enjoy for any great length of time the contract he has made. By this arrangement he becomes Russian Paymaster for the western coast of America, and enjoys certain rights in connection with Russian commerce, which, it is anticipated, will prove extremely lucrative. Mr. S. is living in the most princely style in St. Petersburg, and frequently gives dinners *a l'improviste*, which frighten even the wealthy Russian noblemen by their costliness.

Beginning to Pay.—The general impression has been that the experiment of making the Clinton State Prison pay for itself, or even its running expenses, by the manufacture of iron, would be a failure. But the prospect is now more favorable. The Albany Express says, that the experiment has been brought to a successful issue, that on the 28th day of June last, the first specimen of iron was obtained, and that at the present time, with but one furnace, 12 tons per day, of the very best quality of iron, are being run.

Another Nuncio Coming.—A feud is said to have arisen between the foreign and American born Bishops of the Catholic Church in this country, and that the difficulty has been referred to the Pope at Rome. It is also said that the Pope will despatch another Nuncio to this country, in the hope of healing the dissensions, notwithstanding the bad success of Bedini.

News Paragraphs.

☞ The salaries in the Departments at Washington, with the mileage and per diem of members, amounts to $1,815,636. $1,300,000 are set down for the pay, mileage and other contingent expenses of the two Houses—or $4,000 per member—besides $80,000 for printing for part of the last session, and over $200,000 more for books voted and distributed to members of Congress. There are thousands more for reporting the debates in the Washington papers. The judicial expenses of the Government run well on to a million of dollars.

☞ The passengers to and from India are now conveyed between Alexandria and the Nile, a distance of 66 miles, by rail. The first departure from Alexandria occurred on the 4th of July, with the passengers who arrived on that day by the Ripon and the canal. The most tedious part of the journey through Egypt is now avoided altogether. The whole of the line between Cairo and Alexandria, 140 miles, will be complete, probably, in about 12 months.

☞ From a proclamation which appears in the Canada Gazette, we learn that the act passed in June of last year, to regulate the currency of that province, came into effect on the first inst. By it the dollar is to be five shillings of our present currency, and the cent one hundredth of a dollar; mill one tenth of a cent.—Accounts may be kept, and persons may sue or be sued, for all business transactions in either denomination of currency shall be legal.

☞ A correspondent of the Cleveland Plain-dealer, who is writing from La Pointe, on Lake Superior, states that the white inhabitants on the shore of the Lake, are now agitating the question of forming a State separate and apart from the present organization—taking what of Michigan lies west of Lake Michigan, and the points of Wisconsin and Minnesota bordering on the Lake, and appropriately naming it the State of Superior.

☞ The Boston Herald says:—A wagon, freighted with gun-powder, the wheels of which were tired with leather, to prevent the possibility of ignition from sparks that be produced by the contact of an iron tire with the pavement, was passing over Cragie's Bridge, a few days since, on the top of which was seen an Irishman, with a pipe and some matches in his hands, with which he was endeavoring to "get up a smoke."

☞ John Saville, a medical student in New York, attempted recently to poison the family with which he boarded, by putting oxy-muriate of mercury in the tea-caddy. The mistress perceiving the powder in the caddy, made her tea from the contents of another one, and the refusal of Saville to partake aroused suspicion, and led to an examination, which resulted in his committal to prison.

☞ Mr. Peabody, of the Soil of the South, has recently presented the Columbus Times with a specimen of the orange watermelon.—The rind peals off like the orange, and leaves the whole of the rich luscious pulp in a lubate mass, which also divides into parts, and is most delightfully flavored. We never saw anything of the kind so beautiful. This watermelon is a native of China.

☞ Col. Loring, who was killed at the St. Nicholas Hotel by Dr. Graham, was at the time of his death, receiver at the land office at Benicia, California. The murder took place on Wednesday, and at an early hour on Friday morning, it is said there were no less than nine applications before Secretary McClelland, at Washington, for the vacant office.

☞ The appropriations for the service of the Post Office Department, for the year ending the 30th of June next, out of the moneys in the Treasury, arising from the revenues of said Department, are $8,934,000. An appropriation from the general Treasury of not exceeding $2,344,464, to supply the deficiency in the Post Office revenue is, to meet the above.

☞ Judge P. T. Scruggs, of Carroll county, Alabama, recently charged the Grand Jury very strictly to present every one who had violated a law which interdicts the circulation of bank bills of less denomination than $5. The Jury learned that his Honor had paid his landlord a $2 bill, and placed on the docket the cause of "The State agt. Phineas T. Scruggs."

☞ The National Era, the Anti-Slavery organ at Washington, has suspended its daily issues. The editor says:—"The Daily has fallen far short of defraying its own expenses—much further short of it, indeed, than was anticipated—and its publication will not probably be resumed next winter, unless there be manifested a will to support it.

☞ In London, with a population of two and a half millions, the total number of deaths for the week ending July 1st, was 1,299. In New York, with a population of about seven hundred and fifty thousand, not one-third of that of London, the deaths last week were 1,139, or within 160 of the deaths of London.

☞ By a law on pensions, passed on the last night of the sessions, if the widow of a soldier marries, she loses her claim, but if that husband dies, she again becomes entitled to her pension as formerly. The amount of the new act is, that whenever the lady is a widow, the government holds itself bound to protect her.

☞ The following missionaries sailed from Boston, in the ship Race Horse, for their respective fields of labor:—Rev. Smallord Richardson and wife, Edwin Goodell and wife, Benjamin Parsons and wife—all for the Armenian country, and Dr. Nutting and wife, for the Assyrian mission.

☞ A fire has been burning in the woods north of Sabine, Canada. Three young children were burned to death in a wood hut, to which the fire had extended, and in which they had been locked while the parents had gone in search of cattle, scared to a distance by the fire.

☞ Judge Sheppard F. Norris, the Democratic candidate in Ohio for Judge of the Supreme Court, has decided that a slave brought to that State by or with the consent of the owner, and afterwards escaping from a slave State, is free, and cannot be remanded to Slavery.

☞ A telegraph operator at Camden, S. C., claims to have discovered a means by which atmospheric electricity cannot prevent the successful working of lines during storms. No description of the invention is given, but a patent has been asked for.

☞ A correspondent of the Milwaukee Sentinel, states that some three thousand square miles of the Territory of Kansas have been staked out by squatters from Arkansas and Missouri, who are violently opposed to settlers from the Northern States.

☞ A "Bosom Friend" has been invented by a man in Liverpool, in the shape of a waistcoat which can be inflated to serve as a life preserver. As an article of dress it is said to be becoming.

News Brevities.

—The price asked for the Sandwich Islands, is said to be five millions.

—The whole military force of the United States, officers and all, amounts to 10,339.

—Senator Seward has received the honorary degree of Doctor of Laws, from Yale College.

—Hon. John C. Spencer is now lying very ill, at the Pavilion House in New Haven.

—A single family in Sangamon county, Ill., have seventeen thousand sheep of the best blood.

—The population of Ireland, according to late returns, is less than 7,000,000, of which 3,000,000 are Protestants.

—A German translation of Col. Benton's Thirty Years is in the course of publication at St. Louis, in weekly parts.

—On the 1st inst. the safe of the steamer May Flower, at Buffalo, was robbed of $1,700, during the temporary absence of the clerk.

—The fast trotter, "Belle of Saratoga," belonging to G. B. Clark, of Buffalo, was sold in New York, a few days since, for $5,000.

—A large number of the workmen on the new State House at Columbus, Ohio, have been discharged for want of funds.

—It is computed that there will be 21,000 miles of railway in operation in the United States upon the first day of January next.

—A thousand soldiers have lately arrived at Havana, and two steamers with fifteen hundred more are daily expected.

—Mayor Wall, of Williamsburg, L. I., has fined his own son ten dollars for suffering his dog to go at large unmuzzled.

—The bridge across the Connecticut, leading from Hanover, N. H., to Norwich, Vt., was destroyed by fire a few days since.

—Tuesday of last week was observed at St. Johns, N. B., as a day of fasting and prayer, on account of the cholera.

—Com. Downs, of the Charleston Navy-Yard, who has been ill for some time past, expired August 4th.

—John Van Buren contradicts, through the London Advertiser, the report that he intended to participate in the Anti-Slavery Conference in London.

—It is said that Dodge county, Wis., has raised a million bushels of wheat this season, and that thousands of acres have yielded from fifty to sixty bushels each.

—Five dead bodies have been taken from the wreck of the steamboat Cape May, which sunk in the Ohio River, a few days since, near Mt. Vernon, Indiana.

—Hon. Fayette McMullen, of Va., member of the present Congress, was robbed of $1,800 in Hanover county, while on his way home from the seat of Government.

—A party of young Frenchmen of New York, have organized themselves with a view of emigrating to Kansas, and propose to establish a joint stock company for that purpose.

—When the intelligence of Robt. Schuyler's fraud reached London, it did not produce the panic in American Railroad Securities, as was feared on this side.

—In a speech at Exeter Hall, London, John B. Gough stated that out of 500,000 persons who signed the pledge in the United States, 450,000 had broken it.

—The Plymouth Pilgrim Society offer $300 for the best plan of a granite monument, to be erected in Plymouth, to mark the Pilgrim landing place.

—A new Cunard steamer is on the stocks, to be named the Persia. She will be 3,600 tons burthen, and propelled by engines of 1,000 horse power.

—The ship carpenters at the Charleston Navy-Yard, have struck for higher wages. They demand $3 per day. The same class of workmen in the private yards get $1.

—A bridge is being built for the Danville Road, across the Kentucky river, which will be one of the most magnificent in the world. It has one span of wire, from cliff to cliff, 1,200 feet.

—Between sunrise and noon on Aug. 10th, over 1,435 emigrants landed in New York, and not one case of sickness was found among them which required to be sent to the quarantine hospital.

—Mr. Hargreaves, the Australian gold discoverer, has arrived in London. He is a handsome man, in the prime of life, and received £10,000 from the Sydney Government for his discovery.

—At Kansas, on the 20th July, while Judge Walderman, who was in pursuit of runaway negroes, was attempting to dismount from his horse, he accidentally discharged his gun and killed himself.

—Gerrit Smith, in settling with the Sergeant-at-Arms, was entitled to about $500 legal mileage, but only took about $90, being $8 a day while coming and going, and actual traveling expenses.

—English papers received by the Canada, mention with regret "that there is a necessity for seeking subscriptions to relieve the low estate of a living celebrity—the benevolent Father Mathew."

—Twenty-five Roman exiles, who were banished by order of the Pope, after four year's imprisonment, without trial, and without permission to communicate with their families, arrived at New York a few days since.

—A few days ago an old salt, Capt. David Harris, of Ipswich, on his 84th birth-day, rowed out into the bay some four or five miles, caught about 50 handsome codfish, and was on his way home before sunset!

—Admiral Smith, in his "Mediterranean," says that the star-fish has been drawn up alive at the depth of 340 fathoms; where the weight of water collapses a copper tube at 200, and crushes it flat at 300 fathoms.

—Mrs. Caroline Southey, widow of Robert Southey, the Poet Laureate, died on the 20th ult., at Buckland, near Lymington. She was the daughter of the Rev. Dr. Bowles, a canon of Salisbury Cathedral.

—On Wednesday week, three British steamers, the Niagara, Alps and Canada, were in the port of Boston. On her recent voyage the Alps had fourteen hundred tons of freight at five pounds sterling per ton.

—The dwellers in the vicinity of Clear Lake, Iowa, are grievously disquieted at the presence of six hundred Sioux warriors, all amply armed. An adequate military force has been ordered out to remove them.

Literary Notices.

History of Pendleton. By Jacob Abbott. New York: Harper & Brothers. 1851.

Another of Abbott's Histories is here presented, and in the popular style with which this author invests all his writings for the young. At this late day, it would be impossible to separate the true from the fictitious in ancient biography, so Mr. Abbott only seeks to gather in a single volume the scattered details of each hero's life, that his readers may understand the allusions scattered through all literature to these classic personages. Sold by E. Darrow & Bro.

Ticonderoga; or the Black Eagle. A Romance of Days gone by. By G. P. R. James, Esq. Harper's Library of Select Novels, No 191.

This is "James's last." We copy the first paragraph for the benefit of our readers:

"He said and wrote."

What he wrote, his admirers can learn by getting the book at Darrow's.

Harper's Gazetteer of the World, No. 3, has been received by Darrow & Bro. It contains a large map of Asia, and the whole work will be completed in ten numbers. The names of all places in the world of any importance, are given, with the latest statistical information as to their population, resources, &c.

Tower's Elements of English Grammar, is a little volume of 125 pages, prepared expressly for beginners, and from its simplicity and comprehensiveness, well calculated to be useful. It is warmly recommended by numerous teachers and the newspapers. Published by Daniel Burgess & Co., New York.

The Edinburgh Review, for the July quarter, (commencing the 321st volume,) contains, among other articles of interest, one on the Russian war of 1854. New York: L. Scott & Co. D. M. Dewey, Agt., Rochester.

California News.

Arrival of the Empire City.

The U. S. mail steamer Empire City, from Aspinwall, arrived at New York Aug. 11, with the mails, 400 passengers, and $1,121,058,18 in specie.

Her San Francisco dates are to the 16th July, but her news has been anticipated.

Our Panama papers are to Aug. 2d. The Aspinwall Courier is inclined to endorse the action of our Government in the bombardment of San Juan, and hopes that the same will be accepted by the American people as an earnest that the Government is reviving the foreign policy which made her respected in the days of her infancy.

The guard has been placed on the mule road, to hereafter protect passengers in passing over.

Rain had fallen in Panama for several weeks, and sickness on the Isthmus was on the increase.

From Santa Fe.—The Santa Fe Gazette of the 26th of June, gives an interesting account of the arrival at Santa Fe of Indian Agent Dodge, with a deputation of forty-two Navajos, who had come in to hold a talk with the Superintendent of Indian Affairs. Until within the past year or two the Navajos, for the last twenty-five years, have been constantly committing depredations upon the Mexicans; and this change in their conduct is attributed to the action of agent Dodge in locating himself in the heart of their nation, which thus far has exercised the most beneficial influence over them. The "talk" was got up in the public square with great ceremony, and terminated in the Indians promising to behave themselves in the future, not to steal themselves, and to arrest and bring in all the "bad men" they might find doing so.

San Juan—*A Chance for Poets.*—The N. Y. Evening Post says:—"Our navy has achieved a great victory; with a single sloop-of-war, one of our gallant Captains has scared the inhabitants of a foreign seaport into the woods, and burned their houses to ashes. The efficiency of Lucifer matches for combustible purposes has been vindicated, and the impudence of Jamaica negroes has been rebuked. All that is now wanting is some good poets to assist in transmitting this great victory to posterity." It accordingly offers the following list of prizes for the five best poems on the affair:—First premium, $25.06; second, $10; third, $5; fourth, $1; fifth, 6¼ cts. Candidates for the highest premium are limited to one hundred lines; those writing for the lower premiums need not stop until they feel perfectly relieved.

Arrest of Counterfeiters in Canada.—On the night of August 1st, the High Constable of Sherbrooke arrested two gangs of counterfeiters in Canada, who carried on business about five miles distant from each other in the woods. All their implements were taken, consisting of one printing press, twenty-six plates of paper money, one machine for stamping gold and silver, which weighed 800 lbs, twenty-four moulds for running hard money, dies, ink, paper, engraver's tools, and thousands of dollars in counterfeit money. This is probably the most important arrest of the kind ever made on this continent. The band was completely organized, and had their engravers, who could make all their plates, and their printers, and their signers of the bills—all of whom are now safely lodged in the Montreal jail.

California Lightning.—The Sierra Citizen says that during a recent thunder-storm a lone pine, on the brow of the hill, south of the town, was struck by lightning, setting the top in a blaze, which continued to burn all night. After nightfall the spectacle was beautiful, and every passer-by stopped to gaze at it. The trunk was hid in the darkness, but the burning top seemed like a great lamp hung in the heavens to make darkness visible.

Cholera in Albany.—The Transcript says that the cholera has almost entirely disappeared from that city since noon of Wednesday. There were reported to the Board of Health thirty-seven cases, only seven of which terminated fatally.

Acts

Passed at the First Session of the Thirty-third Congress, and approved by the President.

An act concerning the district courts in California. Approved Jan. 18, 1854.

An act to continue in force an act entitled, An act to ascertain and settle the private land claims in the State of California, and for other purposes. Approved Jan. 18, 1854.

An act to constitute Quincy in the State of Illinois, a port of entry. Approved Feb. 2, 1854.

An act granting the franking privilege to the Superintendent of the Coast Survey, and the assistant in charge of the office of said Coast survey. Approved Feb. 2, 1854.

An act to provide a place for holding of the courts of the United States in the Southern district of New York, and for other purposes.

An act to regulate the disbursement of the contingent fund of the Senate, and for other purposes.

An act to indemnify the State of Indiana, for the failure of title to a township of land granted to said State on her admission into the Union in 1816.

An act to extend the limits of the port of New Orleans.

An act supplementary to an act entitled, An act to ascertain and settle the private land claims in the State of California, March 3d, 1851.

An act for the extension of the pre-emption privilege in the State of California.

An act for the relief of settlers on land reserved for railroad purposes.

An act to extend the warehousing system by establishing private bonded warehouses, and for other purposes.

An act to authorize the construction of six first class steam frigates, and for other purposes.

An act to establish additional land districts in the territory of Minnesota.

An act to authorize the school commissioners of fractional township number one of range number two East of Alabama, to locate one half section of land for school purposes.

An act establishing a land office in the lower peninsula of Michigan.

An act to extend the third section of the "act making appropriations for the civil and diplomatic expenses of government for the year ending 30th June, 1854," and for other purposes.

An act making appropriations for the support of the military academy for the year ending the 30th June, 1855.

An act to supply deficiencies in the appropriations for the service of the fiscal year ending the 30th June, 1854, and for other purposes.

An act to authorize the Territories of Nebraska and Kansas.

An act to authorize the selection of school districts in lieu of the sixteenth section within the twelve mile square reservation State of Alabama.

An act to enable the President of the United States to fulfil the third article of the treaty between the United States and the Mexican Republic, of the 30th December, 1853, as amended by the Senate of the United States.

An act to aid the territory of Minnesota in the construction of a railroad therein.

An act confirming certain land claims in Louisiana in the Bastrop grant.

An act to provide for the continuation of the military road from Myrtle Creek to Scottsburg in Oregon.

An act making further appropriations for continuing the construction of roads in the territory of Minnesota, in accordance with the estimates made by the War Department.

An act for the construction of certain military roads and wells in the territory of New Mexico.

An act for the payment of the civil officers employed in the territory of New Mexico, while under military government.

An act to amend the act approved September 27th, 1850, to create the office of Surveyor General of the public lands in Oregon, and also the act amendatory thereof, approved Feb. 18, 1853.

An act to authorize the President of the United States to cause to be surveyed the level of land in the territory of Minnesota belonging to the half-breeds or mixed bloods of the Dacotah or Sioux nation of Indians, and for other purposes.

An act to authorize the Secretary of War to settle and adjust the expenses of the Rogue River Indian war.

An act to provide for the construction of a military road from Great Salt Lake city, in the Territory of Utah, to the Eastern boundary in the State of California.

An act to refund to the Territory of Utah the expenses incurred by said territory in suppressing Indian hostilities.

An act regulating the time of holding the sessions of the District and Circuit Courts of the United States in the Eastern district of Louisiana.

An act making further appropriations for the improvement of Cape Fear river, North Carolina.

An act to establish the office of Surveyor General of New Mexico, Kansas and Nebraska, and to grant donations to actual settlers therein, and for other purposes.

An act to aid the Territory of Minnesota in the construction of a railroad therein.

An act creating a collection district in New York, to be called the district of Dunkirk, and constituting Dunkirk a port of entry, and the ports of Barcelona, Silver Creek and Cattaraugus Creek, ports of delivery.

An act making appropriations to defray the expenses of the Cayuse war.

An act supplementary to an act entitled, "An act to authorize notaries public to take and certify oaths, affirmations and acknowledgments in certain cases."

An act for the purchase of the copyright of a work published by Thos. H. Skinner, wherein he describes his new method of discovering a ship's position at sea.

An act making appropriations for the payment of invalid and other pensions of the United States for the year ending the 30th of June, 1855.

An act making appropriations for the current and contingent expenses of the Indian Department, and for fulfilling treaty stipulations with various Indian tribes, for the year ending the 30th of June, 1855.

An act making provision for the postal service in the State of California and in the territories of Oregon and Washington.

[Concluded next week.]

The Rutland (Vt.) Herald states that forty-seven sheep and fourteen lambs, worth some $300, were killed near a tree in that town, on the 5th ult., by a discharge of lightning, the direction of which was evidently from the earth, as locks of wool were driven into the tree along which the fluid passed, and the fibres of the wood were brushed upward; and also that the bodies of animals killed by lightning decay very rapidly, as there was only a heap of wool and of dry fleshless bones left of the sheep when found a few days after they were killed.

School Teachers Proscribed.—The newly-elected School Directors in the lower section of the city of Philadelphia, have removed some 15 of the teachers in the public Schools, within the last few days, on (it is understood) sectarian grounds. All the discharged teachers belonged to the Roman Catholic Church. Much feeling is being manifested there among the friends of the proscribed teachers, and the matter seems likely to greatly widen the already existing breach between the Protestants and Catholics in the city.

A letter was mailed from Philadelphia a few days since, to a firm in New York, inclosing a check on the Girard Bank for $600, payable to the order of the firm. Before reaching New York, however, the letter was stolen, it is supposed, from the Post Office, and the check abstracted therefrom, a forged endorsement written upon the back, and the same presented at the counter of the Girard Bank, and paid.

☞ The managers of the American Institute have decided to omit the Annual Fair this year. The last one, at Castle Garden, proved a losing affair, on account of the superior attractions of the Crystal Palace. It is suggested that the State Agricultural Society, which holds its fair in New York, in October, should combine with it the exhibition of the American Institute, but this is not decided upon.

☞ Saxony is about to imitate the example of Prussia and Wurtemberg, and cause all executions to take place privately in the interior of jails and the presence of certain functionaries and witnesses.

Deaths.

In Prattsburg, N. Y., July 31st, Deacon AARON COOK, in the 84th year of his age.

Commercial.

BUSINESS AND FINANCE.

We find but little of note in the financial world. The exports of specie for the week amount to $1,250,000, and thus far for the year to $21,649,085.

The balances in the Sub-Treasury at New York, Aug. 12, was $5,282,196.

The imports at the same place, are $4,249,000, against $3,412,000 for the same week last year. The exports exclusive of specie, have been $247,160, against $619,245, last year.

The stock market is more active.

Market Intelligence, &c.

Rural New-Yorker Office,
Rochester, August 16, 1854.

Wheat holds on at $1,53 in our market, but Flour has suffered a decline of 24 cts. per bbl. No change in Corn, but Oats a trifle less firm.

In provisions, Hams are quoted one cent per lb higher; Butter two cents, and Eggs half a cent less. Other articles unchanged.

We see very little fruit in market.

Wool remains dull, and is quoted 5 cents less for inferior grades.

Hay is $1 per ton higher.

NEW YORK MARKET—Aug. 14

FLOUR AND MEAL—The market opened very firm this morning, but the high pretensions of holders restricted the demand, and at the close there was less buoyancy without any disposition to yield in prices. Sales at $8@8,37 for common to good State; $8,50@9,75 for choice and favorite do; $9@9,25 for fair to good Ohio; $8,25@8,50 for Wisconsin; $8,50@9,00 for Michigan and common to fancy Ohio; $9,15@11 for extra do; and $11@11,50 for extra Genesee. Canadian in fair demand. Rye flour and corn meal continue quiet and nominal.

GRAIN—The demand for wheat continues light, millers still holding off for further concessions. Supply moderate, and confined to the local trade. Sales of new Southern to arrive at $1,45; white do, on the spot, at $1,05; new white Genesee, understood at something below $2,25. Rye quiet, $1,10@1,12½. Corn to active demand for distilling and the rail-yard. The market is le better. Sales at 70@72c for unsound, 73@74½c for sound Western mixed and closing with an asking price below 76c. Oats are firm and in good demand. Sales at 44@47½c for State and Western, the lower rate for heated.

PROVISIONS—Pork does not exhibit any important change and the transactions are to a fair extent at $12,37@13,00 for mess; $14,12@14,25 for clear; $12 for thin mess, and $10,50 for prime. Beef is in moderate demand at $12@13 for country mess; $16@16,25 for city do; $15,16@16 for re-packed Chicago, and $16,16@17 for extra do. Cut meats in good demand and the market firm at 9@9½c for shoulders, and 6¾@7½c for hams. Lard is firm at 10½@10¾. Butter firm at 12@17c for Ohio, and 17@20c for State. Cheese firm for prime at 9½@10c; common is dull at 7@8c.

ALBANY MARKET—Aug. 14.

FLOUR AND MEAL—There is no important change to notice in our market for Western and State Flour. Corn Meal is very firm and in active request at $1,31@1,44.

GRAIN—The daily supply of new wheat is on the increase and with only a moderate local milling demand, prices are not only lower but the market continues to favor the buyer. Sales new white Genesee at $2,25@2,28, closing at the inside figure with a considerable amount upon the market at the close unsold. The corn market is firm; sales Western mixed afloat and at the depot at 70c. In the by nothing was done; for a cargo of prime two-rowed to arrive $1 was asked—no sale. Oats are more active with sales Chicago at 46@46½c, but principally at 46@46½c.

BUFFALO MARKET—Aug. 14.

FLOUR—The market for flour is active this morning, the demand being for the interior and home trade, and not for through shipment. Sales at $8,12½@8,50 for good to fancy brands of southern Ohio; $8,37½@8,50 for choice brands of Michigan.

WHEAT—Quiet and inactive. No sales.

CORN—Market firm with a fair inquiry and limited supply. Sales at 58@60c—mostly at the lower quotation—the higher being for choice Chicago, delivered free to boats.

OATS—Dull and very little inquiry. Sales at 34c.

NEW YORK CATTLE MARKET—Aug 7.

At Washington Drove Yard—Offered to-day 2,137 Beef Cattle; during the week 2,354. The Cattle in market to-day are the most inferior that have been in market for a long time. Prices, however, are fully up to last week's rates. Cows and Calves lighter, also Sheep and Lambs—We reverse our quotations; Beef Cattle $6@10; Cows and Calves at $25@50; Veal Calves (live weight) 4@6c; do. gross $5; Sheep $3,50@7; Lambs $2,50@5,50; Swine (corn fed) $4,16@5.

At Browning's—Prices at this market for Beeves have taken a very wide range. Sales at $7,50@10 per 100 lbs. for Beeves; Cows and Calves lower, and sold at from $30 to $45; extra at $75. Veals 4½ to 6¾c. per lb., live weight. Sheep and Lambs in large supply, and prices declined.—Sheep range at from $2 to 3,66@0. Lambs at $2 to $4,50; some extra at $5.

At Chamberlain's—Prices of Beef ranged at from $7 to $10,00 per 100 lbs. Cows and Calves from $25 to $60.—Veal Calves at from 4½ to 7c per lb. Sheep $3,00 to 7,00. Lambs $2,50@5,50.

At O'Brien's—Sales of Beeves at $7,50@9 per 100 lbs. Cows and Calves at from $30 to $40; extra, $50 to 55.—Veal 4½@6¾c. per lb.

CAMBRIDGE CATTLE MARKET.—Aug. 9.

At market 1,150 Cattle—1,100 Beef Cattle, 50 Stores.

Prices—Market Beef—Extra $8,00 per cwt.; 1st quality, $8,00; 2d do, $7,00@7,25; 3d, do, $6,25; ordinary, $5,25. Hides, ₩ cwt. $6,25; Tallow $5,50@5,75. Prits. 9½@9½c.—Calf Skins, 16c ₩ lb. Veal Calves $5,50 to $7; ordinary, $3@4.

Stores—Working Oxen—$82 to 122@124.

Cows and Calves—$18 to $51@50. Two years old—$18 to $28@30. Three years old—$24 to $41@54.

Sheep and Lambs—3,883 at market. Prices—Extra—$4,50 to $6@7. By lot—$1,02 to $3@3,50

Swine—Wholesale, still hogs 6c, and corn fed 5¾ ₩ lb.

BRIGHTON CATTLE MARKET—Aug. 10,

At market 1,650 Beef Cattle, 175 Stores, and 550 Swine.

Prices—Beef Cattle—We quote to correspond with last week, except small calibs of which the number was large. Extra $9,00; first quality, $8,25@8,75; 2d, $7,50@8,00; 3d, $6,50@$7,15.

Working Oxen—No sales noticed; not in demand.

Cows and Calves—Sales $24 to $60. Sheep—Lambs $2, to $3,75. Hill Sheep $3,50 to $6@7,50.

Swine—Shoats to peddle, 6c; old hogs, 5 and 6¼c; still hogs 4½ and 5c; at retail from 6 to 7½c.

232-tf JOHN MILLER.

SUFFOLK SWINE.

I have for sale a few good Suffolk pigs, now about three months old. Price per pair, properly mated, from different litters and families, caged, supplied with food, &c., is $40. Also, my last year's stock Boar "Boston;" price $75.
Sennett, Cayuga Co., N. Y. 2t* JOHN R. PAGE.

Advertisements.

Advertisements inserted in the Rural New-Yorker at 15 cents a line, each insertion,—*to be paid in advance.*—Brief advertisements preferred, and we do not wish to give any one more than four successive insertions. Our space is limited, and we wish to accommodate and benefit as many applicants as possible,—at the same time interesting our readers by presenting something new, weekly.

☞ The circulation of this paper is several thousand greater than that of any other published in this State, out of New York city,—and we believe it largely exceeds that of any other Agricultural or similar journal (monthly, semi-monthly or weekly,) in either America or Europe.

TRACY FEMALE INSTITUTE,

33 Alexander Street, Rochester, N. Y.—The next Academic Year in this Institution, will commence on Thursday, August 31, 1854.

For Circulars containing particular information, address
241-11 LUCILIA TRACY, Principal and Proprietor.

EAST BLOOMFIELD ACADEMY,

J. H. Kellom, A. M., Principal.

This Institution will re-open on the last Wednesday in August, and continue thirty weeks, including a short recess during the Holidays. At the close of fifteen weeks or one quarter, new classes will be organized.

Expenses for Tuition, &c.—Tuition in common English branches per quarter of eleven weeks, $3 00. Higher English, $4,00. Higher Mathematics, Latin and Greek Languages, $5,00. Music on Piano, with use of instrument, $10,00. French and German each extra, $2,00. Practical Surveying and Civil Engineering, $2,00, extra. Incidentals in summer, 25 cts. per quarter; in the winter, 50 cts. Gentlemen can obtain board in the village for $2,00 per week, including fuel, lights and washing. Young Ladies are boarded in the Institution for $2,00 per week—fuel, lights and washing extra. Also $1,00 per quarter for room rent. Young Ladies from abroad, are received into the Institution for $250,00 per Academic year.

Free Tuition.—As this Academy has been selected by the Regents of the University, to instruct Common School Teachers, the Trustees offer free tuition for fourteen weeks, to twenty-five Students, on condition that they pledge themselves to devote a reasonable time to the profession of Common School teaching.

The teachers' class will be organized the 20th of December. 241-3teow* WILLIAM BRADLEY, Secretary.

A FARM FOR SALE,

In the town of Humphrey, Cattaraugus Co., N. Y., one mile from Chaplesborgh, 10 from Ellicottville, 9 from the Great Valley, 9 from the Allegany, and 12 from the Olean depot,—containing 100 acres, 80 of which is cleared and 50 in meadow. Upon the farm is a frame house and barn with additional hay barns—an orchard of grafted fruit and a splendid sugar orchard. The name of the road and its water privileges render it a superior farm for dairying purposes. Adjoining the farm is other land for sale. I will sell for $16 per acre, and give possession to sell purchaser. Apply to the subscriber upon the farm for further particulars. THOMAS CURRAN.
Humphrey, Aug. 9, 1854. 241 11*

N. Y. STATE AGRICULTURAL SOCIETY,

14th Annual Cattle Show and Exhibition of the New York State Agricultural Society,

Held in connection with the American Institute and New York Horticultural Society, at Hamilton Square in the city of New York, October 3d, 4th, 5th, and 6th, 1854.

The Annual Exhibition of the Society will be held as above, in the city of New York, from Oct. 3d to 6th, on which occasion, upwards of *Eight Thousand Dollars* are offered as premiums, to be competed for, with Cattle, Horses, Sheep, Swine, Poultry, Dairy Products, Farm Implements and Machinery, Domestic and other Manufactures, Flowers, Fruits, and articles in all the Mechanical Departments—the full particulars of which will be found in the List of Premiums published. A large portion of the Premiums are open to competition by persons out of the State.

It is believed that this combined exhibition will be the most extensive ever held in this country, and will afford to exhibitors advantages never before offered, in every department of the Exhibition, combining the entire industrial interests of the Farmer, Manufacturers, Mechanics, Horticulturists, and Artizans of the country.

Persons desirous of examining the List of Premiums and Regulations, or of entering stock, implements or other articles for exhibition, will please apply to H. P. Johnson, Sec'y, State Agricultural Rooms, Albany; at the Rooms of the American Institute, 351 Broadway; or Jaxon Beers & Co., 336 Broadway, New York, where the Premium List and Regulations will be furnished, and every desired information in relation to the Exhibition given.

Stalls and fodder for stock, and pasturage for the other articles, will be furnished in season, so that all articles designed for exhibition can be taken to the show grounds on their arrival to the city, where they will be provided for and protected.

The following Railroads have agreed to transport all stock and articles for the exhibition, free—requiring the freight to be advanced on delivery and re-paid on return of the articles, with evidence of being exhibited, &c.: Hudson River, New York & Erie, New York City & Buffalo, Ithaca and Owego, Canandaigua and Elmira, New York Central, Rome and Watertown, New York & Harlem, Long Island, Troy & Boston; and it is presumed all the Railroads leading into New York will afford the like facility.

Application to transport articles should be made in season to the nearest station Agent.

WM. KELLY, *Prest.*
B. P. Johnson, *Sec'y.* 241-5t

GUANO.—NOTICE.

As there is a substance now selling by some dealers in this city and Brooklyn, for No. 1 Peruvian Guano, we caution the agricultural public who may purchase Peruvian Guano this season, to observe that every bag of the genuine article will have the following brand:

No. 1
Peruvian Guano,
Imported by
F. Barreda Brothers.

The price is now established for this season at $55 per ton of 2,000 lbs. When taken in lots of 5 tons and upwards, a discount will be made.

LONGETT & GRIFFING,
State Agricultural Ware House,
241-7t No. 25 Cliff street, New York.

BEAUTIFUL FARM IN MICHIGAN FOR SALE.

This desirable property of 65 acres, is situated in the town of Marshall, Calhoun Co., but three miles from the County Seat, a flourishing village of 3,000 inhabitants, and lies between the M. C. R. R. and Kalamazoo River, a fine stream abounding with fish and wild fowl. The farm contains a neat Cottage House with 8 rooms, and wide balcony all round; a fine Orchard of Apples with 40 varieties; another Orchard of 6 acres, consisting of Peaches, Plums, Apricots, Nectarines, Quinces, Cherries, Dwarf Pears, Chestnuts, Almonds, &c.; a fine Garden well stocked with fruits, Asparagus, Rhubarb, Sea Kale, &c.; a nice large yard of an acre round the house, also planted in fruit and shrubbery. The outbuildings are a good stone Dairy, Ice House, Apiary, Smoke-House, in the yard; and in the Farmery is a good Stable, Cow-House, Granary, Hog-Pens, Corn-Crib, Wagon-Sheds, and everything else to make it convenient. The entire place is in good repair, beautifully and healthfully located, and is altogether one of the most desirable places in Michigan.

Address the Subscriber at Marshall, Mich., post-paid, and I will give it the earliest attention.
211-tf GEO. HENTIG.

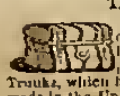
CHEMICAL ANALYSIS.

J. Bryan, Practical Chemist, 112 State St., Rochester, N. Y., is prepared to make *full and accurate* analysis of Minerals, Soils, Metals, Mineral Waters and Chemical Compounds, and articles suspected of adulteration and *Poisons*, either organic or inorganic, and in quantity or quality. It is necessary to send one or two ounces of a solid, and a pint or more of a fluid for examination. 241-13t

SUFFOLK PIGS

from the stock of Prince Albert which gained the gold medal at Smithfield Club, England, also the first prize at the exhibition of the Norfolk Agricultural Society, Massachusetts, 1853, two to three months old, supplied with food delivered on board Express cars, or vessel on receiving thirty dollars per pair. Or they will be sent to any part of the United States, upon receiving a certificate of deposit for forty dollars, from the Postmaster, that upon their reception, in good order, free of expense, he will pay. Address JAMES MORTON,
West Needham, Mass.
Or GEORGE H. P. FLAGG,
241-2t* Boston, Massachusetts.

TRUNKS AND VALISES.



This subscriber would inform the citizens of Rochester and the public generally, that he is manufacturing extensively, a very superior article of sole leather and steel spring Trunks, which he will guarantee to be equal to anything made in the United States.

You may see at FRITCHARD'S Trunk Depot and Sales Room, 78 State street, 1650 Trunks and Valises, and he is now adding to this large stock from 125 to 150 per week—among which you may find Trunks varying from one dollar to fifty. If you should want anything in his line, give him a call, for his motto is, "Large sales and small profits."
A. R. FRITCHARD, No. 78 State St.
Rochester, N. Y., Aug., 1854. 240-tf

WALWORTH ACADEMY.

The next term of this Institution will open Wednesday, August 9th, and continue 14 weeks, under the direction of John F. Seymour, A. M.

The Institution has been entirely refitted and furnished with all the means requisite for an institution of the first class, and no pains will be spared to make it one of the best institutions in the State.

Tuitions, $4, $5 and $6, according to the branches pursued. E. YEOMANS, President.
L. J. Hicks, Secretary.
Walworth, Aug. 1, 1854. 240-2t

SHORT-HORN BULL FOR SALE.

The subscriber offers for sale his pure bred Short-horn Bull, "Sir Arthur"—color mostly red, calved Aug. 11, 1851; bred by Gen. Vail, Esq. He is a fine animal, of large size and fine symmetry, and descended from some of the best animals on record in the English Herd Book. Or I will exchange for a good thoroughbred Short-horn cow. For further particulars address JAMES MEIGHMAN,
Oriskany, Oneida Co., N. Y.,
240-3t 7 miles west of Utica by Railroad.

GAFFNEY, BURKE & CO.,

Importers, Wholesale and Retail Dealers in

Foreign and Domestic Dry Goods,

No. 53 Main Street, and Nos. 1 and 3 North St. Paul Street,

GAFFNEY'S BLOCK, ROCHESTER,

Have now in store one of the largest stocks of Dry Goods ever brought to this city, in which may be found every desirable article of Ladies' and Gents' Dress Goods, adapted to the season. Their improved facilities for IMPORTING, and the great advantage of having a resident partner in New York, daily attending the Auction Sales, enable them to offer to Merchants and Dealers, by piece, case or bale, as cheap as can be purchased in the New York and Boston Markets.

Wholesale Rooms Nos. 1 & 3 North St. Paul St.,
GAFFNEY'S BLOCK, ROCHESTER.

Summer Dress Goods.—We have just opened a very large stock of Summer Dress Goods, consisting of a fine assortment of Brilliants, plain and figured Berages and Tissues, plaid and striped Prairie Silks, Muslins, plaid and striped Lawns, Printed Jaconets, &c., &c. The styles are entirely new and beautiful.
GAFFNEY, BURKE & CO., 53 Main St., Rochester.

Broche and Crape Shawls.—We have now on hand a very large stock of Broche and Crape Shawls, all colors and qualities, which we are selling at very great bargains, as they were purchased much less than cost to import, at an auction Sale.
GAFFNEY, BURKE & CO.,
Gaffney's Block, 53 Main St., Rochester.

More New Silks.—We have just received another large assortment of Summer Silks, from an Auction Sale, which were purchased CHEAP FOR CASH, and will be sold at less than cost to import. The styles are very handsome and entirely new. We have also just received 40 pieces of those celebrated BLACK SILKS, which we are selling as cheap as usual. GAFFNEY, BURKE, & CO.,
53 Main St., Gaffney's Block, Rochester.

STARR'S PREMIUM PIANO FORTES.

Every person in this vicinity, desirous to purchase a Piano Forte, will be *more than paid* by visiting my rooms, where he can *buy directly from the manufacturer*, save the commissions of an agent, and select from the largest assortment in Western New York, as I have constantly on hand from 15 to 30 finished Instruments, and from 60 to 100 others in process of construction, of various sizes, patterns, and prices, from $220 to $500 each. They embrace such a combination of excellencies, in their beauty, finish, strength, (to keep in tune,) exquisite touch—soft, deep, rich, full and melodious tones—as induces the belief, so often expressed by those who have bought, or used them, that "they surpass all others in the market." Their superiority was acknowledged when one of the most intelligent musical committees which ever acted on a similar occasion, *awarded us the three highest premiums*, when in competition with Chickering, Hilbert, Bacon & Ravens, Wm. Hall & Sons, at the New York State Fair for 1851.—And the number since sold, with their daily *increasing celebrity*, fully justifies the report of that committee. They are manufactured of the best materials, in the most perfect manner, with metallic plates upon the Iron Choral scale, with the Bacon Damper, and French Grand Action, *expressly for retailing*—(numerous applications at wholesale, being constantly refused,) and can only be had at my rooms, where the instruments will be shown, and all orders promptly attended to. As it is fully settled that *a good Piano is cheap at almost any price*, and a poor one only a nuisance; and as I rely alone upon their merits to secure them favor with the public, I invite for them, the most careful examination and scrutiny, by all who wish to buy at my manufactory and show rooms, Nos. 45, 47, 49 & 51 Orphean Buildings, Main st., 2d Floor. Every instrument will have upon it the name of the subscriber, and be *warranted to please the purchaser.*
Rochester, June, 1854. FREDERICK STARR.

SHEEP FOR SALE.

I have Sheep (both Bucks and Ewes) of the following breeds, for sale, at reasonable prices. French and Spanish Merinos, pure bred; also, crosses of the two breeds, from ¼ to ¾; also, Leicesters and South-Downs, pure bred, and crosses of the same. These Sheep are from, or descended from the flocks of the well known breeders of pure bred Sheep, Messrs. Jewett, Burritt, Arery, Wakeman, McIntyre, Bradley, &c. For further particulars, address me (post-paid) at Brilleville, Jefferson Co., N. Y.
237-3mepw. E. G. COOK.

PATENT AGENCY.

Inventors can have their drawings and papers prepared under their own inspection, by applying to
JOHN PHIN, C. & M. E., Agent for procuring and for the sale of Patents, 16 Buffalo St., Rochester, N. Y.

Particular attention paid to rejected applications, and to Chemical Patents.

Will also send the claim of any invention patented within the last 14 years, on receipt of one dollar. Patent Rights for Sale. 235-tf

ENGLISH CATTLE.

To Agricultural Societies, and others requiring the best bred Cattle from England, embracing pure blood Horses, Short Horned Cattle, Devons, Herefords, Ayrshire and Alderney Cows, pure bred South Down, Cotswold and Leicester Sheep, Suffolk, Essex and Berkshire Swine. Imported on commission by Messrs. Thos. Betts & Brothers, Herts, England. For information apply to J. M. Miller, 81 Maiden Lane, N. Y. City, who is fully authorized to act as our agent. Orders received for Guano, by applying to
231-13t THOMAS BETTS, 85 Wall St.

HOME PROTECTION.

Tempest Insurance Company, Capital $250,000, Organized December 24, 1851; Chartered March 1, 1853. Homes only insured by this Company. No one risk taken for more than $3,000.

Many distinguished persons have insured their homes, in the amount of $3,000 each, in this Company, among whom are Ex-President Van Buren, Kinderhook; Ex-Governor Seward, Auburn.

Auburn, May 16th, 1853.

To whom it may concern.—We are personally acquainted with many of the Officers and Directors of the Tempest Insurance Company, located at Meridian, Cayuga Co., N. Y. In our opinion they are among the most wealthy and substantial class of Farmers in this county.

J. N. STARIN.
ELMORE P. ROSS.
THOMAS Y. HOWE, Jr.

The above gentlemen will be recognized as the Cashier of Cayuga County Bank, Auburn; Postmaster, Auburn, and Ex-Member of Congress, Auburn, Cayuga County.

N. B.—The public are cautioned to bear in mind the name (*Tempest.*) and not submit to an imposition daily practiced by two-by-four Mutual Co's.
234-tf E. R. TIMBY, Secretary.

LAND PLASTER

At Canandaigua, Victor, and Fisher's Railroad Depots. The subscriber has on hand at each of the above Railroad Stations, 500 tons of pure, fresh ground land Plaster.—Farmers can depend upon getting their Plaster at the above places, of a superior quality and not kiln dried.
217-4m. JIRSH BOWLEY.

Poetical.

[Written for the Rural New-Yorker.]

FRIENDSHIP.

BY J. C. MILLER.

Is "Friendship but a name,
A false and fleeting charm?"
Ah no, it is a constant flame,
A light that cannot fade.

It has a potent spell
Enthralling kindred hearts,
And from the spirit's deepest well
Its holy fountains starts.

Thus, lady, thus we feel
A spell around us thrown;
Thus, each to each, our hearts reveal
Their fountains overflown.

Oh, may their waters blend
And form a placid stream,
Which shall flow on to being's end
As flows a quiet dream!

Rural Sketch Book.

ELLEN JONES.

A STORY FOR GIRLS.

One fine December night, the air was clear and cold, and three children were pressing their faces against the window, eager to catch the first sound of bells—sleigh bells.

"I see them," said Eddy, the youngest of the three, who was allowed the favor of standing in a high chair, and thus looking out through the upper squares of glass; "I can see something.'

"Let me stand in your chair a moment, Bub," said Lizzie. "Yes, I believe it is father and Ellen," said she.

"I know it is," said Mary, "for I hear the bells; it's our bells."

Even the mother's eye beamed with unwonted pleasure as her youngest darling proclaimed, "Here they are, father and Ellen! O, Ellen, she looks like a queen—with a feather in her bonnet; how beautiful!"

A general rush was made for the door as Mr. Jones tenderly, and perhaps a little proudly, handed his eldest daughter from the sleigh.

How the younger children crowd around, eager to observe every look and catch her tones, as she receives her mother's warm grasp, and returns her proffered kiss. To them, sister Ellen was quite an important personage; aside from her being the eldest daughter, she had been six months in a Seminary. Having been in the city, was, to the brother and sisters, in itself a great event. That much was expected of Ellen they were fully aware; many little arrangements, and alterations in household matters had they joined with their mother in making, solely in reference to Ellen's return.

Farmer Jones felt a glow of honest pride as he gazed on Ellen's fine face with a look of love. Certainly sister had improved in personal appearance—so thought the children as after tea, they all gathered around the open fireplace, and turned their eyes to mother's right hand, where sat Ellen in the little rocking-chair.

Mr. Jones, instead of reading his weekly paper as usual, damp from the press, dries it carefully before the blaze, and lays it upon the table; to tell the truth he knew he shouldn't understand or remember a word if he read, for his mind was now with his children, particularly with the one who had just entered the home of her happy childhood.

The children ask Ellen a few questions, which she answers, not quite as readily as they had supposed she would, and mother tells them "that as Ellen is tired, and almost enough of a stranger to be called company, she thought they ought to entertain her."

"Come, Eddy," said she, "can't you tell Ellen something that has taken place since she left us? I think you can say something that will interest sister; just think, she has been away from us since June."

Of course, little Eddy supposed his sister would be as much interested as himself, and commenced with, "O, Ellen! we're had such nice times, only we wished you had been here," and then the girls joined with Eddy and recounted the many joyous, free, and merry times that good children who live in the country know all about. How in summer they rowed over the green fields, or played beneath the shade of the tall pines in the deep wood, and in the winter, when the air was clear and bracing, and the long hills covered with the icy snow, how the boys drew their sleds up their smooth sides, and with the girls glided swiftly down and far over the interval below.

"It's fine coasting now, is it, my son?" said Mr. Jones. "Ellen will be a fresh customer for you to-morrow; 'twill take a day or two to rub off the city polish, won't it though?" turning to Ellen and patting her under the chin.

"I don't know, father," said Lizzie, "the city girls that I've seen are as big romps when they are out here, as any of us. There's cousin Kate and Jane, when they were here last summer, they could beat us all; yes, and how everybody loved them; nobody was afraid of them, for all their father was so rich."

"What made everybody love them?" said Mrs. Jones, who had been a little sad for a few minutes.

"Because they were so kind-hearted,' said Lizzie.

"Because they were so real polite," said Mary.

"It was because they weren't a mite proud," said Eddy, "and every time I see old lame Isaac, he asks me something about them, and says, 'real ladies them was.'"

Somehow the evening wore away pleasantly enough, but without Ellen's seeming quite so free and glad, so happy and satisfied, as was Ellen of a year ago. The children easily accounted for this if they noticed it, by supposing it was a very sad thing to part with teachers and school-mates. They retired and left Mr. and Mrs. Jones arranging matters for the morrow, as they sat by the bed of bright coals.

"Wife," said Mr. Jones, "they give me a very good account of Ellen at B. Mrs. W. says she is a fine scholar,—ambitious,—with a good share of self-respect. They all advised me to have her return in the spring. But the question is, can we afford it? We're bad to make an extra effort to do what we have for her; but then, if I was sure she would repay us, I shouldn't mind that or more."

"We can tell better how to act in this matter when spring comes,—we will try and make Ellen happy at home till then," said Mrs. Jones.

"Bright well, I've a notion it takes more to make girls happy that have been to these schools," said Mr. Jones.

The next morning found the family seated around the breakfast table before it was dawn; Mr. Jones being a hard-working, industrious man, found the old maxim, "Early to bed," &c., for his special interest. They knew it would require some effort for Ellen to rise an hour earlier than had been her custom; so as she did not appear, they said it was "no matter; by-and-by she would get up as early as any of them." Ellen made her appearance soon after the family left the table.

Just now Mr. Jones entered and said to the children, that George and Sarah S., children of their nearest neighbors, were coming with their sleds, and if their mother could spare them for an hour, they might go to the top of the hill and slide. "Where's Ellen?" said Mr. Jones, "call her; there'll be no better coasting this season, and of course, George S. knows of no one he will be more pleased to see on hiss hill."

"Ellen is up stairs;" said Mrs. Jones, "but I hardly think she will go."

"Go! why yes she will go, or else she is not Ellen Jones. Call her, mother, and we'll see.'

As Ellen entered, it was evident to Mr. and Mrs. Jones that something was the matter, for there were traces of tears, and her countenance was by no means a happy one.

"Ellen," said Mr. J., "George and Sarah S. are coming with their sleds—the children have gone to meet them; would you like to go out and slide down hill with them a few times?—You can spare her, can't you, mother?"

"I would rather not go," said Ellen, without raising her eyes from the floor.

Mrs. Jones now silently motioned to her husband to say nothing further to Ellen. She was left alone with her daughter, who looking out of the window asked her mother, "if things always looked alike to her?'

Mrs. Jones smiled, and saying that was a queer question, replied that the same things did appear somewhat differently at different times, for the reason that we view the same objects with such various feelings. "I expect you enjoyed yourself very much while you were away, this winter and summer; you were happy, were you, my daughter?"

"Yes, mother, happier than I shall ever be again, if I've got to stay at home," replied she, at the same time bursting into tears.

"Why, my child, do tell me why you feel so, why this change? I must know, Ellen; your happiness is very dear to me. Do not let us see you unhappy, if it is in our power to make you feel otherwise."

"Well, mother, perhaps 'twould have been better to have let me stayed at home."

"Why, my child?"

"Because, there is everything beautiful in the city, and of course I must, I could not help being happy there. Uncle's house is so different, so much pleasanter, so much more elegant than this. O, this looks like a prison beside it; their kitchen looks prettier to me than our parlor. And then aunt never works as you do; it is fun pleasanter to have servants. O, I wish I had never gone from home, and then I should'nt have known but it was well enough here;" and Ellen drew a long sigh.

"Well, my dear, if you don't wish it, we will not again send you; you will forgive your father and mother for placing you in circumstances which caused you to be so unhappy.—Surely we made a great mistake, and O, Ellen, *you* don't know how great an effort we made, to give you these advantages."

"I don't want you to talk so, mother."

"But my dear, you are taking a wrong and mistaken view of everything, and O, Ellen, how little you know of the world; if I had time, I would tell you how, for months before you left us, your father and I exerted ourselves to give you an opportunity to acquire knowledge, and to make you happy. Let me beg of you, Ellen, not to speak to your father, as you have to me; it does seem to me that you can overcome these feelings at once, if you choose—at any rate you will shortly, if you will make an effort, and cherish kind feelings. Will you try?"

"Yes, mother, but it's no use; I can't make believe contented."

The children returned and gave Ellen an account of their hour's enjoyment. "Such a good time," exclaimed Eddy, "you never had down to uncle's, I know; George was real sorry not to see you, Ellen."

In the evening the family were seated around the open fire-place whose cheerful blaze made shadows on the wall, and threw its light over the whole.

"Now for some popped corn, Eddy, and some apples," said Mr. Jones.

"Yes, father, I've got it all shelled ready." See our new corn-popper, Ellen," said Eddy.

Ellen said nothing, but looked as though it were a little beneath her dignity to notice such childish things. After a few moments shaking—pop, pop, snap,—and it was quickly turned upside down, and emptied of its snow-white kernels. Soon the large dish was filled, and the red-cheeked apples were beside it.—Ellen was now quite cheerful, more so than she had been since her return, and the evening passed pleasantly. Sweetly sounded her fine voice as with her mother she joined in singing

"There is a land of pure delight,"

and when she knelt with the others, and her father prayed that they might be "that happy family whose God is the Lord," how did her mother's heart fill with grateful emotions to the Giver of every blessing.

Ellen took a candle from the mantel, and lighting it, pleasantly bade her father and mother "good night;" as she closed the door, her mother heard her exclaim.

"What is it, Ellen," said she; "did you not speak to me?"

"No, but it is shockingly disagreeable to have these tallow candles; it's too bad, tallow dropping upon my dress; so different from uncle's gas lights—well, I must bear it, an use to say a word—though I despise these things."

Mrs. J. closed the door and made no reply.

"Wife, what *ails* Ellen?" said Mr. Jones, as she recoiled herself. "What has got into her? I think it's pretty well, if we've got to make an effort to raise money to send the children away to school, only to come back and despise home. It is having its effect upon the younger ones—they look up to Ellen. Do you think Eddy didn't say to me out in the barn to-day, 'that the reason his feet were so cold was, because we had no carpets on the floor;' I asked him how he knew, and he said, 'Ellen said so.'"

"I'm very sorry," said Mrs. Jones, "but Ellen is not really unamiable—once let us touch her better feelings, and certain I am she has them, and she will show us kind and as true a heart as any child we have got."

"I know it, but 'twont do to be harsh, we can't scold it out of her; and I'm afraid we can't coax it out very quick,"

"Shall you go to the village this week?" asked Mrs. Jones.

"Yes, I shall go day after to-morrow; shall we let Ellen go over and spend the day?"

"That is what I was thinking of," replied Mrs. Jones. "We must be gentle as well as firm, and her good sense will show her better by-and-by, I hope."

Pleasantly felt Ellen, if we judge from her beaming countenance, as seated in the sleigh by her father's side, on a fine morning, she bade her mother and sister "good bye;" pleasant visions of village girls, rich furniture and charming music were flitting through her mind, and a feeling like contempt for her own home, and something like pity for its inmates, mingled with there pleasurable feelings. "But they don't know any better," she inwardly felt.—"Yes, and didn't you," said a little timid voice speaking from the chamber of her secret thoughts, "didn't you enjoy your childish spirits at home, when you didn't know any better? Didn't you have a better time when you played in the oak pasture; yes, and didn't you have a better time in the garret, even, playing blindman's buff, than in uncle J.'s parlors?"—Then Ellen was almost obliged to own to herself that 'twas so. Then she thought how full of enjoyment the children were the day before, when it stormed, sitting on grandmamma's settle, and calling it uncle's retreat lumber.

"Well, it's because they don't know any better, and I *do know* better. I won't stoop or bend to their homely notions again;" and Ellen tossed her head with quite an air for a young Miss, in continuation of this thought, as her father reined his horse to the door of a shabby looking cottage in one of the back streets of the village they had just entered.

"Now, Ellen," said her father, "I want you to get out here, and stop a spell; I am going to the mill to get this bag of corn ground, and may be you would rather not have any of your young friends know that you rode with a bag of corn."

Ellen blushed, for she didn't suppose till that moment, that her father understood her motive when she expressed a wish to walk part of the distance. "If I shouldn't call for you very soon, Ellen, don't be worried, for you will find an old friend here; try and enjoy yourself, and be sure and stay till I call for you; there, give these things to Mary,' said he, handing her some bundles; don't knock, walk right in."

"Mary, Mary," thought she, hesitating a moment on the door-step, "It must be Mary Teel, who lived with us when mother was sick;' and then she heard a lullaby noise, and the faint wail of an infant, and softly she opened the door of a dark entry. Closing this, she felt her way to the opposite door, and entered a little room. She was, for a moment, unable to distinguish objects, but a kind, though unfamiliar voice greeted her, and placing a broken chair by the stove, invited her to be seated. Ellen now looked around the dark room; dark, not because there was no pleasant sunlight without, but because there was but one little window of four squares for it to gain admittance to this attic room.

In one corner was a low cot bed, upon which lay Mary Teel. Little had Ellen seen of sickness,—yet one glance told her that Mary was very ill. Then as her eye wandered from the bed to the mean and wretched appearance of everything in the room, she for a moment had a feeling of disgust, and felt unkindly towards her father for leaving her there. It was but for a moment, however, for Ellen, as we said before, had a kind heart, and when she saw Mary's baby lifted from its little broken cradle, and placed in the bed by its mother, and heard the woman who attended her describe her intense sufferings, with that distressing sickness, the rheumatic fever, her heart melted.

No visions of her uncle's splendid parlors now rose before her, but she was thinking how Mary, pretty Mary Teel, two years ago, watched by the sick bed of her mother, with a heart as free from sorrow and care as was then her own. Then as Mary, awaking from the fitful slumber into which she had fallen, placed her bright eyes on Ellen, the color on her cheek heightened, and she reached out her thin hand to grasp Ellen's, which was quickly placed in her's—feeble was the grasp, yet it thrilled through her inmost soul.

"'Tis kind in you, so kind, to come to see me, 'a friend in need is a friend indeed!' Such a sweet thought I had while I was sleeping; I thought your dear mother stood by my bedside, and with her sweet voice sang

"Pain and death, and night and anguish,
Enter not the realms above."

and now you will sing it to me—O, I wish you knew some more, my head is so weak I can't think much." Ellen placed her hand over her eyes, now swimming in tears, and thought for a moment; "I believe I know some of it," said she; then bending low she repeated,

"Endless pleasure, pain excluding,
Sickness there no more can come,
There no fear of woe intruding,
Sheds o'er Heaven a moment's gloom."

Mary listened with rhapsodic hands and closed eyes, and then softly added—

"Lay thy supporting, gentle hand,
Beneath my sinking head.

Then in a gentle whisper she asked Ellen if she could sing it like her mother. She did so with a low, sweet voice, and Mary remained silent for a few minutes after looking earnestly on her; then motioning for her to lean over the bed-side, she whispered in her ear, "Are you happy, dear? O yes, you must be; I am, I have everything to make me happy." Ah! those words sank deep in a kind but sensitive nature.

Where were Ellen's fancied sorrows? Scattered in the winds.

Mary now slept, and Ellen for the first time thought of the articles her father gave her for Mary. She untied the bundles, and first were a dozen candles—"tallow candles." "O, kind in you, dear, to bring them," said the woman, "we're burnt rags in a little dipper of grease, but it's not so neat, you know. You must be used to sickness, dear," she said as Ellen handed up the other articles, "to know how we needed these things."

"My mother is," was the reply. "Well, dear, surely you was kind as could be, to come here—young folks like you ain't always so thoughtful like, but you'll have your reward—*She*," pointing to the bed, "*she* is a saint, and oceans of sorrow she's waded through. When her husband died and left her to sore want she never murmured a word, nor in all her sickness, nor no time, has a sharp word fell."

How changed were Ellen Jones' feelings, as ere she placed her head on her pillow that night she prayed "deliver us from evil." Then did she feel that no evil indeed had ever fallen upon her. And in after years, when she had become a useful and a happy woman, did she recur to that visit, believing that God taught her there, that "to make others happy, is one of the truest objects of life.—*M. E. Farmer.*

The opinion of a fool is of more value than the oath of a hypocrite.

Youth's Corner.

ILLUSTRATED REBUS, NO. 35.

☞ Answer in two weeks.

[Written for Moore's Rural New-Yorker.]

MISCELLANEOUS ENIGMA.

The language used by a distinguished warrior, informing his Government of victories won, consisting of three words, forms the basis of the following:

My 5, 12, 4, 10 represents a sum which, if multiplied into itself, and one of its factors be added to the product, and the sum then divided by 6, it will give the number of letters contained in my whole.

My 9, 4, 8 represents the number contained in the cluster of stars called Pleiades.

My 1, 10 represents a number which, if doubled and multiplied into itself, and then divided by the original number, the quotient will be twice that of the number of letters contained in my whole.

My 5, 9, 1 each represents a numerical figure.

My 5, 10, 2 is to strive for superiority.

My 9, 4, 7, 2 is to see, to discern.

My 1, 8, 11, 2 is a useful invention.

My 5, 4, 9, 2 is long life.

My 9, 2, 6, 3 is, in Geology, a seam intersecting a rock or stratum.

My 5, 12, 3, 2 is the long slender stem of any plant.

My 1, 8, 5, 10, 7 is full of life, lucid, bright, active.

My 9, 2, 3, 7 is transferring a thing for an equivalent.

My 5, 2, 3, 7, 2, 2 is a person to whom property is sold.

My 5, 2, 3, 8, 11, 2 is the name of a city in Europe.

My 9, 2, 3, 2, 3, 2 is poisonous, venomous.

The numbers contained in the 1st, 2d, and 3d lines, added together and multiplied by the written numbers contained in the 4th line, from the product of which substract 8, and divide by 613; the answer will be the number of words contained in my whole, commencing with the same letter of the alphabet. EUNOMY.

Rural Grove, Aug., 1854.

THOMAS' NEW FARM BOOK.

FARM IMPLEMENTS, and the principles of their construction and use, with 200 Illustrations. By J. J. THOMAS.

The following are only a few out of the many commendatory notices which this work has already received from the press:

It is a most valuable work; is admirably adapted to the wants of the farmer; and there is no more desirable book for our Common Schools.—*Journal of N. Y. State Ag. Society.*

We wish to see this work placed in the hands of every farmer and farmer's son as an indispensable book; and school committeemen should see that it has a place on the shelves of every rural district school library. It is admirably adapted for popular use as a text book. The illustrations are ample and excellent; and every effort is made to make a straightforward treatise that even a child could not mistake. Illustrating, Mr. Thomas has come the agricultural seaman the great service in the preparation of this book.—*Boston Herald.*

This is an invaluable work for the practical agriculturist, adapting to it, upon the theory of mechanical forces as applied to machinery used in farm labor; it will enable farmers to construct many indispensable articles, and to understand the principles and construction of all agricultural machines."—*Boston Herald.*

We have never seen so much philosophy brought to bear in a practical manner on the ordinary concerns of life.—*Presbyterian Banner.*

Just the book for farmers who wish to perform their labor intelligently and skillfully.—*Zion's Herald.*

This is an interesting and invaluable work for the farmer, and should be in the hands of every farmer in the country.—*Ohio Farmer.*

We should be glad to see the book in every one of our schools and popular libraries.—*N. Y. Agriculturist.*

Published by HARPER & BROTHERS, New York, and sold by booksellers generally. 220 3tpmw.

DRILLING IN WHEAT.

Moore's Seed Planter, or Grain Drill.

PATENTED July 2, 1850.—This valuable implement of husbandry, which has been thoroughly tested in many places, is used for planting WHEAT, RYE, CORN, OATS, BARLEY, BEANS, &c. It operates equally well on all kinds of land, and is not apt to get out of order by coming in contact with rocks, roots, &c.; and it is believed, is superior to any other implement of the kind in use, as may be seen by the testimonials of many of the best farmers in the State. There are several advantages in drilling in a broad-cast sowing, among which are these:—It is most expeditious; it saves labor, which is money; it completes the process of seeding wheat or rye at once; and experience has proved that more grain is obtained, of a better berry, and with less seed, owing to its being covered at any required depth, where every kernel has moisture and a chance to germinate.

DRILLING WHEAT.—Edward Stabler, in his admirable essay on the advantage of drill seeding, states that after ascertaining its results on some 500 or 1,000 acres, besides large experiments on his own land, he finds there is not a single locality where it has not proved the most profitable.—First, in the saving of seed, and secondly in the increased product of the grain, amounting to from one to seven bushels to the acre. He had known the increase, in one case, by careful comparison of the two modes, to amount to nine bushels per acre in favor of drilling. He relates an interesting incident:—A reader offered a drill for the increase in a crop of 50 acres of wheat, to be determined by sowing a few strips broad-cast for comparison; but before the harvest, the farmer preferred paying the hundred dollars for the privilege of a drill, with interest. On carefully ascertaining the increase, he found it to be one hundred and fifty-three bushels.—*Albany Cultivator.*

Extract from the N. Y. Tribune, Feb. 9, 1853, article on Implements at the World's Fair, London:

"Those who understand the subject, know that at least one-third of the seed may be saved, and a fourth added to the crop by DRILLING, as contrasted with the old, slovenly process of sowing by hand. The annual saving by the general adoption of drilling in this country, would be equal in value to all the gold we receive from California."

The highest premiums have been awarded to this Drill at the Agricultural Fairs in Delaware, at Philadelphia, Baltimore, Hetrick, in Maryland, and at various County Fairs in Pennsylvania, Ohio, Michigan, and other States.

TESTIMONIALS.

To E. W. HUNNUT & Co.:—The Grain Drill which we severally purchased of you in 1852, works to our entire satisfaction. Its simplicity, and certainty of distribution, together with its cheapness, commend it in preference to any Drill with which we are acquainted. Samuel Lewis, Esq., York, late Co. Com. N. Y.; Wm. W. Fletcher, Jr., Chas. Hazelton, Elijah Armstrong, Geo. W. Uhl, Leander Clark, Henderson; Chas. Broadershoit, Andrew Boyd, Rich'd Johnson, Groveland.

Extract of a letter from Mr. McCreone, near Newcastle, Delaware:—"Your Drill stands unrivalled, as is admitted by all Farmers in the neighborhood, that have seen it in operation."

"This is to certify, that we, the undersigned, have used Lewis Moore's Improved Grain Drill, and we believe that for simplicity, durability, cheapness, ease, speed and regularity of sowing, it surpasses anything of the kind heretofore in use among us, and we do recommend it to farmers as being a machine the best adapted to their wants."—Signed, Wm. Linville, Lancaster Co., Penn., and thirteen other farmers.

Orders will be received for these machines by the subscribers, who have purchased the right to make and sell them in the Counties of Monroe, Ontario, Wyoming, and Livingston.

Cash prices at the shop,—8 teeth Drills, 8 in a part, $65; 9 teeth do., 7 and 8 in a part, $70; 10 teeth do., 8 in a part, $75; 11 do., 8 in a part, $80. E. W. HUNNUT & CO.

Rochester, Livingston Co., N. Y., June, 1854 220-8t

THE WOOL GROWER AND STOCK REGISTER.

VOL. VI.—ENLARGED AND IMPROVED!

THE WOOL GROWER AND STOCK REGISTER is the *only* American journal devoted to the important and profitable branches of *Wool and Stock Husbandry*. It contains a vast amount of *useful* and *reliable* information on the above and kindred subjects, and should be in the hands of every owner or breeder of Sheep, Cattle, Horses, Swine, or Poultry—whether located East or West, North or South, for the most of the matter given in its pages is equally adapted to all sections of the Union, the Canadas, &c. The Sixth Volume, commencing July, 1854, will be

Enlarged to 32 Octavo Pages Monthly!

And improved in both Contents and Appearance. Among other matters of interest to Wool Growers, Breeders, Graziers, Butchers, &c., the new volume will contain PEDIGREES OF PURE-BRED CATTLE, Horses, Sheep, etc., and the Names and Residences of the principal Breeders and Owners of Improved Stock throughout the country. It is published in the NEAT STYLE, and ILLUSTRATED WITH MANY ENGRAVINGS—including Portraits of Domestic Animals, Designs of Farm Buildings, &c., &c. The careful REVIEWS OF THE WOOL AND CATTLE MARKETS, given in each number, are alone worth many times the price of the paper.—To Wool Growers this feature is invaluable.

TERMS—Only Fifty Cents a Year; Five Copies for $2; Eight for $3,—*in advance*. Any additional number at 37½ cents per copy. Club papers will be sent to different post-offices, if desired. ☞ Back volumes (well bound in paper, for mailing) furnished at above rates.

☞ NOW IS THE TIME TO SUBSCRIBE and form Clubs. Money, properly enclosed, may be mailed at our risk, if addressed to D. D. T. MOORE, Rochester, N. Y.

☞ Mr. C. MOORE, of Berry, Chau. Co., is authorized to act as Agent for the RURAL NEW-YORKER, and for the WOOL GROWER AND STOCK REGISTER, in the counties of Chautauque and Cattaraugus, N. Y., and Warren, Pa.

MOORE'S RURAL NEW-YORKER,

IS PUBLISHED EVERY SATURDAY,

BY D. D. T. MOORE, ROCHESTER, N. Y.

TERMS, IN ADVANCE:

SUBSCRIPTION—$2 a year—$1 for six months. To Clubs and Agents as follows:—Three Copies one year, for $5; Six Copies (and one to Agent or getter up of club,) for $10; Ten Copies (and one to Agent,) for $15; Twenty Copies for $25, and any additional number, directed to individuals at the same rate. Six months subscriptions in proportion. As we are obliged to pre-pay the American postage on papers sent to the British Provinces, our Canadian agents and friends must add 25 cents per copy to the club rates of the RURAL,—making the lowest price to Canadian subscribers $1,50 per year.

☞ Subscription money, properly enclosed, may be sent by mail at the risk of the Publisher.

. The postage on the RURAL is but 3½ cents per quarter, payable in advance, to any part of the State—and 6½ cents to any part of the United States,—except Monroe County, where it goes free.

ADVERTISING.—Brief and appropriate advertisements will be inserted at $1,50 per square, (ten lines, or 100 words,) or 15 cents per line—*in advance*. The circulation of the RURAL NEW-YORKER is several thousand greater than that of any other Agricultural or similar Journal in America. Patent medicines, &c., will not be advertised in this paper on any terms.

☞ All communications, and business letters, should be addressed to D. D. T. MOORE, Rochester, N. Y.

Progress and Improvement.

CHEESE-MAKING,—NO. 3.

We are inclined to think that the reason why the English cheese-makers object to raising the temperature of the milk after the rennet is added, is owing to the fact that they have no convenient apparatus for the purpose. We have spent some time in the best cheese districts of England, and a few weeks since visited some of our cheese-makers in the northern counties of this State, and must say that their arrangements are far superior to anything we have before seen. The "cheese-tub" is made of tin, and is placed in a wooden frame, so fixed that it can be surrounded by hot or cold water as desired. The evening's milk is strained into this tin, as it is brought in warm from the cows; and the tin is surrounded with cold water. In this way the milk keeps sweet till morning, even during the hottest weather.—The morning's milk is added to the cooled evening's milk, and warm water poured round the tin till the milk has attained the proper temperature at which to add the rennet. There is some difference of opinion as to what is the proper temperature. Some add the rennet where the milk is no higher than 78°, and others not till it is as high as 90°. The curd generally comes in from 30 to 40 minutes. Shortly afterwards, the curd is cut up with a "cheese-breaker," and then the temperature is gradually raised by pouring warm water round the tin. About two hours is occupied in thus breaking up the curd and "scalding" it. The temperature to which the whey and curd is thus raised differs materially, some dairies we visited "scalding" as high as 110°, and others no higher than 96°. From 96° to 100° would be about the average.

After being kept at this "scalding" temperature for about an hour, the whey is separated from the curd. This is accomplished as follows: A lattice frame-work is fitted into a sink, from which the whey can run to the desired receptacle. On the frame is placed a large cloth, with the edges hanging over the sides of the sink. The whey and curd is dipped on to the cloth, the whey running through to the hog cistern, while the curd remains in the cloth. This is a vast improvement on the English method of separating the whey—allowing the curd to settle, and dipping the whey from the top, &c. A little cold water is poured on to the curd to keep it from packing. Some prefer to cool whey and curd together, by putting cold water round the tin. When the whey is drawn away, the curd is broken up fine and settled. It is then put in the cheese-hoop and pressed for 24 hours. When taken out, they are bandaged, and a little whey, butter and annotta rubbed over them. They are then taken to the cheese room, where, for the first week or two, they are turned every day.

Salting and pressing are done very differently in the Cheshire cheese district of England from our way. After the curd is separated from the whey, it is put under a hand press for an hour or two, and as much of the whey expressed from it as possible *previous to salting*. When taken from under the hand press, it is broken up very fine—finer than with us—and salted. When we consider that to preserve cheese, it is necessary that all the whey or other liquid which it contains should be saturated with salt, it would seem to be desirable that the curd when salted should contain as little liquid as possible. Certain it is that a less quantity of salt would be sufficient to prevent all decomposition or change of elements in the cheese, when added to a dry curd, than when mixed with a curd containing much whey or other liquid. We believe, therefore, that, in this respect, the English practice is the best.—Again, the Cheshire dairymen press their cheese much longer than we do. They put but a slight pressure on the cheese at first, and after it has been under the press about twelve hours, it is taken out and perforated with a wooden skewer. This is done to open channels for the exudation of the whey. It is then put under the press again, and an increased weight put upon it. It is frequently kept under gradually increasing pressure for two or three days. It is taken out, turned, skewered, and a dry, clean cloth put around it two or three times and pressed till no more whey exudes to wet the cloth. This is very different from the practice adopted here, where the cheese is placed under an *immense pressure* at once, and finished off, without turning, skewering, &c., in 24 hours. It is the "scalding" process which enables the American cheese-makers to dispense with so much pressure. We are inclined to think, however, if we were to "scald" less, and press out more of the whey before starting, break up finer, and press *longer* and not so heavily at first, our cheeses would keep better, and have a finer and more cheesy flavor.

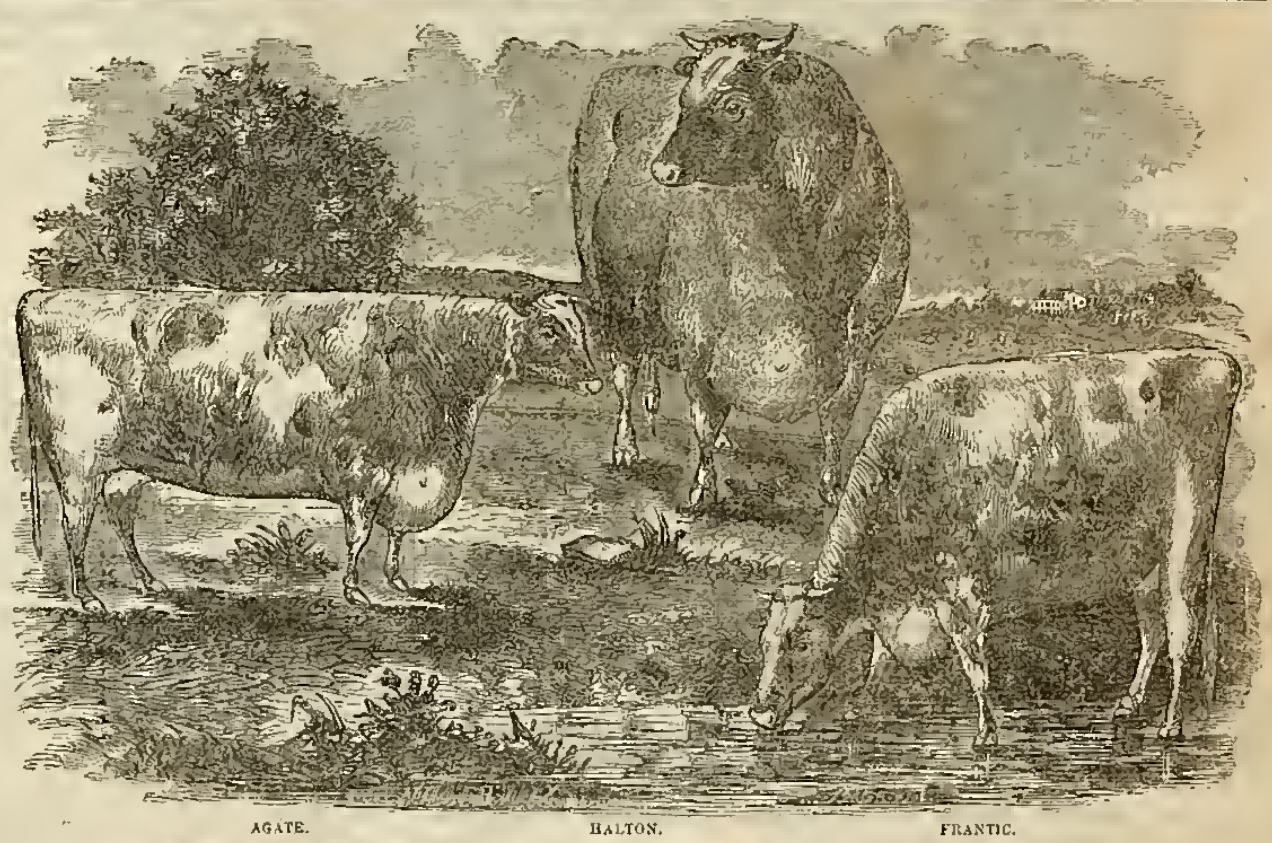
LOSS OF NITROGEN IN FEEDING.

The organic portion of all food is composed of four elements, oxygen, hydrogen, nitrogen, and carbon. When food is eaten by animals, the greater portion of the carbon and the oxygen and hydrogen is burnt in the lungs, and converted into carbonic acid and water, and expelled from the body in the breath and perspiration. But what becomes of the nitrogen? It is now well known that the value of manure is in proportion to the nitrogen it contains, and it is therefore important to determine what proportion of the nitrogen of the food is destroyed or lost to the farm, in passing through the body of an animal. Mr. S. W. Johnson, who is now pursuing his chemical studies at Munich, with the celebrated Liebig, translates for the *Country Gentleman*, "a paper issued by the Directors of the Ag. Experimental Station at Moeckern," from which we make the following extract bearing on this point:

"The favorable influence of rape or linseed-cake upon the *quality* of the manure furnished by foddered animals in a high degree deserves regard, because of all the kinds of feed these are the richest in nitrogen, that ingredient which chiefly determines the value of manure. By direct chemical investigation of manures, we have found that when oil-cake is fed to animals in small quantity—*e. g.* as drink during winter feeding, when the animal was only kept in good condition and not fattened—only 1-6 of the nitrogen originally contained in the oil-cake is lost in its passage through the animal, and by the fermentation and decay of the manure in the stable; accordingly 5-6 of the manure-value of the oil-cake remain available. When the oil-cake has been fed in larger quantity to fattening animals, besides the former loss, a portion of its nitrogen remains in the body of the animal, in the flesh, and perhaps also more may escape from the manure through more rapid decay, but always under such circumstances, ¾ or at least ½ will remain in the manure."

It is very evident that there is little nitrogen necessarily lost in consuming food by animals. Not one-sixth "is lost in its passage through the animal, and *by the fermentation and decay of the manure in the stable.*" We have experimental results of our own which indicate that in *fattening* sheep there is as much nitrogen in the manure as in the food consumed—minus the small quantity retained in the increase of the animal. We have been in the habit of estimating, for practical purposes, that one pound of *nitrogen* in the food would give a pound of *ammonia* in the manure. (See last volume of the *Wool Grower*, page 95.) This is a loss of about one-sixth—the same as given in the above extract—and we are satisfied that by careful preservation of the manure, it need not exceed this.

These results have a most important bearing on the question of plowing under clover, instead of converting it into hay, and consuming it on the farm. As we have said before, it is the nitrogen of the clover which constitutes its great value—the large quantity of carbon and hydrogen of the clover being unquestionably of no *chemical* or manurial value to a wheat crop—and as the loss of this valuable element is only one-sixth, it is easy to calculate whether the feeding value of the clover will or will not compensate for it and the additional expense of preserving and hauling back the manure. We throw out these hints for consideration, hoping to take up the subject at a future time.



AGATE. HALTON. FRANTIC.

MR. CHAPMAN'S SHORT-HORN BULL "HALTON," AND IMPORTED HEIFERS "AGATE" AND "FRANTIC"

Among those who are devoting special attention to the breeding and rearing of Improved Stock in this country, Mr. S. P. Chapman, of Clockville, Madison Co., N. Y., is attaining considerable prominence and an enviable reputation. His herd comprises several superior specimens of the celebrated Bates' breed of Short-horns, including the group of "representative animals" portrayed in the accompanying engraving. "Halton" is a very superior animal, and was awarded the first prize by the N. Y. State Ag. Society, in 1851, in class of "Foreign Stock,"—being then owned and exhibited by Hon. Adam Ferguson, of Woodhill, C. W. "Agate" and "Frantic" were imported last season—are of the Bates' stock, and deeply bred in the blood of Mr. B.'s celebrated Duchess bulls.

Mr. Chapman is an enterprising and skillful breeder and stock-husbandman, and we are glad to know his efforts are being adequately rewarded. For the information of those wishing to see his fine stock, we will add that Mr. C. resides six miles from Canastota, which is on the N. Y. Central Railroad.

We annex the Pedigrees of the animals above represented:

Halton, (11552;—Red roan, calved August 22, 1847, bred by Geo. Vail, Esq., of Troy, N. Y., the property of S. P. Chapman, Mount Pleasant Farm, Clockville, Madison Co., N. Y.; got by Meteor (04, (11811,) dam [Lady Barrington 3d,] by Cleveland Lad, (3407,) g. d. [Lady Barrington 2d] by Belvedere (1706,) gr. g. d. [Lady Barrington] by a son of Herdsman, (304.) —[Young Alicia] by Wonderful (700,) [Alicia] by Alfred (23,)—by Young Favorite (6994.)

Agate—Roan, calved Dec. 6, 1850, bred by Robt. Bell, Mosbro' Hall, Rainford, Lancashire, England, the property of Geo. Vail, of Troy, N. Y., and S. P. Chapman, Mount Pleasant Farm, Clockville, Madison Co., N. Y.; got by Third Duke of York, (10166,) dam [Annie] by Second Cleveland Lad, (3408,) g. d. [Annabella] by Duke of Cleveland, (1937,) gr. g. d. [Acomb] by Belvedere, (1706,)—a cow bought of Mr. Bates.

Frantic—Roan, calved September 3, 1850, bred by Robt. Bell, Mosbro' Hall, Rainford, England, the property of Geo. Vail, Troy, N. Y., and S. P. Chapman, Mount Pleasant Farm, Clockville, Madison Co., N. Y.; got by Fourth Duke of York, (10167,) dam [Faith] by Fourth Duke of Northumberland, (3619,) g. d. [Fidget] by Second Earl of Darlington, (1945,) gr. g. d. [Fletcher] by a son of Young Wynyard, (2859,) —descended from J. Brown's Old Red Bull. (97.)

MR. MAPES' PAMPHLET AND SUPPLEMENT.

In the December number of his paper Mr. Mapes, instead of replying to some articles which had appeared in several agricultural papers speaking disparagingly of "Mapes' Improved Superphosphate of Lime," promised that he would "shortly publish in pamphlet form the certificates of those who have used it, which will *forever* put at rest the illiberal doubts and mis-statements trumpeted before the readers of the Country Gentleman, Genesee Farmer, &c." This pamphlet has never made its appearance.

In an article in the Rural of May 6th, we found it necessary to bring some very serious charges against the science and morality of Mr. Mapes. Instead of immediately replying to our plain statement of facts, he promised to publish, "at an early date," a supplement to his paper which should "render Mr. Harris inert for all future time." Month after month have we looked for the promised supplement in vain. Like the pamphlet, it has not yet made its appearance. In the August number of the *Working Farmer*, Mr. Mapes apologizes for the delay on account of sickness—He is very unwell, and had but just strength enough to call us "a blister on the agricultural press." Well, calling us hard names does not disturb our equanimity. Having waited patiently from May till August for some show of a reply and been disappointed, it is some consolation to find that we have succeeded in *blistering* the Professor's well stuffed epidermis. We presume the "blister" has had a beneficial effect, for we observe that "Professor Mapes" was at the New York Farmers' Club, on the 15th inst., giving a lecture on "top dressing," and puffing his "*Improved Superphosphate of Lime*" as vigorously as ever.

The *Practical Farmer*, of July 29, has a very wordy article on this controversy, in which, however, there is nothing we have not already fully answered. It concludes by saying—"Here we leave the subject, with no one unkind feeling towards our opponent in this controversy—*our friend we hope to claim him on all occasions.*"

One thing is most manifest in respect to this controversy, either that Mapes has drawn up a statement he knew to be essentially false, and induced his men to swear to it; or Harris is an "unmitigated wholesale manufacturer of falsehood"—a "pretty extensive liar." If Mr. King, *the* editor of the *Practical Farmer*, believes the latter, he would hardly wish to claim Harris as his "*friend on all occasions;*" and if he believes the former to be true, he may well feel aggrieved that we called Mapes editor of the *Practical Farmer*, or referred to him as in any way editorially connected with it. It is hardly to be supposed, however, that Mr. King intended tacitly to admit that he doubted Mr. Mapes' veracity; and we cannot but think the sentence claiming "an extensive liar" as a "*friend on all occasions,*" was penned by mistake.—J. H.

HOW TO BUILD AN ICE-HOUSE.

Friend Moore:—Occasionally I see in your paper a plan for constructing an ice-house, but as none of them is so cheaply and easily constructed as my own, with your permission I will give you directions for building one, so readily and cheaply that ice should be felt to be within the reach of all.

Make a box eight feet square, by nailing hemlock planks which are two inches thick, on to hemlock scantling. Let one side of the box be seven feet high, and the side directly opposite ten feet high. This gives a roof eight feet long, with a slant of three feet. It is well to have the roof boards extend over the sides of the box. Double boarding with hemlock makes a sufficient roof. Set this box on the top of the ground, in a dry and shady place, where surface water will not accumulate. No planks are needed on the bottom of the box, but sawdust must be placed on the ground inside the box to the depth of one foot, and over this place loose boards for the ice to lie upon. Cut the cakes of ice two feet square, and build a tower of ice six feet square in the centre of your box, (or ice-house, we will now call it,) by laying the cakes compactly together, and filling all crevices with sawdust as you proceed. We have now a six feet cubic of ice, with a space of one foot all around between the ice and planks. Fill this space with sawdust, and cover the top of the ice with the same eighteen inches deep, and you have ice enough secured to last a large family through the season. The upper three feet of the side which is ten feet high, should not be boarded up, but left for ventilation, and a place of access to the ice, and this aperture may be enlarged as convenience may require while using the ice, and for more conveniently filling in. About 800 feet of lumber will be required, and the merest tyro in the use of tools, can make it. Fresh

sawdust is best, but it may be used a second winter. The dust can easily be washed from the ice at the time of using.

I have endeavored to give you a plain, simple, cheap and efficient mode of keeping ice, which I have practiced for the last three years, —hoping that others may be induced to share with me the benefits which in various ways may be derived from it. E. MARKS.

Fairmount, Onondaga Co., N. Y., Aug., 1854.

SOWING GRASS SEED IN THE FALL.

EDS. RURAL:—As I believe much information may be gained by farmers, in frequently interchanging thoughts and experience in relation to the various subjects, which pertain to their vocation, I propose saying a few words in relation to the inquiries of your correspondent J. B. P. in the last No. of the RURAL, regarding the seeding down of land. Your correspondent states that he cannot get "clover or herds grass to 'catch,' when sown with oats, according to the time-honored custom," which, I suppose, is sowing it with the grain the spring. Farmers are generally quite indisposed to adopt any new manner of performing the routine of their labors,—but the repeated failures in my own case, and that of my neighbors, to get land to catch well, when seeded in the spring, induced me to question the correctness of the idea of spring being the best time to sow grass seed. After losing a good many bushels of seed during the past five or six years, by sowing with oats in the spring, I concluded, last fall, that I would try the experiment of seeding six acres in the fall; and though the trial of any new mode of farming for one year only, is not sufficient to establish its correctness or incorrectness, yet the success which attended the experiment was most satisfactory, for I cut this year my heaviest grass from the field thus seeded. I have not before during several years past, obtained so good grass the first year after seeding; and I attribute the cause entirely to the fact of seeding in the fall.

It is perfectly reasonable to suppose, that seed sown in the fall would be more likely to do well, than if sown in the spring, because it is well known that grass seed self-sown or dropped by grass left standing, almost always catches and grows better, than that sown in the spring. The main reason why it does not succeed when sown with oats in the spring is because it cannot withstand the dry weather which we usually have during the summer.—Where it can be sown very early, as for instance, with winter wheat, its chances for success are greater; but, even then, I should prefer to seed in the fall.

When sown in the fall, it should be sown in September, or before the fall rains commence, so that it may get sufficiently started to withstand the winter.

That which I sowed in the fall was sown on stubble, without any dragging; nor do I think it needs any, for it came up very thick and nice. N. M. CARPENTER.

Killington, N. Y., August, 1854.

CROPS, &C., IN SENECA COUNTY.

This is the dryest summer I have ever witnessed. Not a shower in three weeks sufficient to lay the dust, and very light and infrequent showers for more than two months past. Yet I never had more ears of sweet corn in the same space; sometimes two well-filled ears to a stalk, the kernels completely covering the end of the cob. To early planting, after deeply trenching in unfermented stable manure, the result is mainly due. Many farmers will not get one-third of a crop of corn; all who waited until summer for their land to dry, will have their labor for their pains, as such crops this year will hardly pay the interest on the land. But there is a panacea for every ill; our wet spring, succeeded by a hot, dry summer, will do more than the united efforts of the agricultural press towards waking up farmers to the necessity of tile draining as a *sine qua non* to spring planting. Strange as it may seem there is only now and then a farmer who can be made to believe that all clayey, heavy soils need underdrains, even where the inclination is sufficient to take off or prevent standing water.

Timothy hay was a very light crop. Pastures are now dried up to the burning point; and the crop of potatoes and clover seed will be small indeed. There was considerable flax sown, but it is light. There is but little barley. A greater breadth of oats than ever was sown, to make up for the diminution in wheat; hence oats are plenty with light crops. Some few farmers will have good crops of corn; but taking into view the small wheat harvest, loss in hay and potatoes, the low price of wool, and the short crop of so many large corn-fields, our farming will not pay well this season.—But they say in tropical regions that during the dry season the vegetable world rests and recuperates to be ready for the coming rains. The same argument may be extended to that region of long drouths, California, where we are told vegetation is on the grandest scale.

Waterloo, N. Y. S. W.

SAVING SUNFLOWER SEED.

IN reply to the inquiries of THOMAS CONAN, I offer an answer, having some experience in the matter. The worst difficulty it is true, has been in harvesting the crop. Of all ways, that which has succeeded the best with me, is in having rows the same distance apart as for corn, and a foot or a foot and one half apart in the row. When the seed is hardened and the blossom rubs off easily, then go through and lop the heads down by breaking the stalk a short distance below the head, sufficient only to stop the circulation of sap; and by so doing, the head will dry sufficiently with the seed to pack away in the barn without moulding; for a great difficulty has been in curing the head sufficient to prevent injury to the seed. And when dry enough, go through with a wagon and gather the heads, which can be done faster and easier than one imagines, leaving the stalks which are useless, on the field; and by the next spring they will break up so as not to trouble much. The seed has yielded with me at the rate of from 80 to 100 bushels to the acre, and nearly a gallon of oil to a bushel; and for painting, I have found it fully equal to linseed.—H. C. AUGATE, *East Bethany N. Y.*

ABOUT THE WEEVIL.

THE insect that has injured the wheat crop so extensively in New York, Pennsylvania and Ohio, this season, is not the one generally known as the weevil. This insect, called "red weevil," "wheat midge," "the insect," &c., differs very much from the *curculio granarius*, as that only injures the ripened kernel of wheat or corn after it is stacked or housed, or even after it is in the bin of the granary or grist mill. The weevil exhibits its swarms around the barn, the female laying her eggs upon the grain, and the grubs, as soon as hatched, work into the kernel, consuming all but the bran, and without breaking that so as to show that all is rottenness within. The ravages of this insect are so destructive at the South, that it is difficult to keep wheat or corn. The latter is generally put up with the husk on, which is damp or else heavily salted. Wheat is kept in close casks or tight bins. It may be kept by covering with floor of lime an inch deep over the surface.

The insect that has destroyed so much grain, the present season, is a yellow fly, (with blue wings,) about one-tenth of an inch in length; it deposits its eggs while the wheat is in blossom, within the chaffy scales of the flower during the evening twilight and dark stormy days, in number from ten to forty, which hatch in ten days, and completely destroy the germ of the berry. The maggot is reddish yellow, about one-sixteenth of an inch long, or perhaps an eighth when full grown. It leaves the head and winters in the ground. That is the time to kill them. Salt is undoubtedly the remedy. The fly is hardly ever seen; they never fly in the sun-shine. The weevils fill the air like mosquitoes in a swamp. This insect hides on the stems and leaves, shaded from the heat of the sun. This is a northern insect; the weevil is a southern one.

This insect was first seen in America about the year 1828, in the northern part of Vermont, and the borders of Lower Canada. It first made its appearance in Northern Ohio in in the year 1843, and its ravages have rapidly increased from year to year.

Dr. Harris recommends brimstone fumigation of the plants. That would be impossible, almost, in whole counties. Flour of lime, sown on wet wheat has appeared to prevent the work of destruction. Deep plowing the stubble, and not sowing any grain upon it next year, might eradicate the insect, if all who are affected would unite in that course, as all must in any other that should be adopted

The remedy recommended by our correspondent at Darien, of salting the cut wheat in the mow or stack, would not answer for the maggots already burrowed in the ground for winter, but the salt must be applied to the land in liberal quantities—say five to ten bushels per acre. We cut up the cut-worms effectually upon our corn ground this season with a handful of salt to a hill. The corn fired a little at first, but it is growing beautifully now. Every bug or worm can be killed in the soil with salt, and we have no doubt that will be found the most sure way of ridding the country of the terrible pest to wheat growers—the *Cecidomaya Tritici* of Kirby, as we take to be the insect called the "red weevil."—*N. Y. Tribune.*

REMARKS.—In our view, the use of salt to the extent above recommended, is too expensive and hardly practicable in many instances. Unless we are mistaken, the early sowing of early varieties of wheat (such as the *Mediterranean, Soule,* &c.,) on ground well drained, will prove the best security against the midge. Will some of our experienced correspondents give us their views on this vitally important subject?—EDS. RURAL.

PERIODS OF GESTATION IN DOMESTIC ANIMALS.—It is frequently very important for farmers to know how long the different domestic animals go with their young. The following table is believed to be very exact:

Mares	11	months.	Bitch,	2	months.
Jennet,	11	"	Cat,	8	weeks.
Cow,	9	"	Rabbit,	4½	"
Goat,	4½	"	Rat,	5½	"
Ewe,	5	"	Mouse,	4½	"
Sow,	4	"	G'na Pig,	3	"

The period of incubation of Domestic Fowls is as follows:

Swan	6	weeks.	Pea Hen,	4	weeks.
Turkey,	4	"	G'na Hen,	3	"
Goose	4	"	Hen,	3	"
Duck,	4	"	Pigeon	2	"

Agricultural Miscellany.

AGRICULTURAL FAIRS IN VIRGINIA.

LAST November, the State Ag. Society of Virginia, held at Richmond, if we recollect right, their first State Fair. The experiment was most successful; indeed, so high was the enthusiasm produced by this Fair, that the Society was enabled to raise $100,000 as a permanent endowment. We learn from the Secretary, FRANK S. RUFFIN, Esq., that this year the premiums have been greatly increased, the grounds enlarged, and arrangements made for one of the largest and best exhibitions ever witnessed in this country. The fair will be convened at Richmond, on the 31st of October, and continue four days. Another association has also been formed, called "The Virginia and North Carolina Agricultural Society," to hold its first exhibition at Petersburgh, sometime in October next. This Society has determined to raise $100,000 for the purchase and establishment of an experimental farm; $15,000 have already been subscribed for this purpose. The Western Virginia Agricultural Society and Industrial Institute, holds its second annual Fair, at Wheeling, on the 14th and 15th of September. This promises to be "a great occasion." Success to the glorious efforts of the "Old Dominion."

SALE OF IMPORTED CATTLE AND SHEEP.

THE Short-horn cattle, South Down and Cotswold sheep and Shepherd Dogs imported by the Clinton Co., (Ohio) Association, were sold at public auction at Wilmington, on the 9th inst. The 7 Bulls sold for $9,525. H. H. HANKINS & Co., Bloomington, Clinton Co., Ohio, paid $3,700 for the Short-horn bull *Wellington.* This was the highest figure, the lowest being $625. Three bull calves brought $845. Seventeen cows sold for $10-760, and one heifer calf for $525. Three South Down bucks brought $315, and 6 ewes $380. One Cotswold buck $70, and 2 ewes $170. The shepherd dogs sold well. A dog shot and 5 pups brought $170 50. The cost of the importation up to the time of sale was $17,000 and the sales in the aggregate, as will be seen, amounted to $22,660 50. This is a good result. "Some good cattle went at low figures," and "many of the sheep sold for less than cost."

LETTING SOUTH DOWN SHEEP IN ENGLAND.—At the recent letting of Mr. JONAS WEBB's celebrated South Down Rams at Babraham England, 75 sheep were let out for the season for 1,801 guineas—$9,077, or $122 each.—This is higher by about $15 per head than they were let for in either 1851-2 or 3. The highest price paid this year, was $514 by Mr. LUGAR, of Hengrare, England, for a yearling. The highest price paid last year, and the highest price, it is believed, at which a sheep was ever known to let, was $655; the hirer being, we are proud to say, an American, and a New-Yorker—Mr. JONATHAN THORNE. The practice of *letting* improved animals, is one commonly adopted in England, and one which, in a few years, we hope to see general in this country.

ASIATIC FOWLS IN CANADA EAST.—A writer in the *American Agriculturist* says there is a great demand for Asiatic fowls in Canada East, and urges breeders to attend the Provincial Fair to be held at Quebec on the 12th, 13th, 14th, and 15th of September, and to bring with them a "large collection of pure blooded fowls of their choicest stocks." He says they would not only be "conferring a service upon this country, but it would also in return prove to be a very profitable and satisfactory speculation." Those interested will probably obtain any further information they may need on this subject, by addressing the Secretary of the Society, W. EVANS, of Montreal.

MASSACHUSETTS COUNTY FAIRS.—The following is the list of Fairs for the different Agricultural Societies in Massachusetts:

Essex, at Lawrence, Sept. 27 and 28.
Middlesex, Concord, Oct. 4 and 5.
Middlesex South, Framingham, Sept. 27, 28.
Worcester, Worcester, Sept. 27, 28.
Worcester West, Sept. 20.
Worcester North, Sept. 13.
Hampshire, Franklin and Hampden, Northampton, Oct. 12.
Hampshire, Amherst, Oct. 18, 19.
Hampden, Springfield, Sept. 27, 28.
Franklin, Greenfield, Oct. 4, 5.
Berkshire, Pittsfield, Oct. 4, 5.
Housatonic, Great Barrington, Sept. 27, 28.
Norfolk, Dedham, Sept. 26, 27.
Bristol, Taunton, Sept. 27, 28.
Plymouth, Bridgewater, Oct. 4, 5.
Barnstable, Barnstable, Oct. 11.

TURNIP SEED.—We are indebted to the Hon. C. MASON, Commissioner of Patents for several varieties of English turnip and ruta baga seed. Most of them are new to us. Had they been sent six weeks or two months earlier, we should have had a better opportunity of testing their merits.

THE DROUTH still continues, and is almost universal from Maine to Missouri.

SANDWICH ISLANDS AGRICULTURE.

WE give the following extract of a letter from a subscriber, dated East Maui, May 25, 1854:

"The growing of wheat has been entered into with considerable spirit this year, in this immediate vicinity, and the crop bids fair to be a fine one. Harvesting has already commenced, and what is peculiar to *this country*, I think, will continue for nearly three months, the climate admitting of sowing wheat from the first of December to the last of March. The crop will amount this year to about 25,000 bushels; and from the fact that there is a flour mill at Honolulu, ready for operation, the present and prospective high price of flour, and the success of this year's crops, the next season's sowing will be quadruple to that of this.

"The soil and climate seem admirably adapted to the growing of wheat. There is now good wheat growing on land, where five or six crops have been raised in succession without any dressing. A fine growth on land that produced last year from 25 to 30 bushels per acre, and this land had been cropped with sugar cane for ten years. On new land I have seen this year wheat 6½ feet high, and whole fields averaging more than five feet.

"The elevation at which wheat is grown is from 1,500 to 3,000 feet above the level of the sea. The soil is decomposed lava in some parts, and in others the lava is mingled with volcanic cinders and ashes, also some vegetable matter. The temperature varies from 50° to 84° Fah.

"It is believed that after the present harvest the Islands will not import much bread-stuff.

"The labor saving machines of the U. States are being introduced here. One of Hussey's Reapers is here for the present harvest, and another on the way. A one-horse-power overshot Thresher of Emery's manufacture, a two-horse-power Thresher of Whitman's make are here, and another of Whitman's on the way.—*Country Gentleman.*

SAVING CLOVER SEED.

THE difficulties of saving the seed are imaginary; the process is simple and easy. After the clover field has been cut or grazed, let the second growth come on. When about two-thirds of the heads have turned brown, cut with a cradle, throwing the grass into double swaths, and cure. When cured, rake up in the morning while the dew continues on, into convenient parcels for binding with a pitchfork, and, as soon as all danger from heating is obviated, get it under shelter, either in the barn, or protected in the field. Be careful not to put in many while any moisture remains in the plants; and on the other hand, don't handle it rudely when very dry, where you don't want the seeds to fall, for in that condition the heads shell freely. Having sheltered it, you may wait, if you choose, till winter affords leisure for threshing or treading out.

The second crop produces more seed than the first, and hence the economy of first cutting or grazing the field, though from that cut for hay, a prudent, careful husbandman, might easily save enough seed for his own use. It is believed that more seed may be saved by mowing when about two-thirds of the heads have turned brown than at any other period, because, if cut sooner, too many of the seeds are unripe, and if later, too many scatter out of the heads in cradling and handling. If the heads break off and fall through the fingers in cradling, cover with cotton or linen cloth. Every farmer may easily save his own seed. There is abundant time for clover to make good heads, well filled with seed, after the hogs have been turned upon the rye, or after the first crop of hay has been taken, and it would surely be economical to preserve a small portion of a field for saving seed.—*Farm Journal.*

AGRICULTURAL FAIRS.

STATE Fairs seem to be growing into the Great Annual Festival, in many of the States, eclipsing all other gatherings by their comprehensive character, bringing into contact and communion men of all occupations and tastes, from the most remote portion of the State; and by the great aggregation of stock, vegetables, fruits and implements for exhibition, illustrating the perfection to which, by skill, time, and observance of physiological and mechanical laws, animals, vegetables and fruits, and the rude implements of the farmer can be brought. They cleave scales from the eyes of ignorance. They sweep away the films of prejudice. Like cobwebs. They infuse into the mind of the young farmer an ambition to excel in his profession. They teach the money-loving votary of the profession, what fearful wastes, what exhaustion of his soil, what deterioration of his crops and stock, have been the consequence of persisting in dogged, and selfish, and unnatural courses, because his fathers did before him.—They impress in ten thousand different ways, the superiority of intelligence over mere brute labor, and tell with ten thousand illustrations, that a sharp intellect is as necessary at one end of the plow, as a sharp coulter at the other; in a word, the supremacy of mind over matter. —*Toledo Blade.*

APPLICATION OF MANURE.—By all means, apply manure to grass lands in autumn—the fall, winter, and spring rains will carry down the soluble parts among the roots, and the plants will have the full benefit at the commencement of their growth. There will be a very little evaporation of the manure comparatively, during winter, and the remaining portions become well settled about the plants, and do not hinder their growth. On the other hand, if applied in the spring, the first tendency is to smother and check, some time elapses before the enriching portions get down among the roots; and the warm weather promotes the escape of the volatile portions of the manure.

A PULVERIZED soil permits the immediate escape of water after heavy rains, and yet, by capillary attraction it furnishes a supply of moisture during a protracted drouth.

Inquiries and Answers.

THE LAWTON BLACKBERRY.—Where and at what price can slips or roots of the New Rochelle or Lawton Blackberry be had?

Where, also, can we get the Oregon pea for seed, and at what price? Information through the RURAL is respectfully requested.—A SUBSCRIBER, *Italy, N. Y.*

Messrs. GEO. SEYMOUR & Co., of Norfolk, Ct., have the plants for sale, we believe, at 25 cents per hundred. Others may have them; and, if so, they will do well to make it known by an advertisement.

We cannot answer as to the Oregon pea.

FEEDING PIGS.—I wish some of the readers of the RURAL would inform me what feed will make pigs grow most, and how it should be given. I want to fat them this fall.—A SUBSCRIBER, *Fairport, N. Y., Aug. 2, 1854.*

This inquiry is addressed exclusively to the "readers of the RURAL." We trust some of them will answer it.

ARTESIAN DRILLER.—Can you, or some of your readers, give me full information concerning an "artesian driller," or machine used in drilling for water. I would like to know where one can be obtained, the expense per foot of drilling, &c. I shall be much obliged to any one who will, through your columns or otherwise, give me the necessary information.—A. H. ARNOLD, *Fairfield, Herkimer Co., N. Y.*

CLOVER SEED HARVESTERS.—Will you inform me through the RURAL, where I can purchase a machine for gathering clover seed?—THOMAS BEARDEN, JR., *Geneva, N. Y.*

T. S. STEADMAN, Holley, N. Y., and I. A. WAGENER, Fultony, Steuben Co., N. Y., are inventors of excellent machines for harvesting clover seed.

RED TOP GRASS.—I wish your readers would give us their experience in the cultivation of red top grass,—the best time to sow it,—the amount of seed per acre, and what kind of feed it makes, &c.—GEO. C. WAINWRIGHT, *Wattsfield, Vt.*

Domestic Economy.

FRIED CUCUMBERS.—Peel, and slice lengthwise, about one-quarter of an inch thick.—Dredge with flour, and fry in butter or good pork gravy until cooked brown; add a little salt and pepper, and eat them for oysters.

J. W. H.

PICKLED PEACHES.—Select ripe cling-stone peaches. To one gallon of good vinegar add four pounds of brown sugar; boil this for a few minutes, and take all the scum which may rise. Rub the peaches with a flannel cloth, to remove the down, and stick a clove in each; put them in glass or stone jars, and pour the liquor upon them boiling hot. When cold cover the jars and let them stand in a cool place for a week or ten days, then pour off the liquor and boil it as before, after which return it, boiling, to the peaches, which should be carefully covered and stored away for future use. If your peaches are very hard, boil them in water, to tender, before you pickle them, and they will be fit for use almost immediately.—*National Cook Book*

TO DESTROY BED BUGS.—We have made use of the following simple, yet efficient means of destroying bed-bugs and similar vermin, for several years, and found it to be complete in its extermination.

Remove from the room everything that is not infested; then take a small quantity of sulphur and set it burning in an old kettle, keeping the room closed tight until the smoke has all disappeared. After this, thoroughly ventilate the room, and the smell of the sulphur will all pass away.—D. C., in *Ala. Cultivator*

TO MAKE TOMATO WINE.—Take small, ripe tomatoes, pick off the stems, put them into a basket or tub, wash clean, then mash well, and strain through a linen rag (a bushel will make five gallons pure); then add 2½ to 3 pounds good brown sugar to each gallon: then put into a cask, and ferment and line as for raspberry wine. If two gallons of water be added to each bushel of tomatoes, the wine will be as good.

GREEN CORN PUDDING.—Take twelve ears of corn; cut the half of each row with a sharp pointed knife; then with the back of the knife, scrape all the milk from the corn, leaving the husk on the cob; to this milk add one half teacup of good cream, three table-spoonfuls of flour, three of sugar, one of butter, two eggs—stir well and bake the same as corn bread.—*Iowa Farmer.*

WAX CANDLES NEED NEER SNUFFING.—"The reason why wax candles never need snuffing, is because the wick of a wax candle is made of very fine thread, which the heat of the flame is sufficient to consume. The wick of a tallow candle is made of coarse cotton, which is too substantial to be consumed, and therefore must be removed with the snuffers.

BROWN BREAD PUDDING.—Take half a pound of stale brown bread, grated, ditto of currants, ditto of shred suet, sugar and nutmeg; mix with four eggs, a tea-spoonful of brandy, and two tablespoonfuls of cream; boil in a chalk or basin that exactly holds it, three or four hours.—*Randall.*

Orchard and Garden.

POMOLOGICAL GOSSIP.

NO. 1.—FRUIT GARDENS AMONG FARMERS.

Now that there may be said to be almost a mania in this country about everything pertaining to the cultivation of fruit, there is no fear that the readers of Agricultural and Horticultural journals will tire of the subject, at least until the tide of "popular opinion" sets in some other direction. Everything that is written upon the Garden however crude it may be, is read with avidity. Still there is a large class of people in this country who are yet indifferent to the subject, not that they dislike good fruit, or would object to having a fruit garden in full bearing set down upon upon their premises, but because they are too indolent or avaricious to do it themselves, or else that the task of procuring and setting fruit trees more than overbalances, in their minds, the *good* derived from them.

The inhabitants of our cities and villages have enlisted in the matter with commendable zeal, and thousands of beautiful gardens are springing up as if by magic, thousands of homes are rendered more attractive, and thousands of hearts beat happier. This class need no word of encouragement.

It is in the rural districts that we discover the greatest deficiency in those adornings which increase the delights and attractions of home, and here a new impulse is needed to secure to country homes as beautiful fruit and ornamental gardens as adorn our cities and villages. We would create and encourage a taste for the beautiful in the country, as well as in the town.

One great objection which is urged by farmers generally against improvements of this kind, is the want of time. They would like all these things if they only had time to attend to them.

But this is not a valid objection. There are very few farmers that cannot devote fifteen minutes daily to the cultivation of a fruit garden, yet that will suffice to keep a moderate sized one in a thriving condition. Another objection is the trouble and expense of procuring the trees. Here again fifteen minutes of time and ten dollars in money will accomplish wonders. Sit down some rainy morning and write to some nurseryman, (it is always cheaper and better to order directly from the nursery, than to purchase of the itinerant dealers,) naming the kinds that you desire and the place where you will have them sent, and they will be forthcoming without further trouble. If you only wish a few trees yourself, join with some neighbor, and thus save a part of the expense of packing and transportation.

But, says one, I never shall be able to make a judicious selection from the endless list of names in a nurseryman's catalogue. This, to the amateur, is no objection—the more the better—but, to the novice, it is a serious obstacle. It is easy enough to make out a list at random, but, in making a select list of only a few varieties, and those the very best, much experience is required. To aid those who wish to lay out a small fruit garden this fall or next spring in making good selections, I will, in a future number of the RURAL, name such varieties as, from my experience, prove to be the best.

R. B. W.

EARLY SOWN SQUASHES.—In our notice of the Messrs. HAYWARD'S farm in our last number, we said the *early sown* squashes were all destroyed, while later sown escaped. This is a mistake. The squashes destroyed were the *Vegetable Marrow*, which from its succulent nature and rapid growth is extremely liable to injury by the bug. As a general rule, all *early sown* squashes escape the bug better than the later sown ones. The reason for this is probably because the early sown squashes, from their slow growth are more palatable than the succulent, rapid-growing, later sown ones.

GERMINATION OF CHERRY STONES.—The stones should be washed from the cherries when the latter are fully ripe, and as soon as the surface has dried in the shade, mixed with more than their bulk of sand, and buried in a shallow pit in the earth, covered first with flat stones, and then with a few inches of earth.—Here they may remain through the winter; but the first moment that the frost disappears from the ground the following spring, they are to be taken out and planted in drills. They may be planted in autumn; but the soil settling hard about them, is apt to prevent their growth, unless it is of the lightest character. Freezing tends to remove the shell, and assist germination. The Mazzard makes the hardiest stocks, but the improved heart varieties succeed well in most cases.—*Alb. Cult.*

BUDDING ROSE BUSHES.—I take this way to inform all persons who have a taste for raising flowers, that they can have as many varieties of roses as they wish, growing on the same bush by budding it in July or August. The operation is very simple, and is performed in the same way as in budding peach and pear trees. I tried the experiment last summer on my rose bushes with success.—ELIHU CROSS, *in Alb. Cult.*

CULTIVATION OF STRAWBERRIES.

THE subject of conversation at the last meeting of the New York Horticultural Society was the cultivation of strawberries. The soil best adapted for them was said to be a gravelly loam.

The land should be well drained, and to every acre applied 20 bushels of unleached ashes, 10 bushels of lime, and 2 or 3 pounds of salt. The ground should be well broken up; animal manures should be eschewed; leaf-mold is the best, and this should be carefully spaded in.—About the first of July is the best time to set out the plants. In doing this, pains should be taken to have them firmly rooted. The rows should be eighteen inches apart, and the plants a foot apart. Sometimes it will be well to allow greater interval, in which case the interstices can be filled up from the growth of the runners. After setting out the plants, throw on a covering of tan an inch or an inch and a half in depth, then water them plentifully, and the moisture will be retained a long time.—After cold weather comes on, cover the strawberry beds and the walks with clean straw, throwing over a little brush, or something to keep the straw in its place. In the spring, remove the straw, and make use of some fertilizing agent to give the plants vigor, as sulphate of soda, sulphate of ammonia, or nitrate of potash. Keep the roots out, see that the plants are bountifully watered, and let nothing intervene to disturb or retard their growth till you gather the fruit. The beds should be made over as often as every three years.

DWARF PEARS.

As I have had a good deal of experience in raising dwarfs, and have a dwarf orchard of some 500 varieties, some years planted, I will give you some of my experience.

I find on the true Angiers quince almost all the varities grow freely, while on the common quince only a few will grow. Still, many varieties do not continue to grow in a healthy state for any length of time. If a tree gets once stunted, there is little chance of its ever recovering so as to be a healthy tree, and nearly all the trees peddled about are more or less stunted.

Purchasers should examine the trees in the nursery rows themselves, before buying, when they could easily judge what trees and what varieties are perfectly good and suitable, or they should send their orders to nurserymen they can depend on for supplying a genuine and thrifty article.

I have trees propagated from nearly every variety in my nursery. Several hundred of such varirties appear to be perfectly suitable to the quince stock, and many, more especially of the newer varieties, grow with the greatest luxuriance.

But to cultivate dwarf pears properly and with certainty in this climate, they must be mulched twice a year—once in June or early in July, digging it in slightly in October; second in December, digging it in again in April. The roots of the quince are so much nearer the surface than the pear, that they are more readily affected with the drouths of summer and the frosts of winter.

Last winter was severe on unprotected dwarf pears. In wet ground those in nursery rows were nearly all killed, and the same in sandy soil. Strong clayey loam sufficiently dry that water won't stand on it, is the best soil. On such there is little trouble in cultivating them, and they are much superior to standard pears. When planted on sandy soils, mulching is indispensable.—JAMES DOUGALL, *in Mich. Far.*

IMPROVING FRUIT, ETC.

A CORRESPONDENT of the *Gardeners' Gazette*, says:—"I have, from observation, and a series of trials, ascertained that all sorts of fruits can be raised about one-third larger than they usually are, and their qualities much improved, simply by supporting the fruit in the following manner:—As soon as it is fully developed, it should not be allowed to hang its weight upon its stalk, as the increasing weight strains the stalk, and in that way lessens the quantity of nutritious fluid flowing to the fruit. This may be obviated in some cases by laying the pear, or apple, or whatever it may be, upon a branch, and fixing it with a piece of matting, to prevent its being moved by the wind; or by putting it into a small net, made for the purpose, at the same time keeping the stalk in a horizontal position, when it can be done without twisting or bending it—as the bending, either accidentally or by the weight of the fruit, is, in my opinion, most injurious to its growth; for the pores of the woody stalk are strained on the one side of the bend and compressed on the other; hence the vessels through which the requisite nourishment flows, being thus partially shut up the growth of fruit is retarded in proportion to the straining and compressing of the stalk. The fixing of the fruit also prevents the risk of its falling off and getting damaged before it reaches maturity.—I have grown dahlias upon the same principle, and with similar success, and I have no doubt that the most of flower blooms, especially those which are weighty and inclining, can be grown much larger by the system referred to, and, in short, all sorts of vegetables, trees, etc."

REMARKS.—Amateurs wishing to grow a few fine specimens, may try this,—it is, of course, impracticable to any extent.—EDS.

GREAT YIELD OF CUCUMBERS.—From four hills of cucumbers I gathered at one cutting, 6 cucumbers which measured, laid in a line, 6 ft. 6 in.; the longest measured 15 inches. One of them was bent down at the stem and into the shape of a holster pistol; my wife took up that one and said, "O, here is a gun!" I think this a great crop for one cutting; growing a single cucumber of long length is one thing, but growing them by the dozen is another thing. These were not full-grown cucumbers, but just right to serve on the table.—JOEL HAYGOOD, *in N. E. Farmer.*

CRYSTAL PALACE PRIZE CHURN.

OUR engraving shows the manner of using TILLINGHAST'S Churn—a machine which has attracted considerable attention of late, from the fact that it was awarded the first prize at the New York Crystal Palace. It has been, heretofore, a matter of difficulty to ascertain which of the many patented churns was the best; and many have long ago come to the conclusion that one was just as good as another. Each particular invention has been lauded to the skies, its defects covered up, and its advantages over-rated. At the test of churns alluded to, no less than fourteen different kinds were put in operation at the same time. Among them was LAROISY'S French churn, to which was awarded the first prize at the Great Exhibition of London, in 1851. The New York Crystal Palace Jury made the following official report of the result of the trial:

"Repeated trials were made of the several churns on exhibition, the last of which was the most satisfactory. At this trial, the Centrifugal Churn, invented by Joseph B. Tillinghast, of Ohio, was eminently successful, completely outstripping all others in every respect, but most particularly in the quality and excess of quantity which it produced from the same amount of cream employed in the other churns. Two gallons of sweet cream were required of each exhibitor, the whole was thoroughly mixed, and then equally distributed by the jury. The result was, that the butter produced and gathered in five minutes by the Centrifugal Churn, was of a better line, a richer quality, and weighed four and a half ounces more than the product of any other churn, and brought in much less time.

Its efficiency, simplicity, and superiority, constrain us to award to the Centrifugal Churn the Prize Medal, with our special approbation."

H. WAGER, N. Y., *Chairman.*
W. Newbold, N. J. J. W. Proctor Mass.
Wm. Evans, Canada. Ph. R. Freas, Pa.
HENRY S. BABBIT, Ohio, *Sec'y.*

The Committee have given a recommendation which it would be impossible to improve upon. We shall, therefore, refer our readers for any further information to the advertisement in another column.

Mechanic Arts, &c.

LIST OF PATENT CLAIMS

Issued from the United States Patent Office,
For the week ending August 8.

R. D. Bartlett, Bangor, Me., new mode of manufacturing bricks.

W. S. Babcock, Stonington, Conn., improvement in dumping wagons.

E. A. Baldwin, Elmira, N. Y., new tubular bridge.

Wm. Bonny, N. Y. city, imitation marble.

N. A. Boynton, New York, new arrangement of air heating stoves.

J. W. Brown, West Springfield, Mass., improvement in revolving firearms.

W. S. Chapman, Cincinnati, O., india rubber blocks to prevent wear and noise in running carriages.

Nathan Chapman, Mystic River, Conn., improved cotton press.

Daniel Clare, Hammonsville, Pa., sawing and planing machine.

Silas Constant, Brooklyn, N. Y., rosin oil lamps.

Lewis Cutting, Lowell, Mass., stop motion for speeders.

I. H. Davis, Morristown, N. J., process for making pigments from iron ore.

Joseph C. Day, Hackettstown, N. J., improvement in firearms.

G. C. Fisk, Dansville, N. Y., new method of tonguing and grooving boards.

O. N. Frary, Ansonia, Conn., improvement on melodeons.

J. G. Fulton, Middleport, O., salt-packing machine.

John Gemmil, Mercer, Pa., radiators.

Josee Johnson, Fort Smith, Ark., improved brick press.

Daniel Knight, Salem., Ind., new form of lock for fire-arms.

Wm. H. Merriwether, New Braunfels, Texas, improved spring for bed-bottoms.

Joshua Merrill and George Patten, Boston, Mass., improved refrigerator for marine engines.

J. S. McClelland, Jefferson, Ind., new method of arranging buggy springs.

John McMurry, Lexington, Ky., improved mode of making brick.

Stanislaus Mollett, New York city, improved sofa bedstead.

N. Millington and D. S. George, Shaftsbury, Vt., new method of graduating carpenters' squares.

Alex. Moffit, Brownsville, Pa., spring body carriage.

Samuel Nicholson, Boston, Mass., new mode of setting and preserving woollen pavement.

J. Porter, New York city, stone dressing machine.

Christian Reif, Hartleton, Pa., clover separator.

Cheeney Reed and Brooks K. Mould, Chicago, Ill., improved method of ventilating railroad cars.

Luther and Potter G. Ross, Worcester, Mass., machine for cutting boot and shoe soles.

Horace Smith and B. B. Wesson, Norwich, Ct., improved cartridges.

Ira Smith and John Stonesifer, Boonesboro, Md., improvement in lard lamps.

T. B. Stout, Keyport, N. J., improved car coupling.

A. G. Safford, Boston, Mass., sash spring.

John Thompson, Marblehead, Mass., machine for cutting boot and shoe soles.

Edward Turner, Baltimore, Md., new hame fastener.

Philos B. Tyler and Benj. Lathrop, Springfield, Mass., furniture castors.

Wm. Wickersham, Boston, Mass., self-heating smoothing iron.

Henry E. Woodbury, Washington, D. C., document file or holder.

Peter Midgett, Hoosick, N. Y., shuttle guard for power looms.

Leroy S. White, Chicopee, Mass., improved roller for furniture castors.

Alfred Swingle, assignor of Elmer Townsend, Boston, Mass., sewing machine.

John Norton, Cork, Ireland, improved blasting fuse.

Amos J. Saxton, Brooklyn, N. Y., improved method of constructing iron buildings.

Weatherell Taylor, Camptown, N. J., bushing sheaves for ship blocks.

Solomon W. Ruggles, assignor of himself and A. R. Smith, Fitchburg, Mass., fan-blower.

James A. Bazin, Canton, Mass., assignor of Alfred B. Ely, Boston, new braiding machine.

RE-ISSUE.

Wm. Ball, Chicopee, Mass., gold amalgamator.

MILLER'S STEAM BRAKE.

A FEW days since we alluded to this invention by Mr. Henry Miller, of this city. The steam is taken from the boiler, and by pipes under the cars, made to act upon all the brakes under each car at the same instant of time.—The whole is under the entire control of the engineer, and he can apply the steam as quickly as he can whistle down the brakes.

Yesterday an experimental trip, merely to test the perfection of the apparatus upon the Detroit and Pontiac Railroad, was made. The train consisted of a baggage and two passenger cars. The brakes were applied when the train was at a speed of over thirty miles to the hour, and in a distance of twenty-five rods the train was brought to a dead stop. The brakes were repeatedly brought to bear, and the train stopped before the brakemen could have reached the hand brakes, and the stoppage was so easy, that a passenger would not know the brakes had been applied, except from the fact that the cars had been stopped.

We understand that another experimental trip will be made in a few days; and it is then thought that, with some slight alterations, a train can be brought to a stop in from twelve to fifteen rods. The results of this improvement can hardly be estimated in the saving of life and property, and it must come into use on every road where either are considered of any value.—*Detroit Tribune.*

TRIBUTE TO AMERICAN MANUFACTURE OF ARMS.—A commission of English officers attached to the Engineer and Ordnance Departments are now in this country engaged in examining the system of manufacturing arms, pursued in our public and private establishments. By the order of the President and Secretary of War, all the public workshops have been freely thrown open to them, and every facility for examination granted. At Springfield, the commission have been delighted at the appearance of the National Armory, and the economy and method of manufacture at this great establishment. A full set of machinery modeled from those now in use there, has been ordered for the English Government, and is now constructing at the Ames Manufacturing Company's Works, at Chicopee. Another set is also building at Windsor, Vt., modeled from the machinery of Robbins' Pistol and Carbine Works at that place.—*Sci. American.*

RECENT FOREIGN INVENTIONS.

PREPARING SKINS FOR TANNING.—E. V. F. Kemaire, of Paris, has patented an improvement in tanning which is thus described:—The skins are first soaked and hung up in a dry chamber, heated to about 72° Fah. by steam. After remaining in this chamber for half an hour, they have distributed over them by perforated tubes a very weak alkaline solution of soda; this is repeated twice—half an hour between the operations. Afterwards, at the same intervals of time, streams of water are caused to fall upon the skins until they are well cleansed, and are considered prepared in a superior manner for the other common processes of tanning.

IMITATION LEATHER.—Heiman Kohnstam, of London, has secured a patent for the following mode of making imitation leather:—Into a quantity of thoroughly boiled linseed oil, mix a quantity of lampblack sufficient to form a thick paste, taking care to stir the mixture well, so as to thoroughly incorporate the two ingredients. Then spread on the linen, woolen, or cotton cloth, which is to form the body of the imitation leather, a coat of this paste, and suffer it to dry, after which it is to be rubbed smooth with pumice stone. Second, third and fourth coats are then added, each of them containing less lampblack than the first. After the last coat is thoroughly dried and rubbed down, it is to get two coats of varnish made with boiled linseed oil and the sulphate of zinc, after which it may be enamelled and resembles glazed leather.

BOILING OILS IN A VACUUM.—John Webster, of London, has taken out a patent for subjecting oils and varnishes to heat in a vacuum, instead of a vessel exposed to the atmosphere. In boiling oils and varnishes over a fire, many accidents have taken place from a flame being brought in contact with the escaping gas from the kettle containing the oils, &c. This method of boiling these substances in a vacuum, will obviate this evil.—*Sci. Am.*

LIQUID INDIA-RUBBER.—A correspondent of a New York paper, writing from Para, in Brazil, says: "There is a method in preparing the gum which has recently been patented, and which differs essentially from the usual curdling. The milk, as drawn from the tree, is put into large glass bottles and demijohns; a preparation of some chemical nature, which is a secret, is mixed with the milk, and the bottles are securely sealed. In this way the gum is sent to the United States. It curdles twenty-four hours after exposure to the air, and forms a pure, white, solid, and remarkably strong rubber. There is only one house in Para which has the secret of this receipt, as I learn, and a member of the firm gives his personal attention to the preparation of the article, some thousands of miles in the interior of the country."

IMPROVEMENT IN SEED PLANTERS.—Messrs. Erneshaw & Gibboney, of Pa., have invented an improvement in seed-planters, consisting of a very simple and effective arrangement of a seed-box and lifters, so adjusted that any desired quantity of seed may be deposited either in hills or drills, with the utmost exactitude.—Measures have been taken to secure a patent.—*People's Journal.*

Educational.

SCHOOL VISITATION.

Various expedients have been adopted in different States, for the purpose of ensuring frequent and efficient visitation of the Common Schools. In some of the smaller States, a general Superintendent or commissioner has been appointed, whose duty it is to perambulate the State, hold institutes, visit the schools, and do all things in his power most conducive to the progress and encouragement of education—Many of these expedients have been tried from time to time with only partial success; and some of them abandoned. In our own State, some years since, a County Superintendent was appointed in each county, who was expected to exercise general supervisory and visitorial powers over the schools in his county; but the expenses of these offices were deemed so onerous pecuniarily, that the County Superintendencies were after a year or two of trial abolished by law. In a commonwealth like ours, containing ten thousand school districts, it would take a single visitorial committee over *thirty years* to go once round—a sufficient length of time, it must be conceded, to elapse between each visitation: thence the question arises, how can a proper supervisory board be best established for our schools? The best possible supervision, if it could be effected, would be a frequent visit of parents and patrons; but it is a fact too well known to all teachers, that the light of such a countenance seldom appears within the school-room door, unless indeed it be to enter a complaint against trespassing pupils; or to call the teacher himself to account for some supposed sin of omission or commission; the former by reason of too great leniency in some quarters not specially touching his own children, and the latter by reason of a merited flagellation inflicted upon a favorite but impudent and disobedient child.

In cities where a large number of scholars are contained in narrow limits of territory, and property is of sufficient value to admit of taxation to support a City Superintendent, the necessity of school visitation is provided for in the form of such an officer; but in the country and in sparsely inhabited localities the matter is much more difficult. The State Teachers' Association during its late annual meeting at Oswego, with commendable zeal for the promotion of the Common School interest, appointed an agent at a salary of one thousand dollars, to travel through the State during the ensuing year, hold institutes and perform such other labors as will best promote popular education. The teachers have resolved to advance from their own scanty salaries a sum sufficient to keep at least one agent in the field, where there is room for the active labors of a hundred. All he can do, at most, will be to visit the counties and principal points where the teachers of the vicinity can be easiest assembled, give them such lessons of instruction as he can impart, and encourage them to meet together more frequently for mutual aid and comfort. A general visitorial duty is impossible, as he would become grey with age, and the pupils themselves assume the positions of fathers and mothers in many districts—if not in Israel, with their own children in the schoolhouse, long before the agent would approach their neighborhood in his extensive peregrinations.

HOW TEACHERS SHOULD TREAT ONE ANOTHER.

It has long been the scandal of the medical profession that doctors disagree. If our teachers' meetings are taken as an illustration, an adage to become equally common may be added concerning teachers.

Why do medical men disagree more frequently than lawyers? From these two reasons, principally:—They are less intimate with each other, and as a body are less liberally educated. The first reason applies with equal force to teachers. To this reason may be added several others, peculiar in a good degree to them. Many have little acquaintance with the world around them. They have formed their opinions alone. Long accustomed to maintain them and their authority before their pupils, without opposition, they become earnest combatants when opposed. Difference of opinion merely, in a man of limited experience, too often creates strong dislike, and sometimes active opposition. Theories formed in the closet are for the first time shown false or assaulted, and the teacher fires up at the exhibition or onset.

Too few teachers have trained themselves to perfect self-control—the very secret of governing others as well as ourselves. In many there is a want of enlarged views, the result of a limited acquaintance with the active bustle of life.

The wider our acquaintance with mankind, the more we study the various opinions of others, if our hearts are right—the more liberal we become, the less we value our own opinions, and the more we respect the opinions of other men.

Charles V, who employed some of his last days in manufacturing time-pieces, often expressed his regret that he encouraged the persecution of some of his subjects for different religious opinions, when he could not make two clocks keep time together. We often forget in debate that the structure of *two minds* may differ as much as *two bodies*.

Teachers too frequently cultivate a morbid sensibility. It shows itself on every occasion, and in various ways. They fancy the world overlooks them. Conscious of possessing stores of knowledge from books, they undervalue knowledge obtained by intercourse with society, and foolishly complain because a man of less study and more polish takes the preference in the community. This morbid sensibility breaks out on too many occasions, and, too frequently, a teacher can in no way injure himself more deeply, than by complaining of being undervalued, or suffering from want of respect, by tenaciously contending always for his views, and hotly opposing everything not exactly coinciding with his own opinions.—The exhibitions of this morbid sensibility have brought the blush to many a wise teacher's face.

Teacher, study self-control; also a humble opinion of yourself—liberal and kind feelings towards those who differ from you. Cultivate benevolent feelings towards others; love humanity notwithstanding its faults; respect the opinions of others, and show your respect by every word and action.—*N. Y. Teacher.*

THE HOME OF NOAH WEBSTER'S CHILDHOOD.

Noah Webster, author of the "American Dictionary of the English Language," will be remembered as long as that language is heard. From the venerable halls of the oldest college in America to the rudest cabin in the western wilds, his name is familiar as household words. When one has won such a remembrance in the hearts of his countrymen, and attained so honorable an eminence in the eyes of mankind, we naturally look upon him with a reverence which causes us to regard with peculiar interest everything connected with his history.

That interest is strikingly manifested in relation to the home of his childhood, and the scenes familiar to his youth. Hence we naturally feel a desire to visit those places which he so often frequented, and especially to behold the house in which he passed his infancy and boyhood. Who shall say that this is not a laudable desire, and one tending to stimulate others to more zealous efforts to attain a high position of usefulness in the world?

It is with such feelings that we turn to view the birthplace of Noah Webster, and even a picture of the home of his childhood, has attractions. It is situated on an elevated ridge of land, about one mile south of the Congregational church, in West Hartford, Connecticut, and about four miles west from the city of Hartford. The prominent buildings in the city are seen from the house; also Wadsworth's Tower, on Talcott Mountain, about six miles to the northwest.

This house is owned by Mr. Samuel Hurlbut, who has resided on the spot for a long period. In after life Webster cherished a warm affection for the home of his childhood, and on his last visit to the house, about a year before his death, in 1843, he requested Mr. Hurlbut to take good care of a grape-vine growing a few rods northwest of the house, which he had cultivated in his youthful days.

On this spot, on the 16th day of October, 1758, Noah Webster was born. His father cultivated a small farm for the support of his family, consisting of two daughters and three sons, all of whom were brought up to habits of industry in the employments of agriculture.

The early advantages of Noah were very limited, yet he so overcame them by carefully improving his time, that he entered Yale College at the age of sixteen. His subsequent life is too familiar to need a description here. —*The Student.*

The London Morning Chronicle, in an elaborate notice of the Educational Exhibition now open in London, thus speaks of the contributions from this country:

"Of foreign countries, America is the largest contributor. The Board of Education of New York has sent a large collection of educational works, which are interesting from their classification. They are arranged under the heads of algebra, analyzers, arithmetic, astronomy, atlases, book-keeping, composition, definers, dictionaries, drawings, elocution, expositors, etymology, gazetteers, geography, geometry, globes, grammar, histories, music, readers, spellers, and miscellaneous. There is also a large collection of specimens of writing, drawing and designing, from various ward and primary schools. The specimens have attached to them the names and ages of the pupils, the lowest age being seven, and the highest seventeen years. Many of these specimens are highly creditable, and they speak well for the character of the education imparted in the American schools. Messrs. Barnes & Co., the extensive publishers of New York, have sent over a very large consignment of the best of their educational works. Nova Scotia and the British North American colonies make but a comparatively poor show."

Every well-read and well-taught instructor knows that the march of intellect of the present day, has been greatly developed in the advance of the science of training the youthful mind from infancy up to manhood; and that its progress is marked by a degree of excellence, as superior to that of thirty years since, as the threshing machine of modern times is superior to the antiquated flail—or as the steam-boat of our day excels the keel-boat of a half century since. To extend the benefits of these improvements in this science by means of those who are adepts in the art, and who are specially charged with the duty, is one important object in the law of 1854.—*Penn. School Jour.*

Every man certainly has a right to live, and the duty of every just man is to let him live.—Blessed be the day, if come it ever should, when man will learn that his own true prosperity is essentially involved in the prosperity of his neighbor.

The Essayist.

THE FIXED STARS.

How often have we stood beneath the dark blue dome of heaven at night, and gazed upwards, with infinite delight, upon the beautiful stars that gem the far-off sky, and watched the movements of those silent orbs that twinkle so mildly from their starry thrones, far, far away from earth, in the blue, ethereal space, where they are ever wheeling on in their vast journeys through the realms of ether, and where the operations of those laws that govern the universe, are being carried on upon a scale of magnitude and sublimity that baffles all human understanding, and that defies the collective powers of all human calculation!

The immense distance at which some of the *nearest* fixed stars are known to be placed, proves them to be globes of prodigious size, not inferior to the sun—shining with their own, and not with reflected light. It is, then, by no means unreasonable to suppose that *each* of the unnumbered millions of twinkling stars that garnish the sidereal heavens, is, in reality, a *mighty sun*, forming, like our own bright "orb of day," the center of a complete planetary system, with unnumbered worlds revolving around it, and satellites around each of them, and all moving together, in silent harmony, through the vast infinity of space, in an immense orbit, around the great center of the universe.

The same starry scene that was unfolded to the vision of angels as they lingered around the morning of creation, is now presented to us, and we gaze upon the same beautiful stars that shed their pale light on the first of "Adam's race"; and though long, weary ages have circled away since they were hurled into the dark realms of space, and their fires kindled by the forch of the Almighty, their glory remains unchanged and their brightness undimmed.

We can form some idea of their immense distance from us, when we remember that light, traveling, as it does, with the almost inconceivable velocity of twelve millions of miles per minute, would be upwards of six years in reaching us from the nearest fixed star; and were it to be blotted from existence to-day, its light would blaze on with the same brilliancy for six years to come, ere its fires would be quenched in eternal darkness; while other stars and nebulæ there are, so remote in the regions of space that their light would be millions of years on its lonely flight to earth; and others, perhaps, are so far back in the realms of infinitude, that the rays of their light, though they may have been millions of ages on their silent journey, have never reached us.

It has been computed that one hundred millions of stars, too remote for the naked eye to gaze upon, are distinctly visible through the telescope; yet this vast assemblage of worlds and systems, immense as it may be, perhaps forms no larger a proportion to the boundless depths of space that lie beyond, than does a particle of vapor to the mighty ocean, and the universe would suffer no more from their destruction than would the verdant foliage of the forest from the fall of a single leaf; and were the light of one of these twinkling stars to be quenched forever, its place would no more be missed in the heavens, by the mind that could grasp the universe, than a single grain of sand would be from the matter of ten thousand worlds.

It has been ascertained that many of the stars, in various parts of the heavens, have a proper motion in space; and by accurate and unwearied observations of the quantities and bearings of these motions, together with the indications afforded by the parallaxes, and the influences of that beautiful theory of Newton—universal gravitation—astronomers have arrived at the general conclusion that the Pleiades form the central group of our whole sidereal system, including the Milky Way and the unnumbered millions of stars that compose this immense cluster, but exclusive of the more remote nebulæ, which belong to other systems. Hence they have been led to fix upon the star Alcyone, of that group, as the center of gravity, and, consequently, the *great central sun*, around which myriads of mighty suns are performing their vast journeys through the heavens, each followed by a retinue of planetary worlds, and around which our own sun, attended by its golden train of worlds, is rapidly wheeling on in a circumference so vast, that light would be more than a thousand years in traversing its diameter, and requiring, as it is supposed, upwards of *eighteen millions of years* to perform one complete revolution around its distant centre. Then the great horologe in the circle of Time will beat one, and the sun, with its golden train, start off anew on another of its vast journeys through the dark realms of ether, to regions more distant than Geometry ever measured, and upon a scale of magnitude that baffles all human conceptions. D. Brainerd Abbey.

Southport, N. Y., August, 1854.

THE EMPEROR NICHOLAS.

The *Courier des Etats Unis*, says:—Born in 1796, Nicholas is now 58 years of age. He has passed, according to the vulgar phrase, to the condition of a handsome man who takes the fair round belly. His whiskers and shoulders have a portly fullness; age has thinned the hair on his temples; his eyes are nearly buried under the protuberant mass which swells out over his cheek bones. He affects the look of majesty, and would still sometimes appear majestic if he showed less solicitude upon that point.

To appear magnetized, fascinated, by his look, is to address to him the sweetest of all flatteries. Louis XIV. had also those lastes which are those of most despots; but, more skillful than Nicholas, he knew how greatly mystery increases the impression of majesty, and was difficult of access. Nicholas, on the contrary, is one of the men you most frequently meet in the streets of St. Petersburg. It is there that he makes his favorite promenade, and as he cannot endure the odor of tobacco, he has strictly forbidden every inhabitant of the capital to smoke anywhere except at home. In winter, the Emperor rarely fails to be present at the masked balls and assemblies of the nobility, where he takes pleasure in allowing himself to be called Nicholas by the French actresses, who take him by the arm and talk to him in the most familiar manner.

Nicholas occupies himself much with France and with what the French think of him. On his visit to Rome, Fanny Elsler asked to be presented to him: "No," replied he, "it will be said at Paris that I came to Rome for the purpose of seeing dancers."

In his youth, Nicholas was often surprised carring the name of Napoleon on the bark of the birch trees of Petershoff. He indulged in dreams of a warlike destiny similar to that of the great Captain; but nature had refused him military genius, as the war against Turkey in 1828 fully proved.

He felt compelled to change the direction of his ambition; and he endeavored to make himself the symbol of authority, and to unite in his person the highest degree of authority and power which a man has ever supported. Has this attempt succeeded? One can boldly answer, no.

Seasonable Advice.—The Philadelphia Sun administers the following sensible advice to its readers. If strictly followed, we may bid defiance to the cholera and other diseases so prevalent at this season of the year:

"1. Take exercise daily and amply, but avoid excessive exertion or fatigue. 2. Eat regularly and temperately of wholesome, nutritious food, but avoid everything which tends in ordinary times to produce indigestion or cholera morbus. 3. Be careful of the night air, avoid physical effort after night-fall, and keep good hours inflexibly. 4. Never let a corrupted appetite seduce you into a seeming belief that brandy or any other stimulant is a preventive of cholera or any other disease, nor be persuaded to take one drop of an intoxicating beverage, unless it shall be prescribed by a physician whom you know to be capable and strictly temperate. 5. Keep a light heart, a cool head, and a clear conscience. These rules are applicable alike to the city and country, and we believe they will be found safe and salutary under almost any circumstances."

The Asteroids.—The small planets whose orbits lie between those of Mars and Jupiter, are called Asteroids. Their discovery belongs to the present century, the first having been seen on the night of January 1, 1801.—The other planets have been known from the earliest times. New Asteroids have been discovered from time to time, especially of late years, and there are now known to be no less than twenty-nine of them. The following are the names which have been assigned to them, almost exhausting the catalogue of goddesses, which is the acknowledged treasury for planets' names:—1. Ceres; 2. Pallas; 3. Juno; 4. Vesta; 5. Astrea; 6. Hebe; 7. Iris; 8. Flora; 9. Metis; 10. Hygeia; 11. Parthenope; 12. Clio; 13. Egeria; 14. Irene; 15. Eunomie; 16. Psyche; 17. Thetis; 18. Melpomene; 19. Fortuna; 20 Massalia; 21. Lutetia; 22. Calliope; 23. Thalia; 24. Themis; 25. Phocia; 26. Proserpina; 27. Euterpe; 28. Bellona; 29. Amphitrite.

Extreme Length of the Hair.—Sir Chas. Wilkins states that while he was a resident at Benares, he saw a fakir, the hair of whose head reached the enormous length of twelve feet. (*Saturday Magazine*, No. 168.) The hair nails of the Chinese frequently reach the ground; and their moustaches have been cultivated to the length of eight or nine inches. While mentions an Indian lady whose hair reached to her feet when she stood upright; the same observation may be made of the Greek women. A Prussian soldier had his hair long enough, when loosened, to touch the ground; and, in several instances, English ladies have had it from five to six feet long.—One instance occurs to my memory, in the person of Mrs. Astley, the wife of Mr. Astley, of the Amphitheater, in the Westminster bridge road.—*Reichard on the Hair.*

Cost per Mile of Railroads.—Western (Mass.) $64,250; Boston and Worcester, $70,231; New York and New Haven, $81,614; New Haven and Hartford, $51,355; New York Central, $67,181; Hudson River, $81,812; Camden and Amboy, $66,576; Pennsylvania Central, $54,400; Baltimore and Ohio, $51,292; Michigan Central, $35,657; Cincinnati, Hamilton and Dayton, $44,327; Little Miami, $31,359; Michigan Southern and Northern Indiana Railroads, $23,500; Cleveland and Toledo, 25,000.

Time is no *little* enemy. A man either hates you with his whole heart, or he don't hate you at all. This hating a little is a good deal like blowing up a powder mill a little. It can't be done.

Sunday Reading.

[Written for Moore's Rural New-Yorker.]

I'D RATHER BE SAD.

I'd rather be sad! The ocean deep,
In mute wilh sadness, is hushed to sleep:
'Tis the shallow streams that are noisy and gay;
I'd rather be like the ocean than they—
I'd rather be sad!

I'd rather be sad! The forest green
Reposes in gloom, in deep radness it seems;
On the landscape the eye loves better to dwell,
When twilight casts o'er it her shadowy spell—
I'd rather be sad!

I'd rather be sad! Spring is joyous and gay,
And Summer as glad and as laughing as May;
But Autumn is sad; yet her treasures are grand,
She bestows her rich fruits with a lavishing hand—
Give me Autumn, though sad!

I'm happiest when sad! when alone, all alone,
Through the wildwood I wander, o'er pathways unknown;
To commune with my thoughts, and with nature converse,
Far away from the world and sin's blighting curse—
I'm happiest when sad!

Then let me be sad! ask me not to return,
To the world's heartless scenes, or new vanities learn!
Ask me not to be thoughtless; or sadness beguile!
'Tis better to weep when sad than to smile.
Ask me not to join in the lightsome laugh!
To be gay with the giddy, or pleasure's cup quaff—
I'd rather be sad!

Collinsville, Ohio, 1854. R. Irwin Mc.

[For Moore's Rural New-Yorker.]

THE BLESSINGS OF RABBI JOCHANAN.

[A Rabbinical Tradition compiled from the Talmud.]

The learned and wise Rabbi Jochanan lay enfeebled from old age, and felt that his last hour was fast approaching. His pupils stood around his bed in deep sorrow, and became more sorrowful as they beheld tears rolling down the cheeks of their aged teacher. After a long and melancholy silence, one of the pupils said:—"Rabbi, why weepest thou? Is it hard for thee to depart this life? Didst thou not teach us the vanity and nothingness of our earthly existence? Didst thou not point out to us a better life, a heavenly existence?"

"Certainly," replied the Rabbi, "I taught you all this; and I weep not because I must leave this world!"

"Rabbi!" began his pupil again, "thou hast been our light, an our rock, and image of virtue and piety! If thou, in the moment of departure from this earth, sheddest tears, what will befall us, who do not possess thy virtues and the purity of thy heart? Will we not, on such an occasion, despair?"

Upon which the Rabbi replied:—"If an earthly prince should, on a sudden, summon me to him, a prince of flesh and blood, who must himself one day give an account before the great God,—who lives to-day and may be in the grave to-morrow; whose punishment cannot be everlasting,—a man who could deprive me of my being on this earth only,—a prince that can be appeased with words, and won with gold, would I not fear and tremble to appear before him? Why should I not weep, when I am about to come before the august throne of the King of kings, whose dominion is eternal? This King cannot be softened with words, nor won with gold; for He is the Lord of all treasures. His rule is imperishable, and His word may condemn me to eternal misery. *His* judgment only decides what path I am about to wander, whether to Heaven or to the lower world! and for this reason, my friends, do I weep."

The tears of the Rabbi flowed more copiously, and his pupils stood cast down with heavy grief. They pressed closer round the bed of their dying teacher. The virtue of their master and the power of his piety filled them with holy awe.

"Bless us, thou lamp of Israel!" they mournfully cried, and sank upon their knees.

The grey-haired Rabbi sat up, spread his hands over the kneeling, and said:—"Fear continually the Almighty, as you fear an earthly King, a King of flesh and blood!"

"What! shall we not fear God *more* than an earthly King?"

"Do but consider," said the Rabbi feebly, "how you would tremble, when you believe that some evil deed of yours has reached the ear of your earthly King, and how zealously would you strive to conceal it from him! May the like fear only ever fill your heart towards Almighty God, for He is omnipresent, and no act of yours can escape his knowledge."

S. T

Words Fitly Spoken.—Gen. Cass said recently in the Senate of the United States:—"Independently of its connection with human destiny hereafter, I believe the fate of the republican government is indissolubly bound up with the fate of the Christian religion, and that a people who reject its holy faith, will find themselves the slaves of their own evil passions and of arbitrary powers." He never spoke a truer sentence.

Pain and pleasure, good and evil, come to us from unexpected sources. It is not where we have gathered up our brightest hopes, that the dawn of happiness breaks. It is not there, where we have glanced our eyes with affright, that we find the deadliest gloom. *What should this teach us?* To bow to the great and only Source of light and life humbly, with confiding resignation.

Miscellaneous.

[For the Rural New-Yorker.]

I WISH THAT I WAS JENNIE.

BY MRS. S. WEBSTER LLOYD.

I wish that I was Jennie!
For Jennie's eyes are bright;
Her cheeks are like red roses,
Her brow is lily white;
And all about her shoulders,
The rich brown ringlets twine;
Oh! ma, I cannot help but wish
That Jennie's charms were mine!

Then Jennie has a rich papa,
And pets, and playthings rare;
A little pony of her own,
And gayest clothes to wear.
She has a crying dolly,
And toy books without end;
And then she has a hundred friends,
That don't forget to send.

But I am very ugly,
My figure has no grace;
My hair is red—my eyes are dull,
And there's freckle on my face.
I have to wear a cheap print dress,
And all the girls in town
Know that you alter sister's o'er,
To make my Sunday gown.

But Freddy did not know how well
We loved her freckled face;
She did not guess how welcome 'twas
At every time and place.
She had not learned, a loving heart
Its own rich harvest brought;
And she was not by any means,
As ugly as she thought.

When Fredarica went one day
To see her friend again,
She found her lying on the bed
And suffering with pain.
And when she placed her trembling hand
On Jennie's burning brow,
She thought—"I'm sure I do not wish
That I was Jennie now!"

Then o'er her gentle childish heart,
Quick thoughts went rushing by;
She did not dream how much they bore
Of sound philosophy.
Thought that her parents were as kind,
Her step as light and free,
Her dress as neat, her home as dear,
As any girl's could be.

And thought that riches could not save
From suffering and distress,
Nor make one real friend the more,
One pleasant thought the less.
And Fredny learned a lesson then,
A precious lesson 'tis,
To be content—not wish that she
Were other than she is.

Burlington, Ky., August, 1854.

[Written for the Rural New-Yorker.]

FINE FEELINGS.

"But, Father, he has fine feelings—possesses a heart with all that is noble and manly dwelling there."

"*Fine feelings*, indeed!—a fine capital with which to commence life, with a family on his hands!—*fine feelings* to feed and clothe my daughter with, and make her happy! So you would marry this man of fine feelings, instead of the wealthy and influential R. S."

"Father, you may ridicule me if you like, but I choose one who possesses something beside gold—*seeks* something beside gold, when he sues for my hand, and worships something beside,—a man who possesses a higher *nature*, higher aspirations, and who has a kind, sympathetic heart, which will vibrate in unison with my own."

"*O fudge!* This Mr. G. has been filling your brain with his silly, sickly sentimentality—all visionary, a youth-dream, an over-drawn fancy. Come, dear Kate, wake up and look at life *as it is*: remember it is no fairy road you are to travel—clear sunshine, eternal bird-music, soft green carpets, and flowery fragrance all the way—no such thing, but cloudy skies, discordant sounds, briars and thorns, and noxious vapors, intermingled in profusion, with now and then a sip of something you may imagine nectarian."

"I know but too well that life is a reality—that each moment brings with it joys and sorrows, pleasures and responsibilities—that who would enjoy life *here*, must first know the true end and aim of an earthly existence, then must act well and faithfully his or her part, fill the sphere appropriately theirs. Then *what is* life's aim?—what the goal we all strive to reach?—what the crown we all seek to win? Is the Gold-God to be ours? Should this be the shrine at which we bow? What am I to marry for?—to marry a brute for the sake of the treasure, the perishable dust he is keeper of?—in other words, for the sake of '*a living?*'—to throw these faculties of mind, God-given and sacred, this woman's heart, with its affections, pure desires and holy hopes, throw them all aside, smother every outburst of love's flame, and sink—where?"

"Why, really, Kate, you seem inspired, and yet you appear to have correct views of life. But, after all, does not R. possess some of these ideal qualifications of yours?"

"He is proverbially penurious, father. Intellectually, what is he? The highest aim of his life has been wealth—consequently his highest thoughts reach no higher than his purse. A gourmand!—devoid of every ennobling thought, feasting and gloating on, worshiping and getting what satisfies him not—Gold. No, I have sought in vain to discover aught of a germ, from which, if cultured, might spring up a plant to choke even, in a measure, his inordinate love of mammon; but alas, in vain—a stiff, heartless, soulless, eager money-grasper, money-worshiper."

"And Mr. G.—a hero—a—a *every thing*, of surpassing beauty in form, feature, mind and manners—a perfect—what, Kate?—have you words for such of his virtues? I suppose *he* is faultless?"

"Not at all. There are few infallible.—There are few who become the real of our ideal in perfectness—few whose virtuous actions, however fragrant and beautiful in coloring, are not, rose-like, sustained by a stem covered with thorns. Mr. G. is by no means faultless. He has won my affections. I believe him worthy of them, for reasons, a few of which I have given. I believe him sincere in his professions—is not actuated by any mercenary motive, like R.—in short, loves *me*, not my property, woos *me*, not my wealth, and wins—both, with your approval, father."

"God bless you, Kate! You are a true woman. It is true we live, or *should* live, to be a benefit to our fellows—to be a "North Star" by which others, less favored, may be blessed and guided from the slavery of ignorance and sensuality, to the blissful and glorious fields, where

> —'still flows the stream of pearl
> Beneath the magic mountain: still the scent
> As of a thousand amaranthine wreaths, which lines
> All life unto its sweetness, floats around
> Mist-like, the shining bath where Luna laves,'
> Or Sol, bright brother of that mooned maid,
> Triumphs in light—where
> The spiritual sun,
> The heavenly earth emerogdine, and the fire—
> Spirit of life, the Ire land rill exist
> Immortally, internally, unseen!'

"But in our higher gazings, we must not lose sight of our every-day duties—must not forget we sustain relations which cannot be overlooked, and that while our spiritual nature demands spiritual food, and our mental faculties require mental nutriment, still, our baser, grovelling, earthly part clamors for our care—that our Creator placed us here for a purpose—fitted us to Labor.

"True, there are many kinds of labor, adapted to each individual class, and while one labors to secure a desired end by one process, another will reach the same goal by an entirely different road. Their paths *seem* to diverge, but finally center at the same point. All are seeking to secure happiness, but how differently they labor! By some the mental powers are entirely crushed, and the muscle and sinew perform their office. Others have the physical undeveloped, and revel in classic halls, and tread on classic ground,—while much the greater portion at this point in the world's history, tax both muscle and mind,

"To gladden the hearthstone and lighten the heart."

"The purely selfish man cannot appreciate these finer feelings. Cased in his utilitarian armor, he is proof against all the innovations of the beautiful in Nature or Art. No pure, peaceful, home enjoyments of a moral or intellectual character, no holy, heavenly joys invoke a quicker pulsation. None of these are adequate to soften his rigidity. Not one of woman's charms, however magical to others, can affect him, unless accompanied with—'the Dimes!'

"This is the conclusion of the whole matter." Charlie Chestnut.

WHICH IS THE HAPPY MAN?

We know a man in Michigan who lives on the interest of his money, and that is only $70 per annum. He has, it is true, a small house with one room in it, three or four acres of land, and keeps a cow, a couple of pigs, and a few hens, yet he and his wife always appear cheerful and contented, and preserve a respectable appearance on their $70 per annum.

We know of a man in New York who expends $25,000 per annum for his household expenses. He pays for gas light more than the whole income of the Michigan man. He makes annual holiday presents to more than the whole amount of property of the Michigan man. It costs him a sum six times as large as the whole income of our philosopher to support a single waiter.

We know them both very well, and we think our Michigan friend by far the happiest, healthiest and most enviable man. They are both advanced in years. The cheapness of books and papers places abundance of rational enjoyment in the power of the countryman; an accumulation of physical ills and a necessity for intense activity, deprives the citizen of calm, quiet enjoyment and reflection. The farmer, in the probable course of events, will die of old age at ninety, the latter at seventy. Such is the distribution of happiness and wealth.—*Toledo Blade.*

Here is a beautiful sentiment from the pen of Coleridge. Nothing could be more eloquent:

"Call not that man wretched who, whatever else he suffers, as to pain inflicted or pleasure denied, has a child on whom he doats. Poverty may grind him to the dust; obscurity may cast its dark mantle over him; he may be unheeded by those among whom he dwells, and his face may be unknown by his neighbors; even pain may rack his joints, and sleep fire from his pillow; but he has a gem with which he would not part for wealth, defying computation for fame filling a world's ear, for the sweetest sleep that ever fell on mortal's eye."

MR. WILLIS AT IDLEWILD.—CONSUMPTION.

Mr. Bryant, of the *N. Y. Evening Post* thus refers to the closing letter from Idlewild which appeared in the *Home Journal* of August 5th:

We have read, with deep emotion, the valedictory letter of Mr. Willis, from Idlewild.—Death, after all, with all the gilding from the sunlight beyond, is a dark cloud to pass through; and the last parting with those who have done much to brighten this side of the mysterious valley for us, as they step down into its shadows, is not easy. Mr. Willis is one of the most fascinating writers of the English language—and who, to-day, will remember anything of his productions but their excellences? This letter will moisten eyes in widely-scattered homes, where the face and form of the author are unknown, but where his writings have beguiled many an hour of its weariness. It is like the hovel music of a long familiar harp, whose chords we know are breaking.

We copy the closing paragraphs of Mr. Willis' letter:

But consumption, mourned over as it is, seems to me a gentle marying of the knot of life, instead of the sudden and harsh tearing asunder of its thread by other diseases—a tenderness in the destroying angel, as it were, which greatly softens for *some*, his inevitable errand to *all*. It is a decay with little or no pain, insensible almost in its progress, delayed, sometimes, year after year, in its more fatal approaches. And it is not alone in its indulgent prolonging and deferring, that consumption is like a blessing. The cords which it first loosens into the coarser ones, most confining to the mind. The weight of the material senses is gradually taken from the soul, with the lightening of their food and the lessening of their strength. Probably, till he owns himself an invalid, no man has ever given the wings of his spirit room enough—few, if any, have thought to adjust the ministerings to body and soul so as to subdue the senses to their secondary place and play. With illness enough for this, and not enough to distress or weaken—with consumption, in other words, as most commonly experienced—the mind becomes conscious of a wonderfully new freedom and, predominance. Things around alter their value. Estimates of persons and pursuits strangely change. Nature seems as newly beautiful as if a film had fallen from the eyes. The purer affections, the simpler motives, the humbler and more secluded reliances for sympathy, are found to have been the closest linked with thoughts bolder and freer. Who has not wondered at the cheerfulness of consumptive persons? It is because, with the senses kept under by juvenile treatment, there is no "depression of spirits." With careful regimen, and the system purified and disciplined, life, what there is of it, is in the most exhilarating balance of its varied proportions. Death is not dreaded where there is, thus, such a conscious breaking through of the wings of another life, freer and higher.

* * * * * *

And here the Letters from Idlewild come to an end. The author has thus long—not too long he trusts—made the readers of the Home Journal guests at his home. He brought them here at first, because, confined to its seclusion himself, he felt that he might claim an invalid's privilege to be kindly visited. The friendly interest and willingness to listen have been shown in many ways, and have been, it need scarce be said, most deeply gratifying. The readers of the Journal have rapidly increased, and are now many indeed; and if the author's friendship in the world may be thus measured, he can well afford to care little for its fame. He assures these kind thousands that the memory of their sympathetic listenings will be tenderly cherished in his heart, though the gate of Idlewild is here shut upon the pen that is their servant.

THE WIND IN THE PINES.

"Move! move!" cried the hoarse wind in the pine-tree tops. "You still old pines are good enough in your way, only you are so immovable. It is my business to make all bend before me; and there are poisonous weeds protected by your shade that I want to blow down. So move! move!"

"Nay, winds," said the pines, "We shall not move for a noisy, hasty fellow like you. You may make the clouds and waves fly before you, or shake the boughs of trees more flexible than we are; and you are welcome to brush the dust from our heads; but you shall do nothing more. It is well that there is something firm enough to withstand your leveling blasts. Trailer blossoms and useful shrubs and vines look to us for a shelter. Do not think that you will be permitted to destroy us and them just to overthrow a few vile weeds."

Then the wind grew angry and blew a furious gust, which caused two or three of the tallest trees to fall with a heavy crash.

"They were decayed to the pith," murmured the standing pines.

"Keep straight while you are sound, then," answered the wind as he went whistling away; "but when you get rotten-hearted you also will have to come down."—*Similitude.*

Sir and Lady Bulwer.—Bulwer, who is only 48 years old, (though he has been thirty years before the public,) is likely to become one of the next conservative ministry. His property in Hertfordshire—Knebworth, near Stevenage—is worth about £15,000 a year. His works add £2,000 a year to his rental, and his new publications—for he cannot help writing—may be calculated at about as much more. If Lady Bulwer were defunct, I doubt not that Bulwer would obtain a peerage. On the terms in which they now stand, he would decline an honor to be shared with her. Lady Bulwer, whom I recollect as a lovely young creature some twenty-five years ago, has gradually been changed into a stout, coarse-minded woman, and certainly has not improved the delicacy of her mind by familiar association with Mrs. Trollope, with whom she lives.—*Letters from Europe.*

Ladies' Department.

CONDUCTED BY A——E.

GROWING OLD TOGETHER.

You have promised that through life
We shall journey heart unfiled,
Husband kind and faithful wife,
And I trust the vow thus plighted
Hand in hand, and side by side,
Through life's storms and sunny weather,
We will our own fortune bide,
And at last grow old together.

What if Time's unsparing wing
Of some pleasures has bereft us?
Let us toil by murmuring
Lose the many there are left us.
What though youth and bloom depart,
Swift as birds of lightest feather?
Why repine with feeble heart,
Shall we not grow old together?

Few, indeed, have been our years,
Yet enough our hearts to bind, love;
And to show how many tears
In life's brightest cup we find, love!
Since in our united youth,
We two sported on the heather,
Dearest! it is meet in truth,
That we should grow old together.

THE OLD WIFE'S KISS.

The funeral services were ended, and as the voice of prayer ceased, tears were hastily wiped off from wet cheeks, and long-drawn sighs relieved suppressed and choking sobs, as the "mourners" prepared to "take leave of the corpse."

It was an old man that lay there, robed for the grave. More than three-score years had whitened those locks, and furrowed that brow, and made those stiff limbs weary of life's journey, and all the more willing to lie down and rest where weariness is no more suffered, and infirmities are no longer a burden.

The aged have but few to weep for them when they die. The most of those who would have mourned their loss, have gone to the grave before them: harps that would have sighed sad harmonies are shattered and gone; and the few that remain are looking eradleward rather than graveward,—to life's opening, rather than to life's closing goal; are bound to, and living in the generation rising, more than the generation departing.

Youth and beauty have many admirers while living, have many mourners when dying. Many tearful eyes bend over their coffined clay; many sad hearts follow in their funeral train. But age has few admirers, few mourners.

This was an old man, and the circle of mourners was small. Two children, who had themselves passed the middle of life, and who had children of their own to care for, and be cared for by them. Besides these, and a few friends who had seen and visited him while sick, and possibly had known him for a few years, there were none others to shed a tear, except his old wife. And of this small company, the old wife seemed to be the only heart mourner. It is respectful for friends to be sad for a few moments, till the service is performed and the hearse is out of sight. It is very proper and suitable for children who have outgrown the fervency and affections of youth, to shed tears when an aged parent says farewell, and lies down to quiet slumbers. Some regrets, some recollection of the past, some transitory grief, and the pangs are over. Not always so. But often, how little true, genuine heart-sorrow there is!

The old wife arose with difficulty from her seat, and went to the coffin to look her last look—to take her last farewell. Through the fast-falling tears she gazed long and fondly down into that pale, unconscious face. What did she see there? Others saw nothing but the rigid features of the dead; she saw no more! In every wrinkle of that brow, she read the history of years. From youth to manhood, from manhood to old age; in joy and sorrow, in sickness and health—it was all there: when those children, who had now outgrown the sympathies of childhood, were infants lying on her bosom, and every year since then,—there it was! To others, those dull, mute monitors were unintelligible: to her they were the alphabet of the heart, familiar as household words!

And then the future! "What will become of me? What shall I do now?" She did not say so,—she did not say anything,—but she felt it. The prospect of the old wife is clouded. The home circle is broken, never to be reunited; the visions of the hearth-stone are scattered forever. Up to that hour there was a home, to which the heart always turned with fondness. But that magic is sundered; the keystone of that sacred arch has fallen, and now home is nowhere this side of heaven! What shall the old wife do now? Go and live with her children? be a pensioner upon their kindness, where she may be more of a burden than a blessing; so, at least, she thinks. Or shall she gather up the scattered fragments of that broken arch, make them her temple and her shrine; sit down in her chill solitude beside its expiring fires, and die? What shall she do now?

They gently enwiled her away from the dead, and the undertaker came forward with the coffin-lid in hand. It is all right and proper,—of course,—it must be done; but to the heart-mourner, it brings a kind of shudder,—a thrill of agony,—as when the headsman comes forward with his axe! The undertaker stood for a moment, with decent propriety, not wishing to manifest rude haste, but evidently desirous of being as expeditious as possible. Just as he was about to close the coffin, the old wife turned back, and stooping down, imprinted one long, last kiss upon the cold lips of her dead husband, then staggered to her seat, buried her face in her hands, and the closing coffin hid him from her sight forever!

That kiss! Fond token of affection, and of sorrow, and memory, and farewell! I have seen many kiss their dead,—many such seals of love upon clay-cold lips,—but never did I see one so purely sad, so simply heart-touching and hopeless as that! Or, if it had hope, it was that which looks beyond coffins and charnel-houses, and damp, dark tombs, to the joys of the home above. You would kiss the cold cheek of infancy;—there is poetry; it is the last rose-bud! Or the pallid cheek where beauty blushed;—there is romance there; for the faded flower is still beautiful in childhood, the heart yields to the stroke of sorrow; but recoils again, elastic with faith, buoyant with hope. But here was no beauty, no poetry, nor romance. The heart of the old wife was like the weary swimmer, whose strength has often raised him above the stormy waves, but now exhausted, sinks amidst the surges.

Why should the old love the old, or kiss the cold-unloving lips? Ah! why shouldn't they? Does affection grow old? Does the true heart feel the infirmity of years? Does it grow cold when the step becomes unsteady, and the hands hang down? Who shall say that the heart of the old wife was not as young and warm as in those early and brighter days, when he wooed and won her? The temple of her earthly hope has fallen; and what was there left but for her to sit down in despondency, among its lonely ruins, and weep and die? Or, in the spirit of a better hope, await the dawning of another day, when a hand divine shall gather its scattered dust, and rebuild, for immortality, its broken walls.

May the old wife's kiss, that linked the living with the dead, be the token of a holier tie, that shall bind their spirits in that better land, where tears are wiped from all faces, and the days of their mourning are ended!

THE LOSS OF A WIFE.

In comparison with the loss of a wife, all other bereavements are trifling. The wife! she who fills so large a space in the domestic heaven; she who hoisted herself so unwearingly for the precious ones around her; bitter, bitter is the tear that falls upon her cold clay! You stand beside her coffin and think of the past. It seems an amber-colored pathway, where the sun shone upon beautiful flowers, or the stars hung glittering overhead. Pain would the soul linger there. No thorns are remembered save those your hands may unwillingly have planted. Her noble, tender heart lies open to your inmost sight. You think of her now as all gentleness, all beauty, all purity. But she is dead! The dear head that laid upon your bosom, rests in the still darkness, upon a pillow of clay. The hands that have ministered so untiringly, are folded, white and cold, beneath the gloomy portal. The heart whose every beat measured an eternity of love, lies under your feet. The flowers she bent over with smiles, bend now above her in tears, shaking the dew from petals that the verdure around her may be kept green and beautiful.

There is no white arm over your shoulder; no speaking face to look up into the eye of love; no trembling lips to murmur, "Oh, it is so sad."

There is so strange a hush in every room, no light footstep passing around. No smile to greet you at nightfall. And the old clock ticks and strikes, and ticks—it was such music when she could hear it! Now it seems a knell on the hours through which you watched the shadows of death gathering upon her sweet face.

And every day the clock repeats that old story. Many another tale it telleth too—of beautiful words and deeds that are registered above. You feel—Oh, how often—that the grave cannot keep her.—*Our Dracer.*

A Beautiful Extract.—There is no one thing more lovely in this life, more full of the divinest courage, than when a young maiden, from her past life, from her happy childhood, when she rambled over every field and moor around her home; when a mother anticipated her wants and soothed her little cares; when brothers and sisters grew from merry playmates to loving and trustful friends; from Christmas gatherings and wants; from summer festivals in bower or garden; from the rooms sanctified by the death of relatives; from the secure back-grounds of her childhood, and girlhood, and maidenhood, looks but into the dark and unilluminated future, away from all that; and yet, unterrified, unhaunted, leans her fair cheek upon her lover's breast, and whispers, "Dear heart! I cannot see, but I believe. The past was beautiful, but the future I can trust—with thee!"

Eloquent but inarticulate.—A little while ago we passed half an hour in a village graveyard, reading the inscriptions on those tables of the law of "dust to dust." Upon one of them, carved in marble, was a chain. Of the nine links composing it, one was broken. How legible the characters! How intelligible the language! In that family there were nine once—a beautiful chain of affection, richer than gold, but death unloosened one link, and the broken jewelry of the hearth and the heart had glittered with the dews distilled from loving eyes. Broken jewelry! How many such trinkets of memory and affection there are in the homes of the world—souvenirs whose possessions should render humanity hallowed. Grief makes sacred those upon whom its hand is laid. Joy may elevate, ambition glorify, but sorrow alone can consecrate.

For every one, life has some blessing—some cup that is not mixed with bitterness. At every heart there is some fountain of pure waters, and all men at some time or other taste their sweetness. Who is he that has not found on his path of life, some fragrant rose-bush, scenting all the air with its sweet perfume?

When the Hindoo priest is about to baptize an infant, he utters the following beautiful sentiment:—"Little babe, thou enterest the world weeping, while all around thee smile; contrive so to live that thou mayst depart in smiles while all around thee weep."

Without innocence, beauty is unlovely and quality contemptible.

MOORE'S RURAL NEW-YORKER

ROCHESTER, AUGUST 26, 1854.

An Explanation, or apology, is something we never could pun with grace or facility, and hence constantly aim to avoid the necessity of taxing our ability in that peculiar department. But whenever duty demands, we are bound to "face the music," and perform the proper evolutions, however painful the exercise. Therefore, we proceed to state, what most of our readers know already, that the paper upon which the Rural has been printed recently, was quite inferior,—and moreover, as they did *not* know, decidedly different from our contract and expectations. We are furnished by contract, which calls for a *superior* and uniformly good article — for which we pay an extra price — but, alas, paper-makers, being only human, fallible mortals, sometimes "fail to connect," and the innocent publisher, like poor Tray, suffers the consequences. In our case there was no immediate remedy; the manufacturer having supplied an inferior article, and a good deal of the same, we were obliged to use it, or none, for several weeks,—for it was impossible to obtain elsewhere, on short notice, a sufficient quantity for even one week's edition,—(conclusive evidence of the great inconvenience of having a larger circulation than all the other Rochester weeklies combined!) But the paper upon which our last number was printed, took the palm for inferiority. No small portion of the edition made a decidedly un-Ruralish appearance, and thousands of copies were unfit to send *our* subscribers — men and women of sense and discrimination.

— There, friends, we have made a clean breast of it; and sworn, we trust, that "the head and and front of *our* offending" was altogether involuntary — originating with the man who makes the *white*, and not with the one who has the honor of furnishing you the *printed* paper. Therefore please refrain from giving us any credit for a species of economy sometimes practiced by publishers, but which we of the Rural could never willingly adopt.

Forest Fires.—Immense damage has lately resulted from fire in the woods in various parts of the country. The long continued drought that has prevailed for many weeks, has converted the forest into a vast magazine of combustible materials, ready prepared for the torch of the incendiary or the brand dropped from the hand of the careless passer by. On the line of Railroad leading up the Lake shore from Buffalo, hundreds of acres have been burned over; large quantities of wood, hay, &c., have been destroyed; fences consumed, and large tracts of pasturing—no small loss to the farming community—irreparably injured. Between Silver Creek and Dunkirk, the fences along the track of the Railroad are mostly obliterated.

On the line of the Plattsburgh Railroad fire has been raging, and a few days since as a locomotive was attempting to pass a pile of burning wood, the fireman was so badly injured that he died. In Steuben Co., also the loss by forest fires has been very great. The Saco (Me.) *Democrat* says that a fire raged five days in the woods of Biddeford, burning over 1,000 acres of fine wood land, and ruining the timber.

Anti-Nebraska State Convention.—A State Convention of delegates opposed to the Nebraska bill and to the further extension of Slave territory, met at Saratoga on the 16th. The meeting was very large, and composed of men of distinction from all parties, who assembled for the purpose of taking such action as might be deemed most expedient to promote the objects aimed at by the Convention. After organizing, a Business Committee, with Horace Greeley for Chairman, was appointed, who subsequently introduced a series of strong resolutions against the further extension of slave power. Considerable debate arose on the question of nominating an independent ticket, but the matter was finally settled by the adoption of the following among other resolutions:

Resolved, That when this Convention does adjourn it will adjourn to meet again in Auburn, at 10 o'clock A. M., on Tuesday, September the 26th, charged with the duty of presenting candidates for State officers to be supported at the ensuing election.

The Elections.—Election news from Missouri and Iowa have come in much more disastrous to the Democrats (especially in the former State) than was anticipated; six Whig Congressmen out of seven being elected. They owe their election in a great measure to the split in the Democratic ranks, the Benton and Anti-Benton wings waging war against each other to the knife. In Iowa the Whig candidate for Governor leads his Democratic opponent 4,000; both branches of the Legislature, and one if not both the Congressmen elect belong to the same school of politics. Augustus Caesar Dodge, the Iowa Senator who voted for the Nebraska bill, will have an opportunity to retire to the shades of private life. Both the Democratic candidates for Congress in Arkansas, have been elected.

Marriage notices must be accompanied by a responsible name to secure insertion in the Rural,—and if the proper fee is added, no exceptions taken. Some think there is propriety in paying $1, others 25 cents, and others *nothing*—according to the taste and pleasure of the bridegroom. All we require, however, is a properly authenticated notice.

Important Railroad Movement.

The managers of the four trunk lines of western railroads, viz., the N. Y. Central and Hudson River, the N. Y. & Erie, the Pennsylvania Central, and the Baltimore & Ohio, held a Convention at New York on the 18th, at which it was resolved in advance the price of freight and fares 20 per cent.; to run their trains at lower rates of speed, and to dispense with the services of all outside agents and runners. By this means an increase of receipts and an important reduction of expenditures are anticipated, an army of hostlers and brakesmen dispensed with, and the interests of stockholders promoted. The only thing to be regretted in the movement, is the increase of tariff rates on freight and passengers; and it is a matter of some interest to know by what right the Central advances its passenger tariff, as the statute authorizing its consolidation fixes it at two cents a mile. This inquiry, in case the managers are proceeding illegally, may be put to them in the shape of a *quo warranto*.

Settlement of Kansas.—The papers are just now filled with notes of correspondents from the Kansas territory. All unite in praising the beauty of the country, the fertility of soil, and the healthfulness and mildness of the climate. Settlers are pouring into the territory from all parts, particularly from the North and West.—The stories about mob law and forcible resistance to peaceful immigration are all moonshine; as the residents, both of the territory and the adjoining States, understand too well the value of thriving and industrious communities upon their borders to offer any resistance to the incoming settlers. They are received, both at St. Louis and throughout the entire route, with a most sincere welcome, and are forwarded to their destination with a hearty God speed.—Another convoy of immigrants leaves for the territory about the middle of September, and in a brief period Kansas will be writing herself beside the older States, "*E Pluribus Unum*."

Burning of an Excursion Steamer.—Long Island Sound came very near being the scene of a tragedy on the 16th. The steamer *May Queen*, having in tow a couple of barges, which, together with the steamer, were crowded with *two thousand* excursionists, went up the Sound from New York on a pic-nic. On the return trip the steamer took fire and was burned to the water's edge, but very fortunately not a life was lost. The captain, on the discovery of the fire, headed the boat for shore, and ran her aground in shoal water, whence such of the passengers as could not crowd upon the accompanying barges, leaped into the waves and waded ashore.

Powder Mill Explosion.—Some villain, on the 13th, set fire to the powder mill at Maysville, Ohio, containg 800 kegs of powder, and blew it to atoms, besides destroying thirteen houses by the explosion and the consequent fire. Strange to say, not a single life was lost. The citizens were so much alarmed that some minutes elapsed before any one would go into the street; the general impression being that the day of judgment had come—when the citizens had sallied out, they found the streets covered with fragments of houses, &c. The damage to property is between $50,000 and $100,000, and the Mayor has offered a reward of $1,000 for information that will lead to the conviction of the rascal who set fire to the magazine.

Madison University.—The Commencement of this (Baptist) Institution, was held on Wednesday week, at Hamilton, N. Y. Fourteen graduates received the degree of A. B., and one in the literary and scientific course. The Theological class graduating, numbers four. Among the exercises of the week, were addresses on China, by the Rev. Dr. Dean, of China; on the Romance of History, by Rev. Dr. J. C. Lord, of Buffalo; a poem by Augustine Duganne, Esq., of New York, and a sermon by the Rev. J. L. Burrows, of Philadelphia.

Plymouth Church.—The beautiful new church on South Sophia street in this city, is assuming shape and proportion such as it will present to the eye when fully completed. The brick portion of the tower is erected, and the framework of the lofty spire has been raised to its intended height, surmounted by a vane 225 feet above the pavement. It presents a very graceful aspect, and is a conspicuous object from all parts of the city and surrounding country. It will be the most superb church edifice in the city, and one of the finest this side of New York city.

A Peaceful Army.—The Grand Trunk (Ca.) Railroad have now employed on their works an army of 13,821 men and 1,846 horses, distributed as follows:

Divisions.	Men.	Horses.
Montreal and Toronto	5,796	964
Eastern Division	650	60
Central Division	1,151	253
Western Division	1,930	240
Toronto and Sarnia	1,152	74
Victoria Bridge	2,000	200
Quebec and Richmond	1,142	75
Quebec and Trois Pistoles	—	—
Total	13,821	1,846

How much better this is than to engage them for purposes of war and subjugation!

The Advertisements in our present issue will be found worthy of more than a passing glance. They include several matters deserving special notice, but we can only make this general reference.

A Brilliant Meteor.

Mrs. Rural:—A meteor of extraordinary brilliancy and magnitude having just appeared, I give its apparent locality in the heavens, with the hope that in connection with observations in other places, its distance may be determined, and an estimate of its real magnitude thus be found — which would certainly be a discovery of much interest in connection with these mysterious bodies.

It was about ten minutes past nine in the evening, (Rochester time,) standing in the open air, I was suddenly startled with a brilliant light, like that of a flash of lightning, which, however, continued, and looking up towards the zenith, beheld a magnificent meteor, giving about one-half as much light as the full moon, moving rapidly across the clear sky. It must have commenced near the constellation Aquila, or the Dolphin, and soon after passing the head of the Little Bull (*Taurus Poniatowskia*) it became suddenly obscured, or nearly disappeared, changing at the same time from its first dazzling light blue color, to a faint and dull reddish hue, and at the same time throwing off several fragments. It disappeared near the star Zeta in Serpentarius, south about 10° west. Its whole time was not probably over two or three seconds. The suddenness and magnificence of its appearance prevented that accurate observation of its exact path which otherwise might have been attained, but it is believed the above is nearly correct. J. J. Thomas.

Macedon, Wayne Co., N. Y., 8 mo., 17, 1854.

Great Rains—Not in this region, sweltering reader, but in Europe. England and France have the deluge, while our skies are brass, and all nature is prematurely beginning sere. While every section of our country is suffering from the drouth, protracted beyond precedent, it may be slightly refreshing—if it chances not to be aggravating — to read of copious showers elsewhere. The Paris correspondent of the Journal of Commerce, under date of 30th July, writes:—"In the afternoon of Saturday semi-night, Paris was flooded beyond any precedent this century; several principal streets in the interior became unnavigable; a gentleman, resident in the Rue de la Victoire, has assured me that he saw boys swimming below his window; the omnibuses were everywhere inundated, and all the cellars and shops in the square near the river. Tenants and landlords, builders and their employers, are at fair on the point who are to bear the extensive damage to merchandize and structures of one kind or another. Five persons were killed by strokes of lightning; two were drowned in a narrow street, being swept from the pavement."

The Drouth.—The Tribune of Saturday sums up reports of dry weather from all parts of the country, with the assertion that the drouth now prevailing is more widespread and more destructive than any hitherto known in America. The corn in many of the best counties of Illinois and Indiana, that promised an average yield of sixty bushels per acre, will, in many fields, not produce a single bushel, and the product cannot possibly equal one-half the usual average, if indeed, it equals one-fifth. This drouth is no longer confined to few isolated localities; it extends from Maine to Missouri; it has not only cut off Indian corn, but potatoes, turnips, and buckwheat, and the fall feed for cattle. In some places the poor brutes are literally starving.—Some feed them out of their winter store, and some drive them to the woods to browse;—all sell them as fast as they can, and many are sent to the shambles, though only fit for the knacker's yard.—*Democrat.*

A Pioneer Gone.—The Milwaukee papers notice the death in that city, on Friday last, of Michael Dousman, the "patriarch of Mackinac," at the age of eighty-three years. He had been at Milwaukee, visiting his children, where he was taken sick, and for the first time in his life, within his recollection, was confined by illness to his bed. It was not supposed, however, that the attack was mortal; but on Friday afternoon he suddenly expired. His disease was an affection of the heart. Mr. Dousman was one of the oldest pioneers of the northwest. He emigrated to Mackinac in 1791, and had resided there continuously for 63 years. By his prudence, industry and sagacity, he had acquired a handsome estate. A wife and six children survive him—four of his sons being prominent citizens of Wisconsin.

The State Agricultural Fair.—The New York State Agricultural Society have signified to the Common Council their acceptance of the offer of the use of Hamilton Square for their next annual exhibition. The American Institute having abandoned its annual fair for this season, will co-operate with the Agricultural Society in rendering the coming exhibition as extensive and interesting as possible. Hamilton Square has area of about eighteen acres. The ground is to be prepared for the purpose of the exhibition by the 25th of September, and will be opened to the public on the 3d of October. As the Crystal Palace exhibition will be open at the same time, a great influx of visitors from the country may be anticipated.—*N. Y. Eve. Post.*

Gigantic Railroad Monopoly.—The Governor of Texas has awarded the Hon. Robert J. Walker and Thomas Butler King, as representatives of the Atlantic and Pacific Railroad Company, the contract for building the road to the Pacific, which grants sections of land for each mile of road. The company, by this grant, will acquire about 11,000,000 acres of land. The contractors have deposited three hundred thousand dollars as security for the completion of the road.

Widows and Pensions.—By a law on pensions, passed on the last night of the session, if the widow of a soldier marries, she loses her claim, but if that husband dies, she again becomes entitled to her pension as formerly. The amount of the new act is, that whenever the lady is a widow, the government holds itself bound to protect her.

Peaches are in market, and selling at 75 cents per peck. Though ripe, they are very diminutive in size, and of inferior flavor—items all attributable to the severe and long-continued drouth.

Cash Creek is the name of a new Post Office in Fulton Co., N. Y.—E. G. Stokes, P. M.

News Paragraphs.

☞ Miss Manning, one of the Cambridge graduates, was toasted at the late school festival in this city, in this style:—"She has found her *match*, but we could never find her equal."—The President asked the lady if she would not appoint a gentleman to speak for her, when one of the quick-witted youngsters exclaimed, "She has already been spoken for." Master Everett, son of Hon. Edward Everett, then responded for Miss Manning in an appropriate manner.

☞ About a year and a half since, some persons in searching at West Milford, Passaic county, N. J., for iron ore, came across a bed of clay, with the nature of which they were unacquainted. Until recently it has not been improved, on account of ignorance of its value; but a scientific investigation has revealed the fact that it is Kaolin, an exceedingly valuable porcelain clay.

☞ A Washington correspondent of the Baltimore Sun, learns that a fugitive slave, who had gone to a foreign country, upon sustaining in that country what he conceived to be wrong from its government, applied to the American minister for protection as a citizen of the United States. The decision of the minister was adverse to his right to claim the intervention sought.

☞ On Wednesday, the 2d inst., a quantity of old rags, some of which had been saturated with oil, were found to be on fire in the garret of a store in Doylestown, Pa. It is a clear case of spontaneous combustion, as the rags had been in a box for several days, and no fire or cigars had been taken into the room. The fire originated about the center of the pile.

☞ The Salem Gazette says:—"The sect of Millerites, worshipping in this city, who hold that Christ will come to judge the world before the year 1854 expires, have made quite a number of converts, and baptized them, within the last few months. A gentleman who has held an important office in our community, within a year or two, was baptised on Sunday last."

☞ The Duke d'Elchingen, second son of Marshal Ney, died recently at Gallipoli. The Duke had felt for some days a slight indisposition, when he heard of the death of his mother. That melancholy intelligence caused him a most lively emotion, and immediately after alarming symptoms appeared, and at four in the afternoon he ceased to exist.

☞ A scarcity of Agricultural laborers seems to prevail in France, and the Minister of War has ordered that the soldiers throughout the country may assist in harvesting, in case of necessity. The prices are to be fixed before hand, and as long as there is a civil laborer unoccupied, no soldier will be permitted to harvest.

☞ Of iron foundries there are in Pittsburg thirty-eight, of which number nine are steam engine factories, and twenty-nine for the manufacture of hollow ware, machinery, &c. The former have an aggregate capital of $549,000, produce 120 steam engines yearly, and consume 3200 tons of wrought and 9200 tons of pig iron.

☞ A young man named Lusk, student of Yale College, was knocked down in Norwich city, Ct., on Sunday evening week, badly beaten and stamped upon, by a clan of men none of whom he could identify, and all for no other conceivable reason than that he wore a Know-Nothing hat.

☞ The long continued drouth has caused nearly all the private cisterns in Brooklyn to be deficient in water, and it is said that some of the residents here have been glad to obtain rain-water even at the cost of paying sixpence per pail to their more fortunate neighbors.

☞ The Louisville Journal of Aug. 10, says:—The river presents a sorry sight. Steamboats are almost getting a curiosity. None but stern-wheelers are running above this, and they plow their way over many of the sand bars with great difficulty.

☞ Hon. George Underwood, of Auburn, has given $500 to Hamilton College, the income of which is to be annually given as a prize for proficiency in Chemistry; and Hon. Aaron Clark, of New York, has provided, by a similar donation, for the same proficiency in Oratory.

☞ Ceylon has been visited with great storms and destructive floods. In some parts people had to seek refuge in the tops of trees. At Colombo, the lightning struck down nearly a whole company of the Ceylon rifles, but only one man was seriously hurt.

☞ Thirteen persons are employed at a manufactory for preserving tomatoes, in Trenton, N. J. About half the number are girls.—Some of them are steaming, others are cutting off the skins and filling the cans, while three persons are engaged in soldering up the cans.

☞ A large barn situated in the south part of Barre, Mass., was recently entirely destroyed by fire, with all its contents, consisting of hay, grain, and a new outfit of farming tools. The fire was set by some children who were playing with matches in a hay mow.

☞ The Rev. Josiah Grinnell, late of New York city, with a number of New England people, has purchased thirty or forty thousand acres of land in Iowa, about half-way between Davenport and Iowa City, and commenced the work of building an enterprising town.

☞ There was brought up from the bottom of the lake at Plattsburgh the other day, the wheel of an old cannon-carriage, and it has been ascertained that the gun, a French one, still lies there. This relic must date back to the time of the French occupation of the country.

☞ All the parties of Government Engineers recently engaged in running experimental routes for a Pacific Railroad, are now in Washington, engaged in bringing up their several reports, which are to be ready by the next meeting of Congress.

☞ It is not generally known, says the Lebanon Advertiser, that Lindley Murray was an American, and born within the present limits of Lebanon county, Pa. He was born in the year 1745, on the Swatara, in East Hanover township, then Lancaster, now Lebanon county.

☞ M. Franz Kreger, a goldsmith at Frankfort-on-the-Main, who died, has, with the exception of a few private legacies, left the whole of his fortune, amounting to nearly 400,000 florins, to the charitable establishments of that city.

☞ Some genius at the West, who has an arithmetical turn of mind, has figured up the cost of extending the area of freedom to Mexico, Cuba, Hayti, Porto Rico and Canada, at one thousand billion of dollars.

☞ Gov. Wright, of Indiana, has been invited to deliver the annual address before the New York State Agricultural Fair in October next. The value of the premiums to be delivered on that occasion will exceed $8,000.

News Brevities.

— The recent fire in New Orleans destroyed property to the amount of one million.

— The Syracuse and Binghamton Railroad is to be opened on the 12th of September.

— The President threatens to remove all the Know-Nothings who hold office.

— A paper called the Omaha Arrow, has been started at the City of Omaha, Nebraska.

— Blackberries, if thoroughly ripe, are not only a very palatable but a thoroughly healthful fruit.

— Congress appropriated $1,500 in the Army Bill for a sword to Brevet General John E. Wool.

— The Boston Atlas says there was a severe frost at East Moultonborough, N. H., on Tuesday night of last week.

— There are seventy-two hotels in Boston, and the amount of capital invested in them is estimated at $1,000,000.

— The salary of the Mayor of St. Louis has been increased to $2,750, and the City Engineer to the same amount.

— The average expense of a voyage from New York to Liverpool, of the Collins' steamer, is $16,200.

— Brevet Lieut. Bonaparte, now in France, has sent in his resignation to the War Department, and the same has been accepted.

— Capt. Hollins, of the sloop-of-war Crane, lately went to Washington, and had an interview immediately with the President.

— Secretary Marcy has for several days been so ill of cholera morbus as to be unable to leave his house. He is, however, getting better.

— Ex-Senator Downs, of Louisiana died at Crab Orchard Springs, Ky., on the 15th. He had been sick for some time.

— Thirty-six yellow fever cases have occurred on board the French man-of-war steamer lying off Norfolk, Va.

— Secretary Dobbin is said to be one of the candidates for the vacant Senatorship of North Carolina, to be filled next winter.

— In town of Niles, Mich., which has a population of two thousand five hundred souls, no death has occurred since the 24th of February.

— Dr. J. C. Patterson, Postmaster at Mc-Whirterville, Tenn., has been arrested for robbing the mail, and committed for trial.

— Nineteen thousand six hundred and eighteen foreign emigrants landed in New York from the 1st to the 12th inst., inclusive.

— The President has appointed Thomas C. Porter as Collector of the port of New Orleans, vice Solomon M. Downs, deceased.

— A man fell from the Railroad Bridge over Allen's Creek, near this city, a few days since, a distance of 90 feet, receiving fatal injuries.

— A strong tide of emigrating Savoyards is setting in at Genoa for America; upwards of 500 having arrived there in the course of a week.

— Not one-fourth of the present rank and file of the U. S. army are Americans, while about three-fourths of those in the service are Germans and Irish.

— Another and a larger party of emigrants for Kansas, will leave Boston on the afternoon of the 29th, and probably pass through this city on the 30th.

— As nearly as can be ascertained, ten persons were killed in the recent riots at St. Louis, and some of the wounded are not expected to recover.

— The citizens of Louisville voted Monday week on the proposition to appropriate $100,000 to complete the School System, and carried it by 1,800 majority.

— The will of Commodore Porter, recently deceased, has been entered for probate in the Orphan's Court. The entire property is bequeathed to Mrs. Porter.

— The emigration of Hollanders to this country, during a few years past, has been very great. One colony for the west part of Michigan numbers 2,902.

— Judge Edmonds is preparing a second volume on "Spiritualism." The completion of which, however, has been interrupted by his serious illness.

— The New York Tribune recommends the election of Fred. Douglas as the successor of Gerrit Smith, in the Oswego and Madison Congressional District.

— The Evangelical Lutheran Synod of Ohio and adjacent States, has passed a resolution not to admit to church membership any persons belonging to secret societies.

— The opening of the Bytown and Prescott (Canada) Railroad to Kemptville, a distance of 24 miles, was celebrated on the 9th, with appropriate ceremonies.

— It is rumored that the eldest son of the Prince of Prussia is to marry the Princess Royal of England, when she is sixteen—which will be in a little more than two years.

— On June the 24th, there was upwards of one ton of letters accumulated at Constantinople from England, but no one had authority to break the seals or the bags.

— Three out of the four Swedish chambers have adopted a law allowing Jews to live in any Swedish town. This is a small beginning of Christianity and toleration.

— The Mayor of Toronto has refused to permit Franconi's Hippodrame to perform in that city. The authorities of Yorkville refused a similar application.

— Count Casimir Bathyani, one of the most prominent figurers in the Hungarian struggle for independence, died suddenly at Paris, on the 12th of July, in the 46th year of his age.

— Thos. H. Benton, being defeated for the House, has announced his intention to stump the State of Missouri, for the purpose of securing his election as United States Senator.

— A man, who had the appearance of being a farmer, and who was under the influence of liquor, recently jumped overboard from the steamer Southern Michigan, and was drowned.

— Capt. Chipman, of Austin, Texas, while encamped out, was bitten in the night by a tarantula. He suffered for some days, but finally obtained relief by repeated applications of soda.

— The first white male child born in Nebraska since the passage of the organization bill, was born at Dr. Clark's Hospital, Nebraska Centre, in June, and was christened Bill Nebraska Kinney.

— The Wisconsin University, at Madison, is now in process of erection. It is to be built of stone, on an eminence a mile west of the capitol, in a park of fifty-five acres. It has a fund of $400,000.

Literary Notices.

FIFTY YEARS IN BOTH HEMISPHERES, or Reminiscences of the life of a former Merchant. By PIERRE NOLTE, Late of New Orleans. Translated from the German.

THE above is the title of an interesting work just issued from the publishing house of REDFIELD, N. Y. It is a very entertaining narrative of personal observations and experiences of a man engaged extensively in mercantile and money transactions through a period of more than half a century, and brought thereby into contact with the leading men of both Europe and America. Crowned heads and republican leaders have to submit to his criticisms, and he speaks unreservedly upon all matters of which he treats.

The old motto, *"de mortuis nil nisi bene,"* (speak well, or keep silence concerning the dead,) he says, under the sanction of which so much falsehood has been served up to a credulous posterity, has been regarded by him only in those cases where unblemished reputations have made praise a duty. His motto is, to say nothing concerning the dead unless the truth; and consequently he gives play to much humorous and quiet sarcasm at the expense of men who occupied high places during the period of which he treats.

The book is highly entertaining, and meets an extensive sale. DEWEY has it, in the Arcade.

COLTON'S ATLAS OF THE WORLD, Illustrating Physical and Political Geography. New York: J. H. COLTON & Co.

THE second number of this magnificent and valuable work contains four maps — 1st, of Upper Canada, with the adjoining States, and sections showing the vicinities of the Welland Canal, Niagara Falls and Navy Island enlarged; 2d, Connecticut; 3d, Alabama; 4th, Kentucky and Tennessee. These are now given as they are completed, and not according to their proper place in the volume. Each map has a full page of descriptions, in which are given the agricultural products, manufactures, internal improvements, and the traffic upon the channels of trade, banks, commerce, education, principal cities, towns and points of interest, and an epitome of history.

The work is sold only on subscription, and the agent, Mr. H. N. LOOKWOOD, is now canvassing the city.

TIMELY TOPICS.—D. M. DEWEY, of this city, has just published, in a handsome pamphlet, "The Constitution of the United States, with all the acts of Congress relating to Slavery; including the Nebraska and Kansas Bill." These are "timely topics," for all classes of citizens.

Foreign Intelligence.

Arrival of the Union and America.

THE steamer Union, from Havre, arrived at New York Aug. 16th, and the Liverpool steamer America reached Halifax on the 17th, with three days later news than by the former from Europe.

The principal items of interest were an advance in breadstuffs, and rumored important movements of the allies, both in the Baltic and the Black seas. The subsequent arrival of the Collins steamer Baltic, reports another slight advance in the markets, causes the Black Sea movements to assume a more definite shape, but throws no new light upon the affairs in the North.

Arrival of the Baltic.

THE Baltic arrived at New York Aug. 19.

Flour in good request, but rather heavy; Western 33; Ohio 34.

Wheat advanced 2 pence; corn 1s; lard firm at 35; rye dull; pork dittо; beef unchanged. Consols closed at 92¼@⅞.

It is confirmed that the expedition against Crimea and Sevastopol has left Varna. Nothing certain respecting Bomersund has been received, except that it is about to be bombarded and the Aland Islands taken.

The Russian steamer Uliddimer made a sortie from Sevastopol and destroyed one Turkish merchantman and chased the English steamer Cyclops, which vessel had left her guns on shore, to carry a large cargo of stores.

The Turkish army is advancing cautiously on Bucharest. The Russian rear guard was about half way between Bucharest and Busche. On the 22d the Turkish army had not entered Bucharest. It is said that retrograde movements are being made in Moldavia. It is reported that according to an agreement between the Porte and the Austrian envoy, the Turks will not enter Bucharest; that the Turkish troops shall be withdrawn from the Danube on the arrival of the Austrians.

It was rumored, but not credited, that twelve vessels of war cannonaded the Aland Islands for seven hours, and that the French were in occupation of them.

Omar Pasha has asked for provisions and lodgement for 12,000 men in Bucharest, and rations for 20,000 outside its walls.

The British steamer Fury entered Sevastopol in the night, and remained until morning. She was fired at with both shot and shell, but suffered no damage.

SPAIN.—The barricades have been taken down in Madrid. It was reported that an armed mob had forbidden Christians to leave Madrid without the payment of a large sum of money.

ENGLAND.—The payment of £3110,000, on account of the last series of exchequer bonds, tended to increase the pressure in monetary affairs on Tuesday.

Bombay dates to July 1st. They speak of disposition towards peace on the part of the Court of Ava.

The Russians had captured the fortress of Rocan.

The Dutch expedition against Borne was successful.

The corvette Sumatra had been destroyed by fire.

LATEST.—The Turkish fleet had sailed for Varna, with the pontoons and all the transports.

The Arch-Duke Constantine barely escaped drowning at Cronstadt, by the upsetting of a boat. Admiral Galatzin and four seamen were drowned.

Denmark has given her complete adherence to the Austro-Prussian treaty.

EGYPT.—Alexandria, July 26.—Said Pasha has granted an amnesty. He has abolished the corn monopoly, which has hitherto belonged to government, has re-established free trade, and modified various taxes. The popular enthusiasm was very great.

ST. PETERSBURGH, July 1.—The Czar, supported by the Grand Duke Constantine, will resist to the last, and since the fleets have left Cronstadt, he is more determined than ever. Count Nesselrode and the Grand Duke Kemptinz, try all they can to prevail on the Emperor to alter his policy. Their efforts are in vain, although their partizans increase daily in numbers. The old Russian party has yet a preponderance.

THE "STILL LIVES."—A correspondent of the N. Y. Courier and Enquirer says that the English government is now beginning to suffer the consequences of its insulting conduct to Metternich a few years ago. When, in 1848, that aged statesman was constrained by the course of political events to seek a temporary refuge in England, Palmerston deemed him a safe subject for outrage. The ex-Minister, bent down by years and affliction, having, in reply to some taunt of the foreign Secretary's, declared that "the British aristocracy had a reckoning yet to settle with the people, and that the day was not far distant," Palmerston ordered him within twenty-four hours to quit the kingdom. To his astonishment, Palmerston has since seen him rise with a stateliness and dignity of which his seemingly stricken body and broken spirit, previously afforded no anticipation; and to the dismay of the English Whigs, Metternich has ever since proved their irreconcilable foe. He hurried to Vienna, pealing with his fury and vengeance. The reaction produced on his body, restored the slumbering resources of his mind, and he has ever since been found counsellor, as well as secret spring of the Austrian Empire.

☞ Thursday night of last week some maliciously-disposed person threw a brick-bat through one of the magnificent plate-glass windows of Taylor's saloon, corner of Franklin and Broadway, New York. The Journal of Commerce says the window was fourteen feet in height, formed of a single pane of glass, and was imported from Europe at a cost of $1,000.

Acts

Passed at the First Session of the Thirty-third Congress, and approved by the President.

[Concluded from last week's paper.]

An act to provide for the accommodation of Courts of the United States in the district of Massachusetts and in the cities of New York and Philadelphia.

An act to establish a port of delivery at Lake Port, on Lake Pontchartrain, and for other purposes.

An act constituting Madison, in the State of Indiana, a port of delivery.

An act creating a collection district in Texas and New Mexico.

An act to constitute Tuscumbia, in the State of Alabama, a port of delivery, and for other purposes.

An act making appropriations for fortifications and other works of defence, and for the repairs of barracks and quarters, for the year ending 30th of June, 1855.

An act for the relief of the civil township of Marion, in the county of Mercer, Ohio.

An act making appropriations for light houses, light boats, buoys &c., and providing for the erection and establishment of the same, and for other purposes.

An act for the relief of the inhabitants of school township forty-five, range one, in Warren county, Missouri.

An act granting the right of way over, and depot grounds on the military reserve at Fort Gratiot, in the State of Michigan, to the Port Huron and Lake Michigan Railroad Company.

An act to authorize the State of Illinois to select the residue of the lands to which she is entitled under the act of 2d March, 1821, granting land to that State to open a canal to connect the waters of the Illinois river with those of Lake Michigan.

An act constituting San Pedro, in California, a port of entry and delivery.

An act to constitute Cairo, in the State of Illinois, a port of delivery.

An act to amend the provisions of the 56th section of the act entitled "An act to regulate the collection duties on imports and tonnage," approved the 2d day of March, 1799.

An act to authorize the State of Wisconsin to select the residue of the lands to which she is entitled under the act of 9th August, 1846, for the improvement of the Fox and Wisconsin rivers.

An act authorizing the extension of the Alexandria and Washington Railroad into the district of Columbia, and conferring certain privileges on the Baltimore and Ohio Railroad Company.

An act to vest in the several States and Territories the title in fee of the lands which have been or may be certified to them.

An act for the relief of Geo. Maltingly.

An act for the relief of Mrs Helen Mackay, widow of the late Col Æneas Mackay, Deputy Quarter-Master General United States Army.

An act for the relief of Wm. J. McKibbiney, E. F. Matthews and Laurence Cribben.

An act for the relief of Jonas P. Levy and Jane Maria Jerrers.

An act to incorporate the National Hotel Company of Washington city.

An act for the relief of Silvanus Culver.

An act to constitute Palatka and Bayport in the State of Florida, ports of deliver respectively, and Keokuk and Dubuque, in the State of Iowa.

An act to establish certain post roads.

An act making appropriations for the support of the army for the year ending the 30th of June, 1855.

An act making appropriations for the transportation of the U. S mail by ocean steamers and otherwise during the fiscal year ending the 30th of June, 1855.

An act making appropriations for the naval service for the year ending the 30th of June, 1855.

An act making appropriations for the civil and diplomatic expenses of government for the year ending the 30th of June, 1855, and for other purposes.

An act making appropriation for the service of the Post Office Department during the fiscal year ending the 30th of June, 1855.

An act to extend the right of pre-emption over unsurveyed lands in Minnesota, and for other purposes.

An act to graduate and reduce the price of the public lands to actual settlers and cultivators.

An act to increase the pay of the rank and file of the army and to encourage enlistments.

An act to incorporate the Pioneer Manufacturing Company of Georgetown.

An act authorizing the settlement of the balance of the property accounts between the United States and the State of New York, for military stores in the war of 1812.

An act to repeal the first proviso in the fourth section of the act entitled "An act granting bounty land to certain officers and soldiers, who have been engaged in the military service of the United States."

An act declaring the Southern boundary of New Mexico.

An act for the relief of Thos. Bronaugh and to repeal the "Act to aid the Territory of Minnesota in the construction of a railroad therein," approved 29th June, '54.

An act to establish a land district in the State of Florida, to be called the district of Tampa.

An act granting the right way to the Marysville and Benicia Railroad Company through and over the grounds of the United States at and near Benicia in California.

An act to establish certain additional post roads.

An act for the relief of the inhabitants of school township 45, range one, in Warren Co., Missouri.

An act to carry into effect a treaty between the U. States and Great Britain, signed on the 5th of June, 1854.

Marriages.

IN PICTOR, Aug. 16, 1854, Col. H. W. HOUGHTON, of Philadelphia, late of California, and Miss H. S. CONOVER, of Victor, Ontario Co., N. Y.

☞ California papers please copy.

IN the Village of Canoga, on the evening of the 20th inst., at the Methodist Church, by the Rev. T. J. O. WINCHEN, Rev. JOHN H. BLADES, of the East Genesee Conference, and Miss HELEN A. WOODEN.

Deaths.

IN KANONA, Steuben Co., N. Y., Aug. 1st, CLARISSA BUSHNELL, neice of Deacon Harvey Bushnell, aged 17 years. Her remains were brought back to West Bloomfield for interment.

Commercial.

BUSINESS AND FINANCE.

THERE has been no arrival from California since our last, and consequently no influx of the precious metals, although a large amount has gone abroad. The Boston steamer, on the 16th, took out $240,000; the Atlantic, on the 19th, $223,532, and the Arctic, at a later date, about a million more. The money market is not specially stringent, except for stock speculators, and men and corporations of doubtful credit, and they are having a hard time.

Stocks are dull and still low on the list. Erie is especially depressed, closing at the board on Saturday at 40.

Market Intelligence, &c.

RURAL NEW-YORKER OFFICE, Rochester, August 23, 1854.

THE prospect of short fall crops, in consequence of the absence of rain, has enhanced the price of several products materially within a week. Wheat brings $2 readily; but very little actually prevails. The remarkable lowness of water in the river, vexing the running of our mills, keeps millers out of the market; and the little wheat changing hands is either for the supply of steam mills or for shipment east in bulk. Corn is worth to-day, 72 cents.

Butter is scarce and high, grocers paying eighteen pence for prime.

Hay also brings better prices, ranging from $10 to $15 per ton. Wool markets dull and prices unchanged.

NEW YORK MARKET—Aug. 21.

FLOUR AND MEAL.—The market for common grades flour lower, with good demand for home consumption.—Sales at $8,12½@8,62½ for common to good State; $8,75@9,31½ for choice and fancy do; $9,7.@11,81½ for common to good Ohio and Michigan, and $10@11,00 for the whole range of extras. Canadian at $8,00, good common brands. Rye flour is scarce and wanted at better prices—sales at $6,25 for fine, and $7,75 for superfine. Corn Meal in fair request at $4,06¼ for Jersey.

GRAIN.—There is a better demand for wheat and market firmer. Prime white Genesee at $2,20, and $2,12½ offered. Sales western red at $1,87½; white western at $2,05; fine Canadian $1,72½ for red, and $1,92½ for white; choice red Southern $1,65. Rye better, with sale at $1,20@1,21—new held at $1,00. Corn at 68½@69c for un-sound Western mixed; 84c for round yellow; good sound parcels in store were held at 83@85c. More doing in oats and market firmer—sales State and Western at 48@51c.

PROVISIONS.—Pork market a shade firmer. The reported injury to the corn crop in the Middle and Western States, gives the holders the decided advantage. Demand moderate, principally for the local trade. Sales $13,37@13,50 for mess; $15,25 for clear; and $11@11,50 for prime. Lard is firm at 10½@11. Butter in good request at 13@17 for Ohio, and 17@20 for State. Cheese 9@10c.

ALBANY MARKET—Aug. 21.

FLOUR AND MEAL.—Both a fair Eastern and local demand for Western and State Flour, and with moderate request. Sales at $7,25@8,50 for common to good State and Western, $8,50@9,50 for good to choice do; $9,75@10,75 for fancy to extra Ohio and Michigan; and $10,25@11,25 for extra Genesee. Corn meal is firmer, and is in good request at $4,50@4,56 ₩ 101 lbs.

GRAIN.—The supply of Wheat is moderate, and with a fair home demand, the market for prime is firm. Sales of prime new white Genesee, in lots, at $2,20@2,21. Corn—Sales Western mixed opening at 77½@78c, and closing at 80c afloat, and 81@82c, for lots delivered at the Boston Depot. In Barley there is but little doing.—sales good lots secured at 91½c. Oats are in moderate request,—sales Chicago, in lots, at 45c, weight.

BUFFALO MARKET—Aug. 21.

Flour—Holders firm at advanced prices in view of the scant supply, and limited receipts. All the warehouses are nearly cleaned out and there is not sufficient arriving to meet the immediate demand. Sales at $8,75½@9,50 for ordinary to extra brands of Michigan and Southern Ohio.

Wheat without sale and we hear of none offering on the market. Fair inquiry for milling.

Corn—The speculative inquiry continues to increase and there is a very active demand this morning, the market being nearly swept clean by noon. About 100,000 bu. of corn changed hands at 68c,—a parcel of warm sold for 66c. Oats scarce and quiet—market very firm. Sales at 35c.

NEW YORK CATTLE MARKET—Aug 14

AT Washington Brick Yard—Offered to-day 3,412 Beef Cattle; during the week 3196. Supplies of Beef Cattle have come in lowly the number on hand being larger than for many weeks past; demand fair, but not active enough to clear the market. Left over 600. Prices are fully $1 per 100 lbs lower than last week's rates. We revise our quotations: Beef Cattle $7@9,50; Cows and Calves at $50@50; Veal Calves (live weight) 4@6½c; do. gross 2@4; Sheep (on foot) $3@3; Lambs $2,50@6; Swine (corn fed) $4,75@5.

At Browning's—Prices at this market for Beeves have taken a very wide range. Sales at $7@10,50 per 100 lbs. for Beeves; Cows and Calves lower, and sold at from $28 to $35; extra at $45@50. Veal sold at 4¾ to 6¾c. per lb., live weight. Sheep range at from $1,50 to 4,50@5,50.

At Chamberlain's—Prices of Beef ranged at from $7,50 to $10,00 per 100 lbs. Cows and Calves at from $25 to $50. Veal Calves 4½ to 7c per lb. Sheep $3,00 to 7,00. Lambs $2,50@5,00.

At O'Brien's—Sales of Beeves at $7@9,50 per 100 lbs. Cows and Calves at from $25 to $40; Veal 4½@6¾c. ₩ lb.

CAMBRIDGE CATTLE MARKET.—Aug. 16.

AT market 2,895 Cattle—500 Beeves, and 295 Stores.

Prices—Market Beef—Extra $8,50 per cwt., 1st quality, $8@8; 2d do, $7,00@7,25, 3d, do, $6@6,50; ordinary, $5@6,50. Hides, ₩ cwt. $6@8,25; Tallow 7@8,24. Pelts, 37@62c. Calf Skins, 14@15c ₩ lb. Veal Calves $5,25 to $9; ordinary, $3@4,25.

STORES—Working Oxen—No sales.

Cows AND CALVES—$24 to $45 each. Two years old—$16 to $20@32. Three years old—$25 to $45@51.

SHEEP AND LAMBS—6,102 at market. Prices—Extra—$4,00 to $5@9. By lot—$1,50 to $3@4,50

SWINE—None.

BRIGHTON CATTLE MARKET—Aug. 17.

AT market 2,200 Beef Cattle, 500 Stores, 7,200 Sheep, and 1,200 Swine.

PRICES—Beef Cattle—A large proportion of the cattle at market were small and not fat; prices declined. Extra $8,50; first quality, $7,50@8, 2d, $6,50@7, 3d, $5,@6,25. Working Oxen—Sales $70 to $145@165.

Cows and Calves—Sales $24 to $62. Sheep—Dull and prices reduced; small lots $2,50 to $4,00@6.

Swine—Dull at reduced prices; two entire lots 3¾c, one at 3¾c and one at 4c. Small selected lots 4¼c for retail from 4½c to 5¾c.

CHEMICAL ANALYSIS.

J. DHYAN, Practical Chemist, 112 State St., Rochester, N. Y., is prepared to make *full and accurate* analysis of Minerals, Soils, Metals, Mineral Waters and Chemical Compounds, and articles suspected of adulteration and *Poisons*, either organic or inorganic, and in quantity or quality. It is necessary to send one or two ounces of a solid, and a pint or more of a fluid for examination. 241-13t

SUFFOLK PIGS from the stock of Prince Albert which gained the gold medal at Smithfield Club, England, also the first prize at the exhibition of the Norfolk Agricultural Society, Massachusetts, 1853, two to three months old, supplied with boxes delivered on board Express, cars, or vessel on receiving thirty dollars per pair. Or they will be sent to any part of the United States, upon receiving a certificate of deposit for forty dollars from the Postmaster, that upon their reception, in good order, free of expense, he will pay. Address JAMES MORTON, West Needham Mass.

Or GEORGE R. P. FLAGG, Boston, Massachusetts.

EYE AND EAR INFIRMARY.

DR. WALKER, Oculist and Aurist, (from London, England,) may be consulted daily, and testimonials obtained at the office, 52 State St., Rochester, N. Y. 242-tf.

1,000 YOUNG MEN

CAN make over 100 per cent. in a highly respectable, easy, honest, and useful business,—no Patent Medicine nor Book business. For full particulars address, post-paid, P. O. Box No. 7, Crawfordsville, Ind. 242-4t*

FARM WANTED.

WANTED to purchase, a small farm of from 20 to 40 acres, under a good state of cultivation, with suitable buildings and fruit, located in a healthy section, within two miles or less of a village. A location in Monroe or some adjoining county preferred. Address the subscriber, post-paid, at Waterford, Saratoga Co., giving full particulars and description of property and price, and it will receive my earliest attention. (242-2t*) SAM'L V. WILSON.

REMARKABLE INVENTION.

BUTTER MADE EASY.—Tillinghast's Patent Churn took the HIGHEST PRIZE, at the late great trial of Churns, at the Crystal Palace, N. Y. Nearly all the other Patent Churns in the country were tested, but Tillinghast's came out triumphant, making *more butter* in a *shorter time*, and of a *better quality*, than any other. Beyond all doubt it is the best churn ever made. It is handy and simple in construction. No firm or family should be without it. For it abridges the time and labor of butter-making to a remarkable degree. Town, County and State rights for sale. To enterprising men here is a grand chance. County rights will be sold from $50 to $100, from which $1,000 to $10,000 can be easily realized. Price of single churns, $6, sent by express to any part of the country, on receipt of the money. Address, ALFRED E. BEACH, People's Patent Office, 80 Nassau St., New York.

ADVERTISEMENT.

HAVING set my Leo Kaiser-ward, I now offer my Farm and Mill Property—a great bargain. The Grist Mill is new (been running but two years), well and substantially constructed, on a good stream, and in a good grain country, the toll yielding a good living for a family. The Farm is attached to the Mill, containing about 100 acres (25 cleared and in fence), a small Dwelling House, Barn, and other out-buildings. The property is well located, on the State Road, running from Stroudsburg up Broadheads Creek.—There is a Peach Orchard in full bearing, grafted Apple Trees, and a great variety of small Fruit. The Post Office is within three minutes' walk of the Mill. As I must effect a sale during September, I have determined to put it at the extremely low price of $2,000, or $1,800 cash. Title perfect. Address, post-paid, JOHN B. PITT, Coxsackie, Monroe Co., Pa. 241-2t*

THE HORSE, THE HORSE!

Noblest of Domestic Animals,

AND the one most frequently ill-treated, neglected, and abused. We have just published a book so valuable to every man who owns a Horse, that no one should willingly be without it. It is entitled

THE MODERN HORSE DOCTOR,

And is from the pen of that celebrated English Veterinary Surgeon, Dr. GEO. H. DADD, well known for many years in this country, as one of the most successful, scientific and popular writers and lecturers in this branch of medical and surgical science. The book which he now offers to the public, is the result of many years' study and practical experience which few have had.

From the numerous and strong commendations, of distinguished men and the newspaper press, we select the following:

Extract from a letter from Hon. John H. Clifford, Ex-Governor of Mass.

New Bedford, May 17, 1854.

DR DADD.—*Dear Sir:*—I hope your new work on the noblest creature that man has ever been permitted to hold in subjection, the horse, will meet with that success which all your efforts in this direction so well deserve.

Your obedient servant, JOHN H. CLIFFORD.

From Hon. Marshall P. Wilder.

Boston, May 13, 1854.

Dr. DADD,—*My Dear Sir:*—I am greatly obliged to you for the valuable treatise, the results of your own investigations, which you have recently issued, hoping that it may meet with the patronage of a discriminating community.

I remain yours with great regard, MARSHALL P. WILDER.

The *Modern Horse Doctor*, by G. H. Dadd, is a manual of genuine science, and ought to be owned and studied on the score of humanity, as well as interest, by every man who owns a horse.—*Boston Congregationalist.*

Dr. Dadd has had great experience in the cure of sick horses and explains the secret of his success in this vol.—*N. Y. Tribune.*

The author of this work is well known as a most skillful veterinary surgeon. His book is based on the soundest common sense, and as a hand-book for practical use, we know of nothing to compare with it.—*Yankee Blade.*

We know Dr. Dadd well, and are satisfied that he possesses most important qualifications for preparing such a book as this.—*N. E. Farmer.*

Messrs. Jewett & Co. have just published a very valuable work by Dr. Dadd, a well known veterinary surgeon, on the causes, nature and treatment of diseases, and lameness in horses.—*Farmer's Cabinet.*

This is one of the most valuable treatises on the subject, ever published; and no owner of that noblest of the animal race, the horse, should be without it. Especially should it be in the hands of every hotel and livery-stable keeper. To many a man would it be worth hundreds of dollars every year.—*Ind. Democrat, Concord.*

By far the most learned and copious work on the horse and his diseases we have ever seen.—*N. Y. Evangelist.*

One of the greatest and most commendable qualities of this work, is it is *practical* and plain to the comprehension of those farmers and others for whom it is designed. The course of treatment favors generally a more sensible and rational system of medication than that recommended in any previously existing works on farriery. No farmer or owner of a horse should be without this book. Stable keepers, stage proprietors and hackmen, we believe would derive profit by having at least one copy hung up in their stables for use and reference by their stable men.—*Daily News, Philadelphia.*

There is more common sense in this book than any of the kind we have ever seen, and farmers and owners of horses would find it a matter of economy to possess themselves of it. It will be of more service than the counsel of a score of ordinary doctors.—*Albany Cultivator.*

We deem this decidedly the best and most reliable work on the "Cause, Nature, and Treatment of Disease and Lameness in Horses," ever published.—*Nantucket Enquirer.*

If that we have read of this book induces us to regard it as a very sensible and valuable work; and we learn that those much more competent to judge of its value have given it their unqualified approval.—*Ev. Trav. Boston.*

This book supplies a great desideratum which Skinner's admirable treatise on the horse did not fill. Every man may be his own veterinary surgeon, and with much greater safety to this noble animal than by trusting him to the treatment of the empirical ruffians who infest the country. It is well illustrated, and should be purchased by every man who owns a horse.—*Ev. Mirror, New York.*

This is a book that should be forthwith put into the hands of all who own or drive horses, whether for the dray or gig, for the plow, omnibus or road for hard service or pleasure.—*McMakin's Courier, Philadelphia.*

A good clearly written book, which should be in the hands of every man who has a horse whose ills his affection or his purse make it worth while to cure.—*Bangor Mercury.*

This is a scientific, thorough and complete treatise upon the diseases to which one of the noblest of animals is subject, and the remedies which they severally require.—*Troy Daily Budget.*

It is a valuable book to those who have the care of Horses.—*Hartford Herald.*

He is not worthy to have a horse in his care, who will not use such a work to qualify himself for his duties to this animal.—*Commonwealth Boston.*

BEACH'S IMPROVED PORTABLE WIND-MILLS.

The undersigned furnishes to order Portable Wind-mills of all sizes and powers on short notice.

Size No. 1, intended for driving a two-inch pump. The frame is 5 feet 6 inches high. Diameter of wings 10 feet. This machine is so made as to be easily erected or taken apart. Iron rods are employed to combine it in the strongest manner. The various parts are made of the best stuff, free from liability to disorder, and calculated for effective service. Price, with iron pump, $30, boxed and shipped to any part of the United States or world. Directions for putting up accompany. For a more full description of the construction of this Wind-mill see 3rd volume of the People's Journal, page 131.

Wind-mill of sufficient power to supply railroad station tanks; also to cut wood, grind grain, &c., for farmers' use, furnished and warranted.

PRICES OF BEACH'S WIND-MILLS.

Size No. 1—One man power	$30
" No. 2—One horse "	100
" No 3—Two " "	200
" No. 4—Three " "	300

For further information apply to or address, ALFRED E. BEACH. People's Patent Office, 80 Nassau St., N. Y. City.

N. Y. STATE AGRICULTURAL SOCIETY.

14th Annual Cattle Show and Exhibition of the New York State Agricultural Society,

Held in connection with the American Institute and New York Horticultural Society at Hamilton Square, in the city of New York, October 3d, 4th, 5th, and 6th, 1854.

THE Annual Exhibition of the Society will be held as above, in the city of New York, from Oct. 3d to 6th, on which occasion, upwards of *Eight Thousand Dollars* are offered as premiums, to be competed for, with Cattle, Horses, Sheep, Swine, Poultry, Dairy Products, Farm Implements and Machinery, Domestic and other Manufactures, Flowers, Fruits, and articles in all the Mechanical Departments—the full particulars of which will be found in the List of Premiums published. A large portion of the Premiums are open to competition by persons out of the State.

It is believed that this combined exhibition will be the most extensive ever held in this country, and will afford to exhibitors advantages never before offered, in every department of the Exhibition, combining the entire Industrial Interests of the Farmer, Manufacturers, Mechanics, Horticulturists, and Artizans of our country.

Persons desirous of examining the List of Premiums and Regulations, or of entering stock, implements or other articles for exhibition, will please apply to H. P. JOHNSON, Sec'y. State Agricultural Rooms, Albany; at the Rooms of the American Institute, 351 Broadway; or JAMES BEEBE & Co., 356 Broadway, New York, where the Premium List and Regulations will be furnished, and every desired information in relation to the Exhibition given.

Stalls and fodder for stock, and erections for the other articles, will be furnished in season, so that all articles designed for exhibition can be taken to the show grounds on their arrival in the city, where they will be provided for and protected.

The following Railroads have agreed to transport all stock and articles for the exhibition, FREE—requiring the freight to be advanced on delivery and re-paid on return of the articles, with evidence of being exhibited, &c.: Hudson River, New York & Erie, New York City & Buffalo, Ithaca and Owego, Canandaigua and Elmira, New York Central, Rome and Watertown, New York & Harlem, Long Island, Troy & Boston; and it is presumed all the Railroads leading into New York will afford the like facility.

Application to transport articles should be made in season to the nearest station Agent.

WM. KELLY, *Pres't.*
H. P. JOHNSON, *Sec'y.* 241-6t

ONE HUNDRED BUSHELS OF PEACH, CHERRY, and Plum Stones, wanted at the Rochester Seed Store, for which cash will be paid, by JAMES P. FOGG, 249-eow 4t Opposite the Arcade.

GUANO.—NOTICE.

AS there is a suit once now selling by some dealers in this city and Brooklyn, for No. 1 Peruvian Guano, we caution the agricultural public who may purchase Peruvian Guano this season, to observe that every bag of the genuine article will have the following brand:

No. 1
Peruvian Guano.
Imported by
F. BARRERIA BROTHERS.

The price is now established for this season at $55 per ton of 2,000 lbs. When taken in lots of 6 tons and upwards, a discount will be made.

LONGETT & GRIFFING,
State Agricultural Ware House,
241-7t No. 25 Cliff street, New York.

SHORT-HORN BULL FOR SALE.

THE subscriber offers for sale his pure bred Short-horn Bull, "Sir Arthur"—color mostly red, calved Aug. 11, 1851; bred by Geo. Vail, Esq. He is a fine animal, of large size and fine symmetry, and descended from some of the best animals on record in the English Herd Book. Or I will exchange for a good thorough bred Short-horn cow. For further particulars address JAMES MERRIMAN, Oriskany, Oneida Co., N. Y., 240-3t 7 miles west of Utica by Railroad.

ENGLISH CATTLE.

To Agricultural Societies, and others requiring the best bred Cattle from England, embracing pure blood Horses, Short Horned Cattle, Devons, Herefords, Ayrshire and Alderney Cows, pure bred South Down, Cotswold and Leicester Sheep, Suffolk, Essex and Berkshire Swine. Imported on commission by Messrs. Thos. Betts & Brothers, Herts, England. For information apply to J. M. Miller, 81 Maiden Lane, N. Y. City, who is fully authorized to act as our agent. Orders received for Guano, by applying to 231-13t THOMAS BETTS, 35 Wall St.

DRILLING IN WHEAT.

Moore's Seed Planter, or Grain Drill.

PATENTED July 2, 1850.—This valuable implement of husbandry, which has been thoroughly tested in many places, is used for planting WHEAT, RYE, CORN, OATS, BARLEY, BEANS, &c. It operates equally well on all kinds of land, and is not injured by coming in contact with rocks, roots, &c.; and it is believed, is superior to any other implement of the kind in use, as may be seen by the testimonials of many of the best farmers in the State. There are several advantages in drilling over broad-cast sowing, among which are these:—It is most expeditious; it saves labor, which is money; it completes the process of seeding wherever it moves; and experience has proved that more grain is obtained, of a heavier berry, and with less seed, owing to its being covered at any required depth, where every kernel has moisture and a chance to germinate.

DRILLING WHEAT.—Edward Stabler, in his admirable essay on the advantage of drill seeding, states that after examining its results on some 500 or 1,000 acres, besides large experience on his own land, he finds there is not a single instance where it has not proved the most profitable.—First, in the saving of seed, and secondly in the increased product of the grain, amounting to from one to seven bushels to the acre. He had known the increase, in one case, by careful comparison of the two modes to amount to nine bushels per acre in favor of drilling. He relates an interesting incident:—A vender offered a drill for the increase in a crop of 50 acres of wheat, to be determined by sowing a few strips broad-cast for comparison; but before the harvest, the farmer preferred paying the hundred dollars for the price of a drill, with interest. On carefully ascertaining the increase, he found it to be one hundred and fifty-three bushels.—*Albany Cultivator.*

Extract from the N. Y. Tribune, Feb. 3, 1853, article on Industrial Exhibitions at the World's Fair, London:

"Those who understand the subject, know that at least one-third of the seed may be saved, and a tenth added to the crop by DRILLING, as contrasted with the old, slovenly process of sowing by hand. The annual saving by the general adoption of drilling in this country, would be equal in value to all the gold we receive from California."

The highest premiums have been awarded to this Drill at the Agricultural Fairs in Delaware, at Philadelphia, Baltimore, Detroit, in Maryland, and at various County Fairs in Pennsylvania, Ohio, Michigan, and other States.

TESTIMONIALS.

TO E. W. HUDNUT & Co.:—The Grain Drill which we severally purchased of you in 1852, works to our entire satisfaction. Its simplicity, and certainty of distribution, together with its cheapness, commend it in preference to any Drill with which we are acquainted. Samuel Lewis, Esq., York, Liv. Co., N. Y.; Wm. H. Fleicher, Jr., Chas. Hazelton, Elijah Armstrong, Geo. H. Dibl, Leaming Clark, Geneseo; Chas. Hendershott, Andrew Boyd, Richd Johnson, Groveland.

Extract of a letter from Mr. McCrone, near Newcastle, Delaware:—"Your Drill stands unrivalled, as is admitted by all Farmers in the neighborhood, that have seen it in operation."

"This is to certify, that we, the undersigned, have used Lewis Moore's Improved Grain Drill, and we believe that for simplicity, durability, cheapness, ease, speed and regularity of sowing, it surpasses anything of the kind heretofore in use among us, and we do recommend it to farmers as being a machine the best adapted to their wants."—Signed Wm. Linville, Lancaster Co., Penn., and thirteen other farmers.

Orders will be received for these machines by the subscribers, who have purchased the right to make and sell them in the Counties of Monroe, Ontario, Wyoming, and Livingston.

Cash prices at the shop.—8 teeth Drills, 8 in a part, $65; 9 teeth do., 7 and 8 in a part, $70; 10 teeth do., 8 in a part, $75; 11 do., 8 in a part, $80. E. W. HUDNUT & CO. Geneseo, Livingston Co., N. Y., June, 1854. 236-8t

Poetical.

[Written for Moore's Rural New-Yorker.]

THE HARVEST.

BY ANNA M. LANGELAND.

There are billows, silvery billows,
Out on the azure sea,
And their waves go gliding, gliding,
In gladness and in glee.

And rays of light down flinging
Their diamond gems unstrung,
Across the lakelet's bosom,
A mystic robe have flung.

But out upon the hilltops
And in the winding dell,
Are fairer fields a-waving,
Where golden billows swell.

While in a sea of sunbeams,
The bending harvest laves,
The silvered foam is dashing
Across the yellow waves.

The golden waves go chasing
Each other up the hill,
Till the breeze is lulled to silence,
And the harvest standeth still.

From golden grain now falling
Before the reaper's blow,
With life, and health, and gladness,
Our board shall overflow.

The cloud upon the sky-land,
No shadow ever leaves;
Its sombre form is dancing,
Among the sickled sheaves.

We see dwellers in a life-field,
Where shadows ever fall,
But they leave upon the soul-land,
A light-outshutting pall.

The waves that o'er go gliding
Across its mystic plain,
Full oft the chaff is lifting,
Instead of golden grain.

We all, we all, are sowers,
In Life's unmeasured field;
But when the harvest cometh,
How useless is our yield.

Some there are whose heart-cups
O'er—brimming gladness show,
As all the swinging lily bells,
With fragrance overflow.

But some there see a-gleaning,
Who gather but in ears;
While some go empty handed,
And garner bitter tears.

But when the mighty reaper
Shall gather in his sheaves,
The scorowing shall be garnered,
Where light the soul forcares.

Rural Vale, August, 1854.

Rural Sketch Book.

[For Moore's Rural New-Yorker.]

JOE VINING'S THEFT.

BY MRS. M. W. H.

We frequently read stories "founded on fact," and I am inclined to think that more fiction has its foundation in the real events of life, than is generally supposed. The following is not founded on, but is *fact* itself, and transpired long since the establishment by Divine Authority, of that immutable principle, "The way of the transgressor is hard."

Joe Vining, the eldest of a large family of children who had all been obliged to "dig" on a miserable shrub-oak farm, such as is sometimes met with in some New-England localities, became convinced before he was twenty-one years of age, that the more a man owned of *such* acres, the poorer he would be. He knew that he had always worked hard and fared hard, but he would not have minded this, if he could have received a suitable return for his labor. Besides, he began to look forward to the time when he could take Sally Stubbs to a home he could call his own, where it had been long understood that she should preside. Joe had scraped together a little money, by raising a few potatoes, corn, or turnips, on a patch set off for his own, occasionally selling a lamb that he had raised after it had been given over as dead, and by various other expedients to which farmers' boys in these days need not resort to obtain this very convenient article.

The next day after Joe "came of age," with his every-day suit on his back, and his "freedom suit" tied up in his pocket handkerchief, he started for "York State," intending to find the fertile regions of the "Whitestown Country," which was then "the land of promise" to many an emigrant. The "Genesee Country," whence the Rural New-Yorker visits its thousands of subscribers, was the "Eldorado" of a still more recent date to the enterprising young men of New-England. Even within my own recollection, and I am not a *very old* woman, when friends emigrated to Western New York, they were never expected to return, and if they went as far as Ohio, they were considered as completely severed from home as if they were dead and buried. Perhaps one whom Joe left behind might have been more sanguine, but it was a sad day when he left the house of Deacon Stubbs, who told him, as much to encourage him as with any expectation that he would return, that he might have Sally as soon as he had provided a comfortable home for her.

Nearly a year had elapsed since Joe left Connecticut, when Sally received a letter informing her that he had purchased a tract of wild land of the greatest luxuriance and promise, had made a clearing, raised a fine crop of wheat, and was about to commence building a log house. What, besides the above, this primitive love-letter contained, I am not able to say, but I will venture to assert that it cost more labor than his grand-children need to bestow on half-a-dozen pages, thanks to the increasing facilities for learning. If any one supposes from the time that elapsed before Sally heard from her lover, that his attachment could not have been very great, I beg them to call to mind the fact that there was a time when it took the mails as many *weeks* to carry a letter, as it now takes *moments* to transmit the same message a similar distance—besides, a letter cost eight times as much postage as it now does, which must have been quite a consideration to a *poor* lover.

After an absence of about two years, Joe made his appearance in his native place, where he arranged to work out by the month till autumn, he married, and take a final leave of Connecticut. Accordingly, he sought employment, and was hired by "Squire Lizah," as grandfather was called, to distinguish him from a neighbor who bore the same patronymic, without the office of magistrate. A short time before Joe's term of service expired, my grandfather sold a yoke of oxen;—the buyer was invited into the room where stood the old desk, near which they seated themselves. While they were occupied with their business, Joe passed through the room into the cellar, just as grandfather was depositing the money in a little drawer in his desk.—Eighty dollars, thought Joe, is a pretty large sum; the Squire must be quite well off; I wonder, should he lose that money, if he would ever feel it. How I wish I could have as much money as that, just as I am going to be married and go to housekeeping. Eighty dollars! that would almost stock my farm! it would make the next payment on the land, at any rate, and leave thirty dollars. This, with the new wagon I am to have for my work, would give me a good start. Thus soliloquized Joe, whose evil genius whispered in his ear, "take it, Joe, he never will suspect *you*; only be *careful*, and if he does suspect, he can't prove it. Only think how much eighty dollars will do for you!" But, thought he, I should have to force the lock, and he would hear me, for he sleeps in the next room; and more than all, Sally would not have me if she found it out;—but, whispered the fiend, perhaps he don't lock the desk, and as for Sally, she never would believe such a thing of you; these girls never believe anything ill of the man they love."

Joe returned to his work, but a dangerous enemy had gained access to the fortress of his mind, where, by the aid of lesser ones already entrenched, he gained the victory, and Joe retired to bed with his mind made up to possess the treasure that he vainly fancied would aid him forward so much. He laid tossing restlessly on his bed till he thought all in the house were asleep, when he arose and stole into the room, scarcely able to suppress the audible beatings of his heart, to which the old clock in its tall case, beat a loud response, which, to his excited imagination, seemed to say, "stop thief! stop thief!" Unfortunately, the desk was not locked, and the money was transferred to Joe's pocket. To avoid the possibility of its being found on him, he hid it in the woods a considerable distance from the house, fancying that the very owls hooted "thief" in his ears. He crept back to occupy an uneasy pillow till the daylight should call him forth to labor under the curse of guilt. At his meals and in the fields, for days after, he could feel the gaze of the "Squire's" eyes burning on his averted face, till he would almost sink; such is the force of conscience when first tempted to tread the path of dishonesty.

At my grandfather's, bolts and bars to the doors were unknown, and it may be thought strange that suspicion should not have gone beyond his own threshold, but it did not, for he was a shrewd as well as stern man. It became noised abroad that money had been stolen from the "Squire," but he forbore amid the general gossip, to accuse any one openly. Perhaps he felt a twinge of conscience for leaving so great a temptation without the security of even a lock.

The day Joe left his service, my grandfather called him into his private room, and drawing himself up, his commanding figure appearing to the trembling man before him to be nearer ten feet than six,—"Joe Vining," said he "you took that money from my desk, and I now call on you to restore it." Joe, in the most solemn manner, denied all knowledge of the theft. "I cannot," said my grandfather, prove that you took it, and I have forborne to prosecute you and blast your character; I hope this is your first theft, and may it be the last; *but remember*, Joe Vining, *that I tell you, you will never know one moment's peace of mind till you make restitution.*" This was said in a manner that partook of the Judge and the friend; it sent an arrow to the heart of poor Joe—how long it rankled there, the sequel will show.

Years passed, and that home in the wilderness echoed and re-echoed with the gleeful notes of hale sons and daughters that were born to the Vinings, but they did not prosper, like their neighbors. Sometimes the hopeful and cheerful wife would say she could not see why they did not succeed as well as others who began when they did, and had become rich, and built fine houses without working as hard as they had done, still occupying the old log house. When she talked in this way, it always produced such an effect on her husband's temper, that she forbore to speak of their circumstances, and looked forward hopefully to the help of their children.

* * * * * * *

One day my grandfather was in the field with his men harvesting grain, when a stranger approached on horseback; alighting and tying his horse, he accosted the old gentlemen, asking if he recognized him. After a moment's scrutiny, he replied in the negative. The stranger, without telling his name, asked him to go and look at his horse, which my grandfather did, remarking "he is a very fine animal, but I do not wish to buy." "Neither do I wish to sell," said the stranger, "but the horse is yours; the only restitution Joe Vining has in his power to make to you for the money he stole from you twenty years ago."

Grandfather raised his eyes in astonishment, as he took the proffered hand of Joe Vining, (for it was none other than him,) who thus continued,—"your parting words to me have rung in my ears continually, till I have sometimes almost wished to die. I have not prospered, and often have I resolved to restore four-fold, but had not the means. That horse is five years old, and from the time it was born I have considered it yours when it should attain its full value. Had I not found you alive, as I feared I might not, I should have left the horse for your family; but thank God, you are still here, and now, if you can forgive me, I can go home in peace, and lift up my head that has been so long bowed down with guilt and shame." We may readily imagine that a full and free forgiveness was not withheld for a single act that had made its perpetrator so miserable.

Joe Vining returned to his home a free man. The change that took place in his disposition was noticed by his neighbors, and still more by his family. The affairs of life were undertaken with an alacrity and energy that contained those elements of success which he had never before been able to bring to his work. His children assumed a new interest in his eyes, his sons helped him to improve and enlarge his farm, and to build a new house.—He never told his secret trouble, even to his wife, till after his return from Connecticut. She shed many tears of joy that the leaden weight was lifted from her husband's heart. While he lived, he was indefatigable in his efforts to instill into the minds of his children and grandchildren the great importance of keeping a "conscience void of offence," often relating, with fictitious names, the story of Joe Vining's theft, and its consequences.

THE MORAL OF BUSINESS.

We often see an old and well-beaten man who never had any success in his life, who always knew more and accomplished less than his associates, who took the quartz and dirt of enterprise, while they took the gold, and yet, in old age, he is the happier man. He had a sum of *Hope*, and they of *desire* and *greed*—and amid all his misfortunes and mysterious providences, he had that within him which rose up and, carried his heart above all troubles, and upon their world-wide waters bore him up like the old Ark upon the Deluge. It was the Deluge that gave out—not the Ark. God has distributed his gifts. It takes a score of them to make one man.

One supplies the swift sagacity; another the cautious logic; another the impelling force; another the hope; another the practical tact; one supplies general principles, another the working plans. Men seldom unite by the *strong points*. It is men's weaknesses that bind them together. By distributing gifts, God makes one man dependent upon another; and welds society together by making every man necessitous, in some place, as regards other men. This distribution extends to classes and business interests—some are extensively progressive, and some stoutly stationary.—*H. Ward Beecher.*

The World and Chance.—How often might a man, after he had jumbled a set of letters in a bag, fling them out upon the ground before they would fall into an exact poem, yea, or so much as to make a good discourse in prose. And may not a little book be as easily made by chance as this great volume of the world? How long might a man be sprinkling colors upon canvas with a careless hand, before they could happen to make the exact picture of a man! And is man easier made by chance than his picture? How long might twenty thousand blind men, which should be sent out from several remote places in England, wander up and down before they would meet upon Salisbury Plain and fall into rank and file in the exact order of an army? And yet this is more easy to be imagined than how the innumerable blind parts of matter should rendezvous themselves into a world.—*Tillotson.*

Youth's Corner.

ILLUSTRATED REBUS, NO. 36.

☞ Answer in two weeks.

[Written for Moore's Rural New-Yorker.]

MISCELLANEOUS ENIGMA.

I am composed of 13 words and 60 letters.
My 20, 48, 32, 6, 36 is the goddess of Agriculture.
My 11, 44, 33, 52, 8, 49, 37, 43, 12, is between ourselves.
My 28, 18, 51, 41, 55, 21, 45, 26, 10, 42, 17, 34, 20 is an Albino.
My 4, 29, 7, 37, 60, 58, 19, was the goddess of wisdom.
My 26, 53, 20, 25, 37, 36 was an actor at the siege of Troy.
My 1, 42, 15, 12, 14, 27, 43, 46, is Sir, Mr.
My 3, 31, 23, 60, 28, 8 is annually.
My 13, 10, 54, 35 is a wind instrument.
My 38, 29, 50, 16, 28, 59 is an instrument of music.
My 2, 39, 29, 25, 40 is friendship.
My 19, 1, 30, 28, 47, 37, 17, 24 is dubious of sight.
My 22, 9 are 1,000 each.
My whole was the saying of Gen. Jackson.

Wit and Humor.

EPIGRAM.

To this night's masquerade, quoth Dick,
By pleasure I am beckoned;
And think 'twould be a pleasant trick
To go as Charles the Second.
Tom felt for repartee a thirst,
And thus to Richard said:
You'd better go as Charles the First,
For that requires no head.

Carpets vs. Blankets.—In a certain township of New Hampshire, where little is known of the appliances of modern days, a young farmer had occasion to call on the minister, who had just moved in from Massachusetts, and was shown into the "best room." When the minister came down to see him, he found him sitting in a chair on the door sill, with his legs outside in the entry. The astonished clergyman asked him why he did not go into the parlor. "Oh!" said he, "I was afeared of spilin' your *blanket* by trendin' on it!"

A "stuck-up" sort of a genius entered a shop in Philadelphia, and turning up his nose at some apples in the window, exclaimed:

"Are those apples fit for a hog to eat!"

"I don't know: try them and see," was the instant reply of the shop-keeper.

The Boston Post is guilty of the following: Some negroes escaped from jail at Mariposa by boring holes with an auger. Other prisoners were placed in the same room before it was properly repaired, and likewise escaped by the *nigger auger* route.

John Randolph met a personal enemy in the street one day, who refused to give him half the sidewalk, saying that he never turned out for a rascal. "I do," said Randolph, stepping aside, and politely raising his hat—"pass on, sir—pass on!"

The late Rowland Hill once said, on observing some persons enter his chapel to avoid the rain that was falling, "Many persons are to be blamed for making their religion a cloak; but I do not think those much better who make it an umbrella!"

"Biddy, has that surly fellow cleared off the snow from the pavement?" "Yes, sur." "Did he clear it off with alacrity, Biddy?" "No, sur, wid a shovel."

HICKOK'S PATENT CIDER MILL,

As improved for 1854 received over Fifty Premiums and Diplomas in 1853. This Mill is warranted superior to all others. Sold by the following Agents, who will supply pamphlets containing descriptions, &c.:

H. C. WHITE, & CO., Buffalo, N. Y.
E. H. HALLOCK, Rochester.
E. J. FOSTER, Syracuse.
HIGGINS & CALKINS, Castile, Wyoming Co.
C. M. WIDDIS, Elmira.
PROUTY & CHEW, Geneva.
GREGORY & SMITH, Binghamton.
DANA BROTHERS, Utica, N. Y.
LONGETT & GRIFFING, 26 Cliff St., sole agents for New York City.
CHAS. ASHLEY, Ogdensburg.
OLIVER & HILMER, Montpelier, Vt.
W. H. HILL, & CO., 32 Cornhill, Boston.
GEO. W. EMERY, Albany.
L'AMOREUX, HAHN & RUSSELL, Tuwanda, Pa.

Made solely by W. O. HICKOK,
240-8te* Harrisburg, Pa.

TRUNKS AND VALISES.

The subscriber would inform the citizens of Rochester and the public generally, that he is manufacturing extensively, a very superior article of sole leather and steel spring Trunks, which he will guarantee to be equal to anything made in the United States.

You may see at PRITCHARD'S Trunk Depot and Sales Room, 18 State street, 1000 Trunks and Valises, and he is now adding to this large stock from 125 to 150 per week—among which you may find Trucks varying from one dollar to fifty. If you should want anything in his line, give him a call, for his motto is, "Large sales and small profits."

A. H. PRITCHARD, No. 18 State St.
Rochester, N. Y., Aug., 1854. 240-tf

HOME PROTECTION.

Tempest Insurance Company, Capital $250,000, Organized December 24, 1852; Chartered March 1, 1853. Homes only Insured by this Company. No one risk taken for more than $5,000.

Many distinguished persons have insured their homes, to the amount of $3,000 each, in this Company, among whom are Ex-President Van Buren, Kinderhook; Ex-Governor Seward, Auburn.

Auburn, May 16th, 1853.

To whom it may concern.—We are personally acquainted with many of the Officers and Directors of the Tempest Insurance Company, located at Meridian, Cayuga Co., N. Y. In one opinion they are among the most wealthy and substantial class of Farmers in this county.

J. S. STARIN,
ELMORE P. ROSS,
THOMAS Y. HOWE, Jr.

The above gentlemen will be recognized as the Cashier of Cayuga County Bank, Auburn; Postmaster, Auburn, and Ex-Member of Congress, Auburn, Cayuga County.

N. B.—The public are cautioned to bear in mind the name, (*Tempest,*) and not submit to an imposition daily practiced by two-by-four Mutual Co's.

234-4t E. R. TIBBY, Secretary.

GAFFNEY, BURKE & CO.,

IMPORTERS, WHOLESALE AND RETAIL DEALERS IN

Foreign and Domestic Dry Goods,

No. 53 Main Street, and Nos. 1 and 3 North St. Paul Street,

GAFFNEY'S BLOCK, ROCHESTER,

Have now in store one of the largest stocks of Dry Goods ever bought in this city, to which may be found every desirable article of Ladies' and Gents' Dress Goods, adapted to the season. Their improved facilities for IMPORTATION, and the great advantage of having a resident partner in New York, daily attending the Auction Sales, enable them to offer to Merchants and Dealers, by piece, case or bale, as cheap as can be purchased in the New York and Boston Markets.

Wholesale Rooms Nos. 1 & 3 North St. Paul St.,
GAFFNEY'S BLOCK, ROCHESTER.

Summer Dress Goods.—We have just opened a very large stock of Summer Dress Goods, consisting of a fine assortment of Brilliants, plain and figured Barages and Tissues, plaid and striped Pongee Silks, Muslins, plaid and striped Lawns, Printed Jaconets, &c., &c. The styles are entirely new and beautiful.

GAFFNEY, BURKE & CO., 53 Main St., Rochester.

Broche and Crape Shawls.—We have now on hand a very large stock of Broche and Crape Shawls, all colors and qualities, which we are selling at very great bargains, as they were purchased much less than cost to import, at an Auction Sale.

GAFFNEY, BURKE & CO.,
Gaffney's Block, 53 Main St., Rochester.

More New Silks.—We have just received another large assortment of Summer Silks, from an Auction Sale, which were purchased CHEAP FOR CASH, and will be sold at less than cost to import. The styles are very handsome and entirely new. We have also just received 40 pieces of those celebrated Black Silks, which we are selling as cheap as usual. GAFFNEY, BURKE, & CO.,
53 Main St., Gaffney's Block, Rochester.

LAND PLASTER

At Canandaigua, Victor, and Fisher's Railroad Depots. The subscriber has on hand at each of the above Railroad Stations, 500 tons of pure, fresh ground land Plaster.—Farmers can depend upon getting their Plaster at the above places, of a superior quality and not kiln dried.

217-4m JERRIT ROWLEY.

THE WOOL GROWER AND STOCK REGISTER.

Vol. VI.—Enlarged and Improved!

The Wool Grower and Stock Register is the *only* American journal devoted to the important and profitable branches of *Wool and Stock Husbandry.* It contains a vast amount of *useful* and *reliable* information on the above and kindred subjects, and should be in the hands of every owner or breeder of Sheep, Cattle, Horses, Swine, or Poultry—whether located East or West, North or South, for the most of the matter given in its pages is equally adapted to all sections of the Union, the Canadas, &c. The Sixth Volume, commencing July, 1854, will be

Enlarged to 32 Octavo Pages Monthly!

And improved in both Contents and Appearance. Among other matters of interest to Wool Growers, Breeders, Graziers, Dairymen, &c., the new volume will contain Pedigrees of Pure-Bred Cattle, Horses, Sheep, etc., and the Names and Residences of the principal Breeders and Importers of Improved Stock throughout the country. It is published in the best style, and Illustrated with many Engravings—including Portraits of Domestic Animals, Designs of Farm Buildings, &c., &c. The careful Reviews of the Wool and Cattle Markets, given in each number, are alone worth many times the price of the paper.—To Wool Growers this feature is invaluable.

TERMS—Only Fifty Cents a Year;

Five Copies for $2; Eight for $3,—*in advance.* Any additional number at 37½ cents per copy. Club papers will be sent to different post-offices, if desired. ☞ Back volumes (well bound in paper, for mailing) furnished at above rates.

☞ Now is the Time to Subscribe and form Clubs. Money, properly enclosed, may be mailed at our risk, if addressed to D. D. T. MOORE, Rochester, N. Y.

☞ Mr. C. Moore, of Gerry, Chau. Co., is authorized to act as Agent for the Rural New-Yorker, and for the Wool Grower and Stock Register, in the counties of Chautauque and Cattaraugus, N. Y., and Warren, Pa.

MOORE'S RURAL NEW-YORKER,

IS PUBLISHED EVERY SATURDAY,

BY D. D. T. MOORE, ROCHESTER, N. Y.

TERMS, IN ADVANCE:

Subscription—$2 a year—$1 for six months. To Clubs and Agents as follows:—Three Copies one year, for $5; Six Copies (and one to Agent or getter up of club) for $10; Ten Copies (and one to Agent,) for $15; Twenty Copies for $25, and any additional number, directed to individuals at the same rate. Six months subscriptions in proportion. As we are obliged to pre-pay the American postage on papers sent to the British Provinces, our Canadian agents and friends must add 25 cents per copy to the club rates of the Rural,—making the lowest price to Canadian subscribers $1,50 per year.

☞ Subscription money, properly enclosed, may be sent by mail at the risk of the Publisher.

*** The postage on the Rural is but 3½ cents per quarter, payable in advance, to any part of the State—and 6½ cents to any part of the United States,—except Monroe County, where it goes free.

Advertising.—Brief and appropriate advertisements will be inserted at $1,50 per square, (ten lines, or 100 words,) or 15 cents per line—*in advance.* The circulation of the Rural New-Yorker is several thousand greater than that of any other Agricultural or similar Journal in America. Patent medicines, &c., will not be advertised in this paper on any terms.

☞ All communications, and business letters, should be addressed to D. D. T. Moore, Rochester, N. Y.

MOORE'S RURAL NEW-YORKER

AGRICULTURE. HORTICULTURE. MECHANIC ARTS. EXCELSIOR. LITERATURE. SCIENCE. ARTS.

VOLUME V. NO. 35.} ROCHESTER, N. Y.—SATURDAY, SEPTEMBER 2, 1854. {WHOLE NO. 243.

Moore's Rural New-Yorker:

A QUARTO WEEKLY

Agricultural, Literary, and Family Newspaper.

CONDUCTED BY D. D. T. MOORE,

ASSISTED BY

JOSEPH HARRIS, in the Practical Departments:
EDWARD WEBSTER, in the Literary and News Dep'ts.

Corresponding Editors:

J. H. BIXBY,—H. C. WHITE,—T. E. WETMORE.

THE RURAL NEW-YORKER is designed to be unique and beautiful in appearance, and unsurpassed in Value, Purity and Variety of Contents. Its conductors earnestly labor to make it a Reliable Guide on the important Practical Subjects connected with the business of those whose interests it advocates. It embraces more Agricultural, Horticultural, Scientific, Mechanical, Literary and News Matter, interspersed with many appropriate and handsome engravings, than any other paper published in this Country,—rendering it a complete AGRICULTURAL, LITERARY and FAMILY NEWSPAPER.

☞ FOR TERMS, &c., SEE LAST PAGE. ☜

Rural New-Yorker.

Progress and Improvement.

WESTERN NEW YORK AGRICULTURE—NO. II.

WHILE you in "Merrie Old England" are being deluged with rain, and prognosticating the destruction of the wheat crop from lack of sunshine, we here, at a temperature of 100°, have seen no other clouds than "clouds of dust" for the past two months. We believe the drouth is unparalleled in this country. So that, last week, on informing some of our good friends in the town of Sweden, in this county, that we were come to solicit a few lessons in practical agriculture, and to ascertain how far the many encomiums we had heard of Swedish farming were deserved, they replied, with some degree of plausibility, "Nay, but to see the nakedness of the land ye are come." However, we received a most hearty welcome, and many kind attentions.

The first gentleman we visited was Mr. A. PINNEY, of Clarkson. He devotes 28 acres of his farm to fruit culture. We found him in the peach orchard gathering a splendid crop of *Early York* peaches. He has in all 3,000 peach trees of 128 varieties, most of which are loaded to excess with exceedingly fine fruit. He has, too, 2,700 pear trees grafted on the quince stock, which, as you know, dwarfs the tree, and causes it to bear the first or second year after it is set out. Most of these trees have been set out three years. They are exceedingly thrifty and healthy, many of this year's shoots being from four to five feet long.—Much of the fruit was removed as soon as set, to prevent injury to the tree from over-bearing. Most of the trees, nevertheless, are loaded with fine pears. The *Louise bonne de Jersey, Burtlett* and *Virgalieu* are remarkably fine. There were a few *blighted* trees, but on the whole they present a healthy appearance. The land is a rich calcareous loam. It was subsoiled previous to planting the trees, and heavily manured with barn-yard dung composted with muck. It is plowed spring and fall, and kept very mellow by cultivation. No crops are sown on it. The peach orchard is sometimes planted with beans—Mr. PINNEY preferring them to any other crop—but this year it is fallow. We question if there is a finer orchard of peaches and dwarf pears in the world.

The cultivation of fruit is a noteworthy feature of American *Agri*-culture. On the next farm we visited, that of Mr. DUDLEY ROOT, we found his son-in-law, Mr. COLBY, engaged in growing apple trees for the western nurseries. The apple seeds are sown in the fall, and the next spring twelve months, the seedlings are root-grafted, and sent to various nurseries in Michigan and Wisconsin, where they are set out and allowed to remain till sufficiently large for ultimate planting. In this way, they are acclimated, and are considered better for the west than trees grown in the eastern nurseries. This spring Mr. COLBY grafted and sent to the west 110,000. He has now growing, and will graft next spring, as many more.

Mr. D. ROOT was plowing up a barley stubble for wheat. The barley was sown after Indian corn, and yielded 40 bushels per acre, weighing 50 lbs. per bushel. This climate, although so much better for wheat, is not so well adapted for barley as the moist, long-growing season of the British Isles. On an average, it does not weigh more than 45 lbs. per bushel. When we consider that it is frequently harvested in two months from the time of sowing, this is not to be wondered at. The practice of growing corn, barley and wheat, three cereal crops, in succession, must be very exhausting, and the soil which produces, for any length of time, good crops, under such a "system of rotation," is of no ordinary natural fertility.—Mr. R. says his wheat is generally good after barley, but this year it was injured more by the weevil than that after summer fallow. We do not know if this is a general result. His wheat crop this year averaged twenty bushels per acre. The soil in this vicinity is dry, warm, and active, and the weevil has done much less damage than in many adjoining towns. We have heard of many instances where, with straw enough for 30 bushels, the crop did not exceed five bushels per acre.

The farm of the President of our County Ag. Society, F. F. ROOT, Esq., deserves a much more extended notice than our space allows.—This is somewhat less to be regretted since we gave some description of it in the RURAL of March 11, 1854. He owns and manages some 700 acres; but we shall confine our remarks to the "home farm," containing 430 acres. Of this, 65 acres are in woods and roads, and 45 acres in permanent meadow. He keeps four span of horses, and four yoke of oxen, and fifty head of horned cattle, with a few sheep. He sows 100 acres of wheat each year, and about 40 acres of corn. Barley he considers an uncertain crop, and sows but little. Oats only sufficient for his own use. He sows clover on all the wheat in the spring. The clover seed is grown on the farm. He has this year 15 acres, which, notwithstanding the drouth, bids fair for a good crop, say four bushels per acre. In the early part of the summer, this field was mown, and turned off about 2½ tons of good timothy and clover hay per acre. *Much of the land is sown with wheat every other year.* The preparation is as follows: Sometime in June the field is plowed about ten inches deep, turning under as much clover as the stock can spare. During the summer, it is gone over two or three times with a broad-tined cultivator, which cuts up the thistles and other weeds, and, by the aid of rolling and harrowing, cleans and pulverizes the ground much more effectually than three or four plowings and as many rollings and harrowings would do in England. Mr. ROOT's "fallows," treated in this way, offer what TULL termed a "pasture for plants," deeper, mellower, finer, and more pulverulent than any long or summer fallow we saw in England. This is doubtless to be attributed to the disintegrating effects of the intense cold and heat of our climate. The wheat is cultivated, harrowed, and rolled in—not drilled, as with you.

Last year, 1853, the total expenses of this 430 acre farm was $2,086. The 100 acres of wheat yielded 3,500 bushels, which, deducting that for seed and family use, sold for $6,342; 300 bushels of barley, $189; 200 lbs. of wool, $105; fat cattle and other stock, $1,323; miscellaneous items, $112. Total, $8,071.

This leaves a net profit of $5,985, or $16.40 per acre on the cleared land; and this besides the household expenses of the family. It is true that wheat sold for an unusually high price last year, but we judge that Mr. ROOT has found farming a profitable business other years, for when he commenced farming he was worth, all told, $1,500. We do not know what he is worth now, *all told*, but he has 700 acres of land, as productive as the figures we have given indicate, all paid for. This has been made by farming alone, and is of itself a nice little fortune for a man not yet 40 years old.

There is on the farm upwards of five miles of stone fence, the greater part of it five feet high, costing about $1.50 per rod. Mr. R. has six tenant houses, occupied by the farm laborers, and keeps but one man in his house.—In looking over this fine section of country, abounding in all the luxuries and appurtenances of the highest state of civilization, it is difficult to imagine that 36 years ago it was covered with primeval forest; yet such is the case.

LIME AND ASHES FOR WHEAT.

SEVERAL Western New York farmers have recently asked our opinion respecting the application of lime or unleached ashes to wheat. As a general thing we should not expect much immediate increase of wheat from the application of either lime or ashes to the soil of Western New York. They would be more likely to benefit Indian corn or barley. These crops require very active, mellow land, and, if we may be allowed the expression, lime and ashes have a tendency to *vivify* any soil to which they are applied.

We believe the beneficial effect of lime is not so much owing to its supplying an actual constituent of the plant, as to its decomposing influence on the organic matter of the soil.—We should expect, therefore, that the greatest benefit would be derived from its application to mucky soils, in which there is a deficiency of mineral matter—which lime and ashes would supply—and a large amount of *inert* organic matter, which the lime would render available. Such land, however, should always be underdrained before liming, for, like subsoil plowing, lime does little good on land saturated with stagnant water eight months of the year. Underdraining, to a certain extent, is equivalent to liming; by the removal of stagnant water and the admission of atmospheric air, it greatly accelerates decomposition and disintegration of the soil.

Where limestone is abundant, as on most farms in Western New York, it would seem to be an easy matter for each farmer to satisfy himself whether lime does much good on his soil or not. He could burn a few hundred bushels readily and cheaply, and by an application to the different crops, ascertain in a year or two how far the practice might be profitably extended. Lime was formerly used to an immense extent as manure in England, but it is now very generally superseded by fertilizers supplying organic matter. It has been found more profitable after land has been limed once or twice, to apply organic matter directly to the soil than to apply lime, which furnishes organic matter by accelerating the decomposition of the inert matter of the soil itself. It is the opinion, however, of many of the advocates of the old *regime*, that many of the insects, blight, and other ills that plants are subject to in modern times, are owing to the introduction of organic manures, and the disuse of lime.—There may be some truth in this opinion. It appears to be certain that plants are healthier when grown on a soil abounding in lime and other mineral matter, than when there is rather an excess of organic matter. An application of lime and other mineral manures *may* therefore, be some safeguard against the fearful ravages of the weevil, and is certainly worth the trial.

We observed a few days since that Mr. J. B. REED, of Sweden, was using lime on his land. We should be pleased to have his experience or that of others on this subject.

CLEARING AND IMPROVING MARSHES.

ALTHOUGH we added "concluding remarks" to our second article on this subject, we are tempted to resume it again, to give our readers some account of an experiment, made by JARED ELIOT, A. M., in 1747, and by him given to the public in a pamphlet "Essay upon Field-Husbandry in New England as it is or *may be* Ordered," published in New London the following year. It is quaintly but sensibly written, and contains information of value even at the present day. His third trial of draining (with some omission of its quaintnesses in style and spelling) is thus described:

"I began last March to drain another meadow of forty acres up in Guilford woods. This was a shaking or cranberry marsh—a man standing upon it, might shake the ground for several rods around him. It seemed to be only a strong sward of grass roots laid over a soft mud, of the consistence of pan-cake batter. There was not abundance of bushes in it, but many cranberry vines, and a great burthen of poor wild grass; the meadow was deemed so poor that none would take it up. I was pitied as being about to waste a great deal of money; but they are now of a different opinion."

At the outlet of this meadow (we must condense more closely) there was full sufficient, but very rocky,—they must dig four or five feet to get the advantage of it. To do this they were compelled to make a dam to keep back the water. This they did by fulling a tree across the brook, and setting slabs against it, and then filling the chinks with swingle tow. They took this up every night, letting the water flow until morning; and he says, this use of tow proved to his workmen the truth of the Dutch proverb, which say of things which seem of but little value, "That something is always good for something." He proceeds:

"When the weather grew sufficiently warm, and the meadow a little settled, we began to ditch. I cut a ditch on each side and one in the middle, and as far as we went it soon rendered the meadow firm and dry. I then proceeded to sow grass seed, such as red clover, foul meadow grass, English spear grass, and herds grass, but of all the sorts, none seemed to take hold and come up as well as red clover; this I found to be the boldest and most hardy grass. Where the sward was strong, although the clover came up well, the toughness of the ground and the overtopping growth of the wild grass, hindered its progress until the fall of the year and then it mended considerably. But where there happened to be no sward to hinder it, the clover grew to the height of mid-thigh, and produced ripe seed the first season. The other grasses came up poorly; I suppose the land was too new and tough for them."

Mr. ELIOT plowed up portions of the marsh during the summer, and found that "the meadow rotted more in October than in all the summer beside." He tried turnips on some of it in July—they grew but very little until late in the season, and then were good and sweet. It was his opinion and experience that such drained land must have one summer to ferment and rot so as to become proper soil, before it would be fit for every sort of grain and grass. If he had sown only clover instead of other sorts of grass, he would have saved £5 in seed. These lands he found to give 60 or 70 bushels of Indian corn, per acre; they would produce good crops of flax, and he intended to try the production of hemp, which he wished to make one of the staple products of New England. History shows that this project was unsuccessful.—B.

THE WEEVIL, OR WHEAT MIDGE.

MR. MOORE:—An article in your last number, from the *N. Y. Tribune*, on the subject of the weevil, is generally correct as to the natural history of that insect, which is to become a terrible scourge to all wheat growing countries.

The term *weevil*, as stated, is a misnomer, as that insect is a moth in the perfect state, and its *larva* only attacks the ripe grain. The *Wheat Fly*, or *Midge*, is an entirely different insect, and is, apparently, quite a contemptible creature, physically; but from its ability to multiply, and restricting its ravages to the incipient and infant state of the berry, it possesses the potentiality of destructiveness in an alarming degree—even to the entire annihilation of the whole cereal crop, at least until a variety shall be discovered, whose early ripening shall put the berry in advance of the necessity that nature has imposed on the insect, as to the period it must deposit the *ova* of its future progeny.

A variety of wheat ripening a week or ten days earlier than the earliest now known, would escape its ravages. The Mediterranean wheat comes the nearest to that desideratum, when sown early, on warm and well-drained land; the Soule, and bearded Hutchinson, next. Whether the old hardy and prolific Red Chaff, which has been abandoned many years on account of its lateness and liability to rust, would be forward enough for the necessities of the Midge, has not, as far as we are advised, as yet been tried. Spring wheat sown in June escaped, but it is subject to many other casualties equally destructive.

Early sowing of early varieties, on good upland soils and with perfect drainage, are the only concomitants of any value in avoiding this pest. No faith can be placed in fumigation, or in the use of salt, or any other destructive application as a top-dressing. The depredator is a winged, flying insect, filling the air with its presence over the whole surface. A single stook of wheat on the embankment of a railroad, in a forest, more than a mile from a field of wheat, was found with over seventy *larva* in a single head.

Allowing that salt was a cure for the evil, nothing short of sowing from "five to ten bushels" per acre over the whole surface of the "State of Genesee," as the English papers have got it, and upon what little land joins it, would be of the slightest use, as they possess the power of locomotion at the rate of some fifteen miles per year, which is about the rate they advance.

The wheat fly attacks all the cereals, more or less, except oats, and nothing short of the entire suspension of the production of those grains, from the want of a proper *nidus* to deposit its *ova*, would rid the country of its presence; and it is believed that there is nothing in the whole vegetable kingdom it could resort to as a succedaneum for that purpose. On suggesting this view to a gentleman of much and close observation, he stated that the common mullein *(Verbascum thapsus)* was full of this insect, and which, upon observation, appeared at first sight to be true; but their active movements induced a suspicion that it might be a mistake, and on examination with the microscope, they were found to have six legs, which the *larva* of the wheat fly have not being only a maggot with annular muscles, or rings, allowing them a very slight motion.

It is the well-settled opinion of observers in those regions where it has prevailed, that nothing short of a total suspension of wheat and its kindred crops, will effect its obliteration from the country, unless they might be affected by some extraordinary change of our seasons, as some severe drouth, excessive cold and open winter, or great soaking rains at the period of their transformation in the spring.

Such is the experience of observers in all those locations in which the midge obtained a fast hold—a category that will materially affect the value of real estate, and the prospects and prosperity of the country, and even the whole bread-consuming world. L. B. L.

A SLIGHT MISTAKE—The *Granite Farmer* publishes S. W. JOHNSON's analyses of "Mapes Improved Superphosphate of Lime," and gives 21½ as the percentage of ammonia. Instead of finding 21½, Mr. JOHNSON found only 2½ per cent. of ammonia. Of course the error is accidental, and though the *Farmer* has strongly censured us for writing disparagingly of MAPES' Superphosphate, it will be glad to correct the mistake, though the figures thus corrected annihilate Mr. MAPES' claim to having invented an "*improved*" superphosphate, or a manure which cannot "be manufactured in England for $100 per ton," &c. The correct figures are as follows:

Water and sand	20 per cent.
Plaster (sulphate of lime)	37 "
Insoluble phosphate of lime	21 "
Superphosphate of lime	16 "
Free sulphuric acid	5 "
Ammonia	2½ "

DRAINING SWAMPS—THROWING UP MUCK, &c. The present dry weather affords an excellent opportunity for draining swamps, throwing up peat or muck for winter use in composting manure, &c. There are thousands of acres of low swampy lands, producing, at present, nothing of any value, which by a little judicious ditching and draining might be made the most productive land on the farm. The labor of doing this will be much lighter now when such lands are comparatively dry, than when saturated with moisture. Few realize the amount of water peat or muck absorbs, and the extra labor of digging or carting it in a wet, instead of in a dry state. For use in the stables, barn-yard, composting, &c., peat or muck should be thrown up and allowed to dry before carting; in this way much labor will be saved, and *now is the time to do it.*

POSTS last a vast deal longer in wet soils than in dry, sandy loams—longer in clay than in the richest soil. In peat meadows, the bottom of the posts hold out longer than the tops and the rails.

SEASONABLE NOTES AND SUGGESTIONS.

September is not only one of the pleasantest months of the whole year, but in other respects possesses peculiar interest in the eyes and estimation of Ruralists. The old Almanac adage,

"September blow soft,
Till the fruit's in the loft,"

is pleasant and practical, even in this season of arid waste, and scarcity of fruit,—and we trust the couplet will prove practically true with the majority of our large and widely-extended parish of readers. Though the earth may not yield its bounties to the extent of our wishes and (months ago) reasonable expectations—though some of our crops have been partially and others almost entirely destroyed, by a drouth unparalleled for severity and extent in the history of American Agriculture—all is not lost, and, instead of folding our arms in despair, we should take courage and manfully battle to secure the prime necessities, if not the comforts and luxuries of existence.—Let us, then, be of good cheer, resolving to discharge our duties aright, even under the most discouraging circumstances. Adversity is often more beneficial, in the end, than prosperity—especially to those who read aright its important lessons.

The severe drouth which has executed over so large a portion of this country during the past two months, has taught, or should teach, a never-to-be-forgotten lesson to American farmers on the importance and benefit of Deep Tillage and Underdraining. Not only every one who runs may read, but all who see may understand its import, and comprehend the wisdom of its teachings. The lesson has been expensive, and will therefore be heeded and remembered. It will be more impressive and beneficial than all the addresses and essays on the subject ever delivered or published in this country—though it only proves their correctness. From year to year we have urged the importance of Underdraining and Deep Tillage. Need we continue to give line upon line, and article after article, on subjects so forcibly demonstrated by the recent Great Calamity—the long-to-be-remembered Drouth of 1854?

The ravages of the weevil, or wheat midge, have been so extensive in many sections during the past season, that a remedy or preventive against this destructive insect is an important desideratum in our best wheat-growing districts; and the man or association who shall discover and make known a cheap and effectual means of heading the enemy, will immensely benefit the country, and become entitled to distinguished honor. In the absence of any better remedy, we would again advise the *early sowing of early varieties of wheat*, such as the *Mediterranean, Soule*, &c. Those who sow winter wheat at all, have no time to spare—for the earlier it is sown, the greater the chances of escaping the ravages of the midge. There are other advantages in early sowing, but the most important point is to head the chief enemy. Prepare your ground in the best manner, see to its proper drainage, procure clean seed, and let it be sown or drilled in properly. Liming and brining will be advantageous, especially if you have any fears of smut. Those who can do so, should try some of the proposed (or their own) preventives against the weevil, and note and report the result. We are not rich, but will give $500 to any person who shall discover a practical, cheap, and sure remedy, against the midge; the remedy to be proved by its entire success during at least two successive seasons, in different localities where the midge prevails,—and first communicated to the public through the pages of the Rural New-Yorker.

THE WEATHER AND CROPS AT THE WEST.

The weather seems to be a very general topic of remark, it is so dry in many parts of the country, particularly in the west. Here-abouts we had abundance of rain for all needful purposes of vegetation up to July 27; but since then not enough rain has fallen to moisten the surface. Very drying winds succeeding our last showers, in connection with the *hot* weather, soon licked up the moisture.—Quite aged people remark they do not remember a drouth of so short a duration being so severe as it now is. Corn and potatoes, especially late planted, with garden vegetables, are suffering very much, and will be greatly curtailed in yield. We frequently have the "signs of rain," but the adage that "all signs fail in a dry time," proves too true. Wheat, grass, and all our earlier crops, gave a yield this season considerably above our average; and the farmer can only be really thankful for the many blessings vouchsafed by a good Providence.

Mr. L. Norris, of Ashtabula county, O., writes under date of the 11th instant:—"The wheat crop in this region came in better than was at one time expected; but the great cry is now the *drouth*, and certainly it is unprecedented. The corn crop is, I think, past recovery. In most of the fields there is no appearance of tassel, and where there is tassel there are no ears. Immediate rains might produce a change. Potatoes, too, by the effects of the drouth, and bugs innumerable, will prove a total failure. Our pastures are dry, *very dry*, and most of the young clover killed. Our gardens look desolate, fruit shriveled and dropping from the trees. Springs failing, and vegetation generally drooping and dying, fires raging in the fields and woods, destroying much property, and even human life. Never have we known the weather so intensely hot as has been the past month, whilst there appears to be no dew, so that we can walk the fields at early dawn without moistening the soles of our shoes. Stock suffers, and may perhaps have to be sacrificed; but we must not complain. With our usual health, we should still enjoy what we have with thankfulness, ever dependent on Him who is the giver of life with all its blessings."

A correspondent at Carrollton, Ill., writes under date of Aug. 1st:—"We are suffering very much from a severe drouth, having had no rain to speak of since the 13th of June.—The corn crop is likely to prove very light.—Our small grains and grass crops, however, are very good, and all secured. I understand the drouth is very general all over this State and Missouri."

A friend writing from Warsaw, on the Mississippi river, opposite the mouth of the Des Moines, says, under same date:—"Standing on the high bluffs, we have a good view of three States, that would certainly afford many fine scenes, were not everything burned up by the drouth. But as it is, with the thermometer ranging from 100° to 104° in the shade, and from 135° to 145° in the sun, for five hours per day, as it has done (save a few days) for the past six weeks, and that, too, without any rain, the daylight view of landscape is anything but the most agreeable." T. E. W.

THE DROUTH, FIRES, &c.

Rus. Rural:—There has been great suffering in many places this season from drouth, and we in this community are in a bad fix indeed. In addition to the light crops, both of grain and grass, the element of fire is let loose in our fields and forests, burning with fearful rapidity large tracts of valuable timber. Many fields and fences have been burned, even hundreds of acres; also, some hay-stacks, houses and barns have been consumed. It is so very dry that neither dews nor the combined energies of the citizens can stop its progress. Some have removed their goods from their houses and fled before the flames for safety; others are in great danger of being burned out at any moment. High winds prevail, and there is no prospect of any rain. We hope none will be so presumptuous as to kindle any fire out of doors for any purpose, while it continues as dry as it is at present. Many wells and valuable springs are dried up, and there is a lack of water. Our pastures no longer sustain the stock, and many have already had to fodder their cattle to keep them alive. Most of the farmers are disposing of their stock as fast as they can, for the want of both pasture and fodder. But let us not murmur at these calamities, but remembering that we have been chastised for our follies, learn wisdom by the things we suffer. C.

Lyle, Yates Co., N. Y., August 28, 1854.

Hay from a Reclaimed Meadow.—From a meadow that fifteen years ago would not grow buckwheat tall enough for stubble, I this year cut a large crop of hay. I measured off half an acre, raked and cocked it, 52 large cocks of hay, and when sufficiently cured for the barn I took an average of the cocks and weighed it—it weighed 110 lbs. Now 52 cocks at 110 lbs. each, would produce two tons and 17 cwt., or about five tons and 14 cwt. to the acre.—If it had been a wet season the crop would have been much greater. This improvement has been brought about by rotation in cropping, and top-dressing when in grass.—Louis P. Leon, *Berkshire Hill, Tioga Co., N. Y., Aug.*, 1854.

Remarks.—Such a method of estimating the acreage yield of a crop is frequently far from accurate, and never satisfactory to any who are skeptical in regard to five or six tons to the acre hay crops.—Eds.

The Drouth and Crops in Jefferson Co.—Under date of Aug. 24, Moses Eames, Esq., of Rutland, Jefferson county, N. Y., writes as follows:—"We are now in the midst of a severe drouth, and our dairies suffer very much. The hay crop was very short, the pastures are dried up, and we have a good supply of grasshoppers. Corn and potato crops will be much less than half, and in some cases the potato crop will be an entire failure. Apples are all small, and not very plenty, yet we hope to have a good show at our fair on the 21st and 22d. Amount of rain in July, 0.67 in.; in August to date, 0.47 in. For the same time last year, 3.76 in."

From a course of experiments made under the direction of the Duke of Buccleugh, it is found that among the grasses best adapted for the shade, or drip of trees, some of the Poas or spear grasses, the orchard grass, tall fescue and wooly meadow grass are preferred, and that the sweet-scented vernal grass and timothy come next in order.

Agricultural Miscellany.

The Weather and the Wheat Crop in England.—In England, at this season of the year, the weather is a source of constant anxiety, a rainy week or two being sufficient to blast the bright hopes of the husbandman, lower the funds, depress trade, and produce but for foreign importations, a famine. For the first week in August, very generally throughout England, there was constant rains and the wheat crop has been considerably damaged.

The *Mark Lane Express* says:—"Should a period of settled dry weather succeed, the mischief might, perhaps, not be serious; but it must be confessed, that matters are now in a somewhat precarious position, and that great injury might result in case much more wet should be experienced." In quantity, the wheat and spring crops are a full average, but "*Everything must depend on the weather*; should it prove suspicious, we might yet have a good average crop, in which case the range of prices would, undoubtedly, be much lower during the next twelve months, than it has been since the autumn of 1853."

The Hop Crop in England.—All accounts we have seen from the hop districts of England concur in representing the crop as exceedingly light. In Worcester, "few are now sanguine enough to expect anything like half a crop."—The *Doncaster Chronicle* says:—"The present will be an eventful year in the history of that fickle and singular production, the hop plant. From the earlier period of spring, we have had our misgivings as to there being any likelihood of a crop, and these have now (Aug. 3) been all but confirmed. *The plant in this district is all but a total failure.*" On many of the low lands in Kent, "the blight has laid such a strong hold that the plant is beyond recovery." In North Nottinghamshire, "the hops are a great failure, and there is every appearance of its being the worst season for thirty years." The *Sussex Express* says the plantations in that district exhibit some improvement during the past week; many healthy shoots are come out, and they are mostly free from vermin. At East Farleigh, too, "the gardens are doing remarkable well." These two are the only favorable reports we have seen.

Characteristics of Nitrates of Potash, Soda, &c.—The nitrate salts are attracting much attention as fertilizers in Great Britain, and the Government is having searches made for natural deposits, &c. The following characteristics of these salts are given by Professor Way, with some practical hints for ascertaining the amount of nitrates in saline depositions:

"All the ordinary nitrates are readily *soluble in water*. The nitrate of soda crystallizes in cubes. The nitrate of potash in long prisms. When exposed to a gentle heat the nitrates fuse, giving off oxygen gas. On this character is founded the most simple and certain means of distinguishing these salts from all other natural saline deposits—namely, to throw a portion of the supposed nitrate on red hot fuel, when "deflagration," or a greatly increased and violent combustion of the fuel will result. A mixture in which the quantity of alkaline nitrate is too small for the production of these phenomena, will hardly pay for importation into England. All nitrates are valuable, though not in an equal degree, for agricultural use."

Massachusetts Hops.—The Inspector of Hops, in Boston, urges the hop growers of Massachusetts to be more careful in growing, picking, and packing their hops. He says:

"To all interested in growing and dealing in hops it is well known, that during the last seven years, in point of reputation and character, Massachusetts hops have suffered very materially in comparison with New York hops; have been in less demand and sold at a lower price. This fact is attributable to a combination of causes, the most prominent of which are the following, viz:—Permitting too many mule hops per acre, and too early picking, before the hop was ripe; from bad picking; from packing the hops in unsuitable bagging.

"The most fatal error of Massachusetts hop growers, has been picking too early, before the hops were ripe, and hurrying them into bags too soon. Under this system of management hops cannot be produced for the brewers in a state of perfection."

Cotswold Sheep.—At the recent sale of Mr. Wm. Game, Aldsworth, Gloucester, England, fifty-five "long-wooled tups" were sold or let at an average of $105 each. The highest price was $252, and the lowest $45. These are much lower figures than those obtained at the Babraham South Down letting.

American Pomological Society—The biennial meeting of this society will be convened at Boston September 13th. It is expected that this will be the most interesting meeting the society has yet held.

A Substitute for Ringing Swine.—An English breeder of stock has recommended a mode of dealing with these mischievous animals, which it is said may supersede the necessity of putting rings in their noses. It consists in simply shaving off with a razor or sharp knife the gristle on the top of the noses of young pigs. The place soon heals over; and the pigs are thus rendered incapable of rooting.

GRASSES FOR PASTURES.

We have seen several extracts from an address of Hon. A. B. Dickinson before the Tioga Co. (Pa.) Agricultural Society. The subject of butter-making appears to constitute a large portion of the address, and in this connection he speaks of the proper grasses for cow pastures. He advises a mixture of different kinds, as "when any kind is green and fresh, cattle do much better than when it is ripe and dried up." This is very well, and the practice has long been followed in England, though too much neglected in America. But Mr. D. makes some confusion in regard to species. He says:

"You must have in your pastures, Timothy, White Clover, Blue Grass, Red-Top, or Fowl Meadow Grass, which I think is one and the same thing, only differing as it grows on different soils."

It is a mistake to regard fowl (not "foul") meadow as "the same thing" as red-top; they are quite distinct species. Red-top is the *Agrostis vulgaris* of botanists. The fowl meadow is an American species, probably unknown to European authors—indeed we do not find it described in *any* scientific classification—but every person who compares the two can readily distinguish them, though both doubtless belong to the same genus. The fowl meadow has a longer and more slender stem, a narrower and lighter green leaf, a more open head, and smaller but larger seed. Its chief value is for low meadows,—not the wettest, but those of a deep vegetable or mucky soil. The stem keeps green and sweet even after the seed has ripened and fallen. It makes good hay. It will not thrive on what is called upland, nor in most situations where red-top flourishes. In this vicinity it grows plentifully on the banks of Charles and Neponset rivers above tide water. The name "fowl meadow grass" is said to have been given it on account of its seeds being formerly much eaten by wild ducks and other fowl, which frequented the localities where it grew.

Again, Mr. Dickinson says:—"The kinds I have named come forward in order. Timothy is first, and blue grass last to mature."

We are aware of the difficulty of being always understood when speaking of grasses by their common names. But we suppose the grass alluded to by Mr. D. as "timothy," is the herdsgrass of this section, or meadow cat-tail of the English (*Phleum pratense*.) And we suppose by "blue grass," he means what is known as Kentucky blue grass, spear grass, green grass, June grass (*Poa pratensis*.) The former species is one of our latest grasses, and the latter is one of the earliest—the one flowering in July and the other in June. The blue grass starts with the first warmth of spring, shoots directly into stem and forms seed. In drouth its growth is checked more than that of red-top, though not so much as timothy or herdsgrass; but it starts with the first rain, and grows later in fall than almost any species.—*Bost. Cult.*

MACHINERY IN FARMING—ITS NECESSITY.

It is not enough that farmers avail themselves of all the advantages which chemistry affords in its application to their art; it is not enough that they learn how to save as much as possible of the manures made on their premises, and the best methods of applying these and also purchased and specific manures; it is not enough that they know at what seasons and to what depth their soils should be cultivated.—They must perform as many of the operations of farming by machinery, as machinery can be made to perform to advantage.

There is no other way in which agriculture can keep pace in respectability, pleasure, and profit, with other arts. Without this expedient, it will be outstripped by them, and sink steadily in comparative rank.

By machinery, as we use the word here, we mean all mechanical contrivances which can be substituted for manual labor, and combined with manual labor so as greatly to increase its productiveness.

And the policy which we recommend includes also manual labor, and as a more powerful co-operator with it.

So far as a horse or an ox can be made to do the work of five men, the horse or the ox earns the net product of five men's labor for the employer. If one man cultivates as much corn, and cultivates it well, with one horse, attached to a cultivator, as his neighbor cultivates with ten hoes, in the hands of ten men, it is easy to see which of the two is traveling the fastest on the road to wealth.

So in cutting grass, in planting and harvesting grain, in shelling corn, and in various other operations of the farm, machines can do the work for a small percentage of the cost of manual labor.—*M'Mahon's Courier.*

Time for Cutting Buckwheat.—It is hard to give a precise rule for the best time to cut buckwheat. The grain continues to ripen successively, and while most of the stalks remain green or succulent, these grains will not drop off. It is therefore best to let the crop remain so long as the amount continues to increase by successively ripening portions. But as soon as the plant loses its fresh appearance, and the first ripened portions are found to separate easily, no time should be lost in cutting. The rule with some farmers in the north, is to allow the crop to stand till the first night frost, and then to cut as quickly as possible before the shelling process commences. But when frosts do not come early, it is cut before. As soon as the stalks are dead or dry, buckwheat threshes with great ease, but not before; hence the reason that when but partly dried, it is often found so difficult to thresh. At the north, it is usually sown during the early part of summer, sometimes nearly as late as midsummer; if sown too early, the grain does not set so well.—*Alb. Cultivator.*

The first cattle brought to America from Europe were imported by Columbus in his second voyage, in 1493.

A DESTRUCTIVE WEEVIL.

Insects known as weevils and curculios comprise many species, and feed on different kinds of vegetation. Many people are familiar with the grain-weevil, sometimes called black weevil (*curculio granarius*) and also with the plum weevil, the habits of both being but too well known from the injury they do to grain and fruit. There are other species whose ravages are equally destructive in other ways.—Several attack the different kinds of pine and other resinous trees. In some of the Southern States the pine forests have been so overrun with these insects that thousands of acres have been laid waste, and damage to an incalculable amount thus inflicted. Dr. Harris and other entomologists have described a destructive species found in this section called the white pine weevil. We have lately noticed a species on the spruce. In a plantation of young spruces and firs belonging to Dr. Eben Wight, of Dedham, we observed that the leading shoot of the tree, sometimes to the length of two feet, had turned yellow and was dead. This was about the middle of July. On examination, it was found that a worm or maggot, about three eighths of an inch in length, had eaten the inner bark and tender wood of this year's formation, entirely around the tree, leaving the outer bark unbroken. As some of the larvæ appeared to be about to pass into the pupa state, we took the top from a tree containing them, and have traced them to their last stage. The insect is a curculio, or weevil, but does not correspond exactly to Dr. Harris's description of the white pine weevil. Its mode of attack, however, is similar, and the remedies suggested by Dr. Harris against the one, would probably be best in regard to the other: viz., to cut off the shoot as soon as it is perceived to be attacked, and burn it. The beauty of pines, spruces, and such trees, depends much on preserving the first upright shoot. For this reason the injury done by this insect is great, and all means should be used to destroy it.—*Boston Cultivator.*

TURNIP-HOEING.

Quite an animated discussion has been carried on, of late, in the columns of the *Mark Lane Express*, on the question of the proper distance at which turnip plants should be drilled and left at hoeing. Some contend for 9 and some for 11 inches between the plants, the drills being 12 inches apart. Others contend for as much as 18 inches or more between the drills and 18 inches or more also between the plants in the drill. One who advocates this largest space, says he saw last winter, some white turnips on a desk in the Corn Exchange at Bury, three of which would fill a bushel; and he says that he has doubts whether three could be put into an imperial bushel, if furnished with a shut down lid. The general opinion seems to be that the heaviest crops may be gathered when the drills are 12 inches apart, and the plants are set with an 11 or 12 inch hoe, thus leaving the plants about 12 inches apart. When large bulbs are expected from the richness of the soil, or on account of special manuring, a larger area is allowed.

Degeneracy from Breeding in-and-in.—The fact that animals of all kinds become degenerate from breeding from two parents between which there is affinity of blood, is one that is pretty well known. It is not always, however, attended to in practice, else we would not have witnessed the degenerate lambs which we have seen this spring. Through thoughtlessness or careless-ness a neighboring flock of ewes was sired by the same buck which had been with them before for two seasons. He sired, therefore, his own lambs, and perhaps, his lambs' lambs. The owner knew better, and intended to have procured a change of bucks; but in some way the result above stated happened.—The result was a number of very weakly and deformed and idiot-looking lambs. Some were so weak in the hind legs that they could not support their own weight; and some had their hind legs twist outwards when they attempted to walk. One lived several days, but breathed quick and short all the time, and had to be assisted about nursing. One was coarse wooled almost as a water-dog, and looked very stupid and idiotic. Such results seem worthy of being put on record as a warning against like carelessness or neglect in others.—*Country Gentleman.*

To Destroy Thistles.—The Canada thistle is easily subdued, if they can be plowed—Plow in the fall, and sow to wheat, and stock down heavily with the large red clover and timothy. In the spring, as soon as the ground is dry, or the clover is two inches high, sow plaster, as much as you please, from one-half to four bushels per acre. Cut your wheat off as early as possible; let the clover grow as late in the fall as is convenient; then let nothing but calves or yearlings on to it, nor let it be fed more than just to keep the mice from nesting in it. The better you can make the clover grow, the more fatal to the thistle.

A very singular discovery has lately been made in France, by M. Fabre, a gardener of Ayde. The herb ergHops, heretofore considered as worse than useless, grows abundantly on the shores of the Mediterranean. It produces a species of grain resembling wheat in form, but much smaller. In the year 1830, M. Fabre sowed a quantity of this grain, and he found the produce bore a close affinity to wheat; that produce he sowed the next year, and the yield was still more like wheat. He went on sowing the produce of the succeeding year, until he has now succeeded in getting as fine a crop of wheat and of as good quality as can be wished for.

In consequence of the severe drouth in some parts of Prince George's county, Md., the corn and tobacco crops have been abandoned, and many persons are sowing buckwheat in their stead. The cattle are suffering terribly for pasture.

Orchard and Garden.

POMOLOGICAL GOSSIP.

NO. II.—FARM GARDENS—SELECT LIST OF FRUITS.

AGREEABLY to my promise in a previous article, I will make out a small, select list of the choicest varieties of such fruits as ought to find a place in every farmer's garden

And first, by way of introduction, let me say that any deep soil—(not *less* than ten inches)—thoroughly enriched with well-rotted stable manure, if kept free from grass and weeds until the trees and plants get a good start, and also free from *stagnant moisture*, will answer a good purpose for any of the following fruits.

Strawberries.—*Large Early Scarlet, Hovey's Seedling*, and *Genesee* will prove *good* if not the very *best*, for general cultivation. If I wished to cultivate only a single variety, I should select the *Genesee* in preference to all others. It is a seedling, raised by Messrs. EDWARDS and BARRY, of Rochester, is very hardy and productive, and of nearly first rate flavor. It is a *hermaphrodite*—that is, it produces perfect flowers, and consequently needs no other kind for a fertilizer. I would recommend spring planting, for the reason that farmers generally have more time to attend to it then, and the plants are not as liable to winter-kill if neglected.

The *best* time, no doubt, is in summer, but they need more attention to protect them from the drouth, and to prevent their winter-killing, than farmers can bestow at that season. To succeed well they should always be mulched with clean straw, (where field mice are not troublesome,) or with fine litter, leaves or spent tan bark. From fifty to a hundred plants will do very well to begin with as they increase rapidly. The most convenient way to plant them is in beds, wide enough for three rows 18 inches apart, and set the plants about 15 inches from each other in the rows.

Cherries.—It is a matter of surprise that so few of the *Heart* and *Biggarean* cherries have found a place in farmers' gardens. They are so much superior, in size, flavor and productiveness, to the common red cherry, that I should suppose everybody would have some of them. Reader, if you have none of them growing, make up your mind at once that you must set some this fall.

The best varieties for a small collection are, *Bauman's May, Downer's Late Red, Belle Magnifique* and *Yellow Spanish*; and if you wish more add *Reine Hortense, Governor Wood* and *Elton*.

Apricots.—This most delicious fruit, ripening as it does in midsummer, when other fruits are scarce, deserves to be more generally introduced. The great obstacle to its successful cultivation is the ravages of the curculio, (mine have not been seriously injured by the frost during the past five years,) and now that Mr. MATHEWS' remedy promises to be effectual to the destruction of that pest, (I hope arrangements may be made for its publication before the next curculio season,) every farmer ought to plant two or three trees at least.

The *Early Golden, Moorpark*, and *Breda*, are good varieties. It is usually worked on peach stocks, but such trees will rarely live more than four or five years. It succeeds much better on plum stocks—the fruit is larger and better, and the trees, although less vigorous, are more productive. If you would not be disappointed, set no trees except on plum stocks. The trees are much better worked on the hard-shelled almond than on the peach, but not as good as on the plum.

Plums.—There is not much to encourage the cultivation of the plum at present, for, if the curculio can be "headed," there seems to be no escape from the black knot. The free use of the knife whenever and wherever it appears, will arrest its progress for a time, but in the end it destroys the tree.

There are many good varieties, but the *Green Gage, Washington, Imperial Gage*, and *Lombard*, are, all things considered, about the best. R. R. W.

HINTS AND GLEANINGS.

THE CURCULIO.—A correspondent of the *N. Y. Eve. Post*, told in that paper, last spring, how a neighbor last year destroyed the curculio by taking the dirt from the roots of his plum trees when in bloom, and supplying the place with leached ashes. He now says:

"I have tried the experiment this year on all of my trees, and have saved *one* plum; the rest of the fruit having been bitten by the insect, fell off. I begin to think that we shall have to wait the "good time coming," when the insect leaves of its own accord, before we raise plum fruit."

MULCHING WITH WOOD SHAVINGS.—Mr. HERSEY, of Hingham, Mass., writes to the *N. E. Farmer* that he has tried mulching fruit trees with wood shavings for the last two years, and finds it an excellent material. Brush from evergreen trees is also good.

RUST ON APRICOTS.—There is a species of rust which sometimes affects apricots, and we think plums, shrivelling and rendering them worthless. It is probably caused by the general unhealthy condition of the tree, and for its cure we would apply better culture. A deep and well-drained soil are prime necessities for a good fruit garden.

FRUITFUL BENEVOLENCE.—It is stated of GEN. PUTNAM, that he planted in his native town in Windham Co., Conn., a mile of apple trees along the highway, so that "the poor might have apples as well as the rich." Such beneficence is well worthy of imitation.

THE FUCHSIA.

THIS green-house plant is a shrub of small size, generally from two to four feet in height, and possesses no particular beauty except in its flowers. These are of a tubular shape, and have a very graceful pendant habit, combined with great diversity and strong contrasts of the most brilliant and delicate colors. It is a native of Mexico and South America, and belongs to the natural order *Onagraceæ*, and received its generic name in honor of a German Botanist, L. FUCHS. It hybridizes with the greatest ease and success; and thus numberless varieties, far surpassing the original type in beauty, have been produced. The purchaser is confused, however, by this very richness, and is puzzled to choose from the long list of names—many which have but slight differences in form or color.

We propose to give illustrations of a few of the best and most distinct varieties, as described by Mr. BARRY, of the *Horticulturist*. The first is the

PEARL OF ENGLAND.

This is the finest of all the Fuchsias; certainly the finest of all the hybrids with light colored tubes. The above figure shows this in the natural size. The calyx is of a pale flesh color or nearly white, well reflexed, showing a fine, full, bright scarlet corolla. It grows freely and blooms most profusely, and is among the new varieties.

A BARREN GRAPE VINE.—INQUIRY.

EDS. RURAL:—As your paper is the source of much useful information, and is considered an available umpire on all mooted questions pertaining to the farm and the garden,—will you, or some of your correspondents, enlighten me as the "why" and "wherefore" of the following anomaly, viz:

In my yard is a magnificent Isabella grape—14 years of age—of very extensive superficial pretensions—exhibiting every desire to "spread itself,"—vegetating most luxuriantly, "*solus cum sola*" in unmitigated *barrenness*, and flourishing in "unbleached greenness," from April till October. Every appliance has failed—the result, thus far, being only an exhaustion of patience, and a shaken faith in scientific recommendations. It is uniformly intractible to all the *promptings* of thorough pruning, heavy top-dressings, subsoil culture, Cuyuga plasterings, judicious training, plentiful irrigations, "soap-suds" "sunshine," etc., etc., etc. All them have been tried and yet, *not one single cluster in 14 years!* The blossoms appear in boundless profusion, but no fruit is produced.

These are the facts. Now what shall I do? Please enlighten my perplexity, and greatly oblige, Yours, &c. ESTHER WILSON.

East Wilson, N. Y., Aug., 1854.

CAMPHOR VS. PEA BUGS.—A correspondent of the *Horticulturist* says:

"Four years ago, last spring, my seed peas were more than half destroyed by bugs, the largest and best varieties being most injured. The summer following, I had boxes made, one for each variety, with a cover; and when the peas were gathered, I put into each box with two quarts of peas, from six to eight bits of gum camphor the size of a large pea, and mixed them together, and closed the box. The next spring there was not a pea injured. I have pursued the same course every year since, and have not had one pea affected by the bugs."

THE DIFFUSION OF SEED.

THE economy of Providence in distributing seeds may be remarked in those of the dandelion *(Leontodon taraxacum,)* which are everywhere to be seen, during summer, floating about on the air, supported by its feathery down. It is not to be supposed that half of these seeds ever fall upon spots favorable to germination; but when so great a number of them, and their congeners of the class *Syngenesia, (Compositæ,)* are scattered about by the winds, it almost raises the chance to certainty that some of them will fall on spots where before there has been none, or only a scanty vegetation; on the tops of walls, for instance, where a thin stratum of soil has been formed by the decay of the winter crop of mosses.—The process of the forming of such soil is extremely interesting, and may be observed, in a small scale, even in cities, on brick or stone walls. First there is the green incrustation, called *Byssus* by Linnæus, but recently proved to be the primary germination of several mosses, such as *Polytricha* and *Tortula*. When this decays, a very thin layer of vegetable earth is formed, which affords a scanty support for the roots of the next year's crop of mosses; and in process of time soil is formed of sufficient depth for *Draba verna* and other frail plants.

A singular contrivance is conspicuous in one of our wild cresses *(Cardamine impatiens,)* as well as in the balsams and in Touch-me-not *(Impatiens noli-me-tangere)* a native plant of the same genus. In all of these, when the seed is ripe, the valves which inclose it are so constructed that by the influence of the sun's heat they open with a sudden jerk, and throw the seeds to a considerable distance. The effect is produced sooner and with more force when the ripe seed vessel is touched by the hand, or by any accidental jarring of the leaf against it. Were we disposed to refine upon the final cause of this, (a subject very ready to mislead,) we might say that this jerking of the seeds was contrived not only for their diffusion, but for their preservation from birds and insects; since the instant that these should begin to devour them, the springs of the valves would be thrown into action, and the seeds scattered about before a single one could be secured for a meal. In the wood sorrel *(Oxalis acetosella,)* as well as the horned sorrel *(O. corniculata,)* the structure of the valves is very beautiful, but no description could do justice to it, not even with aid of figures. The first, however, abounds in most woods; and the latter, where it has been introduced as a flower, soon becomes, from the circumstances under consideration, a very troublesome weed.

One of the most beautiful contrivances for the diffusion of seeds occurs in various species of violets. The seeds of this order of plants are contained in a capsule of a single loculament, consisting, however, of three valves. To the inner part of each of these valves the seeds are attached, and remain so for some time after the valves, in the process of ripening, have separated and stood open. The influence of the sun's heat, however, causes the sides of each valve to shrink and collapse, and in this state the edges press firmly upon the seed, which from being before apparently irregular in its arrangement, comes into a straight line. The seeds, it may be said, are not only extremely smooth, polished, and shining, but regularly egg-shaped; so that when pressed upon the collapsing edge of the valve, it slides gradually down the sloping parts of the seeds, and throws it with a jerk to a considerable distance. There is another part in the contrivance of Providence for the same purpose, in the Violaceæ, worthy of remark. Before the seed is ripe, the capsule hangs in a drooping position, with the persisting calyx spread over it like an umbrella, to guard it from the rain and dews, which would retard the process of ripening; but no sooner is the ripening completed than the capsule becomes upright, with the calyx for a support. This upright position appears to have been intended by nature to give more effect to the valvular mechanism for scattering the seeds, as it thus gains a higher elevation (in some cases more than an inch) from which to project them; and this gives it, according to the laws of projectiles, a very considerable increase of horizontal extent. Some ripe capsules of *Viola tri-color*, which I placed in a shallow paste-board box in a drawer, were found to have projected their seeds to the distance of nearly two feet. From the elevation of a capsule, therefore at the top a tall plant, I should think these seeds might be projected twice or thrice that distance.—*Mag. Gard. and Bot.*

THE YEW TREE.

MRS. STOWE, in her new work entitled "Sunny Memories of Foreign Lands," gives the following description of the yew tree, of which we have heard so much in English literature:

"Here in England, I think, they have vegetable creations made on purpose to go with old, dusky buildings; and this yew tree is one of them. It has altogether a most goblin-like, bewitched air, with its dusky black leaves and rugged branches, throwing themselves straight out with odd twists and angular lines, and might put one in mind of an old raven with some of his feathers pulled out, or a black cat with her hair stroked the wrong way, or any other strange, unmanly thing. Besides this, they live almost for ever; for when they have grown so old that any respectable tree ought to be thinking of dying, they only take another twist, and so live another hundred years. I saw some in England seven hundred years old, and they had grown queer every century."

THE BARTLETT.—No pear is so universally popular as this. If pear trees are found in any garden in New England, one or more Bartletts are sure to be among them. In this I admire their taste, and I go with the mass. It is a first-rate fruit on the pear, quince, and the mountain ash. It is a fast grower and a sure bearer.—*Henry Little, of Maine, in Patent Office Report.*

Mechanic Arts, &c.

LIST OF PATENT CLAIMS

Issued from the United States Patent Office,

For the week ending August 15, 1854.

Robert Arthur, Washington, improvement in closing the mouths of bottles, &c., air-tight.

John A. Bradshaw, Lowell, improvement in machine for pegging boots and shoes.

William Brooke, Jersey City, improvement in gas molds.

John H. Cahill, Philadelphia, improvement in hot air ranges and side irons.

Mathias P. Coons, Brooklyn, improvement in railroad car brakes.

Aaron D. Crane, Newark, N. J., improvement in machines for turning irregular forms.

D. M. Cummings, Enfield, N. H., improvement in rakes.

B. Franklin Day, Philadelphia, improved hand press.

Cook Darling, Utica, improved mode of securing hubs to axles.

Aaron L. Dennison, Roxbury, improvement in punches and dies for punching watch hands.

Joshua Gibbs, Canton, Ohio, improvement in plows.

Joseph Harris, Jr., Boston, improvement in lamps.

Albert H. Judd, St. Louis, improved safety apparatus for steam boilers.

J. L. Lord, Chester, Conn., improved grindstone frame.

Thomas G. McLaughlin, Philadelphia, improvement in railroad car brakes.

Jacob Myers, Powhatan Point, Ohio, improvement in harrows.

Robert Neish, New York, improvement in lime kilns.

Andrew Patrick, Alleghany County, Md., improved mode of unloading coal and other cars.

Sylvester H. Roper, Worcester, improvement in sewing machines.

Jacob C. Robie, Binghamton, improvement in turn tables.

O. S. Reynolds, Dover, N. H., improvement in machines for cutting irregular forms.

Charles G. Sargent, Lowell, improvement in machines for combing wool.

George Spencer, Utica, improvement in railroad car windows.

William A. Surret, Pompey, N. Y., improvement in fire-arms.

J. S. White and L. P. Wait, Waterloo, S. C., improvement in seed planter.

Moses D. Wells, Morgantown, Va., improvement in horse rakes.

Timothy W. Welsh, Jersey City, improvement in insulators for lightning rods.

W. A. White, Roxbury, improved process of printing hung-napped fabrics.

A. S. Wright, San Francisco, Cal., improvement in gold amalgamator.

William Kidder, Newburyport, assignor to William Kidder and Nehemiah Hunt, Boston, improvement in machines for pegging boots and shoes.

Henry H. Beach, Chicago, improvement in winnowers.

HOUSE-PAINTING.

I AM a painter by trade, and have been for twenty years experimenting to ascertain what mixtures of paints are the cheapest and most desirable, due regard being had to handsome appearance, and first for white paint, whether it be for old or new work—but if for old and bare wood the greater utility, as it will save a greater amount of stock—the following mode of procedure is excellent. For the first coat, take clean, French yellow, and one half good boiled oil, the other half raw, and cover the work well with it. Let it stand to become hard and dry, and then put on two coats of the purest white lead paint, when it will be found that just half the quantity will be sufficient, and make better surface than all clear white and last twice as long, with less expense. Fifty pounds of yellow will go as far in priming as three hundred of white lead. For a very old house where the paint is all off, take strong lime-water and mix with it one-half oil for the first coat, which will be found to fill up the pores and lie just as durable as if primed with white lead, the second coat going on and working as flexibly as on new work, looking as well when done, and at half the expense. I painted an old-fashioned house the past season that had not been painted for twenty-five years before. I took six gallons of oil and added to it eight gallons of lime-water, mixing with it about 35 pounds of French yellow, and painted the house through with it, and in four weeks after, I painted it again with white lead, taking sixty pounds of white lead to three and-a-half gallons of oil, when it made a perfectly beautiful surface, and excellent finish. I could give more examples, but it is not necessary.—J. B. THOMPSON, in *Boston Cultivator.*

CANOPY MOSQUITO NET.—A rod is secured by a link and hook to each post of the bedstead, and they extend upwards at an angle of 45°, and meet in the center above the bed, and are secured there altogether by an ornamental cap.

The parts are so constructed as to fit any kind of bedstead, and the net is so arranged that it will contract and expand by an India rubber braid, so as to fit snugly on every bed to which it is applied. It is portable, neat, and ornamental. By a cord, the net can be raised or lowered at pleasure by a person in the bed, and it can be taken down in half a minute and applied to another bed.—*Scientific American.*

WASHINGTON GORDON, of Haverstraw, N. Y., has taken measures to secure a patent for an improvement in kilns for burning brick with anthracite or other coals as fuel. The fire chambers are constructed in a peculiar manner, and blasts are used for the purpose of intensifying the heat, and regulating it as desired.

OIL FOR MACHINERY.—Add one part of India rubber to fifty parts of Rape oil, and boil till the rubber is nearly all dissolved. It is not only more unctious and less affected by friction than other oils, but remains liquid below the freezing point of water. In this respect it is most valuable in cold winters.

BREECH-LOADING CANNON.

OUR countrymen have a high reputation for inventing destructive instruments of war.—This is well known to the governments of Europe, and is the reason why a commission of officers, from England, is now in this country, in order that Uncle John may keep posted up with Brother Jonathan in shooting irons. The race, however, will be a tough one, even if the present most improved of our instruments are adopted, for invention after invention succeed one another so rapidly, that no wonder Capt. McKinnon, R. N., was not unprepared for a proposal from an American to take the Caffre war (when it existed) on contract. Among the many new improvements in the battling line, we have to chronicle an application which has been made for a patent by S. H. Starr, Lieutenant U. S. A. (now residing at Burlington, N. J.,) for a very ingenious improvement in breech-loading cannon. It is constructed with a receiver, constituting the breech and charge chamber. It is bored uniform with the barrel, and has its front part or neck made of a conical form, and turned to fit into a recess made to receive it, in the barrel. This cone has a broad shoulder at its back, fitting to the rear of the barrel. The outward form of the receiver is the same as that of the ordinary cannon, except it is furnished with trunnions, a ring and a hand. The breech slides back and swings upward, so as to receive the charge, and then it is run forward into the barrel and clamped tight with an ingenious and quickly-acting hand. The improvement is a good one, and has been so acknowledged by every person who has seen it.—*Scientific American.*

GREAT ENGINEERING INVENTION.—WILLIAM H. BROWN, of Erie, Pa., went to Europe in the Pacific, which left here on the 5th inst., taking with him a model of an invention in engineering (for which he has taken measures to secure a patent), which must strike the civil engineers of Europe—as it has many of our ablest—as one of the greatest improvements ever brought before the public, for the transporting of blocks of stone to piers in the course of erection in rivers; also the transporting of cannons and the baggage of armies over rivers. By this invention, the whole of the artillery of a large army could be carried across a broad river in a few hours, without a single boat being required. It is the very thing wanted on the Danube.—*Sci. American.*

NATURE-PRINTING.—At a recent meeting of the Royal Ag. Society of England, "Messrs. Bradbury & Evans of Whitefriars, London, presented to the Council a series of beautiful and striking specimens of their "nature-printing," or process by which vegetable productions may be printed off in their natural size and color in almost perfect fac-simile. The objects selected for the series consisted chiefly of common wild flowers, and well-known agricultural and other plants, of which both the strength and the delicacy of the details were given with daguerreotype exactness. These specimens were much admired by the members, and the value of such a process in an agricultural point of view fully recognized."

Domestic Economy.

ACORN COFFEE.—There is in Berlin, Prussia a large establishment for the manufacture of coffee from acorns and chicory, the article being made separately from each. The chicory is mixed with an equal weight of turnips to render it sweeter. The acorn coffee which is made from roasted and ground acorns, is sold in large quantities, and frequently with rather a medicinal than an economical view, as it is thought to have a wholesome effect upon the blood, particularly of scrofulous persons. Acorn coffee is, however, made and used in many parts of Germany for the sole purpose of adulterating genuine coffee, and has been imported into the United States for the same use, so that, no doubt, many persons, who would shrink from knowingly drinking acorn coffee, have actually drank it under another name.—If it be medicinal in its nature, as is said, the use of it ought to be encouraged. And at any rate, as it is healthy in its nature, and can be made very cheaply from the superabundance of acorns in our forests, it seems to recommend itself under certain circumstances as a substitute for coffee, the price of which would thereby be much reduced.

GREEN CORN PUDDING.—This is one of the numerous rural luxuries which the farmer has always the power to obtain at small expense. The following is the receipe for making it:

Take of green corn, full in the milk, twelve ears, and grate it. To this add one quart of sweet milk, one-fourth of a pound of fresh butter, four eggs, well beaten, pepper and salt as much as may be deemed necessary; stir the ingredients well together, and bake in a buttered dish. Some add to the other ingredients a quarter of a pound of fine sugar, and eat with sauce. It is an excellent dish, cold or warm, with meat or sauce; but epicures of the most "exquisite taste" declare for it, we believe, and with the first service.

BATTER PUDDING WITHOUT EGGS.—Mix six tea-spoonfuls of flour with a little milk, a tea-spoonful of salt, two tea-spoonfuls of beaten ginger, and two of the tincture of saffron.—Mix it with nearly a quart of milk, and boil it an hour.—*Hammond.*

SWEET-APPLE PUDDING.—Take one pint of scalded milk, half a pint of Indian meal, a tea-spoonful of salt, and six sweet apples cut into small pieces, and bake not less than three hours. The apples will afford an excellent, rich jelly.

SUET keeps good all the year round if chopped and packed in a stone jar and covered by molasses.

Educational.

[Written for Moore's Rural New-Yorker.]

A WORD ON COMPOSITION.

The little girl, who, on being asked by her teacher at school, whether her exercise in composition was ready, answered hopefully that she "had got her subject composed," unconsciously indicated one of the many perplexities that enter into the general experience of beginners in authorship. The wide range of themes open to the choice of the young writer, to the discussion of no one of which he feels that he can bring any peculiar fitness or adequate preparation, is the cause that so frequently his instructor or friends are applied to in hope their clearer perception of his aptitudes may enable them to select from the embarassing variety, a subject on which he can dilate with some degree of success. "What shall I write about?" "Do give me a subject for composition!" are repeated till the person solicited, wearied by such importunity, suggests a topic either at random or something in his opinion suited to the ability of the applicant; which, ten to one, is promptly rejected on the plea that it is too hackneyed, or that he knows nothing to say on it, and the demand renewed with increased vigor. Whatever proposals are drawn forth by these continued clamors, are likely to share the fate of their predecessor, and the unhappy, despairing, self-pitying victim of what in his dark hour he fancies a tyrannical demand, is at last left to his own resources, and to act on the conclusion, which he has never reasoned himself into, and does not knowingly accept, that no one, however good his intention, can help him so well as himself.

The requirement on the part of the teacher that each pupil of sufficient age and attainments shall prepare at stated intervals a literary exercise, to be submitted to him for criticism, constitutes one of the greatest drawbacks to the pleasure of attending school; indeed, a good share of the unpleasant occurrences between teachers and taught, arises out of this very regulation. In vain you reason with the scholar that it is not for your benefit you wish him to write; that the profit will be all his own; he knew that well enough before; but if he attempt to reduce his feelings to words, he will perhaps tell you that since *he* is willing to forego the advantage of this practice, rather than endure its attendant agonies, it looks to him somewhat unkind in *you* to be so strenuous about it. In very many instances, he feels really injured by the enforcement of such a rule; and I have known cases where, after a brief trial, with the most unflattering results, the teacher thought advisable to abandon it. I cannot, therefore, be extravagant in saying that no school duty is performed more reluctantly on the part of the scholar, or to the less satisfaction of the teacher, than the one of which I am speaking. Reluctantly, I say, but not because the former has no ambition to improve in the art of expression on paper, for from it; the frequent and earnest exclamations of "How I *do* wish I could write a good composition!" are sufficient proof that indifference is not the hindrance, and that the ungracious manner in which pupils so often acquit themselves of this task, as if they believed they were conferring quite an obligation on their teacher, and he ought to feel grateful to them for it, is only a trick they play in endeavoring to console and excuse themselves for the poverty of their performance. The great difficulty seems to be, not so much destitution of ideas, as inability to set them in proper order—not so much a lack of something to say, as a feeling of awkwardness and clumsiness in attempting to say it—not so much a want of willingness to do what is required, as not knowing how to go to work to effect it. For, converse with a youth of twelve or fifteen years on any topic in which he feels interested, and which has occupied his thoughts somewhat, and, though he will not deliver you a fine impromptu essay on it, he may surprise you by saying several excellent things; ask him to write an article on that same theme—immediately he sits down to comply with your request, a sudden dumbness seizes him, and he finally presents you a page or two of weak, common-place, rambling reflections, such as it is an affliction to the teacher to read, unrelieved by a single one of those fine things he so lately communicated to you by word of mouth.

I do not need to be told how much easier is the critical, the fault-finding, than the remedial—how much more difficult the work of construction than that of destruction—nor how far short of the expectations of its originator the most promising system proves when reduced to practice; but, because there is evidently something needed to be done by way of relief to both teacher and scholar, I venture to offer a few suggestions to either party, trusting they may prove, at worst, harmless, and glad if they shall be found to possess any positive merit.—Without dwelling on the importance of early training to literary execution, for it is freely admitted by all, not excepting such as regard themselves the severest sufferers by it, I would remark first, that I do not consider it advisable for very young writers to be encouraged, much less required, to undertake the preparation of set articles. If it sometimes happens to the practised writer that, after having determined to prepare a paper on a certain subject for which he thinks he has plenty of materials at command, he finds, on taking an inventory of his stock in trade, that it falls quite short of what he flattered himself he possessed, how much more frequently must this be the experience of the beginner? He sits down to his task with one or two good, common-sense, perhaps original and brilliant ideas. They fill his mind; and he, complacently imagining that what seems so grand and expansive in his brain must make a magnificent appearance in manuscript, proceeds with the directness characteristic of inexperience, to commit them to writing, and is mortified to see, after all, how little space they occupy. He was conscious of having said the very best things he was able on this particular theme; but, measured by words and lines, it looks too insignificant to offer; besides, he remembers to have heard the teacher reprove JOHN or THOMAS for the brevity of his last production; so, throwing aside as worthless what, only a brief half hour before, possessed such consequence in his sight, he betakes himself to a tiresome relation of his last Saturday afternoon rambles, signs, folds, and duly delivers it. In this way, girls fall into a habit of sentimentalizing in faint, delicate, scarcely-legible characters, while boys go hunting and fishing tediously on foolscap.

What I would propose then, especially for the unskilled, and for, at least, occasional trial by those who have acquired some facility in writing, is the substitution of detached thoughts in place of the commonly distasteful, ill-sustained, exhausting effort at continuous composition. Better compress your thought into one line, if possible, and make that worth reading (no danger of its being too rich—indigestible—the intellectual stomach of the age is pretty strong, and able to bear almost anything, provided there be good sense at the bottom of it,) than dissipate it through a hundred, compelling your readers to seek through "two bushels of chaff" your "one grain of wheat." This plan could scarcely fail to draw from the young writer the cleverest ideas in his possession, and, if properly managed and persevered in, do much toward correcting a tendency to the dull, spiritless level of stereotyped nothingness, from which, when one has established a footing there, it is more difficult to rouse him than to tame the wildness of the most extravagant. A proper idea of the right of quality to take precedence of quantity, is thus presented to the learner's mind, and he is easily led to recognize the greater merit of writing a *little* well, than *much* indifferently. Being accustomed too, to feel that only his best is demanded of him, ambition to sustain himself—to make each succeeding effort equal or surpass what went before, will lead him to dwell much on elevated themes in seeking wherewith to satisfy the expectation he has raised.

The disposition of the inexperienced writer to look beyond himself for something wherefrom he can derive support, many times leads him to attach undue importance to certain studies, valuable indeed, but in his imagination calculated to supply every requisite to success in the art of composition. Thus, scholars often betake themselves to the study of Rhetoric and those so-called Aids to Composition, persuading themselves that they shall therein find a highway to excellence in literary creation,—shall, by familiarizing themselves with the rules and forms prescribed by BLAIR, PARKER, &c., be transformed from dull to brilliant writers But it is beyond the power of instruction to supply the place of practice, and the literary aspirant must rise from his table many times in disappointment and disgust, before he succeeds in weaving his cherished thoughts into an easy, graceful production. And, aside from the danger that a too close attention to models influence a forced, cramped style of writing, and ultimately crush out what natural talent for this art the student may possess, it is essential that he be warned against expecting to find in formulas anything more than the skeleton of authorship—he early taught that the soul of it must reside in his own brain or nowhere, and that from this source his pen must be fed or remain forever dry. So, too, it will be useless for him to consult long columns of themes in search of one for which he may fancy for the moment he detects in himself a special fitness or inclination; he has only to look within, observe what thoughts are uppermost there, and if he fail to discourse satisfactorily on a subject to which his mind reverts habitually, and of its own choice, he will be still less fortunate in his treatment of one selected with no such reference.

A.

South Livonia, N. Y., 1854.

THE current theology of Russia—that which is taught in their sermons, text-books for the clergy, and tracts popularly circulated, and read by the people—is the theology of the early Greek fathers, Basil, Chrysostom, the Gregories, Athanasius, Cyril, etc. From this theology no departure is allowed, in any manner whatsoever.

HIRAM POWERS THE SCULPTOR.

The above remarkable portrait of a remarkable man, is presented to our readers with a just feeling of national pride. HIRAM POWERS is one of the most distinguished of our many countrymen, who, within a few years, have vindicated America from the sneers and snobbishness of the old world. The question, Who reads an American book? has been answered by so many Europeans who are as familiar with our authors as their own, that the subject needs no further vindication. But in the fine arts, fewer Americans have heretofore been competitors. The field of painting and sculpture has remained mostly in the undisputed occupation of the old world, and the assertion has been confidently made, that Republicanism is fatal to a cultivation of the fine arts.—This declaration has proved to have as unfounded as the former concerning authorship, and Americans now stand forth as successful rivals of the world in every field of art.

POWERS, the American sculptor, was born at Woodstock, Vt., July 29, 1805, and is now in his fiftieth year. He was the youngest of a family of nine children, and received his education at a district school in his native town.—His father being a farmer in humble circumstances, and finding it difficult to rear his family in such a locality, removed to Ohio, where he soon after died. Young POWERS, living thus thrown upon his own resources, set out for Cincinnati, feeling that the character of his future life depended upon his own efforts. Ignorant of the world, unacquainted with himself, and poor in friends, he reached the city, where he found employment in a reading-room connected with one of the hotels. His stay here was not long. He became a clerk in a produce store, from which situation he was cast out by the failure of the principal. A clockmaker's establishment offered him a situation. Here he remained for some time, acting as a collector of debts, and, at a later period, engaged in the mechanical part of the business. It was not altogether disagreeable. The processes of manufacture were pleasing to his ingenuity: the symmetry of machinery, the nice adjustment of wheels and pinions, and the regular measure of time, had their influence in forming that rhythm of life so essential to the true artist. But he could not be content as an artizan; he aspired to something higher.—About this time he became acquainted with a Prussian, who was engaged on a bust of Gen. JACKSON. This acquaintance was the occasion of giving the first marked development to the future artist. POWERS sought and obtained some instruction in modeling, and soon produced plaster busts of much merit. One of these possessed more than ordinary excellence, and has been regarded by himself as possessing a likeness and finish which will compare favorably with his best productions.

He subsequently connected himself with the *Western Museum* at Cincinnati, where he remained seven years, superintending the artistic department. From thence he went to Washington, where he was employed some time taking busts of distinguished men at the capitol, and finally sailed for Europe, and landed at Florence in 1837, ever since which time he has remained abroad. He has gone on from triumph to triumph, turning out from his studio some of the most transcendent specimens of the plastic art known in modern times. Among them may be reckoned the statue of Eve, the Greek Slave, the Fisher Boy, and the bust of Proserpine. One of the most attractive features of the Crystal Palace in New York, has been the group of statuary by HIRAM POWERS.

DUFFALO HUNTING.

A member of Governor Stephen's northern route exploring party, writing from the head of Yellow Stone river, says of the "sights and incidents" thus far:

On Sunday, after a march of some ten miles, the buffaloes were reached. They were before and on each side of the train. For miles ahead it seemed one vast drove yard. They were estimated by some as high as five hundred thousand—two hundred thousand is considered a very low estimate. Drawing up our trains at our usual halt at noon, a large herd were about half a mile ahead.

The hunters, six in number, were immediately despatched, well mounted on spare horses reserved for that special purpose, and the whole train had an opportunity to witness a buffalo hunt. The hunters dashed in among the herd, picked out the fattest of the crowd, and then separating the selected ones from the herd, soon dispatched them. In less than an hour the wagons were sent but a short distance from the route to receive the choicest pieces of the buffalo.

In the next two days' march the hunters were kept some distance ahead to keep off the buffaloes—it was the only way the safe passage of the train could be ensured through the sea of flesh. The pack mules and spare animals following on in the train, too numerous to be separately led, were hard to control, and despite every precaution and care, one horse and four mules were lost, they getting mingled with a herd of buffaloes. Every effort was made to reclaim them—hours spent in their attempted recovery. The effort was entirely useless.

HOW TO DO GOOD.—He who waits to do a great deal of good at once, will rarely do anything. True greatness consists in being great in little things. How are Railroads built? By one shovelfull of dirt after another. Drops made the ocean. If we would do much good in the world, we must be willing to do good in little things, setting a good example all the time.

ANY one may do a casual act of good nature, but a continuation of them shows it to be a part of the temperament.

MASON AND DIXON'S LINE.

"WHAT is meant by Mason and Dixon's line?" asked a bright, blue-eyed girl of twelve years of age, who sitting at her father's table, a few days ago. The answer was, "It is a phrase usually employed to describe the boundary between the free and slave States." "But why do they describe it in that way?" was her inquiry. The answer may be worth giving to some of our readers. "In the seventeenth century, James II., of England, then the Duke of York, gave certain lands to Lord Baltimore and to William Penn, and a difficulty soon sprang up as to the proper owner of these lands on the Delaware. Again and again was the affair carried into the courts, till in the year 1760, when George the III. came to the crown, the Lord Chancellor of England made a decision; but new difficulties sprang up in drawing the boundary lines. The commissioners finally employed Messrs. Mason and Dixon, who had just returned from the Cape of Good Hope, where they had been to observe the transit of Venus. They succeeded in establishing the line between Delaware and Maryland, which has ever since been called 'Mason and Dixon's line.'"—*Watchman & Reflector.*

JULLIEN'S START IN THE WORLD.—Jullien was recognized neither as conductor, composer, or artist. The only position he held was that of leader of a votillon band which furnished dancing music for balls and private parties, at so much a night. His first pecuniary success arose from his wife, who made up and sold very exquisite bouquets in a little by-street in London, where they lived. These bouquets soon become the rage, and the narrow street was daily blocked up by the carriages of the aristocracy, who could not think of going to opera or soiree without one of Madame Jullien's guinea bouquets. In a few years M. and Madame Jullien had amassed a handsome sum of money, and then the husband opened a saloon for giving shilling concerts, at which polkas, quadrilles and waltzes were played to audiences unable to appreciate music of a higher order. From this humble beginning, JULLIEN has arisen to the present high position he occupies in the musical world.

Sunday Reading.

[Written for Moore's Rural New-Yorker.]

THE MOONLIGHT BURIAL.

'Tis a sweet summer's eve! O'er all the West
A parting sunset sheds its amber glow—
While in its softened light the landscape sleeps,
Hushed to a Sabbath stillness and repose.
But in this hour of quiet loveliness,
Relief and unlooked for deluge greets the ear!
The words speed on, with quick electric thrill,
From friend to friend—and many a loving heart
With sudden grief is burdened!

One, whose name
Is lingering sadly now on many a lip,
Hath passed from the companionship of earth,
And gone to dwell with angels!

Months have rolled
Since CLARA stood among us—weary months,
Of wasting, slow decline. Now her pale clay
Asketh a place beside its kindred dust,
Till the glad morn shall come!

That fostering care
Which led those orphan feet so tenderly,
Along life's early path, she needs no more!
Love's work is done, and in the recompense
Their hands have rendered back a polished gem
Meet for the Saviour's crown!

We may not look
On the dear shrouded sleeper at our side,
Or mark the death-change on the marble cheek,
Yet memory well recalls each lineament
Of the sweet face beneath yon coffin lid!
The dark, sad, dreaming eyes (earnest with thought,
Bend their mild gaze upon us, as of yore.
The raven hair is smoothly folded back
From that expansive brow serene and pure,
While an encircling sphere of innocence
And guileless truth surrounds with a spell,
Till our own wayward soul seems hushed as in
The presence of "an angel unawares."
How oft, in bygone hours, we fain had sat
A learner at her feet—as that sweet voice,
Ne'er missing from the quiet place of prayer,
Breathed its low tones of supplicance and praise—
Our weaker faith rebuked by that meek trust
In a REDEEMER'S righteousness.

And now,
"Thanks be to Him who gave the victory,"
For all those blessed words of hope and joy,
Which from that couch of suffering have come back,
A priceless legacy!

The closing eye
With the death-shadows was already dim—
But "she saw JESUS!" The cold, purpling lips
Gave faint response unto affection's voice,
But, that fond Name still roused the slumbering ear,
For He whom she had chosen, when the light
Of girlhood lay upon her gentle brow,
Hath not forsaken in the conflict-hour!
The sun of life goes down, but death's dark vale
Streams with celestial radiance! and they
Who gather near in strange and wond'ring awe,
Seem privileged, almost, to gaze within
The golden portals! Hark! the rustling wings!
O'er that low couch do ether spirits bend,
Sealing that pale immortal for the skies!

The twilight falls
With deepened shadow, as that funeral train
Winds slowly onward to the burial-place!
Now they are grouped amid those grassy mounds,
While bared and reverent brow—while once again
The voice of her beloved Pastor lifts
Its faltering tones! He, who in other years
Had led that dear one to the Saviour's feet,
A wandering lamb, hath cause to linger now
With grateful praise—the sheltering fold is won!
Tears freely gush, but they are tears of joy,
Of glad thanksgiving o'er the early dead,
The early crowned!

Now on the still night air
Uplifts the solemn dirge! while answering strains
Seem floating down from yon blue vault above,
Like the far echoes of immortal song!
Pale dust is all our feet, yet she, perchance,
Bendeth on radiant wing above us still [know
Yearning, 'mid Heaven's new bliss, that each may
What grace doth ransom here!

And who that stood,
In the calm moonlight on that burial-sod,
Can e'er forget the lesson? Brief the days
Since CLARA'S eye had marked yon vesper star,
And Diana's slender crescent. Now its beams
Were falling with a pale and silvery ray,
Upon her grave!

What tender memories [lasts,"
Shall blend, henceforth, "while thought or being
With that sweet eventide when loving friends,
By the soft starlight, laid that rifled clay
In its long resting place! It was indeed
A holy hour! Life hath not many such
Scattered along its pathway! MARIANNA.

West Bloomfield, Aug., 1854.

LOOKING BACK.

WHEN LOT and his wife were running from cursed Sodom to the mountains, to save their lives, it is said that his wife looked back from behind him, and she became a pillar of salt.—And yet neither her practice, nor the judgment of God that fell upon her for the same, would cause Lot to look upon her. I have sometimes wondered at Lot in this particular. His wife looked behind her, and died immediately; but let what would become of her, Lot would not so much as look behind him to see her.—We do not read that he did so much as once look where she was, or what was become of her. His heart was indeed upon his journey, and well it might be. There was a mountain before him, and fire and brimstone behind him. His life lay at stake, and he had lost it if he had but looked behind him. Do thou so run, and in thy race remember Lot's wife, and remember her doom; and remember for what that doom did overtake her; and remember that God made her for an example for all lazy runners, to the end of the world; and take heed that thou fall not after the same example. —*Bunyan.*

SABBATH RECREATIONS.—It is an interesting fact in religious history, that King James put forth a declaration in favor of sports on the Sabbath—declaring that after public service, the people should not be hindered from such lawful recreations as dancing, archery, leaping or vaulting, &c. This declaration was ordered to be read in all the parish churches. Many ministers refused to read it; others read it, and then argued the sinfulness of the sports.

Miscellaneous.

COUNTRY HOME.

Oh! give me a home in the country wide,
Where the earth comes out as a blushing bride,
With her buds and flowers,
In the bright spring hours,
Her bridal song ringing, from fresh-leaved trees,
And melody floats on the perfumed breeze.

In summer, a seat in the shady nook,
And close by the side of a cooling brook,
Where the violet glows,
Or the pale swamp rose,
Fainting and sick, 'neath the sun scorching beam
Dips her fair petals in the cooling stream.

Oh! give me a home in the country wide,
In the golden days of a farmer's pride,
When his barns are filled
From the field he's tilled,
And he feels that his yearly task is done,
Smiling at winter, he beckons him on.

Oh! give me a home in the country wide,
And a seat by the farmer's wood fireside,
Where the fire burns bright,
On a frosty night,
Where the jest and the song and the laugh are free,
Oh! the farmer's home is the home for me.

Don't tell me of to-morrow,
Give me the man who'll say
That when a good deed's to be done,
Let's do the deed to-day!
We may command the present,
If we act and never wait;
But repentance is the phantom
Of the past that come's too late!

THE GOOD AND ILL OF LIFE.

The good and ill of human life, are much more evenly distributed among mankind, than a casual observer or superficial thinker might be led to suppose. Where an unusual amount of appliances to worldly happiness exists, there usually springs up also some fountain of bitter waters, that mingle secretly or openly with every felicity, and poison the source of every joy. The world may envy the position of a man, whose whole life and action are a mockery and a lie! He paints over the outside with a false show of enjoyment, while the inside is as hollow and mocking as a sepulchre. How many are there within the range of our observation, who possess wealth and property, who sport their carriages and display an ostentatious superiority in all their acts, whose families are taught to believe themselves superior to their neighbors, and who would no more mingle with the mass of their fellow men than they would with a race of inferior beings; and yet, there are off-setting disadvantages on their own part, palpable to all who are not blinded and dazzled by tinsel and false show.

The mother of a rosy, healthy, and beautiful offspring, lives in a cottage and struggles, it may be, with poverty, sighs as she sees the children of a rich neighbor whirled by in a carriage, or having at their own disposal pony and saddle, while her own bright children are compelled to trudge on foot; and yet, those envied offspring of wealth may be cast in a much rougher mould, both of mind and person; may be the inheritors of some hereditary disease that robs them of health, and strews their couches with thorns. The father may lament his inability to give his son any advantages of education better than those afforded by the humble Common School of a rural district, while the sons of a wealthy neighbor enjoy all the privileges of the Academy and College; and yet he may live to see all those superior advantages thrown away, and the college graduate sink below the school-boy in after life. The young man may lament that his lot is one of toil, that ten hours of each day must be spent by him at a laborious trade, while an acquaintance is enabled to spend his time in ease, supplied with the means by the hand of a wealthy and indulgent parent; and yet he may live to see that parent removed by death, his estate insolvent, and the son thrown upon his own resources, without the necessary training to obtain creditably the means of his own support. One young lady may sigh for the costly laces and ornaments of another, her elegant home, expensive piano, luxurious living, and crowd of admirers; and yet he herself as much superior both in mind and person as is possible in the two opposite scales of humanity. She may live to see the envied one the wife of an unkind husband who married her for her wealth and for nothing else, while her own more humble lot is in after life blessed with domestic felicity.

The Deity has not been unmindful of his creatures, and mingles in all their cups both pleasure and pain. While he gives to one more outward appearances of enjoyment, he insures to him also corresponding trials. It is an unsafe standard to measure happiness by external show. The depths of the human heart, the internal life of the man is capable of misery and enjoyment that the outward world knows not of; and if we could read the secret history of any two individuals, the lot of the less promising to the external observer, would be found not unfrequently to be much the happier of the two. All men should strive to ameliorate their own condition with a cheerful acquiescence in what falls to their lot; but to look upon the advantages of others grudgingly, is both wickedness and folly.

MISUNDERSTANDINGS.

Much unhappiness is occasioned in families, not unfrequently leading to total alienation, from misunderstandings based upon very slight foundations. Especially is this the case where the members have become partially separated, and intercourse thereby in a measure interrupted, so as to prevent any ready and willing explanation. An action misconstrued, an unintentional affront offered, a thoughtless expression made, an oversight on the part of one committed, which is taken by another as evidence of a loss of interest or of kindly regard, becomes a secret stumbling block between members of a family, who through all their early years would have readily sacrificed their lives in behalf of each other; molehills grow into mountains, abrupt with precipices, and crowned with perpetual frost, which interpose impassable barriers between hearts full to overflowing with every genial sympathy.

Such unhappy affairs, having their foundations originally in nothing, or at least in incidents so slight that both parties are ashamed to confess the cause even to themselves, are more frequent than is generally supposed. Let a family of children who live in harmony, in the exercise of every trait of brotherly and sisterly affection, be told that a time will come in after life when other ties, other connections, other interests, pursuits, pleasures, and pains, will unloose the cords that bind them to each other in such apparently indissoluble bonds, and they will be apt to exclaim in indignation, "Are thy servants dogs, that they should do this great thing?"

The natural course of events must separate families—must dissolve fraternal ties, in order to give room to others, if possible, of a tenderer and more enduring nature; but in that transformation, especial care ought to be taken that no element of discord be permitted to intervene between the original and the new relation. In the close connection, for instance, which certainly ought to exist between parties that enter into the conjugal ties, many defects of character will likely be hidden from each other which are apparent to a less blinded vision; and a brother may feel a tinge of selfish pain, or a sister receive a slight shock of wounded sensibility, that the other turns from them to the husband or the wife, forgetting that they themselves will do the same thing.

A little mutual forbearance, a few kindly explanations, a determination on both sides to do to the other as each would like to be done by, will in all these cases, as in every other event of human life, remove all difficulties, and enable brothers and sisters to go on harmoniously to the end of life's uncertain journey. Let the prayer be acted upon—

"The mercy I to others show,
That mercy show to me;"

and all trouble of this nature will speedily vanish away. Intercourse must of necessity be partially interrupted; diverse pursuits, distant residences, different degrees of success or failure, other ties and connections, will greatly interfere with the original close intimacy, but what remains may be as tender, as kindly, and as fraternal, as that which existed through all their earlier years; and that it be such is a solemn duty each member of a family owes to the memory of their dead parents, to themselves, and to each other.

WHO ARE YOUR ARISTOCRATICS?

Twenty years ago, this one made candles, that one sold cheese and butter, another butchered, a fourth carried on a distillery, another was a contractor on canals, others were merchants and mechanics. They are acquainted with both ends of society as their children will be after them—though it will not do to say so out loud! For often you shall find that these toiling worms hatch butterflies—and they live about a year. Death brings a division of property, and it brings new financiers; the old gent is discharged, the young gent takes his revenues, and begins to travel—toward poverty, which he reaches before death, or his children do, if he does not. So that, in fact, though there is a sort of moneyed race it is not hereditary, it is necessible to all; three good seasons of cotton will send a generation of men up—a score of years will bring them all down, and send their children to labor. The father grubs and grows rich—his children strut and use the money. Their children in turn inherit the pride, and go to shiftless poverty; next, their children, reinvigorated by fresh plebian blood, and by the smell of the clod, came up again.

Thus society, like a tree, draws its sap from the earth, changes it into leaves and blossoms, spreads them abroad in great glory, sheds them off to fall back to the earth, again to mingle with the soil, and at length re-appear in new dress and fresh garniture.

The best part of human qualities is the tenderness and delicacy of feeling in little matters, the desire to soothe and please others—minute of the social virtues. Some ridicule these feminine attributes, which are left out of many men's natures; but I have known the brave, the intellectual, the eloquent, to possess tho these gentle qualities; the braggart, the weak, never! Benevolence and feeling ennoble the most trifling actions.

No man has a right to do as he pleases, except he pleases to do right.

REVERIE OF THE CHURCH SEXTON.

"Splendid day! We'll have quite a turn out. There's nothing like sunshine to draw an audience. It's better than all the popular preachers that were ever born. Oh! there's my memorandum book; I'd like to have forgotten it, and if them directions hadn't been tended to, most like I should have lost my place. Let's see—[Takes out a memorandum and reads:]

"By orders of Judge R., the woman who squints and eats cranaamun seeds is not to be put in the seat in front of him.

By order of Squire B., the young man who ogles his daughter and wears plaid pants, is to be put somewhere on the other side of the church.

By order of the wealthy Miss Prudence Prim, the young man whose clothes smell of cigars and brandy, shall be set behind her.

The request of A., a merhunic, that strangers be not shown into his pew'—to be attended to if convenient.

Quite a chapter anyhow. But people are beginning to streak in. There's two young women waiting. Common sort of folks I guess, gentility don't come quite so early as this.—'Have a seat, marm?' She with a low bow, 'If you please, sir.' No matter, politeness is a cheap article, it don't cost nothing. So here goes the two women into one of the back wall pews. Here's two more birds of the same feather; woolen shawls, straw bonnets and cotton gloves; wall pew, second from the door; food enough in all conscience.

Ah! there's a bride. Satin velvet and white kids; fine broadcloth and white vest—'Shall I have the pleasure of showing yourself and lady some seats?' They must have some first-rate seats, for they are evidently somebody. What a difference there is in folks?

Now there's a dress-maker and a school-mistress, nobodies. Back seats good enough. Two young lawyers—somebodies; I must find a seat in the middle aisle. A broken-down minister, coat rather seedy, cravat rather coarse—nobody—side aisle. Six fashionable boarding school girls—somebodies—middle aisle, if possible. Ronged cheeks, but a splendid silk cloak—somebody—middle aisle. An apprentice boy, decent looking, but a nobody—side aisle.

Who'll say I ain't a judge of human nature? Don't I know who a man is the minute I see him?

Now there's one of our seedy coated old fellows coming. Don't I set him down as a nobody, and won't he be glad to get any kind of a seat? I'll show folks that I understand my business. Have a seat, sir?

Confound my ill luck. Just as I was putting him into one of the poorest seats in the house, along comes Judge B., who spying him, comes up and says he, 'Ah, how d'ye do, Governor B? Take a seat with me, sir; my wife will rejoice to meet you.' Shaking hands with the seedy coat he looked daggers at me, and I'll bet a fourpence I've lost my place. Who'd have thought that the old fellow was an ex-Governor. But that comes of looking as meek as a school-master, and dressed like a wool-sawyer! Why don't folks as ought to, hold up their heads and be somebody?"—*Boston True Flag.*

RUDE AND CRUDE OBSERVATIONS.

None of us likes the crying of another person's baby.

The fire that "went out" has returned.

Recommend to your children virtue; that alone can make them happy, not gold.

"I won't" is woman's ultimatum.

No man knows when he goes to law, or gets into a cab, what he will have to pay on getting out of it.

Red tape is the legal chalk with which a lawyer ruddles his sheep.

If we all had windows to our breasts, what a demand there would be for blinds!

When a man has been "drinking like a fish," it is "the salmon" always that is to blame.

Truth, like London Pure Milk, lives certainly at the bottom of a well.

Years are the milestones which tell us the distance we have traveled, but it is rarely that women count them.

Conversation was hip for a long time, until it was discovered in a bag of filberts.

Some persons are fond of "opening their minds" to you as if it were a dirty linen bag—only to let you see the foul things that can drop out of it.

Women, when they talk about "a good figure," must mean the figure 8, for that is the figure which is most pulled in at the middle.

The dissipations that persons resort to, to drown care, are like the curtains that children in bed pull around them to keep out the dark.

The bread of repentance we eat, is often made of the wild oats we sow in our youth.

THE BOY AND THE BRICK.

A boy hearing his father say "'Twas a poor rule that would not work both ways," said: "If father applies this rule to his work, I will test it in my play."

So setting up a row of bricks, three or four inches apart, he tipped over the first, which striking the second, caused it to fall on the third, and so on through the whole course, until all the brick lay prostrate.

"Well," said the boy, "each brick has knocked down his neighbor which stood next to him; I only tipped one. Now *I* will raise one and see if he will raise his neighbor. I will see if raising one will raise the rest." He looked in vain to see them rise.

"Here, father," said the boy, "is a poor rule; 'twill not work both ways. They knock each other down, but will not raise each other up."

"My son," said the father, "bricks and mankind are alike, made of clay, active in knocking each other down, but not disposed to help each other up. When men fall they love company; but when they rise they love to stand alone, like yonder brick, and see others prostrate below them."

Ladies' Department.

CONDUCTED BY A——E.

TRUE LOVELINESS.

BY CHARLES SWAIN.

She who thinks a noble heart
Better than a noble mien—
Honors virtue more than art,
Though 'tis less in fashion seen—
Whatsoe'er her fortune be,
She's the bride—the wife—for me.

She who deems that inward grace
Far surpasses outward show,
She who values less the face
Than THAT CHARM the soul can throw—
Whatsoe'er her fortune be,
She's the bride—the wife—for me.

She who knows the heart requires
Something more than lips of dew—
That when love's brief rose expires,
Love itself dies with it too—
Whatsoe'er her fortune be,
She's the bride—the wife—for me.

[For Moore's Rural New-Yorker.]

FRIENDSHIP.

The first law of friendship is sincerity; and he who violates this first law, will soon find himself destitute of what he so erringly seeks to gain; for the deceitful heart of such an one will soon betray itself, and feel the contempt due to insincerity.

The world is so full of selfishness, that true friendship is seldom found; yet it is often sought for paltry gain by the base and designing. Behold that toiling miser, with his ill-got and worthless treasures; his soul is never moved by the hallowed influence of the sacred bonn of friendship, which renews again on earth lost Eden's faded bloom, and flings hope's halcyon halo over the wastes of life. The envious man,—he, too, seeks to gain the applause of others for an unholy usage, by which he may usurp a seat of pre-eminence for himself. Self-love, the spring of motion, acts upon his soul.

All are fond of praise, and many are dishonest in the use of means to obtain it; hence it is often difficult to distinguish between true and false friendship—for

"Disguise so near the truth doth seem to run,
'Tis doubtful whom to seek or whom to shun;
Not know we when to spare or when to strike,
Our friends and foes they seem so much alike."

Newfane, N. Y., August, 1851. NOVICE.

[Written for Moore's Rural New-Yorker.]

OUR BABY.

Did you ever see such a baby? He is a very peculiar baby,—*very*. It is true, every one does not see his good qualities as we do; and some even dared to speak of his "big ears," "large and ill-shaped mouth," but this all arises from envy; or it shows their bad taste or want of discernment. His perseverance is also peculiar. If he wants any thing he must have it, and we always give him what he wants, for the sake of peace; for you know it would not answer to thwart or cross him—he is too young for that. "It would break his spirits."

His manners, too, are peculiar. It is true they are not exactly what they should be, nor what we expect they will be. But he is too young to be trained, you know—only two years old—and we expect he will by-and-by see his own faults, if he has any, and correct them, or grow out of them. If he does not, it will then be time for us to try to set these things right, and then you know his improvement will be the more manifest. He has also many other peculiarities, such as none but parents can see; but as you will probably never see either him or them, I will not trouble you further. L.

A HAPPY LAND.

A writer from Florence says that in some respects Italy is the most delightful country in the world. It is a land, for example, where house-cleaning, washing-day, and all other such interesting epochs in the American calendar are unknown. This exemption from the great domestic evil of house-cleaning, is owing not so much to a love of dirt, as to the peculiar construction of the buildings. Thus, for instance, when the ceilings or walls are frescoed, or the latter covered with silk or paper hangings, there is no need of white-washing; and where panels and floors are of marble or oak, there is no necessity for scouring paint.—The ceilings and walls are kept clean by long-handled brushes. The carpets there are fastened to iron rings in the floor by means of large hooks in the binding, and can thus be raised and let down again as mischiefs and easily as bed-covers. We would recommend the adoption of this to American house-keepers. In Italy, a large portion of the housework, such as washing, cleaning windows, &c., is done at an early hour in the morning, before the family are up for the day; and so quietly is it accomplished, that to a stranger it seems as if the invisible wand of some mighty magician had changed all in the night.

The garden of the heart is capable of producing, under good culture, everything beautiful in humanity, while neglected, it is choked up with every kind of rank and poisonous weed. The gentle hand of woman is best adapted to the task of sowing good seed and rearing beautiful flowers.

EQUESTRIAN EXERCISE FOR LADIES.

The most experienced physicians agree that horseback exercise is beneficial to all, but more especially so for invalids and sedentaries. The gentle motion of the chest, the increase of respiration, the grateful shifting of every drop of blood in the arteries, the fresh, buoyant wings given to the spirits during an hour's gallop on a clear spring morning, must render it an antidote for nine-tenths of mortal maladies. We believe that equestrian exercise, under a judicious direction, is, of itself, if timely commenced, a cure for consumption. There is no civilized country on the globe, where physical education is so much neglected as in America; the consequence of which is, that our males are demi-dwarfs, and our females little more than house plants. The English, physically, the most beautiful nation on the earth, are assiduous in this department of education. They would think a child's education incomplete without a thorough knowledge of horsemanship. One of the most interesting pictures that the pencil of an artist ever drew, is a finely formed and graceful woman mounted on a spirited charger, who, proud of his fair burden, curbs his glossy neck, and spurns the earth as if it were not good enough for him to stand upon. It has been said that a lady's position on a horse is dangerous. We do not think so. Every position is either dangerous or awkward until we learn to manage ourselves in it. A lady, with proper care and training, can get the management of a horse so completely that he will be put to his last trump to throw her. In evidence, we may name Fanny Kemble. A few hints and practice are all she needs. The left foot should be placed in the stirrup a little above the second joint of the great toe. The reins should be brought up between the fingers of the left hand, and firmly held between the thumb and first finger. The left shoulder should be brought well forward, and the right hand, holding the whip, fall gracefully by the right side. The pommel of the saddle should not be held by the right hand. The fair rider should throw her shoulders back, and give as much expansion to the chest as possible, and keep as nearly as she can the momentum of her horse. If the steed springs suddenly to the left, and she agrees not with his direction, she gets a counter motion and falls to the right, which is neither pleasant nor graceful.—*Home Journal.*

YOUNG WOMEN.

Very young ladies cannot be said to have any conversation. Experience, knowledge of society, acquirements gradually and imperceptibly accumulated, are requisite before a person can be properly said to converse. The female character is, from its attributes, peculiarly under the control of circumstances, and the influence of other and stronger natures.—There cannot be a more momentous condition than that of a young woman under twenty. A fool may win her admiration; and her character becomes, for a time, frivolous. Many a noble spirit in woman has been checked by an ill-placed first affection; but if she be fortunate enough to place an early dependence upon a worthy object, the tenor of her life is determined. It is observable that in youth women cannot understand friendship towards men. Girls never stop at that point. There is always a tinge of love in their sentiments towards intimate associates of the other sex. Hence the dangerous ascendency acquired by their male instructors, and by other less attractive and less meritorious individuals, over women who have been even delicately nurtured.

THE TRUE WOMAN.

The true woman, for whose ambition a husband's love and her children's adoration are sufficient, who applies her military instincts to the discipline of her household, and whose legislative faculties exercise themselves in making laws for her nursery; whose intellect has field enough for her in communion with her husband, and whose heart asks no other honors than his love and admiration; a woman who does not think it a weakness to attend to her toilet, and who does not disdain to be beautiful; who believes in the virtue of glossy hairs and well-fitting gowns, and who eschews rents and ravelled edges, slip-shod shoes and audacious make-ups; a woman who speaks low and does not speak much; who is patient and gentle, intellectual and industrious; who loves more than she reasons, and yet does not love blindly; who never scolds and rarely argues, but who adjusts with a smile; a woman who is the wife we have all dreamed of once in our lives, and who is the mother we still worship in the backward distance of the past; such a woman as this does more for human nature, and more for woman's cause than all the sea-captains, barristers, judges and members of Parliament put together—God-given and God-blessed as she is!—*Dickens.*

Happiness not in Station Alone.—There is one experience, gentlemen, to which the history of my various changes in life has peculiarly, and, I will even say, has painfully exposed me—and that is, how little a man gains, or rather, indeed, how much he loses in the happiness of natural and healthful enjoyment, by passing from a narrower to a wider, and what some may call, a more elevated sphere. There is not room in the heart of man for more than a certain number of objects; and he is therefore placed far more favorably for the development of all that pleasure which lies in the kind and friendly affections of our nature, when the intimacy of his regards is permitted to rest on a few, than when, bustled through an interminable variety of persons and things, each individual can have but a slender hold upon the memory, and a hold as slender upon the emotions.—*Dr. Chalmers.*

The water that flows from a spring does not congeal in the winter. And those sentiments of friendship which flow from the heart cannot be frozen by adversity.

MOORE'S RURAL NEW-YORKER

ROCHESTER, SEPTEMBER 2, 1854.

Blessed Rain!

About three o'clock on Saturday morning, a moderate shower passed over the city, accompanied by slight electrical disturbances, and followed by a few scattering rain clouds; just sufficient to lay the dust and moisten the parched and jewelled foliage of the trees. These slight pluvial manifestations, however, were only precursors of more plentiful showers, and on the afternoon of Saturday it commenced thickening up in the west and north, until the whole sky assumed an inky aspect.

The rain commenced falling furiously about five o'clock, P. M., and lasted, with occasional cessations, for a couple of hours, washing the streets, filling the gutters with a floating accumulation of mud and filth, giving the thirsty earth one of the most thorough (in fact the only) wettings it has had for months, and demonstrating the truth of the declaration, if indeed it need any demonstration, that "He causeth rain to fall upon the just and upon the unjust." All nature, both animate and inanimate rejoices, in the merciful dispensation; and the grass, lately so sere and brown, begins to put on its green once more.

—Though the recent copious rains, both here and elsewhere, will prove of incalculable benefit, they were too late to save the corn and potatoes in many parts of the country, or to prevent the immense losses by fires, as well as drouth, in different localities of this and other States. But the unparalleled drouth has been checked in some, if not most places, and the fears of famine at least partially dissipated. The aggregate damage, however, will prove immense, and must elevate and maintain the prices of food for the next twelvemonth.

Look out for Bad Bills.

The *Democrat* of Monday says:—"A despatch received by the Morse line on Saturday, says the notes of the following banks are discredited in New York:

Bank of Washtenaw, Ann Arbor, Michigan; Erie and Kalamazoo Railroad Bank, of Adrian, Michigan; Farmers' and Mechanics' Bank, of Memphis, Tennessee; Bank of Carthage, Carthage, New York; Lewis County Bank, Martinsburg, New York; Bank of Sackett's Harbor, Buffalo, New York; Drovers' Bank, of Ogdensburg, New York; Bank of Milford, of Milford, Delaware; Bank of Commerce, of Carmel, New York; Bank of Corning, of New York; Bank of Brussalaer, Indiana; State Stock Bank, of Peru, Indiana. There is no Indiana money which is really considered safe."

—Agents and others remitting payment for the RURAL, will oblige us by forwarding New York or New England money, wherever convenient. We do not *require* this, but it would save us much loss, and inconvenience in returning bad money. Where Western and Southern money is mailed, please give us the issues of the best banks—such bills as will not be likely to materially depreciate during transit, as have many (on some of above-named banks,) received within past ten days. A discount of from 2 to 5 per cent. is quite endurable, compared with total loss.

Disastrous Conflagration.

On the afternoon of Friday, the 25th ult., a tremendous conflagration occurred at Troy, by which nine lumber depots, a large number of manufactories and stores, and over *two hundred tenements*, were destroyed. Four hundred families are rendered houseless by this disaster, and property destroyed to the amount of $1,500,000. The loss on the lumber alone, comprising all the yards in the city, is estimated at half a million dollars. The fire commenced in the planing mill occupied by Mr. Geo. Quiggins, and which is located on the corner of Division and Front streets. The planing mill was a wooden building, and the light materials in and about it were in a blaze in a few minutes, and the whole building was one mass of flame, whence it spread to the adjoining blocks, sweeping away whole streets, and laying in ashes within the brief space of a few hours all the eastern portion of the city.

A strong north-west wind was blowing at the time; every combustible material was dry as tinder, and leaped into flame wherever a spark touched it; reservoirs and hydrants were destitute of water, and all the circumstances conspired to make the conflagation extensive and disastrous. A million and a half is a sad loss, even for a city like New York, but to a young, vigorous, and enterprising community like that of Troy, where every dollar of available means is actively employed, such a calamity must be well nigh overwhelming.

A VILLAGE NEARLY DESTROYED.—Last week Friday, the village of Waldoboro, Me., was nearly destroyed by fire. It broke out in the first instance in a hotel, and from thence spread in various directions, consuming everything in its course, until arrested by the river. The property destroyed included two banks, the Custom House and Post Office, every store in the village, one timber yard, and two ships on the stocks, and will not fall short of five hundred thousand dollars.

Woodland Fires.

Our record of forest fires still continues.—Among the Green Mountains in Vermont the conflagrations have been very destructive. In the woods in the vicinity of Swanton, near Lake Champlain and the Canada line, fire ran along either side of the Vermont Central Railroad track, a distance of more than two miles. Hundreds of trees were burned down, falling across the track, not only obstructing the movements of the cars, but burning the cross ties, and entirely destroying the track. Passengers have to be carried in wagons eight or ten miles around the fire.

On Catskill Mountain two extensive fires have been raging in the woods west of the Falls for several days, and fears were entertained that the observatory and boarding house near the Falls would be destroyed.

A large fire of very singular appearance has been prevailing for several days upon the highest mountain peak southeast of the village of Williamson, Me., and overlooking it. It is literally a cloud of smoke by day and a pillar of fire by night. It stretches around the crest of the hill in a huge semi-circle. It will continue probably until there is rain, of which there is a great want thereabouts.

The Argus says the fire in the pine woods between Albany and Schenectady has been so extensive for several days as to envelop the Dutch capital in smoke, when the wind is in the right quarter. Its ravages are said to have been extensive.

A frightful fire is now raging in the woods at Cuyahoga Falls, Franklin, Randolph, Ravenna, Robertson, Northfield, and parts of Summit and Portage Counties, Ohio. Even the soil is burning to the depth of one and a half feet. As the flames are driven forward by the wind, trees, both dry and green, are ignited in an instant, and almost as quickly consumed. Several barns in the vicinity of the woods, stored with hay and grain, have been destroyed. Apprehensions are entertained for the safety of the town of Hudson.

The woods near Painesville, for a mile in length, are all on fire.

Infamous Mobocracy.

We learn from the Cincinnati *Columbian* of August 16th, that some time since an itinerant lecturer, who gave his name as Graham, passed through the interior of Kentucky, and was suspected of having seduced a number of slaves to leave their masters and run for Canada. The masters, if they had caught him, would have inflicted summary punishment, but he managed to escape, and has not since been heard from. A few days since, a respectable farmer of the same name, from Preble Co., Ohio, visited Cynthiana, Ky., at the time of the session of the Court, for the purpose of exhibiting an improved plow of his own invention. A suspicion having arisen of his being the lecturer mentioned above, he was set upon by a mob, and, notwithstanding his protestations of innocence, and his offer to produce ample testimony to the proof of his assertions, he was pelted with rotten eggs, his clothes ruined, his face blackened with indelible ink, and he was then ordered to quit the State under threats of still more serious personal violence. What renders the deed peculiarly infamous, is the fact that the man was as innocent of the charges brought against him as the child unborn.

Catastrophe and Loss of Life.

Two massive granite stores, five and a half stories high, just completed on Broad street, Boston, tumbled into a mass of ruins on the afternoon of the 21st. The settling and cracking of the walls gave the inmates due notice to withdraw, most of whom did so in time to save their lives; but one clerk inside, and two little children on the sidewalk, were crushed to death. The cause of the lamentable occurrence, was the failure of a portion of the foundation wall, which was not of sufficient strength to support the immense superincumbent pressure. The building was a magnificent and costly block, and the loss will be near $100,000. A fire afterwards broke out amid the ruins, and raged violently, destroying what of the goods had been spared by the wreck of the buildings.

Arrest of Capt. Hollins.

The *New York Times* states that Capt. GEORGE N. HOLLINS, of the United States sloop of war Cyane, has been arrested in New York city, by Deputy Sheriff Vallee, at the suit of Calvin Durand, for destruction of property at the bombardment of Greytown. The order of arrest was granted by Judge Oakley, of the Superior Court. The damages are laid at $14,000. The amount of bail given by Capt. Hollins was *twenty thousand dollars*. His sureties were Hon. HERMAN J. REDFIELD, Collector of the Port; JOHN J. CISCO, Sub-Treasurer; and J. ROMEYN BRODHEAD, Naval Officer. The arrest was made just as the Captain was leaving the City for Boston, and after giving bail, he prosecuted his journey.

JUDGE BRONSON, the candidate of the Administration wing of the Democratic Party, who declined in advance, but was nominated, notwithstanding his declension, for Governor, has been waited on by a committee, and at their earnest solicitation, has consented to allow his name to be used. There will be a triangular contest in this State, if not one of more sides than even that; and whichever party wins will probably act upon the motto, "to the victor belongs the spoils." That motto is the *ne plus ultra* of modern patriotism.

Got His Pay.

It will be recollected that at the time of the rendition of the fugitive slave, BURNS, at Boston, and while the hearing was going on before the U. S. Commissioner, RICHARD H. DANA, one of the Counsel for the slave made some severe but just criticisms upon the character of the Deputy United States Marshals, a number of whom were notorious bullies and blacklegs.—One of them named WM. HUXFORD, *alias* SULLIVAN, *alias* OXNARD, assaulted Mr. DANA in the evening, knocking him down with a slung-shot and injuring him severely, for which assault he was arrested and held to bail. Forfeiting his bail, however, he fled to New Orleans, whither he was pursued by an officer, and brought back in irons, tried and convicted, and on Thursday, the 24th ult., sentenced by Judge PERKINS to eighteen months' imprisonment in the penitentiary.

EDS. RURAL:—A meteor corresponding very nearly to the description of one given by Mr. THOMAS—see RURAL of Aug. 26—passed over this place Thursday evening, Aug. 17, at about 9 o'clock. It was visible but a few seconds, being first seen in the east at an altitude of about 30 deg, passing directly over this place towards the west.

This may prove the same witnessed by Mr. THOMAS. In size, it almost equaled the *apparent* magnitude of the moon at the zenith. It gave a very brilliant light, and although the night was quite dark, surrounding objects were as plainly visible as in a clear moonlight. This place is situated about two hundred and fifty miles east of Rochester. E. G. STORMS.

Crum Creek, Fulton Co., N. Y., Aug 27, 1854.

ONE OF THE PIONEERS.—A magnificent locomotive from the works of ROGERS, KETCHUM & GROSVENOR, Paterson, N. J., passed through this city over the Central road on Monday, bound west. The name of the engine is *Nebraska*, and was built for the Chicago and Galena Union Railroad. There are some of the most splendid engines ever constructed now running on the New York Central, but for magnificence of proportion and style of finish, the Nebraska bears away the palm. There is no doubt but that in its rush over the prairies, the Suckers will mistake it for an earthquake.

A Strange Phenomenon.

THE *Buffalo Democracy* gives currency to the following. It sounds to us very like a humbug, and our readers may put such faith in it as they deem it to deserve, until some *Hamburger* (not humbuger) authenticates or denies it:

A singular occurrence, resulting in a melancholy manner, took place, a few days since, in the town of Hamburg, in this county. An Irishman was engaged in digging a well, and, after getting down to the depth of some 18 or 20 feet, found signs of water very perceptible.—At last he struck his pick through a thin layer of slate, when, all at once, and with a noise like thunder, sufficiently loud to be distinctly heard all over the neighborhood, a stream of mingled gas and water burst through the orifice, instantly killing the unfortunate man, and filling the well to the depth of twelve feet with water. Gas still escapes profusely, and the water is in constant and violent motion, resembling a large cauldron of boiling fluid.

WILD LANDS FOR SALE IN CANADA.—The Hamilton Gazette says about 2000 lots of land are offered for sale by the Government in the counties of Wellington, Perth, and Huron. Part of them are school lands, and will be sold for $2 an acre; the others are crown lands, and will be sold for $1,50 per acre, in ten annual instalments, with interest. The sale will be conditioned upon actual settlement, as indeed it ought to be. On payment of the first instalment, the purchaser will get a license of occupation, and he is expected immediately to go upon the land, build a house at least 16 by 18 feet, and clear not less than two acres a year. The license will become void on neglecting any of the conditions, and is not transferable without permission.

CAMPHOR PROPHYLAXIS INSANITY.—The Toronto Colonist says:—"We are informed that no less than eight persons have been admitted into the lunatic asylum in a state of insanity, occasioned by consuming quantities of camphor to prevent cholera. Some of them carried it about in their pockets, and kept from time to time eating small quantities of it. Others took it dissolved in brandy. In all cases where it was taken in any quantity, it produced insanity. It is a fact well known that a comparatively small quantity of camphor will set a dog mad, and that he will soon afterwards die."

A MR. PELTZER, of Pennsylvania, has constructed a locomotive for burning anthracite coal, which promises to reduce the expenses of railroad transportation very greatly. One of this locomotive engines has been running daily between Philadelphia and Havre da Grace, on the Wilmington & Baltimore Railroad, for over two weeks. It has been attached to the express train, consisting of six or eight passenger cars, and, as we are informed, consumes only two dollars cost of coal per day. The wood-burning locomotive which it replaced, consumed twenty-four dollars worth of wood per day.

SINKING OF A RAILROAD.—The track of the Milwaukee and Mississippi Railroad, near Madison, Wisconsin, has sunk about eight feet below its proper level, and now lies, for the distance of half a mile, six feet under water. The road at this spot was built over marsh land, and the accident was caused by the heavy weight of the superstructure. The detention of passengers, and the cost of extricating the rails and filling up, will involve much inconvenience and expense.

SEVERE SENTENCE.—A man named PORTER, who keeps quite a celebrated hotel at Cambridge, Mass., has been sentenced, for violating the liquor law, to imprisonment in the penitentiary for four years, and to pay a fine of $350. The accused has appealed from the sentence.

News Paragraphs.

☞ A correspondent of the Ohio State Journal says, that numerous frauds have been committed by packers in flour, many barrels being short of weight from 12 to 14 pounds. This is quite an item at the high price now held, and somebody derives a large profit from roguery. It is also stated that barrels have been opened which were filled at the ends with superfine flour, and the center was a poor mixture of coarse grade and middlings. Packers are careful not to put their brands on such barrels.

☞ Mary Sabilla, wife of Vincent Nurello, the eminent musical composer, died at Nice, in Sardinia, on the 26th July. She was an accomplished woman, a loving wife, and a devoted mother, and the author of some literary works of a high order, and among the children whom she bears are Mary Cowden Clarke, the authoress, and the Countess Bighucci, (Clara Nurello) a lady of most brilliant talents as a vocalist.

☞ The largest picture on glass executed in modern times has just been terminated at Munich. It is to cover a window in the Church of St. Catharine, at Hamburgh, 45 feet high, and 14½ wide. It has been painted by M. Ferustor, from designs by Overbeck, representing our Savior teaching the apostles to pray. The superb work has been executed at the cost of M. Voerberk, of Hamburgh.

☞ Hon. Sherrard Clemens, Ex-M. C., and now a candidate for a Judgeship in Western Virginia, in a recent speech at Morgantown, in which he denounced the Know-Nothings, asserted that one-third of the signers of the Declaration of Independence were foreigners, which is a falsification of history. There were 48 native born, to 8 foreigners, who signed that glorious document.

☞ The Washington Star says Gen. Joseph Lane, of Oregon, has been quite ill at the President's house, since the adjournment of Congress. We hear that on hearing of his indisposition, the President sent for him from his boarding house, and he remained a guest at the Executive Mansion while sick. We are happy to say that he is again convalescent, however.

☞ We are assured, says the Albany Atlas, that an agent of Cunard's ocean steamers visited this city a few days since, and purchased one thousand tons of coal for the use of their vessels. The supply in market is so limited that they cannot secure a sufficiency without making purchases elsewhere than at the mines.

☞ At a recent sale in Paris of the library of Armand Bertin, the late Editor of the Débats, M. de Rothschild gave 3900 fr. for a copy on large vellum paper of the original edition of the Œuvres de Voltaire, and to which M. Bertin had added more than 1000 autographs, portraits, &c.

☞ It is said that Mormonism is rapidly spreading in Denmark. Entire villages have gone over to the new faith, and so rapidly is proselytism progressing that the government is growing uneasy, and is taking measures to put a check to the evil. The Danish women are more easily converted than the men.

☞ The Green Bay Advocate learns that on Monday, 7th inst., the boiler of the steamer Barlow, running on Lake Winnebago, burst while lying at the dock in Oshkosh, killing several persons. Others were blown into the river and more or less injured.

☞ The Clinton County Ohio Importing Company lately sold their stock at Wilmington, at profitable prices. Cows brought as high as $1,675; bulls, 2 years old, $3,700; heifers, $1,060; calves, $125; and sheep, $125. We give the highest figures—others sold lower.

☞ It is stated that Victor Hugo is a disappointed exile in the Island of Guernsey; Lamartine is nearly forgotten; Alexander Dumas is neglected; only Guizot, Villemain, Augustin Thierry, and Victor Cousin remain, of first class French writers, and of these last, Guizot alone is active.

☞ Dr. Peter Smith, of Alexandria, Va., has invented a rifle which throws conical slugs (ten to the pound) a distance of 600 yards, and with such astonishing accuracy that ten successive shots hit a target fifteen inches in diameter, and four of them perforated the centre or bull's eye.

☞ The Boston Traveller tells of a "solid man" of that city, who moved out of town just in time to dodge his tax bill, and who, on returning, found his forsaken mansion had been robbed of silver plate, clothing, &c., to the amount of several thousand dollars.

☞ The diamond for the finding of which a Brazilian slave received his freedom a few months since, has been deposited in a London banking house. It weighs 254 carats, and its estimated value is £280,000—or, in round numbers, $1,400,000!

☞ Hubbs, the American lock-maker, when in Liverpool last month, was shown the strong-room of the Union Bank, and when asked if he could pick the lock of the door, a very strong one, he astonished John Bull by accomplishing the feat in a very few minutes.

☞ A Liverpool paper says:—"Within little more than half a century Russia has advanced her frontier, towards Berlin, Vienna and Paris, 700 miles; towards Constantinople, 500; towards Stockholm 630; and towards Teheran 1000.

☞ A man in Chicago fled from his wife, who had the premonitory symptoms of cholera, taking with him three children, and leaving an infant with his wife. The poor woman died for want of that immediate attention which her husband should have rendered.

☞ The Spanish revolutionists were successful in their recent rising by means of a secret organization, on the plan of the "Know Nothings," throughout the Kingdom, and it is believed to extend over Italy, Hungary, Germany, and even to Russia.

☞ The Annual Fair of the Erie County Agricultural Society will be held in the village of Aurora, on the 20th and 21st days of Sept. The Address will be delivered by the Rev. Mr. Lord of Buffalo.

☞ The late election in Oregon was very exciting, and resulted in a triumph for the Democrats. The Convention party were badly beaten, and it will be sometime before Oregon applies for admission as a State into the Union.

☞ There are sixteen ships now building at East Boston. Among them is ship Commodore Perry, which is nearly ready for launching. She is 2,000 tons, and is intended for a Liverpool liner.

☞ There is to be another Regatta at Nahant, on a scale so extensive as to eclipse all former ones which have taken place in this country. The prizes will be headed with a $1,000 note as the first.

News Brevities.

—— There have been 1,174 deaths by cholera in Montreal this summer.

—— In Florida the papers tell of water-melons weighing 50 and 81 pounds each.

—— It is supposed that the Mormon population of Utah territory, now reaches 50,000.

—— A camp meeting with one hundred tents, is progressing in Fairfax Co., Va.

—— The next elections will be held in Vermont and Maine, on the 5th and 11th of September.

—— The St. Louis firemen have contracted for a new steam fire engine, to be built in September next.

—— It is said that boys are wading across the Ohio River at Kanawha. The river has not been so low since 1838.

—— The total value of taxable property in Boston, real estate and personal, is set down at $245,000,000.

—— The loss of life on western steamers for six months is about 250; and of property about two millions.

—— The steamer Huntsville, loaded with dry goods, recently struck a snag about sixty miles from St. Louis, and was lost.

—— It has been ascertained that the average duration of the life of a London "omnibus-horse" is under four months.

—— The famous fast-sailing yacht America is advertised for sale at Gosport, England, with all her costly and elegant equipments.

—— Mrs. Sarah Elliott, of Salem, N. J., has gathered one hundred good ripe lemons from a single tree the present season.

—— The Cleveland Herald is informed that a malignant dysentery is prevailing at Oberlin. There were four burials on Sunday week.

—— Hopes are still entertained that the steamship Franklin will be got off so little damaged as to render it possible to repair her.

—— It is estimated that a decided majority of the 340,000,000 of Chinese population acknowledge the insurgent chief as Emperor.

—— Captain Marryatt's daughter is about to appear before the public as a novelist. Her first work, in three volumes, is entitled "Temper."

—— The Illinois State Agricultural Fair at Springfield has been postponed from the middle of September to the first week in October.

—— The Newberry (S. C.) Sentinel, August 16, says that gold has been discovered in that district, on a plantation owned by N. A. Hunter.

—— A house for the governor is nearly completed at Springfield, Illinois. It is built by the State, of fine red brick, and will cost $45,000.

—— The Utica Herald is informed that many of the farmers in Oneida county are cutting up their corn in consequence of the continued drouth.

—— Col. Richardson has been nominated for re-election by the Democrats in the Quincy (Ill.) district. The Anti-Nebraska candidate is Archibald Williams.

—— There arrived at the port of Quebec this year, up to the 12th inst., 39,000 emigrants—14,000 more than for a corresponding period last year.

—— The store of Martin, Owen & Co., burned at New Orleans on the 5th, contained 15,000 barrels of whiskey, every barrel of which was lost.

—— The crop of breadstuffs in California is more than sufficient for the next 12 months, and large shipments have already commenced to Australia.

—— The Syracuse and Binghamton railroad is completed to Tully, twenty miles from Syracuse, and a regular passenger train has been put upon that section.

—— The sexton of All-Saints' Church, of Newcastle-upon-Tyne, Eng., has been committed to trial for stealing lead from the coffins in the grave yard vaults.

—— The sale of Prescott's Histories is estimated at 160,000 volumes, and of Bancroft's History 30,000 volumes,—a sale, for such a work, entirely unprecedented.

—— The Evangelical Lutheran Synod of Ohio and the adjacent States, has passed a resolution not to admit to church membership any person belonging to secret societies.

—— The National Democrat says:—"We have reason to believe that Mr. Buchanan will resign his present position, and return to the United States within three months."

—— According to the returns received at the Auditor's Office, the number of hogs in Kentucky over six months old is 1,515,699—an increase of 159,957 over last year.

—— The Boston Post estimates the amount invested in the book business in that city at nearly $3,000,000, exclusive of newspaper and periodical establishments.

—— Among the changes which the presence of the allies has wrought in Varna, Turkey, is a Lenchon "gambling hell" that shines in great glory, and draws in a great many victims.

—— The Rev. Dr. Huntington, of Albany, has accepted the appointment of professor of sacred languages and biblical criticism, in the Auburn Theological Seminary.

—— The New Albany Tribune says a suit for damages against the Jeffersonville Railroad, for refusing to convey over it a colored passenger, has been decided against the road.

—— The water is so low in the long level of the Erie canal, east of Syracuse, that no boats can pass. There are a large number of boats in Syracuse waiting to be locked through.

—— A block of buildings, principally stores, on Main street, in Chatham, C. W., has been recently destroyed by fire. The bridge across the Thames also burnt. Loss nearly $100,000.

—— A man named Humphrey Duncan, a slater, was brutally murdered by rowdies during a fight in South Boston on Sunday night. The murderer, an Irishman, has been arrested.

—— Mr. Conover, of Victor, met with a severe loss on Friday last. Several stacks of oats, containing from 600 to 800 bushels, were burned. The fire caught from the burning of stumps in a neighboring field.

—— The captured chief of a gang of Greek pirates has confessed that he was hired and paid to turn pirate, and prey on the French and English ships, by the Commissary of Police at Athens.

—— It is said that the mint of the United States at Philadelphia, uses $80,000 worth of nitric acid a year; and that the new Assay Office in New York will require at least $60,000 worth to start with.

Literary Notices.

THE YOUTH OF JEFFERSON, or a Chronicle of College Scrapes at Williamsburgh, Va., in 1764. New York: REDFIELD, Publisher.

A neatly got up volume of 250 pages, the subject of which is sufficiently indicated by the title. Its style is lively and interesting. DEWEY'S, Arcade Book Store.

PUTNAM'S MONTHLY for September is unusually excellent in variety and merit of contents. The leading article, entitled "Our Parties and Politics," is bold and truthful—proclaiming with ability and independence the principles of Northern freedom, in defiance of the precepts of the Pro-Slavery party. The whole paper is pungent, and will create a decided sensation.—Witness its closing words, thus:

"We repeat, that until the sentiment of Slavery is driven back to its original bounds, to the States to which it legitimately belongs, the people of the North are vassals. Yet their emancipation is practicable if not easy. They have only to evince a determination to be free, and they are free. They are to discard all past alliances, to put aside all present fears, to dread no future conditions, in the single hope of carrying to speedy victory a banner inscribed with these devices:—The Repeal of the Fugitive Slave Law,—The Restoration of the Missouri Compromise,—No more Slave States,—No more Slave Territories,—The Homestead for Free Men on the Public Lands."

THE NATIONAL for Sept. is a superior issue of an always beautiful and entertaining magazine. While its contents are of a moral, entertaining and sterling character, it excels in elegance of typography and wood-cut illustrations.

GODEY'S LADY'S BOOK greets us monthly with unfailing regularity. The Sept. issue embraces the usual variety of ornamental and useful embellishments and reading. DEWEY.

THE WESTERN LITERARY MESSENGER commences its 23d volume this month, under favorable auspices. We again commend it as worthy beyond its pretensions. Edited by JESSE CLEMENT. Published by JEWETT, THOMAS & Co., Buffalo, at $1,50 per annum.

Foreign Intelligence.

Arrival of the Steamship Asia.

THE Asia arrived at New York August 24th.

Sir George Brown, in the Fury, entered the harbor of Sevastopol in the night and remained till day. The Fury was fired at both with shot and shell, but she suffered no damage.

The Turkish fleet has sailed for Varna with the pontoons, and all the transports. Sulina is burnt.

The Russian envoy has announced to the Cabinet of Vienna that the Emperor Nicholas has just ordered the complete evacuation of the principalities of Wallachia and of Moldavia. A plot to burn the Russian fleet at Sevastopol was discovered on the 16th inst. A war council is sitting to investigate the affair. Several captains of merchantmen and of the navy have been imprisoned.

Sevastopol is being surrounded by most imposing fortifications. The most strenuous efforts are made to overcome the difficulties of the ground works. The Russian fleet is in Sevastopol waters yet; isolated Russian men-of-war are cruising along the coast to observe the enemy's movements.

The Government of Great Britain has chartered ships to convey arms and stores for defence to Halifax, St. John, N. B., Quebec, Montreal, Bermuda, Jamaica, Antigua, Barbadoes, St. Lucia, and Demerara.

Cholera is prevalent in Liverpool, and is increasing.

Weather in England very fine.

An American-built brig, of 200 tons, timber-laden, water-logged, stripped, and abandoned, and that had apparently been fired into by 32-pound shot, was boarded June 14th, in lat. 33° north, lon. 18° west, by the Crouch Brothers, for Melbourne—supposed to have been overhauled by a privateer.

MADRID, Aug. 6.—Espartero and the Ministers remained at the Palace during a part of last night, in deliberation upon a proposition of the Junta relative to Queen Christina. In the course of the day, deputations from various sections of Madrid presented themselves before the Junta, to request that body to prevent Queen Christina from leaving the kingdom until she had been tried by the Cortes. The Junta immediately communicated this request to the Council of Ministers, which, after a long and animated discussion, determined to accede to the desire of the people.

ITALY.—Three guards of the Treasury, and two shop-keepers, taken with arms in their hands during the revolt of the 22d ult., have been shot.

The King of Saxony was killed recently by a kick from a horse, after his coach had been overturned near Brenobuched.

POLAND.—A letter from Warsaw of the 1st, in the Presse of Vienna, says:—

"The approaching arrival of the Czar at Warsaw, will be marked, it is said, by certain concessions to the Poles, as respects their nationality. It is said that the Assembly of Notables mentioned in the organic statue of the kingdom of Poland of 1832, is to be convoked. The establishments of public instruction are, it is said, to be re-opened, and the use of the Polish language in official acts, the publication of the annual expenses and receipts, and the right to consent to direct taxes, ordered. The Polish army is also, the report goes, to be re-established, but under the command of Russian officers. The fourth recruiting is finished; never had the population been placed under contribution to such an extent."

INDIA AND CHINA.—The India mail has arrived. The Russians have taken possession of Kahan, near Bukhara. Business in India is dull. There is great disturbance in the north of China. Shikiang is in the hands of the insurrectionists, who threaten Canton with an attack.—

LIVERPOOL MARKETS.—Breadstuffs unchanged. Mellvenny quotes western flour 31s@32s, and Baltimore and Philadelphia 32s@33s.

White corn, 33s@34s; yellow, 33s@35. Rye dull.

Bacon unchanged. Beef dull. Pork declining. Lard heavy. Tallow advanced.

Manchester trade unchanged.

California News.

Arrival of the Geo. Law & Prometheus.

THE U. S. mail steamship George Law, Lieut. Fox commanding, and the steamship Prometheus, Capt. Turner, arrived at New York Aug. 24th, from Aspinwall and Nicaragua, bringing dates from California to August 1, two weeks later than previous advices.

The George Law left Aspinwall at 12 o'clock on the night of the 15th inst., making the run in 8 days and 6½ hours. She brings the mails and 288 passengers.

The total receipts of gold by these arrivals is nearly two millions, ($1,996,009;) number of passengers arrived, 542.

Left at Aspinwall, steamer North Star, awaiting the arrival of the passengers leaving San Francisco on the 1st inst., by the Yankee Blade, which steamer up to 12 o'clock M. of the 14th inst., had not arrived at Panama.

The Prometheus arrived at Punta Arenas on the morning of the 14th, at 6 o'clock, having touched at Kingston for coals. The steamer Brother Jonathan, connecting with the Prometheus, arrived at San Juan del Sud on the 14th. The Prometheus left Punta Arenas on the morning of the 18th, with 251 passengers and $800,000 in specie on freight.

POLITICAL INTELLIGENCE.—The Whig State Convention assembled at Sacramento July 25th, and continued for two days. They published an address and resolutions of very little importance and meaning.

The lands in the Democratic party continued with unabated violence.

MINING INTELLIGENCE.—Owing to the scarcity of water in many localities, mining is not carried on so actively as in the early part of the summer; but where water is to be had, at Negro Hill, the Reservoir and the various tunnels in the vicinity, supplied by the South Fork Canal, and on the creeks and bars, the miners are making their usual good wages. Next month the South Fork Canal will be completed and will afford an abundance of water. On Smith river and Myrtle creek the miners are making from $10 to $25 per day. Laborers are receiving from $100 to $150 per month.

At Sailor diggings and Althouse creek the miners were never doing better. New discoveries on Indian creek are proving rich. The prospect is from $1 to $3 per pan. Some of the companies are making from $50 to $100 per day.

The Jacksonville diggings are exceedingly rich. Some of the miners are making as high as $300 per day. Labor cannot be obtained at any price. On the Salmon and Klamath the reports are equally favorable with the above.

THE CROPS.—The crops along the Columbia river are very promising. There has been an unusual quantity of wheat sown this year on the bottoms, and the June rise of the water has not injured it. The corn is not quite so good as the last year, owing to the cold. Oats and barley are first rate. Potatoes and onions promise more than an average yield.

During the last three or four weeks, the grasshoppers have been committing great ravages in the gardens on the Mariposa, Merced, Tuolumne, and Stanislaus rivers. In some places the whole crop of corn, onions, melons, &c., has been entirely destroyed—in others, the corn has been cut to save it for fodder. These pests have appeared in immense swarms this summer, and have done a great amount of damage to farmers in different parts of the San Joaquin Valley.

THE ISTHMUS NEWS.—The parties engaged on "the road," in searching for robbers and suspicious persons in the vicinity, have arrested near twenty. Against some of these they have proof of eye-witnesses; against others strong circumstantial evidence has been long and continually accumulating; while there are those whose manner of life and the character of whose associations place them under strong suspicion of connection and implication with the murderous villains who have infested the road for a long time past.

OREGON AND WASHINGTON TERRITORY.—Valuable gold mines are reported to have been recently discovered on the Cathlepoodle river, some thirty or forty miles above its mouth.—Large quantities of gold, silver and rich iron ore have been found on this river. It is also reported that there are rich mines in the vicinity of Mt. St. Helens. Also that rich gold diggings have been discovered at Shoalwater Bay. It is said that the citizens of Astoria have generally gone over to "see what they will see."

Several fires have occurred at Fort Vancouver, supposed to be the work of incendiaries.

N. Y. STATE AGRICULTURAL SOCIETY.

14th Annual Cattle Show and Exhibition at the New York State Agricultural Society,

Held in connection with the American Institute and New York Horticultural Society, at Hamilton Square in the city of New York, October 3d, 4th, 5th, and 6th, 1854.

THE Annual Exhibition of the Society will be held as above, in the city of New York, from Oct. 3d to 6th, on which occasion upwards of *Eight Thousand Dollars* are offered as premiums, to be competed for, viz: Cattle, Horses, Sheep, Swine, Poultry, Dairy Products, Farm Implements and Machinery, Domestic and other Manufactures, Flowers, Fruits, and articles in all the Mechanical Departments—the full particulars of which will be found in the List of Premiums published. A large portion of the Premiums are open to competition by persons out of the State.

It is believed that this combined exhibition will be the most extensive ever held in this country, and will afford to exhibitors advantages never before offered, in every department of the Exhibition, combining the entire industrial interests of the Farmer, Manufacturers, Mechanics, Horticulturists, and Artizans of our country.

Persons desirous of examining the List of Premiums and Regulations, or of entering stock, implements or other articles for exhibition, will please apply to H. P. JOHNSON, Sec'y, State Agricultural Rooms, Albany; at the Rooms of the American Institute, 351 Broadway); or JAMES, Bruce & Co., 356 Broadway, New York, where the Premium List and Regulations will be furnished, and every desired information in relation to the Exhibition given.

Stalls and fodder for stock, and erections for the other articles, will be furnished in season, so that all articles designed for exhibition can be taken to the show grounds on their arrival in the city, where they will be provided for and protected.

The following Railroads have agreed to transport all stock and articles for the exhibition, FREE—requiring the freight to be advanced on delivery and repaid on return of the articles, with evidence of being exhibited, &c.: Hudson River, New York & Erie, New York City & Buffalo, Ithaca and Owego, Canandaigua and Elmira, New York Central, Rome and Watertown, New York & Harlem, Long Island, Troy & Boston; and it is presumed all the Railroads leading into New York will afford the like facility.

Application to transport articles should be made in season to the nearest station Agent.

WM. KELLY, *Pres't.*
B. P. JOHNSON, *Sec'y.* 241-5t

Commercial.

BUSINESS AND FINANCE.

THE California Steamers brought in a couple of millions of dollars during the past week, and the news they furnish from the mines on the Pacific coast is of the most cheering character; but trade is exceedingly dull, and shipments thither from the Atlantic States a ruinous business. California will soon be an exporting State for other products than gold, and it is stated that she has a surplus of breadstuffs of her own raising even now, and is preparing to ship it to Australia. For manufactures, &c., however, she must still be dependent upon the older States, and her demand for them must increase yearly. It is insane speculation, and not legitimate trade, that has rendered shipping to the Pacific lately such a losing venture.

The shipments of specie abroad, the past week, were $1,374,748 93, making for the year, thus far, $27,650,638 01.

Railroad securities are still in bad odor, and many shuffle them off as they do a mortal coil. The *bears* have it their own way most of the time, and make a loot loll of the stocks of some of our gigantic corporations. Erie seems to have been the principal one in this line, and is now selling down to 36, and has been lower.

There are a number of banks, both State and Western, which are suspected to be rotten and need looking into. A list of those against which suspicions are afloat, will be found in another column. Let our readers look out for their bills.

Market Intelligence, &c.

RURAL NEW-YORKER OFFICE, }
Rochester, August 30, 1854. }

PRICES have stiffened for most kinds of produce during the week. Wheat and Flour in very light supply, and at higher quotations, the former bringing seventeen shillings, and the latter ten dollars. Corn scarce, and bringing in this market 75 cents.

Hay is $2 higher on the ton, and quoted to-day at $12 to $17 per ton.

Butter very scarce, and unusually high for the season; grocers offering twenty cents for lots of prime fresh.

NEW YORK MARKET—Aug. 28

FLOUR—In the flour market but little doing. Sales at $9,75@10 com. to straight State; $10,25@10,75 for good to choice do.; $10,25@7,5 0 do. to good Ohio and Indiana Wis. and Mich.; $10,62½@11,50 extra Ohio and Genesee. The bulk of the sales are made at $11@11,25. In Canadian flour there are no transactions.

GRAIN—Our wheat dem and good and supply limited.—Prime white Genesee is held at $2,25@2,30, with buyers at about $2,15. Sales white South at $1,60; sundry $1,90; strictly prime held at $2,15. Rye in good demand and prices have again advanced; sales at $1,29@1,36. Corn transactions fair and market closed dull at 1@2c. lower. The bulk of the sales were made at 83@83½c. Oats plenty and lower; sales of State and Western at 68@69c; handsome Chicago held at 62@63c., with no buyers over 59@60c.

PROVISIONS—Pork has again improved, with a good speculative demand. Sales at mess at $15 for all October. Other sales made for Sept., Oct. and Nov. at $14,50@15.

ALBANY MARKET—Aug. 28

FLOUR—There is less activity in our market for Western and State flour, though prices current at the close of the week are pretty well maintained, owing to the small supply and the much diminished stock. Sales at $9,50@10 for common to good State and Western; $10@10,75 for good to extra Western; $10@11,25 for good to extra Genesee.—Corn meal is in fair request, and improved in value; sales at $1,99@1,75 ₩ 100 lbs.

GRAIN—The supply of wheat is moderate, and with a fair milling demand the market is dem. Sales new Genesee at $2,12½@2 25 for good to prime lots. Corn is in moderate request, and the market favors the buyer. Sales Western mixed at 83 cents afloat, and 85 for lots delivered at the Boston depot. Barley firm and in good request at very full prices. Sales of part two and four-rowed at 92 and 96 cts. Oats are in good supply, and with a moderate inquiry, the market strongly favors the buyers.

BUFFALO MARKET—Aug. 28.

FLOUR—The receipts of flour have been larger for two or three days past, but the supply is not equal to the demand. Sales at $9,25@9,75 for good to choice brands of Southern Ohio and Michigan.

GRAIN—Wheat in good demand and holders firm at high figures. Sales new white Mich at $1 90@1,92. Corn quiet and market less firm. Holders more anxious to sell and lots offering on the market at 69 cts. without buyers; sales at 68 cents. Oats quiet—no sales.

NEW YORK CATTLE MARKET—Aug 21.

AT Washington Drove Yard—Offered to-day 5,462 Beef Cattle; during the week 3,200. Supplies of Beef Cattle have come in freely the number on hand being larger than for many weeks past; demand fair, but not active enough to clear the market. Left over 600. Prices are fully $1 per 100 lbs lower than last week's rates. We revise our quotations: Beef Cattle $,@9 50; Cows and Calves at $30@50; Veal Calves (live weight) 4@6½c; do. gross $2@4; Sheep (on foot) $3@5; Lambs $2,50@0; Swine (corn fed) $4,75@5.

At Browning's—Prices at this market for Beeves have taken a very wide range. Sales at $7@10,50 per 100 lbs. for Beeves; Cows and Calves lower, and sold at from $28 to $35; extra at $45@50. Veals sold at 4½ to 6½c. per lb, live weight. Sheep range at from $4,50 to 4,50@5,50.

At Chamberlain's—Prices of Beef ranged at from $7,50 to $10,00 per 100 lbs. Cows and Calves at from $25 to $50. Veal Calves 4½ to 7c per lb. Sheep $3,00 to 7,00 Lambs $2,00@5,00

At O'Brien's—Sales of Beeves at $7@9 50 per 100 lbs. Cows and Calves at from $25 to $40; Veal 4½@6½c. ₩ lb.

CAMBRIDGE CATTLE MARKET.—Aug. 23.

AT market 2,225 Cattle—1,255 Beeves, and 1,000 Stores.

PRICES—Market Beef—Extra $8,50 per cwt.; 1st quality, $8,00; 2d do, $6,50@7,00; 3d, do, $5,50@6; ordinary, $4@5 00. Hides, ₩ cwt. $7@8,25; Tallow 8@8,25. Pelts, 37@62c. Calf Skins, 14@ 16c ₩ lb. Veal Calves $5,00 to $8; ordinary, $3@4,25.

STORES—Working Oxen—$62 to $162@210.

COWS AND CALVES—$18 to $50@68. Two years old—$14 to $26@30. Three years old—$25 to $43@48.

SHEEP AND LAMBS—4,638 at market. Prices—Extra—$4,00 to $6@7. By lot—$1,50 to $3@3,50

SWINE—Still fat 4½c., and corn fed 6c. ₩ lb wholesale.

BRIGHTON CATTLE MARKET—Aug. 24.

AT market 1,460 Beef Cattle, 1,350 Stores, 5,500 Sheep, and 800 Swine.

PRICES—Beef Cattle—We quote last week's prices. Extra $8, 0; first quality, $7,50@8; 2d, $6,50@7; 3d, $5,@6,25. Working Oxen—Sales $80 to $142@165.

Cows and Calves—Sales $22 to $60. Sheep—$1,88 to $3,75@4,00.

Swine—Dull; sales of lots at 5½c, small selected lots at 6 and 6½c. At retail from 6½c to 8½c.

Deaths.

In Newbury, Geauga Co., Ohio, Aug. 22, 1854, of consumption, Mr GEORGE RANDOLPH, aged 24 years.

MOORE'S RURAL NEW-YORKER has become a giant among its kind. With a subscription verging fast to 30,000, and with a conductor who knows how to polish it with every grace of the art, and how to accomplish it with the best talent of the age—it is not surprising that it is now the leading agricultural paper of the country.—*Christian Adv.*

MILLER, ORTON & MULLIGAN,
Auburn or Buffalo.
Auburn, Aug. 26, 1854. 243-4t

THE OPTICAL ART

HAS really reached the highest degree of perfection, as it is daily proved by the instruments of the celebrated Opticalist Institution at Leipsic. Its superior Spectacles are of such pure and select crystal glass, and so scientifically ground, as not only to assist the sight, but principally to "improve and restore the failing vision."

Common glasses are magnifying the objects, and soon they begin to irritate and weaken the noble organ, whilst these Lenses, ground on the well-tested principles of the above named Institution, ease, strengthen and preserve it to the most advanced period of life, no matter if used by day or candle light, or by young or old persons.

The exclusive right of sale of these Leipsic Spectacles has been vested to Dr. SHLÆTZER, where the richest selection for any degree of impaired sight will be found, and the proper Lenses for the present and future be selected by the doctor.

Their elegant frames have been already partially imitated, therefore, it should be remembered that none of them are commissioned, nor sold by peddling, but that the genuine conservative Leipsic Glasses cannot be had except at the popular medical office of Dr. SHLÆTZER, No. 10 Atwater street, East of the Railroad Bridge, and near St. Paul street.

SYRACUSE NURSERIES, SYRACUSE, N. Y.

THE Subscribers would most respectfully call the attention of Nurserymen, Fruit Growers, Venders, &c., to their *very large* Stock of Fruit and Ornamental Trees, which they offer for sale the coming fall and spring.

We are issuing from the press—

No. 2. A New Fruit Catalogue, which, with

No. 3, Containing the Ornamental Department, and

No. 4, The Green-house Department, will be forwarded to all pre-paid applications, enclosing a *one cent* stamp for each.

Also, a *New Wholesale* Trade List, for persons wishing to trade by the quantity.

A fresh importation of the *very best Dutch Bulbous Roots*, from Haarlem, in Holland, will be ready for delivery in September. Young trees of the following new Pears can be had of us this fall—price $1 each.

Their splendid, large, early, melting pear, the *true Hoosenshenck* coming in after the *Madaleine*, equalling nearly in all respects the *Virgalieu*, and *more* valuable than any other early pear.

Also these splendid, luscious, fall pears, the *Des Nonnes* and *Beurre Charron*, first brought to notice by ourselves. These two pears much surpass the *Seckel* in size, while they fully rival it in their rich aroma, and possess the melting luciousness of the *Belle Lucrative*.

Also, *Beurre Clairgeau* and *Kossuth*, with that fine winter pear *Beurre Gachelier*.

240-eow 4t Opposite the Arcade.

THE HORSE, THE HORSE!

Noblest of Domestic Animals,

AND the one most frequently ill-treated, neglected, and abused. We have just published a book so valuable to every man who owns a horse, that no one should willingly be without it. It is entitled

THE MODERN HORSE DOCTOR,

And is from the pen of that celebrated English Veterinary Surgeon, Dr. GEO. H. DADD, well known for many years in this country, as one of the most successful, scientific and popular writers and lecturers in this branch of medical and surgical science. The book which he now offers to the public, is the result of many years' study and practical experience which few have had.

From the numerous and strong commendations, of distinguished men and the newspaper press, we select the following:

Extract from a letter from Hon. John H. Clifford, Ex-Governor of Mass.

New Bedford, May 11, 1854.

DR DADD.—*Dear Sir:*—I hope your new work on the noblest creature that man has ever been permitted to hold in subjection, the horse, will meet with that success which all your efforts in this direction so well deserve.

Your obedient servant,
JOHN H. CLIFFORD.

From Hon. Marshall P. Wilder.

Boston, May 13, 1854.

Dr. DADD,—*My Dear Sir:*—I am greatly obliged to you for the valuable treatise, the results of your own investigations, which you have recently issued, hoping that it may meet with the patronage of a discriminating community.

I remain yours with great regard,
MARSHALL P. WILDER.

The *Modern Horse Doctor*, by G. H. Dadd, is a manual of genuine science, and ought to be owned and studied on the score of humanity, as well as interest, by every man who owns a horse.—*Boston Congregationalist.*

Dr. Dadd has had great experience in the cure of sick horses, and explains the secret of his success in this vol.—*N. Y. Tribune.*

The author of this work is well known as a most skillful veterinary surgeon. His book is based on the soundest common sense, and as a hand-book for practical use, we know of nothing to compare with it.—*Yankee Blade.*

We know Dr. Dadd well, and are satisfied that he possesses most important qualifications for preparing such a book as this.—*N. E. Farmer.*

Messrs. Jewett & Co. have just published a very valuable work by Dr. Dadd, a well known veterinary surgeon, on the causes, nature and treatment of diseases, and lameness in horses.—*Farmer's Cabinet.*

This is one of the most valuable treatises on the subject, ever published; and no owner of that noblest of the animal race, the horse, should be without it. Especially should it be in the hands of every hotel and livery-stable keeper. To many a man would it be worth hundreds of dollars every year.—*Ind. Democrat, Concord.*

By far the most learned and copious work on the horse and his diseases we have ever seen.—*N. Y. Evangelist.*

One of the greatest and most commendable qualities of this work, is, it is *practical* and plain to the comprehension of those farmers and others for whom it is designed. The course of treatment favors generally a more sanative and rational system of medication than that recommended in any previously existing works on farriery. No farmer or owner of a horse should be without this book. Stable keepers, stage proprietors and hackmen, we believe would derive profit by having at least one copy hung up in their stables for use and reference by their stable men.—*Daily News. Philadelphia.*

There is more common sense in this book than any of the kind we have ever seen, and farmers and owners of horses would find it a matter of economy to possess themselves of it. It will be of more service than the counsel of a score of ordinary doctors.—*Albany Courier.*

We deem this decidedly the best and most reliable work on the "Cause, Nature, and Treatment of Disease and Lameness in Horses," ever published.—*Nantucket Enquirer.*

What we have read of this book induces us to regard it as a very sensible and valuable work; and we learn that those much more competent to judge of its value, have given it their unqualified approval.—*Ex. Trav. Boston.*

This book supplies a great desideratum which Skinner's admirable treatise on the Horse did not fill. Every man may be his own veterinary surgeon, and with much greater safety to this noble animal than by trusting him to the treatment of the empirical ignorants who infest the country. It is well illustrated, and should be purchased by every man who owns a horse.—*Ex. Mirror, New York.*

This is a book that should be forthwith put into the hands of all who own or drive horses, whether for the dray or gig, for the plow, omnibus or road, for hard service or pleasure.—*McMakin's Courier, Philadelphia.*

A good clearly written book, which should be in the hands of every man who has a horse whose life his affection or his purse make it worth while to cure.—*Banner Mercury.*

This is a scientific, thorough and complete treatise upon the diseases to which one of the noblest of animals is subject and the remedies which they severally require.—*Troy Daily Budget.*

It is a valuable book to those who have the care of Horses.—*Hartford Herald.*

He is not worthy to have a horse in his care, who will not use such a work to qualify himself for his duties to this animal.—*Commonwealth Boston.*

JEWETT, PROCTOR & WORTHINGTON,
CLEVELAND, Ohio.
For sale by all Booksellers. 242-13t

ADVERTISEMENT.

HAVING sold my Geo Kansas-ward, I now offer my Farm and Mill Property—a great bargain. The Grist Mill is new (been running last two years), well and substantially constructed, on a good stream, and in a good grain country, the toll yielding a good living for a family. The Farm is attached to the Mill, contains about 100 acres (25 cleared and in fence), a small Dwelling House, Barn, and other out-building. The property is well located, on the State Road, running from Stroudsburg up Broadhead's Creek.—There is a Peach Orchard in full bearing, grafted Apple Trees, and a great variety of small Fruit. The Post Office is within three minutes' walk of the Mill. As I must effect a sale during September, I have determined to put it at the extremely low price of $2,000, or $1,800 cash. Title perfect. Address, post-paid, JOHN H PITT,
242-2t* Coxsville, Monroe Co., Pa.

EAST BLOOMFIELD ACADEMY,

J. H. KELLOG, A. M., PRINCIPAL.

This Institution will re-open on the last Wednesday in August, and continue thirty weeks, including a short recess during the Holidays. At the close of eleven weeks or one quarter, new classes will be organized.

EXPENSES FOR TUITION, &c.—Tuition in common English branches per quarter of eleven weeks $3 00. Higher English, $4,00. Higher Mathematics, Latin and Greek Languages, $5,00. Music on Piano, with use of instrument, $10 00. French and German each extra, $2 00. Practical Surveying and Civil Engineering, $2,00. extra. Incidentals in summer, 25 cts. per quarter; in the winter, 50 cts. Gentlemen can obtain board in the village for $2,00 per week, including fuel, lights and washing. Young Ladies are boarded in the Institution for $2,00 per week—fuel, lights and washing extra. Also $1,00 per quarter for room rent. Young Ladies from abroad are received into the Institution for $150,00 per Academic year.

FREE TUITION.—As this Academy has been selected by the Regents of the University, to instruct Common School Teachers, the Trustees offer free tuition for fourteen weeks to twenty-five Students, on condition that they pledge themselves to devote a reasonable time to the profession of Common School teaching.

The teachers' class will be organized the 20th of December.

Poetical.

[Written for Moore's Rural New-Yorker.]

THE OWLS' CONCERT.

BY HORACE S. RUGGEY.

A chorus of owls, in a hickory wood,
A concert held by night,
Row after row on many a limb,
They ranged them by moonlight,
They ranged them by moonlight.

The chorister owl now leads the band,
And chants, "Inwhit, Inwhoo!"
A multitude to him respond,
And echo back "whoo, whoo!"
And echo back "whoo, whoo."

A rustic youth in the dusky grove,
They frighten near out of his wits;
While pealing from the boughs above,
Their many "Iuwhoo, Iuwhits,"
Their many "Iuwhoo, Iuwhits."

His hair on end, with might and main,
He through the forest flits,
While on his ear ring dolefully
Their "whoo, Iuwhoo, Iuwhits,"
Their "whoo, Iuwhoo, Iowhits."

The plunder's out at length he gains,
And rushes through the door,
And trembling with affright he sinks
Exhausted on the floor,
Exhausted on the floor.

"What is the matter with my son,
What can the matter be?"
"Oh, father! what a horrid din
Rung out from every tree!
Rung out from ev'ry tree!"

"Tuwhoo, tuwhit, Iuwhoo-o-o," they cried,
All babel had broke loose,
"If were but owls that scared my boy,
You are a little goose,
You are a little goose."

Elmira Water-Cure, N. Y., 1854.

Rural Sketch Book.

HEPSEY BARTON.

Miss Hepsey Barton was an old maid!—So said all the young men in Lenox, and all the girls too, and the old saying, "What everybody says must be true," of course verified this first assertion. Notwithstanding this *dreadful* fact, Miss Hepsey was a universal favorite with the young people of both sexes; and, although the most inquisitive damsel in Lenox, Kate Grey, could never find the most remote tradition of her having had any "love affair," still there was no one in the place that seemed to take a warmer interest in the courtships and flirtations of all the young people around her than Hepsey. She was thirty-four years old, as she frankly owned, and as read the Town Clerk's record—still her mirror reflected no scowl nor wrinkle on her features, nor silver thread in her brown hair. She was not beautiful. She had a high forehead, but her hair grew low over it; her eyes were gray, nose large, and shaped a little like a potato; her mouth was large, and showed a set of white but irregular teeth; her complexion was a sort of "neutral tint," and her hair, though abundant and glossy, of a fine brown color, was always dressed with the simplicity of a Quakeress.

No wonder that Hepsey was, as we have said, a favorite among the villagers; the children liked her because she mingled with them in their childish sports, and taught them new modes of amusement; and she never met them without a kind word or a sunny smile. And then among the young men and maidens how could she fail to be beloved? Who was so wise, and prudent, and confidential a counsellor—who, though never volunteering, was ever ready to impart the best advice on all the knotty points that puzzled the brains of the young people of Lenox, from the arrangement of a bonnet ribbon to the weightier matters pertaining to picnics and donation parties.

Her parents being dead, she kept house for her brother, a widower, with a pretty daughter about fifteen, who was acknowledged as the prospective belle of Lenox, and joined heartily with the young people of the village in loving Aunt Hepsey, who, although quiet and unobtrusive, would perform more real, active good in a week, than an ordinary woman could in six.

"Hepsey," said Jeremiah Barton one evening to his sister, "I believe you never had an offer in your life."

"True, brother, I never did," was her reply.

"Well, Aunt Hepsey, that is queer enough," said Helen, who was playing with a pet spaniel on the floor, while Aunt Hepsey was knitting her stockings for her. "I am sure I do not know a married woman in Lenox that I like half so well as I do you. There is Mrs. Grey, she has lost all her teeth and wears false hair, and Mrs. Stevens scolds all the time, and her face is all over scowls and wrinkles, and Mrs. Carter, who cares for nothing but balls and parties, and Mrs. Jones, who leaves everything to the servants, and Mrs.—"

"Judge not that ye be not judged," chimed in the sweet voice of Aunt Hepsey. She had a sweet voice, exceeding sweet, and to the blind she must have looked most beautiful.

"Well, Aunt Hespey, I will not say what faults I see in most of the married ladies around us, but this I will say, and I know father thinks so too, there is not a woman in the State who can make home as pleasant as you; and if a real woman wants any higher praise than that, I for one woman, have no words in which to express it."

"You are right, Helen," said her father, "but I think you and I are not the only ones who have thought so. There was Deacon Jones, who wanted to offer himself to her soon after your mother died, but she begged me to refuse for her in advance, because she could not leave that little motherless Helen. Then there was 'Squire Grey at the Corner, had some talk with me about proposing for her, but she preferred keeping house for her brother. But I am going to speak now of an offer which she may receive, which she, however, must refuse for herself. I think it an excellent match, and if she will not take up with it, she shall refuse it herself, and at least have it to say that she has actually received *one* offer."

"So, brother, it seems you are tired of my company," quietly replied Miss Hepsey, at the same time taking up a stitch that had dropped in her knitting.

"Have it so if you will, Hepsey; but at any rate think it over, before you refuse our new minister, Mr. Harris. Why, he is a bachelor, not forty yet, and almost as handsome as his brother Willis was. See, Helen, you do not remember Willis Harris—oh no, he died before I was married. Well, he was a splendid looking fellow—open-hearted, generous, and a capital scholar. His father lived in that house where 'Squire Green did before he went to Congress. His father was thought very rich, and Willis and Harrey were both sent to College. Mr. Harris lost his property and died poor; and Willis left Harvey to go to sea, take care of himself, and help Harvey. Harvey has never been back here until last month. He has preached in Iowa, from the time he finished his studies."

"And where is that noble Willis, father?"

"Ah, that is the sad part of my story. He was successful at first, but just before Harvey was to graduate, he was wrecked on his voyage home, and instead of a brother's greeting after receiving his diploma, a stranger mentioned in his hearing that the "Falcon" and all on board had gone down in a hurricane. Father had invited the two brothers to make us a visit that autumn, for I had always been very intimate with them both; and on hearing the news I hurried to meet Harvey, to offer him at least a temporary home. He was dangerously ill at the time, and upon his recovery he was unwilling to revive old associations. Very happy was I to inform him that our church unanimously chose him as its pastor, and more happy that he came."

"But, brother, what has put it into your head that Mr. Harris has any thought of taking a wife?" said Hepsey, her voice trembling slightly, and her usually colorless cheek becoming a shade paler.

"His own words. He wished to know if you were unmarried, and why, and if I thought you would ever consent to change your name and condition—and his face was lighted up with such a handsome, animated expression, that I could not bear to repeat to him your determination to remain single. So I told him he must talk with you about it, if he wanted to know. He said he would call to-morrow evening and see you."

"Hepsey," said Mr. Barton at the tea-table, "do for once oblige me by trying whether your hair will not curl as it used to when you was our Helen's age. You have not worn curls—let me see—since your seventeenth birth-day. That was the day, too, that we heard of Willis Harris' death, and Harrey's extreme sickness."

"No, brother," replied Hepsey; "no doubt it would be rebellious against curling now—and then for an old maid to cover her face with ringlets would be too absurd."

"Too much as if you wanted to catch the minister after all, wouldn't it, aunty?" laughed Helen; "though I should love to see it curled once."

"So, aunty, you are going to marry the minister after all!" exclaimed Helen, running joyously into her aunt's room the next morning; "going to take a ride with him to-day, at any rate. Now let me dress your hair to-day—I must, aunty, or I shall do some mischief. Aunt Hepsey fallen in love! joy! joy!"

"But, Helen, I have no idea of marrying Harvey Harris."

"Indeed, aunt, but I know better. Didn't he stay until twelve o'clock, and didn't I, knowing that the minister's last words must be something *dreadful good*, put my head to the open window sill and hear him say, 'There will be some surprise when you are known as Mrs. Harris?' Ah, that blush! Oh, aunt, how pretty you look,—that curl laid so, on your cheek, and your eyes are so bright! I wonder, for my part, how you could have kept your hair so straight so long; all I have to do is to wet it and twine it over my finger so, and it curls sweetly! And, oh, aunty, if you have not got a ring on your finger!—you never wore one before! It is a beauty, but shockingly old-fashioned."

So the chatterbox Helen rattled on, as she dressed her aunt's hair, and helped her prepare for a ride with Mr. Harris.

"That's a good sensible girl, now," said Mr. Barton, as his sister came into the little parlor, equipped for a ride; "and I never saw you look so handsome before, neither;" and in the plentitude of his joy at the idea of becoming brother-in-law to his friend Harvey Harris, he bestowed upon her a mighty kiss.

"Oh, aunt, just let me peep into that locket,' said Helen,—"such a beauty, but old-fashioned. I declare, Mr. Harris ought to have his taste modernized a little. I think he was pretty confident of his attractions, or he would not have brought *two presents* to give his *first* call. I declare, here is a little short curl of jet black hair, and a long curl of brown,—that is like yours, but Mr. Harris' hair is brown too, but little darker than yours,—that can't be his. There is a mystery about it somewhere."

"Yes, Helen dear, there *is* a mystery about it; all shall be solved on our return this evening."

Just then the Rev. Mr. Harris drove along in his chaise, and after helping Hepsey in, he handed Mr. Barton a note, and then they drove rapidly away. The note read as follows:

"Friend Barton,—A couple wishing me to marry them this evening, I have taken the liberty to arrange matters so as to have the wedding at your house, as I feel no claim upon the people where I board. As they intend residing in Lenox, and will prove an acquisition to our whole society, if it is convenient I would be glad for you to invite the people of the village generally, if not, let only your own family be present. H. Harris.

Helen was in a fever of expectation and delight, as well as considerable of a bustle in preparing for an impromtu party. The village generally were invited, and some two or three had arrived, when the Rev. Mr. Harris came in alone. To Helen's eager inquiries, he could only answer that Aunt Hepsey would be there soon, and that the couple desired to be received by her father alone at the private entrance to his study. They would be there, he said, at half-past seven, and in fifteen minutes after she might go in with him; and the ceremony would be performed in the study, and she and her father might introduce the new married couple to the company.

The time at length came. She heard considerable bustle in the study, and at the appointed hour, Helen took the ministers arm and went into the study. There stood a dark, noble-looking man, whose short black curls were slightly flecked with silver, and—Aunt Hepsey!

In a few words the Rev. Mr. Harris pronounced Hepsy Barton and *Willis Harris* husband and wife, and then they were introduced as such to the astonished villagers.

Willis and Hepsey loved each other almost from childhood. The locket and ring were given her by him, when he sailed for what all supposed was to him a fatal voyage. Both looked upon marriage as something too far hidden in the future for him to make an *offer*, so called.

He was the only survivor of the vessel's wreck, and was cast a shore on the inhospitable coast of Africa,—and was carried into slavery among the savage tribes of Ethiopia.—After a varied fortune he fell among the Arabs, and reached Constantinople. Two years spent in trade there, made him wealthy. Although he received no answers to numerous letters he sent home, he preferred to believe they had been miscarried, rather than that friends had ceased to love him.

He reached New York in safety, and there learned that his brother had just returned to his boyhood's home. He wrote to Harvey, requesting him to ascertain whether Hepsey still remembered him,—waiting an answer at a house some three hours' ride from Lenox.

The rest is known.

If any one asks whether the "old maid" made a happy wife or not, I can only answer, that although ten years have passed, her ringlets curl as well as ever, and she has not a wrinkle yet.—*Portland Eclectic.*

THE BROKEN-HEARTED.

About two years ago, I took up my residence for a few weeks in a country village, in the eastern part of New England. Soon after my arrival, I became acquainted with a young lady apparently about seventeen years of age. She had lost the idol of her heart's purest love, and the shadows of deep and holy memories were resting like the wing of death upon her brow.

I first met her in the presence of the mirthful. She was, indeed, a creature to be admired; her brow was garlanded by the young year's sweetest flowers, and her sunny tresses were hanging beautiful and low upon her bosom; and she moved through the crowd with such floating, unearthly grace, that the bewildered gazer looked almost to see her fade away into the air, like the creation of a pleasant dream. She seemed cheerful, and even gay; yet I saw that her gayety was but the mockery of her feelings. She smiled, but there was something in her smile which told me that its mournful beauty was but the bright reflection of a tear; and her eyelids at times pressed heavily down, as if struggling to repress the tide of agony that was bursting up from her heart's secret urn. She looked as if she could have left the scene of festivity, and gone out beneath the quiet stars, and laid her forehead down upon the fresh, green earth, and poured out her stricken soul, gush after gush, till it mingled with the eternal fountain of purity and life.

I have lately heard that the young lady of whom I have spoken is dead. The close of her life was calm as the falling of a quiet stream; gentle as the sinking of the breeze, that lingers for a time round a bed of withered roses, and then dies for very sweetness.

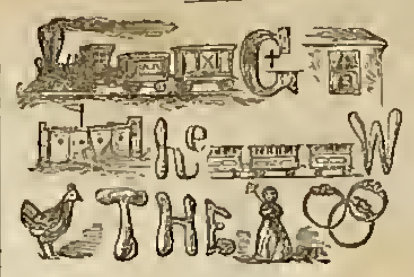
It cannot be that earth is man's only abiding-place. It cannot be that our life is a bubble, cast up by the ocean of eternity, to float a moment upon its surface, and then sink into nothingness and darkness. Else, why is it that the high and glorious aspirations which leap like angels from the temple of our hearts, are forever wandering abroad unsatisfied? Why is it that the rainbow and the cloud come over us with a beauty that is not of earth, and then pass off and leave us to muse on their faded loveliness? Why is it that the stars which hold the festival around the midnight throne, are set above the grasp of our limited faculties, and forever mocking us with their unapproachable glory? And, finally, why is it that bright forms of human beauty are presented to the view, and then taken from us, leaving the thousand streams of affliction, to flow back in an Alpine torrent upon our hearts?

We are born for a higher destiny than that of earth. There is a realm where the rainbow never fades; where the stars will be spread out before us like the islands that slumber on the ocean; and where the beautiful beings that here pass before us like visions, will stay in our presence forever.—*Geo. D. Prentice.*

Solemn Thought.—We see not, in this life, the end of human actions; their influence never dies; in ever widening circles, it reaches beyond the grave. Death removes us from this to an eternal world. Every morning, when we go forth, we lay the moulding hand on our destiny; and every evening, when we have done, we have left a deathless impress upon our character. We touch not a wire but vibrates in eternity; we speak not a word, we have not even a thought, which is not reported at the throne of God. Let youth, especially, think of these things; and let every one remember that in this world, where character is in its forming state, it is a serious thing to think, speak, and act.

Youth's Corner.

ILLUSTRATED REBUS, NO. 37.



☞ Answer in two weeks.

[Written for Moore's Rural New-Yorker.]

HISTORICAL ENIGMA.

I am composed of 36 letters.

My 9, 19, 17, 21, 36, 23 was one of the seven wise men of Greece.

My 12, 17, 11, 31, 17, 28 was the greatest man in Roman history.

My 14, 11, 28, 22 was an Emperor of Rome.

My 25, 10, 15, 21, 20, 18 was King of Macedonia.

My 1, 32, 29, 4, 27, 14, 5, 31 was a cynic philosopher.

My 35, 21, 15, 33, 13 was an ancient historian.

My 17, 6, 14, 7 was a Queen of England.

My 17, 21, 30, 3, 33, 8, 24 was King of Portugal.

My 2, 6, 16, 17, 31 was a tribe of S. A. Indians.

My 18, 34, 7 was an American Poet.

My 19, 17, 13, 33, 27 was an eminent U. S. Senator.

My whole was an ancient and very distinguished Philosopher.

Newark, N. Y. H. H. H.

Wit and Humor.

Sot Back.—General Sam. Houston meeting Recently Johnson the other day in the Capitol, the Senator and ex-Senator very naturally entered into conversation about public men, when, speaking of Douglas, the General said he had been "*sot* back." "Sot back," said Mr. J., "what do you mean by that?" "Why," said General H., "did you never hear the story?" "No." "Well, there was a man in my neighborhood when I was a boy, who made it a rule not to allow his boys to come to the table till they were 17 years old. He had a boy whom a neighbor, who was aware of the father's rule, happened to see one day sitting at a side-table; knowing, however, the boy was more than 17, he asked how it happened that he was still prohibited from coming to the table? 'Why,' said he, 'when I was 17, father let me come, but I was so hungry, and in *such a hurry to help myself*, that I stood up and *reached so far*, that a sad accident happened; whereupon my father immediately *sot me back* two year.

A Fast Nag.—A gentleman well known in a celebrated sporting circle, more for good humore than straight riding, arrived home a short time since, in a plight which would lead to the conclusion that he had something better than a "good thing."

"What sport?" asked a friend.

"C-a-pitall" replied our friend, emphatically. "Never had a better run in the whole course of my life! Was thrown into the first ditch, and it took me three hours to catch my horse!"

"How are you, count?" said a noted wag to a spruce looking specimen of a genus snob at the —— hall yesterday.

"Sir!" exclaimed the indignant swell, "who are you, and why do you call me count?"

"Why, I saw you counting oysters in New York last week, and I supposed you were of royal blood," returned the wag.

A chap was asked what kind of a "gal" he preferred for a wife. He replied, "One that was not a *prodi*-gal, but a *fru*-gal, and a *tru*-gal, and one that suited his *conju*-gal taste."—That's bright.

The Liberty Society is now in full blast.—Question for discussion:—If a man builds a corn-crib, does that give him a right to crib corn?

DRILLING IN WHEAT.

Moore's Seed Planter, or Grain Drill.

Patented July 2, 1850.—This valuable implement of husbandry, which has been thoroughly tested in many places, is used for planting Wheat, Rye, Corn, Oats, Barley, Beans, &c. It operates equally well on all kinds of land, and is not injured by coming in contact with rocks, roots, &c.; and it is believed, is superior to any other implement of the kind in use, as may be seen by the testimonials of many of the best farmers in the State. There are several advantages in drilling over broad-cast sowing, among which are these:—It is most expeditious; it saves labor, which is money; it completes the process of seeding whereever it moves; and experience has proved that more grain is obtained, of a heavier berry, and with less seed, owing to the being covered at any required depth, where every kernel has moisture and a chance to germinate.

Drilling Wheat.—Edward Stabler, in his admirable essay on the advantage of drill seeding, states that after examining its results on some 500 or 1,000 acres, besides large experience on his own land, he finds there is not a single instance where it has not proved the most profitable.—First, in the saving of seed, and secondly in the increased product of the grain, amounting to from one to seven bushels to the acre. He had known the increase, in one case, by careful comparison of the two modes, to amount to nine bushels per acre in favor of drilling. He relates an interesting incident:—A reader offered a drill for the increase in a crop of 50 acres of wheat, to be determined by sowing a few strips broad-cast for comparison; but before the harvest, the former preferred paying the hundred dollars for the price of a drill, with interest. On carefully ascertaining the increase, he found it to be one hundred and fifty-three bushels.—*Albany Cultivator.*

Extract from the N. Y. Tribune, Feb. 3, 1853, article on Industrial Exhibitions at the World's Fair, London:

"Those who understand the subject, know that at least one-third of the seed may be saved, and a fourth added to the crop by drilling, as contrasted with the old, slovenly process of sowing by hand. The annual saving by the general adoption of drilling in this country, would be equal in value to all the gold we receive from California."

The highest premiums have been awarded to this Drill at the Agricultural Fairs in Delaware, at Philadelphia, Baltimore, Detroit, in Maryland, and at various County Fairs in Pennsylvania, Ohio, Michigan, and other States.

TESTIMONIALS.

To E. W. Hudnut & Co.:—The Grain Drill which we severally purchased of you in 1852, works to our entire satisfaction. Its simplicity, and certainly of distribution, together with its cheapness, commend it in preference to any Drill with which we are acquainted. Samuel Lewis, Esq., York, Liv. Co., N. Y.; Wm. W. Fleichel, Jr., Chas. Hazelton, Elijah Armstrong, Geo. W. Uhl, Leaming Clark, Geneseo; Chas. Hendershott, Andrew Boyd, Rich'd Johnson, Groveland.

Extract of a letter from Mr. McCrone, near Newcastle, Delaware:—"Your Drill stands unrivalled, as is admitted by all Farmers in the neighborhood, that have seen it in operation."

"This is to certify, that we, the undersigned, have used Lewis Moore's Improved Grain Drill, and we believe that for simplicity, durability, cheapness, ease, speed and regularity of sowing, it surpasses anything of the kind heretofore in use among us, and we do recommend it to farmers as being a machine the best adapted to their wants."—Signed, Wm. Linville, Lancaster Co., Penn., and thirteen other farmers.

Orders will be received for these machines by the subscribers, who have purchased the right to make and sell them in the Counties of Monroe, Ontario, Wyoming, and Livingston.

Cash prices at the shop,—8 teeth Drills, 8 in a part, $65; 9 teeth do., 7 and 8 in a part, $70; 10 teeth do., 8 in a part, $75; 11 do., 8 in a part, $80. E. W. HUDNUT & CO.

Geneseo, Livingston Co., N. Y., June, 1854. 230-3t

HOME PROTECTION.

Tempest Insurance Company, Capital $250,000, Organized December 24, 1852; Chartered March 1, 1853. Homes only insured by this Company. No one risk taken for more than $3,000.

Many distinguished persons have insured their homes, to the amount of $3,000 each, in this Company, among whom are Ex-President Van Buren, Kinderhook; Ex-Governor Seward, Auburn.

Auburn, May 16th, 1853.

To whom it may concern:—We are personally acquainted with many of the Officers and Directors of the Tempest Insurance Company, located at Meridian, Cayuga Co., N. Y. In our opinion they are among the most wealthy and substantial class of Farmers in this county.

J. N. STARIN.
ELMORE P. ROSS.
THOMAS Y. HOWE, Jr.

The above gentlemen will be recognized as the Cashier of Cayuga County Bank, Auburn; Postmaster, Auburn, and Ex-Member of Congress, Auburn, Cayuga County.

N. B.—The public are cautioned to bear in mind the name, (*Tempest,*) and not submit to an imposition daily practiced by two-by-four Mutual Co's.

234-4t T. R. TIMBY, Secretary.

SHEEP FOR SALE.

I have Sheep (both Bucks and Ewes,) of the following breeds, for sale, at reasonable prices. French and Spanish Merinos, pure bred; also, crosses of the two breeds, from ¾ to ⅞; also, Leicesters and South-Downs, pure bred, and crosses of the same. These Sheep are from, or descended from the flocks of the well known breeders of pure bred Sheep, Messrs. Jewett, Borrill, Averly, Wakeman, Melntyre, Brodie, &c. For further particulars, address me (post-paid) at Belleville, Jefferson Co., N. Y.

237-4mcow. E. G. COOK.

THE WOOL GROWER AND STOCK REGISTER.

Vol. VI.—Enlarged and Improved!

The Wool Grower and Stock Register is the *only* American journal devoted to the important and profitable branches of *Wool and Stock Husbandry.* It contains a vast amount of *useful* and *reliable* information on the above and kindred subjects, and should be in the hands of every owner or breeder of Sheep, Cattle, Horses, Swine, or Poultry—whether located East or West, North or South, for the most of the matter given in its pages is equally adapted to all sections of the Union, the Canadas, &c. The Sixth Volume, commencing July, 1854, will be

Enlarged to 32 Octavo Pages Monthly!

And improved in both Contents and Appearance. Among other matters of interest to Wool Growers, Breeders, Graziers, Dairymen, &c., the new volume will contain Pedigrees of Pure-Bred Cattle, Horses, Sheep, etc., and the Names and Residences of the principal Breeders and Owners of Improved Stock throughout the country. It is published in the neat style, and illustrated with many Engravings—including Portraits of Domestic Animals, Designs of Farm Buildings, &c., &c. The careful Reviews of the Wool and Cattle Markets, given in each number, are alone worth many times the price of the paper.—To Wool Growers this feature is invaluable.

TERMS—Only Fifty Cents a Year; Five Copies for $2; Eight for $3,—*in advance.* Any additional number at 37½ cents per copy. Club papers will be sent to different post-offices, if desired. ☞ Back volumes (well bound in paper, for mailing) furnished at above rates.

☞ Now is the Time to Subscribe and form Clubs. Money, properly enclosed, may be mailed at our risk, if addressed to D. D. T. MOORE, Rochester, N. Y.

☞ Mr. C. Moore, of Surry, Chau. Co., is authorized to act as Agent for the Rural New-Yorker, and for the Wool Grower and Stock Register, in the counties of Chautauque and Cattaraugus, N. Y., and Warren, Pa.

MOORE'S RURAL NEW-YORKER,

IS PUBLISHED EVERY SATURDAY,

BY D. D. T. MOORE, ROCHESTER, N. Y.

TERMS, IN ADVANCE:

Subscription—$2 a year—$1 for six months. To Clubs and Agents as follows:—Three Copies one year, for $5; Six Copies (and one to Agent or getter up of club) for $10; Ten Copies (and one to Agent,) for $15; Twenty Copies for $25, and any additional number, directed to individuals at the same rate. Six months subscriptions in proportion. As we are obliged to pre-pay the American postage on papers sent to the British Provinces, our Canadian agents and friends must add 25 cents per copy to the club rates of the Rural,—making the lowest price to Canadian subscribers $1,50 per year.

☞ Subscription money, properly enclosed, may be sent by mail at the risk of the Publisher.

☞ The postage on the Rural is but 3½ cents per quarter, payable in advance, to any part of the State—and 6½ cents to any part of the United States,—except Monroe County, where it goes free.

Advertising.—Brief and appropriate advertisements will be inserted at $1,50 per square, (ten lines, or 100 words,) or 15 cents per line—*in advance.* The circulation of the Rural New-Yorker is several thousand greater than that of any other Agricultural or similar journal in America. Patent medicines, &c., will not be advertised in this paper on any terms.

☞ All communications, and business letters, should be addressed to D. D. T. Moore, Rochester, N. Y.

Progress and Improvement.

EXPERIMENTS IN FEEDING PIGS.—NO. I.

In a recent *Journal of the Royal Ag. Society*, Mr. Lawes publishes the results of an extensive series of experiments in feeding pigs on his farm at Rothamsted, England. In the first series, 36 pigs, from nine to ten months old, and weighing about 140 lbs. each, were divided into 12 pens of three pigs each. The pigs were each weighed and numbered at the commencement of the experiment, and at the end of each fortnight afterwards. The experiment lasted eight weeks, when the pigs were slaughtered, and their live and dead weight ascertained.

Egyptian Beans and Lentils are used to a great extent in England as food for all kinds of stock. In composition and general characteristics they are similar to *peas;* and in applying the results of these experiments to American Agriculture, we shall not be far wrong in considering them as *peas*. Bean and lentil meal, Indian corn meal, and bran, were the three foods used in the first series of experiments.—The pigs were allowed as much of one or other of these kinds of food as they would eat, and some of them a limited amount of one or two of the other foods in addition. The following table shows the quantity of limited food, ad libitum food—that is to say, food given without limit—and the total food consumed by each pen of pigs, and the total increase in live weight during eight weeks:

TABLE I.

Nos. of Pens.	Description of Food. Limited Food.	Description of Food. Ad Lib. Food.	Quantity of food consum'd by 3 pigs in 8 weeks. Limit'd food.	Ad Libitum food.	Total food.	Total increase in weight of 3 pigs in 8 weeks.

		Bran, ...	...	71	...	...

A single glance down the last column, giving the *increase in live weight*, shows that *bran* is a very poor pig food. Pens 9, 10, and 11, with bran ad lib., increased less than one-half as much as the average of the other pens. Bean and lentil meal alone, pen 1, gives a much higher increase than Indian corn alone, pen 5; but it will be seen that much more food is consumed. Thus, the three pigs eat 1,512 lbs. of bean and lentil meal, and only 1,086 lbs. of Indian meal. So that when we calculate the quantity of food consumed to produce a given increase, we find that pen 1 consumed 499 lbs. of bean and lentil meal to produce 100 lbs. increase in live weight, while pen 5 consumed only 491 lbs. of Indian meal, or 8 lbs. less.

It is necessary to observe that two of the pigs in pen 5, with Indian meal alone, were taken sick the third week of the experiment; their breathing became labored, and they had large swellings on the side of their necks.—They were allowed a mixture of 20 lbs. finely-sifted coal ashes, 4 lbs. common salt, and 1 lb. superphosphate of lime. This they eat with evident relish, and soon recovered, and when killed were found to be remarkably well *fatted*. Indeed, "a dealer with a practiced eye, selected and purchased the carcass of one of these pigs which had been diseased from among the whole 36, after they had been killed and hung up." Mr. Lawes appears to think that Indian corn does not contain sufficient mineral matter, and that this mixture supplied the deficiency. We would mention for Mr. Lawes' consideration, that it is the common practice in this country, when feeding pigs on Indian corn, in the pen, to put within their reach charcoal or thoroughly decayed wood. Ashes or other mineral substances may also be used for this purpose, but it is not a general practice.

Comparing pens 5 and 6, it is seen that the addition of 2 lbs. bean and lentil meal per pig per day, gives 77 lbs. more increase of animal; and the addition of 2 lbs. of bran per pig per day—pen 7—gives a greater increase over Indian meal alone by 88 lbs.; and an addition of 2 lbs. bean and lentil meal, and 2 lbs. of bran per pig per day—pen 8—give an increase over Indian meal alone of 126 lbs. In fact this pen gives a higher increase than any other in this series, and consumes the least food to produce 100 lbs. increased live weight, viz., 449 lbs. Pen 7 consumes the next least quantity of food—453 lbs—to produce 100 lbs. increase; and pen 6 the next—470 lbs; pen 2 the next—471 lbs.; Indian corn alone—pen 5—coming next, 491 lbs. The good result in pen 8 confirms the common opinion that a *variety* of food is the most fattening and profitable.

Our space forbids further reference to the results of this series. It has long been a disputed point as to whether the highly nitrogenous seeds of the leguminous plants, peas, beans, lentils, &c., were more nutritious than the less nitrogenous grains of the cereals, maize, barley, oats, wheat, &c. Looking at these results *as a whole*, we should say that Indian corn, for pigs at least, is more fattening than peas, beans, lentils, &c. But it is evident that a mixed diet is the most fattening, and that where Indian corn forms the principal food of hogs, a small quantity of peas or bran may be added with decided advantage.

But will it pay to fat hogs at all. With Indian meal alone (pen 5), 491 lbs.—say 8 bushels—of corn, was consumed to produce 100 lbs. increase of live weight; and in pen 8, which consumed the least food of any pen in this series to produce 100 lbs. of increase, 194 lbs. of bean and lentil meal and bran, and 255 lbs. of Indian meal, are required. If we consider this least quantity consumed equal to 7 bushels of corn, and take it as the basis of calculation, it is evident that corn must be cheap to render its conversion into pork a very lucrative business. On this point, however, we shall have more to say.

NAPAUL BARLEY.

Mention is made of this Barley in a late number of the Rural, under the name of Hindoo Barley. The writer received a sample per mail from Mr. J. B. Gardner of Columbia, Lancaster Co., Pa., the last winter. Mr. G. accompanied it with the following remarks:

"During the winter of 1850 and '51 it was first sent to this country, to a gentleman of Georgia, from the interior of Hindoostan, and is undoubtedly the first of its kind ever seen in the United States. The grain looks very much like the 'Emour,' or wheat barley, which has beards like all other barleys, whilst the Napaul is *smooth headed*. It is also different in its inflorescence, grows vigorously, tillers well, and from one year's trial, I judge it to suit our climate quite as well as the common kinds of Spring Barley. Sow in spring as soon as the ground is in good farming order."

The most of the sample received was planted on the 13th of March, during a warm spring-like "spell of weather," but most severe winter weather coming after, effectually destroyed it when the seeds had vegetated but not appeared. The balance I planted May 6th. This grew vigorously and tillered remarkably well. The leaves were very much broader than ordinary barleys, averaging an inch in width; many that I measured gave 1¼ inches width.—The heads were large, almost square-shaped, and longer than other barley, but from some cause they blighted very much, or at least but a few seeds were perfected. These were ripe July 27th.

The reason of its blighting may be ascribed perhaps to its late planting, or to its being somewhat shaded. If it shall prove worthy of cultivation it will most certainly be a very great acquisition to the country, as the beards are not very pleasant accompaniments of Barley harvest.

In a recent letter from Mr. Garner, he speaks of good success with it this season, which goes to confirm more strongly the favorable impressions he had formed of it. Further and more extensive trials will decide its merits. At present it can be pronounced a *promising* addition to the variety to our grains.

T. E. W.

FARMS IMPROVED BY KEEPING SHEEP.

Sheep Husbandry has been found not only profitable from its legitimate results, but from its tendency to improve and enrich the land for all agricultural purposes. It does this by the consumption of food refused by other animals—turning waste vegetation to use, and giving rough and bushy pastures a smoother appearance—as well as by the manufacture of considerable quantities of valuable manure. No grazing farm should be without at least a small flock of sheep—for it has been found that as large a number of cattle and horses can be kept with as without them, and without any injury to the value of the farm for other purposes. We say a small flock—and perhaps six or eight to each cow or horse would be the proper number. Upon this point (and others also,) perhaps some of our readers will give the suggestions of their own experience.

For rough and rocky farms sheep husbandry is well calculated, both from its succeeding better than anything else, and its improvement of the land by eradicating weeds and bushes, so that good grasses and white clover may take their place. This is conclusively shown by the farm of Richard S. Fay, of Lynn, Mass., an account of which we find in the *Boston Cultivator* of June 28. Mr. F. has several hundred acres of land, most of it rocky and uneven, and but a few years since covered with bushes, briers, and wood-wax. The latter plant is one of very difficult eradication, and on land inaccessible to the plow is commonly left in undisturbed possession. It came from the garden at first, but being a hardy perennial, has spread over wide tracts of country.

"On this land," says Mr. Howard, "Mr. F. commenced keeping sheep in 1852, and now has about three hundred pasturing on two hundred acres. That we might see exactly what the sheep have done, Mr. Fay first showed us land that is still in the condition it was when he first purchased it—a hundred acres of which would not afford a living for a cow—and next that on which the sheep are grazing for the third year. The contrast was striking. On the parts most closely fed, the wild roses, blackberry, and whortleberry bushes, and wood-wax are almost entirely killed, and there is a very good sward of blue grass, red-top, and white clover. There is no longer a question that the sheep will bring the whole tract into good pasturage, thus enabling the owner to derive a handsome income from land which was before totally unprofitable. The sheep, also, have thriven well."

In a letter to Mr. H., Mr. Fay gives some further account of his management. His sheep are folded at night on account of the attacks of dogs, a boy thirteen years old having taken the entire charge of them the past summer,—and he thinks dogs might be profitably employed to assist in the operation. Any dog can be accustomed to tend and drive sheep, and to keep off other dogs. His sheep are all kept under cover during the winter, he having a large barn with cellar underneath, to receive the manure, and a yard attached with sheds and racks, where they can move about and be fed in good weather. In this way he keeps between two and three hundred sheep in good condition. Last season he cut a quantity of the wood-wax when in flower, and prepared it like hay; and for four months the sheep were fed upon this alone, and thrive well. He reserves his roots, &c., until they commence lambing. He says—"It is bad economy to allow a sheep insufficient food, and I watched them carefully to see that what they had to eat kept them in good heart." By so doing, he has suffered but slightly from losses usually occurring in all the flocks in the spring.

As to results, Mr. Fay remarks:—"Last year the wool and manure more than paid the expenses; and the sale of lambs, increase of flock, and *improvement to land*, which I dare not put in figures, for fear of its being thought an exaggeration, quite satisfies me with the result of my experiment." Mr. F. has been the first to introduce the Oxfordshire Downs, a new variety, which we shall yet hear more of, into this country.—B.

ABOUT A FARM IN NIAGARA CO.

The following letter was not written for publication, but merely to gratify a friend.—On reading it over, our associate pronounced it, if used as originally intended alone, so much "copy" *wasted*, so as we have a horror of waste, it has a place in the Rural. The farm is the same described in "A November day at Uncle John's" in the last volume.—B.

My Dear G——:—Bearing in mind your request, you shall ramble with me over the farm, this pleasant August morning. And first, as it comes first, let us take a glance at the orchard. It contains some two hundred trees, one-third of them, perhaps, set some thirty-five years ago, and,—I remember to have heard—brought from a distant nursery, on the backs of the old farmer and his son. One half or more of the trees are grafted, and some of those which bear the seedling fruit, produce very good varieties of apples. This year the orchard is in meadow, and, like all the orchards in this vicinity, will yield but a small crop of fruit. Have you noticed that the Greenings are among the greatest bearers, in poor seasons? They are so here, and wherever I have observed them.

The farm buildings are very pleasantly situated, but we will not linger about them. A lane leads through the fields, let us follow it leisurely. On the right hand is a ten-acre clover meadow, which gave some 16 tons of hay the present year—the most of it being quite heavy. On the left is a pasture of the same size. It was in wheat last year, and gave some 340 bushels, of fine quality. It was seeded to clover as usual, but owing to the delay in sowing plaster, the wheat was so large that the job was a difficult one, and only half the lot was sown. This made a *marked* difference in the "catching" of the clover, as well as in its appearance the present year, and—no such neglect will be likely to occur again. Both these fields are part sandy and part gravelly loam.

Next is a five-acre lot—one acre in potatoes, which promise very well. Last year an acre with like manuring and culture, gave 230 bushels. The variety grown most, is the old flesh-colored, though Mexicans, Mercers, and Western Reds, are also planted. The remainder of the field is in corn, which promises a fair crop. The lot has been in pasture three years, it was manured at about 20 wagon loads to the acre, and plowed early in May, seven inches deep with much care and neatness. After harrowing,—but not to disturb the sod—it was marked out and planted,—say the last week in May. The corn was well cultivated and hoed, and a handful of ashes applied to each hill, and this has been all the culture given or *needed*.

This last may be thought a bold assertion, but there is not a field of corn in town in better order, so far as weeds and mellow soil are concerned. And, are you troubled with wire or witch grass in Old Steuben? It is the worst stuff to kill I ever knew,—turn it under in the summer fallow, and it will grow up through the sod, dig it up and it will again take root,—it has always been here a regular "live-for-ever."—But this early spring plowing has subdued it, in this field, at least, and it is intended to give the plan further trial, as other parts of the farm are troubled in like manner. By the way, there were two or three small patches of Canada thistles on the lot, and in June one could tell their location as far as they could see the rows, by the ranker growth of corn—and a closer inspection showed that the soil was much deeper and more mellow where they grew.—So the thistles have one commendation, as a "set off" to the general objorgations.

On the other side of the lane is a field of oats. This is part of a cranberry marsh, with an alder and willow border, drained some twenty-five or thirty years ago. It has borne many good crops of spring grains and grass, and some poor ones. The oats look well, but the grain is always lighter than that sown on upland. The whole marsh contains some 35 acres. About half of it is cleared, and is in meadow, pasture and grain, the remainder has grown up to wood rapidly. In a few years it would be an elm and soft maple woods, with plenty of underbrush. Some five or six acres will be added to the clearing this season, spare time and odd days having been devoted to this work since the year commenced.

We are now at the end of the lane and come to the wheat-stubble. It is on a ridge between the marsh and the wood lot, and was not very promising, but the *weevil* put the finishing touch to it. On 18 acres, where 12 or 15 bushels per acre was expected, it is *hoped* that there may be *five*. Here is a loss of $300, from an insignificant insect, but the loss on this farm is a small one compared with that of the town, or with many single farmers, even. People who have threshed in the neighborhood get from 4 to 9 bushels per acre, but there were fields in town not at all injured.

The wood lot before spoken of, contains some twenty acres, about equally divided between maple and beech upland, and ash and elm swamp. It has not been pastured for some years, and a fine undergrowth of trees fill all the openings. Bessie and I went a blackberrying here yesterday, with very tolerable success.

On that cleared portion of the swamp you see another oat field. The product satisfies one man as to the profit of sowing oats on sod ground. The lot contains some six acres, and has been in meadow some twenty years. Part of it was plowed last fall—the rest this spring—both alike produce poor oats. I have no doubt that another year, if sown again to oats, and the season proved favorable, the field would give from two to three times its present crop. Twenty years ago, part of the field was in white turnips, and they came up in considerable numbers among the oats the present year.

The summer fallow is between this field and the clover pasture, first mentioned. It contains nine acres, and is in good order. Pains have been taken to get out all the stones of any size within reach of the plow—a very commendable practice. Some five acres of this field has been manured.

The "lay of the land" is rather undulating, but no hills of any size, as I presume there is not over 30 feet difference in the highest and lowest level. The water from one side of the farm reaches Lake Ontario, some thirty or forty miles distant from that on the other, and those low, blue clouds you see to the southeast, are the oak openings of Old Genesee.—There is a large variety of soil,—sand and gravel, gravelly, sandy, and clayey loam, blue, red, and yellow clay, muck and springy swale—but all are productive in favorable seasons, and with additional draining, the farm would be, for its extent, as good as could be desired for "mixed husbandry"—grain, dairy and sheep. There are 132 acres of the whole, giving plenty of room for the capital of the owner, and in cannot be better applied than in making improvements on this hastily-described farm.

Sowing Wheat.—This should be attended to immediately, for fear of wet weather coming on, making the work more difficult. Wheat sown in wet weather is also more likely to be affected by smut.

Communications.

MORE ABOUT IOWA.

Mr. Editor:—The communication from me which you published in the Rural of July 15, has called out many inquiries concerning this State, and the numerous letters which I have received, all demand a more thorough description of this country. I can answer them all at once if you will give this publicity, for all that have written are subscribers of the Rural.

The principal questions to be answered are these:

1. Is your country subject to the fever and ague?
2. What is land worth per acre?
3. Have you schools, mills, and churches?
4. Is there a good demand for mechanics?
5. What kind of money is used in Iowa?
6. What kind of goods will pay transportation?
7. Which is the best route to go there?
8. Where is your market?
9. Is it a good fruit country, and where are your fruit trees obtained?
10. Are wolves troublesome to sheep?
11. Have you good blooded horses, cattle and sheep?
12. What branch of farming is the most profitable.
13. Is there a demand for reapers, seed-drills, and mowing machines?
14. What kind of people is your country settled with?

In answering the above, I will be as brief as it is possible to be, and do it satisfactorily.

In regard to the fever and ague,—there are places on some of the rivers and smaller streams, where the waters set back in rainy times, forming sloughs, and it frequently breeds the fever and ague in its immediate neighborhood—and sometimes mill ponds have the same effect—but such places are few and scattering, like islands in the ocean. It is generally very healthy. I have been here over a year, and have not seen a person shake with the ague yet.

Land is worth from three to twenty dollars per acre, according to location and improvements. I believe there is some government land yet in this country—but here, as elsewhere, the first settlers take their choice.

We have schools quite convenient; the school system of Iowa is good—every 16th section of land is appropriated to school purposes—most all fines, estray cattle and horses, sunny rafts of timber and lumber, &c., go to swell the School fund. We have five saw-mills and three grist mills within seven miles of us. We need more saw mills; the price is $6 per 100 feet, for sawing, and our mills cannot supply the demand. There is a grand location for a steam saw mill in this neighborhood.

The different denominations of Maquoketa have each their church, and nearly every country school house serves as a church on the Sabbath.

Manual labor of all kinds is in good demand. A young man that has energy enough to accumulate $100, can, by going a little further west, buy a good farm of his own, and cannot be persuaded to labor for other people.

Until recently nothing was money here except gold and silver; now paper money that is current east, is current here. The Land-offices require specie, but it is no trouble to get specie in even change for paper, of our merchants, as they go east for goods.

No bulky goods will pay transportation.—Furniture and farming tools should be sold rather than move them a great distance; they can be purchased here at a small advance upon eastern prices.

The best route to come here, depends upon the starting point. From New York State, the better course would be to come to Chicago, thence to Freeport by railroad, thence by stage to Savannah and Maquoketa, which route will soon be traveled over by the Iron Horse.

Our principal market for pork and grain is on the Mississippi. Dubuque, Davenport, and Sabula, are three quite important points on the great Father of Waters, and are each within a day's drive of Maquoketa. At no distant day the Mississippi will be the main artery of the great body of the United States.

Our stock market is good at home, and were it not for the amount of stock driven here from Illinois, Indiana, and Wisconsin, by emigrants, the cry would be loud and shrill.

There is an abundance of wild fruit; plums, crab and thorn apples, gooseberries, currants, grapes, black and red haws, blackberries, strawberries, &c. Tame fruit is not plenty yet. fruit trees grow rapidly here, and can be obtained from nurseries at Dubuque and Davenport, or some smaller nurseries near, at 12½ cents per tree.

Wolves are somewhat troublesome—sheep should be yarded nights for a week or two, then they will come to the yard themselves, and a boy can easily secure them.

We have a few good blooded horses and cattle from New York, and sheep from Vermont.

The raising of stock is the most profitable branch of farming at this time.

There is a good demand for reapers in the more thickly settled parts, for it is impossible to procure help enough to secure the grain that is raised. Seed drills and mowing machines will be needed in a few years.

This country is settled by people from nearly all parts of the world, most every nation can find its representatives in Iowa—the most part, however, are from New York, Penn., and Ohio, and in every case, "birds of feather flock together."

In conclusion—people who have settled in this portion of Iowa, are generally well pleased and contented, but it is impossible for every one who goes prospecting to be suited. Some become homesick before they get here, consequently see the dark side of everything; some are strongly attached to their friends whom they have left behind, and go back thinking they can live in their presence only; others come with clear and independent heads, buy and do well, and their friends follow the example. There is as much difference in the minds of men as in different countries. The principal inducement to settle in new countries, is to secure a good and independent home, which I consider quite an important item.

Although the inducement to capitalists is great at present, on account of the great interest money commands, yet it is the good, honest, and upright settlers we want, who with their industry and capital will make the natural prairie look like an old farm in one year's time.

John Watson.

Maquoketa, Jackson Co., Iowa.

OREGON PEA.—THE WEEVIL.

Friend Moore:—Having lately seen several inquiries about the Oregon Pea, I would state that I procured a quart last winter from a gentleman near Nashville, Tenn., and sowed them the 9th of May on a gravelly soil. They came up well, and seemed to flourish the fore part of the season, but show no sign of blossom or pod, coming, I presume, to the drouth; (we have had but little rain here the last two months;) but they have still held a green and thrifty appearance, and I should think attained a fair growth of stalks. As we were this morning blessed with a very fine shower, I may yet get fruit from them; if so, I should be happy to furnish a small quantity to any person who may wish to try them. They are a small pea, and I should think a quart would plant an acre thick enough.

I also notice an article in the Rural of this date, on the weevil, recommending salt as a remedy. I have used annually for the last 5 or 6 years on wheat, some years on barley, and 2 or 3 on corn ground, from 5 to 11 bushels to the acre, but am not yet satisfied that it will kill all the insects, and know that 10 bushels per acre, broadcast, will not kill the black-headed grub, or wire worm. We are apt sometimes to attribute to one thing what is accomplished by another; still a very large quantity of salt may possibly do it. In that case it would be better to apply it a long time before sowing or planting—otherwise it may injure the young plants. But in this Onondaga Valley, which is a loose sand and gravel, lime stone soil, I am convinced it will pay the expense at a moderate price, as a manure, and it may be worth while to try it on other kinds of soil and watch the result. Five or six bushels on an acre, in some part of the field, will do no harm, and may act as a stimulant. But your remarks, Mr. Editor, on the article alluded to, and your advice to sow the earliest varieties of wheat, is the safest, and I think will prove the greatest security against the weevil, at least, I adopted and pursued it for several years with good success. Perrego Kinder.

Onondaga Valley, N. Y., Aug. 20, 1854.

The Drouth in Vermont.—The oldest inhabitant remembers not so dry a season as the past has been in Vermont. There has no rain fallen since the first of June, to any amount.—The streams and springs that were never before known to fail, have been dry for weeks. Corn planted late in May has been in the "stook" for a fortnight, and in this vicinity will not produce one-eighth of an average crop. The yield of potatoes will be very light, and gardens are nowhere. The farmers fodder their cows regularly, the leaves are falling from the trees in the woods, and the upland pastures look as if a fire had run over them. Hundreds of acres of timber land in this vicinity have been destroyed by fire during the present month, and fires are now raging in the woods in different sections of the State.—S., *Castleton, Vt., August* 24, 1854.

Feeding Pigs.—In answer to the inquiry in regard to fattening hogs, I will give my experience. Grind barley into fine meal, scald it thoroughly, and, if convenient, let it stand until it ferments a little. Add a little salt and sulphur frequently. In this manner of cooking food, I think three-fourths of a bushel equal to a bushel fed without cooking.—John H. Parkell, *Munnsville, Madison Co., N. Y.*

Agricultural Miscellany.

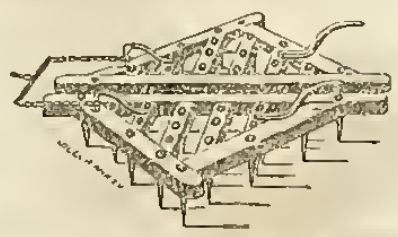
PLASTER ON WHEAT IN THE FALL.

From frequent conversations with practical farmers, we are well convinced that the use of plaster on wheat at the time of sowing, or put in with the seed, draws more attention than it has hitherto received. Those who have used it, aver that the increase of the crop is not only sufficient to repay the expense and labor, but has in addition been found to return a good per cent. of profit. The plaster has the effect of bringing forward the timothy or clover seed sown with the wheat, thus insuring a better after crop of grass for fall feed.

Plaster, by some means, we shall not undertake to say what, acts to absorb and retain much of the moisture of the atmosphere, or brings it up from "its hidden depths" in the soil, enabling young plants to obtain a larger growth through its genial influence, especially if the earth be more than usually dry. The effect of this will be to produce a better growth of wheat in the fall, and thus enable it more successfully to stand the winter, and withstand the ruinous effects of the early spring frosts—So, also, it may promote an earlier spring growth, and thus render the crop more remunerating. We think plaster will pay the farmer nearly as well *at what it costs*, as will guano at the present exhorbitant price, or even "Improved Superphosphate of Lime," with all its boasted virtues. H. O. W.

IMPORTED CATTLE FOR KENTUCKY.

The ship Antarctic, just arrived at New York, brings a valuable lot of improved stock for the "Kentucky Stock Importing Company," and for Col. Wm. Alexander, Woodford Co., Kentucky. The cattle are all short horns, and comprise eight bulls, one of which cost $1,000 ten cows, sixteen heifers, and one calf. One heifer, "remarkable for her size and beauty," cost $500. The sheep are all Cotswolds, eight bucks, "some of which are unusually large," and forty-six ewes. Some of the sheep cost $200 a piece. The swine, sixteen in number, are of the Yorkshire and Liverpool breed, and some of them, according to the *New York Tribune*, "are large enough to suit the breeders of monsters in Kentucky." The Cleveland Bay Stallion is said to be the best that could be obtained in the North of England, and cost $1,100. The stock arrived in excellent condition, only three sheep being lost on the passage.



ANDERSON'S DOUBLE-TRIANGULAR HARROW.

The above engraving represents an improved Harrow, recently patented by Mr. Anderson, of Jacksonville, Tompkins Co., N. Y., and now first offered to the public generally. For pulverizing the surface of the soil in the most thorough manner, it is probably unrivalled, and its peculiar form adapts it admirably to stumpy and uneven ground. It is the opinion of those who have seen it in operation, that once harrowing with this harrow is equal to going over the ground twice with any in common use. For further information see advertisement.

Ohio and Pennsylvania Horse Exhibition.—The Ohio and Pennsylvania Horse Fair will be held at Salem, Ohio, October 11th, 12th, 13th and 14th, 1854. The premiums are liberal—for the best thorough bred stallion $100, and other premiums on the same scale. The committees have also power to award premiums on mules should any be exhibited. There will be a sale of horses (we presume by auction) on the 14th. Entering fee for all stallions and spans of horses for premium or sale $3. All other horses and mares 3 years old and over, $2.—"Competition open to all the States." *Why not to the Canadas?*

The Late Rain.—Farmers were beginning to question the utility of sowing wheat this fall on account of the dryness of their fallows, when happily the heavens were opened, and we were visited with gracious rains. Now put in the wheat, the earlier the better, never mind those who say it will *mull*. Drill it in if you can; if you have no drill the cultivator is nearly as good. Cover the seed well and have no fears that it will not grow. We anticipate a warm, growing fall, and if this is the case, wheat sown this week and next will probably be quite as good as that sown earlier, at all events it will be early enough. The rain will benefit late corn and potatoes, and the pastures, which so recently were as brown and bare as a fallow, are already clothed with a mantle of green grass.

STATE AND COUNTY FAIRS FOR 1854.

We publish a list of the State and County Agricultural Fairs for the present year, so far as they have been announced. We shall be obliged to the Secretaries of our County Societies if they will send us information respecting their exhibitions, &c.

Sowing Wheat after Corn without Plowing.—Some farmers in this country, last fall, introduced a manner of preparing their corn ground for wheat *without plowing*, and altogether new to me. The corn is cut up at the roots as low as possible, fourteen rows forming one row of stooks. The ground is then harrowed to clear it from pumpkin vines, and level down the hills somewhat. This prepares the way for the cultivator, which should be passed over thoroughly, and the soil is ready for the seed after one more harrowing. I assisted in cutting several fields of wheat the last harvest, sown after corn. One of them, on no better soil, prepared in the manner above described, was one fourth heavier than either of the others—V. J. Strong, *Burlington, Calhoun Co. Mich., August*, 1854.

Charcoal for Fattening Turkeys.—A correspondent of the *Germantown Telegraph*, who had frequently seen charcoal recommended for fattening animals, but who was skeptical as to its value, satisfied himself with the following experiment:

Four turkeys were confined in a pen and fed on meal, boiled potatoes and oats. Four others, of the same brood, were also, at the same time, confined in another pen, and fed daily on the same articles, but with one pint of very finely pulverized charcoal mixed with their mixed meal and potatoes. They had also a plentiful supply of broken charcoal in their pen. The eight were killed on the same day, and there was a difference of one and a half pounds each in favor of the fowls which had been supplied with the charcoal, they being much the fattest, and the meat greatly superior in point of tenderness and flavor.

The Drouth and the Prospect.—The drouth still continues, with no appearance of change. The mourning is universal. Farmers have no heart in labor, but hope for the best. Turnip and grass seed sown weeks ago have made no appearance of sprouting. Potatoes and corn are a failure, and very many herds of cattle will soon suffer for the want of grass.—Hay is now used in many places as freely as tho' it were winter. The money market, drouth and sickness combined, make times *hard*, and they will continue *hard* for some time to come. Let us prepare for them.—*Ohio Farmer, August 26th.*

Threshing Wheat.—For the comfort of those who feed Threshing Machines where there is much dust in the wheat, I will say, it is the experience of my feeder (who has suffered much from the dust in his throat) that one swallow of oil, (which should be the best lamp oil,) when he stops at night, will relieve me from all the unpleasant effects of the dust. This is his remedy after ten years experience, and as it may give relief to many a fatigued and suffering poor fellow, I communicate it to the Planter.—*Southern Planter.*

Clover.—When clover was first introduced into Germany to fill up the year of naked fallow, in the triennial course of cropping, its effects appeared so extraordinary, that it was pronounced to be *the limit of the art of culture*. It gave fodder for cattle during the formerly naked year, it gave a better crop in the following year, and it was supposed to choke the weeds which infested the fields of grain.—*Von Thaer.*

The first sheep introduced into any part of the present territory of the United States were brought from England to Jamestown, in Virginia, by the "London Company," in 1609.

INDIAN CORN FOR SOILING.

An intelligent friend, who has recently commenced farming on the Hudson River, acting upon our suggestion last spring, put in seven acres of corn in drills and broadcast for soiling. The seed was put in early, and the ground having had a coating of guano, in addition to being in good condition, the corn took a vigorous start before the beginning of the drouth, which is now afflicting that region, and thus shaded the surface as well as to defy its effects. When his pastures dried up, he commenced feeding the corn-stalks. Of these a man could cut a day's supply for a dozen animals, in a short space of time, and on a very small patch. The consequence is, that while his neighbors have been coming to him to know how they shall dispose of their stock in the absence of any feed for them, his dairy-maids have been making for additional cracks and kirkins in which they may bestow their unusual surplus of *fall* butter. This is not a bad result for July and August. Henceforth the early drilled corn for soiling is a settled feature in his system of cultivation.

How many similar facts must we record, before we shall induce our readers to guard themselves against drouth, to which all are liable? If it comes, you are safe, and if it does not, your corn is worth twice what it cost for winter feed, or fodder for cattle, or manure, turned into the furrows on the field where grown. —*American Agriculturist.*

Destructive Rushes.—The presence of rushes indicates coldness and wetness of soil. To get rid of the superfluous water by thorough drainage, should therefore be the first object. When this is done, the rushes will gradually die out; but their death may be hastened by turning over the surface with a plow, and seeding with grass on the furrow.—*Cult.*

Inquiries and Answers.

Sowing Clover with Oats, &c.—I have frequently heard it asserted by experienced farmers that sowing Grass seed with Oats was the next thing to throwing it away. In the year 1850 I resolved to try it for myself, which I did, with the best of success, fully equal to that sown on wheat in the spring, by throwing it upon light snows the last of March or first of April. I again sowed with Oats in the spring of 1853, and succeeded most admirably, the Clover being nearly to my knees at the time of harvesting the Oats, and completely covering the ground, the Oats being also quite large, yielding some 60 bushels per acre. I would like to ask Mr. N. M. Carpenter, who in your last No. appears to favor sowing Grass seed in the fall, whether he sowed with winter Wheat, Rye, or any other crop? The reading of his article brought fresh to my mind, the recollection of a crop of Clover produced by my brother several years since, which was of the large variety, and was, I think, the best piece of Clover I have ever seen. He sowed on fallow or stubble ground (I am not certain which) in August, with winter Rye, mixing the Clover seed with the Rye, and sowing from the same bag. At the time of harvesting the Rye, it was truly of mammoth growth, rendering the harvesting of the Rye difficult and quite laborious. The main hazard to run in fall sowing, would doubtless be that of winter killing, or heaving out in the spring by the frost, which would be increased or diminished, according to the different kinds of soil.—*Manchester Centre, N. Y., Aug. 28, 1854.*

Disease in the Feet of Sheep.—A disease has recently appeared among my sheep somewhat resembling the "foot rot," but I think an entirely different disease from that. It is simply a soreness between the hoofs, not unlike the fowls in cattle. It produces lameness, the same as the foot rot, and affects the hind feet as well as the fore feet, which I am told is not the case with the foot rot. More of the sucking lambs have taken the disease than the old sheep. I wish to know, through the Rural, what this disease is called? Will it continue in a flock from year to year? Is it contagious? At what time of the year is it usually the worst? I use a remedy found in the Wool Grower—blue stone, verdigris and gunpowder. It is an infallible cure. —W. S. Adams, *Kent, Coshocton Co., O.*

Gas Tar—Draining Tile.—I notice several articles lately on the use of Gas Tar for stable floors, garden walks, &c. Can you or any of your subscribers inform me how it is applied? Where and of whom the Tar can be obtained, the price per barrel, and how much surface a barrel will cover?

Do you know if there is a Draining Tile manufactory anywhere on the borders of Lake Ontario? I want to use quite a quantity of them, but the breakage and freight of them from Albany, make them cost too much to be used in St. Lawrence Co.—H. B., *Waddington, N. Y.*

Tiles can be had at Rochester. See advertisement in this number of the Rural.

Sowing Clover in the Fall.—In your last Rural I noticed the answer of Mr. N. M. Carpenter, to some inquiries in regard to the sowing of Grass seeds in the fall. I wish to inquire whether his experiments included *Clover seed*; and if sowing Clover seed on wheat ground in the fall would answer, or whether it would winter kill?—A Subscriber, *Eldridge, N. Y.*

To Poultry Dealers.—A friend of mine (and of course a subscriber to the Rural) is desirous of getting some information about the *Poultry business*. Can you, or any of your numerous family of readers inform him, through the Rural, where there are any large establishments in this vicinity, that he could visit and obtain the desired information?—J. H. Stanley, *Le Roy.*

Orchard and Garden.

POMOLOGICAL GOSSIP.

NO. III—SELECT LIST OF FRUITS CONTINUED.

Peaches.—A great majority of farmers think seedling peach trees better than none; (?) the consequence is that we find but very few good peaches in the country. This is very poor economy. Good, early peaches are just as easily cultivated as seedlings, (from my own experience and observation, I think budded trees are full as hardy and productive as seedlings) and will always command a good price in market, whilst late ones will hardly sell at any price.

The following varieties will be found the most profitable for general cultivation, viz:—*Crawford's Early, Crawford's Late, Yellow Alberge, Jacque's Rareripe, Old Mixon Freestone, Morris White, Bergen's Yellow,* and *Red Cheek Melocoton.*

Pears.—This may be said to be *the* fruit in this country at the present time. It is receiving more attention than any other—I had almost said all other kinds. If a man plants but two trees, one at least must be a pear tree, and the chances are that *both* will be. If this *furor* does not lead to disappointment as a result, I for one shall be thankful. The chances are that many planters will be satisfied with planting merely, leaving the trees to take care of themselves afterwards; and such will, as they deserve to, be disappointed. The pear, when worked on the quince, needs good culture to succeed, particularly whilst the trees are young.

I would not advise the planting of dwarf trees to much extent by farmers generally, for that reason. They are impatient of neglect, and can be made profitable only by the most careful and systematic culture. They bear young, generally in from two to three years after they are set, which is their greatest advantage, except where land is scarce. (I speak now of their general cultivation—to the *amateur* of course, they are indispensable.) Plant a few dwarf trees, so that you may have a foretaste of the "good time coming." But don't be sparing with your standard trees, (that is, if you can give them even a chance for life.) They will always be profitable for market. There is no danger of a surplus of good pears. The demand will always keep pace with the supply.

The best varieties on quince are *Bartlett, White Doyenne, Louise Bonne de Jersey, Duchess of Angouleme,* and *Vicar of Winkfield.* The most profitable varieties for standard trees are, *Madeline, Dearborn's Seedling, Bartlett, White Doyenne,* (where it does not crack,) *Seckel, Paradise of Autumn,* and *Winter Nelis.*

Apples.—This fruit is too well known and too generally cultivated to require any especial notice here, only, I should advise every farmer who has not an orchard of grafted fruit growing, to make it his *first business this fall* to set out one, and, if he has one of natural fruit growing, to have it grafted next spring.

Much has been said *pro* and *con* about the value of root-grafted trees. Without attempting to decide the question, as to which is best in the end, I would only say, that as far as my observation extends, root-grafted trees do not come into bearing nearly as soon as seedling trees grafted at standard height when four or five years old.

Red Siberian Crab Apple.—Plant one or two of them in your door-yards. They make one of the most beautiful ornaments, and are very fine for preserving. R. B. W.

EARLY GRAPES.—Our friend R. B. WARREN, of Ahlama, N. Y., writes under date of Aug. 28th:—"I shall have some very fine grapes this season, and some are already ripe. By the by, mine on the east side of the barn are ripening first, although they have the sun only a short time in the morning." [It is an Isabella vine, and is trained very neatly and systematically upon the south side of a barn, but extends around upon the east side, where it is shaded by a large almond tree.—R.] "Can it be possible that they ripen better in the shade, when the roots of the vine are fully exposed to the sun? I shall have a fair chance to test it on my vine."

TIME OF BUDDING.—An Illinois correspondent, Mr. S. W. ARNOLD, says:—"Here buds set in July generally succeed better than those put in later. I have put in about five hundred this summer, on my own premises—cherries, plums, apricots, peaches and apples—and have not lost ten buds. They are mostly grown in as solid as the natural wood." We think Mr. A. can be more certain about the best time of budding next June, as the second season has much to do with the matter.

THE CURCULIO.—The curculio has appeared a second time in some localities; brought out, very probably, by the dry hot weather. They can do no harm, and if they would all hatch, the drouth would have one good effect at least.

FUCHSIAS.—THE SERRATIFOLIA.

WE continue our illustrations of the Fuchsias by a fine engraving of the *Serratifolia.* This is a species or a sub-species, quite distinct in appearance—lately introduced from Peru. It is an autumn flower, and in high beauty through October and November, and even into December. The habit of the plant is low, stout, and bushy. The leaves are very dark, opposite in fours (verticillate) on the branches, and the flowers are produced from their axils, one on each leaf, with a graceful drooping habit. Calyx, bright rose; points of sepals, green; corolla, scarlet; stamines prominent, being beautiful white anthers; making in all a fine assemblage of colors and contrasts. Plants of one season's growth are generally most satisfactory. The above engraving represents this flower the natural size.

TIME OF BUDDING.—AGAIN.

EDS. RURAL NEW-YORKER:—In one of your recent numbers, I see a communication from E. HERSEY to the *N. E. Farmer,* on the time for budding. He gives a very limited period as the proper one, and says a skillful budder will make 75 per cent. of his buds live. Now, that will not do, "out west."

In this vicinity, we commence working apples as soon as the wood is ripe enough, and continue to set buds as long as the bark peels well, which is usually till the last of September. A good budder will set 1,000 buds per day, and with free stocks and ripe wood, we make about 95 per cent. live. We cut the bud thin, and never remove the wood. For tieing, we prefer the inner bark of the bass-wood, *(Tilia Americana)* prepared by soaking the bark in water for several days, when the inner layers separate in thin sheets, which are readily split into the proper width. This has been appropriately called "*nurseryman's ribbon.*" If our stock of *bass* fails, Russia matting, or woolen thrums, and sometimes corn husks, are used. The bandages are removed as soon as the growth of the tree causes them to *cut;* and they are all taken off in the fall, any way, as they greatly injure the buds if allowed to remain through the winter.

A thin-bladed pocket knife, that will hold a keen edge, is the best for a budding-knife.—The flat ivory end is superfluous, as we open the edges of the cut with the knife-point, thereby saving much time. R. W. R.

The Grove Nursery, Ill., August 22, 1854.

CUCUMBERS.—I observed in the last number of the RURAL, a large cucumber story, and think I can tell a larger one. I have one hill, on which there are seven cucumbers, the aggregate length of which is over 12½ feet, the longest one measuring 2½ feet.—J. H. STANLEY, *Le Roy, August 29, 1854.*

HICKORIES.—Can a hickory be successfully transplanted? People have often enough tried it, and generally said no. Being a few days ago in the garden of Agustus Adams, Esq., of Elgin, we saw a large number of hickories from three to seven feet high, which had been transplanted successfully from the woods, or rather the openings, and were growing vigorously on their second summer. Mr. Adams stated that he had lost no more of them than any other tree. His plan is to dig down and down till he gets tired of it, and then cut off the tap root. He never stops till he gets four feet until from that to six, and yet he states that he never got so low as to find the tap root as small as the tree at the surface of the ground.—*Prairie Farmer.*

Domestic Economy.

RECIPE FOR ELDERBERRY WINE.—Pick the berries clean from the stem, put 4 quarts of water to three quarts of berries, boil them slowly for two hours, then strain the liquor, and measure it again, adding three pounds and a half of sugar to a gallon of liquor. Also one-fourth pound of green ginger, 3 oz. allspice, 3 oz. cinnamon. Add water while the whole is boiling, that you may have the same quantity of liquor when done as at the beginning.—Let it boil half an hour; then strain it off into the barrel, put a slice of toasted bread with a small tea-cup of yeast spread on, and let it float upon the wine until it is fermented ready for sealing up. Let the barrel remain uncorked until it has done fermenting. Some prefer it without the spices.

RIPE TOMATO PICKLES.—Select handsome sized tomatoes, wash them and prick them with a fork, lay them in dry salt 24 hours, then soak them in equal quantities of vinegar and water 24 hours; take them out and lay them down in a crock with sliced onions, first a layer of tomatoes, then onions, with cinnamon, cloves and brown sugar, and then cover the whole with good cider vinegar.

TO KILL BED BUGS.—Take say one teaspoonful of quicksilver, and the white of one egg, and beat together thoroughly. Then take the feather end of a quill, and apply to the secret hidings of the chaps, and they will surely come up missing.—E. PIERSON, *Leroy, N. Y.*

TO PRESERVE GRAPES.—Take a box of sufficient capacity to contain twelve pounds of grapes, and cover the bottom with a thick sheet of glazed wadding. On this deposit a stratum of grapes, but not so close that the bunches will touch each other, and continue the alternation of wadding and grapes until the box is full. The cooler they are kept without actually freezing, the better.

TOMATO CATSUP.—Tomatoes, a bushel, should be boiled till they are soft. Squeese them through a wire sive, and add half a gallon of vinegar, a pint and a half of salt, two ounces of cloves, a quarter of a pound of allspice, three table-spoonsful of black pepper, (all ground finely.) Mix and boil several hours, till reduced about one half. When sufficiently cool, bottle without straining.

CLOTTED CREAM.—Take a quantity of milk, one day drawn, but perfectly free from sourness, with the cream on: scald it over a gentle heat, till a ring appears in the cream of the size of the pan; remove it, and take off the cream, which is then fit for use.

Mechanic Arts, &c.

LIST OF PATENT CLAIMS

Issued from the United States Patent Office,

For the week ending August 22, 1854.

Wm. D. Andrews, New York, improved centrifugal pump.

Nathaniel A. Boynton, New York, improvement in hot air furnaces.

Richard C. Bristol, China, Michigan, improvement in rotary engines.

Benjamin Brindenalph, Cleanspring, Md., for improvement in hominy mills.

Absalom B. Earle, Franklin, N. Y., for improvement in straw cutters.

Wm. M. Ellis, Washington, D. C., improved arrangement of the steam engine.

Wm. Z. Hatcher, Philadelphia, improved stop and waste cocks.

Levi Haywood, Joseph L. Ross, and James K. Otis, Boston, improvement in portable bureaus.

J. Burrows Hyde, New York, improvement in apparatus for creating telegraph wires.

Bernard Hughes, Rochester, improvement in actuating engines by bi-sulphate of carbon.

George Jackson, Cohoes, improvement in knitting machines.

Abel F. Lewis, Shopiere, Wis., improvement in floating drugs, or anchors.

Robert Marquis, Xenia, Ohio, apparatus for balancing and hoisting sashes.

Elbridge Marshall, Blinton, N. J., improvement in manure spreaders.

Henry Mellish, Walpole, N. H., improvement in grain mills.

Johns A. Prase, New York, improved diaphragm pump.

Wm. D. Porter, New York, improvements in wood gas generators.

Henry Richardson, Shrldon Morris, jr., and Bennet C. Perry, Litchfield, Ct., improvement in folding umbrellas.

Artemus Rogers, Painsville, Ohio, improved instrument for manufacturing door-knobs.

Charles M. Alburger, Philadelphia, improved pavement washer, hose hydrant, and hitching post.

Thos. Crossly, Boston, improvement in manufacturing two-ply carpets.

Joseph Hall, Shumeatchs, improved Daguerreotype plate holder.

Joseph C. Jenkins, Bealsville, Ohio, improvement in tuning forks.

Abner White Jones, New York, improved means of preventing the explosion of boilers.

Dustin F. Mellin, Wentworth, N. H., machine for sawing clapboards, &c.

Wm. O. Rust, Great Falls, N. H., improved saw set.

Hugh Sangster, Buffalo, improvement in securing glasses in lanterns.

Edmund Shaw, East Abington Mass., improvement in sewing machines.

Haley on Skinner and Wm. Greenhaigh, West Farms, N. Y., improved carpenters' gauge.

Robert Spencer, Southport, Conn., improvement in harness saddle-trees.

Alfred A. Stara, New York, catamenial suppurters.

David Swartz, and Sam'l Swartz, Tomsbrook, Va., improvement in fastening plows.

Robt. Spencer, New York, improvement in harness saddles.

Paul Stillman, New York, improvement in counting machines.

Francis C. Treadwell, New York, improvement in ovens.

Abner Whitely, Springfield, Ohio, improvement in truck cleaners, to grass harvesters.

Philander Wilbar, Milan, Ohio, improvement in cheese presses.

Melvin Shaw, East Abington, Mass., assignor to Melvin Shaw and Daniel Gage Wheeler, of East Abington aforesaid, improvement in clamps for sewing machines.

Solomon S. Hay, South Boston, assignor to S. S. Gray and S. A. Woods, of South Boston aforesaid, for improved machine for planing lumber "out of wind."

Daniel Treadwell, Cambridge, assignor to Herbert H. and Frederick H. Simpson, of Boston, improvement in operating furnaces.

Thomas W. Harvey, deceased, late of New York, administrator and assignor to the Harvey Steel and Iron Company, for improvement in furnace for manufacturing wrought iron directly from the ore.

James A. Brazier, Canton, Mass., assignor to Alfred B. Ely, of Boston, improvement in cog gearing.

M. H. Merriam, Chelsea, Mass., and William W. Nichols, Boston, assignors to W. W. Nichols & Co., of Boston aforesaid, for improved tool rest for turning lathes.

Benjamin F. Graves, of Boston, assignor to C. Kimwilton, of Boston aforesaid, for improved tool for boring recesses for castors, &c.

Sidney S. Turner, Westborough, Mass., assignor to Elmer Townsend, of Boston, Mass., for improvement in sewing machines.

Jacob Sminoff, Philadelphia, for improvement in machines for rolling shoulders on axles.

Wm. Van Arden, Poughkeepsie, improvement in machines for rolling shoulders on axles.

Robert Rose, Philadelphia, improved steam valves.

RE-ISSUE.

A. C. Harig and D. C. Stoy, Louisville, Ky., improvement in bank locks. Original patent dated July 25, 1851.

WASHER HINGES.—It has long been a desirable object to produce a complete hinge by one molding and one casting. This has been accomplished by Nelson Gates, of Cincinnati, who has applied for and obtained a patent.—The invention consists chiefly in the employment of a washer, of concave-convex or other suitable form, in every joint of the knuckle, to enable the washer to form a pivot, or to receive a portion of the knuckle which would form a pivot. A suitable number of these washers are placed in the mold of the hinge at proper distances apart, and when the metal is poured out they form a separation of the two parts of the hinge, and without any pin (as in the common hinge), they serve as a pivot.—*Scientific American.*

SUGAR FROM PUMPKINS.—A patent has been granted by the French Government for making sugar from pumpkins; it is said the quantity produced will be at least as great as could be obtained from an equal weight of beet-root.—The invention comes at a time when it has been found that beet-root can be more profitably employed in making brandy than sugar.

ENGINE FORCE PUMP.

THE above cut represents an "Engine Well Pump," manufactured by COVINO & Co., Seneca Falls, N. Y. It combines the principles of atmospheric pressure or suction with the Force Pump, and having an Air Chamber connected with it, is calculated to throw a constant stream. It is adapted not only to the ordinary uses of a Well Pump, but also to the washing of windows, buildings, and vehicles, and the extinguishing of fires. Having an Air Chamber it combines all the principles of a Double Acting Fire Engine! With three feet of hose and discharge pipe, water can easily be thrown over a two story building, and with sufficient hose can be carried over the entire premises. This we deem one of the most practical and useful improvements of the day, since every house in town or country may have not only the conveniences of a good Well Pump, but at the same time be always supplied with a first rate Fire Engine. The working piston of this Pump is some three feet below the platform of the well, where is a small let-off which entirely prevents its freezing, if the well is covered tight. It is furnished at $18 including three feet of hose and discharge pipe. Extra hose 25 cents per foot.

Directions.—When used as a Common Pump the hole in the top of the Air Chamber should be left open; when used with the Hose it should be perfectly tight. Orders should be addressed to the manufacturers as above.

SUBSTITUTE FOR GUTTA PERCHA AND INDIA RUBBER.—A. P. Sorel, of Paris, has taken out a patent for a new compo-sition, asserted to be a substitute for the above named substances. It consists of two parts (by weight) of colophony, twelve of pitch or bitumen, eight of resin oil, six of the hydrate of lime, twelve of gutta percha, ten of pipe clay, and three of water.—These ingredients are all to be melted together in an iron vessel, and when well incorporated by heat and stirring, the compound is to be used as a whole for gutta percha or India rubber, which substances are much higher in price than the new compound. The question arises, "is the new compound as good as the substitute?" We have given the quantities, so that any person may try the experiment.—*Scientific American.*

DANIEL HALLIDAY, of Ellington, Ct., has invented and put in successful operation a self-adjusting windmill, which furls its own sails at the proper time, stops when the wind is too high and starts steadily round again when it returns to its approximate degree of force. It has been in operation six months without requiring a hand to regulate the sails, has run fifteen consecutive days and nights without stopping; has drawn water from a well twenty-eight feet deep, and one hundred feet distant, and forced it into a reservoir in the upper part of a barn in sufficient quantities for farm and garden irrigation, and cost but $50.—*Springfield Republican.*

MANUFACTURES IN BOSTON.—A Boston paper says that the entire furniture business in that city will amount in value to nearly $8,000,000. There are some eight or ten establishments there, dealing in furniture and chairs.

Educational.

THE STUDENT'S GREETING.

FROM HILLSBOOK GLEN.

Friendly "Student," glad are we
Thy loved form once more to see;
Warmly we will bid thee come,
Welcome! welcome! to our home!

Longing hearts o'er wait to greet thee;
Eager hands oft haste to meet thee;
Thine approach is hailed by all,
Thee, with earnest voice, we call.

Thine's the page of love and truth,
Thine's the sphere to teach the youth;
Noble work! and well fulfilled,
Pure the thoughts by thee instilled.

Wisdom on each leaflet lies
Knowledge pure, which never dies!
Countless pearls thou dost unfold,
Heavenly gems, more worth than gold.

May God bless thy progress here,
Grant thee still a bright career;
Hallowed truths by thee be given,
Which shall lead young hearts to heaven.

The Student.

(Written for Moore's Rural New-Yorker.)

DIFFICULTIES IN SCHOOLS.

It is no new thing under the sun. There is frequent insubordination in school. The "master" meets with difficulty in ruling in his little empire. In the administration of his gubernatorial fiats, there are often great impediments. The teacher, as a governor, should possess qualifications peculiarly adapted to the unavoidable necessities he is called to meet. No doubt, many undertake the management of children, and youth, who are in no wise qualified to "rule," and find, to their regret, the sad mistake they have made. A governor cannot manage his affairs profitably and successfully, unless he has a knowledge of the disposition and wants of his subjects. Nor can he always succeed with this acquirement. He may know what is necessary to be done, and yet have very little skill to do it. He may know there should be peace, order and prosperity in all his borders, still be ignorant of the proper means to bring about those desirable ends. Perhaps this may be considered one of the primary causes of difficulty in school. Not *the first*, but one of the first. The talent of *ruling well* is as much a "natural gift," as that of doing anything else; and, like every other "natural ability," this may be greatly improved. No matter what may have been the advantages or literary attainments of the teacher, unless he has a consciousness of his aptness to *govern well*, he should engage in the management of youth with great diffidence. Do not imagine, because you may have acquired a reputation for proficiency in literature, you are every way qualified to manage a school. Teachers have a very inadequate estimate of the importance of their calling, who deem this sufficient. Truly, a teacher cannot teach others what he does not know himself, nor can he teach those whom he cannot govern. The picture has two sides. Teachers frequently make their own difficulty. They sometimes mistake their calling, and undertake to *teach*, when it is very evident that:

Whatever station they *might* fill,
In teaching they have little skill.

And their want of success does not so much arise from their want of literary acquirements, as their want of *power to rule*. Do not, then, charge *all* difficulty in schools to the "incorrigible pupils," or the extreme waywardness and fastidiousness of parents. Most children have a tender place in their hearts. True, in many cases, it may lay "far up a good many flights of winding stairs." It may have been calloused by the icy touch of this world's friendship, and it may require much patience to reach it, yet it is there. Hence the great importance that the teacher should understand the multiform exhibitions of human character—that he should be enabled to trace the connection between the eye and mind. But I do not design to dwell upon the qualities of a good teacher, however desirable this may be. I will assert what I have before stated. The primary cause, or at least, one of the primary causes of difficulty in schools, is a want of adaptedness, on the part of the teacher, to his business. Very many "quacks" enter the school-room, and attempt to deal out their *nostrums* to the young mind.

From such apostles, O ye ecclesiastical heads,
Preserve our schools.

J. W. Barker.

Brockport, N. Y., 1854.

To the Student.— Confidence in our own faculties and powers, in our own ability to *do something*, is a quality of which many of us are deficient. We think we are weak, unable to do but little, (we are truly) and thus rest upon the endeavors and attempts of others. Believe in the old adage, "Where there's a will there's a way." Great achievements are attained by comparatively small efforts. Did we but realize the regret which will fasten upon us in after years, doubly keen would be our anxiety to accomplish something. We should not despond because the clouds look dark, but press onward to the accomplishment of great mental achievements. P.

SUGGESTIONS UPON READING—TO THE YOUNG.

To be able to read *well* is a valuable acquisition; and one of which the young in modern days are particularly neglectful.—While other branches of education are pursued with vigor and thoroughly investigated, that of reading has been but little regarded; and that more especially as the pupil progresses in the higher branches of study. If he but call the words correctly, mind the pauses, and give the due inflections of voice, it is usually considered sufficient. The thought does not seem to present itself, as to *what the object of reading is*. I would here ask, whether the mere coming of words ought to be termed reading? The child reads through from beginning to end, his whole series of School Readers; commits them perhaps, to memory; and yet when done knows but little more than as if he had never perused them. He has learned it because it was required of him as a task. He has not been interested, his imagination has not been excited; he has not comprehended its meaning or ultimate design.—The object to be obtained in reading is, to make the *thoughts*—the *knowledge* of others our *own*. To do this, our mind—our whole attention must for the time be directed *to* it. We must enter into the feelings, aspirations, and imaginations of the writer; and learn at a glance the meaning he would convey. We must weigh the thoughts, discover what it is which excites our admiration or emotion; and judge of its fitness and accuracy. Not only this, but we should make a proper use of the thoughts of our own minds, naturally produced by coming in contact with those of another.—The knowledge thus obtained may be of incalculable value. This knowledge does not so much depend upon the *quantity* we read, as *how* we read it.

Too little attention also, has been paid as to *what* young people read. Their parents and guardians have permitted them to read promiscuously whatever fell in their way, seemingly contented if they but read at all. In this way their minds have often been misdirected; or, to say the least, have become so confused and unmethodical in their arrangement that nothing can be drawn from them. They contain a smattering of everything, with no knowledge of anything. The habits induced by this superficial course of reading are highly pernicious. The mind unaccustomed to be fixed upon any particular object, loses the control of its powers; and weakens its natural energy. It should be, I think, with those who have charge of the young, an indispensable requisite, to select their reading for them, and direct their tastes for them. Much of the character of young people, depend upon their choice and manner of reading. Good books are the friends which give a charm to solitude, an impulse to the expanding intellect of youth, direction to the mental powers, strength, beauty, wisdom, and refinement to the mind.

Royalton, N. Y. B. A. McN.

Stray Leaf from a Teacher's Journal.—Where am I? Ah! I may well ask that question: but my heart only replies, "Far from home, and in a land of strangers." And must I toil in this desert place *five long* months?—Oh for guidance from on high! Help me, Heavenly Father, to bear all and patiently endure to the end.

It was with a sad heart I bade my home and dear ones farewell, but little did I know where my summer was to be spent! "The whole heart is sick and the whole head is faint."—Home and all its endearments rushes to my mind, and "tears unbidden start!"

But a voice within bids me "Never, never be dismayed;" and I will arouse myself, and perhaps in this obscure and remote place I may scatter seed that shall bear fruit to the honor of Him who careth for and watcheth over us all.

"Sure He who knows my every sorrow,
Knows and will reward my hope."

—*N. Y. Teacher.*

Common Schools.—In an oration at Williams College, Mass., Hon. Edward Everett once said:

"I would rather occupy the bleakest nook of the mountain that towers above us, with the wild wolf and the rattlesnake for my nearest neighbors, with a village school, well kept at the bottom of the hill, than dwell in a paradise of fertility, if I must bring up my children in a lazy, pampered, self-sufficient ignorance."

Breaking the Rules of School.—Three brothers are confined in the Ohio Penitentiary, two for seven years and one for three. They, with others, had formed a secret society for the purpose of carrying on a regular business in house-breaking, the plan of which was found in their pockets when they were arrested.

Now it is well for every boy to know what the *apprenticeship* of such a business was, and let him mark it seriously. *They began law-breaking by violating and defying the just rules of school.*

Knowledge may slumber in the memory, but it never dies; it is like the dormouse in its home in the ivied tower, that sleeps while winter lasts, but wakes with the warm breath of spring.

Useful Olio.

FACTS IN HUMAN LIFE.

The number of languages spoken in the world amounts to 3,064; 587 in Europe, 896 in Asia, 276 in Africa, and 1,264 in America. The inhabitants of the globe profess more than 1,000 different religions. The number of men is about equal to the number of women. The average of human life is about 28 years. One quarter die previous to the age of 7 years; one-half before reaching 17; and those who pass this age enjoy a felicity refused to one-half the human species. To every 1,000 persons, only one reaches 100 years of life; to every one hundred, only six reach the age of 65; and not more than one in five hundred lives to see 80 years of age. There are on earth 1,000,000,000 inhabitants; and of these 33,333,333 die every year, 91,334 every day, 3,780 every hour, and sixty every minute, or one every second. These losses are almost balanced by an equal number of births. The married are longer lived than the single, and above all those who observe a sober and industrious conduct. Tall men live longer than short ones. Women have more chances of life in their favor previous to being 50 years of age than men have, but fewer afterwards. The number of marriages is in proportion of 75 to every 1,000 individuals. Marriages are more frequent after the equinoxes; that is, during the months of June and December. Those born in the spring are more robust than others. Births and deaths are more frequent by night than by day. The number of men capable of bearing arms is calculated at one-fourth of the population.

THE SHELLS.

A father returned from the sea-side, and brought home for his son some pretty shells, which he had gathered on the beach. The boy's delight was inexpressible, when he received the beautiful and many-colored productions of the sea; he arranged them with care and attention in a neat little box, and exhibited them to his playmates; so that there was much talk among the children of the village about the beautiful shells and the treasure box of the boy. He counted them every morning, discovered daily some new beauty, and gave to each shell a name. For the love and delight of childish simplicity are ingenious, and rich in pleasant words.

After some months his father thought, I will prepare for him a greater pleasure and delight. And he said to him: "We will go to the sea-side; there you will admire the number of beautiful shells, and may collect as many as you desire for yourself."

When they went to the beach at the ebb of the tide, the boy was surprised at the abundance of shells, of divers colors, which lay scattered about; and went up and down collecting them. But each appeared to him more beautiful than the last; and he continued picking up new ones, and exchanging those which he had for those which he found. Thus he went on, choosing, changing, and doubting, and afterwards became confused. Tired, at length, with stooping, examining, and comparing, he threw away all the shells he had collected; and when he returned home, empty-handed and out of humor, he gave away those which had before afforded him so much pleasure.

Then his father was very sorry, and said:—"I have not acted wisely; but my foolishness has taken from my child his simplicity, and from both of us our joy."—*Krummacher's Parables.*

NEW CURE FOR STAMMERING.

The last number of the Scientific American contains quite a long article on Bates' apparatus for the relief of stammerers. This apparatus consists of "a belt intended to be worn around the neck after the manner of a stock, with a view to pressure on the glottis as the seat of the difficulty with respect to guttural sounds." By means of a screw and a pad, the glottis is acted on so as to allow a free passage for the air. A thin tube of gold or silver, attached to the root of the mouth by a gum-elastic spring, is also worn—one end opening against the teeth and the other extending backwards. The use of this tube is to "carry off the breath, which would be converted in its absence into a spasmodic lingual sound."—There is yet another instrument—"a small metallic disk, convex on both sides and hollow. In the centre of one side is an aperture, designed for the ingress of the expired breath to its cavity, while in its periphery there is another aperture for the egress of the breath from its cavity into a little straight tube, which conveys it from the cavity of the mouth. This instrument has reference to the labial sounds."

Professor Dunglison and other medical gentlemen are said to have pronounced very favorable opinions on the merits of this invention.

Violence ever defeats its own ends. Where you cannot drive, you can always persuade.—Few people will submit to coercion. A gentle word, a kind look, a good-natured smile, can work wonders and accomplish miracles. There is a secret pride in every human heart that revolts at tyranny. You may order and drive an individual, but you cannot make him respect you. In the domestic circle, especially, kind words and looks are most essential to connubial felicity. Children should never be spoken harshly to. If they commit a fault, they should be corrected in a mild but firm manner, and the impression it makes upon them is sure to prove salutary.

Many a true heart, that would have come back, like a dove to the ark, after its first transgression, has been frightened beyond recall by the angry look and menace—the taunt, the savage charity of an unforgiving spirit.

Youth's Corner.

ILLUSTRATED CHARADE.

I.

I graced Don Pedro's revelry,
All dressed in fire and feather,
When loveliness and chivalry
Were met in feast together;
He flung the glare who moved the lid
A purse of maravedis;
And this that gallant Spaniard did
For me and for the ladies.

He vowed a vow, that noble night,
Before he went to table,
To make his only sport the fight—
His only couch the stable—
Till he had dagged, as he was bid,
Five score of Turks to Cadiz;
And this that gallant Spaniard did
For me and for the ladies.

To ride through mountains where my first
A banquet would be reckoned—
Through deserts, where to quench their thirst
Men vainly turn my second—
To leave the gates of fair Madrid,
To dare the gates of Hades,
And this that gallant Spaniard did
For me and for the ladies.

MISCELLANEOUS ENIGMA.

I am composed of 37 letters.
My 2, 19, 7, 4, 5, 22, 10, 29, 34 is a silver coin.
My 32, 23, 4, 33, 16 is a dramatic composition.
My 37, 6, 20, 14, 15, 17, 9, 18 is eminent.
My 35, 12, 25, 1, 11, 36 is a city in Europe.
My 3, 27, 5, 24, 13, 8 is to rely.
My 31, 1, 28, 26 is recovering something lost.
My 21 as a numeral is 500.

My whole was the saying of an eminent American statesman. C. H.

Mathematical Problem.—A strong man, six feet in height, weighing 162 lbs., can bear 30 lbs. at arm's end, the weight of his arm being equivalent to 4 lbs. at arm's end. What must be the height and weight of that man who can bear the greatest possible weight at arm's end; also, what must be the height and weight of a man who can but just extend his arm horizontally?

MY THOUGHTS.

Why is it so? Who, who on earth can tell
Why those we love so tenderly, so well,
Our dear and only ones, so soon must go—
'Tis right, but who can tell why it is so?

Complain: I would not, would not lose my breath
By praying, "Spare my child from pain and death;"
He is not mine, such precious flowers as this
Must early bloom in Heaven; where all is bliss.

Emma.

ADAM AND THE FLOWER.

BY T. J. DUNKLEY.

When Adam named the beauteous flowers,
One lily gem escaped his view;
This meekest in all Eden's bowers,
Its simple robe of turquois hue;—
This little flower with modest shame,
Said "Lord, I grieve—sad is my lot;
I only—am without a name,"
He, smiling, said—"Forget-me-Not."

(Written for Moore's Rural New-Yorker.)

THE CONTRAST.

Upon a low couch, surrounded by weeping friends and relatives, lies a dying man. Bitter tears of sorrow are shed for him, the impenitent one. How he clings to earth; and as one by one the objects of his affections and worship fade away, 'twould seem as though his very heart strings were being torn asunder. Life becomes more and still more precious, as its waning hours grow less; and death (truly a "King of Terrors" to him who approaches the grave "without hope and without God in the world,") is pictured, in all its fearfulness, upon the chambers of his heated brain. Anguish sits solitary upon his countenance; for his soul is overcast with the fearful forebodings of the future. Who shall conceive the agony with which his heart is wrung, at thus leaving the world, where all his desires are concentrated, and upon which he has squandered all his noblest energies? He feels not underneath him "those everlasting arms"—and the thick darkness of those last hours is not illuminated by the presence of the "Dear Redeemer." One unavailing effort to speak—one faint, low whisper—one convulsive shudder—one heart-rending groan, and the "ungodly" man is in eternity!

But turn we to the dying moments of the "righteous man," and mark the contrast. How calm and peaceful are the closing hours of his weary pilgrimage. For him tears are shed, but they are tears of mingled sorrow and joy; of sorrow, because a beloved parent and friend is about to depart forever—and of joy, because a "*a good man dieth.*"

With meek submission he calmly awaits the final summons, that is to transport him from a world of care and trouble, to that blest place where "God will wipe all tears from off all faces." With him, "it was not all of life to live," and hence death has no terrors for him. A "still small voice" speaks to him the cheering promise, "He that believeth in me shall never die—and he that liveth and believeth in me, though he were dead, yet shall he live again." "Ministering spirits" watch by his bed-side, and when the last struggle is o'er conduct his enfranchised spirit to God who gave it. O let me die the death of the righteous, and let my last end be like his." In witnessing such a scene, we are reminded of those sweet words of the poet,

"How sweet the scene when Christians die,
When holy souls retire to rest:
How mildly beams the closing eye,
How gently heaves the expiring breast."

Ionia, Mich., Aug., 1854. S. A. E.

A Sunday Family Dinner.—A Sunday family dinner, where all its members, after being separated perhaps for a week, unite under the parental roof, appears to us one of the most delightful circles imaginable. When home loses its attraction, we may rely on it there is fault somewhere: parents have become unkind or children prodigal; and when aversion takes place, how great a source of enjoyment is cut off from the parent—how great a privilege is forfeited by the children! where can we find a welcome like home? It is at once the altar where we worship—a sanctuary where we flee. How many temptations are resisted, where the child thinks of home, or when the parent thinks of the child!—each to the other is a monitor—conscious that the other is watching his conduct and his welfare.

China.—The British Banner states on the authority of Dr. Tinman, that in China alone, there are 443 missionaries, 698 native teachers, and 20,000 church members; and on the authority of Rev. W. C. Milne, that there are 51 missionary openings on the coast of China, where are more than 70 missionaries, and 41 chapels, with an average attendance of 200 persons; and in connection with these are 28 native assistant teachers; and in three years the Chinese emigration to San Francisco has amounted to 100,000.

St. Hilary, bishop of Poitiers, is said to have been the first to compose hymns to be sung in churches. The Greek hymns, attributed to Homer, are the oldest known, addressed to the Pagan deities. The oldest sacred hymns, addressed to the true God, of which we have any knowledge, are the Psalms of David, and certain passages in the book of Job.

Miscellaneous.

LAMENTATIONS.

BY MELVA MAY.

THERE are who weep, as weeps an April sky,
Heeping a few bright tears, each with a ray
Of Heavens own sunshine in them, and the cloud,
Light-winged flies by, and leaves no shade to mark
Where passed the gloom; but lo! the sun undimmed,
Kisses the tear drops from the opening leaves,
And life starts fresh, and beauty is more fair
That it hath wept.

There are who weep in passion,
When passion bursts as tempests through the sky,
Dark thou the brow of gloom and flashing eye,
And angry words, that grate, as grate harsh sounds.
O! it is then that angels weep, if ere
An angels eye is dimmed, and fiends rejoice,
To see such tempests sweep the human breast;
And tears, Heaven's gift, which fall like gentle dew
Upon the gentle soul, blown hurled by breath
Of guilty passions fierce, drop cold and hard
Like hailstones on the shrinking ground.

And yet there are sad hearts
Who weep as though to cherish their own sadness,
And for fear the sunshine may peer through
Lock their own shadows close within their breasts.
Their tear drops fall, as falls the autumn rain
With measured pattering on the cottage roof.
Their gloom is like the gloom of storms, whose shroud
Of dripping mists, for long and weary hours
Shuts out the light of Heaven.

Unionville, Susquehannah, Co., Pa., 1854.

[Translated from the German for the Rural New-Yorker.]

THE THREE MAXIMS.

A rich gardener went one day into his garden with a cheerful and happy mind. As he was walking up and down the garden, he suddenly perceived a bird caught in a net. He immediately took possession of the tiny creature, and was not a little surprised to hear it talk as follows:

"Set me at liberty, good man! What advantage would arise to you, if you should shut me up in a cage? I have no gorgeous plumage to delight your eye, nor can I sing, as other birds do, to please your ear. Thus you cannot in any way amuse yourself with me. And as to my being useful for food, you see that I am by far too small to satiate you.—But if you will release me, I will teach you three wise rules that will be useful to you all your life."

The gardener scrutinized the little bird, and said: "If you do not sing, you certainly cannot delight me. But let me hear thy wisdom, and if it will instruct me, I will release you."

Thereupon the little bird said: "Do not be grieved at things that are past. Covet not that which you cannot obtain. Believe not what is impossible."

Then said the gardener: "You have, indeed, instructed me; your words are wise; there, take your liberty," and with these words he released the bird, and was reflecting on the three maxims, when he heard a twittering like laughter from the branches above his head. He looked up and saw the bird he had just released. "Ah, do you laugh so joyfully?" he said.

"Yes, at the liberty which I so easily gained, and I laugh still more at the folly of man who ventures to affirm that he surpasses all creatures in cunning. If you had been more prudent, you would have been a fortunate man now, and there would have been none richer than you."

"How were this possible?" asked the gardener, astonished.

"If you had kept me, instead of setting me at liberty; for I carry in my body a diamond as large as a hen's egg."

When the gardener heard this, he stood as if thunderstruck. Despair seized upon him, and after he had recovered a little, he began thus, with flattering words: "You fancy yourself happy, because you are at liberty; but behold! the summer is passing away, and winter, with its howling storms, will soon be here. The brooks will be frozen, and you will not find a drop of water to quench your thirst, nor a grain upon the fields to satisfy your hunger. The biting frost of winter will kill you. But if you will come in my house, I will furnish for you a warm apartment where every comfort will be provided for you. Come down, and you will be convinced that you will fare better under my roof than under the free sky."

Thus spoke the master of the garden. But the little bird laughed still louder, and aggravated the grief of the gardener. At length it said: "Behold, you gave me liberty for the sake of the wise maxims which I taught you, and you are so silly as not to take them to heart. You thought me, indeed, worthy to be released for those maxims, and yet you have in a few moments forgotten them. 'Do not be grieved at things that are past,' and you are grieved because you set me free. 'Do not covet what you cannot obtain,' and you desire that I should go voluntarily into prison, when my whole life consists of liberty without which I could not live. 'Do not believe what is impossible,' and you believe that I possess a diamond of the size of a hen's egg, when I myself am scarcely half as big as a hen's egg. O folly, thy name is man!" A. T.

THE LIFETIME OF MAN.

WHEN the world was created, and all creatures assembled to have their lifetime appointed, the ass first advanced and asked how long he would have to live?

"Thirty years," replied Nature; "will that be agreeable to thee?"

"Alas!" answered the ass, "it is a long while. Remember what a wearisome existence will be mine; from morning until night I shall have to bear heavy burdens, dragging corn sacks to the mill, that others may eat bread, while I shall have no encouragement, nor be refreshed by anything, but blows and kicks—give but a portion of that time I pray!"

Nature was moved with compassion, and presented but eighteen years. The ass went away comforted, and the dog came forward.

"How long dost thou require to live?" asked Nature. "Thirty years were too many for the ass, but wilt thou be contented with them?"

"Is it thy will that I should?" replied the dog.

"Think how much I shall have to run about; my feet will not last for so long a time, and when I shall have lost my voice for barking, and my teeth for biting, what else shall I be fit for but to lie in the corner and growl?" Nature thought he was right, and gave twelve years.

The ape then appeared.

"Thou wilt doubtless, willingly live the thirty years," said Nature; "thou wilt not have to labor as the ass and the dog. Life will be pleasant to thee."

"Ah no!" cried he, "so it may seem to others, but it will not be! Should puddings ever ruin down, I shall excite laughter by my grimaces, and then be rewarded with a sour apple. How often sorrow lies concealed behind a jest! I shall not be able to endure for thirty years."

Nature was gracious, and bo received but ten.

At last came man, healthy and strong, and asked the measure of his days.

"Will thirty years content thee?"

"How short a time!" exclaimed man.—"When I shall have built my house and kindled a fire on my own hearth—when the trees I shall have planted are about to bloom and bear fruit—when life shall seem to me most desirable, I shall die. O Nature grant me a longer period."

"Thou shalt have the eighteen years of the ass besides."

"That is not enough," replied man.

"Take likewise the twelve years of the dog."

"It is not yet sufficient," reiterated man; "give me more."

"I give thee, then, the ten years of the ape; in vain wilt thou claim more."

Man departed unsatisfied.

Thus man lives seventy years. The first thirty are his human years, and pass swiftly by. He is then healthy and happy. He labors cheerfully, and rejoices in his existence. The eighteen of the ass come next, burden upon burden is heaped upon him, he carries the corn that is to feed others; blows and kicks are the rewards of his faithful service. The twelve years of the dog follow, and he loses his teeth, and lies down in the corner and growls. When these are gone, the ape's ten years form the conclusion. Then man, weak and silly, becomes the sport of children.—*Translated from the German.*

WIVES AND CARPETS.

IN the selection of a carpet you should always prefer one with small figures, because the two webs of which the fabrics consist are always more close interwoven than in carpeting where large figures are wrought. There is a great deal of true philosophy in this that will apply to matters widely different from the selection of carpets. A man commits a sad mistake who selects a wife that cuts too large a figure on the green carpet of life—in other words, makes much display. The attractions fade out—the web of life becomes worn and weak, and all the gay figures that seemed so charming at first, disappear like Summer flowers in Autumn. Many a man has made flimsy linsey-woolsey of himself by striving to weave too large a figure, and finds himself worn out, used up, and like an old carpet, hanging on the fence before he has lived out half his alloted days of usefulness. Many a man wears out like a carpet that is never swept, by the dust of indolence. Like that same carpet, he needs shaking or whipping—he needs activity, something to think of—something to do. Look out then for the large figures, and there are those now stowed away in the garret of the world, awaiting their final consignment to the cellar, who, had they practised this bit of carpet philosophy, would today be firm and bright as a Brussels fresh from the loom, and everybody exclaiming, "It is wonderful how well they do!"

A SHORT SERMON ON MANLINESS.—Learn from the earliest days to inure your principles against the peril of ridicule; you can no more exercise your reason if you live in the constant dread of laughter, than you can enjoy your life if you are in constant dread of death. If you think it right to differ from the times, and to make a point of morals, do it, however antiquated, however pedantic, it may appear; do it not for insolence, but seriously—as a man who wore a soul of his own in his bosom, and did not wait till it was breathed into him by the breath of fashion.

TAKE the hand of the friendless. Smile on the sad and dejected. Sympathize with those in trouble. Strive everywhere to diffuse around you sunshine and joy. If you do this, you will be sure to be beloved.

A GENTLEMAN in conversation with Mr. John Wesley, once used the expression *Vox populi, vox Dei.* He at once replied, "No, it cannot be the voice of God; for it was *vox populi* that cried out, 'Crucify him, crucify him!'"

Ladies' Department.

CONDUCTED BY A——E.

THE FATHER'S RETURN.

BY E. LISTELL.

'Tis evening now, his work is done:
His hours of toil are o'er;
With weary limbs, but cheerful heart,
He seeks his cottage door.
His wife and children meet him there,
With faces beaming bright;
And he forgets his labor past,
As day forgets the night.

In humble garb, yet neat array,
The evening meal is spread;
Around the board the children sit,
Their father at the head,
And now from out the father's heart,
Ascends a prayer of love
To him, whose mercy showers down
Such blessings from above.

Trans-Atlantic Epistles,

TO COUSIN KATEY.

Communicated thro' Moore's Rural New-Yorker.

EPISTLE TENTH.

Unsuccessful attempts to quit Rome—Imaginary visit to the Bridge of St. Angelo—Adrian's Tomb—Bronze Angel—passage from the Vatican to the Castle of St. Angelo—Roman's Statues—The Tiber—Place of St. Peter—Colonnades—Facade—Plan of Michael Angelo—Obelisk—Fountains—Queen Christine's mistake—Appearance of the Place of St. Peter on Easter Sunday—Promises of amendment.

ROME, August, 1854.

DEAR KATEY:—When I closed my last letter, I fully intended it should be my farewell to Rome, and the present communication be devoted to rehearsing the delights of Naples, but I find my thoughts still cling to the imperial city. As I take my pen and seat myself in my quiet room, the image of Rome, solemn and majestic, rises before me, and other scenes which I would fain retrace, fade and disappear at the sight. My fancies, cousin KATEY, must e'en have their way, at least when I am writing to you, so come with me again to Rome, and let us see where the truants will lead us. Ah, it is upon the Bridge of St. Angelo that we are to take our position. Not a bad choice, KATEY, for the massive bridge with the marble figures which decorate its balustrades, and the imposing tomb of Adrian, now the Castle of St. Angelo, which rises upon the other side of the Tiber, are not the least interesting among the many monuments of Rome. Both date back to the time of ADRIAN, about 120 years after Christ. The tomb, as you see, is a round tower, something in the style of that of CECILIA METELLA, but much larger and stronger. It was first converted into a fortress by the Goths, and in this character has passed through many hands. CRESCENTINE, ARNAULT DE BRESCIA, RIENZI, those friends of Roman liberty, have here successively defended themselves in the tomb of an Emperor, and it is now garrisoned by French soldiers. The name of St. Angelo was given to it on account of the bronze figure of St. MICHAEL, placed by BENOIT XIVth on the summit of the edifice. You observe the angel is represented, sword in hand, trampling the dragon under foot. Apropos of this figure, an anecdote is related of a French officer who commanded this fortress during one of the Italian wars. When summoned by the Neapolitan troops to surrender, he answered,—"Not till the bronze angel sheathes his sword!"

A covered passage, more than half a mile in length, and supported by arcades, connects the Castle of St. Angelo with the Palace of the Vatican, and by this means the "Father of the Faithful" is enabled to withdraw to a place of safety when his children become turbulent and and unruly. Could ADRIAN's great shade revisit the earth, I fancy he would be not a little surprised to find the only trace of his power to be his tomb, and that despoiled of its name, transformed into a fortress for foreign troops, and occasionally serving as an asylum to the pontiff of a religion which he despised.

But you have gazed long enough at the Castle; let us advance upon the bridge and examine that. This, as I have already told you, was also built by ADRIAN, to enable him to visit his magnificent mausoleum, and to pass to the gardens of Domitian, much frequented by him, which were upon the further side of the Tiber. Several Popes have, at different epochs, embellished and improved it.—At the entrance we find the never-failing statues of PETER and PAUL, which meet one's eyes at every turn in Rome, and along the sides are distributed eight angels, bearing the instruments of the Passion. These are the work of BERNIN, and furnish a good illustration of the style of this sculptor. Observe the affected attitudes, the *graceful grief*, almost ludicrous, were it not associated with a subject too sacred for mirth. Not very suggestive, this, of the noble calmness and dignified simplicity which characterize the antique masterpieces. Glancing over the balustrades, we see the "Yellow Tiber," an insignificant stream, it must be confessed, compared with our noble Hudson or majestic Missouri. One is almost forced to believe that it has diminished in volume since the days when the old Latin poets celebrated its beauties, for it is now but a turbid rivulet, upon which a school-boy would not fear to venture himself. SHAKSPEARE, who represented CASSIUS as having rescued CÆSAR from its angry waves, would not have considered it a very remarkable exploit, could he have seen the famous river in its present condition.

We should here enter upon the avenue leading to St. Peters, had the magnificent plan of MICHAEL ANGELO been carried out, for he proposed to extend the columns which precede it thus far. But succeeding generations have curtailed the gigantic proportions of his design, and we must pass through a street of some length before we reach the noble structure which has been named the eighth wonder of the world. Here we are, at length, at the foot of the Place of St. Peter, and let us pause awhile and study the *tout ensemble* of the view. Before us stretches an oblong space nearly 2,000 feet long by 600 broad, the ground ascending with a gentle slope to the magnificent flight of marble steps which conducts to the portico of the church. Along the sides extend two semicircular colonnades, each composed of four rows of massive pillars, which, after reaching a certain distance from the church, turn at right angles, and are continued in straight lines until they meet the vestibule at either end. Upon these colonnades are placed no less than 176 statues of saints and popes, each ten feet in height, and, filling the space between their extremities rises the facade of St. Peters, surmounted by thirteen figures still more colossal in their proportions. This facade is certainly unworthy of the position it occupies. It is too broken—too confused—there is not the simple grandeur and unity about it which the ancients wrought into the very structure of their works, and a still more serious objection is that it injures the effect of the dome by hiding the entablature on which it rests, and thus diminishing its apparent height. MICHAEL ANGELO's intention was to precede the church by an open portico, similar to that of the Pantheon, and it seems much to be regretted that his idea was not followed in this, as well as in some other particulars.

But to return to the Place. Do you observe the obelisk which rises in the centre of the oval formed by the colonnades? It is eighty feet in height, although it scarcely seems elevated in comparison with the enormous structure before which it is placed,—was originally brought from Egypt to adorn the baths of CALIGULA, and his dedication of it to AUGUSTUS and TIBERIUS is still distinctly visible. It is the only one among the many obelisks at Rome, which has never been thrown down, but still remains in all its integrity as it issued from the hands of its Egyptian fabricators.

But I see your attention is entirely absorbed by the magnificent fountains which are placed on either side the obelisk, midway between it and the encircling colonnades. You may well admire them, for they are really most beautiful. The numerous jets of water, so light and airy that in a sunny day a thousand rainbows dance upon them, from a pyramid ten feet high, and the basin into which they fall, more than fifty feet in circumference, is hollowed from a single block of oriental granite. These fountains are kept constantly playing, and there is something very touching in this juxtaposition of the most graceful ornaments which nature furnishes and the proudest works of art. The eye, when weary of gazing upon the massive colonnades, upon the lofty facade, with the colossal statues which crown it, or upon the lone obelisk which raises its mysterious finger in the center of the place, turns for repose and recreation to the beautiful sparkling curves of the fountain, and the gentle murmur of the falling water lulls the soul into a sad but pleasant revery. Queen CHRISTINE, on her first visit to St. Peter's, very innocently imagined the fountains were made to play in her honor, and, after admiring them a short time, requested they might be stopped, that so much water might not be wasted to no purpose.

One of the most impressive scenes I ever witnessed, was this same Place of St. Peter on Easter Sunday, at the moment the Pope pronounced his benediction. Just imagine it KATEY, not almost deserted, as at present, but filled to overflowing with a dense mass of humanity, troops in brilliant military costume drawn up at the lower extremity, the roofs of these stately colonnades thronged with spectators, and the Pope, borne in his chair of state, advancing upon the balcony which you see above the principal entrance to St. Peter's, and bestowing a solemn blessing upon the gathered multitude. Then, too, in the evening of that day, it seemed like a fairy scene to behold the curves of the colonnades and every arch and line in the lofty facade glittering with light, first pale and silvery like the moonbeams,—then, as the stroke of nine pealed forth upon the night-air, changing, as if by magic, to a blaze of veritable flame.

Were you here in proper person, dear KATEY, I fancy you would hardly be willing to turn back without entering the church; but as you only see through my eyes, or rather *my pen*, you are as completely in my power as ever was any poor *subject* in that of a traveling magnetiser, and I shall not hesitate to use my authority; for, between you and me, I have quite a spice of tyranny in my composition. Besides, my conscience rather reproaches me for indulging in all those rhapsodies about temples, ruins and churches. It is decidedly stepping out of "woman's sphere," and who knows what disastrous effects it may have upon you? Should your mind become so occupied with the monuments of Rome as to fail in the composition of one of your husband's favorite dishes, I could never forgive myself for having been the cause of such a domestic catastrophe. I am really ashamed when I think of my last letters—not a word about the fashions, methods of cookery, or any of the subjects peculiarly appropriated to the fair sex, but filled with descriptions of tombs and what not, for all the world as if they were written to be published, instead of being addressed to the dear cousin KATEY who was the playmate of my romping childhood, and is the confidential friend of my riper years.

To tell the truth, my Italian trip and the excitement which accompanied it produced a kind of brain fever, from which I am just beginning to recover. By dint of hearing the names of great men constantly repeated, of wandering daily and hourly through places consecrated by genius, or illustrated by fame, I at length reached the conclusion that I, too, like the unfortunate Mrs. DOMBEY, must "*make an effort.*" But the enthusiasm is passing away; I find myself somewhat fatigued with my exertions, and am quite ready to subside into the simple gossiping Cousin MINNIE of yore,—in which very proper state of mind I bid you adieu. MINNIE.

MANNERS.

GOOD MANNERS add lustre to virtue. Their object is to oblige, and pay proper attention to others. In order, therefore, to inspire children with such disposition, we should endeavor early to infuse the spirit of that precept—"Honor all men;" and teach them that kindness and civility are due to all: that a haughty, positive, contemptuous manner is not only ill-bred, but unchristian: and especially to be avoided in our behavior to servants, or those in inferior stations in life. To these they should never be suffered to behave with haughtiness, nor even to speak with a commanding tone of voice; as it will have a direct tendency to cherish pride and self-importance.

It is also necessary to guard children against vulgar habits, as loud talking or laughing.—Whispering in company does not comport with good manners, and mimickry is the favorite amusement of low minds. Speaking when it interrupts reading or conversation, and the habit of contradicting others, are improper, and should be checked.

At meals, children of suitable age should be admitted to the table with the family, when convenient. This privilege will improve their manners and tend to prevent bashfulness and awkwardness.—*J. Mott.*

Variety.--Grave and Gay.

HAVE the courage to cut the most agreeable acquaintance you have, when you are convinced he lacks principle; a friend should bear with a friend's infirmities, but not with his vices.

Have the courage to show your respect for honesty, in whatever guise it appears, and your contempt for dishonesty and duplicity by whomsoever exhibited.

Have the courage to prefer comfort and propriety, to fashion in all things.

Have the courage to acknowledge your ignorance, rather than seek for knowledge under false pretences.

Have the courage in providing an entertainment for your friends, not to exceed your means.

Have the courage to obey your Maker at the risk of being ridiculed by man.

"GENTLEMEN never swear." So said Washington, who, we believe, never allowed profane swearing while in command of the army of the revolution.

SOMEBODY says a wife should be like roast lamb—tender and nicely dressed. Somebody else wickedly adds—"and without sauce."

A CERTAIN Secretary of State being asked why he did not promote merit, aptly replied, "Because merit did not promote me."

A PERSON who undertakes to raise himself by scandalizing others, might as well sit down in a wheel-barrow and wheel himself.

CONVERSATION should be pleasant without scurrility, witty without affectation, learned without pedantry, moral without falsehood."

CORRECTION does much, but encouragement does more. Encouragement after censure, is as the sun after a shower.

MEN of the noblest disposition think themselves happiest when others share their happiness with them.

GET justly, use soberly, distribute cheerfully, and live contentedly.

MANY are great because their associates are small.

PRESERVING the health by too strict a regimen, is a wearisome malady.

THE loquacity of fools is a lecture to the wise.

PROSPERITY is no just scale; adversity is the only true balance to weigh a friend.

MOORE'S RURAL NEW-YORKER

ROCHESTER, SEPTEMBER 9, 1854.

Ho! For Kansas!

A party of Kansas emigrants, three hundred strong, left Boston on Monday, the 29th ult., under the auspices of the Emigrant Aid Society; and on arriving at Albany, were joined by 25 from New York. An enthusiastic welcome was given them at Albany, where a large meeting convened in the City Hall, and afterwards adjourned to the Delavan House. The emigrants were forwarded on Tuesday morning with a hearty God speed, and on reaching this city they were presented, by Wm. C. Bloss, with a Bible and package of spelling books, as an offering emblematic of the chief objects of their mission. When the cars started nine cheers were given by the citizens assembled at the station, which were responded to by the pioneers.

The Platte (Missouri) *Argus* contains an account of a public meeting held in Weston, in that State, near the borders of Kansas, on the 20th ult., at which the following insane resolutions were adopted:

Resolved, 1st.—That this Association will, whenever called upon by any of the citizens of Kansas Territory, hold themselves in readiness to go there, to assist in removing any and all emigrants who go there under the auspices of the Northern Emigration Aid Societies.

2nd.—That we recommend to the citizens of other counties, and particularly those bordering on Kansas Territory, to adopt regulations similar to those of this Association, and to indicate their readiness to co-operate in the objects of the first resolution.

That these resolutions be published in the papers at Weston.

It is scarcely necessary to say that these braggadocios will never be called upon to put their courage to the proof, for the citizens of Kansas stand ready to welcome all new comers who bring warm hearts and strong hands; and that a vast majority of the people of Missouri favor emigration to the Territories. However, should any unlawful demonstrations be made against the emigrants, they are amply competent, and certainly will protect themselves.

A Taste of Editorial Life.—The Rev. E. T. Baird, of the St. Louis Presbyterian, says.—"He expects, Providence permitting, to continue at his post till the 1st of October, and thus finish out two years of the most oppressive labor he ever underwent, and the worst requited."

In leaving the Pulpit for the Press, Mr. B. undoubtedly mistook his vocation—most certainly if he anticipated more ease and dimes. He is not the first man or clergyman, by a good many, who "could a tale unfold" that would check the confidence and longings of those who imagine they possess the peculiar requisites for the editorial profession. It is one thing to criticise a newspaper, but quite another and different matter to conduct a public journal with credit and success. The first is easy, and well enough—but he who would undertake the latter, should first forswear all such luxuries as ease, the pleasures and comforts of domestic and social life, and the anticipations of wealth and distinction, usually entertained by aspirants. According to our notion, no man is fit for an editor, however great his learning or literary attainments, who has not health, tact, energy, enthusiasm, a liking for the business, and an earnest desire to promote the welfare of mankind. With these requisites, and a firm, honest purpose, there is some prospect of tolerable success—without them, nine out of ten men would pray Providence for a release before serving a twelvemonth.

Sunshine and Showers.—Our city and the immediate vicinity have been visited with alternate shower and sunshine, until the thirsty earth has become somewhat slaked, and vegetation is green once more. Friday of last week gave us a refreshing shower, and Saturday night added copiously to what had preceded. Alternating with these rains, and succeeding them, have been intensely warm and sunny days; which, although they may have added an element to the pre-existing causes of sickness, have certainly induced nature to smile again. Some miles out of the city and especially towards the south, we are informed, the drouth has scarcely been alleviated by rain. A friend from Honeoye Falls, who came in on Monday, states that while the water was standing in pools beside the roads in our vicinity, their own were as arid as the desert of Sahara.

Freaks of Lightning.—The *Democrat* learns that a house was struck by lightning in Palmyra, on the 30th ult. No damage was done, beyond stunning its inmates for a moment, and scorching a few objects in its course. The same flash knocked down one of the horses of the Canandaigua stage, when it was about a mile from Palmyra. It was supposed the horse was dead; but after lying motionless for a moment, he picked himself up and went along as though nothing had happened.

Fall Elections.—The following is a list of the States yet to vote this fall, and the time of holding their elections:

Maine, September 11; Pennsylvania, Ohio and Indiana, October 10; New York, New Jersey, Illinois, Michigan and Wisconsin, November 7; Massachusetts, November 13th. California and Vermont hold their elections on Thursday of this week.

Sunday Labor.

The following circular, issued from the office of the Michigan Central Railroad to its agents, is worthy of imitation elsewhere, and seems to indicate that, contrary to generally-received opinion, one corporation at least has a soul:

Michigan Central Railroad Office,
Detroit, August 14, 1854.

Believing that the example set by this road has some influence on the public sentiment of the State, though more particularly on that of the country through which it passes, and also that the welfare of its employers would be greatly promoted by abstaining from Sunday labor in all the departments of the road, it is desired that you dispense with labor of all kinds at your station on that day.

To enable you to conform to this arrangement, it is decided to dispense with the through freight trains on Sunday, and no train will run on that day excepting the evening passenger trains from Detroit to Chicago, which will have to be attended to as usual.

Through freight will leave Detroit on Saturdays and remain at Marshall 24 hours; it will leave Chicago on Saturdays and lie over at Michigan City. Trains leave Marshall on Saturday afternoon for Detroit, but none on Mondays.

Yours, respectfully,
R. N. Rice, Superintendent.

Riots and Bloodshed.

Tuesday morning's telegraph reports several cases of riot, in which, to use the stereotyped phrase of political demagogues, "our adopted fellow citizens" seem to have been active participants. We give them as reported, the particulars not having been received.

Boston, Sept. 4.—A terrible riot occurred among the Irish at Spa street last evening. The police were fallen upon and assailed by the rioters, but the latter succeeded in making 50 arrests.

A riot also occurred among the Irish at Somerville, Mass., in which 200, were engaged. It was finally quieted, and without loss of life.

A native-American disturbance is also reported to have occurred at Lebanon, New Hampshire.

New York, Sept. 4.—Last evening, just as a meeting was dispersing from the Battery, a party of Americans were quietly marching up Broadway, a crowd of Irishmen fell upon them and stabbed a young man severely in the back.

The above will answer for one "day's report of crime and outrage with which earth is filled!"

Calamity at Louisville.—A terrific tornado passed over Louisville on Sunday, the 28th of August, unroofing buildings, and spreading devastation and terror on all sides. During the height of the gale, and in the midst of divine service, the Fourth Presbyterian Church was blown down, and shocking to relate, twenty-five of the congregation were killed instantly, and a large number wounded. Fully one hundred buildings were unroofed and otherwise injured. The storm passed over that part of the city lying between Fifth and Twenty-first Sts., and in addition to the lamentable loss of human life involved in the calamity, it is estimated that a hundred thousand dollars worth of property was destroyed.

Right Premises but Wrong Conclusions.—The Jones County Agricultural Society of Iowa, among other sapient resolutions, has resolved that the inability of a wife to make bread, is a sufficient ground for divorce. If the Society had resolved that inability to make bread is a good and sufficient bar against riveting the chain matrimonial in the first instance, they would not have been altogether wrong; but the man who marries, takes his wife for better or worse, and if he gets the worse it is only a consequence of his own folly. A word also might be added in behalf of the women, to wit, they are generally quite as often cheated as the men.

Sad Accident.—Two ladies were killed by the cars on the New York Central Railroad, at Canastota, nine miles east of Syracuse, on the 29th ult. They were passengers on the mail train going west, which was stopping a few minutes at the station, and got out of the cars upon the wrong side, and were crossing the other track just as the express train from the west came by at full speed. One of the unfortunate ladies was caught by the cow-catcher and thrown into the air, and the other was drawn under the wheels. Both were instantly killed. Their names are Mrs. Rachel Keller and Mrs. Sally Dickinson, mother and daughter, and both have husbands living.

Senator Douglas.—A telegraphic despatch from Chicago, dated Sept. 2d, states that Senator Douglas attempted to speak in that city the evening previous, in vindication of his course on the Nebraska and the River and Harbor bills, but was silenced by the people. A great and sudden change seems to have come over the spirit of the Illinoisans' dreams, they having elected a Senator only last year to serve until 1859, and then refused him a hearing in his own defence so soon after his election. Mr. Douglas can well repeat the exclamation of an ancient Greek, "Strike, but hear me!"

Great Fire at Milwaukee.—The most destructive fire ever experienced in Milwaukee, occurred on the 25th of Aug. The entire loss is put down at half a million of dollars. Among the property destroyed is the United States and Tremont Hotels; several Insurance offices, and the building occupied by the proprietors of the Daily Wisconsin. Altogether, several entire blocks were laid in ruins. The wind was blowing strong from the southeast, and the dryness of the season furnished every facility for an extensive conflagration.

Sheep Killed by Lightning.

A correspondent writing from Lima, Livingston county, says:

During a thunder shower which passed over part of the town on the 30th ult., a number of sheep belonging to Justus Lyon, had taken shelter under a tree to avoid the heat, and while thus huddled together, a stroke of lightning killed twenty-three of the number. Mr. Lyon had left the field in which he was plowing, and where the accident happened, only a few minutes before, and by that means, perhaps, was saved from a similar destruction. What seems but a little strange, is the fact that the tree under which the sheep were collected was entirely uninjured; two other trees, however, standing some six or eight rods distant, were shattered to pieces. But little rain fell at the time of the electrical phenomenon.

John Brown's Tract.—People frequently hear allusions to, or speak in going to "John Brown's Tract," and ask about its history. Those who have been there in June, know that it swarms with punkins, musquitoes and black flies, as well as trout and deer. A writer in Putnam gives this condensed synopsis of its history:—"More than fifty years ago, John Brown, Governor of Rhode Island, bought 200,000 acres of wild land in Herkimer and Hamilton counties, over the waters of Moose river, for the purpose of opening and carrying on the iron business.—A colony was sent on, 3,000 acres of land cleared up, veins of iron ore found and opened, and a forge built. But the mines were not so productive as was expected, the soil cold, and much money was expended without a return or a prospect of one. The overseer sent out by Governor Brown killed himself, the others became discouraged, and the place was abandoned. At present one family by the name of Arnold live there, occupying some 2,000 acres, run over with foot shrubs and wild grasses."—*Buffalo Courier.*

Important Purchase and Discovery.—We learn from the Binghamton Daily Republican, that G. L. Colegrove, of the town of Union, in that county, recently purchased in Troupsburg, Steuben county, New York, 2001 acres of land, at $10 an acre, and has since fortunately discovered on his new possessions coal and iron mines, and plaster richer than that of Cayuga. He receives from the State $3,000 bounty, as the first discoverer of coal in New York. He has been offered and refused $30,000 for his property. The mines seem to be excellent and inexhaustible, but the extent of his good fortune and that of the State remains to be ascertained. Mr. Colegrove's mines are only about 6½ miles from the N. Y. & Erie Railroad.—*Utica Gazette.*

Mammon Tremendant.—The *New York Times*, speaking of the conversion of down town churches to business purposes, says:

In 1821, a large House of worship was erected in Grand street, corner of Mercer, by the Associate Presbyterians; within a few weeks the inside has been cleared out and filled up with stalls, making of it a fine livery-stable. Several old churches on Bleecker, Duane, and other down town streets are shut up. Two buildings in Nassau street, which were formerly Baptist and Dutch Reformed Churches, are now used, one as an eating house, the other as a sarsaparilla depot. The burning of the Broome street church adds another to these ravages of time.

Narrow Escape.—In Stoddard, New Hampshire, several days since, two or three hundred acres belonging to the Stoddard Glass Company were burned over by fire. While the fire was burning, Mr. Curtis Hunt attempted to drive a team laden with goods to the amount of $700, through a road which passed by the woods.—The flames were then some ten rods distant; but a strong gust of wind drove them so rapidly that he was forced to quit the wagon and fly for his life, saving only one of his three horses. The other horses, with the wagon and goods, were destroyed. Mr. Hunt himself hardly escaped, his shirt being burned from his back, and his face and hands blistered. The horse which he saved was badly burned.

Shark.—A countryman was passing along one of the streets of Baltimore with his wagon a few days since, when one of his wheels came off, and he discovered that a linch-pin was gone. After searching for it some time, he offered the boys who congregated a shilling to find it.—They then joined in the search, and in a few minutes one of them brought him what he supposed to be the pin. Having adjusted the wheel, he paid the shilling and started off, but had not gone more than half a block before a wheel on the other side came off, when he discovered that the young rascal had stolen the pin from one of the other wheels, to obtain the reward.

Treasure found at Harlem.—Some two or three thousand silver dollars have just been found at Harlem, New York, the history of which is as follows:—Samuel Benson, the owner of the estate during the Revolution, removed up to Fishkill, and before leaving, buried this money on his farm, and planted a tree over it to mark the spot. Since the tree died, and was removed by his servants, and as the ground had been plowed and harrowed over, the treasure was lost. The other day, five workmen, two Germans and three Irishmen, found the money, and filling their pockets with it, all ran off.

Hungarian Patriots.—Kossuth and Pulszky are both now residing in London with their families. Kossuth's two sons, aged 10 and 13, are attending school. The family live in a very plain and economical style. Pulszky and his wife, by their joint writings, it is stated in a London letter to the New York Times, have made this year about £100. They have four children. Mad. Pulszky's father is a wealthy banker of Vienna, but is forbidden to give his only daughter room. Pulszky's splendid estate in Hungary, was seized by the Austrians at the time of his arrest, and his beautiful castle subsequently converted into a hospital.

Fatal Casualty.—On Thursday, the 24th inst., Mr. Hubbard, a highly respectable farmer residing in the town of Le Roy, two or three miles west of Munford, was instantly killed by a back stroke of a large lever. He was engaged on his farm extracting stumps, when by the sudden breaking of a log chain, the lever swung back with great violence, striking the unfortunate man on the breast. He was about fifty years old, and has left a family.

News Paragraphs.

☞ In the discussion of the Navy Appropriation bill in the Senate, the fact was disclosed that the expenses of chartering and supplying fuel, &c., for steamers to suppress filibustering in Lower California amounted to $113,638. The rate paid for the boat was $1,500 a day, and the coal cost $13 per ton!

The Senate rejected an amendment to pay the amount, being more than the whole value of the steamer.

☞ William Piper, who resides two miles east of Connersville, Indiana, has had this year a twenty acre field of wheat, which produced him five hundred bushels of prime wheat—twenty-five bushels to the acre. The wheat weighed full sixty-four pounds to the bushel. His wheat was sown broadcast—part of it Mediterranean and part Genesee.

☞ Col. D. S. Miles, U. S. A., now on his way to New Mexico, with a detachment of troops, writes from Fort Atkinson, Arkansas, that he had been four days among the Camanches and Kickapoos, and adds:—"Some of the bucks offered me as high as ten horses for my daughter, and I had an offer of a swap of a squaw for Mrs. M. I declined both indignantly offers."

☞ The Central Railroad Co. have made the purchase of one of the fire wires of the Morse Telegraph between Albany and Buffalo, for their own use. Offices are to be erected at stations along the line of the road where there are none at present. Workmen have been engaged for the past month between Utica and Buffalo, in repairing and erecting offices, &c.

☞ The French Minister of War has notified the officers in the navy that the Council of Admiralty has decided unanimously on the suppression of swivel guns, the aim of which is very uncertain, but retains the blunderbuss as calculated to render useful services in warfare, particularly in close combat.

☞ A few days since, as a gentleman residing at Antwerp was sitting in his study reading a letter, the contents of which seemed to exasperate him very much, one of the children entered the room. The father, in a fit of delirium, startled from his chair, and seizing a weapon from the table, killed the child on the spot.

☞ The Municipal Council of Paris has just renewed for thirty-two years its contract with the six companies now engaged in lighting the city with gas. Their tariff has been considerably reduced, and in the course of a few weeks they are to be united into one great company.

☞ A young woman in Kortright, Delaware county, in passing in the night from her father's house to where she was at service, accidentally walked over a precipice on the 7th. She was not missed for a week, when her mangled body was found.

☞ A letter from Rome, in the Messagere di Modena, states that at the present moment there are seven cardinals' hats at the disposal of the Pope, and that no fifth is likely to be soon recalled by the death, which is daily expected, of the Archbishop of Braga, (Portugal,) Cardinal of Figueredo.

☞ Mrs. Barbara Buck, aged 78 years, and the oldest pioneer of the Holland Purchase, died at Tonawanda on the 29th ult. The Pilot says she came from the neighborhood of Fort Plain, in the Mohawk Valley, in 1791, and has ever since resided near that village.

☞ From the official returns, it appears that the production of beet-root sugar in France, during the year ending on the 1st of June, has been 75,000,000 kilogrammes, being an increase of one million over that of the preceding year.

☞ The Bois de Boulogne, which was considerably reduced in extent by the building of the fortifications of Paris in 1841, is about to be further reduced by the sale of about 40,000 square yards, on the route from St. Cloud to the Avenue d'Auteuil.

☞ On the Concord (N. H.) railroad, men with a dear follow after each train to see if anything has caught fire from sparks emitted. The President thinking it much cheaper than to have cars, fence and lumber burned the whole length of the road.

☞ The people of Portland, Maine, are talking about the introduction of water into their city from Lake Sebago, which is about ten miles distant, and about 250 feet above the sea level of the harbor. The lake covers a surface of 150 square miles.

☞ The Quebec Mercury says that it is generally understood that Quebec will be made the military headquarters on the arrival of Gen. Rowan's successor. Half the artillery in Canada will soon embark for England, and will not be replaced. Drafts will shortly arrive at Quebec.

☞ The water in the North river, at Troy, is now lower than before known within the remembrance of "the oldest inhabitant." By actual measurement, it is eighteen feet and eleven inches lower than the highest point it attained during the spring freshet.

☞ A large peat meadow near the centre of Lexington, some 12 miles from Boston, has been on fire for the past few days. On Tuesday evening it presented a very brilliant appearance, and attracted a large number of spectators, to whom the sight was quite a novelty.

☞ A freight car belonging to the Ogdensburg Railroad caught fire on the Concord Railroad last week Wednesday, and was entirely destroyed, together with the contents, consisting of silks and rich goods. Loss estimated at $1,000.

☞ Recent rains in Pennsylvania have removed the embargo which the drought had placed upon several of the Canals in that State. The seven hundred boats detained at Columbia were enabled to move off on Saturday last, by the rise in the Susquehannah.

☞ The mother of the world-renowned Sam Patch died in Pawtucket, R. I., a few days since, aged 80 years. She is represented to have been a christian woman both in word and deed, and is much deeply mourned the untimely fate of her son.

☞ Rev. Wm. W. Hall, of Edgartown, has received and accepted an appointment from the Baptist Home Missionary Society, to labor in Kansas Territory for the coming year, and entered upon his duties on the first of September.

☞ The Cleveland Plaindealer states that the steamer Ocean is carrying passengers from that place to Detroit for nothing. If a stateroom is wanted, 50 cents is the charge; if a berth, 25 cents.

☞ A daughter stolen from her mother ten years ago, was found by her mother in Brooklyn a few days since. They mutually recognized each other. The meeting was intensely affecting.

News Brevities.

— Harvest operations are becoming general throughout Great Britain.

— Saranac Lake, N. Y., has not been so low for many years as at the present time.

— Advices from Alabama, Tennessee and Georgia, speak favorably of the corn crop.

— The New Haven Journal states that the water in the Connecticut river is so low that navigation is impeded.

— Aug. 30th was the warmest day of the season at Milwaukee. The thermometer stood at 105 degrees.

— In a recent battle between the Chippewas and Sioux, in Minnesota, twenty-eight of the former were killed.

— Rev. Leonard Woods, of the Andover Theological Seminary, died recently, at the age of 84 years.

— The Synod of Mississippi have resolved to raise $100,000 for the establishment of a Synodical College.

— There are sixteen ships now building at East Boston, of which Donald McKay, the famous ship builder, has seven.

— Efforts are being made to secure the construction of a bridge over the Ohio river, to connect Covington with Cincinnati.

— It is confidently asserted that all the members of Congress from Maine, to be chosen this fall, will be anti-Nebraska men.

— A conference of the M. E. Church commenced its session in the village of Warsaw, Wyoming County, on Wednesday, Sept. 6th.

— It is stated that since the pay of the non-commissioned officers and privates has been raised, there is quite a rush to enlist.

— Smith D'Hrier has written to his family from Van Diemen's land, that he was preparing to leave the Colony and return to Europe.

— The Rev. Dr. Lord, of Guilford, is to deliver the address before the Erie Co. Agricultural Society, at Aurora, on the 20th of September.

— The Pennsylvanians are on the march to Kansas. A party of 200 Germans will leave Crawford Co. for the new Territory on the 26th.

— The kidnappers of Solomon Northup, M. Ales, Merrill and Joseph Russell, have been arrested, but will not be tried till October or December.

— The Cuban celebration at New York, Sept. 2d, in commemoration of the martyrdom of Lopez and his associates, was an enthusiastic affair.

— A Cincinnati despatch says the U. S. Express Company was robbed of between $30,000 and $40,000 at the Hamilton Railroad depot on Thursday night of last week.

— The demolition of the Pont d'Austerlitz, in Paris, which is to be rebuilt, is going on. The bridge was commenced in 1802, and finished in 1806.

— The consumption of cotton in England is 5,000 bales per week, in excess of the average weekly consumption of the last four months of 1853.

— The Troy Daily Whig understands that there is not water enough in the Champlain canal to float boats, and this has been the case for more than a week.

— Extensive as are the dock accommodations in the port of Liverpool, arrangements have been perfected so as to give an increased dockage of about 101 acres.

— The gas in the city of Troy failed owing to the total destruction of meters and services connected with the buildings that were burnt during the progress of the great fire.

— The Wyoming County Agricultural Fair is to be held on Wednesday and Thursday, Sept. 27th and 28th, instead of October 4th and 5th, as heretofore advertised.

— The Erie Railroad Company paid on the 1st of September the interest then due on the 2d mortgage bonds, and those of 1853, amounting to $374,000.

— The House Printing Telegraph Co. are building a new line from Toledo to Chicago. It is understood that it is built under the direction of the Michigan S. R. R. Co.

— Flournoy, a relative of Mart. Ward, the murderer, violently attacked an editor in Paris, Ky., for remarks upon Ward. Murder was intended, but prevented.

— The town of Killingly, Ct., has appropriated three cents, payable on the 4th of July, 1875, for the salary of its liquor agents, and the town of Litchfield, six and a half cents.

— The notorious John S. Orr, alias the Angel Gabriel, was recently convicted at Charlestown, Mass., for disturbing the public peace, and fined $50 and costs of the court.

— The Millerite delusion, it is said, is again spreading in many portions of the country, and camp meetings of the believers in this faith are frequently noticed in the papers.

— A young grampus whale, about 15 feet in length, and weighing 120 lbs., was captured last week by Mr. Samuel Spooner, of New Bedford, between Gayhunk and Gay Head.

— A man named Ned Wahlde was killed on Saturday week at Spencerport. He was digging at the bottom of a well, when the earth caved in and covered him.

— The Baptist College for Wisconsin has been located at Beaver Dam. The citizens of the village having pledged $15,000 in cash subscriptions, and furnished a site worth $1,000.

— The London Times has an article strongly censuring the administration of Gen. Pierce, for its conduct in the Greytown affair, and for his message to Congress on the Spanish question.

— Laura Bridgeman is spending the summer with Dr. Morton, at Halifax, Mass., whose wife was among her earliest teachers. Laura is now about twenty-five years of age.

— A New York merchant, who returned recently from Cleveland, Ohio, states that the accounts given regarding the drouth, and its effects on Indian corn, have been greatly exaggerated.

— The Cincinnati Commercial says men are making $10 a day in gathering boulders from the Ohio river. The bar was formerly covered with sand, but was uncovered by the floods of last winter.

— A lady in New Haven, after the first case or two of cholera occurred, took calomel, laudanum, and cholera mixture, and finally wound up with a Dover's powder, all between the tea hour and bed-time!

— The Toledo Blade of the 29th ult., says: Large quantities of wheat are now coming in by the Railroad. Upwards of 30 cars loaded with wheat and corn, have arrived within the last twenty-four hours.

Literary Notices.

RESTIGH AND LIGHT: or, The Parsonage of Beech Glen. A Romance by ELIZABETH OAKES SMITH. New York: J. C. DERBY.

LIKE all of DERBY'S publications, this is tastefully got up, and is illustrated by several fine wood engravings printed on tinted paper. The story is rather unique and improbable, and the sentiments somewhat "spiritualistic," but there are many striking truths boldly presented in the course of this interesting volume. Sold at DEWEY'S.

THE WOOL GROWER AND STOCK REGISTER, for September, was issued promptly, on the 1st inst. To show what "the enlargement" does for its readers, in making room for an ampler variety of interesting and valuable articles, we copy the table of Contents. The volume commenced in July, and the price is still 50 cents per annum.

Foreign Intelligence.

Arrival of the Europa.

THE Royal Mail Steamship Europa, from Liverpool on the afternoon of Saturday, the 19th, arrived at Halifax Aug. 30.

THE BALTIC.—The Paris Moniteur announces that the French expeditional force was landed on the island north of the fortress of Bomarsund. The disembarkation was covered by war steamers, and was effected without a man getting his feet wet. They then erected their batteries while the Russians destroyed theirs, and fell back on the main fortress. By the 12th the fortress was completely invested. On the 4th, the Russians made a sortie, but were driven back. On the 8th the French carried the redoubt of 8 guns without losing a man.

The Fortress, it is stated, surrendered on the 15th. 2,000 Russians were taken prisoners. The aspect of affairs on the Danube is quite unchanged.

The London Daily News contains a remarkable special correspondence, stating that the British troops in camp at Mehomastir, near Deuna, are decimated by malignant cholera, totally destitute of medicine, furnishing for lack of food, and are disconcerted and discouraged, and the Times correspondent partly confirms the statement.

Prince Paskiewitch returned to Warsaw on the 13th, and will again take command of the Russian army.

THE BLACK SEA.—A Russian dispatch from Odessa, August 6th, says the allied fleets tried to land at Ballakarva, Crimea.

At Sebastopol it was reported that Admiral Lyons had bombarded Anapa 24 hours. Result unknown.

The Russian fleet came out of Sebastopol and was seen off Odessa, and returned safely.

ASIA.—On the 4th of August an offensive and defensive alliance was concluded between the Porte and Schamyl. The terms had not transpired, but it is understood that Schamyl insisted that the Porte should recognize the independence of Circassia.

Mercantile letters from Bagdad say that contracts have been made to furnish supplies and transports for a Hindoo British force, which will arrive via the Persian Gulf, and be landed at Baza, on the river Tigris.

The Emperor of Morocco has announced his intention to present the Sultan with 30,000,000 piastres and 12,000 troops, annually, while the war lasts.

Arrival of the Steamship Pacific.

THE Pacific, Capt. [illegible], arrived at New York Sept. 3d. She left Liverpool on the 23d.

The surrender of Bomarsund is confirmed.—Letters from that place give the details of the capture. The effect of the guns upon its walls was terrific, and large blocks of granite, which appeared impregnable, fell out in masses. The English loss was only one. The French loss was also trifling. The enemy had six killed and seven wounded. The two thousand prisoners are to be conveyed to the Downs, to await further orders.

The bombardment lasted from 5 o'clock P. M., the 15th, until 2 P. M. the following day.—It is reported that the Russians blew up a fort containing some State prisoners.

The cholera was making awful havoc among the allied troops. The latest advices put down the French loss by the disease at 7,000. The English at 600.

The Russians have suffered terribly in their retreat towards the Pruth. They took with them 24,000 sick.

Napoleon has addressed a proclamation to the army of the East. Its tendency is to restore confidence after the awful ravages of the cholera.

LIVERPOOL MARKETS.—Flour in request at 6d @9d declined. Wheat declined 3d@4d.

Corn active for speculative purposes, at 6d lower.

Deaths.

On the 19th ult., at Parma, Jackson Co., Mich., suddenly, of congestion of the brain, WILLIE HOOD, second son of Harry H. and Lucy A. Bramhall, (formerly of Lysander, Onondaga Co., N. Y.,) aged 8 months.

At Niagara Falls, Aug. 7th, of cholera, Mrs. SARAH NICHOLS, wife of Rev. David Nichols, of the Genesee Conference.

Commercial.

BUSINESS AND FINANCE.

No gold has been received from California during the week, but a million and a half has gone abroad; in fact, for months past the shipments have trodden well on the heels of the receipts of precious metals, and the enormous importations of foreign goods give an earnest of no abatement in this edge of the precious metals.

The Secretary of the Treasury has issued proposals for a still further redemption of U. S. stock in advance of its falling due, giving a premium on stock redeemable in 1850 of 3 per cent; in 1852, of 11 per cent.; in 1857, of 16 per cent. The time limited for redemption on these terms, is to the 20th day of November next.

Twelve hundred and 61 y thousand dollars of the 6 per cent. State Land Enlargement Loan has been awarded during the week, to bidders at a premium ranging from 12 66-100, to 16¾ per cent; terms, it must be conceded, very advantageous to the State.

Railroad stocks continue depressed; Erie has continued to go down with a rush, and on Monday sold at 20 a point of depression never before reached. It rallied again, however, and at the second board went up to 31. The end is not yet.

Market Intelligence, &c.

RURAL NEW-YORKER OFFICE, Rochester, Sept. 6, 1854.

THE markets have declined in several important and leading articles during the week. Foreign news and the recent rains in various quarters, have partially allayed the fears of ex rems scarcely, and as a consequences prices go down correspondingly.

Wheat rules to day at 82, a decline of a shilling from the extreme upper limit of the season. Flour is two shillings lower on the barrel, selling to the trade at $9,75@$10.—Corn 75 to 80 cents, and Oats unchanged. Our brewers are paying to-day 75 to 80 cents for Genesee Barley.

Hay has declined a dollar on the ton, and Potatoes 12½ cents on the bushel. Peaches are in profusely, and brin, at wholesale three to five shillings the basket; many of them for shipment to New York, Buffalo, and Canada.

Rochester Wholesale Prices.

NEW YORK MARKET—Sept. 4.

FLOUR—Receipts slightly on the increase, and only moderate inquiry for local trade. Market easier, particularly for western brands. Sales at $8,62@8,75 com State $8,50@8,10 com to good Ohio; $10,37@11 for fancy and extra do.; $10@11,25 extra Genesee; $10@10 50 fancy and extra Mich. Nothing of moment doing in Canadian. Rye flour very scarce, and is nly held. Sales at $8,75 super, $9,75 fine. Corn meal fluctuating moderate demand; sales of western at $4 12; Jersey held at $4,31.

GRAIN—Wheat heavy, and holders more disposed to realize. Sales prime white Genesee at $2,12½@2 15; go d white Southern at $1,17 and red Southern at $1,85. Rye, market nominal at $1,23@1,25. Receipts of corn heavy, and 2@3c lower, with a good demand at the decline for the east and distilling; and also some export inquiry. Sales at 78@81½ c unsound; 82@83c sound West mixed. South white and yellow scarce and nominal. Oats more plenty and lower. Sales at 50@52c State and West. The bulk of supply consists of heated and unsound parcels.

PROVISIONS—Pork a shade firmer. Sales of bbl at 11¾@11¾c. Butter in fair request; sales at 14@17c for Ohio, 18@22c for State. Cheese dull at 9@10½c.

ALBANY MARKET—Sept. 4.

FLOUR—The demand for flour was quite moderate this morning, and the sales effected were at a decline of 12½c per barrel. Sales at $9 37@9 87 for interior to good State and Western; $9,87@10,37 for good to favorite State and extra Mich.; $10,50@11 for extra Ohio and Genesee. Corn meal is unchanged in value, but is in moderate request at $4,06@4,75.

GRAIN—With moderate milling demand and a fair supply the market for wheat opened dull, and to effect sales lower prices were accepted. Sales of prime white Genesee at $2,18. Corn is lower and in mod rate request at the decline. Sales of Western mixed at 80c afloat and 81c for car lots delivered at the East Albany depot. Barley; sales good hour rowed at 93c, do. two rowed at 97c. Oats are in fair request at rather better prices; sales at 52c for good Chicago and 56c for State, measure.

BUFFALO MARKET—Sept. 4.

FLOUR—There was rather more inquiry for flour on Saturday than for several days previous, but prices show no further decline. Sales at $9 for choice Ill., Ohio and Mich. Some small lots of fancy Mich. at a shade higher prices. Receipts are in excess at the demand.

GRAIN—Wheat is in fair demand; sales of two boat loads Wis. on p. t., and white Mich. at $1,81. Corn opened firm with a good speculative demand, and sales were made at 68c Chicago yellow, a very superior sample, at 70c. In the afternoon there was no demand and sellers were offering at 66c on the spot without finding buyers.

NEW YORK CATTLE MARKET Aug 28

At Washington Drove Yard—Offered to-day 2,486 Beef Cattle; during the week 2,583. A steady business has been done during the week, at prices showing no material variation from those of the week previous. The anticipated short crop of Corn favors an impression among the drovers that cattle will be scarce next winter; but as it is too early yet for rational speculations on this head, the purpose probably is to strengthen present prices. Some few lots extra, sold as high as $10 per 100 lbs. We realize a quotation: Beef Cattle $8@9 00; Cows and Calves at $50@60; Veal Calves (live weight) 4@6c; Sheep (no lost) $3@6. Lambs $2,50@6,50; Swine (corn fed) $4,00@5.

At Browning's—Prices at this market for Beeves have taken a very wide range. Sales at $6 50@9,25 per 100 lbs for Beeves; Cows and Calves lower, and sold at from $26 to 240. Veals sold at from 4½@5½c per lb. (live weight.) Sheep range at from $1,50 to $5,50.

At Chamberlain's—Market for all descriptions of Cattle has been quite active to-day, and prices well supported.—Prices of Beef ranged at from $7 50 to $10,00 per 100 lbs. Cows and Calves at from $25 to $40. Veal Calves 4½ to 7c per lb. Sheep $3 to $7. Lambs $2,50@5,00.

At O'Brien's—Sales of Beeves at $6,00@9 per 100 lbs. Cows and Calves at from $25 to $40; Veal 4½@5½c. ₱ lb.

ALBANY CATTLE MARKET.—Sept. 4

AT W. Woodford's Bull's Head, Washington street.—Beef Cattle—370 at market. Prices—Extra $7,50; 1st quality $7; 2d do, $6,50; 3d, $5 50@6.

Cows and Calves—Few in market. Prices range from 25, $30@40.

Sheep and Lambs—1,900 in market. Prices range from $3 to $3 50 for Sheep, $2,00@3,25 for Lambs.

Swine—Not any in market.

CAMBRIDGE CATTLE MARKET.—Aug. 30.

AT market 2,442 Cattle—about 1,900 Beeves, and 642 Stores.

Prices—Market Beef—Extra $8@8,50 per cwt.; 1st quality, $7,00@7,50; 2d do, $7@7,50; 3d, do, $6,00; ordinary, $4 50@5,00. Hides, ₱ cwt. $6@6,25; Tallow 5@8,2; Pelts 75@00. Calf Skins, 14@15c ₱ lb. Veal Calves $5,00 to $8.

STORES—Working Oxen—$65 to $130@168.

Cows and Calves—$21 to $45@69. Yearlings, $8 to $8 50. Two years old—$18 to $30@36. Three years old—$25 to $44@48.

SHEEP AND LAMBS—6,676 at market. Prices—Extra—$4 00 to $0@7. By lot—$2,25 to $3@3,75

Swine—None. Train not in.

BRIGHTON CATTLE MARKET—Aug. 31.

AT market 2,300 Beef Cattle, 600 Stores, 5,100 Sheep and 1,300 Swine.

Prices—Beef Cattle—The prices last week were not sustained and sales were not so readily made. We quote Extra 8@8,50; first quality, $7,25@7,75; 2d, $6,00@7; 3d, $5,00@6,00.

Working Oxen—Sales $75 to $160@170.

Cows and Calves—A full market. Sales $20 to $67.

Stores—Two year old, sell quick at high prices, $18@25. Three year old $30@40

Sheep—Sm l lots $2 to $1@6.

Swine—Dull; some lots 3 @3½@3½c; selected lots 6; large store hogs 4 and 4¼c, such as are suitable to slaughter 4¾, 4¾ and 5c.

Advertisements.

ADVERTISEMENTS inserted in the RURAL NEW-YORKER at 15 cents a line, each insertion,—*to be paid in advance*

N. Y. STATE AGRICULTURAL SOCIETY.
14th Annual Cattle Show and Exhibition of the New York State Agricultural Society,
Held in connection with the American Institute and New York Horticultural Society at Hamilton Square in the city of New York October 3d, 4th, 5th, and 6th, 1854.

THE Annual Exhibition of the Society will be held as above, in the city of New York, from Oct. 3d to 6th, on which occasion, upwards of *Eight Thousand Dollars* are offered as premiums, to be competed for, with Cattle, Horses, Sheep, Swine, Poultry, Dairy Products, Farm Implements and Machinery, Domestic and other Manufactures, Flowers, Fruits, and articles in all the Mechanical Departments—the full particulars of which will be found in the List of Premiums published. A large portion of the Premiums are open to competition by persons out of the State.

It is believed that this combined exhibition will be the most extensive ever held in this country, and will afford to exhibitors advantages never before offered, in every department of the Exhibition, combining the entire industrial interests of the Farmer, Manufacturers, Mechanics, Horticulturists, and Artizans of our country.

Persons desirous of examining the List of Premiums and Regulations, or of entering stock, implements or other articles for exhibition, will please apply to B. P. JOHNSON, Sec'y, State Agricultural Rooms, Albany; at the Rooms of the American Institute, 258 Broadway; or JAMES BRIDGE & Co., 350 Broadway, New York, where the Premium List and Regulations will be furnished, and every desired information in relation to the Exhibition given.

Stalls and boxes for stock, and erections for the other articles, will be furnished in season, so that all articles designed for exhibition can be taken to the show ground on their arrival in the city, where they will be provided for and protected.

The following Railroads have agreed to transport all stock and articles for the exhibition, FREE—requiring the freight to be advanced on delivery and re-paid on return of the articles, with evidence of being exhibited, &c.: Hudson River, New York & Erie, New York City & Hud'n, Ithaca and Owego Canandaigua and Elmira New York Central, Rome and Watertown, New York & Harlem, Long Island, Troy & Boston; and it is presumed all the Railroads leading into New York will afford the like facility.

Application to transport articles should be made in season to the nearest station Agent.

WM. KELLY, *Pres't.*
B. P. JOHNSON, *Sec'y.* 241-3t

UNDERDRAINING TILE.

THE ROCHESTER BRICK AND TILE MANUFACTURING CO., have on hand a large supply, and are constantly manufacturing Tile of the different varieties and sizes used for underdraining in this vicinity. The extent of the influence of the wheat crop the present season has, we conclusively think it has been for many years before, shown the utility of tile Draining—for in no instance, and it is safe to say on no premises where lands were properly underdrained, has wheat been known to be injured by winter kill—which every one knows is caused by the freezing and thawing of water standing upon the wheat.

The following is a list of the prices for the different varieties and sizes of Underdraining Tile delivered at our premises in Brighton, one and a half miles east of the city of Rochester. The Company will deliver Tile on canal boats at fifty cents a advance per thousand, on their yard prices, and on vessels running on Lake Ontario at reasonable charges, for transportation. Prices as follows:

1 Inch Pipe Tile	$7 00	per thousand.
1½ do	8 00	do.
2 do	9 00	do.
3 do	12 00	do.
4 do	22 00	do.
5 do	&c.	per rod
2 Inch Horse-shoe Tile	$8 00	per thousand.
3 do do	11 00	do.
4 do do	14 00	do.
8 Inch Round Tile	10c	per rod.

1000 Tiles will lay 66⅔ rods or 16 Tiles per rod.
For further particulars, address
WILLIAM OTIS, Superintendent,
244-tf Rochester, N. Y.

PERUVIAN GUANO.

In consequence of well known causes which have lately prejudiced and continue to prejudice the genuine interest, His Excellency, the Envoy Extraordinary and Minister Plenipotentiary of Peru, is desirous as far as in his power, to place the Peruvian Guano before the consumers in such a manner as will enable them to obtain it on terms better adapted to meet the difficulties of the season; and has been pleased to direct orders to the undersigned to sell the guano, for the present, as follows:

For	1 to 5 tons	$53 cash.	
	6 " 10 "	$52 "	
	11 " 22 "	$51 "	
	23 " 25 "	$50 "	
	26 " 30 "	$50, 30 days or correspond'g discount.	
	31 " 100 "	$50, 2 months " " "	
	101 " 200 "	$50, 3 months " " "	
	201 upwards	$50, 4 months " " "	

The agents are prepared to make deliveries at their depots in the different ports in the United States, through orders given by them in this city.

F. BARREDA & BROTHER.

Baltimore, Sept. 1, 1854
We are now prepared to supply all orders on above terms.
LONGETT & GRIFFING.
244-4t No 25 Cliff st., New York.

FARM FOR SALE.

THE subscriber offers for sale his Farm, situated in the town of Penfield, Monroe Co., N. Y., two miles north of the village of Penfield, and seven east of the city of Rochester. THE subscribers have a choice lot of French and Spanish Merino bucks and ewes, descended from some of the best flocks in Vermont,—also, crosses of the same breeds from ¼ to ¾ blood, which they propose to sell on reasonable terms. Persons wishing to purchase, will do well to call at their residence, 1½ miles east of Brockport, and examine for themselves. S. L. & S. S. SHELDON,
Brockport, N. Y. Aug. 28, 1854. 244-2t*

FARM FOR SALE.

SITUATED in the town of Plattsburgh, Steuben Co., N. Y., 3 miles west of Plattsburgh village, and 4 miles east of Crooked Lake. Said farm contains 575 acres, well adapted to either grain or grass. House new and convenient.—Barns sufficient to hold 100 tons of hay, with stables for 80 head of cattle; also a large cheese house, with other outbuildings. Price, $25 per acre. For particulars address the subscriber, post-paid, JOHN C. DENNISTON,
Elmira, Chemung Co., N. Y., Aug. 29, 1854. 244 4t*

ANDERSON'S DOUBLE-TRIANGULAR HARROW

PATENTED August 1st, 1854. Is universally acknowledged by agriculturists who have seen it in operation, to be the best Harrow for all purposes now in use. By the particular arrangement of the teeth the entire surface is thoroughly pulverized. Its peculiar form also renders it very effective in new, or even or stumpy ground; one half being made to turn completely over the other in passing a stump, I applied. It is lasily simplified than any harrow as it is this harrow, does more execution than twice by those in common use. The Patentee, being a practical farmer is willing to dispose of rights in Towns, Counties, or States, for the benefit of the public, or the harrow may be had on application to WM. ANDERSON.
244-3t Jacksonville, Tompkins Co., N. Y.

FRIENDS OF EDUCATION!

Lo in the days of the ancient Israelite, so now in 1854, the command comes—*Go forward!*

The *New York Teacher* has already attained a circulation unsurpassed by any other Educational Journal in the U. States. But the Managers propose to commence the next volume, beginning Oct. 1, 1854, with an edition of *Five Thousand Copies*. They have decided to increase the number of pages at least to forty-eight of reading matter, and hope occasionally to reach sixty-four. The size of the page will also be increased, so that a *great amount of matter* may be inserted without the use of small type, which is so injurious to the eye-sight, and an unpleasant to the reader. As this will double our circulation, so it will *double our expenses*. The outlays for the coming year are estimated at over $1,000.

THE EDITORIAL DEPARTMENT is to be conducted on the *Teacher* for the coming year, to more extensive and varied than that of any other similar magazine in the Union, containing Collegiate, Academic, Normal School, Select School and Common School talent. The following are the Board for Volume III:

Oliver Arey, Buffalo; Truman H. Bowen, Albany; J. W. Bulkley, Williamsburgh; S. H. Cole, Prattsburgh; Delos Gary, Oswego; J. N. McElligott, New York; L. R. Satterlee, Rochester; A. J. Upson, Hamilton College; Marcius Willson, Albion Hill; J. Watson, Watertown; Emma Willard, Troy; Mary P. Tenney, Binghamton.

THOMAS W. VALENTINE, *Readers Editor*, Albany.

We shall continue to publish such communications, decisions and notices, from the Department of Public Instruction, as may be deemed by the Superintendent to be of general interest. Notices of School Celebrations, Institutes, Examinations, and the like, will ever be welcomed to our columns. Sketches of schools in different localities will be inserted, whereby Teachers and Schools may compare notes; and thus encourage one another to good works.

It is expected that the Essays and leading Articles from the Editors will be *more numerous and varied* than heretofore, and the Correspondence and Items will continue to receive proper attention. In fine it is the determination of the Managers to procure

The Cheapest and Best Educational Magazine

in the United States. The terms are as follows:—single copies, one year, $1; ten copies, $9; twenty-five copies, $20; fifty copies, $35.

Subscriptions commence with the beginning of the volume (Oct. 1, 1854.) Payment invariably in advance. Advertisements $10 per page, each insertion.

PREMIUMS.

To every person obtaining one hundred *new* subscribers previous to Jan 1, 1855, a set of the "Encyclopædia Americana" (13 vols.) $15.

To every person procuring fifty *new* subscribers, previous to Jan. 1, 1855, a copy of each of the following periodicals for one year:—The Massachusetts Teacher, the Ohio Journal of Education, the Michigan Journal of Education, the Connecticut School Journal, the Iowa Journal of Education, the Pennsylvania School Journal, and the Student Free, $7.

To every person procuring twenty-five *new* subscribers, a copy of Harper's Gazetteer of the World, a splendid work, issued in numbers.

To every person procuring ten *new* subscribers, a copy of Moore's Rural New-Yorker, for one year. Price, $2.

SPECIAL PREMIUMS.

To the county sending the largest number of subscribers during the year, a selection of books amounting to $30, will be sent for the Teachers' Association of said county—the books to be selected in New York, by J. W. Bulkley, Chairman of the Board of Managers, or, by a committee appointed by the County Association.

Any Academy, College, or other School, furnishing 25 subscribers, shall be entitled to one insertion in the *Teacher* of an advertisement of the last kind, not to exceed half a page. Also two copies of the *Teacher, gratis*, for the reading rooms connected with the school.

For the best Essay on the School system of New York, setting forth its advantages and disadvantages, and giving the best plans for its improvement we will furnish the author with twenty-five copies of the *Teacher* for one year—provided the State Superintendent, to whom all of the productions will be submitted, shall deem any one worthy of the premium. Those who compete for this should send their Essays, accompanied by real name in an enclosed envelope, prior to Jan. 1, 1855.

For the best original contribution to the *Teacher*, each month, not to exceed four printed pages in length (the merits to be decided by the Resident Editor,) we will give a copy of Webster's Unabridged Dictionary, provided one be worthy of a premium, and provided the writer is not one of the Board of Editors. Communications for this purpose should be addressed, by the first of the month previous to the month of publication, with real name unsealed, to T. W. Valentine, Albany. No restrictions imposed in regard to the subject of the form. Those who receive these twelve premiums, will be announced at the next Annual Meeting. The readers of the *Teacher*, in the mean time, may decide for themselves, which is the Prize Article in each number.

PREMIUM EXTRAORDINARY.

To the town (not city) sending the largest number of subscribers during the year, A BANNER, with appropriate devices and inscriptions, the value of which shall not be less than $25—the Banner to be presented at the next Annual Meeting.

BE VERY PARTICULAR

to give the Name, Post-Office, County, and State, correctly and *plainly*. Transfers should state *from* what place as well as *to* what place. Communications purely editorial may be directed to T. W. Valentine, Resident Editor, Albany. All others should be addressed (post-paid) to the Publishing Agent.

FELLOW WORKERS!

The day is propitious! The signs of Progress were never more promising than at this time. With a State Superintendent energetic and devoted to his work—a State Agent to move amongst the people, in conjunction with the Superintendent—with a Legislature ready and willing to make all needful laws for the promotion of the great cause of Education—with a healthy public sentiment growing daily more and more liberal and progressive—with our own periodical to rally, unite, and lead on to victory—with all these, and many more potent and pervading influences, shall we affect or shall the coming year be made an era in the Educational History of our State! Let your deeds answer.

On behalf of the Board of Managers,
TRUMAN H. BOWEN, *Publishing Agent.*
Albany, September 1, 1854. 244

TO YOUNG MEN!
And others desiring Employment.
CHANCE TO MAKE MONEY!

MILLER, ORTON & MULLIGAN, Auburn and Buffalo, N. Y., will give immediate, constant, and very lucrative employment to 1,000 agents, to labor chiefly in the Counties where they reside, in selling the most

Popular, Interesting and Useful Books,

published in this country. The list of books is very large, and embraces a great variety. They are selected and made with especial reference to the wants of the PEOPLE. They vary in Price from 25 cents to $2 per volume, are neatly and strongly bound, generally illustrated with beautiful steel and other engravings, and embrace History, Popular Biography, Narratives and Travels, Agriculture, Theology, Temperance, Books for the Young, Bibles, Standard Poetry, Law and School Books, &c.

N. B.—Terms, Descriptive Catalogues, Circulars, and full particulars furnished gratis, on application (post-paid) to
MILLER, ORTON & MULLIGAN,
Auburn or Buffalo.
Auburn, Aug. 26, 1854. 243-4t

A VALUABLE FARM FOR SALE.

SITUATED in the town of Conquest, 4 miles northwest of Weedsport, a good market on the Canal, and 3½ from Rochester & Syracuse direct Railroad. Said Farm contains 163 acres; 140 improved and in a good state of cultivation; well adapted for all kinds of produce, and well situated for two farms if desirable, as there are two houses and two barns, two orchards containing a good variety of fruit, also a wood lot on each end of the farm. Thirty-five acres can be put in to wheat this fall. Said farm can be had cheap; terms easy, and possession given when desired. Stock and farming implements can be had if desirable. For further particulars inquire of the subscriber on the premises.
243-4t JACOB EAKER.
Weedsport, Cayuga Co., N. Y., Sept., 1854.

THE HORSE, THE HORSE!
Noblest of Domestic Animals,

And the one most frequently diseased, neglected, and abused. We have just published a book so valuable to every man who owns a Horse, that no one should willingly be without it. It is entitled

THE MODERN HORSE DOCTOR,

And is from the pen of that celebrated English Veterinary surgeon, Dr. GEO. H. DADD, well known for many years in this country, as one of the most successful, scientific and popular writers and lecturers in this branch of medical and surgical science. The book which he now offers to the public, is the result of many years' study and practical experience which few have had.

From the numerous and strong commendations of distinguished men and the newspaper press, we select the following:

Extract from a letter from Hon. John H. Clifford, Ex-Governor of Mass.

New Bedford, May 11, 1854.

DR. DADD.—*Dear Sir*—I hope your new work on the noblest creature that man has ever been permitted to hold in subjection, the horse, will meet with that success which all your efforts in this direction so well deserve.

Your obedient servant,
JOHN H. CLIFFORD.

From Hon. Marshall P. Wilder.

Boston, May 13, 1854.

DR. DADD,—*My Dear Sir*,—I am greatly obliged to you for the valuable treatise, the result of your own investigations, which you have recently issued, hoping that it may meet with the patronage of a discriminating community.

I remain yours with great regard,
MARSHALL P. WILDER.

The *Modern Horse Doctor*, by G. H. Dadd, is a manual of great value, and ought to be owned and studied in the sense of humanity, as well as literally by every man who owns a horse.—*Boston Congregationalist.*

Dr. Dadd has had great experience in the cure of sick horses and explains the secret of his success to this volume.—*N. Y. Tribune.*

The author of this work is well known as a most skillful veterinary surgeon and his book is based on the soundest common sense, and as a hand-book for practical use, we know of nothing to compare with it.—*Yankee Blade.*

We know Dr. Dadd well, and are satisfied that he possesses most important qualifications for preparing such a book as this.—*N. E. Farmer.*

Messrs. Jewett & Co. have just published a very valuable work by Dr. Dadd, a well known veterinary surgeon, on the causes, nature and treatment of diseases, and lameness in horses.—*Farmer's Cabinet.*

This is one of the most valuable treatises on the subject, ever published; and no owner of that noblest of the animal race, the horse, should be without it. Especially should it be in the hands of every hotel and livery stable keeper. To many a man would it be worth hundreds of dollars every year.—*Ind. Democrat, Concord.*

By far the most learned and copious work on the horse and his diseases we have ever seen.—*N. Y. Evangelist.*

"One of the greatest and most commendable qualities of this work, is it is *practical* and plain to the comprehension of those horsemen and others for whom it is designed. The course of treatment favors generally a more sensitive and rational system of medication than that recommended in any previously existing works on farriery. No farmer or owner of a horse should be without this book. Stable keepers, stage proprietors and hackmen, we believe would derive profit by having at least one copy hung up in their stables for use and reference by their stable men.—*Daily News Philadelphia.*

There is more common sense in this book than any of the kind we have ever seen, and farmers and owners of horses would find it a matter of economy to possess themselves of it. It will be of more service than the counsel of a score of ordinary doctors.—*Albany Courier.*

We deem this decidedly the best and most reliable work on the "Cause, Nature, and Treatment of Disease and Lameness in Horses," ever published.—*Nantucket Enquirer.*

What we have read of this book induces us to say that it is a very sensible and valuable work; and we learn that those much more competent to judge of its value have given it their unqualified approval.—*Ex. Trav. Boston.*

This book supplies a great desideratum which Skinner's admirable treatise on the Horse did not fill. Every man may be his own veterinary surgeon, and with much greater safety to his noble animal than by trusting him to the treatment of the empirical influences who infest the country. It is well illustrated, and should be purchased by every man who owns a horse.—*Ex. Mirror, New York.*

This is a book that should be forthwith put into the hands of all who own or drive horses, whether for the draught, for the plow, small or round for hard service or pleasure.—*McMakin's Courier, Philadelphia.*

A good clearly written book, which should be in the hands of every man who has a horse whose life his affection or his purse make it worth while to cure.—*Lancaster Mercury.*

This is a scientific, thorough and complete treatise upon the diseases to which one of the noblest of animals is subject and the remedies which they severally require.—*Troy Daily Budget.*

It is a valuable book to those who have the care of Horses.—*Hartford Herald.*

He is not worthy to have a horse in his care, who will not use such a work to qualify himself for his duty to this animal.—*Cheerswere with Boston.*

THE POET'S MISSION.

BY J. G. MILLER.

With pale, sad brow, and dreamy downcast eyes,
A poet walked the ocean's golden strand,
Nor saw the splendor flooding all the skies,
Nor felt the breeze which fanned the fevered land.

He heard the mournful murmur of the surge
Which broke in music on the shelly shore,
And drained his listened to the dulcful dirge
Of one who slept, to wake on earth no more!

His soul was wrought to music, sad and sweet,
As on his ear the liquid murmur stole,
Of waters, tripping with their silver feet,
Like pilgrims hastening to a glorious goal,

But when the tempest thundered from afar,
And on swift pinions mounted up the skies,
And rode the billows on its cloudy car,
He woke, and looked around with strange surprise.

Till then, his soul had slept and idly dreamed,
While golden fancies round his path unsprung,
And inspiration on his spirit beamed,
While to his thought his lyre responsive rung.

He heard the cradle of thunders, and the boom
Of warring waves which dashed themselves to spray,
And saw afar, begirt with awful gloom,
A spectral ship, upon the watery way.

He saw in ocean's wild and tortured face,
And in that ship borne onward to its doom,
A fitting emblem of the human race,
O'er time's broad ocean hurried to the tomb.

"'Tis well; the loved and lost I sing no more:
They who, with me, the world's rough pathway trod
Have reached their home at last, their perils o'er
They bask forever in the smile of God.

Henceforth I sing the triumph of the Right,
The overthrow of Power, the death of Wrong,
The dawn of that auspicious day, whose light
Earth's mighty bards have hailed from hills of song."

Russell, O., August, 1854.

Rural Sketch Book.

[For Moore's Rural New-Yorker.]

THE CHOLERA PATIENT:

OR, A TALE OF THE SEASON,

BY EDWARD WEBSTER, ESQ.,

THE epidemic, that had been slowly spreading from city to city, and from village to village, sending panic and dismay forward as a precursor and an exciting cause, and bringing death and the grave in its train, at length, it was said, had reached the quiet little inland community of G——. No one had ever been known in that healthful locality to be even attacked by the cholera; and during former years, when it had swept over the country like flame over a prairie on fire, G—— had escaped unscathed. But this season was anomalous. Localities hitherto regarded as peculiarly chosen spots for the revels of the destroying angel hardly felt at this time the terror of his presence; while the serene air even of the mountain top and the waterfall, experienced occasional puffs of his life-withering breath.

Rumors, as we said above, finally began to go forth that the disease had made its appearance at G——, not in an epidemic form as yet, it was admitted, but sporadically; a sufficient indication that it was gathering strength and holding back its powers for a surer and more deadly onslaught. Men, who had gazed unmoved on the tears of widows and the distress of the orphans, grew pallid with fear. Hard hands, that had wrung with a usurer's grip the last cent from an unfortunate debtor, trembled in every nerve. Dry, legal fingers, that had time and again written without a tremor the attest to a *capias* which would consign some luckless, or quasi fraudulent insolvent to the cold walls of a jail, dropped the pen at the remote possibility of a choleratic grave. Flushed cheeks, that could retain their glow for a lifelong night through the exhausting excitement and blaze of a ball room, blanched to the color of ashes at the bare mention of the epidemic. What effect this excitement had upon persons in any way affected by the ordinary diseases of the season, we leave to the pathologist to determine; certain it is however, that an unusual number of those attacked by such diseases suffered much, and not unfrequently fatally.—But still, no well authenticated cases of the genuine Asiatic cholera could as yet be identified in G——. Young and ambitious physicians, who longed for an opportunity to exhibit their skill and win professional fame, and possibly the means of support, would occasionally, when a severe case of Cholera Morbus came under their supervision, pronounce it something *very like* the Cholera.

But at last it did really come; men sickened and died here and there, but even then not more in number, nor so many as had before been carried off by common complaints without producing any kind of excitement. Influenza had taken many victims. Measles, and Small Pox, and Fevers had called for their proportion of human sacrifices; and that all-pervading and inexorable disease Consumption had removed many of the brightest and fairest members of the little community, and yet men looked upon these afflictive dispensations as matters of course. But the Cholera! the Cholera! One fatal case of that came with a knell of death to the hearts of the terror-stricken.

An old, lonesome, dilapidated, and tenantless dwelling on the outskirts of the village, was hastily refitted to serve the purposes of a lazaretto, whither the infected were to be conveyed, being considered as lepers were of old, unfit to live among men, and unfit to die even, amid the surroundings of domestic comfort and peace. The wisemen of the village, called the Board of Health, undertook, in addition to their proper and legitimate sanitary duties, to establish a sort of quarantine, by prohibiting all innholders and publicans from entertaining or lodging travelers from *infected districts*.

As is usual in all such cases, the alarm was needlessly great; the disease was generally mild in form, and when attended to in time, yielded readily to skillful medical treatment. The few fatal cases could be easily traced to imprudence in diet, intemperance in habits, filthiness of person or of habitation, and above all to neglect of medical advice until too late. The insidious approaches of the enemy would be construed by the victim as an ordinary summer complaint, and not unfrequently he would find himself in a state of collapse, and of course past hope, before a physician would be consulted. Thus men died in G——, as they died in other places, victims of their own neglect and folly.

All the citizens were not stricken with terror at the approach, or even presence of the cholera. These took unusual precaution to remove exciting causes, and then kept about their ordinary business, except when called upon to lend a helping hand to the distresses of others. Not visited with sickness in their own persons or families, they were willing to assist those who were. SOLOMON WILLIAMS, and his excellent wife were reckoned among this number, and many a half frantic patient can fix the date of his recovery at the moment when the mild, consoling face, and encouraging voice of Mrs. WILLIAMS were seen and heard within the sick man's room.

At the time the excitement was at its height, and before men had become familiar with the presence of the epidemic, a middle-aged stranger was seen moving along up the street. He had just come in upon the cars and stopped in consequence of a sudden and death-like illness that had fallen upon him only a few hours before. His livid expression of countenance as he alighted upon the platform, attracted general attention, and caused the crowd to draw back from his presence involuntarily. After asking of a hackman or two a conveyance up town which was peremptorily refused, he started on foot under the scorching rays of an almost meridian sun; but before proceeding half way up the street, his strength gave way entirely, and he sat down upon a dry goods box in front of a store, and leaned his head against the wall. The invalid was a well-dressed and intelligent looking man, apparently in good circumstances, and one who could command friends at home if not among strangers; but his mental as well as physical energies seemed utterly prostrated, and the presence of death itself would have been a matter of perfect indifference to him. The shopman, as he beheld the ill-boding sign before his door, was filled with indignation, and ordered him away instantly. Not being obeyed, he was working himself into a tempest of rage and terror—rage from fear of injury to his business, and terror from fear of the cholera, and was about to push the sick man into the street as Mrs. WILLIAMS came along the walk, who, glancing a moment at what was going forward, exclaimed:

"What in the name of humanity is going on here?"

"He's got the cholera!" answered the shopman. "We shall all die with it! He'll ruin my trade, too!" he added, mingling the fear of worldly losses oddly up with mortal terror of the epidemic.

"Shame on you, you hard hearted and cowardly ruffian!" exclaimed the lady in indignation. "Poor man—poor man! he must not be permitted to die in the street. Perhaps he has a wife and family at home, who would go distracted at a sight like this!" So saying, she approached the half unconscious object of her sympathy, and gazed into his face. A gleam of intelligence lit up the half-glazed eye-balls of the apparently dying man, as if he recognized in her the features and voice of an angel of mercy; and, attempting to stretch out a feeble hand towards her, he fell back senseless against the wall.

The good lady exhibited a degree of excitement at this juncture, so contrary to her usual calm bearing, that the few persons who had mustered sufficient courage to approach the group were filled with surprise.

"Run for Dr. ——!" she cried to a young man standing near, "and tell him to call at our house with all speed!" and motioning to a hackman who was just then giving a wide birth to what he deemed an infected neighborhood, and about to pass at a rapid pace on the other side of the street, she brought him to an unwilling halt. "Take this sick man into your carriage and carry him to our house," she said to the driver.

"*Ma'am*; he's got the cholera, and it would ruin me to do that. Nobody would ride with me afterwards, even if I didn't die with the disease myself!"

"I will ride in the carriage with the sick man, and you certainly will not be afraid to ride outside. Here is a half eagle for you now," she added, tossing to him the coin, "and for every fare you lose during the rest of the season, my husband will pay you for two. This man is one of his best friends, and he would sacrifice his own life in the sick man's behalf. Come along, for mercy's sake!"

The rough, hard features of the hackman softened down at such an appeal, so wheeling his carriage hastily up beside the walk, and leaping down from his seat, he called out to the shopman to assist in placing the invalid inside. The latter hesitated a moment, but the desire to rid the premises of such an ill-boding customer overcoming his fears of infection, he aided finally at arms length in putting the sick man within the back. Then, after helping the lady up, who bade the driver proceed in all haste to her own residence, he clapped to the door of the carriage, proceeded to wash his hands and face in at least a dozen successive basins of water, sprinkled his door-steps and sidewalk with chloride of lime, bathed his forehead in spirits of camphor, took a long snuff or two at a smelling bottle, perfumed his handkerchief with cologne, and muttered a mental invocation that the demon of Cholera be exorcised from his premises, and that the gods of gold and gain would continue to favor him with the light of their propitious countenances.

In the meantime the invalid was speedily conveyed to the quiet residence of Mrs. WILLIAMS, where the best restoratives within reach were immediately applied. He was placed upon a couch, and warm woolen cloths applied to his cold and almost pulseless limbs. A dose of fifty drops of laudanum and camphor were given him at once, and the good lady was busily employed in further medical preparations when the doctor arrived. He felt the patient's pulse, and inquired what had been done thus far; and, on being informed observed quietly,—"Mrs. WILLIAMS, if all cholera patients could have your attentions at an early stage of the disease, our bills of mortality would be greatly reduced. Let the patient be kept entirely quiet, and receive at stated times the medicine I shall leave for him, and I will call again towards evening. If any worse symptoms occur in the meantime, let me know of it at once. I have brought with me a skillful nurse, who will relieve you of all further responsibility on the patient's account." So saying, the doctor withdrew, after committing the sick man to the care of the nurse."

Mrs. WILLIAMS followed the physician to the door, and inquired of him the true nature of the disease, and the prospects of the patient's recovery. She was frankly informed that, as she had inferred, it was a case of genuine Asiatic cholera, but that the indications were favorable, and the worst symptoms of the case averted by the timely ministrations of the lady herself. "You undoubtedly, Mrs. WILLIAMS," he added, "have saved the poor man's life."

"Oh! God be thanked!" she exclaimed, and burst into tears. "That man is my husband's dearest friend, and one who has stood by us in hours of pecuniary distresses as no other man would have done. I have heard my husband say a thousand times, he would go on a pilgrimage to the ends of the earth to do him a service, and he would never have had a moment's peace of mind hereafter, if his friend had perished unaided in our streets. And, besides, the poor man has a wife who clings to him as only a loving wife can do, and a child as dear and bright as ever blessed a peaceful household. Think what a calamity would have overwhelmed them, if the husband and father had been removed from them at such a time and in such a way!"

That evening, on the return of the physician from his round of visitation among the sick, he found the cholera patient, as he had predicted, convalescent, and with such care as he was sure of receiving in his present quarter, out of all danger. Perfect rest, and freedom from all excitement, mental or physical, were specially enjoined. Light, nourishing, and antiseptic food was prescribed, and the patient left in the care of his friends. Mr. WILLIAMS, who had been absent during the day, was overjoyed on his return to learn the heroism and presence of mind displayed by his wife, and the aid she had been thus enabled to afford his friend. Proud and happy as he had ever been with her, he pressed her to his heart with an emotion of tenderness and exultation which even he had never known.

"I knew you was a good wife, Bess," he said, "but never set you down for such a heroine before. Playing the good Samaritan, and to such a purpose too, and in behalf of such a friend."

"But we owe to common humanity all we have done; how much more, then, do we owe to the sick man under our roof!"

"Everything! everything! The happiness and success of our lives are due to him, and the recollection of this act will rivet the ties of friendship still more closely between us. You have saved his life, Bess, and that of itself is a sufficient reward."

In the meantime, a telegraphic despatch had been forwarded to the sick man's wife, and the next evening brought her to his bedside; not, however, until all danger was over, and the patient well nigh restored to health. The speed of the telegraph conveyed to her the intelligence of her husband's alarming illness, but the comparatively slow-moving locomotive only could bring her back; and the affecting meeting between them, nor that the crisis was past our feeble pen will not attempt to portray. What had previously occurred to bind the two families in such close friendship, we will endeavor to explain hereafter,—merely closing this portion of the tale by a call of special attention (and it is written for this purpose) to the course pursued by Mrs. WILLIAMS in a case of Asiatic cholera; and urging upon others the necessity of following her example, particularly as regards the measures to be adopted at the outset of such a disease.

Wit and Humor.

AUBURN LOCKS.

The following amusing anecdote is from the editor's table of the California Pioneer:

"Several years since there was a society of theatrical amateurs in Philadelphia, of which Mr. Mordock, J. R. Scott and others were members. One evening the Association were performing Richard III. There was an artiste for each of the leading characters, but unfortunately they were wanting in supernumeraries to act as soldiers towards the end of the play. So it was arranged that two of the company, both of whom, by the way, had locks of that brilliant color sometimes mis-called through politeness, *auburn*, should supply the deficiency by running on after the others across the stage, then round a 'flat,' as quickly as they could and across the stage in the opposite direction, and so on, making up by rapidity of appearance, the want of a numerous army.—Well, the scene came on and the 'army' had commenced operations and were really doing their part very well, when a boy in the pit cried out so loudly as to be heard all over the house—'O-o-o, what a lot of red-headed fellows!' The effect was indescribable, and the 'army' could never be induced to perform any more *brilliant* evolutions."

UNSAFE PROPERTY.—A southern gentleman now in this city, relates the following story, as an instance of negro shrewdness. A slave had agreed with his master to purchase his freedom for the sum of $800. After $400 had been secured to the master, the slave was to have one half the amount he earned during the regular work hours. Soon after this amount had been paid, the slave accompanied his master on a sailing excursion. The boat was upset, and the parties narrowly escaped with their lives. The next day after this accident, the negro called upon his master, and requested that the $400 he had paid upon himself should be refunded, on the ground that he could not risk his earnings upon such *unsafe property*.—*Boston Transcript*.

ATROCIOUS.—English tavern-keepers simply advertise their intention to "dress a fine, lively turtle," on such a day; but the Yankee, more atrociously, writes with chalk upon the devoted animal's back, "Soup to-morrow," and places him on parade before his hotel, thus basely making him a party to his own murder, and compelling him, in defiance of all the laws of nations, to advertise his own execution.

A PENURIOUS old farmer met with an accident in his field, by which his shoulder was broken and dislocated. While undergoing the painful operation necessary to put the shattered bones in their original position, he groaned bitterly and exclaimed, "Oh dear! Oh dear! I'd rather gi'n *nine shillin's!*"

FAVORITES.—"Husband, why do you destroy all my Sweet Williams in the garden, and leave all the Bouncing Betseys?"

"Because the Betseys are all favorites of mine, but I won't have any Sweet Williams about my premises."

IF you wish to please people, just sugar and oil their weaknesses. If there is one thing more than another that folks like clear through to the marrow, it is a clear saccharine plaster over their short-comings.

"WHAT makes the bell ring, Isaac? Do you know? Nobody's dead or dying here, I hope." "If I might guess," drawled out Isaac, "its as how somebody or other's a pullin' on't.

LEFT—that young man to whom the world owes a living, the gentleman with whom he boarded not being willing to take the indebtedness of the world on his shoulders.

PHILOSOPHERS say, that shutting the eyes makes the sense of hearing more acute. This may account for the many closed eyes that are seen in our churches.

"I THINK our church will last a good while yet," said a waggish deacon to the minister.—"I see the sleepers are very sound."

SYRACUSE NURSERIES, SYRACUSE, N. Y.

THE Subscribers would most respectfully call the attention of Nurserymen, Fruit Growers, Dealers, &c., to their very large Stock of Fruit and Ornamental Trees, which they offer for sale the coming fall and spring.

We are issuing from the press—

No. 2, A New Fruit Catalogue, which, with

No. 3, Containing the Ornamental Department, and

No. 4, The Green-house Department, will be forwarded to all pre-paid applications, enclosing a *one cent* stamp for each.

Also, a *New Wholesale* Trade List, for persons wishing to trade by the quantity.

A fresh importation of the very best *Dutch Bulbous Roots*, from Haarlem, in Holland, will be ready for delivery in September. Young trees of the following new Pears can be had of us this Fall—price $1 each.

The splendid, large, early-melting pear, the *true Honeysheack*, coming in after the *Madeleine*, excelling greatly in all respects the *Virgalieu*, and more valuable than any other early pear.

Also, these splendid, luscious, fall pears, the *Des Nonnes* and *Beurre Clairgeau*, first brought to notice by ourselves. These two pears often surpass the *Seckel* in size, while they fully rival it in their rich aroma, and possess the melting luciousness of the *Belle Lucrative*.

Also, *Beurre Clairgeau* and *Kiesuth*, with that fine winter pear *Beurre Bachelier*.

THORP, SMITH, HANCHETT & CO.

Syracuse, N. Y., July 18, 1854. 239-Tlecow

GUANO.—NOTICE.

As there is a substance now selling by some dealers in this city and Brooklyn, for No. 1 Peruvian Guano, we caution the agricultural public who may purchase Peruvian Guano this season, to observe that every bag of the genuine article will have the following brand:

No. 1
Peruvian Guano.
Imported by
F. BARREDA BROTHERS.

The price is now established for this season at $45 per ton of 2,000 lbs. When taken in lots of 5 tons and upwards, a discount will be made.

LONGETT & GRIFFING,
State Agricultural Ware House,
241-tf No. 25 Mill street, New York.

CHEMICAL ANALYSIS.

J. BRYAN, Practical Chemist, 112 State St., Rochester, N. Y., is prepared to make *full and accurate* analysis of Minerals, Salts, Metals, Mineral Waters and Chemical Compounds, and articles suspected of adulteration and *Poisons*, either organic or inorganic, and in quantity or quality. It is necessary to send one or two ounces of a solid, and a pint or more of a fluid for examination. 241-13t

HICKOK'S PATENT CIDER MILL,

As improved for 1854, received over Fifty Premiums and Diplomas in 1853. This Mill is warranted superior to all others. Sold by the following Agents, who will supply pamphlets containing descriptions, &c.:

H. C. WHITE, & CO., Buffalo, N. Y.
E. D. HALLOCK, Rochester.
E. J. FOSTER, Syracuse.
HIBBINS & CALKINS, Carthe, Wyoming Co.
C. M. WHRIG, Elmira.
PROUTY & CHERI, Geneva.
GREGORY & SMITH, Binghamton.
DANA BROTHERS, Utica, N. Y.
LONGETT & GRIFFING, 25 Cliff St., sole agents for New York City.
CHAS. ASHLEY, Ogdensburg.
OLIVER & HILMER, Montpelier, Vt.
W. H. HILL & CO., 32 Cornhill, Boston.
GEO. W. EMERY, Albany.
LAMEREUX, HALL & RUSSELL, Towanda, Pa.

Made solely by W. O. HICKOK,
240-3w* Harrisburg, Pa.

ENGLISH CATTLE.

To Agricultural Societies, and others requiring the best bred Cattle from England, embracing pure blood Horses, Short Horned Cattle, Durons, Herefords, Ayrshire and Alderney Cows, pure bred South Down, Cotswold and Leicester Sheep, Suffolk, Essex and Berkshire Swine. Imported on commission by Messrs. Tros. Bolts & Brothers, Herts, England. For information apply to J. M. Hiller, 81 Maiden Lane, N. Y. City, who is fully authorized to act as our agent.

Orders received for Guano, by applying to
234-13t THOMAS BETTS, 35 Wall St.

HOME PROTECTION.

TEMPEST Insurance Company, Capital $250,000, Organized December 24, 1852; Chartered March 1, 1853. Homes only insured by this Company. No one risk taken for more than $3,000.

Many distinguished persons have insured their homes, to the amount of $3,000 each, in this Company, among whom are Ex-President VAN BUREN, Kinderhook; Ex-Governor SEWARD, Auburn.

AUBURN, May 16th, 1853.

To whom it may concern.—We are personally acquainted with many of the Officers and Directors of the Tempest Insurance Company, located at Meridian, Cayuga Co., N. Y. In our opinion they are among the most wealthy and substantial class of Farmers in this county.

J. N. STARIN.
ELMORE P. ROSS.
THOMAS Y. HOWE, Jr.

The above gentlemen will be recognized as the Cashier of Cayuga County Bank, Auburn; Postmaster, Auburn, and Ex-Member of Congress, Auburn, Cayuga County.

N. B.—The public are cautioned to bear in mind the name, (*Tempest,*) and not submit to an imposition daily practiced by two-by-four Mutual Co's.

234-tf T. H. TIMBY, Secretary.

THE WOOL GROWER AND STOCK REGISTER.

VOL. VI.—ENLARGED AND IMPROVED!

THE WOOL GROWER AND STOCK REGISTER is the *only* American journal devoted to the important and profitable branches of *Wool and Stock Husbandry*. It contains a vast amount of *useful* and *reliable* information on the above and kindred subjects, and should be in the hands of every owner or breeder of Sheep, Cattle, Horses, Swine, or Poultry—whether located East or West, North or South, for the most of the matter given in its pages is equally adapted to all sections of the Union, the Canadas, &c. The Sixth Volume, commencing July, 1854, will be

Enlarged to 32 Octavo Pages Monthly!

And improved in both Contents and Appearance. Among other matters of interest to Wool Growers, Breeders, Graziers, Dairymen, &c., the new volume will contain PEDIGREES OF PURE-BRED Cattle, Horses, Sheep, etc., and the Names and Residences of the principal Breeders and Owners of Improved Stock throughout the country. It is published in the NEST STYLE, and ILLUSTRATED WITH MANY ENGRAVINGS—including Portraits of Domestic Animals, Designs of Farm Buildings, &c., &c. The careful REVIEWS OF THE WOOL AND CATTLE MARKETS, given in each number, are alone worth many times the price of the paper.—To Wool Growers this feature is invaluable.

TERMS—Only Fifty Cents a Year;

Five Copies for $2; Eight for $3,—in advance. Any additional number at 37½ cents per copy. Club papers will be sent to different post-offices, if desired. ☞ Back volumes (well bound in paper, for mailing) furnished at above rates.

☞ NOW IS THE TIME TO SUBSCRIBE and form Clubs. Money, properly enclosed, may be mailed at our risk, if addressed to D. D. T. MOORE, Rochester, N. Y.

☞ Mr. C. MOORE, of Gerry, Chau. Co., is authorized to act as Agent for the RURAL NEW-YORKER, and for the WOOL GROWER AND STOCK REGISTER, in the counties of Chautauque and Cattaraugus, N. Y., and Warren, Pa.

MOORE'S RURAL NEW-YORKER,

IS PUBLISHED EVERY SATURDAY,

BY D. D. T. MOORE, ROCHESTER, N. Y.

TERMS, IN ADVANCE:

SUBSCRIPTION—$2 a year—$1 for six months. To Clubs and Agents as follows:—Three Copies one year, for $5; Six Copies (and one to Agent or getter up of club,) for $10; Ten Copies (and one to Agent,) for $15; Twenty Copies for $25, and any additional number, directed to individuals at the same rate. Six months subscriptions in proportion. As we are obliged to pre-pay the American postage on papers sent to the British Provinces, our Canadian agents and friends must add 25 cents per copy to the club rates of the RURAL,—making the lowest price to Canadian subscribers $1,50 per year.

☞ Subscription money, properly enclosed, may be sent by mail at the risk of the Publisher.

*** The postage on the RURAL is but 3½ cents per quarter, payable in advance, to any part of the State—and 6¾ cents to any part of the United States,—except Monroe County, where it goes free.

ADVERTISING.—Brief and appropriate advertisements will be inserted at $1,50 per square, (ten lines, or 100 words,) or 15 cents per line—*in advance*. The circulation of the RURAL NEW-YORKER is several thousand greater than that of any other Agricultural or similar journal in America. Patent medicines, &c., will not be advertised in this paper on any terms.

☞ All communications, and business letters, should be addressed to D. D. T. MOORE, Rochester, N. Y.

MOORE'S RURAL NEW-YORKER

VOLUME V. NO. 37.} ROCHESTER, N. Y.—SATURDAY, SEPTEMBER 16, 1854. {WHOLE NO. 245.

Moore's Rural New-Yorker:

A QUARTO WEEKLY

Agricultural, Literary, and Family Newspaper

CONDUCTED BY D. D. T. MOORE,

ASSISTED BY

JOSEPH HARRIS, in the Practical Departments:
EDWARD WEBSTER, in the Literary and News Dep'ts.

Corresponding Editors:
J. H. BIXBY,—H. C. WHITE,—T. E. WETMORE.

THE RURAL NEW-YORKER is designed to be unique and beautiful in appearance, and unsurpassed in Value, Purity and Variety of Contents. Its conductors earnestly labor to make it a Reliable Guide on the Important Practical Subjects connected with the business of those whose interests it advocates. It embraces more Agricultural, Horticultural, Scientific, Mechanical, Literary and News Matter, interspersed with many appropriate and handsome engravings, than any other paper published in this Country,—rendering it a complete AGRICULTURAL, LITERARY and FAMILY NEWSPAPER.

☞ FOR TERMS, &c., SEE LAST PAGE. ☜

Rural New-Yorker.

Progress and Improvement.

EXPERIMENTS IN PIG FEEDING—NO. II.

THE second series of experiments, like the first, consisted of 12 pens, with 3 pigs in each. The first series commenced in February, the second in April. The foods chosen were bean and lentil meal, barley meal, and bran; the same as in the first series, except that barley takes the place of Indian corn. The proportion of limited to unlimited food was also changed—3 lbs. instead of 2 lbs. per pig per day of limited food being given, when it consisted of bean and lentil mixture or of barley-meal, and only 1 lb when of bran. The weather during part of the period of the experiment was excessively hot, and partly on this account 5 of the pigs *died in the course of the experiment*. These 5 pigs, however, all belonged to one lot of 8, and it is probable that there was some defect in their constitution which a rich diet in hot weather rendered fatal. Owing to these accidents, we shall not go into a detailed account of the consumption of food and increase of animal in all the pens, but simply compare some of the results of this series with those we have already given, and point out some other matters of practical interest in both series.

Comparing barley meal alone ad lib., with Indian meal alone ad lib., we find that the average weekly consumption per pig was, barley meal 68¼ lbs., Indian meal 45¼ lbs., and the average weekly increase in live weight per pig was, with barley 12.12 lbs.; with Indian meal 9.21 lbs.—a difference in favor of the barley, so far as increase alone is concerned, of 3 lbs. per pig per week. But, calculating the amount of food consumed to produce 100 lbs. increase of animal, we find that 565 lbs. of barley meal is required, and only 491 lbs. of Indian meal. With a limited quantity of bran, of bean and lentil meal, or of the two together, in addition to the ad lib. food, the difference is even still greater in favor of Indian corn, and this not merely in the amount of food consumed to produce 100 lbs. increase of animal, but also in the actual increase per pig per week.

In the second, as in the first series, the best result was obtained from a *variety* of food.—Thus, 65 lbs. per week of a mixture of 1 part bran, 2 parts bean and lentil meal, and 3 parts barley meal, gave an average weekly increase per pig of 12.92 lbs. The pigs on this mixed diet, too, consumed a less amount of food—503 lbs.—to produce 100 lbs. increase of animal, than any other pen in this series.

These experiments afford another striking illustration of the correctness of *established opinion* among observing experienced farmers. Indian corn is considered the most fattening pig food; a "mixed diet" is thought better than any single food; and it is generally believed that as animals fatten they consume less food. Mr. LAWES' experiments demonstrate the correctness of all these opinions.—We believe, however, that on the latter point farmers have no idea that the diminution of food is so great as these experiments indicate. Thus, taking the first series, during the first period of 14 days, pen 1, with bean and lentil meal alone, consumed per 100 lbs. live weight of animal *per week*, 37.2 lbs.; during the second period, 36.7 lbs.; during the third period, 30 lbs.; and during the fourth and last period only 26.6 lbs. It will be seen that there is a gradual diminution of the quantity of food consumed as the pigs fatten. In pen 5, with Indian meal alone, the diminution is still greater; thus, during the first period, the weekly consumption per 100 lbs. live weight of animal was 33.7 lbs., and during the last, only 19 lbs. *There is not a single exception in the whole series to this rule.* Taking the mean of the whole 12 pens of the first series, it is, during the first period, 36.3 lbs.; the second, 31.7 lbs.; the third, 27.9 lbs.; and the fourth, 23.7 lbs.—It should be observed too that *with the rich, available non-nitrogenous food*, Indian corn, *the diminution is much greater than with the highly-nitrogenous* bean and lentil meal, and bran. In the second series, the same rule is observed, the mean of the whole 12 pens being, during the first period, 40.3 lbs.; second, 34.1 lbs.; third, 31.7 lbs.; fourth, 25.7 lbs. The mean of the whole of these two series together, was, during the first period, 38.3 lbs.; during the last, 24.7 lbs.; that is to say, the pigs on an average consumed sixty-four per cent. less food the last fortnight of the experiment than the first fortnight. At the same time, the figures indicate that, in the language of Mr. LAWES, "although there is this great decrease in the amount of food consumed to a given weight of animal as it matures, yet that the *productiveness*—at least in gross increase in live weight—of a given amount of food, is much more nearly constant throughout the fattening process." Thus taking the mean of all the pens of the first series, we find that the increase produced by the consumption of 100 lbs. of food, was, during the first period, 18.8 lbs., and during the last, 18.6 lbs.—a difference of only two-tenths of a pound. It follows, therefore, that though the pigs consume less food as they fatten, they also increase less in about the same ratio. So that a bushel of corn will make no more pork on a nearly fatted pig than on a lean one. The lean hog eats more and increases more; the fat one eats less and increases less, in the same proportion.

HARVESTING CORN AND CORN STALKS.

EXCEPTING, perhaps, in the great corn districts of the West, one of the great items in the profitable culture of Indian corn, is the value of the stalks as food for cattle during the winter months. In deciding on the merits of the various processes of harvesting corn, therefore, their effect in increasing or decreasing the amount of nutritious matter in the corn stalks must be taken into consideration. If there is no danger of frost, and the stalks are not needed as fodder, the corn might be allowed to get *fully ripe* before it is cut. But there is a vast region of country where early frosts frequently prove highly injurious to the grain of standing corn, and render the stalks nearly worthless. Experience as well as direct experiment, sanctions the practice of cutting up the corn close to the ground *as soon as the grain is glazed*. When thus cut before they are fully ripe, the stalks unquestionably are more palatable, and we believe more nutritious; the quantity of corn is nearly, if not quite, as large; while the quality is superior. A frosty night, that would materially injure uncut corn, will do no harm whatever when it is cut up and stooked.

On a recent visit to some farmers in this county, we were surprised to find that they had already cut up a considerable portion of their corn. We "go in" for cutting corn before it is fully ripe, for the reasons above stated, but there is such a thing as cutting it too early. We know, from actual experiment, that there is considerable *loss in quantity* from cutting wheat *in the milk*. And, though we have no experimental evidence of the fact, we have no doubt, from what we know of the effect of immaturity on the composition of the turnip, &c., that wheat cut in such a state is relatively poor in *starch* and rich in nitrogen,—and consequently is of poor quality. On the other hand, if it is allowed to get too ripe, the *quality* of the wheat is injured from the conversion of the starch into woody fibre, in order to form a good thick bran for the better protection of the germinating principle of the grain. So that, while *for seed* we should let the wheat get fully ripe, for bread-making it should be cut while the grain is still soft, after the milk has disappeared.

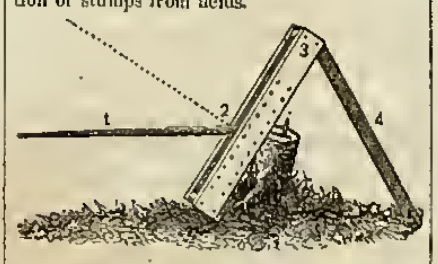
In cutting Indian corn the same principles will probably hold true. While there are many reasons for not allowing the corn to get fully ripe before cutting, we believe there are equally as good reasons for not cutting it *too early*. In such a case there would be a loss of starch in the grain, and though the stalks would contain more of the *elements* of nutrition, we have good reason to doubt whether they would prove any more nutritious. The matter would be in a crude, unorganized state; would, in fact, belong rather to the "*mineral*" than to the "*vegetable*" kingdom, and which, it is well known, cannot sustain *animal* life.—In this matter, as in nearly all others, therefore, extremes should be avoided. Corn should not be cut up while it is quite green, nor yet left till it is fully ripe.

Corn stalks are always valuable as fodder, but, owing to the great drouth, they will be more than ever valuable the coming winter. As a general thing, we believe there is a loss of at least one-third through carelessness in curing and stacking the corn stalks. We trust the scarcity will induce reform in these particulars. Though a somewhat difficult matter, every farmer knows how to cure corn stalks, if he would only be at the trouble. Let the husking be done in good season, while the weather is fine. It is certainly as cheap, and generally as convenient to do it early as late. If the husking is done in warm, dry weather, and the bundles tied up small, and not put in too large stooks, the stalks will soon be ready to draw in.

In an article on "stacking hay and grain," in the RURAL of July 1st, we mentioned an English method of ventilating hay stacks by placing a large sack, filled with chaff or cut straw, upright in the centre of the stack, and pulling it up as the stack rose, forming in this way a chimney for the heated air to escape.—The *Country Gentleman*, in alluding to it, thought that "an empty salt barrel, with an iron rod across the top for a handle, would be likely to suit a Yankee better, and would draw upwards easily, if the hay was not built much above the middle or swollen part. *This would doubtless be a good contrivance for corn fodder stacks, which so often suffer for a want of ventilation.*" We believe if this practice was adopted in stacking corn stalks, or even when they are put in the barn, and a little salt was scattered over them—say half a peck to a load—the value of the fodder would be much improved. If any of our readers have tried this method, or any other which answers the same purpose, we shall be pleased to hear from them.

TWO STUMP MACHINES.

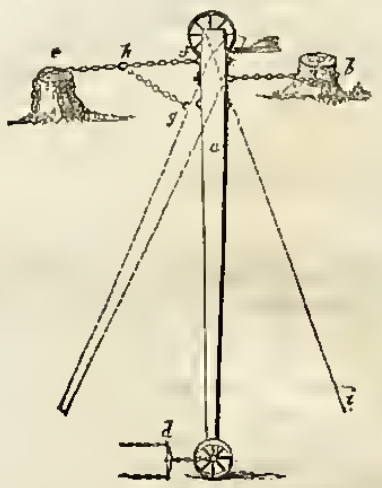
THE beauty and value of a field is much enhanced by its being cleared from every obstruction to the plow; so, to further this object and comply with the request of correspondents, we give engravings and descriptions of two of the simpler machines for the extraction of stumps from fields.



The first was furnished us in 1849, by an Ontario Co. correspondent, for the *Genesee Farmer*. He gave it a thorough trial, in clearing 15 acres from stumps the previous fall. The same machine is given in THOMAS'S *Farm Implements*, under the head of the application of the *lever* to practical principles. We give a condensed description below:

Two pieces of strong, three-inch white-oak plank, eight inches wide, are pinned together at the ends through a piece of four-inch scantling, between the planks, and furnished with a movable leg or prop (4). Two rows of holes are bored through them 4½ inches apart and 1¼ inches in diameter, to receive iron pins of the same size. The lever (1)—a round pole 10 feet long and 4 in. in diameter at the largest end, which is well bundled—is furnished with a strong iron hook, [shown in fig. 2] which is first fastened to the root of the stump, and then one of the pins is inserted under the lever. The lever is now elevated, and the other bolt is placed under it. It is next pressed down, and the first bolt elevated one hole higher, and so on till the stump is torn out. To prevent the lever slipping, there are notches for the pin to rest in on each side of the bolt. The machine costs $7 or $8, and with a team and stone-boat to draw it about, two hands can do very effective work at raising stumps which have been cut for some years.

Another and more powerful machine is given in the work referred to above. It is on the same principle, and is thus described:



"The lever, *a*, should be a strong stick of timber, furnished with three massive iron hooks, secured by bolts passing through, as represented in the figure. Small or truck wheels are placed at each end of the lever, merely for the purpose of moving it easily over the ground. The stump, *b*, used as a fulcrum, has the chain passing round near its base, while another chain passes over the top of the stump, *e*, to be torn out. A horse is attached to the lever at *d*, and, moving to *e*, draws the other end of the lever backward, and loosens the stump; while in this position, another chain is made to connect *g* to *h*, and the horse is turned about and draws the lever backward to *i*, which still further increases the loosening; a few repetitions of this alternating process tears out the stump. Very strong chains are requisite for this purpose. Large stumps may require an additional horse or a yoke of oxen. Where the stumps are remote from each other, iron rods with hooks may be used to connect the chains.

"The power which may be given to this and to all other modes of using the lever, as we have already seen, depends on the difference between the lengths of its two arms. A yoke of oxen, drawing with a force of 500 pounds on the long arm of a lever 25 feet long, will exert a force on the short arm of six inches equal to 50 times 500 pounds, or 25,000 pounds, on the stump."

REMEDY FOR THE PEA BUG.

A CORRESPONDENT at Rutland, Jefferson Co., N. Y., sends us a remedy for the pea bug. It is as follows:—Thrash the peas early, and "put those which are designed for seed the next year, into a tight sack, that no bug can escape, and *at the time of sowing*, turn the peas, bugs and all, into a tub of hot water and scald them to death. It has been tried in this vicinity with success, the past season. It does not hurt the germinating principle of the pea." This is not a new remedy. It has been recommend for years, and *on a small scale* proves quite practicable and efficacious. We would suggest, however, that the peas be dipt for a few seconds, sufficient to kill the bug, but not to injure the pea, *at this season of the year*, for it is during the early winter months that the bug does the most damage.

Our friend says: "I think that if every farmer and gardener would adopt this practice, and feed out the remainder of his peas this fall, we can destroy the pea bug from the land."—Would it not be cheaper to feed out all the peas in the fall as suggested, and then obtain peas from Canada or other places where the pea bug is unknown?

They migrate but slowly, "they have been six or seven years in getting from Lima to Rutland, a distance of 20 miles, and I think they have been brought in by seed peas faster than they would fly of themselves. Last year there were but a few in this town, but this year there is a bug in every pea." When in Lewis county, some time since, we were informed that the bug did not affect the peas there, and are sorry to learn they are so troublesome in Jefferson. Destructive as the bug is, we still believe it profitable to sow peas for the purpose of fattening pigs early in the fall before the bug does much injury. They are an admirable crop to precede wheat, impoverish the soil little, if any, are highly nutritious, and when consumed on the farm greatly increase its fertility. The great drawback is the high price of seed.—Farmers in localities where the bug is unknown, we are satisfied, would find it to their interest to raise more peas in order to supply seed to their less fortunate brethren.

MULTICOLE RYE.

THIS is a native of Poland, and was introduced to this country through the instrumentality of the Hon. W. C. RIVES. It has been quite extensively disseminated, and where tried, we believe it has given excellent satisfaction. It flourishes well on any soil adapted to rye, and is noted for its great tillering propensity, as well as the length of straw and head, and the abundant yield. In Virginia it frequently yields 40 bushels to the acre.

Mr. KLOPPER, of Montgomery county, Md., in the Pat. Office Report for 1850, says his crop averaged from 5 to 6 feet high on thin land without any manure, though not sown till December, and scarcely visible till spring, and then retarded by a drouth. The yield, he adds, is much in proportion to the quality of the land. Mr. LEMUEL NORRIS, of Ashtabula co., O., speaking of this rye in a recent letter, remarks that he received a small sample by mail, in the fall of '52, which he sowed so late it was badly winter-killed, but of what lived and grew, he gathered over a quart. From two grains planted in August of last season, he this season gathered 202 well developed heads that were many of them seven inches in length, and averaged 75 grains to a head, making the product of 7,575 grains from one. He adds: "What I sowed in the field did not yield as well—it was sown too late and too thick. I think a half bushel seed to the acre enough, and that it should be sown in August, or even in July." The writer planted on the 28th of October last a small sample in a light sandy soil. Owing to cold weather coming on, it did not appear above ground till Nov. 20, and attained to only two leaves growth when winter really set in. The severe weather of the latter part of March killed two-thirds of it.—The balance grew well, stooled enough to perfect from four to a dozen heads from each root. The heads average 6½ to 7 inches; some measuring 8 inches, and containing from 70 to 100 grains in a head.

For those who desire a fall and winter feed for calves and sheep, this grain seems to be most desirable, the more so, as it will flourish on soils where it is often difficult to get clover and the ordinary grasses to catch. Besides, after being fed till late in the spring, it may be permitted, where desired, to go to seed, and a good crop thus secured. Or it may be turned under for corn, and the ground not injured, but rather benefited. T. E. W.

CLEAR out the dead furrows after sowing your wheat fields, and if the soil is of a retentive character see that ample drains are prepared and in order.

Communications.

ITEMS FROM ILLINOIS.

Editor Rural:—Thy correspondent H, from Kendall county, Ill., says his seed corn loses its vitality after one year. My experience is that all seeds do not vegetate here as surely and readily in the spring as in New York. In the summer, when the ground is warm and wet, they come up very quick. I have had many seeds fail here, and recommend a little extra care in planting, and to be sure and press the ground about the seeds.

Respecting the price of land, the same is true in this county only it has increased 100 per cent, and in some cases more, within eighteen months. The Galena Air-Line Railroad, from Chicago to the Mississippi, and the high price of grain, are the two principal causes.—Farms with a little improvement are worth $20 per acre, and wild land from $6 to $12. This is a very desirable place for farmers or mechanics. The soil is very fertile, the water good, the climate healthy and pleasant, access to market easy, and the land mostly high, slightly rolling prairie, with occasional groves of timber.

J. B. P., of Madison, Ohio, wants to know when to sow grass seed. I never failed having it take well when sown with oats in the spring; barley is called an excellent crop to seed with; have had excellent success sowing soon after harvest in the stubble, with slight dragging, or not at all. Sowed in this way, it will yield a crop of grass the next year.

I have attempted to protect peach blossoms by winding the limbs in the fall with strips of flannel, but without success; the buds start sooner in the spring for the process.

I should like to return my thanks to I. W. Briggs, of West Macedon, through the Rural, for sweet potato and apple squash seeds. The vines are doing finely—the apple squash is the best summer squash we ever eat.

The Rural is much liked here; think I can get quite a good sized club next winter.

Cortland Station, DeKalb Co., Ill., 6th mo. 20th, 1854. S. W. ARNOLD.

SMUT IN CORN.

Last spring I planted several varieties of corn in my garden, among them the Sweet Tuscarora and the large western corn. Not wishing them to mix, I planted each by itself so far as I could, and in strips, or hills, of two, three and four rows, often to twenty hills in length. Most of the hills ran N. N. W. and S. S. E. The season has been *very* warm, and, at times, very dry. I have observed an unusual amount of smut, *(ustedo segetum,)* on all the different kinds. It has appeared not only on the regular ears, but on the ends of the sucker-stalks, the lower sides of the main stalk, and on the joints both above and below the ears, even the uppermost, and in some instances, on the thicker portions of the leaf. Of the western, or native corn, scarce a hill could be found that was not more or less affected by it.

I record this for the benefit of one of your former correspondents, "Hiel," (I think it was,) who gave an explanation of the causes of smut; and respectfully ask him, (should this meet his eye,) whether it tends to confirm, or to confute, his theory. H.

CURE FOR HEAVES.

Take a lot of the weed commonly called *smart weed*, that grows along the roadside, or in the fields in low places; steep it in boiling water till the strength is all out, and give the horse one quart of the liquid every day for eight or ten days. Mix it with bran or shorts if he will eat it, if not, pour it down him with a bottle. Give him green or cut feed wet up with water during the operation, and I will warrant a cure. Horses with heaves will be troubled with it about as bad this dry and dusty weather, as they will in the spring of the year. This medicine is so simple, and easy to be obtained, that some may not think it worth their while to try it; but simple medicines many times prove more effectual than those obtained at a great expense. Now is the time to secure the weed, and I say to those interested, try it.

Harvey Rosecrantz.

West Kendall, August 21, 1854.

Rinoing Swine—Again.—I observe in the last Rural, (Sept. 2,) a short paragraph headed "A Substitute for Rioging Swine," which is said to consist in "simply shaving off with a razor or sharp knife the gristle on the top of the noses of young pigs."

I remember in my youth to have assisted to do this very thing, repeating the operation two or three times, on different litters of pigs, that the thing might be thoroughly tested, and I remember just as well, that it proved a failure in each instance.

If a man has a hard clay farm, I presume it would answer the purpose, especially in so dry a season as this; but any man, having a farm of good soil, will find it a failure if he tries it. His pigs will have his clover roots before said pigs are four months old.—B—n, *Henrietta, September*, 1854.

Agricultural Miscellany.

HIGH FARMING.

This is the term applied by Mr. Mechi, the distinguished English agriculturist, to the system of abundant labor and expensive manuring, with the consequent increase of crops and fine condition of the farm stock. The question is will it pay? That is a question which our farmers have to meet and settle some day. Mr. Mechi says it pays.—*Ex.*

Mr. Mechi's "balance sheet," however, does not say so. High farming, in the popular acceptation of the term, has hitherto proved the reverse of profitable in England. We assert, without fear of honest refutation, that Mr. Mechi, or any other English advocate of high farming, has never yet been able, by the use of artificial fertilizers, artificial foods, irrigation, or any other means, to raise wheat, with profit, at *one dollar per bushel*. Will those who are continually chiding us for not adopting the Mechi system of "high farming" ponder this fact? When we can afford to underdrain, to irrigate, to use guano, superphosphate, &c., to feed our oilcake to our own stock on the farm, we shall do so. American farmers are a reading, thinking, enterprising, wide-awake class of men, and when any system of agriculture can be shown to *pay* they will "go into it;" not till then.—Eds.

French Sheep.—Messrs. Hall & McAllister, of Gaines, N. Y., have recently purchased of Gustavus Austin, Orwell, Vt., forty full-blood French Merino sheep. About one-half of these were imported by J. A. Taintor, and the remainder bred by A. L. Bingham. Judging from what we saw of these sheep during a brief tarry at the depot in this city, we should pronounce them superior specimens of the French breed. They cost, we are assured, nearly $7,000—the prices varying from $150 to $500 each. We understand that a portion of this flock, together with a large number of French Merinos bred by Messrs. H. and McA., will be exhibited at the Wisconsin State Fair, where the owners propose to challenge "the whole world and the rest of mankind" in the line of French Merinos.

Michigan State Fair.—The sixth annual Fair of the Michigan Agricultural Society, will be held at Detroit, on the Jones and Cass farms, Sept. 26 to 29. The premiums to be awarded amount to $4,500. Exhibitors are to enter and arrange their articles on the 25th and 26th; the Judges make their examination on the 27th; the plowing match and annual address occur on the 28th; the reports of committees and election of officers, followed by a public sale of stock, will take place on the 29th, or last day. The several railroads and plank roads of the State, also the Great Western Railroad, will pass passengers and freight over these roads at reduced rates. The river boats have joined in this arrangement.

Ohio State Fair.—*Postponement.*—We gave the change of time in our list of fairs last week, and now add that, owing to the drouth, heat, health of the country, &c., it was thought best by the committee to delay the Fair until October 17th to 20th. The arrangements otherwise remain the same.

The Illinois State Fair has also been postponed. It will be held at Springfield the first week in October.

Importation of Short-horns.—From the Boston *Cultivator* of recent date, we learn that Messrs. Morris & Becar have received three fine cows from England. "Duchess 66th," is from the stock of the late Earl of Ducie, and $3,675 was paid for her. She is of medium size for the breed, and is almost perfection in the points aimed at by the leading breeders of Short-horns. "Oxford 6th" is from the same herd, and is a large animal, but of much fineness and symmetry. "Miss Bellville," about eighteen months old, was bred by Mr. Hopper, and is pronounced a decided acquisition.

Crops in Onondaga County.—The drouth in this town is very severe, more so than I have known it for many years. We have had no rain of any consequence during the last month, and no appearance of any at this time. This makes it extremely bad preparing the ground for sowing winter wheat. Many fields cannot be fitted for sowing till we have considerable rain. What little rain has fallen has not been equally distributed. Some farms have received a small supply from a passing cloud, while the next neighbor received none. Oneida Lake is now lower than I have known it for thirty years past. Our wheat that was not spring killed, was mostly destroyed by the midge; the best yields were seven or eight bushels an acre. The ears of corn are quite short, and not well filled. Potatoes as yet are of good quality, but small and few in a hill. Early sown oats, good quality and fair yield. Apples, very few. Hay very light. Pasture burnt up for want of rain.—A. E., *Cicero, Sept. 2, 1854.*

SUGGESTIONS FOR THE TIMES.

A severe drouth over a large portion of the country, has unfavorably affected the prospects of the farmer. In some places the hay crop was not large, owing to a lack of rain in the two past years, and these very places are now suffering most from the drouth of the present season. The grass is dried up, and unless its growth should soon be renewed by copious rains, the scanty stock of hay must be resorted to for the support of animals. Indian corn and root crops will also be more or less cut off.

It is an interesting inquiry with the farmer, how the evils which this state of things has brought upon him, can be to the greatest degree alleviated. The first suggestion we would offer in regard to this question, is the observance of the strictest economy in the use of all kinds of cattle food. By attention to this point much may be saved. The object should be to keep animals in just the right condition at the least expense. In the ordinary modes of feeding, much is wasted. Hay is pulled under foot or left in the manger and blown on till it is unfit to be eaten. Nearly all kinds of fodder can be fed out more economically by being passed through a cutting machine. The quantity required by each animal can be more exactly given, and mixtures of different kinds of food can frequently be made to advantage. Hay, straw, and corn fodder can be combined in any proportion, and if roots or meal are to be used, the mixing of the whole together will produce better results with the animals than if the articles are given separately. Experience in this manner of feeding, enables us to say that stock can be kept with the expenditure of only half the food that is sometimes given. It is true the labor required is somewhat more, but this is by no means an offset to the saving in hay and grain.

Another suggestion we would offer is, the sowing of rye this fall on such land as is adapted to that grain. It would be better to put in the seed before the middle of September, but should the dry weather prevent the preparation of the soil, the sowing may be deferred, even for a month longer. If the crop is got in early, and the autumn is favorable, it will afford feed on good land, for sheep and other light stock before winter, and if needed, can be pastured next spring. Or it can be cut for animals as soon as it is high enough. Either as fodder or for grain, it is the first crop that can be made available. The farmer can have the grain ground into meal, to support either himself or his animals, in July, which is several months sooner than Indian corn can be used in the same way.

Another, and perhaps the most important suggestion is, that under the liability to drouth which belongs to so many portions of this country, attention should be directed to securing supplies of water to be used in irrigation. This is a very essential aid to agriculture, but it is almost entirely neglected by our farmers. In hilly and mountainous neighborhoods, a little expense would supply unfailing quantities of water. Reservoirs might be made in situations from which it could be conveyed to the land occupied by crops. In more level districts, the surplus rain-water, which now carries to the ocean the elements of fertility, may be saved in clay-bottomed basins, and conveyed to the thirsty crops.

We are not prepared to say what would be the cheapest and best means of effecting the object alluded to, under various circumstances; but we are convinced that it is a subject which demands attention. We are glad to know, that at least one gentleman in this section who is much interested in the improvement of agriculture, and who has abundant means, is about to commence some trials in irrigation, which will probably settle many questions of importance touching the successful application of machinery for this purpose.—*Boston Cultivator.*

Carriage of Eggs.—It may be interesting to some of our readers to know of an attempt to send eggs from here to America to be hatched there; and as it has been pretty successful, it may induce others to try the same mode of procuring poultry of the finer breeds. By one of the New York steamers, which left here in the end of April, I sent a box containing 61 eggs of different selected breeds; they were 12 or 13 days in reaching New York, and on being landed they were sent on 80 miles further by steamboat, and were placed under hens on the following day. Of the number sent four were broken on the journey, and of the remainder one-half were hatched and were alive on the 26th of June—the date of my last communication—a very good result considering both time and distance, especially as all but one dozen had been brought to Liverpool by railway. *D. J. in London Agricultural Gazette.*

Harvesting Corn.—After making trial in three ways, viz., topping the corn; cutting it up at the ground and shocking; and leaving it untouched until the leaves and stems were dead; we have come to the conclusion that the best way is—both in point of economy and convenience—to top the corn when the spindle and a little of the stem below it is dry, and leave the remainder in the field, no matter, if the weather is moderate, if until into November; the grain will not hurt. In topping the corn the grain is undoubtedly diminished; but the quality of the fodder will make up for this, and all the labor of harvesting the crop in this way is greatly more convenient and pleasant.—*N. E. Farmer.*

Damage Done by Caterpillars, &c.—It is estimated by the most experienced agriculturists in the country that the span worm and caterpillar damage our crops to the amount of $100,000,000 annually. More damage is done by these insects to America than all the combined armies and navies of Europe could from April to November. The damage committed in France in one year upon wheat, grapes and potatoes, by these insects, is estimated as greater than that which would pay for Napoleon's campaign to Moscow.—*Maine Farmer.*

HEREDITARY DISEASE IN HORSES' FEET.

Most persons acquainted with the feet of horses will recognize their strong tendency to disease arising from faulty formation. Sometimes the hoofs are disproportionate to the frame—they may be too small, without sufficient base to support the superincumbent weight—rendering the foot insecure; or too large and unwieldly, rendering the action slow and awkward. At other times the crust of the hoof is naturally weak, arising from a faulty secretion of horn. Such hoofs are generally uneven, indented, and wrinkled, and have invariably flattened soles, with a disposition to become *pumiced*. Again, we occasionally find the crust morbidly dry and brittle, arising from the absence of that peculiar tough and elastic horny material which consolidates and binds, in perfectly formed hoofs, the longitudinal fibres of the crust together. Feet of this character are particularly disposed to *sand cracks*. All these defects we have been describing in horses' feet, are found to exist not only in different but in the same breed, and are most certainly propagated in breeding.

The Navicular Disease is another striking example of hereditary disease to which horses are liable, arising from peculiarity of structure. Those most disposed to it have slender bodies, low action, strong upright hoofs, narrow heels, and great concavity of soles. Lameness is soon produced in horses of this description, when the hereditary tendency exists, from exciting agents of various kinds, such as exposure to heated, fermented litter, imperfect shoeing, hot roadwork; whilst animals free of this hereditary proclivity are capable of withstanding all these influences.

The contraction usually seen in diseased feet of this kind is perhaps more commonly the consequence than the cause of lameness; but sometimes it may act as a predisposing agent—the former in cases when inflammation precedes the contraction, the latter when a manifest alteration in the form of the foot precedes the lameness. Hence, breeders should at all times look with very considerable suspicion on a stallion exhibiting narrow, contracted, upright hoofs; for although we may occasionally observe old horses, having contracted feet and otherwise out of shape, performing their work without lameness, yet such horses should be invariably avoided in breeding.

Mr. Thomas Turner, V. S., Croydon, related an interesting case respecting the hereditary nature of the navicular disease, at a meeting of the Veterinary Medical Association, well worth mentioning here—that of a colt bred by himself, which became lame from this disease at four years old. Both the sire and dam of the colt had narrow, contracted feet; and the mare becoming unfitted for work, was destroyed.—On dissecting the foot which exhibited the greatest amount of disease, he discovered a hole in the navicular bone, and, strange as it may appear, the colt's lameness existed in the corresponding foot; and, what appears still more curious, the dam had a rat-tail, and the colt had a fac-simile of it.

In the examples given we have positive evidence of diseased action arising from peculiarity of structure, and transmissible by descent. The breeder may learn a useful lesson from them—that, in selecting horses to breed from, it is not enough to direct his attention to pedigree chiefly, but should be also guided in his judgment by external conformation. The animal machine may be put in motion by the noblest blood; but unless every bone has its just proportion, every muscle its proper pulley, and every lever its due length and arrangement, the motion can never be accurate, vigorous, and durable.—*London Farmers' Magazine.*

Animated Oats—*(Avena Sensitiva.)*—This grain resembles in its general appearance and modes of growth, the common field oats, but it is distinguished from most cultivated plants, by its extreme sensitiveness to atmospheric changes. It seems, indeed, almost to possess a nervous power, and exhibits many phenomena, for some of which it is by no means easy to account. "The seeds," says one, "are covered with a stiff down, and have appendages like the legs of some insect, with apparent joints. They are affected by the changes of the weather, and of course, are continually moving. If they be wet they will turn over several times and twist about. If wet, and held to a lighted lamp, they exhibit such motions of apparent agony as an insect would, if placed in a like situation—*Ger. Telegraph.*

Prolific Ear of Wheat.—Wm. Story, of the Abdy Farm, near Wath, bet a wager of five guineas with a farmer in the neighborhood of Rotherham, that he could produce an ear of wheat with 110 marketable corns, to be shown at the Crown Inn, Rotherham, on Monday the 14th inst. A gentleman was appointed by each party to count the corns, and Mr. Dyson, of Tinsley, was the umpire to decide the quality of the grain. The ear was produced, and 114 corns rubbed out of it. Mr. Dyson decided that three of the corns were not marketable, but declared 111 to be good and perfect corns; consequently, Mr. Story won his wager.

The Wheat Weevil.—A practical agriculturist recommends farmers who desire to rid themselves of the weevil, to apply one pound of salt to every two bushels of wheat in the bin. He says he has seen the experiment tried, and hence vouches for its success.

Leather for Manure.—Old boots and shoes, and old harness and shoe-shop scraps, are first rate manure. They may be eaten up in ashes or lye, or added to the compost heap, or chopped fine and plowed in the soil. Old woolen rags and scraps of wool, hair, skins, all should be treated in the same way.

Signs of Health in Sheep are, a skittish brightness, clear azure eye, florid, ruddy eye-strings and gums, teeth fast, breath sweet, nose and eyes dry, respiration free and regular, feet cool, drag substantial, wool fast and unbroken, skin of fine florid red, particularly on the brisket.—*Lawrence on Cattle.*

Domestic Economy.

Utility of Tea.—In the life of most persons a period arrives when the stomach no longer digests enough of the ordinary elements of food to make up for the natural daily waste of the bodily substance. The size and weight of the body, therefore, begins to diminish more or less perceptibly. At this period tea comes in as a medicine to arrest the waste, to keep the body from falling away so fast, and thus enable the less energetic powers of digestion still to supply as much as is needed to repair the wear and tear of the solid tissues. No wonder, therefore, that tea should be a favorite, on the one hand, with the poor, whose supply of substantial food is scanty, and, on the other, with the aged and infirm, especially of the feebler sex, whose powers of digestion and whose bodily substance have together begun to fail. Nor is it surprising that the aged female, who has barely enough of weekly income to buy what are called the common necessaries of life, should yet spend a portion of her small gains in purchasing her ounce of tea. She can live quite as well on less common food, when she takes her tea along with it; while she feels lighter at the same time, more cheerful, and fitter for her work, because of the indulgence.—*Chemistry of Common Life.*

To Clarify Sugar for Preserves.—Put a half pint of water to every pound of sugar.—Stir it well together, and put in the beaten white of an egg. Five whites will do for a dozen pounds of sugar. Stir all together thoroughly, and let it boil. When it rises towards the top of the kettle, put in a spoonful or two of water, and let it boil up again. Repeat the process two or three times, and then set the kettle aside. After fifteen minutes, take the scum very carefully from the top, and pour off the syrup so gently as not to disturb the sediment. Have the kettle washed, and return the syrup and add the fruit. Some persons always strain the syrup through a flannel bag, but if the above directions are observed it is not necessary. To use a flannel bag, always wring it every day in hot water. This prevents a waste of the article strained.—*Ex.*

Would it not be cheaper to purchase good lump sugar that needs no clarifying?—Eds.

Potted Butter.—The following is Mr. Ballentine's recipe:—The butter is taken warm from the churn, and it is an invariable rule never to work it or dip it into water when intended to be salted. The dairymaid puts it into a clean tub, previously well rinsed with cold water, and then works it with cool hands till the milk is thoroughly squeezed out. Half the allowed quantity of salt is then added, and well mixed up with the butter, and in this state it is allowed to stand till the next morning, when it is again brought up, any brine squeezed out, and the remainder of the salt added.—It is then potted in kits, which, when full, should be well covered and placed in a cool, dry stove. A small quantity of salt is usually sprinkled on the surface. The quantity of salt used is half a pound to 14 lbs. of butter.—*Quarterly Journal of Agriculture.*

Beets.—No knife should ever touch a beet previous to boiling; rub the leaves off by hand, for if there is a wound made in the beet, the best of its juices will be lost in boiling. Drop the beets into boiling water, with a handful of salt. Most cooks take beets from the boiling kettle, and place them in cold water for the ease with which the skin peels off. This should never be done, as they part with one-half their flavor. When taken from the pot, let them drain, then peel and slice them, butter, pepper and salt them, or pour good vinegar over them, which many prefer.

Egg Cream.—To the yolks of three eggs, and a dessert spoonful of good new milk, or cream, add two drops of oil of cinnamon. This is a very nourishing mixture. The oil of cinnamon is cordial and tonic, and the above has been recommended in long complaints, where respiration has been attended with pain, and a dry cough, especially after eating, or exercise. It is also excellent in cases of hectic towards the evening, and of profuse night sweats.

Cheap Carpeting.—Sew together strips of the cheapest cotton cloth, of the size of the room and tack the edges to the floor. Then paper the cloth with any sort of room paper. After being well dried give it two coats of varnish and your carpet is completed. It can be washed like carpets without injury, retains its gloss, and on chambers or sleeping rooms where it will not meet rough usage, it will last two years as good as new.

To make Junket.—To every quart of milk—just drawn and warm from the cow—stir in one table-spoonful of rennet, and let the whole stand fifteen minutes. If the rennet is of proper strength, the milk will in that time be curdled, when a little nutmeg may be sifted over it, and the whole sweetened with maple, or common sugar. Junket is a fine dish for an evening meal, though rarely well prepared.

Valuable Application.—From wounds received from old nails, or cuts occasioned by broken glass, peach tree leaves, well steeped, and applied to the wound, will give immediate relief. By thickening the liquid from which the leaves have been taken, it will keep moist for hours. In case the leaves cannot be obtained, a tea made of twigs of the peach tree, thickened, will do as well.

Cauliflower and Brocoli.—The flower heads of these delicious vegetables may be cooked like the cabbage, or asparagus. They should be dropped in fair boiling water, taking care not to let them boil too long, as the buds will drop off. Season with butter, pepper and salt, with the addition of a little white wine.

Orchard and Garden.

POMOLOGICAL GOSSIP.

NO. IV.—GRAPES.—CONCLUDING REMARKS.

Grapes.—This valuable fruit does not receive a moiety of the attention which it merits. Whether this is on account of the supposed difficulties in the way of its culture, or from negligence alone, I am at a loss to determine. I know that most writers in treating on Grape Culture, prescribe a course of treatment which would appear difficult to most persons, yet there is no more difficulty in growing a grape vine than in growing a hill of melons—only that the same process requires to be repeated from year to year. We should not expect a very good crop of melons if the seeds were planted in a grass plot, or if the plants were overrun with weeds. So with the grape. It requires a good, deep and dry soil—entirely free from *stagnant moisture*. *Water* will not injure it, nor *soap suds* either, but the soil must be such as to allow the *surplus* to pass off freely.

If the vine is not planted where the land about it is plowed annually, the surface should be either *mulched* or *spaded* five or six feet around it every spring, (it will take about ten minutes to do either,) and hoed two or three times during the summer. With such treatment they will usually bear abundantly the third or fourth year from the cutting.

They may be trained on almost any kind of trellis, but succeed best trained on the south or east side of a barn or other out-building. They may be fastened with bits of leather and common carpet tacks.

Sometimes a severe frost will kill all the buds on a vine—(such occurrences are rare, however)—it then must start from the root again, which sets it back a year or two. To obviate this, and also to *make sure of pruning* my vines, I loosen them from the trellis, or building, about the first of December, and at the same time prune off the side shoots to within two or three buds of the main branches,—cut them an inch or so above the bud so that it will not be injured by drying—and cut about one-third of that season's growth from the ends of the main shoots, then simply let them lie on the ground until April, when they should be replaced upon the trellis. In this way two important objects—pruning and protection—are accomplished in a short space of time.

They are easily propagated from cuttings.—The branches which are pruned off may be cut into pieces of three buds each, and thrown upon the ground in some dry place, and either covered with earth or straw. This will preserve them in a good condition until May, when they should be set out in some sandy or loamy soil, at an angle of about 45°, leaving the top bud just even with the surface. The soil should be frequently stirred around them during the summer. The next spring they may be set out.

The *Isabella* is the only really good variety which can be successfully cultivated in this latitude (43°). The *Catawba* will sometimes ripen here, but is very liable to be injured by frost. The *Clinton* is an early variety of fair quality. It ripens about two weeks earlier than the *Isabella*, which is its greatest merit. One vine of that and one of the *Catawba*, with a liberal supply of *Isabellas*, would pay in every farmer's garden.

In conclusion allow me to urge upon every farmer the importance of devoting some portion of his time and attention to the cultivation of the various kinds of fruit, and also the importance of placing such embellishments, in the shape of ornamental trees, shrubs, &c., around his home as shall increase its attractions and delights. Life, at best, is beset with difficulties and perplexities. The selfish passions of men, always active, constantly embitter the path of active life. It is only at home, in the bosom of our own family, that we may reasonably seek for unalloyed happiness.

Many farmers, who are in independent circumstances, toil from "morn till night," day after day, as though their very existence depended upon their exertions. They may have an object in view—to secure a competence for their children—but, in a great majority of cases, it is a thankless task. Give your children a good education and lead them to love home by rendering it attractive—inspire their hearts with a love for the "beautiful and the good," by mingling them with the associations of their childhood—and they will pass through life far happier and far more respected than wealth alone, with all its influence, can possibly make them.

American farmers have often, and with reason, been reproached by foreigners for their devotion to the acquisition of wealth, and with a lack of taste. We see many fine farmers' houses it is true, but a majority of them are set within a few feet of the highway, and without a tree or shrub to enliven the prospect.—This is a serious and universal fault,—let us set ourselves about correcting it without delay.

R. B. W.

GARDENING FOR THE YOUNG.

We commend the following beautiful remarks from a valued correspondent, to the attention of parents and guardians:

The absorbing pleasures of a garden offer a natural and readily appreciated attraction to the young, and I am convinced from much experience, that no other pursuit will operate so favorably on the youthful mind, as the culture of flowers. Nature has implanted in every infant an innate love of flowers, and it is the bounden duty of all who are entrusted with the responsible duty of educating and developing the infant faculties, taste and propensities, to guide and direct them to such pursuits as are most likely to refine and improve them. What other pursuit, I would ask, is so entirely guileless and unalloyed; and what is there, I ask, in the whole range of creation, so perfectly in harmony with the untainted and pure mind of the child, fresh from the hand of its Creator, as the enjoyment of his most charming, as it is his purest handiwork, as displayed in a flower garden. Teach then, the child to till and cultivate flowers—they will assuredly win their own way to its affections, and you lay the foundation of a love for the sweetest and purest of all earthly pursuits, which in after life, when the allurements of the wicked world are gathered around him, will win him from and shelter him against their blandishments.—I can say with perfect truth, that the happiest hours I have ever spent in a long and varied life, has been in the society of my flower garden, and it has this additional advantage, that while many of the gaities and pleasures which fascinate us in early life, cease to please in the decline of life, the flower garden loses not one jot of its fascination to our latest hour.

The Orange Watermelon.—This new melon has been grown very successfully the present season by L. W. Briggs, of West Macedon, N. Y. A large specimen was placed before us last week, and on trial we found it a first rate article. Its great peculiarity is that the rind is easily separated from the pulp, peeling off like that of an orange. Our correspondent who inquires where seed can be had, may probably obtain it of Mr. Briggs.

PROPAGATION OF THE HOLLYHOCK.

We know of but three modes of propagating the hollyhock—1, by seed; 2, by cuttings; and 3, by dividing the roots. The first mode has been already discussed; it remains for us to consider the two latter. Propagation by cuttings is the best mode of obtaining good plants, and the practice may be carried on from March to October. Most of the old plants give no abundance of young shoots early in the spring; and so soon as these become a little hard, they may be cut off close to the stem, leaving about three of the best shoots for flower-spikes. Place three or four cuttings round a five-inch pot, in a rather light sandy soil. Plunge them in a close frame, where, in a few weeks, they will have formed new leaves and roots, and may be potted off, each in a separate four-inch pot. As fresh shoots form on the old plants, they may be treated similarly, up to midsummer, after which period we would prefer leaving the wood to become hard before making the cuttings. In the latter case a single eye is sufficient to make a plant; but the wood-shoots, and not the flower-shoots, should be chosen. It sometimes happens that the eyes developed at the base of a spike produce wood-shoots, but they more usually produce flower-shoots. The latter take root and form plants, but are not of the best description. Cuttings made from single eyes may be completely buried beneath the soil, leaving the foot-stalk only protruding above; they should then be placed in a close frame, if with bottom heat so much the better, and the eyes quickly push through the soil, and form stout healthy plants. These, when rooted, may also be transferred to single pots, there to await transplution in autumn or spring, as before recommended.

Propagation by division is best carried out in autumn, immediately after the flowering is over. A large, well-ordered plant may sometimes be divided into several, but in general three or four is a more advantageous number. Nothing, certainly, is gained by breaking the old plants into too many pieces; every separate part should carry with it a good share of roots. Seedlings and others that may bloom late, cannot be divided till the spring. March is, perhaps, the best time, and if not broken too fine, will flower well during the first autumn.—*Hovey's Magazine.*

Striking Cuttings.—The following are half a dozen general rules relative to the selection and preparation of slips or cuttings. 1st, Let all slips be cut off as near a joint as possible without injuring it. 2d, For autumn or winter make choice of well-ripened or firm wood. 3d, In spring or summer half-ripened young shoots are best, as they strike quicker than old wood. 4th, All succulents, such as Cactuses, Geraniums, &c., should remain a few days to dry, until their wounds are closed up, before they are potted. 5th, Never allow cuttings to remain in water; if they cannot be planted immediately, lay the ends in moist sand. 6th, In winter or summer always let a few of the leaves remain on evergreens.—*Gard's Chronicle.*

Tying down Buds.—Last season I noticed that some of the buds I had set commenced growing. As an experiment (with me) I tied down the buds that had started by passing some matting around the stock and directly over the growing buds. This stopped their growth. This spring they started equally as well as those that did not start prematurely.—This season (rather early) I inserted six buds of the Queen of the Prairie rose into one stock of another rose; they all commenced to grow. I tied down five of the buds, as above; these from pressure remain dormant, while the one not tied has grown some six or seven inches.—E. W. Smith, in *N. E. Farmer.*

OPERATIONS FOR SEPTEMBER.

Fixing Budding as early in the month as possible. Look over the stocks that have been budded, and fill up where buds are wanting, provided the stocks are in a suitable condition. The tyings must be attended to or they may cut into the stock.

We have noticed an article in some of the papers recommending that the tyings be left on during winter as a protection to the buds. We prefer to leave the buds without this protection, for it oftener proves injurious to both bud and stock than beneficial; the strings become saturated with water, which causes the bark of the stock to rot. We know that injury is not always the result of this practice, but it so often occurs when the experiment is tried, that we think it much safer to cut the strings in the fall and let them drop off.—Strawberry beds may continue to be made for a short time. Trench the beds, and select the strongest runners for planting. Tulip and other hardy bulbs that have been lifted, should be planted this month.

Roses intended for the house should be potted.

Soon after the frost has killed the Dahlias, let the tops be cut off to within about a foot of the ground; upon this stump fasten the label with copper wire, then with a digging fork raise the roots carefully to stop them from growing or throwing up new shoots; let them remain in place for a few days, and then take them to their winter quarters.—*Farmer's Companion.*

Horticultural Advertisements.

200 BUSHELS PEACH STONES WANTED,

At the Mt. Hope Nurseries, Mt. Hope Avenue, Rochester, N. Y., for which the highest market price will be paid in cash. [245-51] ELLWANGER & BARRY.

FRUIT AND ORNAMENTAL TREES,

150,000 Apple Seedlings, two years old, and good size.
35,000 *Extra size* Dwarf Pear trees from one to four years old, a very large portion of them White Doyenne or Virgalieu.
2,000 Horse Chestnut trees, 7 to 9 feet high.
500 Mountain Ash, from 9 to 14 ft. high; with the usual stock of other trees, for sale at Walworth, Wayne Co., N.Y.
T. G. YEOMANS.

Also for sale, 3 very fine full blooded Suffolk Boar Pigs, four months old; 2 half blooded do., same age—price $10 to $20. 245-3t T. G. Y.

FRUIT AND ORNAMENTAL TREES!

T. C. MAXWELL & BROS., are happy to announce a very large and very desirable stock of Fruit and Ornamental Trees, &c., for fall trade, embracing
75,000 Apple Trees—thrifty and stocky.
15,000 Standard Pear Trees, 2 and 3 years old, healthy and fine.
25,000 Dwarf do. do. do. do.
25,000 Cherry Trees—very fine.
11,000 Peach do., one year from bud.
6,000 Apricot, Quince and Plum Trees.
Calhoon's, Mammoth and other kinds Pie Plant. Also, a good variety of the smaller fruits.
1,000 Horse Chestnut Trees, 6 to 10 feet high.
5,000 Mountain Ash Trees, 6 to 10 feet high—cheap.
6,000 Balsam Fir Trees, 1 to 6 feet high—very fine.
1,000 Red Cedar Trees, 1 to 6 do. do.
Also, Norway Spruce, Hemlock Spruce, Maples, Basswood, European Lime, &c., &c.
100,000 American Arbor Vitæ, 6 to 30 inches. About 25,000 of these have grown two years in the Nursery, and are very bushy and fine;—*all are very finely rooted.* Osage Orange for Hedges, &c., &c.
The above trees were all grown on clay and gravel loams,—the best of all soils for the growth of thrifty and healthy trees.
☞ Orders promptly attended to. Packing done in the most careful and skillful manner.
Old Castle Nurseries, Geneva, Ontario Co., N. Y., Sept. 9, 1854. } 146-6t.

WALWORTH NURSERY,—CATALOGUE.

HAVING been many years engaged in the Nursery business, being located in one of the best fruit growing districts of the United States, and having planted

Extensive Orchards, Embracing over 7,000 Trees!

Many of which are in bearing, I am enabled to test for myself and satisfy others of the relative value of the numerous varieties of fruits grown; I feel prepared therefore to furnish Trees, in large or small quantities, of such varieties as careful experience has shown to be the most profitable, rejecting a very large portion of those that fill up the long list in many Nursery Catalogues of the present day.

Apples.—I have grown some sixty sorts, but I now propagate mostly some five leading market sorts, (with a choice but limited supply of earlier fruit,) viz; Roxbury Russet, Esopus Spitzenberg, Rhode Island Greening, Northern Spy, and Baldwin, of which my orchards embrace 2,000 trees.

Pears.—Over seventy sorts have been grown by me, of which I reject about two-thirds—cultivating now principally on the Angiers Quince Stock, and of the following varieties, with a few other sorts in small quantities:—White Doyenne, Duchess de Angouleme, Bartlet, Louise Bonne de Jersey, Beurre Bird, Vicar of Winkfield, Easter Beurre, Glout Morceau, Madeline, Bloodgood, Lawrence, Dix, Flemish Beauty, Onondaga, Seckel.
My Pear Orchard consists of over 3,300 trees, 2,800 of which are White Doyenne. My stock of Nursery Pear Trees, consists of about 20,000 trees.

Peaches.—I have cultivated and tested more than fifty sorts of Peaches; and now cultivate only about fifteen of the best, and principally of the following sorts:—Early Purple, Alberge, Orange Cling, Crawford's Early Malecoton, Crawford's Late do., Coolidge's Favorite, Sweet Water, Early York, Red Cheek Malecoton, Free Apple, Old Mixon Free Stone, Wells' Free. I propagate from 10,000 to 40,000 a year.

Cherries.—May Bigarreau, Knight's Early Black, Black Eagle, Black Tartarian, Elton, Yellow Spanish, Napoleon Bigarreau, Transparent Guigne, Black Heart, Butner's Yellow, Bigarreau de Mezel.

Also:—Apricots, Grapes, Currants, Gooseberries, Raspberries, Strawberries, Apple Seedlings, Quinces, Norway Spruce, Mountain Ash, Silver Maples, European and Hungarian Balsam Fir, Horse Chestnut, Chinese and American Arborvitæ, Austrian Pine and other European Evergreens.
I propose to sell my trees at the very lowest rates, and especially low in large quantities. Buds, Scions, and Peach Stones, furnished in their season.
☞ All orders and post-paid communications will receive prompt attention. No charge for carrying packages to the Railroad. T. G. YEOMANS.
Walworth, Wayne Co., N. Y., 1854. 245-3t

SYRACUSE NURSERIES, SYRACUSE, N. Y.

THE Subscribers would most respectfully call the attention of Nurserymen, Fruit Growers, Venders, &c., to their *very large* Stock of Fruit and Ornamental Trees, which they offer for sale the coming fall and spring.
We are issuing from the press—
No. 2, A New Fruit Catalogue, which, with
No. 3, Containing the Ornamental Department, and
No. 4, The Green-house Department, will be forwarded to all pre-paid applications, enclosing a *one cent* stamp for each.
Also, a *New Wholesale* Trade List, for persons wishing to trade by the quantity.
A fresh importation of the *very best Dutch Bulbous Roots*, from Haarlem, in Holland, will be ready for delivery in September. Young trees of the following new Pears can be had of us this fall—price $1 each.
That splendid, large, early, melting pear, the *true Hosen-Birnlein*, coming in after the *Madeleine*, equalling nearly in all respects the *Virgalieu*, and *more* valuable than any other early pear.
Also, those splendid, luscious, fall pears, the *Des Nonnes* and *Beurre Charron*, first brought to notice by ourselves. These two pears much surpass the *Seckel* in size, while they fully rival it in their rich aroma, and possess the melting lusciousness of the *Belle Lucrative*.
Also, *Beurre Clairgeau* and *Kossuth*, with that fine winter pear *Beurre Bachelier*.
THORP, SMITH, HANCHETT & CO.
Syracuse, N. Y., July 18, 1854. 238-7teow

ONE HUNDRED BUSHELS OF PEACH, CHERRY, and Plum Stones, wanted at the Rochester Seed Store, for which cash will be paid, by JAMES P. FOGG,
240-eow 4t Opposite the Arcade.

Mechanic Arts, &c.

LIST OF PATENT CLAIMS

Issued from the United States Patent Office,

For the week ending August 29, 1854.

Robt. M. Ahbe, Thompsonville, Conn., improvement in hog pens.

Wm. T. Bozemore, county of Bibb, Ga., improvement in cultivators.

Wm. Biddle, Lafayette, Ind., improvement in washing machines.

Gardiner A. Bruce, Mechanicsburg, Ill., improvement in maize harvesters.

Lebbeus Brudis, Great Falls, N. H., improvement in spirit levels.

E. W. Bullard, Hardwick, Mass., improved window blind holder.

Julius C. Dickey, Sandy Hill, N. Y., improvement in fastening skirts to saddle trees.

Isaac B. Dudley, Athens, Ohio, stave machine.

Isaac B. Dudley, Athens, Ohio, improved stave machine.

O. G. Ewings, Heart Prairie, Wisconsin, improvement in plows.

Joseph W. Fawkes, Christiana, Pa., improvement in manure and lime spreaders.

Richard Fanning, Clarksfield, Ohio, improved method of guiding cross cut saws.

Joseph F. Flanders and Jeremiah A. Marden, Newburyport, Mass., improvements in leather splitting machines.

J. T. Forbes, Cobourg, Canada West, improvement in bedsteads for invalids. Patented in Canada, Feb. 2, 1854.

Nelson Gates, Cincinnati, Ohio, improvement in cast hinges.

John Gleason, Northfield, Vt., improvement in slide valves for steam engines.

Daniel Haywards, Providence, R. I., improvement in manufacture of India rubber.

Samuel M. Huckman, Tunnbrook, Va., improvement in seed planters.

Abraham R. Hursh, Harrisburg, Pa., improvement in manure excarators.

John H. King, Jr., Georgetown, D. C., improvement in seed planters.

C. R. Landman, New York, N. Y., improvement in lamp-fillers.

Ezra Hommedieu, Chester, Conn., improvement in dies for making augers.

John G. McCauley, Stonebridge, Va., improvement in harrows.

John B. Nichols, Lynn, Mass., improvement in binding folder.

Whitman Price, Goldsborough, N. C., improvement in plows for planting potatoes.

Wm. Rellick, Uniontown, Pa., improvement in seed-planters.

Titus H. Russell, Tuftsville, Vt., improved saw-mill dogs.

R. L. Sibbel, Shippensburg, Pa., improved method of tenoning spokes.

Andrew J. Smith, Piqua, Ohio, improvement in corn shellers.

Joseph C. Strode, Westchester, Pa., puppet valves for hydraulic rams.

Joshua Stevens, Chicopee Falls, Mass, improvement in chairs for exercising.

Elisha Waters, Troy, N. Y., improvement in breast cups.

Noah Warlick, Lafayette, Ala., improved horse shoeing apparatus.

Chas. P. S. Wardwell, Lake Village, N. H., improved machine for cutting tenons.

Joseph D. West, New York, N. Y., improved hydraulic ram.

Jesse Whitehead, Manchester, Va., improvement in crimper twist speeders.

John Wanlton, Boonton, N. J., improvement in nail machines.

Daniel Halliday, Ellington, Conn., improved governor for windmills.

Thomas C. Vice, Rochester, N. Y., method of furling and unfurling windmill sails.

Sidney S. Turner, Westborough, Mass., assignor to Elmer Townsend, Boston, Mass., improvement in sewing machines.

Philemon A. Morley, Brooklyn, N. Y., assignor to James Bright, of Bronklyn, aforesaid, improvement in glass lanterns.

Dexter H. Chamberlain, Boston, Mass., assignor to Wm. H. Mesbural, New Haven, Conn., improvement in lard lamps.

James F. Crowell, Salem, Mass., assignor to himself, Edmund Smith, and Charles T. Stickney, of Salem, aforesaid, machine for dressing ship timbers.

Thomas Worrall, Mount Holly, N. Y., assignor to Mifflin Paul, of Mount Holly, aforesaid, multiform moulding plane.

CINCINNATI STEAM FIRE ENGINE.

Mr. Dyke, one of the English Commissioners to the New York Industrial Exhibition gives, in his Report, the following account of a trial he and Professor Wilson witnessed, of the Steam Fire Engine in Cincinnati. After stating that the Engine, which costs rather more than £2,000, ($10,000) and weighs between 5 and 6 tons, throws 84,000 gallons in an hour, he says:

"On reaching the station we satisfied ourselves that there was no fire in the engine, and that the water in the boiler was cold. On the order being given to proceed to a particular point, the light was applied to the grate always kept ready filled with very combustible materials, the horses were harnessed, and the engine left the house in 3½ minutes after the supposed fire was announced. It reached the spot indicated, more than 1,450 feet distant from the engine-house, in 2¾ minutes, and in 6½ minutes from the first announcement the horses were uncoupled, and the engine placed over the supply-cistern. In 8½ minutes the steam-guage was at 35, and the pumps self-feeding. In 9 minutes a hose was affixed, and the reel despatched in 9½ minutes to about 100 feet distant from the engine, during which time a second hose was being fixed and laid out. In 12 minutes water was issuing from one hose, and in 12½ minutes from both. In 13 minutes the jet of water reached 100 feet from the nozzle first applied, one inch in diameter, and from that time a large body of water was pouring forth. In 17 minutes the supply was strong enough to rise about 60 feet in height. In 28 minutes it was playing over a moderate-sized house. In 33 minutes all six nozzles were in use. In 38 minutes the issue of water was stopped, that the capability of supplying steam jets might be shown. In 39½ minutes a very powerful blast of steam was issuing. We were informed that the engine had on two or three occasions played six hours continuously, and once 12 hours, and we were given to understand that it had thrown water 230 feet—a statement we could believe from the power exhibited, and which was shown by directing the steam against a heavy cart standing empty in the street, and which was driven by it nearly 100 feet."

EFFECT OF OCCUPATION ON HEALTH.

It has oftentimes been asserted that those exposed to severe labor in the open atmosphere, were the least subject to sickness. This has been proven a fallacy by Mr. Finlaison, Actuary of the National Debt Office in London. Of persons engaged at heavy labor in out-door exposure, the per centage of sickness in the year is 28.05. Of those engaged at heavy labor in-doors, such as blacksmiths, &c., the per centage of sickness is 26.54—not much difference to be sure; but of those engaged at light occupations in-doors and out, the per centage of sickness is only 20.80.—21.58. For every three cases of sickness in those engaged in light labor, there are four cases among those whose lot is heavy labor. The mortality, however, is greatest among those engaged in light toil, and in-door labor is less favorable to longevity, than laboring in the open atmosphere. It is established clearly, however, Mr. Finlaison says, "that the quantum of sickness annually falling to the lot of man, is in direct proportion to demands on his muscular power." How true this makes the assertion, "Every inventor who abridges labor and relieves man from the drudgery of severe toil, is a benefactor of his race." There were many who looked upon labor-saving machines as great evils, because they supplanted the hand-toil of many operatives. We have helped to cure the laboring and toiling classes of such absurd notions. A more enlightened spirit is now abroad, for all experience proves that labor-saving machines do not destroy the occupations of men, but merely change them. Man is relieved from drudgery by the iron sinews of the machine, and his own ore left to more more lightly and free in pursuing avocations demanding less physical but more mental and noble exertion.—*Scientific American.*

THE GREATEST STEAMER IN THE WORLD.

The immense screw and paddle steamer, building by Scott Russell, at Millwall, England, for the Eastern Steam Navigation Company, is to be completed in twelve months. Her keel has been laid down, and several of her bulkheads, or compartments, are raised, and the works are proceeding with energy and expedition. A railroad has been laid down the entire length of her way, to facilitate the conveyance of the materials from the factory to the different parts of the vessel. The exact dimensions of the ship are as follows: Tonnage, builder's measurement, 22,000 tons; tonnage burthen, 10,000 tons; extreme length, 680 feet; extreme breadth, 83 feet; extreme depth, 58 feet; power of engines (screw paddle), 2,600 horse.—Her engines are in the course of construction, and will be fitted in the vessel before she is floated off. The hull will be entirely of iron, and of more than usual strength, the magnitude of her size enabling Mr. Brunel, the architect, to introduce many precautionary measures conducive to support and security. From her keel up to six feet above the water line, is double, of a cellular construction. The upper deck will also be strengthened on the same principle, and will form a complete beam, similar to the tube of the Britannia Bridge, so that any external injury will not affect the tightness or the safety of the ship. She is divided into two separate water-tight compartments, each being sixty feet in length, enabling her to take out sufficient fuel for a voyage to Australia and back to England, without stopping.

A New Sheet Metal Tubing Machine.—The apparatus consists of a large hollow cylinder, with two small iron rollers inside. The large cylinder revolves upon three flanged wheels on the outside of each end. The revolution of the lower roller causes the cylinder and the other roller inside to revolve, bending the metal into the required shape. The end of the sheet to be bent is inserted into a crevice in a roller of the size required for the tube, and is then put inside of the large cylinder, between the two rollers, and by a pressure of the foot upon a lever the upper roller descends upon the sheet. A simple revolution and the tube is made, as true and straight as a rifle bore. By this principle tubes from an inch to two feet in diameter and from three to twelve feet in length, may be turned out with equal facility. The machine is said to be capable of making from 5,000 to 18,000 feet of metal tubing of any kind per day.

Purifying Gas.—The Rev. W. R. Boudich of Wakefield, England, has obtained a patent for purifying gas, by employing clayey earths either alone or in combination with lime. The earths so employed are afterwards used by farmers for manure. It is well known that aluminous earth possess the quality of absorbing and retaining ammonia; they therefore absorb the ammonia which is set free in the distillation of the coal of which the gas is made, and as ammonia is an excellent fertilizing agent, the products of the gas works thus become serviceable for raising wheat and corn.—*Scientific American.*

A New Candlestick.—Instead of a round tube, the candle is held by four spring wires of the size of knitting needles, approaching each other at the top, which adjusts their capacity to whatever is inserted between them, so that the largest candle is readily received, while the smallest is tightly held, and may be reversed and violently shaken without dropping the candle. Attached is a pair of snuffers, very simple and cheap, yet efficient, and the whole might be made very cheap yet very effective. It is the invention of Erastus Pu, of Ohio.

Educational.

AGRICULTURAL COLLEGE IN OHIO.

Ohio is a great and progressive State—great in extent and resources, and progressive in providing the means of Mental, Moral and Physical Improvement. Though in many respects inferior to New York, our thriving sister bids fair to excel the "Empire" in some essentials of importance. Of late years the Ohio State and County Agricultural Exhibitions have been largely attended, and attracted marked attention both at home and abroad. Among other efforts to further "Progress and Improvement," perhaps none have been more energetic, or creditable to the people of Ohio, than the establishment of Institutions to promote Agriculture and Education. In these respects much has been accomplished in Ohio during the past five years—more, we think, than in any other State within the period named. As items, witness the success of the efforts of the Ohio State Board of Agriculture, whose recent Annual Fairs have been the largest and most successful in the Union,—and the establishment of Antioch College, one of the most complete and extensive educational institutions in this country. And now an effort is making to establish an Agricultural College. From what we have heard respecting this laudable enterprise, we are inclined to believe it will prove successful. The plan of the institution presents some peculiar advantages, as will be seen from the circular or advertisement subjoined—to which we invite the attention of all interested.

OHIO AGRICULTURAL COLLEGE, AT OBERLIN.

The first term of this College will commence on the first Monday of December, and continue three months—The object is to place within the reach of farmers, both old and young, the means of acquiring a thorough and practical acquaintance with all those branches of Science which have direct relations to Agriculture.

It is proposed to give Courses of Lectures during the winter months, on all the several departments of Agricultural Science, each principal division being assigned to a different Lecturer, and systematically presented in the same manner, as Medical Science is taught in Medical Colleges. The branches taught will embrace whatever pertains to Animals, Vegetables, Land or Labor.

Lecturers.

JAMES DASCOMB, M. D., Chemistry in all its applications to Soils, Manures, Animal and Vegetable Life, and the Domestic Arts, &c.

This department is regarded as especially important, and means have been provided for its thorough illustration.

NORTON S. TOWNSHEND, M. D., Comparative Anatomy and Physiology, with special reference to the feeding and breeding of Stock; History and Description of Domestic Animals in their several varieties; Veterinary Medicine and Surgery—Entomology.

This department will be illustrated by preparations and specimens, and by the practice before the class of such operations as are necessary to be performed by the keeper of stock.

JOHN S. NEWBERRY, M. D., Geology and Mineralogy; Botany, Descriptive and Physiological, with special reference to the history and habitudes of all plants cultivated in the Garden and Orchard, or in the Field—the various modes of culture, and soils adapted to each.

This department will be illustrated by specimens of all the varieties of grains, fruits, and other vegetable products of interest to the Farmer, Gardener or Orchardist.

JAMES H. FAIRCHILD, A. M., Natural Philosophy; Agricultural Mechanics; Farm Implements; Meteorology; Elements of Engineering and Land Surveying; Rural Architecture; Landscape Gardening, and Farm Book-Keeping.

Philosophical Apparatus, Implements, Models, Plans, Drawings, &c., will be abundantly provided, to aid the Lecturer in this department.

The Lectures will commence on the first Monday in December, and continue three months. Four Lectures will be given daily.

ADDITIONAL FACILITIES.

A Reading Room, supplied with the principal Agricultural Periodicals, will be open to students at all hours. They will also have access to an extensive Library.

TERMS.—For the entire Course,.....$40,00

Board and rooms may be obtained at $2 per week, exclusive of fuel and light.

This institution is designed to be permanent, and is therefore incorporated as the Ohio Agricultural College. It is located at Oberlin, Lorain County, Ohio.

Oberlin is easily accessible by the Cleveland and Toledo Railroad. It is only one hour's ride from Cleveland.

Letters of a business character may be addressed to Dr. Dascomb, Oberlin, Ohio. 245.

[For Moore's Rural New-Yorker.]

DIFFICULTIES IN SCHOOLS.—NO. 2.

While many teachers are poorly qualified to fulfil their grand mission, it must be conceded that many good teachers do not succeed. The good people not unfrequently expect too much from the "schoolmaster." They hire him, and perhaps pay him a fair price for his services; he comes to them with a good reputation—has taught many years, and so, of course, they reckon upon a first rate school. They feel very willing to delegate to him every power relative to the character of their school. This is but one of two extremes. The other is just as far from the true principle. They would make the teacher the mere instrument of caprice and whim. They are very lavish with their advice. Every one has something to advise or say in regard to the management of their school, and it is difficult to say which of these extremes is the most dangerous to the real interest of the institution. The one imposes the whole work upon the teacher,—the other would take it all from his hands, or set him at work in so many different directions as to absolutely paralyze all his efforts.

So important a work as that of teaching, needs much attention. A teacher should not be "let alone." Not that he is to be set up as a peculiar mark for a neighborhood of eager-eyed uncharitable critics, but his employers should feel enough interest in their own business, to know personally how it is going. "How does your school prosper?" inquired I of a friend, the other day. "O, I don't know—don't hear much complaint—haven't been near it myself—children don't seem to learn much." Here it is,—this *let-alone* system. What man who has any interest in his business, would think of treating it thus, if there were even five dollars at issue? Would a farmer hire a man to plow in his field, and not visit him daily? Would he set him to chopping wood, and not know whether he had chopped three cords or one at the end of every day? In this case there are several shillings at stake. If he sees anything wrong, he kindly tells the laborer of it; and if he is a sensible man, and worthy to be entrusted with work, he will reform. This is all right, only let the principle be carried along into all branches of business. Some parents do not appreciate the character of a teacher's position and influence. They do not realize that much of the influence necessary to keep up a good school, must come directly from the parent.

The second difficulty then appears to be a want of co-operation on the part of parents. It is not enough that the teacher be hired—that he be fed and clothed, and every temporal want supplied. He wants to know and feel, that those for whom he daily toils, feel an especial interest in his business. The teacher cannot always raise an interest in the mind of the scholar. He cannot always make him feel the importance of becoming wise. Can you expect your child to feel more interest than you manifest yourself? You are far more capable of understanding the importance of improving his school hours, than he is himself. Do not find fault with the teacher because he does not interest your child, when you take so little pains to interest him yourself. Make your teacher a friendly visit—he will be glad to see you; and see that your child complies with all the requests of the instructor. Not that you are to take the business out of his hands, but aid in that direction is always acceptable, and extremely profitable. Thus sustained, and thus treated, your school will be flourishing, and your teacher successful.

Brockport, N. Y. J. W. BARKER.

BOSTON LIBRARY.

The Boston Public Library is now one of the institutions of the city. Its benefits are enjoyed by thousands of young men and women, and are second only to those realized by a copious flow of the Cochituate. The number of books taken out daily—particularly on Saturdays—is really marvellous. The Librarian and his courteous assistants are kept quite active during each afternoon, and it is really pleasant to witness the procession of young people on their way to and from Mason street, for the purpose of returning books which they have read, and the procurement of others. The demand is principally for books of travel, history and biography, and but comparatively few novels are taken out. This is an encouraging circumstance; not that there is anything objectionable in a standard work of fiction, but it is better that busy men and women, who have but little time to read, should study those works which may have a tendency to cultivate and enlighten the mind. It is far better that one should endeavor to become acquainted with the arts by which bliss is won, eternity achieved, and a people governed, than to waste candle light snivelling over the misfortunes of a Sophia Weston. There are twelve sets of Mr. Hillard's "Six Months in Italy," in the Library, and yesterday all the volumes were out. So with regard to other works of that class. Then the number of persons who visit the reading-room for the purpose of inspecting books not on the circulating list, is quite large, so that altogether the library has proved a beneficial establishment.—*Courier.*

Pennsylvania School Statistics.—The following statistics are taken from the reports of superintendents made within the last four years, showing a large increase of benefits, without a dollar of increased expenditures:

	Pupils.	Teachers.	Averaged school time.	Appropriation paid.
In 1850	424,334	10 907	5m. 1 day	$150,773 21
" 1851	453,642	11,979	5m. 2 days	193 004 89
" 1852	480,778	11,713	5m.	199 268 19
" 1853	474,556	11,230	5m.	184,390 27

Thus, it is demonstrated that whilst the State expenditure for public schools has decreased since 1849 the number of pupils has swollen fifty thousand, and the corps of teachers multiplied three hundred and twenty-three.

Ignorance vs. Knowledge.—Ignorance pays such a tax that we can't imagine how anybody can afford to be a blockhead. McCracken works for a dollar a day, while Spring, his neighbor, commands twenty shillings. A wide difference, and all caused by Spring's knowing how to read, write and cipher. From these figures, it will be seen that McCracken's want of knowledge costs him four hundred dollars a year—which shows that ignorance costs him more than his wife and children, house-rent inclusive.—*N. Y. Dutchman.*

Unconscious Influence.—It may be a question which is the wiser, but not the happier—he who strives against every form of wrong, seeking *directly* to destroy error and root out ignorance; or he who quietly, by the force of examples of beauty, unconsciously soothes and harmonizes the perturbed spirits and unhallowed passions of those around him, into unison with his own higher and purer nature.

VIEW IN MT. HOPE CEMETERY.

RURAL CEMETERIES.

An important and commendable change has of late years taken place in public taste, in reference to the repose of the dead. A quiet, grassy mound in a rural cemetery, under the broad and majestic canopy of the sky, with the trunks of tall old trees for pillars, and winding pathways amid shrubs and flowers for aisles, is a far more fitting place for burial than the stony and forbidding inclosure of a cathedral.

The selection and adornment of rural cemeteries in the vicinity of cities, is one of the surest proofs of a moral and religious community; for no people can become wholly depraved, until they cease to cherish sentiments of respect for the dead, and to pay homage at the shrine of the great leveler, Death.

"Earth to earth and dust to dust," can be commingled in no more fitting place than such a cemetery as Mount Hope, in the immediate vicinity of this city. One of its varied scenes is represented by the above illustration. It was drawn and engraved by our fellow townsmen, Miller & Mix, and represents an ornamental basin or tunnel overshadowed by trees and surrounded by graves. The cemetery is one of the most beautifully located in the country, and capable of tasteful adornment unsurpassed; although truth compels us to say, the attention paid to it within the past few years has not fulfilled the promise of its origin. There are many fine monuments and tasteful graves; many lots which display the existence of a cherished and revered memory for the departed; but the general appearance of the grounds, and especially those portions not under the immediate care of individual citizens, indicates a degree of carelessness and neglect no way creditable to the public spirit of the city.

Mount Hope has only to receive the attention and adornment of which it is capable, to render it, if possible, even more attractive than the far-famed Mount Auburn.

PHILOSOPHICAL LECTURES.

A long time before Railways were even thought of, transportation of merchandize had been effected between commercial marts by means of water communication. Commerce on the ocean existed from the remotest antiquity, not as at the present day, carried on by means of huge three masted clipper-ships spreading an acre of canvass, or the marine steamer sustaining a burthen of two or three thousand tons, and forcing its way across the sea in the face of waves and tempests, but by means of galleys propelled by oars, and feeling their way along the shore, scarcely venturing out of sight of land. The commercial Greeks, when they penetrated the remotest of the European island were in search of the golden fleece, and the warlike Romans, when they passed the Pillars of Hercules, to wit, the Straits of Gibralter, and reached the *ultima thule*, (England,) performed feats worthy of commemoration in immortal song.

But inland commerce by means of artificial water channels, did not exist among the ancients, unless some canals may have been in use in China. Commercial marts were then, as now, located upon the sea, but where navigation was broken off by interposing land barriers, the caravan was the only means of overcoming the difficulty. No canals, no railways, not even a tram or a McAdamized road was ever dreamed of to facilitate the transit. True, the Romans built the Appian way, and some other works of a similar nature; but these were for military rather than for commercial purposes, and were dedicated to the god of war, rather than of commerce.

It is one of the features of modern civilization, that inventive genius is turned to an advancement of the arts of peace, and commerce is one of the most powerful agents in forwarding the great work. Nature has furnished facilities for carrying on external commerce by providing to all nations the great highway of the ocean, but internal trade, to a great extent, has to be conducted through artificial channels, one of which, the railway, has been heretofore considered. The intention now is to call attention to another, viz., the Canal.

Turning from the fast traveling locomotive to the slow moving line boat, from the thunder of a train of cars to the noiseless creeping of a raft, may be deemed by some a retrograde movement; and impatient young America, repudiating in his haste all the advantages which the latter possess over the former, may stand in the midst of the crowd at either terminus of such a gigantic railway as the New York Central, and view with astonishment the vastness of its corporation business; while, at the time, he ignores the very existence of the Erie canal. He may be cognizant of the crowd of passengers, the car-loads of mails, express packages, and lighter goods, the long trains of live stock seeking from the far west a market at the sea-board; and yet never think it worth while to take a look at the docks and quays, where the untold millions of freights and merchandize received by the canal, are awaiting transhipment. He may stand confounded as the freight train thunders by, and then look down with contempt upon a couple of unpretending canal boats, each drawn by a brace of poor old horses, and never dream that those two boats sustain a burthen equal to that of the whole train. He will never believe, even when told it by the staid engineer, *that the canal freights received at tide-water each day of the business season would load a train of cars fifteen miles long!*

But so it is, and whatever may be said in favor of railroads, and whatever advantages they possess in certain respects, they cannot supply the place of canals, nor supersede, in certain cases, the necessities of their construction. True, short lines of canal between points where there is no occasion for moving immense quantities of heavy materials, have been ruined by the competition of railroads. Such a result was witnessed in New England, where the Middlesex and Blackstone canals have been abandoned and filled up; but in New York, in Pennsylvania, in Ohio, and other States, where millions of tons of heavy freights are to be annually moved, canals are a fixed and perpetual fact, their superiority over railroads is established, and their benefits to the community placed beyond contingency. The rail will always monopolize the passenger traffic, the mail service, the express business, the carriage of light and valuable materials like dry-goods, the transportation of live stock and fresh provisions; but in the transit of coal, iron and lumber; of salt, flour and grain; of heavy materials and the grosser products of the field and forest, the canals remain triumphant masters of the field, and the attempt of railroads to supersede them has proved a failure.

The construction and management of a canal will be made the subject of a future paper; and we would ask our young friends not to grow impatient, and turn away from the subject as an old, lazy idea, as something obsolete and behind the age; for a great portion of the commercial prosperity of our State, and, indeed, of all the West, is dependent, in a great measure, upon the Erie Canal.

Summer Sickness.—As the heat of the season advances, bowel complaints make their appearance. These are the result, generally, of indiscretion, showing itself either in over-eating, or in using crude berries and badly-cooked green vegetables. Children are the largest sufferers, as they have but a feeble share of reasoning power to guide them in the choice of food; and those having the care of them are, as often as otherwise, influenced quite as much by the promptings of appetite, as the admonitions of experience. Ripe fruits, when not taken in excess, are conducive to health. They are absolutely necessary to its maintenance in many parts of the world. With us, the apple is an essential ingredient in a correct system of diet. But it would be a waste of words to urge the point. A dissertation on the bad tendencies of beefsteak would be no more absurd, than an attempt, on any common sense principle, to prove that rich cherries, luscious pears, blushing peaches, or ripe grapes, were not intended for food. The great point, already referred to, must not be lost sight of, viz, to be sure the fruit is fully ripe, and be moderate in the use of it.

Those who have forsaken rural labors and been disappointed in their dreams of riches quickly obtained, should return with the humility of a prodigal son to a forgiving parent.

Science is not a club, it is an ocean; it is as open to the cockboat as the frigate. One man carries across it freightage of ingots; another may fish there for herrings.

Sunday Reading.

GOD GIVETH TO ALL ARIGHT.

BY MRS. S. WEBSTER LLOYD.

Young Norah sat at her cottage door,
On an afternoon in May,
Her baby crept on the soft green sward
And her little boy was at play.

The sun had placed on the children's cheeks
His good night kiss, but still
He touched with gold the tall tree tops,
And tinted the distant hill.

The golden failed—a purple tinge
Stole over the western sky,
Their peeping baby was hushed to sleep
By the soft winds lullaby.

Still the mother wrapt in the gloomy thoughts
Unheeded the falling dew—
When the father came through the little gate
And sat on the threshhold too.

The young wife cast her weary form
A troubled quick glance sent,
Then she laid her hand on her husband's arm
And murmured her discontent.

"I was thinking just now of your life of toil,
And I thought of our neighbor's too;
The days that bring only ease to him
Bring hardship alone to you.

And I thought if we only live to work,
If our children must labor too,
For their daily bread, it were well for all
If this weary life were through."

"Why Norah, your thoughts are strange and wild!
And your heart is wrong to night;
There's a righteous River above," he said,
"Who giveth to all aright."

"I have worked to-day in the rich man's field,
I have sat in the rich man's hall;
His lands are broad, and his gold is bright,
But my riches are worth them all.

His lands are broad—they were freely given,
If again on the pallid cheek
Of his beautiful, cherished, lovable wife,
The roses of health might speak.

His gold is bright—it would be to him
A source of the purest joy,
Could it buy a single germ of thought
For the mind of his idiot boy.

Nay, Norah, for little sleeper there;
The boy that has climbed my knee;
Thy love, dear wife, and our perfect health,
Are the richest of gifts to me.

For our hopeful future, our general good,
I've a thankful heart to-night."
And Norah said, as she kissed her babe,
"God giveth to all aright."

Burlington, Ky., September, 1854.

THEO OF OUR MINISTER.

So, you do not like our minister, and will not listen to his sermons, because he tells nothing new! You have become tired of hearing ever the same old story.

It is true, he has but a very few things to tell. All may be summed up in a few words:—"Thou shalt love the Lord, thy God, with all thy heart, and with all thy soul, and with all thy strength, and with all thy mind, and thy neighbor as thyself." But, my brother, have you ever tried to obey that command, asking of the Most High the strength he alone can give? Have you never heard that God gives to those that love him a new perception of the import of those words?

Take to yourself that lesson. Obey the command, and then see if our minister will tell you nothing new. Ought he not to repeat the lesson till you have comprehended it? Do those who truly love the author of all their blessings become weary of listening to those same old stories of his mercy and his truth?—Is it not proof of your ingratitude, that you are unwilling to be told of your obligations to God?

Will you refuse to look on the flowers of spring, to rejoice in the harvests of summer, to listen to the wild music of the winter gale as it sweeps along the frozen earth, because the past year, and every one before it, afforded the same round of enjoyments?

Would you, after reading that one passage, cast the Bible forever aside? Yet read it from beginning to end, and you shall find only this: "Thou shalt love the Lord thy God with all thy soul, and thy neighbor as thyself."

Suissac.

How to receive your Pastor.—When your minister calls to make you a friendly visit, receive him without ceremony. His time is precious, and he cannot well afford to wait for you to change your dress, perform your toilet, and put things to rights. He calls to see you, not your clothes. And do not weary him with your apologies. He would much prefer to hear you speak of your moral concernments. And if you invite him to sit at your table, give him precisely such food as your family would have if he had not visited you. And improve your time, while he is with you, in conversation upon such subjects as tend to increase your knowledge and your happiness—Preachers are men, and they know that people have their affairs to see to; and if your minister is a man of common sense, and finds that you put yourself out on his account, he will not come again, lest by so doing he should put you to some inconvenience. Be kind enough to see him just as you are, when he calls—he will like you the better for it.—*Exchange.*

What is religion? The pilot of the soul to the bright fields of heaven; a communion with the saints of light.

Miscellaneous.

THE PLAY-HOUSE.

BY ANN PIERPONT.

Who has not been a child, and made
A play-house 'neath the trees?
And who so old but groweth young,
While passing one of these?

I saw one in the cool, green nook,
Anear a cottage wall,
Built cunningly with many rooms,
And stored with play-things small!

Prompt little hands had laid some walls,
And swept the mossy floors,
And slicks across the opening laid
Were gravely called the "doors."

On showy shelves, which oft would fail,
Were treasures rare I ween—
The broken china glistened there,
In blue, and red, and green.

The golden light of childhood's morn,
While gazing, round me stole,
And fragrance from its sweet dim shores
Swept breeze-like o'er my soul.

Once more I trod that green-mossed bank,
Where 'neath a school-house tree,
From tiny acorn cups we drank,
And called it "taking tea."

We played our "meeting" o'er again,
And I was preacher there,
And, with mock gravity we wore
Our precious Quaker hair.

But thou who put on matron airs,
And played "the mother" then,
The fairest one of all the school,
Now walkest not with men.

Thou, too, whose dark eyes proudly beamed,
The stateliest of that band,
'Mid summer toils hast gone away,
Unto the "tribal land."

Those mosses still, their little cheeks
'Gainst sister mosses lay,
While of those three who leaned on them,
But I, the weakest, stay.

Oh! earth would be one funeral pyre,
And life a dream of pain,
If beauty did not live for aye,
And love and God remain. [*Cayuga Chief.*

LEAVES FROM A TRAVELER'S NOTE-BOOK.

No. I.—From Liverpool to Dublin.

No day that the writer passed "abroad" will live longer and greener in his memory than that upon which he was whirled along by a steaming fire-horse on the road from Liverpool to Dublin. Fairer scenes than were then displayed, afterward delighted his eyes; localities teeming with deeper interest were visited, and the recollections of them treasured up in his remembrance, yet none afforded the intense delight he that day experienced, for it was the initial step of his wanderings in the Old World, and an abrupt and delightful transition from the monotony of an ocean-voyage to the ravishing beauties of an English landscape.—There was no more "fearful looking for the terrors of the deep;" there he was, comfortably seated in an easy-riding car, dashing, ever and anon, by scenes of exquisite loveliness, enjoying an ever-shifting, rapidly-unfolding panorama of green hedges, fields of grain waving gracefully in the breeze, and smiling villages glittering resplendently beneath the sun's bright rays.

In about an hour after leaving Birkenhead—the Brooklyn of Liverpool,—the warning bell sounded, the whistle gave out a shrill response, and indications of a rapid approach to a station became visible. Another scream from the whistle, the train lessened its velocity, and entered an almost palatial structure. The guard cried out "Chester," and the writer descended to visit veritable antiquities—something he had seen only in museums and collections—never before upon the very spot where they originated and grew old.

Chester furnishes ample material for the researches of the antiquary, and the gratification of admirers of what is curious and ancient, many vestiges existing within it of the power and skill of the Romans, in whose possession it was held at a very early period.—Portions of the old walls still remain, possessing more interest than mere antiquity attaches to them, being the only specimen of that order of ancient fortification now to be met with. They are built of blocks of light red sandstone, firmly cemented together; the cement still remains firm and hard, while the stone has proved more perishable, and gradually crumbled away. They have been repaired from time to time when necessary, and an ample fund has recently been appropriated, to further the preservation of these embattled memorials of hoar antiquity. They extend nearly two miles in circumference, and their summit affords a fine promenade, it having been levelled for the purpose, and surmounted with a railing. We were highly delighted with our perambulations around them, and observed many objects worthy of particular attention and note. Among them may be mentioned the Phœnix Tower, and another called Julius Cæsar's, or Agricola's. From the summit of the former CHARLES THE FIRST witnessed the defeat and subsequent flight of his army from the Parliamentary forces, at the battle of Rowton Moor, and the latter bears marks of cannon balls, said to have been aimed and fired against it by OLIVER CROMWELL himself. But Rowton Moor now presents a different picture from that of those days of anarchy and confusion; its surface, then covered with the bodies of the dead and dying, is now laid out in well-cultivated fields, dotted at frequent intervals with peaceful homesteads nestled quietly amid leafy groves.

A great number of the houses in the old portion of the city, attest by their appearance their great antiquity. They are built entirely of timber, and painted in squares, with alternate stripes of black and white. One building bears the date of 1539 upon it, and another has the following inscription on a beam in front:

"God's Providence is mine inheritance. 1652."

The date, however, does not refer to the time of its erection—the house, from its style, being evidently much older—but to the fact that, while the plague in that year was devastating the city by its fearful ravages, this was the only house in the whole street that escaped its destructive havoc. The pious occupant, grateful to Providence for his deliverance, caused the foregoing inscription to be conspicuously carved upon the front of the building. In the same street is an old house with the front divided into squares, filled with carved work of various designs, but principally illustrating scenes from Holy Writ. They are most artistically executed, but exhibit some extremely ludicrous anachronisms. Conspicuous among them is the patriarch ABRAHAM, habited in coat, waist-coat and knee-breeches, offering up ISAAC as a sacrifice.

We then proceeded to the Cathedral—a venerable structure—portions of which were erected at widely different periods, forming an architectural medley not at all inharmonious, and presenting a singular yet beautiful appearance from whatever point of view it is regarded. Within it is solemn and austere; the panels and galleries are of oak, beautifully carved, and of sufficient antiquity to satisfy the most enthusiastic hunter after what is old and curious. We noticed several monuments of great antiquity, and a tablet with the following inscription arrested my attention particularly:—"To the memory of GEORGE CLARK, of Hyde Park, formerly Lieutenant-Governor of New York, and afterward resident of this city. He died 1740, and was buried here."

Leaving the Cathedral, we retraced our steps to the station, which is the terminus of six different lines of railway, and is the most splendid and extensive railway depot in the United Kingdom. This superb edifice, replete with every convenience, has a frontage of 1160 feet, and cost upwards of £240,000, or $1,200,000. Entering the cars again, we were soon on our way to Holyhead, passing through North Wales and the island of Anglesea. The road runs amidst the most beautiful and romantic scenery of North Wales, and I regretted exceedingly that our iron horse was possessed of such speed that we could only obtain a passing glance of the lovely valleys, picturesque castles, the lowering and majestic mountains, with foaming torrents rushing headlong down their rocky sides, and of the placid lakes and bounding rivulets that were constantly flitting by.

At Conway, however, we halted for a considerable time, and obtained a good view of the ruins of Old Conway Castle, erected by EDWARD I. in the thirteenth century. The walls on all sides are covered with a luxuriant growth of ivy, from the top of which spring eight lofty towers, each with a slender turret singularly graceful and elegant in form. For a long time this noble fortress was suffered to retain all its ancient grandeur undiminished but it was finally granted to the Earl of Conway, who ordered all the timber, iron, lead and other valuable materials in the castle to be removed to Ireland. This ancient castle is the fictitious scene of the "Castle Spectre" and "The Bard" of GRAY.

Passing Penrhyn Castle, and Bangor, we soon reached the celebrated and world-renowned Menai Suspension Bridge, together with the equally noted tubular bridge through which we passed, both of which cross the Menai Straits, joining the mainland with the island of Anglesea, the home of the ancient Druids. From this point to Holyhead the scenery is less attractive. At the latter place we stepped on board a pigmy steamer, which conveyed us to Kingstown, the port of Dublin, and seven miles distant from it. A well-conducted railway affords frequent communication.

Rahway, Sept. 4, 1854. J. M. H.

MOHAMMEDAN LIBERALITY.—In a recent address of Lord Shaftsbury, he stated that his son had free admission into every mosque in Constantinople, with a party of thirty or forty officers, which a short time previous, if attempted, would have been attended with death. This remarkable abatement of prejudice had produced a free intercourse with Europeans. The Sultan also had given quite a sum of money for the repair of the Protestant cemetery in Constantinople, and has signified his intention of giving a large space of ground for the erection of a Protestant place of worship. Compare this with the severe and illiberal spirit of the Czar or the Pope—and how elevated the position of the Sultan above that of either of these religious despots!

[Written for the Rural New-Yorker.]

SELFISHNESS.

How true is the observation of a friend that "some men are never satisfied, but spend their lives and sink into the grave, crying *more! more!* Such seek pleasure only in the gratification of self—the wants and woes of their fellows claim no share of their attention or sympathy. How truly great and wise is that man who, to a disposition to carefully provide for the wants of his own household, adds an affectionate regard for the happiness of those around him."

Mankind make the gratification of selfish desires too much their study,—it absorbs not only their actions, but their thoughts, till it becomes a second nature, and too many sink into the mire wiser. The strife after riches is the end and aim of life, apparently, instead of being the means of doing good to all that surround us, or that may come within the wake of our influence. How much nobler to cultivate the higher aspirations of our being, and study to act out that charity that embraceth the whole world as one common brotherhood. T. E. W.

TROPICAL VEGETATION.

THE following description of tropical forest scenery is from *Gan Eden*, a delightful work recently published:

"Here is the domain of that gorgeous and formidable vegetation which wages such a constant war with the works of man, the vegetation which has toppled down the temples of the Aztec, and hidden the cities of Central America in a green night, and built along the Orinoco and the Amazon fortresses of barbarism and of ignorance, impregnable alike by commerce and by curiosity. The wastes of Northern Cuba are jungles of closely twining plants, gay with the myriad hues of strange, magnificent flowers, and overtopped by gigantic trees, whose trunks are not less gay with fantastic embroideries, and from whose Briarean arms hang countless veils and fringes of creeping plants, the names of which cause upon the ear the same indefinite impression of savage magnificence that is made by their blended, indistinguishable forms upon the eye. All things which to us of the temperate zone are creatures of boxes and of bales, creations, we might perhaps as truly say, of the merchant and the grocer, meet us at every turn wild and bold in the woods; the fan-like caeno tree, the spreading vanilla, the parasite cinnamon, the gaunt and desolate guava. The cactus no longer struggles for existence in the feeble sunshine of a three-pair back window, with a Southern exposure; but swollen to the size of a scrub oak, impedes your way with its dull, hideous, prickly leaves, and flaunts its great flowers in your face. * * * The silence of these tropic forests is tremendous. Still are they as the seat of Saturn. No beast crashes through the undergrowth, no bird sings in the branches, no wind sighs through the mighty tops. The living creatures of that world glance noiselessly through the air, or glide stealthily through the heavy sound-deadening verdure. Your own voice startles you. Sublime at first, this silence soon grows insufferably oppressive. You are on the point of giving an impatient shout, when your purpose is anticipated by nature with a shriek mean and malicious as the cry of an imp. Saddening is the absence of song birds from the Cuban landscape. * * * It is worse than soulless. The parrot gives it an uncanny soul, a sprite of evil."

FAMILIAR NONSENSE.

How many phrases are there in common use that seem to mean something, but mean nothing whatever. We call lawyers, for example, "gentlemen of the long robe;" yet who ever saw a lawyer in anything of the kind? We say that Judge so-or-so wears "the judicial ermine" with dignity, when he does not wear any ermine at all. We have seen newspaper reports of a new ship's "gliding gracefully into her native element," when all the world knows that a ship's native element is not the sea but the shore.

We are told of the way the tragic actor wears the "sock," and the comic actor the "buskin," and yet who ever saw either wear either on the stage? Gentlemen partial to good living, we hear it said, are "fond of the bottle," when it is the contents of that vessel and not the vessel itself they love so dearly.—"The jury box" is no box at all, nor does any court we ever saw sit on a "bench." And what, we would respectfully inquire, do the poets and romancers mean by saying "the sex," when alluding to the ladies, as if we were of no sex at all? We could extend this list of absurdities; but enough for the present.—*Cour.*

A PORTRAIT.

A young man wishing to be be noticed in the gay circles of the world, buys an old watch for five dollars. At the end of four months, finding that it does not keep time as well as a new one, he pays three dollars to have it thoroughly repaired. Two months after, finding it is not exactly a new watch, he pays two dollars for further repairs. At the end of a year, growing sick of it, he swaps it away for an old musket. He then tries to get rich by hunting, but not finding game very plenty, and receiving a summons from the merchant to pay for his powder and shot which has amounted to eight dollars, he says to himself, "I'll get rid of the rotten musket somehow;" so he swaps it off for an old horse and pays five dollars to boot. He hires his horse kept at the tavern, at which place he boards; at the end of the year his bill for horse keeping has amounted to forty dollars, and his own to seventy-five. He says to himself, "this is not getting along very fast," so he sells his horse for a barrel of brandy, which finishes his earthly career.

"WHAT'S THE USE.

Where's Sam?" asked Joe Dennet, coming into Mr. Power's yard, and seeing Mr. Powers at the door. "Up in his study," answered Sam's mother. "And where is that?" asked Joe; "I did not know that Sam had a study." Sam's mother smiled, and told him to go in the garden and may be he would find it. He did so, and shouted "Sam, where are you?" "Hallo!" said a voice from above. Joe looked up and saw his friend perched in the crotch of an apple-tree, with slate and book in hand.

"Come," said Joe, "the boys are going a boating, and want you to go." "Can't," answered Sam, "I am trying to master this Algebra; we all missed to-day." "Why, it is Wednesday afternoon, and that is *our* time.—I would not study, I am sure, what's the use?" asked Joe. "Well, for my part, I am bound to get this lesson the first thing I do," said Sam. "Pooh, it's too hot to study; besides I hate Algebra; what's the use of puzzling your brains over x plus y?" "I think it is of use to get our lessons," said Sam. "What are you going to do after that?" asked Joe. "I am going to weed the onion beds." "Oh its too pleasant to work; what's the use of tying yourself up here all the afternoon? I know I would not," said Joe Dennet. "Well, I think it's of use to do what needs to be done, was Sam's answer.

This was a fair sample of Sam Powers and Joseph Dennet, two boys who lived in the same neighborhood. It is twenty-five years since this kind of talk took place, and the boys are now men. Sam Powers is called a man of "iron will," because he lays plans and carries them out with a patience and energy which never gives up. He is one of the first business men in the State, and a truly pious man too. How is it with Joe? He goes through life a man, just as he did a boy. If there is any extra exertion to be made in his business, he asks, "What's the use?" and goes to it with so little heart, that he is sure to fail. He is always complaining of hard times, and wondering how people get ahead so. As for his religion, he does not live as if it were of much use to him or any one else.

There are some boys who, when they have anything to do, or are called upon to do a little more than usual, try to shirk off by asking, "O, what's the use?" The fact is, boys, there *is use* in doing like a man what you have to do. There *is use* in getting your lessons, and getting them well, and making extra exertions to get them, if they are difficult. There *is use* in weeding the garden, chopping at the woodpile, tilling the cows, cultivating a taste for reading, and in doing what your parents ask of you. Whenever I hear a boy trying to excuse from duty, by asking fretfully, "O, what's the use?" I mark him as a lazy, shirking, shuffling boy, who will be very likely to be good for nothing when he grows up. You must have a hearty interest in your work; and always feel very suspicious of yourself, if you find an inclination to dodge duty with this meaningless excuse.

HUMAN GRANDEUR.

THE following passage is from one of Prof. Upham's letters to the Congregationalist. He is speaking of the captain of the steamer in which he sailed from New York.

"As we were about to start, I saw him move to an elevated position above the wheel; and it was interesting to perceive how quickly and completely the inward thought or purpose alters the outward man. He gave a quick glance to every part of the ship, among whom was the American embassador to England, who, if the captain may be said to embody the ship, may be said with equal truth to embody in his official person a nation's right and a nation's honor. He saw the husbands and wives, the mothers and children entrusted to his care; and his slender form, as he gave the orders for our departure, seemed at once to grow more erect and firm; the muscles of his face swelled, his dark eye glowed with a new fire, and his whole person expanded and beautified itself by the power of inward emotion.

"I have often noticed this interesting phenomenon; and have come to the conclusion, if man or woman either wishes to realize the full power of personal beauty, it must be by cherishing noble hopes and purposes—by having something to do and something to live for, which is worthy of humanity—and which, by expanding the capacities of the soul, give expansion and symmetry to the body which contains it."

INALIENABLE RIGHTS OF AMERICANS.

THE following are not enumerated in the Declaration of Independence:

To know any trade or business without apprenticeship or experience.

To marry without regard to fortune, state of health, position, or opinion of parents or friends.

To have a wife and children dependent on the contingencies of business, and in case of sudden death, leave them wholly unprovided for.

To put off upon hireling strangers the literary, moral, and religious education of children.

To teach children no good trade, hoping they will have, when grown up, wit enough to live on the industry of other people.

To enjoy the general sympathy when made bankrupt by reckless speculation.

To cheat the Government, if possible.

To hold office without being competent to discharge its duties.

To build houses with nine and six inch walls, and go to the funerals of tenants, firemen, and others, killed by their fall, weeping over the mysterious dispensations of Providence.

To build up cities and towns without parks, and call pestilence a visitation of God.

IF you are affronted, it is better to pass it by in silence, or with a jest, though with some dishonor, than to endeavor revenge. If you can keep reason above passion, that, and watchfulness, will be your best defendant.—*Sir Isaac Newton.*

Ladies' Department.

CONDUCTED BY A——E.

THE TWO WORLDS.

A LAND where sweetest roses fade,
And smiling youth grows quickly old;
A land where sunshine turns to shade,
And beauty takes a different mould;
A land of change, a land of care,
Whose fleeting joys are little worth;
A land where smile becomes a tear—
That land is Earth!

A land of love where naught can sever,
And beauty blooms with lustre fair;
A land where youth is young forever,
For time exerts no influence there;
A land where streams of pleasure flow,
And golden harps in all are given;
A land where we our God shall know—
That land is Heaven!

PLAYING WITH CHILDREN.

COUNTRY life's opportunity to cultivate intimacy with children, seems to me a very important as well as agreeable advantage over life in the city. To be able to get out any moment in the day when most convenient, and join a gay and loving little troop and take share in their work or play, unobserved by all eyes, is preferable to an opera, I think, as a relaxation from care and as a pleasure within reach. And there is fresh air with it, and exercise; while its timeliness makes it serviceable to health. But the degree to which a man lives a stranger to his children, without it—neither understanding their minds nor comprehending their dispositions—can hardly be understood by those who have lived only in the city. There is no charm, for a child, like the presence of a person who takes an interest in his play; and he loves and opens his nature to those who do so, as he loves and is frank with nothing else. To enter into the excitement of his occupations, and to listen to and reply with habitual familiarity and earnestness to his questionings and imparting, is to link his soul with you by an every day strengthening of affection, like the growing of a branch upon a tree. With his memories of these days—all golden and treasured—the parent who is the kindly companion out of doors is thus inseparably interwoven. Nature ordained such to be the intercourse between parent and child.

And while to daily life this gives a charm and hallowing influence, it plants a flower of affection that will bloom when old age needs its fragrance of respect and tenderness.—*Willis.*

KINDNESS.

WOULD it not please you to pick up a string of pearls, drops of gold, diamonds, and precious stones, as you pass along the street? It would make you feel happy for a month to come.—Such happiness you can give to others. How, do you ask? By dropping sweet words, kind remarks, and pleasant smiles, as you pass along. These are true pearls and precious stones which can never be lost; of which none can deprive you. Speak to that orphan child; see the diamonds drop from her cheeks. Take the hand of that friendless boy; bright pearls flash in his eyes. Smile on the sad and the dejected; a joy diffuses his cheek more brilliant than the most splendid precious stones. By the way side, mid the city's din, and at the fireside of the poor, drop words and smiles to cheer and bless. You will feel happier when resting on your pillow at the close of the day, than if you had picked up a score of perishing diamonds. The latter fade and crumble in time; the former grow brighter with age, and produce happier reflections forever.

SELF-GOVERNMENT IN CHILDREN.

A MODERN writer says:—"I know nothing more touching than the efforts of self-government of which little children are capable, when the best parts of their nature are growing rigorously under the warmth and light of parental love. How beautiful is the self-control of the little creature who stifles his sobs of pain because his mother's pitying eye is upon him in tender sorrow! or that of the babe who abstains from play and sits quietly on the floor, because somebody is ill! I have known a very young child slip over to the cold side of the bed on a winter's night, that a grown-up sister might find a warm one. I have known a little girl submit spontaneously to hours of irksome restraint and disagreeable employment, merely because it was right. Such wills as these—so strong and yet so humble, so patient and so dignified—were never impaired by fear, but flourished thus under the influence of love, with its sweet excitements and holy supports."

THINK.—Thought engenders thought. Place one idea on paper, another will follow it, and still another, until you have written a page.—You cannot fathom your mind. There is a well of thought there which has no bottom.—The more you draw from it, the more clear and fruitful it will be. If you neglect to think yourself, and use other people's thoughts, giving them utterance only, you will never know what you are capable of. At first your ideas may come out in lumps, homely and shapeless; but time and perseverance will arrange and polish them. Learn to think, and the better will you express your ideas.

IT is a glorious sight to see two old people, who have weathered the storms and basked in the sunshine of life together, go hand in hand, lovingly and thoughtfully, together down the gentle declivity of time, with no anger, nor jealousy, nor hatred, garnered up against each other, and looking with hope and joy to the everlasting youth of Heaven, where they two shall be one forever. That is a true marriage, for it is a marriage of spirit with spirit. Their love is woven into a woof of gold, that neither time, nor death, nor eternity can sever.

MOORE'S RURAL NEW-YORKER

ROCHESTER, SEPTEMBER 16, 1854.

To Correspondents.

Fire Among the Manuscripts!—A sad calamity has befallen the productions of several of our correspondents, whereby the readers of the Rural will be losers. It may be proper to remark, first, that we have a "home sanctum," *wherein* we have a sizable table, *whereon* are usually deposited a large number of manuscript articles, selections, &c., *whereat* we are wont of evenings to write, and examine and revise the favors of correspondents. Through the carelessness of a servant, a few evenings since, the documents on said table caught fire unobserved, and on our entering the room some minutes after, we were nearly blinded by the glare of a conflagration, which, unchecked, would have soon destroyed the whole premises. As it was, almost every manuscript was either wholly or partially burned, and we found it very difficult to extinguish the fire.

Fortunately many of the manuscripts were from anonymous correspondents, and others had been rejected,—yet there were some, in both prose and verse, the loss of which we much regret, and others, unexamined, which would probably have proved eminently worthy of publication. Though the "assortment" had been accumulating for months, and was quite complete in quantity, variety, style, &c., we believe it did not include any articles from special contributors, and but few from regular correspondents. Most of the articles were of a literary character—such as tales, sketches, poetry, &c. Of the large number of manuscripts, scarcely one remains entire,—and moreover we cannot give the titles of articles, or the names or signatures of their authors. On these points our Irish "help" has rendered us a *Know Nothing*—and almost induced us to join that fraternity! Should the authors of the consumed documents feel equally exasperated, the K. N. order will soon receive large and respectable accessions in different parts of the country! But, seriously, we assure all interested of our regret at the occurrence—for, though many of the effusions may have deserved such *light* usage, others were designed, by us as well as their writers, to subserve a nobler purpose. The authors may, therefore, very properly attribute the non-appearance of their favors to the accidental conflagration.

—Severe illness during most of the past two months, has precluded us from responding, by letter, to the favors of personal friends, contributors and business correspondents. Those anticipating written epistles, will therefore please accept the will for the deed—at least for delinquencies during the past few weeks, and the immediate future. What little strength we have is necessarily devoted to the most pressing duties, and they are neither "few nor far between."

Disastrous Conflagration.

On Thursday afternoon, Sept. 7th, a disastrous fire occurred on premises owned by the New York Central Railroad in this city, which destroyed property to the amount of seventy or eighty thousand dollars. The fire caught in the wood-pile, from a small steam engine attached to a sawing machine, and almost instantly some four or five hundred cords of wood were in a blaze, and rolling up towards the sky in immense volumes of smoke and flame. The huge round-house situated on North street, and containing at the time seven locomotives, was instantly surrounded by the fire and consumed. The immense dome-shaped roof, composed of a net-work of iron and zinc, twisted from its anchorage on the top of the walls and fell in, while the valves of the heated engines gave forth a last puff of expiring energy, and then with *tender and tubes, tank and turntable*, the whole structure and its valuable contents became a mass of ruins.

So rapid was the progress of the conflagration, that the workmen connected with the building were unable to shift the turntable so as to remove a single locomotive before they were compelled to flee for their lives. To any one unacquainted with the building and its position, an engine house of the kind would be deemed indestructible; but the facts were, it was surrounded by a funeral pyre which nothing could withstand. The loss is a heavy one, but it can more easily be borne by a gigantic corporation like the N. Y. Central, than by private individuals. The loss of the engines will be most severely felt, as the company, in consequence of its extensive business, is greatly pressed for locomotive power.

Let Justice be Done.—Mr. Scoresby writes to *The London Morning Herald* in favor of giving to the land discovered by Lieut. De Haven and his companions north of Wellington Channel the name they affixed to it of "Grinnell Land." The English who subsequently discovered the same territory, gave it the name of "Prince Albert's Land," which remains in their charts, but Mr. Scoresby contends that justice to the American Expedition requires the adoption of the American name. No doubt it does, and we presume the remonstrance of so eminent an authority will have its effect.

Democratic Convention.

The Democratic State Convention met at Syracuse on the 6th, and continued in session two days. The committee on organization reported for President Wm. H. Luncow, sustained by eight Vice Presidents and five Secretaries.

A committee on resolutions was then appointed, which subsequently reported a series. After some excitement and debate, they were finally adopted. They eulogize Democratic principles, denounce the Whigs, reaffirm the Baltimore platform, endorse the administrations, State and National, favor free trade on a basis of reciprocity, with a tariff reduced to a point of collecting revenue sufficient for the wants of a free and economical government; oppose all government appropriations for river or railroad improvements of doubtful constitutionality, and more doubtful expediency; favor the free distribution of public lands in limited portions, as homesteads, among citizens, and other persons who shall have declared their intention to become citizens, but subject to the condition of individuality and occupation, and oppose the re-establishment of the Missouri Compromise.

The following is the resolution on this behalf, which created a good deal of feeling, and on its adoption caused many delegates to withdraw:

Resolved, That we consider the clause in the Nebraska and Kansas bill, repealing the Missouri Compromise, as inexpedient and unnecessary; but we are opposed to any agitation, having in view the restoration of that line, or tending to promote any sectional controversy in relation thereto; and we congratulate the country that the results to grow out of that measure are likely to prove beneficial to the people of the territories, and that while we maintain our position, that opinions in regard to the power of Congress in this matter are not tests; we nevertheless consider that the act of renunciation by Congress of the power it has heretofore exercised over the subject, as the practical surrender of a formidable function on the part of the federal government, and as the cession of a right on the part of the incipient States of the Union, the exercise of which can, in all probability, result only auspiciously to the people of the territories and the peace of the Union.

The Convention renominated Gov. Seymour, and then proceeded to the choice of candidates for other State officers, with the following result: For Lieut. Governor, Wm. H. Ludlow; Canal Commissioner, Jason Clark; State Prison Inspector, William B. Andrews.

The above refers, of course, to the "Soft" wing of the party,—the "Hards" having held their Convention and nominated a ticket (headed by Judge Bronson) some weeks ago.

The Recent Rains.

On Friday night and Saturday through the day, there were almost continuous and abundant rains; and what is more to the purpose, they were not, as heretofore, confined to a narrow belt of territory, but extended over a very wide range, giving the thirsty earth a tolerable degree of saturation, filling up the tanks and cisterns, and permitting people to indulge once more in the luxury of an abundant supply of rain-water. On Sunday night it cleared off, leaving the atmosphere cool and pure, with almost the premonitory symptoms of a frost, which however is to be deprecated, and, it is believed, will not occur for several weeks to come. Summer has departed like a tale that is told, and Autumn speedily follows. Let the thrifty and far-seeing make preparation for coming storms, and the unthrifty and short-sighted make haste to mend their ways.

Annexation.

It is generally believed that a treaty for the annexation of the Sandwich Islands to the United States was received by the Star of the West, and has been taken on to Washington. Its provisions are of course a secret, and it must receive a two-thirds vote of the Senate for its confirmation; unless, as in the case of Texas, it be put through Congress in the form of a statute. The questions of slavery or freedom, of State or territorial form of government, are of great interest, and their solution will be looked for with anxiety. If the public become too impatient for an insight before the Senate see fit to remove the seal of secrecy, the *N. Y. Times*, or some other paper equally successful in that line of business, must get an advance transcript by underground telegraph. *Money will do it.*

Vermont Elections.—The election in Vermont has resulted, as was anticipated, in favor of the Whigs. As New Hampshire has always been Democratic, so Vermont has generally been Whig; the result is not, therefore, considered by the latter party so much of a triumph as the previous elections in the former State and in Iowa. The Nebraska issue seems to have exerted a decided influence in Vermont, as in all the States which have heretofore held their elections.

Wife Wanted.—An exchange paper says:—"A professional man with a respectable looking name, advertises in the Concord Patriot, that he will certainly marry the first girl *that offers herself through the mails.*" If he pays postage on her at the rate of three cents the half ounce, a moderate sized woman will cost over one hundred dollars, besides the expense of advertising.

Price of Hops.—The N. Y. *Tribune*, of recent date, says:—"Contracts for the new crop have recently been made to a limited extent, at 30 cents—a higher figure than has been paid so early in the season for many years past. These sales have mostly been made to fill orders, and not on speculation."

Our Albany Correspondence.

Albany, Sept. 11, 1854.

I wonder how it would appear if I should "pay up" some of my debts to the Rural.—Sometimes I am half inclined to dislike my name, for even when I do my best, it is still Owe, with very little prospect of being anything else. O! Oh! "Owe!" is it not too bad? But this is not what is expected. Some news, some gossip, some far-seeing speculations, and some truthful predictions with reference to the ship of state, would be far more palatable. So here goes.

The weather has cooled off very perceptibly, and it has rained here as elsewhere. The cholera is really abating. Our city has suffered very much from its ravages. Many family circles have been broken, many seats become vacant, many parents been left childless, many children deprived of parents. Brothers have been made sisterless, and sisters have lost brothers. Our vaults have been crowded with the dead, and our asylums have been more than filled with orphans. Thank God the scourge is receding. May it be long ere it makes another visit!

A few educational items are worthy of note. Samuel H. Hammond has, on motion of the State Superintendent of Public Instruction, been appointed as one of the Executive Committee of the Normal School, in place of Hon. W. W. Forsyth, deceased. This is an excellent appointment, as Mr. H. possesses superior qualifications for the position, and is in education, as in other things, a progressive man. The Faculty of the Normal School has been enforced by the appointment of three of Western New York's noblest sons—David H. Cochrane, late Principal of Fredonia Academy; Rev. Mr. Jewell, of Homer Academy; and T. C. Estee, of Water Valley, Erie county. The first is Professor of Natural Sciences, the second of English Literature, and Mr. Estee, of Music and Penmanship. It is needless to say that this adds materially to the strength of the Faculty. The Institution opens next Monday. Albany is to have a Teachers' Institute, which is very remarkable, being entirely new to this locality.—How such a result has been achieved in this stronghold of Fogyism, may be explained when it is mentioned that the Superintendent of Public Instruction (Mr. Rice,) is a Western man, and believes in progress! This is some fruit already, and more is forthcoming. Who supposes that all has been accomplished in the world that ought to be?

But Albany, now as heretofore, is politics first, politics last, and politics in the middle. A stranger entering our city would be surprised to see what a stir there is. Wire-pullers are running to and fro—candidates sending and receiving, almost hourly, telegraph dispatches from this, that and the other direction. Spies are sent into all quarters, and *weighty* inducements offered for *valuable* services. The "Hards" and the "Softs" having flung their banner to the breeze, it is now the problem for Whigs to solve, to find the *man* and the *pretensions* that will *draw* the most votes. It seems to be conceded that the Whigs will come off victorious. But they are also in a quandary, for the "Know Nothings" seem to have cut them in two about the middle, getting a little more than half, if there be any difference. Still the desire seems to be to re-elect Wm. H. Seward to the Senate. It must be well known that the election of some one to fill the vacancy in the Senate of the United States, is one of the important things to be decided at the next election. The Senate of our State is Whig, and if the Assembly elected this fall shall be of the same faith and order, Mr. Seward will be returned. All seem to concede the desirableness of this. But it is hinted that Mr. S. is obnoxious to the "Know Nothings." This will have some weight; yet his course will undoubtedly be sustained by a majority of that peculiar class. The following qualifications seem to be desirable for candidates this fall: 1, "Whig;" 2, "Know Nothing;" 3, "Temperance;" 4, "Sewardites;" 5, "Anti-Nebraskite;" 6, "Non-Committals far enough to secure a heavy vote from all other factions." If any body can ride all these horses and not get thrown, he may reach the goal of his desires. If he cannot, he must expect to be entirely dashed to pieces, or allowed to slip off into "Salt River" to pickle. It is doubtful whether matters were ever so much mixed up, and withal so uncertain as to results, as at present. But let them mix. Let them connive. Let them barter away their birthright. Let them triumph in their selfish and unprincipled schemes. Yet the people are already "posting their books," and a day of settlement is at hand. The time draweth nigh when the good and the wise are to be our rulers—and when he who would be great among men shall be their servant. The true theory of Democracy is bursting forth from the masses, and the petty tricks of politicians will ere long be entirely discarded. Young man! study these times, and learn wisdom. "Owe."

Resignation of the Canadian Ministry.—A despatch from Quebec, dated Sept. 8th, brings the intelligence that the Ministry has resigned. The Governor General prorogued Parliament last spring, and ordered a new election because the Ministry were in minority. The elections have resulted in the return of an overwhelming anti-Ministerial majority, and the administration were defeated on the first parliamentary vote; hence their resignation. No new Ministry has yet been formed.

The Protection Insurance Company of Hartford, an old institution, $300,000 capital, has been obliged to make an assignment.

News Paragraphs.

☞ An English paper, noticing the danger to which the transport screw ship Tynemouth was lately exposed by the incorrectness of her compass, says that an investigation of the binnacles by the aid of a small magnet, led to the discovery of a piece of iron wire inside the rim which strengthened the carrier used at night to hold the lights. The Compass had the name of Hewitson, Newcastle, on it. No doubt many a ship has been lost by similar unscientific arrangements.

☞ The Lake Superior Journal of the 13th represents that there is a good deal of excitement in "the Soo" against the Canal Company, on political grounds. It is alleged that the Company are about to urge one of their agents for the State Senate, and another for the Assembly, and that boasts are made that the number of laborers in their employ is sufficient to secure their election. It is intimated that the Company have some scheme to push through the Legislature at its next session.

☞ The Richmond Dispatch, in protesting against the proposition to let Mr. Zadock Pratt put a stone, with his name on it, in the Washington Monument, says that if Mr. Zadock Pratt wants to be immortal, let him build a monument for himself, and suggests that it should be made of brass. A cotemporary adds:—"The Dispatch is wrong. Leather is the proper material for Mr. Zadock Pratt's monument—nothing like leather!"

☞ The Grinnell Arctic Expedition, under Dr. Kane, was last heard from the 23d of July, 1853, when he was at Upernavic, west coast of Greenland. He is expected to report himself in New York in the course of next month. Should he not be heard from at that time, it will be surmised that he has decided upon spending another winter at the North. He could not remain there longer than the first of September.

☞ Lenox, in Massachusetts, says an exchange, is probably the most literary country town in America. It is at present the residence of Henry Ward Beecher, Oliver W. Holmes, Herman Melville, G. W. Curtis, Nathaniel Hawthorne, Miss Segwick and Fanny Kemble Butler. It was also, till recently, the residence of G. P. R. James.

☞ Arrison, who is supposed to be the maker of the Cincinnati "infernal machine," is said to be skulking in the woods, somewhere in Iowa, where his father lives. Traces of him are seen every day, and he has been shot at twice within the last week, but the brush is so thick that he has so far escaped. There is a continual watch kept up around the place.

☞ The Postmaster at Frankfort, Ky., a few days since received by mail a small box containing a living horned frog, that had been forwarded from Texas. The frog had been three weeks on his travels; the box was perforated to admit air, and when opened the animal appeared lively and in good condition, but died three days afterwards.

☞ The monument in honor of Pulaski, at Savannah, has been completed by Mr. Launitz, the Russian sculptor, and will be erected shortly in Savannah. It is a square column, sixty feet in height, with a Corinthian cap, and surmounted by a statue of liberty. Within the panels of the pedestals are inserted appropriate designs, wrought in basso relievo.

☞ The Artesian well at Charleston, S. C., has already reached the depth of 1,177 feet, 300 of which have been dug through solid rock. The well, when completed, will be one of the most valuable as well as gigantic works in the country. Only think of drilling rock at the depth of nearly 1200 feet!

☞ The amount of money taken at the late fair at Marshfield, the Boston Courier estimates, will be sufficient, after paying expenses, to leave a balance of from $1,000 to $2,000, to apply to the beautifying of the old Winslow Burial Ground, where the remains of Daniel Webster repose.

☞ Nearly fifty persons have reported that their watches were stolen at Salem, during the Second Division Encampment last week. An expert pickpocket, named Charles Clark, has been arrested, and a number of watches found in his possession.

☞ A private letter in the Aspinwall Courier of August 15, says that cholera is extending its ravages through the island of Grenada, sparing neither age nor sex, nor rank. The total number of deaths reported up to July 25, was 2,000, in a population of less than 30,000 souls.

☞ Thackeray, who has been staying at Rome some months writing his "Newcomes," has returned to London, and commenced a series of imaginary letters from the Seat of War, published in Punch over the signature of "Bashi-Bozouk."

☞ The Rev. Pierre Chanial, one of the priests of the Seminary, Montreal, was drowned while bathing, last week, in the Lake of the Two Mountains. M. Chanial was 34 years of age.—He was much respected, and had gone to Two Mountains for the recovery of his health.

☞ The Utica Observer says it is informed on good authority, that the farmers of Whitestown are compelled to be very watchful over their potato patches, or lose their crop. Watchmen, steel traps, and spring guns are employed to prevent the depredations of the potato thieves.

☞ There is no reasonable doubt of the completion of the canal at the Sault by the time named in the contract—the 27th of May next. The locks are to be finished in the course of the month of September; 1,600 men are now at work on the canal.

☞ Chicago is fast peopling the Illinois Penitentiary. Nineteen prisoners were convicted at the present term of the court, and the jail is crowded with persons charged with offences against the law.

☞ Mrs. Elizabeth Fish, widow of Col. N. Fish, and mother of Gov. Fish, died at her residence in New York, on the 6th, at the advanced age of 80 years. Mrs. Fish was descended, in a direct line, from Gov. Stuyvesant.

☞ Two conductors of the Boston and Maine Railroad were fined, a few days since, for ejecting Mr. Chas. Poole from the cars, he having a check taken from the conductor of a preceding train, which they refused to receive.

☞ A correspondent of the Milwaukee News, writing from La Pointe, Lake Superior, wonders why the islands, upon one of which that town is located, are called "The Twelve Apostles," as there are fifteen instead of twelve of them.

☞ New Brunswick papers report that the Legislatures of New Brunswick, Nova Scotia, and Prince Edwards' Island, will meet in September, to take into consideration the treaty of reciprocity recently concluded.

News Brevities.

—Emigration to the United States this year, it is thought, will reach 400,000.

—Twenty-five hundred head of cattle were conveyed over the Erie Railroad last week, to New York.

—The soldiers, on their way to Malta, inarribly called the General on the Danube, Gotsuch-a-cough.

—The loss to the Chemical Bank, N. Y., by the late counterfeiting fraud, will reach nearly $15,000.

—A third and still larger party than any which has preceded it, will be ready to leave Massachusetts for Kansas on the 25th inst.

—The New Orleans papers of the 31st ult., report that 200 bales of new cotton were received there on the 30th of August.

—Rumor says the Cyane will go back to San Juan. The Buffalo Commercial insists that Capt. Hollins should not command her.

—"Hard Times," by Dickens, which is sold here for 12½ cents, cannot be had in London for less than 10s sterling, or about $2,20.

—The Freshman class just beginning its course at Harvard College numbers one hundred and five, which is extraordinarily large.

—Rogers, the poet, is not expected to live but a short time. He is ninety-two years of age, and is suffering from a recent paralytic stroke.

—An experiment has just been successfully made in France of employing swallows to carry letters, as pigeons were used some years back.

—Hon. Geo. P. Marsh has returned to his home in Burlington, Vt, after five years' absence as U. S. Minister, at Constantinople.

—Upwards of 100 young men have gone from Baltimore to labor for one year in the Chincha Islands, loading guano, and more are to follow.

—Ten editors have been elected to the Canadian Parliament. This fact demonstrates the advanced civilization of our provincial neighbors.

—Of the glorious Army of the Revolution, the Veterans of which received their Pensions at the Albany Agency, there are less than fifty survivors!

—The Canadian Parliament assembled at Montreal on the 5th inst. The Reciprocity Treaty will probably be ratified in the course of two weeks.

—Wm. B. Francis swam the Mississippi, from the Iowa shore to Phelps' wharf, in Quincy, in *eighteen minutes*. Distance a mile and a half.

—The Agricultural Fair of Madison Co., will be held at Morrisville on the 20th and 21st inst. Wm. Tracy, Esq., of Utica, will deliver the address.

—A man named Baird murdered another named Robinson, near Xenia, O., because the latter last Sunday married a young woman whom he wanted.

—Mr. Stephenson's tubular bridge over the river Nile, at Benha, is to have ten arches, and is to be 870 feet in length. The Egyptian railway will pass over the top.

—Donna Maria Acosta resides in Cuba, aged 111. She was born at Santa Cruz, Teneriffe, having crossed the sea to come to this island only six years since.

—A State Convention of the veterans of 1812, is called at Fonda, Montgomery county, on the 27th inst., to elect a General-in-Chief in the place of Nicholas Haight.

—The Montreal Freeman says:—It now appears certain that the rumors of the early retirement of Lord Elgin from the Government of Canada, are without foundation.

—A man was recently tried for forgery, in Ireland, but it turned out that he had forged the signature of a man who neither read nor wrote, which the Judge decided was no forgery at all.

—It is stated that on and after the first of October, the circulation of foreign bank notes below $10, will be prohibited in the State of Ohio, by a law passed last winter.

—The Montreal Pilot of a recent date, says that his Excellency the Governor General (Lord Elgin) has been confined at Spencer Wood, by indisposition, for several days.

—Over 70 members of the Irish constabulary have volunteered to join the British troops in Turkey. Some have been appointed to subaltern ranks in the commissariat department.

—Among the losses by the recent fire in Troy, was that of the fine Library of Gen. Davis, embracing a rare collection of political works, pamphlets, &c., to the number of over 4,000.

—Hon. O. B. Matteson, M. C. from Oneida County, has given $100 towards the erection of an Observatory, for astronomical purposes, at Hamilton College in Clinton, Oneida county.

—The quantity of coal produced in 1853 in various parts of the world, is set down at 75,000,000 tons, of which Great Britain produced 42,000,000, and the United States 9,000,000 tons.

—Miller, Orton & Mulligan, of Auburn, make a prosperous beginning for a new firm in a small town. They have published fourteen books, of which the aggregate sale is 376,000 copies.

—Recent intelligence from Cuba states that several free negroes and liberated African slaves have lately left Cuba and returned to the home of their forefathers in Africa, well provided with money.

—A letter from St. Petersburgh says not a word about peace is uttered there, and if any one wishes, he dare not express it, as the old Russian war party entirely govern public opinion.

—Col. Benton, in a letter to the democratic voters of the St. Louis congressional district, expresses the opinion that the expenditures of the government for the present year will amount to $70,000,000!

—They are now experimenting at Saint Etienne upon a new cuirass or breastplate for the army. The weight is very light, but it is said to be capable of resisting bullets at even short distances.

—The foundation-stone of the first Ragged Church in London, was laid on the 15th ult., with deeply interesting religious services. The church is intended for the sole and exclusive use of the lowest class of poor people.

—A corn stalk measuring 22 feet and 5 inches in length, has been sent to the Reading Eagle office, from the farm of Mr. Elijah Fisher, of Berks county. This is the tallest corn we ever remember to have heard of, even in the southwest, where corn grows much longer than here.

Literary Notices.

HARD TIMES. By CHARLES DICKENS. Library of Select Novels, No. 102. New York: HARPERS.

THE writings of CHARLES DICKENS will always be popular with a large class of readers. His latest production shows up the evil of an education, bringing out only the hard, bare facts of life, and carefully shutting out all the sunshine of fancy and feeling, so needful for the heart. E. DARROW & BRO.

THE NORTH BRITISH REVIEW for August, is a sterling number of that valuable Quarterly.—There are articles on VINET, his Life and Writings; HUGH MILLER, of Cromarty; Books for Children; DANTE; ARNOLD'S Poems; Political Morality of British Statesmen, &c., which will be read with interest.

THE LONDON QUARTERLY REVIEW, and BLACKWOOD'S MAGAZINE for August, have also come to hand. We have repeatedly commended these publications. New York, L. SCOTT & Co. Price of Blackwood and any one of the four Reviews, $3; the four Reviews and Blackwood, $10. D. M. DEWEY, agent.

HARPER'S GAZETTEER OF THE WORLD, has reached its fourth number. Six more will complete the work, making a volume of near 2,000 pages, of the latest statistical and topographical information concering all places of any note in the world. DARROW & BRO., have it for sale.

ARTHUR'S HOME MAGAZINE for the current month is profusely illustrated, and, as usual, presents an excellent table of contents for reading at the Home Circle.

Foreign Intelligence.

Arrival of the Africa.

THE Africa, with three days later news, arrived at New York, Sept. 7, at 7½ o'clock A. M.

It was reported at Paris that the expedition to the Crimea, positively left Varna on the 10th.

The Russians say that at the battle of Kars, in Asia, they took 23,000 Turks prisoners, and left 3,000 dead on the field.

The cholera was on the decline at Varna, but was still raging at Adrianople and other places with great virulence.

Immediately after the surrender of Bomarsund, Gen. Baraguay de Billiers, accompanied by Mr. Grey, of the English Legation, went to Stockholm, with the view it is said, of urging Sweden to declare for the Western Powers.

On the 21st, Mr. Magginnis, the British Minister at Stockholm, had an interview with the King of Sweden.

The Austrian loan had all been taken.

The Moniteur contains the following:

VIENNA, August 22d.—The Austrians entered Wallachia on the 20th. The whole corps of occupation will have passed the frontier by the 22d. Two brigades have marched from Hermanstadt and another from Cronstadt. Bucharest, Krajova, and Lesser Wallachia will be occupied. The advanced guard will reach Bucharest on the 5th of Sept. Three brigades of the army of Count Carumi are preparing for a similar movement into Moldavia.

There is no truth in the report that the Russians refused to retire from the Principalities.

The French Minister of War has applied to the Sisterhood of St. Vincent de Paul, in act as nurses in the hospitals of the army in Turkey. Fifty of the ladies have undertaken the duty, and fifty others will be provided.

Austria has proclaimed the Gulf of Cattaro, with its buoys and anchoring grounds, a war port. No foreign vessel of war will be permitted to enter, and if any single ship of war is driven in by stress of weather, it must leave in seven days. Austria has now three war ports in the Adriatic—Pola, Sysea and Cattaro.

Gov. Klatka will return to Switzerland, as the Turkish government refuses to give him a command.

1,000 of the Russian prisoners taken at Bomarsund have embarked for Brest. The other 1,000 have been disposed of by Admiral Napier.

The news from Spain is of a gloomy character. The streets of Madrid are dessected, and none but the National Guard and soldiers of Espartero are to be met with.

In flour and wheat there are no new features.

Corn is wanted at some improvement in price.

Mellenry quotes western flour 28s@31s; Philadelphia and Baltimore, 31s@32s. Red wheat, 8s 6d@9s; mixed do., 9s@9s 4d. White corn, 34s@36s; yellow, 35s@36s.

Bacon dull, and tends down.

Beef and pork quiet. Lard unsettled.

California News.

Arrival of the Star of the West.

The Star of the West arrived at New York Sept. 8, with California dates to August 16.

There were several British war vessels at San Juan.

The most important news is the reported capture of Canton by the rebels, and the flight of the foreign residents from the city.

Trade at San Francisco has been more active, and goods are held at better rates, in anticipation of a better fall trade.

The town of Bidwell was destroyed by fire Aug. 2.

SANDWICH ISLANDS.—Eight war vessels from England and France had arrived at Honolulu.—Their object is unknown.

A large meeting had been held on the subject of steamers for Honolulu and San Francisco.

The Star of the West has 400 passengers and one million in gold. Among the passengers are Gov. Davis, of Oregon, resigned on account of sickness in his family, and Lieut. Beckwith and surveying party.

It is rumored that the annexation of the Sandwich Islands has been finally determined upon, and that the consent for a cession of the Islands to the United States has been sent to Washington.

THE St. Louis papers complain of the great African exodus from that city by the "Underground Railroad" to Chicago. The names of prominent citizens of Chicago connected with two underground arrangements, have been ascertained. A number of steamboats are charged with conniving at the escape of negroes, and some of the citizens of St. Louis are said to have furnished them with means of conveyance.

Later Arrivals.

SINCE our paper went to press, the telegraph announces the arrival of the Empire City from Aspinwall and the St. Louis from Europe. The former brings over one million in gold, and China news to the effect that the Revolutionists were in possession of two large towns near Whampoa, and were hourly expected to attack Canton. A portion of the U. S. Surveying Squadron were moored off the Factories, designing to protect American interests. The Mandarins had stopped the export of rice.—Several Chinese merchants had moved out of the city. Large bodies of Imperial troops were stationed outside the walls.

The European news is four days later, and reports a decline in breadstuffs. Omar Pacha has entered Bucharest. The expedition to Crimea, composed of 70,000 men, was announced to sail on the 20th of August.

The Journal de Constantinople confirms the defeat of Selim Pacha in Asia, and he has been dismissed. The loss of the two armies at the battle of Kars was 5,000.

The Russians continue their retrograde movement, and there is nothing to indicate the position they intend taking to meet the dangers which threaten them on the frontier of Bessarabia.

There is no improvement in Spanish affairs.

The weather throughout England was most brilliant, and the harvest was rapidly proceeding.

HIGH PRICE OF CORN.—In consequence of short crops, we see that corn is selling in several places at the South and West at double the usual price. At Loudun, Va., last week, it was worth $5 a barrel. "A barrel of corn" is a southern measure of five bushels of shelled corn.

At Cassopolis, Michigan, it sells for fifty cents a bushel. Farmers only look for half a crop.—Wheat is $1 70.

A letter from Allegan county, Michigan, says farmers are cutting up their corn. The price will be high. Corn is dried up, and potatoes baked in the hill, and turnips past help from rain, all of which will keep the price of corn high.

A letter dated Columbus, Miss., says: We have never had a better crop of corn on the prairie lands, or Tombigbee Flats. Still, owing to poor crops in other sections, the price is high. In some of the dry lands in Yallabusha and Holmes counties, in the western part of this State, the corn crop is almost entirely cut off by drouth. This is the case in many localities, and will keep the price up—say from $3 to $5 a barrel.

Marriages.

In Kendall on the 8th inst., by Rev. John Davis, Mr. H. T. WHIPPIER and Miss SARAH A. THOMAS, both of Kendall.

Deaths.

In this city, on the 7th inst., ELIZABETH, wife of Chas. Drunerel, aged 31 years.

In this city, on the 11th inst., of cholera, WILLIAM S. GIFF, aged 41 years.

In Janesville, Wis., Aug. 20, FRED. W., aged 9 months, infant son of Wm. and M. J. Blanchard, residents of Waukau, Wis., formerly of Western New York.

At Greece Centre, 8d inst., of cholera, JOHN KISILAR, aged 10 years. The deceased was one of the first settlers in that part of the town.

☞ Will papers in Ohio and Michigan please copy?

In Parma, suddenly, on the evening of the 26th of Aug., LAURA A. RANDALL, wife of Anson W. Pond, aged 40 years.

☞ Western papers please copy.

Commercial.

BUSINESS AND FINANCE.

THE movements in gold very nearly balance for the week, the Star of the West bringing in little over a million, and the Asia and the Washington taking out $1,463,000.

The imports of merchandize at New York for the week, has been $3,652,677, and for the year $134,000,000.

The fall trade is beginning to revive the recent depressed and gloomy State of things, and confidence is somewhat restored to the stock and money markets. Erie Railroad stock, which a week ago had fallen to 29, has been going up daily since, and now stands at 40, and other stocks in proportion.

Market Intelligence, &c.

RURAL NEW-YORKER OFFICE,
Rochester, Sept. 13, 1854.

THE price of all kinds of grain is higher than last week. The recent rains have somewhat enlarged the volume of water in the river, although it is still very low. As a consequence of the partially increased activity of the mills, a local demand has been produced for Wheat, and it is selling in the street to-day at $2,06. Corn scarce at 80 cents, and Oats in demand at 40 cts. Barley is bringing, delivered at the Brewery, 76 to 83 cents.

Other articles of farm produce remain at former quotations.

NEW YORK MARKET—Sept. 11.

FLOUR—Market easier. Receipts increasing, and there is a pretty strong desire to realize. Demand for the rest less active. Sales at $9,25@9,75 com. to straight State; $9,-50@10 com. to good Ohio and mixed to fancy Mich.; $10 @$11 for the range of extras. Included in the sales are 1,000 brls. local Oct. delivery at $7,50. Blocked for Canadian flour firm. Sales at $9,75 good com. brand, $10 extra.

GRAIN—Supply of wheat is moderate, and market without important change. There is a fair milling demand for strictly prime parcels, but inferior descriptions rule heavy. Sales prime white Genesee at $2,12½c; red southern at $1,87½@1,90; white do. at $1,95. Rye in moderate request, and prices without change. Sales at $1,20@1,23.—Corn easier, with only a moderate demand for export, but a good inquiry for the east. Sales at 79@82½c in sound to prime Western mixed, and 83@83½c fine round yellow. Oats firm. Sales 52@53c for State, and 54@57 for Chicago.

PROVISIONS—Pork market less animated, and prices not so firm. Sales at $14,50@22½ for mess; $11,87½@12 prime; close $15,02½. Lard is unchanged. Butter and Cheese without change.

ALBANY MARKET—Sept. 11

FLOUR—We have only to notice a moderate demand and eastern inquiry for flour, with a gradually lessening supply and an augmented stock. In prices there is no material change to note, but on the part of receivers there is more anxiety to realize, particularly for inferior descriptions. Sales in lots at $9,12@9,25 for Inferior Black Rock; $9,56@9,75 for common to good State and Western, $9,75 @$10,25 for good to favorite do.; $10,25@10,50 for fancy do., and $10,50@11 for extra Ohio and Genesee. In Corn meal there is a moderate business doing at $1,03@1,75 ₩ 100 lbs.

GRAIN—Millers continue to buy Wheat sparingly, and only to supply their immediate wants. Sales prime white Genesee, delivered at Central Depot, at $2,17. For a cargo of good white Canadian, now at Oswego, $2,12½ was asked without finding a purchaser. Corn unsettled, but the market is easier, with a moderate supply offering. Sales 50½@51 for Western mixed afloat, 52c for small lots, and 53c for a small parcel of round yellow, closing with some buyers of Western mixed at the inside figure. Barley continues to be taken freely on arrival, at very full prices.—Sales at about $1,03. Rye is selling at $1,20@1,23. Oats are very firm and in good request, with a moderate supply offering. Sales good western Chicago at 56@57c, measure.

SEED—Timothy is in good request and selling firmly in the street at $3,76@4 for fair to good parcels.

HOPS—The market remains unsettled, and the prospective prices for the new crop are regarded merely founded on conjecture. Some few lots of last year's crop have changed hands at 31@35c, and in the new crop 31½@40c is asked, without any sales of moment being reported.

BUFFALO MARKET—Sept. 11.

FLOUR—There is a better demand for Flour, and the market is steady. The inquiry is to fill orders from the interior, and there is no inclination to speculate at present prices. Sales good Mich. at $8,75, choice do. $8,87½; ordinary Ohio $8,62½.

GRAIN—Supply of Wheat very light, and moderate milling demand. Holders firm. Sales white Mich. $1,80. The receipts of Corn are very light, and but little offering on the market. There is no much inquiry, buyers holding back in anticipation of easier prices. Sales in lots at 70c, and 60,000 bushels to arrive, all in Sept., at 66c. Oats quiet and firm. Sales at 43c.

NEW YORK CATTLE MARKET—Sept. 4.

At Washington Drove Yard—Offered to-day 2,800 Beef Cattle; during the week 2,000. Prices are firm at from $7 to $9,50@9,75 per cwt. The latter is an improvement upon the prices of the preceding week. Cows and Calves, $30@50; Veal Calves (live weight) 4@6c; Sheep (on foot) $4,50@6; Lambs $2,50@6,50.

At Browning's—At market, 623 Beef Cattle, 74 Cows and Calves, 64 Veal Calves, and 3,110 Sheep and Lambs.—Market firm. Sales at $7@9,50 per 100 lbs. for Beeves; Cows and Calves range at from $25 to $45. Veals sold at from 4½@5c per lb. Sheep range at from $1,25 to $6,00. Lambs, $2 to $5.

At Chamberlain's—At market 410 Beeves, 104 Cows and Calves, 114 Veal Calves, 3,750 Sheep, and 3,447 Lambs.—Prices of Beef ranged at from $9,00 to $9,50 per 100 lbs. Cows and Calves at from $25 to $50. Veal Calves 4 to 4½c per lb. Sheep $3 to $5. Lambs $2,50@5,00.

At O'Brien's—Sales of Beeves at $7,00@9 per 100 lbs. Cows and Calves at from $29 to $40; Veal 4½@5½c. ₩ lb.

ALBANY CATTLE MARKET.—Sept. 11.

At W. Woollord's Bull's Head, Washington street.—Beef Cattle—300 at market. Prices—Extra $7,50; 1st quality $7; 2d do, $6,50; 3d, $5@5,50.

Cows and Calves—Few in market. Prices range from 25, $50@45.

Sheep and Lambs—600 in market. Prices range from $3 to $4 for Sheep, $2,50@3,25 for Lambs.

Swine—Not any in market.

CAMBRIDGE CATTLE MARKET.—Sept. 6.

At market 1,304 Cattle—about 800 Beeves, and 504 Stores.

Prices—Market Beef—Extra $8 per cwt.; 1st quality, $7-50; 2d do, $7@7,25; 3d, do, $6@6,50; ordinary, $5@5,50. Hides, ₩ cwt. $5,50@6; Tallow $8@8,25; Pelts 31@62c. Calf Skins, 11@13c ₩ lb. Veal Calves $5 to $8.

STORES—Working Oxen—$61 to $136@160.

COWS AND CALVES—$21 to $41@50. Yearlings, $7 to $5@9. Two years old—$10 to $25@32. Three years old—$28 to $31@46.

SHEEP AND LAMBS—3,409 at market. Prices—Extra—$4,00 to $6,38. By lot—$1,50 to $3@3,50.

SWINE—Wholesale, still hogs at 1¾c; hard at 5c per lb.

BRIGHTON CATTLE MARKET—Sept 6.

At market 1,200 Beef Cattle, 500 Stores, 4,600 Sheep, and 1,600 Swine.

PRICES—Beef Cattle—Quotations are reduced from last week, viz—Extra $8; first quality, $7,@7,50; 2d, $6,25@6,75; 3d, $5,@5,50.

Working Oxen—Sales $70 to $142@167.

Cows and Calves—Sales $24 to $52.

Stores—Two years old, $18@27. Three year old, $30@40.

Sheep—Small lots $2,25 to $6,50.

Swine—Still fed fat hogs, 6c; fuller lots of about 3½@3¾; small lots to peddle 3¾@4; old hogs 3@4½; at retail 4½ to 6.

Advertisements.

ADVERTISEMENTS inserted in the RURAL NEW-YORKER at 15 cents a line, each insertion,—*to be paid in advance*—Brief advertisements preferred, and we do not wish to give any one more than four successive insertions. One space is limited, and we wish to accommodate and benefit as many applicants as possible,—at the same time interesting our readers by presenting something new, weekly.

FOR NEW HORTICULTURAL ADVERTISEMENTS, see page 298,—third page of this number.

STRAWBERRY CULTURE.

A COMPLETE MANUAL FOR THE CULTIVATION OF THE STRAWberry, and Description of the best Varieties; Also, Notices of the *Raspberry, Blackberry, Currant, Gooseberry* and *Grape*, with brief directions for their cultivation and best selections.

BY R. G. PARDEE.

To which is added an Appendix, containing much valuable original and selected matter, in reference to the whole of these subjects; giving the reader an opportunity to select all that is desirable from every mode of culture, and have the advantage of the judgment of many of the most experienced cultivators as to the best varieties.

This book so completely covers the whole ground of our door culture of these most *delicious fruits*, that many copies will be wanted in every town in our whole country when once offered for sale. Price, 50 cents, and 8cnt free of postage. Just published by C. M. SAXTON,
245-1 Ag'l Book-seller, No. 152 Fulton St., N. Y.

Fairfield Classical Academy and Female Collegiate Institute,

REV. L. D. STEBBINS, A. M., PRINCIPAL.

THIS Institution is located at Fairfield, Herkimer Co., N. Y., upon a beautiful range of hills, in one of the healthiest villages in the State, and is reached by a line of stages from the Central Railroad at Little Falls and Herkimer, by 10 miles travel. It has by more *fifty* years of faithful instruction and good discipline, attained a large reputation. Its Libraries and Apparatus are hardly equalled by any Academy in the State.

It has 3 large, commodious buildings, all in a pleasant grove. Its Faculty is large and competent. The Principal is a gentleman of unpeelee qualifications. The next term will begin November 8th. Board, room furnished, fuel, washing, incidental expenses, tuition in common English, only $19 per quarter. Conveyance free from Herkimer, Auburn, Syracuse, Watertown—fare being remitted on payment of Tuition. There is a complete graduating course for Ladies, and full courses for gentlemen for business and College, and teaching. For the Ladies there is a large Gymnasium for daily exercise.

For conveyance and rooms, address the Principal at Fairfield, Herkimer Co., N. Y. J. SMITH, Pres't.
J. MATHER, Sec'y. 245-4teow

FARM FOR SALE,

SITUATED in the town of Bethany, Genesee Co., N. Y., and two miles south of the depot of the Canandaigua and Niagara Falls Railroad at Stafford Centre, five miles from the village of Le Roy, and six from Batavia. It contains 110 acres of suitably proportioned timber, wheat and meadow land, in a good state of cultivation, and is well watered by living springs and a creek running through it. An orchard and garden well stocked with choice fruit trees. A good frame house, pleasantly situated, with ample and convenient outbuildings. Terms easy.

To any person wishing to purchase a good farm, at a moderate price, in one of the best sections of the State, the above presents a desirable opportunity. Apply to, or address [245-3t] EDWARD HAMMOND,
Sept. 14, 1854. Stafford, Genesee Co., N. Y.

A CHANCE TO MAKE MONEY!

PROFITABLE AND HONORABLE EMPLOYMENT!—The subscribe is desirous of having an agent in each county and town of the Union. A capital of from $5 to $10 only will be required, and anything like an efficient, energetic man can make from three to five dollars per day;—indeed some of the Agents now employed are realizing twice that sum. Every information will be given by addressing, (postage paid,) WM. A. KINSLER,
245-1t* Box 601, Philadelphia Post Office.

ANDERSON'S DOUBLE-TRIANGULAR HARROW,

PATENTED August 1st, 1854, is universally acknowledged by agriculturists who have seen it in operation, to be the best Harrow for all purposes now in use. By the particular arrangement of the teeth, the entire surface is thoroughly pulverized. Its peculiar form also renders it very effective in new, uneven, or stumpy ground; one half being made to run completely over the other in passing a stump, if required. It is fully admitted that once harrowing with this harrow, does more execution than twice by those in common use. The Patentee, being a practical farmer, is willing to dispose of rights in Town, Counties, or States, for the benefit of the public, or the harrow may be had on application to WM. ANDERSON,
244-3t Jacksonville, Tompkins Co., N. Y.

FARM FOR SALE,

SITUATED in the town of Prattsburgh, Steuben Co., N. Y., 3 miles west of Prattsburgh village, and 4 miles east of Crooked Lake. Said farm contains 175 acres, well adapted to either grain or grass. House new and convenient.—Barn sufficient to hold 100 tons of hay, with stables for 80 head of cattle; also a large cheese house, with other buildings. Price, $25 per acre. For particulars address the subscriber, post-paid, JOHN C. DENNISTON.
Elmira, Chemung Co., N. Y., Aug. 29, 1854. 244-3t*

FOR SALE.

A DESIRABLE OLD HOMESTEAD FARM—Containing *One Hundred Acres* of best farming land, under good cultivation, with good buildings, and well watered, and considerable standing timber. Excellent fruit of various kinds and finally well adapted to the purposes of the Farmer. It is 2½ miles distant from Weedsport, and the same from Port Byron, Cayuga Co., N. Y., *the best Western markets*. Price low, and terms easy. For particulars, call on DANIEL GAIN, near the premises, or A. L. SMITH,
Sept., 1854. [244-4] Druggist, Weedsport.

FARM FOR SALE.

HAVING had an attack of (Minnesota) fever, I have concluded to offer my farm for sale. It contains thirty acres. It is situated five miles south of Albion, and half a mile south of Barre Centre. For further particulars inquire of R. S. BUCKLAND,
Sept., '54. 244-3t Barre Centre, Orleans Co., N. Y.

BUFFALO SEED AND AG'L WARE-HOUSE,

No. 196 Main street, Buffalo, N. Y.

Persons wishing to purchase, will do well to call at their residence, 1¾ miles east of Brockport, and examine for themselves. S. L. & S. S. SHELDON.
Brockport, N. Y., Aug. 28, 1854. 244-3t*

UNDERDRAINING TILE.

THE ROCHESTER BRICK AND TILE MANUFACTURING CO., have on hand a large supply, and are constantly manufacturing Tile of the different varieties and sizes used for underdraining farm lands. The extent of the failure of the wheat crop the present season has, more conclusively than it has been for many years before, shown the utility of Tile Draining—for in no instance, and it is safe to say on no premises where lands were properly underdrained, has wheat been known to be injured by winter-kill,—which every one knows is caused by the heaving and thawing of water standing upon the wheat.

The following is a list of the prices for the different varieties and sizes of Underdraining Tile delivered at our premises in Brighton, one and a half miles east of the city of Rochester. The Company will deliver Tile on canal boat at fifty cents advance per thousand, on their yard prices, and on vessels running on Lake Ontario at reasonable charges, for transportation. Prices as follows:

1 Inch Pipe Tile.		$7 00	per thousand.
1½	do	8 00	do.
2	do	9 00	do.
3	do	12 00	do.
4	do	22 00	do.
5	do	5c.	per rod.
2 Inch Horse-shoe Tile		$8 00	per thousand.
3	do do	11 00	do.
4	do do	14 00	do.
8 Inch Round Tile.		10c.	per rod.

1000 Tile will lay 66⅔ rods, or 15 Tiles per rod.

For further particulars, address
WILLIAM OTIS, Superintendent,
214-tf Rochester, N. Y.

EYE AND EAR INFIRMARY.

DR. WALKER, Oculist and Aurist, (from London, England,) may be consulted daily, and testimonials obtained in the office, 52 State St., Rochester, N. Y. 242-tf.

EAST BLOOMFIELD ACADEMY,

J. H. KELLOG, A. M., PRINCIPAL.

This Institution will re-open on the last Wednesday in August, and continue thirty weeks, including a short recess during the Holidays. At the close of eleven weeks one quarter, new classes will be organized.

EXPENSES FOR TUITION, &c.—Tuition in common English branches per quarter of eleven weeks, $3,00. Higher English, $4,00. Higher Mathematics, Latin and Greek languages, $5,00. Music on Piano, with use of instrument, $10,00. French and German each extra, $2,00. Practical Surveying and Civil Engineering, $2,00, extra.

Incidentals in summer, 25 cts. per quarter; in the winter, 31 cts. Gentlemen can obtain board in the village for $2,00 per week, including fuel, lights and washing. Young Ladies are boarded in the Institution for $2,00 per week—and, lights and washing extra. Also $1,00 per quarter for room rent. Young Ladies from abroad, are received into the Institution for $150,00 per Academic year.

FREE TUITION.—As this Academy has been selected by the Regents of the University, to instruct Common School Teachers, the Trustees offer free tuition for fourteen weeks, to twenty-five Students, on condition that they pledge themselves to devote a reasonable time to the profession of Common School teaching.

The teachers' class will be organized the 20th of December. 241-3t*on* WILLIAM BRADLEY, Secretary.

GUANO.—NOTICE.

As there is a substance now selling by some dealers in this city and Brooklyn, for No. 1 Peruvian Guano, we caution the agricultural public who may purchase Peruvian Guano this season, to observe that every bag of the genuine article will have the following brand:

No. 1
Peruvian Guano.
Imported by
F. BARREDA BROTHERS.

The price is now established for this season at $50 per ton of 2,000 lbs. When taken in lots of 5 tons and upwards, a discount will be made.

LONGETT & GRIFFING,
State Agricultural Ware House,
241-7t No. 25 Cliff street, New York.

1,000 YOUNG MEN

STARR'S PREMIUM PIANO FORTES.

EVERY person in this vicinity, desirous to purchase a Piano Forte, will be *more than paid*, by visiting my rooms, where he can *buy directly from the manufacturer*, save the commissions of an agent, and select from the largest assortment in Western New York, as I have constantly on hand from 15 to 30 finished instruments, and from 50 to 100 others in process of construction, of various sizes, patterns, and prices, from $230 to $500 each. They embrace such a combination of excellencies, in their beauty, finish, strength, (to keep in tune,) exquisite touch—soft, deep, rich, full and melodious tones—as induces the belief, so often expressed by those who have bought, or used them, that "they surpass all others in the market." Their superiority was acknowledged when one of the most intelligent musical committees which ever acted on a similar occasion, *awarded us the three highest premiums*, when in competition with Chickering, Dilbeel, Bacon & Ravens, Wm. Hall & Sons, at the New York State Fair for 1851.—And the number since sold, with their daily *increasing celebrity*, fully justifies the report of that committee. They are manufactured of the best materials, in the most perfect manner, with metallic plates upon the 16o Chordal scale, with the Iso Bacon Damper, and French Grand Action, *expressly for retailing*—(numerous applications at wholesale, being constantly refused,) and can only be had at my rooms, where the instruments will be shown, and all orders promptly attended to. As it is fully settled that *a good Piano is cheap at almost any price*, and a poor one only a nuisance; and as I rely alone upon their merits to secure them favor with the public, I invite for them the most careful examination and scrutiny, by all who wish to buy at my manufactory and show rooms, Nos. 45, 47, 49 & 51 Orphean Buildings, Main st., 2d Floor. Every instrument will have upon it the name of the subscriber, and be *warranted to please the purchaser*.

Rochester, June, 1854. FREDERICK STARR.

N. Y. STATE AGRICULTURAL SOCIETY.

14th Annual Cattle Show and Exhibition of the New York State Agricultural Society,

Held in connection with the American Institute and New York Horticultural Society, at Hamilton Square, in the city of New York, October 3d, 4th, 5th, and 6th, 1854.

THE Annual Exhibition of the Society will be held as above, in the city of New York, from Oct. 3d to 6th, on which occasion, upwards of *Eight Thousand Dollars* are offered as premiums, to be competed for, with Cattle, Horses, Sheep, Swine, Poultry, Dairy Products, Farm Implements and Machinery, Domestic and other Manufactures, Flowers, Fruits, and articles in all the Mechanical Departments—the full particulars of which will be found in the List of Premiums published. A large portion of the Premiums are open to competition by persons out of the State.

It is believed that this combined exhibition will be the most extensive ever held in this country, and will afford to exhibitors advantages never before offered, in every department of the Exhibition, combining the entire industrial interests of the Farmer, Manufacturer, Mechanics, Horticulturists, and Artizans of our country.

Persons desirous of examining the List of Premiums and Regulations, or of entering stock, implements or other articles for exhibition, will please apply to B. P. JOHNSON, Sec'y, State Agricultural Rooms, Albany; at the Rooms of the American Institute, 351 Broadway; or JAMES, BERRIE & Co., 156 Broadway, New York, where the Premium List and Regulations will be furnished, and every desired information in relation to the Exhibition given.

Stalls and fodder for stock, and erections for the other articles, will be furnished in season, so that all articles designed for exhibition can be taken to the show grounds on their arrival in the city, where they will be provided for and protected.

The following Railroads have agreed to transport all stock and articles for the exhibition, free—requiring the freight to be advanced on delivery and re-paid on return of the articles, with evidence of being exhibited, &c.: Hudson River, New York & Erie, New York City & Buffalo, Ithaca and Owego, Canandaigua and Elmira, New York Central, Rome and Watertown, New York & Harlem, Long Island, Troy & Boston; and it is presumed all the Railroads leading into New York will afford the like facility.

Application to transport articles should be made in season to the nearest station Agent.

WM. KELLY, *Pres't*,
B. P. JOHNSON, *Sec'y*. 241-5t

THE HORSE, THE HORSE!

Noblest of Domestic Animals,

AND the one most frequently ill-treated, neglected, and abused. We have just published a book so valuable to every man who owns a Horse, that no one should willingly be without it. It is entitled

THE MODERN HORSE DOCTOR,

And is from the pen of that celebrated English Veterinary Surgeon, Dr. GEO. H. DADD, well known for many years in this country, as one of the most successful, scientific and popular writers and lecturers in this branch of medical and surgical science. The book which he now offers to the public, is the result of many years' study and practical experience which few have had.

From the numerous and strong commendations, of distinguished men and the newspaper press, we select the following:

Extract from a letter from Hon. John H. Clifford, Ex-Governor of Mass.

NEW BEDFORD, May 11, 1854.

DR. DADD,—*Dear Sir*—I hope your new work on the noblest creature that ever been permitted to hold in subjection, the horse, will meet with that success which all your efforts in this direction so well deserve.

Your obedient servant,
JOHN H. CLIFFORD.

From Hon. Marshall P. Wilder.

BOSTON, May 13, 1854.

DR. DADD,—*My Dear Sir*—I am greatly obliged to you for the valuable treatise, the results of your own investigations, which you have recently issued, hoping that it may meet with the patronage of a discriminating community.

I remain yours with great regard,
MARSHALL P. WILDER.

The *Modern Horse Doctor*, by G. H. Dadd, is a manual of genuine science, and ought to be owned and studied on the score of humanity, as well as interest by every man who owns a horse.—*Boston Congregationalist*.

Dr. Dadd has had great experience in the cure of sick horses, and explains the secret of his success in this vol.—*N. Y. Tribune*.

The author of this work is well known as a most skillful veterinary surgeon. His book is based on the soundest common sense, and as a hand-book for practical use, we know of nothing to compare with it.—*Yankee Blade*.

We know Dr. Dadd well, and are satisfied that he possesses most important qualifications for preparing such a book as this.—*N. E. Farmer*.

Messrs. Jewett & Co. have just published a very valuable work by Dr. Dadd, a well known veterinary surgeon, on the cause, nature and treatment of diseases, and lameness in horses.—*Farmer's Cabinet*.

This is one of the most valuable treatises on the subject, ever published; and no owner of that noblest of the animal race, the horse, should be without it. Especially should it be in the hands of every hotel and livery stable keeper. To many a man would it be worth hundreds of dollars every year.—*Ind. Democrat, Concord*.

By far the most learned and copious work on the horse and his diseases we have ever seen.—*N. Y. Evangelist*.

One of the greatest and most commendable qualities of this work, is, it is *practical* and plain to the comprehension of those farmers and others for whom it is designed. The course of treatment favors generally a more sensible and rational system of medication than that recommended in any previously existing works on farriery. No farmer or owner of a horse should be without this book. Stable keepers, stage proprietors and hackmen, we believe would derive profit by having at least one copy hung up in their stables for use and reference by their reliable men.—*Daily News, Philadelphia*.

There is more common sense in this book than any of the kind we have ever seen, and farmers and owners of horses would find it a matter of economy to possess themselves of it. It will be of more service than the counsel of a score of ordinary doctors.—*Albany Courier*.

We deem this decidedly the best and most reliable work on the "Cause, Nature, and Treatment of Disease and Lameness in Horses," ever published.—*Nantucket Enquirer*.

What we have read of this book induces us to regard it as a very sensible and valuable work; and we learn that those much more competent to judge of its value, have given it their unqualified approval.—*Ec. Trav. Boston*.

This book supplies a great desideratum which Skinner's admirable treatise on the Horse did not fill. Every man may be his own veterinary surgeon, and with much greater safety to this noble animal than by trusting him to the treatment of the empirical Indigenals who infest the country. It is well illustrated, and should be purchased by every man who owns a horse.—*Ex. Mirror, New York*.

This is a book that should be forthwith put into the hands of all who own or drive horses, whether for the dray or gig, for the plow, omnibus or coal. Its hard service or pleasure.—*Mr. Makin's Courier, Philadelphia*.

A good clearly written book, which should be in the hands of every man who has a horse whose ills his affection or his purse make it worth while to cure.—*Bangor Mercury*.

This is a scientific, thorough and complete treatise upon the diseases to which one of the noblest of animals is subject, and the remedies which they severally require.—*Troy Daily Budget*.

It is a valuable book to those who have the care of horses.—*Hartford Herald*.

He is not worthy to have a horse in his care, who will not use such a work to qualify himself for his duties to this animal.—*Commonwealth, Boston*.

THE FALL OF PALMYRA.—A FRAGMENT.

BY ADELINE LAWSON.

'Tis night!—and in Palmyra's halls
Zenobia holds high festival,
With warriors brave, and Gallia fair,
In banquet hall assembled there.
The haughtiest Lord has lain aside,
With coat of mail his stately pride,
And seems resolved to show his power
And give to revelry the hour.
And like Mahomet's houris seem,
The maids who circle 'round the Queen,
With lustrous, dark ned rolling eye,
But found beneath an Eastern sky;
And masses of rich silken hair
Which with the raven's wing may vie,
Sweep back from brow of purity,
And float upon the balmy air.
Golconda's gems and gold bedeck
The rounded arm and snowy neck,
And round the slender form they fold
The silken robe inwrought with gold.

No fingers on the harp strings dwell,
But ne'er was heard so sweet a lay
As rose on air with plaintive swell,
Then in low murmurs died away.
The golden lamps emit a light
That beams the marble halls along,
While odors on the air of night
Are scattered by a servile throng.
On silken couch the guests recline,
The dainties viands grace the board,
From massive gold they quaff their wine,
But first libations freely poured
To Mars;—that on the coming day
When they should meet in war's array,
He'd give to their victorious hand
Aurelian and his proud command.

* * * * * *

The night wears on—when suddenly
Upon the breeze is borne a sound
That banishes wild revelry
And sends a startled glance around;
Then maiden's cheek is pale with fear
All still and motionless she sits,
With stony eye and parted lips,
As if the Demon of Despair
Had crushed her young and guileless heart,
And Life was ready to depart.
Then can fond lover lily brook
Such keen, such agonizing look,
But in light tone and manner gay
Thus strives to wile her fear away.
"Fear not:—'tis but the fitful breeze
That sweeps the branches of the trees,
Or gazelle bounding o'er the plain,—
Or 'tis perchance the nightly strain
Of Bulbul to the Rose."
But no,
For though at first so faint and low
Each moment hears it louder grow.
"I hear the Roman's battle cry!"
Zenobia said with flashing eye,
"Haste, Zabdas, haste thee for to meet,
We will ourselves their presence greet!"

* * * * * *

The day and battle both are spent,
The sun has set in golden sheen,
Aurelian sits within his tent,
Before him stands the Syrian Queen,
And stern his looks, and harsh his word,
"How dared thou arm against thy Lord?"

Thru from Zenobias haughty eye
Flashed lightnings, as she made reply:
"The fate of war has given my land,
Myself, and subjects to thy hand;
Unchained my limbs, but my free soul
Defies thee still, nor brooks control;
The only boon from ther I crave
Is death! I will not live thy slave."
She paused—then with a surer resumed:
"The day is not far distant, when
I won the victory o'er Rome,
And sent her armies back again,
In greater haste than when they came,
Shorn by a woman's hand of Fame."

"My victories shall their shame efface;
Thy beauties shall my triumph grace!"
He waves his hand and briefly tells
Them to remove, but guard her well.

* * * * * *

And where is now Palmyra's Queen?
And where is fled the gorgeous scene
We strove to picture in our lay?
And what can mean these columns gray,
O'ergrown with moss? These ruined walls
Are left of all Palmyra's halls
Not swept by ruthless Time away.
'Twas there of yore, the wine was quaffed,
By maiden bright and gallant gay,
And there was heard the joyous laugh.
And where are they that revelled there?
Ah! "Echo only answers, where?"

Rochester, N. Y., August, 1854.

Rural Sketch Book.

ANGLING FOR A HUSBAND.

[Translated from the French.]

Mme. D——, who resided at Chaton, was a lady of the strictest character, and of a heart proof against all allurement. She prided herself upon her great insensibility, and her profound indifference had repulsed all those gallants who had ventured to offer their addresses. The country was for her a veritable retreat; she shunned re-unions, and was only happy in solitude. The charms of a chosen circle, the pleasures of the world, had for her no attraction, and her favorite recreation was that of angling—an amusement worthy of an unfeeling woman.

She was accustomed every pleasant day to station herself at the extremity of the lonely island of Chaton, and there, with a book in one hand and her line in the other, her time was passed in fishing, reading or dreaming.

A lover who had always been intimidated by her coldness, and who had never ventured on a spoken or written declaration, surprised her at her favorite pursuit, one day when he had come to the island for the purpose of enjoying a swimming bath. He observed her for a long time without discovery, and busied himself with thinking how he might turn to his advantage this lonely amusement of angling. His reveries were so deep and so fortunate, that he at last hit upon the desired plan, a novel expedient, indeed—yet they are always most successful with such women as pretend to be irreprehensible.

The next day our amorous hero returned to the island, studied the ground, made his arrangements, and when Mme. D—— had resumed her accustomed place, he slipped away to a remote and retired shelter, and after having divested himself of his clothing he entered the stream. An excellent swimmer and skillful diver, he trusted to his aquatic talents for the success of his enterprize. He swam to the end of the island with the greatest precaution, favored by the chances of the bank and the bushes which hung their dense foliage above the waters. In his lips was a note folded and sealed, and on arriving near the spot where Mme. D. was sitting, he made a dive, and lightly seizing the hook, he attached to it his letter.

Mme. D——, perceiving the movement of her line, supposed that a fish was biting.

The young man had returned as he came; he had doubled the cape which extended out into the water, separating them from each other, and had regained his post without the least noise in his passage under the willows. The deed was done.

Mme. D—— pulled in her line, and what was her surprise to observe dangling upon the barb of her hook, not the expected shiner, but an unexpected letter!

This was, however, trifling, and her surprise became stupefaction when, on detaching the transfixed billet, she read upon the envelope—her name!

So then, this letter which she had fished up was addressed to her!

This was somewhat miraculous. She was afraid. Her troubled glance scrutinized the surrounding space, but there was nothing to be seen, or heard; all was still and lonely both on land and water.

She quitted her seat, but took away the letter. As soon as she was alone, and closeted with herself, and as soon as the paper was dry—a paper perfectly water-proof, and written upon with indelible ink—she unsealed the letter and commenced its perusal.

A declaration of love! cried she at the first words. What insolence!

Still, the insolence had come to her in such an extraordinary manner that her curiosity would not suffer her to treat this letter as she had so many others—pitilessly burn it without a reading.

No, she read it quite through. The lover, who dated his note from the bottom of the river, had skillfully adopted the allegory, and introduced himself as a grotesque inhabitant of the waters. The fable was gracefully managed, and with the jesting tone which he had adopted, was mingled a true, serious, ardent sentiment, expressed with beauty and eloquence.

The next day Mme. D—— returned to the island, not without emotion and some trace of fear. She threw her line with a trembling hand, and shuddered as, a moment after, she perceived the movement of the hook.

Is it a fish? Is it a letter?

It was a letter.

Mme. D—— was no believer in magic, still there was something strange and supernatural in all this.

She had an idea of throwing back the letter into the stream, but relinquished it. The most stubborn and haughty woman is always disarmed in face of that strange mystery which captivates her imagination.

This second letter was more tender, more passionate, more charming than the first.—Mme. D—— re-read it several times, and could not help thinking about the delightful mermaid who wrote such bewitching letters.

On the subsequent day she attached her line to the bank, and left it swimming in the stream, while she withdrew to a hiding-place upon the extremity of the island. She watched for a long time, but saw nothing. She returned to the place, withdrew the line—and there was the letter!

This time an answer was requested. It was, perhaps, premature, yet the audacious request obtained full success. The reply was written after some hesitation, and the hook dropped into the stream charged with a letter which was intended to say nothing, and affected a sort of badinage, which was nevertheless a bulletin of a victory gained over the harsh severity of a woman until then inapproachable.

Mme. D—— had too much shrewdness not to guess that her mysterious correspondent employed, instead of magic, the art of a skillful diver. Scruples easily understood, restrained her from that portion of the bank where she was sure that the diver would emerge from the water.

But this game of letters amused her. First it pleased her intellect, and then her heart was interested; finally her feelings, and her curiosity became so lively that she wrote:

"Let us give up this jesting, which has pleased me for the moment, but which should continue no longer, and come with your apologies to Chaton."

The lover answered:

"Yes, if you will add Hope."

The inexorable lady replied—

"If only a word is necessary to decide you, be it so!"

And the word was written.

The young man appeared, and was not a loser. The gift of pleasing belonged to his person as much as to his style, and he had made such rapid progress under water that it was easy to complete his conquest on land.

Thus Mme. D—— caught a husband without wishing it, and in spite of the vow which she had taken, never to marry. Holding the line, she had been caught by the fish.

Domestic Happiness.—Nothing hinders the constant agreement of people who live together, but mere vanity; a secret insisting upon what they think their dignity or merit, and inward expectation of such an over-measure of deference and regard, as answers to their own extravagant false scale, and which nobody can pay, because none but themselves can tell readily to what pitch it amounts.—*Pope.*

A TALE FOR OLD FOGIES:

OR, DOING AS A FATHER DID.

I love to hear of any man being convinced of an error, but especially an obstinate man.—Again and again has it been said, that of all the people in the world, farmers are the most opinionated; that they do things for an better reason than that of their fathers' having done them generations before; that they have a drill of their own, and that the whole world cannot turn them. Some such farmers have I known, certainly, but still with truth can I say, that I number among my country friends not a few of a contrary kind. The other day I was in conversation with my old friend, John Ashfield, of Highfield farm, a man from whom I learned much; though when I tell him so, he usually replies, "the boot is on the other leg." We were talking over old times together—but you shall have the account he gave of himself, as well I can remember in his own words.

"I have been as obstinate, pig-headed a man in my time, I suppose, as ever strode across a furrow; but the day is gone by now, and high time too that it had. The tilth of my plow land, and the sward of my grass land, are different now from what they used to be.

Fifty years ago, James Holt was my neighbor. A wiser man than I was, or ever shall be, was James, though at that time I did not think so. When wheel plows were getting common he says to me: 'Neighbor Ashfield, you are falling behind the times; you must set up a wheel plow or two.'

'I won't,' said I. 'My father never had a wheel plow on the farm, and why should I?'—You know, Mr. Humphrey, that the farmers were always blind in their speech, and no one more so than farmer Ashfield.

When draining came into use, more than it had been before, my neighbor says to me:—'You are standing in your own light in not draining your land more than you do; but better late than never. Better begin now.'

'I won't,' said I, 'let those cut up their meadows, and lay out their money in sloughtiles that like; my meadows shall always remain as they have been.'

'Well,' says he, 'at any rate trim up your hedges and headlands, or 'adland, as you call them a little closer. There's a deal of waste land on your farm. Trim up your hedges and headlands.'

'I won't,' said I. 'My father was as good a farmer as any in the Parish; he knew what he was about as well as you do; and he never trimmed up his headlands more than I do.'

Soon after this he was at me again. 'Your land is stiff, neighbor,' says he; 'I would advise you to try one of the new-fashioned clod-crushers, for you will find it an advantage.'

'I won't,' said I. 'Such jimcracks may suit some people, but they won't suit me; my harrows break the ground quite as well as a clod-crusher; if some folks as I could mention, were half as fond of work as they are now of whims, it would be to their credit.'

'Neighbor Ashfield,' says he, a year or two after threshing machines had once come into fashion, 'you and I must do as other people do—we must set up a threshing machine.'

'I won't,' says I. 'Why should I do that which my father never did? And why should I take the bread out of the mouth of the laboring man.'

But never did I see my neighbor more in earnest than when he came to ask me to give something towards the Sunday Schools. 'Lend them a helping hand,' said he, 'for they are doing more good in the Parish than you think.'

'I won't,' says I. 'We never used to have Sunday Schools, and plow-lads and dairy-maids do none too much as it is. What will they do if you make scholars of them, I can't tell.'

All this time I thought myself wondrous wise in not being led astray by the new fangled notions of my neighbors; but at last my eyes were opened, for there was not a farmer in the parish who hadn't better crops than I had.

I saw that my neighbor with a wheel plow could do more without a driver, and hold the plow tail with half the trouble that it cost me, so I set up three or four wheel plows; and what I could do without them now, it would be hard to say.

'Keep your land wet at the top and dry at the bottom,' said my neighbor, when I began to listen to him. I took his advice, had my meadows well drained, and have never had any cause to grudge either the expense or the trouble. He who doesn't drain his farm, if it is a wet one, is draining his own purse by bad management.

I looked about me and saw that I lost an acre or two of ground by my slovenly hedges and headlands; so I set to work and had them trimmed up close. It was a foolish thing that this was not done before.

I was backward enough in venturing on a heavy iron press-wheel clod-crusher; but, when I did, I found more work done by it, than half a dozen pair of harrows would do. No one can persuade me to set it aside now.

Nobody stood stiffer than I did against the threshing machines; but for all that, when I saw how easily my neighbor could turn a hundred bushels a day out of the straw, while my men, thumping away with their flails did so little, I gave way at once, and set up a machine myself.

As my neighbor had got the better of my obstinacy in so many things, it was not at all likely he would give up trying me again about the Sunday Schools. At last he beat me there too. For many years have I supported them and never shall they need a pound while I have one to give.

At the present time, though I am not fond of running neck or nothing after every new thing, I keep my eyes open to see, and my ears open to hear; quite disposed to believe that my neighbors are quite as wise as I am, and to profit by their judgment as well as my own.

It has often surprised me to think that, after setting my face against wheel plows, draining, clod-crushers, threshing machines, and Sunday Schools, I should adopt them all, but I believe Mr. Humphrey, the real truth to be this, that I never saw the ill condition of my own farm, till it pleased God to show me the evil of my own heart. This it was that opened my eyes, humbled me, and took away my obstinacy."

Youth's Corner.

ILLUSTRATED REBUS, NO. 38.

MISCELLANEOUS ENIGMA.

I am composed of 13 letters.
My 6, 9, 3 is a great calamity.
My 4, 2, 1 is a carpenter's tool.
My 12, 5, 13 is the name of one of the months.
My 11, 10, 6, 2, 3, 10 is a man's name.
My 12, 9, 3, 13 is a woman's name.
My 13, 11, 1 is the name of a tree.
My 1, 7, 4 is the imperfect of an English verb.
My 2, 13, 11 is a sign of affirmation.
My 10, 7, 13 is used as a measurement of time.
My 10, 11, 11, 3 is a wild animal.
My 6, 9, 3, 4, 2, 1 is a flourishing village in Wyoming county, N. Y.
My whole is the name of an Institution of learning in Western New York. D.
Orangeville, N. Y.

☞ Answer next week.

A Riddle.—I am certainly very handsome, and ought to be married, for the birds on St. Valentine's day are not more given to pair than I am. And many a lady offers me her hand—besides, I have received several love-letters; but, alas! one too many, and that has destroyed all my affection. Since then I have been off and on with many—have even gone to the altar—and have there been cast off at a moment's warning; the very priest has refused to unite me. Yet, still, all seek a match for me, hold out their arms to receive me, and yet I am single.—*Blackwood's Magazine.*

Answer to Mathematical Problem in No. 36.—*34 feet, 29,748 lbs.; 51 feet, 99,488¼.*

Wit and Humor.

Doctor Hawks, it is said, was at one time elected Bishop of Rhode Island, but he declined to accept the appointment—the ground of refusal being the small salary attached to the office. His Rhode Island friends reminded him of the promise made in the scriptures, "that God would feed the young ravens." The doctor replied that this was true, but that he had nowhere seen a promise "to feed the young Hawks."

It is said that when the Turkish officer, Amin Bey, attended some fashionable parties at Washington, where the ladies were dressed very low in the neck, he remarked that in going into our society, "he expected to see *as many* of American ladies, but not *as much.*"

The Boston Post wants to know "What proof is there that Robinson Crusoe found his Island inhabited?" And for fear somebody would rush to a solution, the propounder thus expounds:—"Because he saw a *great swell* pitch into a *little cove.*"

A person having the misfortune to admit as a lodger into his house an individual of bad reputation named Bell, turned him out the other day with the remark that he would never keep a *bell* in his house that *wanted hanging.*

A Scotch blacksmith gave the following definition of metaphysics:—"Two folk disputen thegither; he that's listening disna ken what he that's speaking means, and he that's speaking disna ken what he means himself—that's metaphysics."

Buss.—Buss—to kiss. Rebuss—to kiss again. Blunderbuss—two girls kissing each other. Omnibuss—to kiss all the girls in the room.

It is stated that a professor at Cambridge has been displaced because he regulated the astronomical clock so as to make it keep *mean time!*

The London Diogenes says:—"Since 'the race is not to the swift,' &c., why wonder at the *tardiness* of the *fleet?*"

The railroad employee who attempted *to break up a train of circumstances* ran it into the ground.

TO YOUNG MEN!
And others desiring Employment.
CHANCE TO MAKE MONEY!

Miller, Orton & Mulligan, Auburn and Buffalo, N. Y., will give immediate, constant, and very lucrative employment to 1,000 agents, to labor chiefly in the Counties where they reside, in selling the most

Popular, Interesting and Useful Books,

published in this country. The List of Books is very large, and embraces a great variety. They are selected and made with especial reference to the wants of the People. They vary in Price from 25 cents to $2 per volume, are neatly and strongly bound, generally illustrated with beautiful steel and other engravings, and embrace History, Popular Biography, Narrative and Travels, Agriculture, Theology, Temperance, Books for the Young, Bibles, Standard Poetry, Law and School Books, &c.

N. B.—Terms, Descriptive Catalogues, Circulars, and full particulars furnished gratis, on application (post-paid) to

MILLER, ORTON & MULLIGAN,
Auburn or Buffalo.

Auburn, Aug. 26, 1854. 243-4t

A VALUABLE FARM FOR SALE.

Situated in the town of Conquest, 4 miles northwest of Weedsport, a good market on the Canal, and 23½ from Rochester & Syracuse direct Railroad. Said Farm contains 163 acres; 140 improved and in a good state of cultivation; well adapted for all kinds of produce, and well watered for two farms if desirable, as there are two houses and two barns, two orchards containing a good variety of fruit, also a wood lot on each end of the farm. Thirty-five acres can be put in to wheat this fall. Said farm can be had cheap; terms easy, and possession given when desired. Stock and farming implements can be had if desirable. For further particulars inquire of the subscriber on the premises.

243-4t JACOB EAKER.

Weedsport, Cayuga Co., N. Y., Sept., 1854.

THE OPTICAL ART

Has really reached the highest degree of perfection, as is fully proved by the instruments of the celebrated Optic-Ocullist Institution at Leipsic. Its superior Spectacles are of such pure and select crystal glass, and so scientifically ground, as not only to assist the sight, but principally to "improve and restore the failing vision."

Common glasses are magnifying the objects, and soon they begin to irritate and weaken the noble organ, whilst these Lenses, ground on the sanctioned principles of the above named Institution, ease, strengthen and preserve it to the most advanced period of life, no matter if used by day or candle light, or by young or old persons.

The exclusive right of sale of these Leipsic Spectacles has been vested to Dr. SHLOETZER, where the choice selection for any degree of impaired sight will be found, and the proper Lense for the present and future be selected by the doctor.

Their elegant frames have been already partially imitated, therefore, it should be remembered that none of them are commissioned, nor sold for peddling, but that the genuine concentrative Celeste Glasses cannot be had except at the regular medical office of Dr. SHLOETZER, No. 10 Arcade street, East of the Railroad Bridge, and near St. Paul street.

GAFFNEY, BURKE & CO.,
IMPORTERS, WHOLESALE AND RETAIL DEALERS IN
Foreign and Domestic Dry Goods,
No. 53 Main Street, and Nos. 1 and 3 North St. Paul Street,
GAFFNEY'S BLOCK, ROCHESTER,

Have now in store one of the largest stocks of Dry Goods ever brought to this city, in which may be found every desirable article of Ladies' and Gents' Dress Goods, adapted to the season. Their improved facilities for importing, and the great advantage of having a resident partner in New York, daily attending the Auction Sales, enable them to offer to Merchants and Dealers, by piece, case or bale, as cheap as can be purchased in the New York and Boston Markets.

Wholesale Rooms Nos. 1 & 3 North St. Paul St.,
GAFFNEY'S BLOCK, ROCHESTER.

Summer Dress Goods.—We have just opened a very large stock of Summer Dress Goods, consisting of a fine assortment of Brilliants, plain and figured Barreges and Tissues, plaid and striped Poplin Silks, Muslins, plaid and striped Lawns, Printed Jaconets, &c., &c. The styles are entirely new and beautiful.

GAFFNEY, BURKE & CO., 53 Main St., Rochester.

Broche and Crape Shawls.—We have now on hand a very large stock of Broche and Crape Shawls, all colors and qualities, which we are selling at very great bargains, as they were purchased much less than cost to import, at an Auction Sale.

GAFFNEY, BURKE & CO.,
Gaffney's Block, 53 Main St., Rochester.

More New Silks.—We have just received another large assortment of Summer Silks, from an Auction Sale, which were purchased CHEAP FOR CASH, and will be sold at less than cost to import. The styles are very handsome and entirely new. We have also just received 40 pieces of those celebrated Black Silks, which we are selling as cheap as usual. GAFFNEY, BURKE & CO.,
53 Main St.—Gaffney's Block, Rochester.

HICKOK'S PATENT CIDER MILL,

As improved for 1854, received over Fifty Premiums and Diplomas in 1853. This Mill is warranted superior to all others. Sold by the following Agents, who will supply pamphlets containing descriptions, &c.:

R. C. HYDE, & CO., Buffalo, N. Y.
E. D. HALLOCK, Rochester.
E. J. FOSTER, Syracuse.
HIGGINS & CALKINS, Seattle, Wyoming Co.
C. M. WIDRIG, Elmira.

ENGLISH CATTLE.

To Agricultural Societies, and others requiring the best bred Cattle from England, embracing pure blood Horses, Short Horned Cattle, Devons, Herefords, Ayrshire and Alderney Cows, pure bred South Down, Cotswold and Leicester Sheep, Suffolk, Essex and Berkshire Swine. Imported on commission by Messrs. Thos. Betts & Brothers, Herts, England. For information apply to J. M. Miller, 51 Maiden Lane, N. Y. City, who is fully authorized to act as my agent.

Orders received for Guano, by applying to
234-13t THOMAS BETTS, 35 Wall St.

CHEMICAL ANALYSIS.

J. BRYAN, Practical Chemist, 112 State St., Rochester, N. Y., is prepared to make *full and accurate* analysis of Minerals, Soils, Metals, Mineral Waters and Chemical Compounds, and articles suspected of adulteration and *Poisons*, either organic or inorganic, and in quantity or quality. It is necessary to send one or two ounces of a solid, and a pint or more of a fluid for examination. 241-13t

☞ Mr. C. Moore, of Gerry, Chau. Co., is authorized to act as Agent for the Rural New-Yorker, and for the Wool Grower and Stock Register, in the counties of Chautauque and Cattaraugus, N. Y., and Warren, Pa.

MOORE'S RURAL NEW-YORKER,
IS PUBLISHED EVERY SATURDAY,
BY D. D. T. MOORE, ROCHESTER, N. Y.

TERMS, IN ADVANCE:

Subscription—$2 a year—$1 for six months. To Clubs and Agents as follows:—Three Copies one year, for $5; Six Copies (and one to Agent or getter up of club,) for $10; Ten Copies (and one to Agent,) for $15; Twenty Copies for $25, and any additional number, directed to individuals at the same rate. Six months subscriptions in proportion. As we are obliged to pre-pay the American postage on papers sent to the British Provinces, our Canadian agents and friends must add 26 cents per copy to the club rates of the Rural,—making the lowest price to Canadian subscribers $1,50 per year.

☞ Subscription money, properly enclosed, may be sent by mail at the risk of the Publisher.

*** The postage on the Rural is but 3½ cents per quarter, payable in advance, to any part of the State—and 6½ cents to any part of the United States,—except Monroe County, where it goes free.

Advertising.—Brief and appropriate advertisements will be inserted at $1,00 per square, (ten lines, or 100 words,) or 15 cents per line—*in advance.* The circulation of the Rural New-Yorker is several thousand greater than that of any other Agricultural or similar Journal in America. Patent medicines, &c., will not be advertised in this paper on any terms.

☞ All communications, and business letters, should be addressed to D. D. T. Moore, Rochester, N. Y.

Moore's Rural New-Yorker:

A QUARTO WEEKLY

Agricultural, Literary, and Family Newspaper

CONDUCTED BY D. D. T. MOORE,

ASSISTED BY

JOSEPH HARRIS, in the Practical Departments:
EDWARD WEBSTER, in the Literary and News Dep'ts.

Corresponding Editors:

J. H. BIXBY,—H. C. WHITE,—T. E. WETMORE.

THE RURAL NEW-YORKER is designed to be unique and beautiful in appearance, and unsurpassed in Value, Purity and Variety of Contents. Its conductors earnestly labor to make it a Reliable Guide on the Important Practical Subjects connected with the business of those whose interest it advocates. It embraces more Agricultural, Horticultural, Scientific, Mechanical, Literary and News Matter, interspersed with many appropriate and handsome engravings, than any other paper published in this Country,—rendering it a complete AGRICULTURAL, LITERARY and FAMILY NEWSPAPER.

☞ FOR TERMS, &c., SEE LAST PAGE. ☜

Progress and Improvement.

WESTERN NEW YORK AGRICULTURE—NO. 3.

IN company with ROBERT RUSSEL, Esq., of Fifeshire, Scotland—the "critic R." of the London *Agricultural Gazette*, and who is now on a meteorological tour through this country—we visited, last week, some of the farms in Rigs, in this county. Mr. R. was much surprised to see the farmers sowing their wheat so early, and still more to see some of the fields already green with the young wheat plant. The immense orchards of apples and peach trees, loaded with luscious fruit, also elicited many exclamations of astonishment. Our system of "fallowing" for wheat — plowing up a clover sod in June, and simply cultivating it afterwards — was equally novel and interesting to him.

The farm of Mr. WM. W. EMMONS consists of 230 acres, 25 acres of which are in woods. He sows about 80 acres of wheat each year. In 1853 his wheat crop averaged 40 bushels per acre. As indicating the natural fertility of the land, Mr. E. showed us 8½ acres of land, on which in 1852 he had a heavy crop of Indian corn. After the corn was off, the land was plowed, in the fall, and the next spring cultivated, (without plowing,) and sown with barley. This yielded *a little over fifty bushels per acre.* As soon as the barley was off, the land was plowed once, cultivated, &c., and sown to wheat, the yield of which was *forty bushels per acre.* This is the best crop we have heard of *this year.*

Mr. E. plants but little corn, about 10 acres, all of which he consumes on the farm. He sows clover with all his wheat, and plows most of it in for wheat when one year old. Sows plaster on the wheat in March. It does not benefit the wheat, but is of great advantage to the clover, especially in a dry season. It has been supposed that plaster sown in this way injured the wheat plant, by retarding its maturity, more than it benefited the clover.—This, however, is not found to be the case, and the practice is extending rapidly. Mr. E. keeps 100 sheep and but little other stock.

Mr. JOHN BETTAMNON'S farm contains 208 acres, 40 of which is in woods and 12 in permanent pasture. Sows 65 acres to wheat each year. Sows clover with all the wheat in the spring. Thinks it better to sow plaster on the wheat than on the clover the next spring. His wheat crop this year was injured nearly one-third. He usually obtains about 30 bushels per acre. Mr. B. has a fine flock of Leicester sheep, most of them imported by himself. He has kept both kinds, and is fully satisfied that the Leicester is far more profitable than the Merino. He grows but little corn, thinking it rather an exhausting crop on a wheat farm. This year he had 10 acres of peas, which yielded 29 bushels per acre. They were plastered. Plaster, Mr. B. says, has a marvellously beneficial effect on peas on his land, causing them to grow luxuriantly, when those not plastered are withered up. He thinks the fodder so valuable for sheep, that he should always grow them did he not get a single pea. The peas are quite "buggy," and he is now feeding them out to pigs. He is keeping, unthrashed, enough for seed, thinking that the bug does not materially injure the germinating principle of the pea. This spring he sowed 10 bug-eaten peas in a pot, and 6 of them grew. He sowed 3 bushels of the same peas per acre, and had, as we have said, a crop of 29 bushels in return. He thinks peas far superior to barley, oats or corn to precede a wheat crop, nearly equal, if they are a good "smothering crop," to a summer fallow.

Mr. B., this year, has not a ton of hay on the farm, and intends to winter his horses, cattle and sheep on cut oats in the straw, cut wheat straw, chaff, pea straw, corn-stalks, &c. In this way he has no doubt his stock will do as well as on hay. Mr. B. has the best *farm* horses we have seen for some time. They have considerable of the "Samson" blood in them, but though very powerful and active horses, they do not come up to our beau ideal of a good American farm horse. Mr. RUSSEL said such horses would sell for £60 ($300) each in Scotland. They are probably worth about half that here. He agreed with us that none of the celebrated breeds of horses in Great Britain were exactly adapted to the wants of American farmers. *Judicious* crossing with the Suffolk, the Cleveland Bay, and even with the heavy Clydedale, however, would, in many cases, lead to much improvement. Unfortunately, some of the horses imported into this country have not been good representatives of the breed, and consequently these breeds have fallen into disrepute.

We hope more care and judgment have been exercised in the recent importations, and that the whole question of breeding farm horses will receive that attention it so pre-eminently deserves.

EXPERIMENTS IN PIG FEEDING — NO. III.

THE third series of experiments was devoted to the trial, as pig food, of *dried Newfoundland codfish*—"an article which could be supplied in large quantities, and at a moderate price, were it found available for this purpose." The experiments were so arranged as to ascertain in what proportions it could be most advantageously mixed with other foods. It contains more nitrogen—6½ per cent.—than any other current pig food, and hence, if found otherwise available, "would yield a manure of corresponding richness." The codfish was prepared by boiling in water; and a portion of the other food was then stirred into the soup thus obtained. In the other series, we should have stated that the food was in all cases mixed with water before it was put into the troughs.

There were 5 pens of 4 pigs each in this series. The experiment lasted eight weeks. The food was given as follows:

Pen 1. 2 lbs. of dried Codfish per pig per day, with a mixture of equal parts of Indian meal and bran, ad libitum.

Pen 2. 2 lbs. of dried codfish per pig per day, with Indian meal, ad libitum.

Pen 3. Codfish, and a mixture of equal parts of Indian meal and bran, each ad libitum.

Pen 4. 1 lb. of codfish per pig per day, with a mixture of 2 parts barley meal and 1 part bran, ad libitum.

Pen 5. 1 lb. of codfish per pig per day, with barley-meal, ad libitum.

Pen 1 consumed 755 lbs. each of bran and Indian corn meal and 308 lbs. of codfish, and increased 323 lbs., or 100 lbs. of food produced 17.7 lbs. increase in live weight.

Pen 2 consumed 1450 lbs. Indian meal and 308 lbs. codfish, and increased 389 lbs., or 100 lbs. food produced 22.1 lbs. increase in live weight.

Pen 3 consumed 756 lbs. each of bran and Indian meal and 238 lbs. of codfish, and increased 286 lbs., or 100 lbs. of food produced 16.3 lbs. increase of animal.

Pen 4 consumed 1048 lbs. of barley meal, 524 lbs. bran and 224 lbs. codfish, and increased 301 lbs., or 100 lbs. of food produced 16.7 lbs. increase of animal.

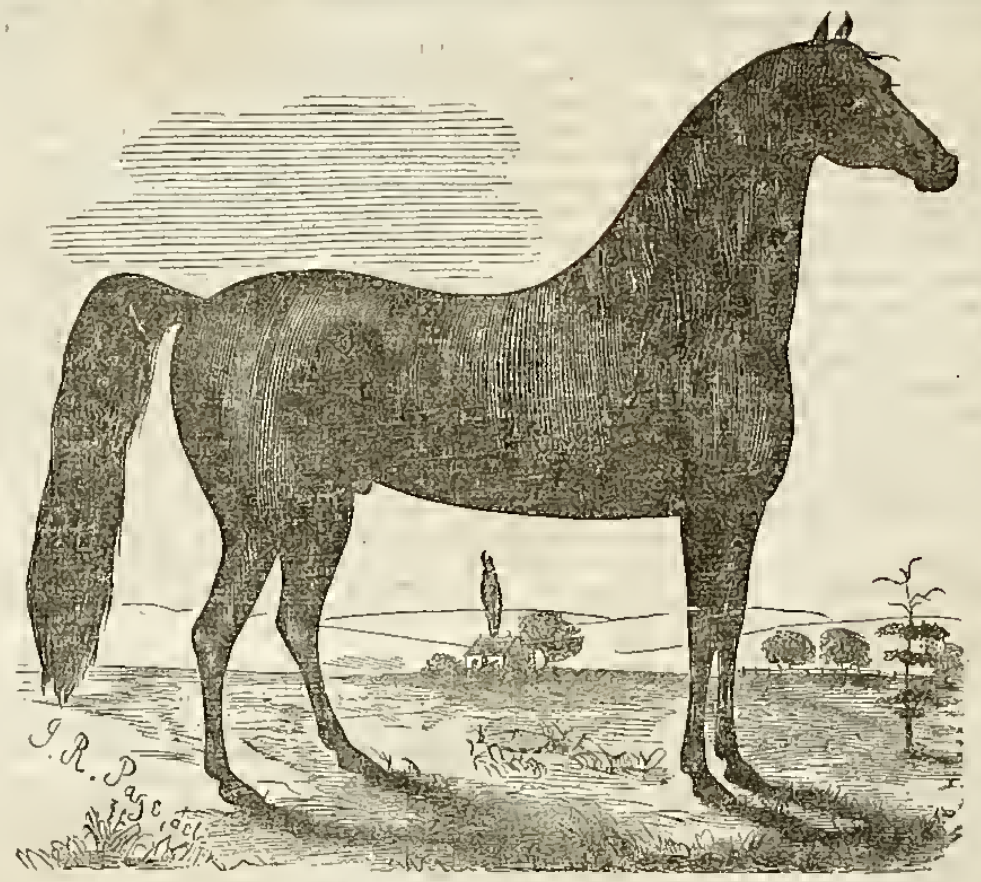
Pen 5 consumed 1841 lbs. of barley meal and 224 lbs. codfish, and increased 376 lbs., or 100 lbs. of food produced 18.2 lbs. increase of animal.

The general indications of this series are similar to those of the other two. Bran is evidently a poor food for pigs. In pens 1 and 3, where the ad lib. food is equal parts *bran* and Indian meal, the increase is much less than where Indian meal alone is the ad lib. food. In pen 4, too, where equal parts of *bran* and barley meal are the ad lib. food, the increase is 75 lbs. less than in pen 5, where barley-meal alone is the ad lib. food. Barley is also again shown to be less fattening than Indian corn—thus, in pen 2, 100 lbs. codfish and Indian meal produce 22.1 lbs. increase of animal, while in pen 5, 100 lbs. codfish and barley meal produce only 18.2 lbs. increase in live weight.

It will be seen that the general increase of this codfish series is very good. Taking the mean of all the pens of the first series, 100 lbs. of food produce 18.1 lbs. increase; in the second series, 17.8 lbs.; in the third series, 18.2. So that the codfish series, as a whole, gives slightly the highest increase for the food consumed. Pen 6, first series, with 2 lbs. bean and lentil meal per pig per day, and Indian corn ad lib., gives 21.3 lbs. increase for 100 lbs. of food consumed, and pen 2, third series, with 2 lbs. of codfish per pig per day, and Indian meal ad lib., gives 22.1 lbs. increase for 100 lbs. of food consumed. This is a slight difference in favor of the codfish. In fact, we may estimate the feeding value of this refuse codfish as fully equal to beans and lentils or peas, while, as before said, the large amount of nitrogen it contains would render the manure made by its consumption exceedingly valuable.

To produce 100 lbs. of pork, 491 lbs. of Indian corn are consumed. The manure made by it would contain about 9 lbs. of ammonia. This at 16 cents per lb.—its value in Peruvian guano—would be worth $1,44. Again, in producing 100 lbs. of pork, 499 lbs. bean and lentil meal, or peas, are consumed. This would give about 22 lbs. of ammonia in the excrements, and would be worth $3,52. With Indian corn and codfish, to produce 100 lbs. of pork, we require 452 lbs. This would leave about 12 lbs. of ammonia in the excrements, worth $1,92. With barley-meal we require 565 lbs. This would give about 10 lbs. of ammonia, worth $1,60. With 2 lbs. bean and lentil meal, and barley meal ad lib., we require 545 lbs. This leaves in the excrements about 14 lbs. of ammonia, worth $2,24. The smallest amount of food consumed to produce 100 lbs. of pork in the whole three series, was pen 8, series 1, with 2 lbs. of bean and lentil meal, and 2 lbs. of bran per pig per day, and Indian corn ad lib.—194 lbs. of the former and 255 of the latter. These would leave in the excrements about 11 lbs. of ammonia, worth $1,76.

Mr. LAWES has not yet published the actual amount of ammonia found in the excrements, and the above figures are obtained by estimating that a pound of nitrogen in the food will give one pound of ammonia in the excrements. We believe this estimate will be found to approximate closely to the truth. We may be censured for stepping in advance of the actual results of the investigation, but the practical value of the experiments is so closely connected with the *whole process of feeding*, that did we look simply at the amount of food required to produce a given amount of pork, forgetting the value of the excrements, we should be apt to arrive at wrong conclusions. We believe the most profitable method of fattening hogs will be to give them peas, at first, with perhaps a *little* Indian corn, and as they fatten gradually reduce the proportion of peas, and increase the quantity of corn, and the last few weeks Indian meal alone should be given. We say this, because the experiments indicate, what is quite consistent with common experience, that as an animal fattens it requires a less quantity of nitrogenous matter, and an increased quantity of available carbonaceous substance, such as starch, sugar, fat, &c. The highly nitrogenous peas, therefore, would be well adapted to the requirements of the pig when he is rather growing than fattening, and the rich carbonaceous Indian corn just the food he requires when he has done growing, and is simply accumulating fat.



MR. M. D. BAILEY'S STALLION OTHELLO.

THE above engraving, though of rather a coarser description than we are in the habit of admitting into the pages of the RURAL, will give a tolerably correct idea of the general outline of the fine stallion, Othello, owned by M. D. BAILEY, Esq., Wampsville, Madison Co., N. Y. Othello was sired by the celebrated trotting horse Morse's Grey; his dam (Lady Ludlow) by WM. LUDLOW'S Othello, &c., &c. He is a jet black color, stands sixteen hands high and weighs 1300 pounds. He was formerly owned by E. BUSH, Esq., Sheffield, Mass., of whom he was recently purchased by Mr. BAILEY at a very high figure. It is said the engraving is a very good likeness with the exception that it represents him a little too long from the hunce to the fet-lock. Mr. B. will doubtless give any further information.

THE OREGON PEA.

EDS. RURAL:—I notice several inquiries recently in the RURAL, relative to the Oregon pea. They were introduced among us two years ago, and are now pretty generally disseminated throughout middle Tennessee. Their merits have scarcely been fairly tested, as the high price at which they were sold, prevented their being planted in any quantity. If the object of planting is the pea alone, other kinds might well claim the preference, as the Oregon is the smallest of all the peas, and not particularly inviting in appearance,—but if along with a reasonable amount of seed, we wish a superabundant supply of stalks, valuable as green food, as hay, and as manure, then surely there is nothing else to compare to it. It grows luxuriantly on the poorest soil, and is less affected by drouth than any plant I have ever seen. For example, the present is a season of unparalled drouth—never before have we witnessed such wide spread desolation, almost every green thing is parched up as by the withering sirocco; corn and cotton were cut off in the midst of the fairest promise, yet the Oregon pea is now growing and maturing its seed, as fresh and verdant as if the earth was not drained of its moisture.

I planted in the midst of a cotton field, selecting the poorest spot—a red knoll—the cotton adjoining is but a few inches high; the peas stand from three to four feet, and completely cover the ground. They have no vine, but grow upright after the manner of the cotton plant. The pea in size and appearance is like Okra seed—the pods, four or five inches long, grow in clusters so as to be easily gathered.—They should be planted in drills four feet by two, and, with care in dropping, a bushel will plant forty acres or more. There is much difference of opinion here in regard to their merits,—those who have tried them generally speak highly in their favor, while they are loudly condemned as a humbug by many who know but little about them. I have no doubt they possess a real and high value as a renovator of the soil, where fed off the land, and as hay where the stalks are harvested and properly secured. The price last spring was fifty cents a pint, but will probably be much lower this season. J. E. MASSON.

Murfreesboro, Tenn., Sept. 4, 1854.

LICE ON FOWLS.—A correspondent writes that, in a long experience he has never found chickens, of any age or breed, attacked with lice if supplied with a liberal quantity of nutritious food. But in all cases, and especially if the fowls are confined in close quarters, a scanty supply of food renders them extremely liable to be infested with the "little varmints."—The best remedy, he says, and our own experience corresponds with it, is to rub into the parts affected, a liberal quantity of any kind of grease, provide a generous bill of fare, and avoid tobacco and all other filthy nostrums.

DEEP TILLAGE.

We have abundant evidence, from various sources, of the superior benefits obtained from plowing eight or ten inches deep, instead of five or six, as was once the almost universal custom. Yet many still continue the old practice, asserting that they have tried the other and found it injurious, the crops invariably depreciating on lands thus tilled. Now what is the cause of this discrepancy in results? We assert that in every case where the subsoil is of equal or superior fertility to the surface, and has been subjected to the ameliorating influence of the atmosphere for a short time, that deep plowing increases the crop. But unfortunately many of our soils a few inches below the surface are nearly barren; and to throw up, any four inches, of this barren soil to the surface, and without cross plowing or mixing it with the mold, sow the grain on it and drag it in, no wonder that the young plants in their vain struggle to find nourishment should dwindle and die.

But it is believed that such, or in fact any soil, can ultimately be benefited by deep plowing, if judiciously performed.

We would, in the above case, deepen but one inch the first year, and mix well together, manuring, if necessary, and then in one, two or three years, according to circumstances, deepen another inch, and so continue until you have a soil as deep as one pair of oxen or horses will ordinarily plow with a *good* plow, which is about ten inches.

The advantages of such tillage have been apparent during the present dry season, and in wet seasons they are no less so. It is true, were there always just moisture enough, and not any too much, shallow plowing would do better than it now does; but as we are always liable to extremes, deep tillage is the only safe course. C.

LETTER FROM WISCONSIN.

Rus. Rural.—I would be very thankful if you would give the few remarks which I shall make concerning this State a place in your valuable paper. Last March I came from New York State to the far west, for the purpose of purchasing a farm, should I find one with soil, location and climate, suited to my mind. After looking over a portion of Michigan, Illinois, Iowa, and Wisconsin, I finally bought in Winnebago county, Wis, it being according to my judgment the best adapted to farming purposes of any place that I have seen in the western States. The soil consists of loam, with lime and sand. It produces large crops of corn, winter and spring wheat, oats, hops, and in fact anything that can be raised in any of the northern or western States. There is now building a ship canal from Lake Winnebago to Green Bay, so that our produce can be sent to Buffalo by water, which will always insure the people of this country a good market. The timber here consists of maple, elm, basswood, hickory, and five kinds of oak. Good pine lumber can be bought for from eight to ten dollars per thousand, which makes building less expensive than in most western States. The country is generally well watered, and the climate is remarkably healthy. It is fast settling up with good, enterprising, moral and industrious people from the eastern States.

Neenah and Menasha, two towns lying one on each side of Fox river, are two as flourishing towns as I ever saw according to their age and number of inhabitants. Seven years ago, where they now stand was a perfect wilderness. They now contain about two thousand inhabitants each; the two places have six saw mills, six flouring mills, with machine shops, of most every description. They possess a water power not to be excelled in the United States. Now I would say to those young men in the east who wish to buy farms and settle down, instead of buying those old worn out farms and paying perhaps from forty to seventy dollars per acre, come out west. You can buy land for from three to fifteen dollars that will produce nearly double the crops, and where the rise of your land will make you rich men in a short time. And to those that do anticipate coming west, I think they would do well to stop a short time in Winnebago county, Wisconsin, before they buy. L. Watson.

Winnebago co., Wis.

Sowing Grass Seed in the Fall.—Again.—In answer to the inquiry of "V," regarding what I said of sowing grass seed in the fall, I would say that the seed was sown upon oat stubble, soon after the oats were taken off; and, also, in answer to "A Subscriber," that my experiment did *not include clover seed.*—My design was to seed down for a permanent meadow. I have abandoned my former practice of mixing clover and timothy for meadow, believing that an acre of clear timothy is worth more than a mixture of clover and timothy. I believe the only reason why the practice of mixing clover with timothy for meadow has obtained so generally, is because it is so difficult to get a good crop of clear timothy the first year after seeding; but I think it may be done if sown at the time which nature seems to indicate. N. M. Carpenter.

Elling co, N. Y.

Agricultural Miscellany.

STATE AND COUNTY FAIRS.

New York State Fair.—The fourteenth annual exhibition of the New York State Fair will be held in Hamilton Square, in the city of New York, Oct. 3, 4, 5 and 6. The *American Institute* unites with the Society in the Agricultural Department, and the *New York Horticultural Society* in the Horticultural Department of the Fair. So that on the whole the exhibition cannot fail to be one of unusual interest. The various railroads leading to New York have agreed to convey stock and articles to and from the exhibition *free of charge*. To guard against any abuse of this privilege, however, freight will be charged on the delivery of the articles for transportation, and refunded to the payer on return of them with proper evidence that they were exhibited at the Fair, and that the owners thereof are not changed.

Hamilton Square is bounded by the Third and Fourth Avenues on two sides. The Third Avenue cars pass it on one side, and the Harlem on the other; and stock and articles sent by the Harlem and New Haven roads can be deposited very near the grounds, and those by the Hudson River railroad not far distant.

For further particulars see advertisement in last number.

Vermont State Fair.—The fourth Annual Fair of the Vermont State Agricultural Society was held at Brattleboro last week. The *New York Tribune* says it was all that the friends of improvement in the State could desire. The show of cattle of all kinds was the best of any of the previous Fairs. The excellence and beauty of the working oxen was a noticeable feature. One yoke owned by Josiah Fessues, of Deerfield, Mass, weighed 6,000 lbs. There was one string of 30 yoke, nearly all handsome red. It was estimated that nearly 1,500 persons were on the ground the second day.

Munroe Co. Fair.—The Monroe County Agricultural Fair will be held on Falls Field, on Friday and Saturday, September 22 and 23. All stock, implements, poultry, &c., must be entered before 10 o'clock on Friday. Articles for the second days' exhibition should be brought in and arranged in the tent, on the first day. Articles, however, for this department, will be admitted till 10 A. M. on Saturday. The Judges on stock will make their reports on Saturday, when the Premiums will be paid. Poultry exhibitors must furnish their own coops. The Poultry, Implements, &c., must remain on the ground till the afternoon of the second day. Articles left on the ground will be carefully watched during the night.

Orleans Co. Fair.—The Annual Fair of the Orleans County Ag'l Society, will be held at Albion on the 27th and 28th of Sept.—Plowing Match, at 10 A. M., on the 28th, near the village. Address at the Court House at 2 P. M., by A. Thomas Esq., after which Reports of Committees, and Award of Premiums. Then the subject of the reorganization of the Society will be brought before the members and others interested, and such action taken for its incorporation may be deemed most advisable.

The Ontario County Fair is to be held at Canandaigua on the 27th and 28th—Wednesday and Thursday next. Extensive arrangements are making, and a fine exhibition may be anticipated. Under the management of its efficient President, Wm. Hildreth, Esq., and other energetic officers, the Ontario Fair will undoubtedly prove highly creditable to the County and all interested.

The Yates Co. Fair, held at Penn Yan last week, is spoken of as a very creditable exhibition. A friend who was present, states that, notwithstanding the unfavorable weather, "Little Yates" made a decidedly good demonstration.

Steuben Co. Fair.—The Agricultural Fair of this county will be held at Bath, Oct 11th and 12th. An address will be delivered by Hon. Lewis F. Allen, of Black Rock, and the whole affair promises to be one of much interest.

Wayne Co. Fair, will be held at Lyons on the 26th and 27th of Sept., *Albany Co.* on the same date, also that of *Wyoming Co.*, at Warsaw as already noted. The Pennsylvania State Fair occurs at the same time, holding one day longer, as does the Upper Canada at London.

The Fishers Town Fair, on the 13th and 14th, made a good display, and was largely attended. There was a fine show of stock, &c., on the first day. The heavy rain on the second day was very unfortunate, yet there was a creditable exhibition of Fruit, (including superior specimens of apples, peaches and pears,) Vegetables, Domestic Manufactures, &c, under a large tent. The Plowing Match was more interesting and creditable to the skill of the plowmen, than we have witnessed at some County Fairs.

STUMP MACHINE.

The editor of the *Farmer's Companion* describes a new stump machine, which is powerful and effective, "turning out solid oak stumps 3 feet in diameter, with as much ease as a dentist would extract a molar." We saw a similar machine to this at the Provincial Fair at Hamilton, C. W., last year, and were assured by several farmers who had taken up several acres of stumps with them that they answered the purpose admirably. Its lever power is a screw, turned by a horse. The following directions will enable any mechanic to make one:

First, there are two bed-pieces of best oak, 8 by 2 inches; 10 feet long, put together like a common crutch drag, spreading 10 feet at the rear end. The cross-piece is inserted 2 feet from the forward end, and just behind this is inserted a strong bolt with a nut and screw, to prevent spreading. Three posts 6 feet between joints, and 5 by 8 inches, oak, are mortised into the bed-pieces, forming a triangle.—The hind posts are 8 feet apart at the foot, measuring across the frame. The top of these posts are let into a head block, 10 inches thick, 18 inches wide, and 3½ feet long, made of the toughest oak. A knot would be better. A hole is made through this block, 3 inches in diameter at the top and 8 inches at the bottom. Through this is passed a common rider mill screw, 4½ feet long, with a clevis made of S-rods's bar, passing through the lower holes in the screw, to admit two bolts for bolts an inch and a half thick. Then a chain made of ¾ inch iron, 4½ feet long, with a ring on one end and a large hook on the other, for hitching to roots. The nut in which the screw works is let into the sweep, (like an old-fashioned rider mill sweep,) to the end of which a horse is attached. The screw is lowered sufficient to hitch; the horse is then started and the stump is raised out with great ease. Indeed it was wonderful to see with what power and ease it threw into pieces a solid oak stump; it being so firm in the ground that it came into parts rather than yield entirely at one hitch. The whole cost of the machine is $24. The screw with the nut, cost $10. It was found necessary to insert two extra braces, reaching from the foot of the rear braces to the top of the forward one.—This machine is designed especially for large stumps.

Patent Office Report for 1853.—We are indebted to the Hon. Charles Mason, Commissioner of Patents, for the Agricultural and Mechanical Reports for 1853. We are glad to note a marked improvement in the *arrangement* of the answers to the Agricultural Circular. Formerly the entire letter was given together, and it was next to impossible to compare the statements of different individuals, or any particular subject—say the increase obtained from guano, &c. Mr. D. J. Browne, the present agricultural clerk, has wisely, we think, arranged the answers of the various individuals, under their appropriate head. This may not be so agreeable to the writers, as to have their communications given entire as they wrote them but to those who wish to examine the answers to this or that particular question, the new arrangement will be of great advantage. In other respects, we can see little improvement. With the exception of an article prepared through the instrumentality of the Smithsonian Institute, on "Climatology," to which we hope to refer at a future time—there is not a single essay or valuable paper in the Report. It is filled simply, with the "condensed correspondence;" which, though systematically arranged, is, inherently, no more interesting and valuable than that of former years.

Sowing Grass Seed alone and in the Fall.—The *Country Gentleman* strongly recommends sowing grass seed *alone*, thinking that other crops with which it is sown operate precisely as weeds and choke it out of several months growth. It cites the experiments of a correspondent of the *Michigan Farmer* to sustain this opinion. The editor then says:—"We have never succeeded so well in seeding land speedily and heavily with Timothy, as by sowing about or before mid-autumn, or as soon as the moderately damp weather has set in, and harrowing it lightly, *without connection with any other crop*. It has always afforded a good product the following season, but not equal to that of the second summer."

Tioga Co. (Pa.) Land.—Our friend Gardner, who recently took a "hurried" trip through this county, says that it offers as good inducements for settlers as any Western State. Good grazing farms can be had at $1,50 per acre, and it is not only good grazing land, but will produce good grain, and when cleared, equal either Orange or Duchess counties in this State.

Peat for Potatoes.—The editor of the *American Agriculturist*, put several bushels of peat in a row of potatoes, 20 feet long in his garden. This row produced 21 lbs. of potatoes, while a row of equal length along side, where nothing was used, gave only 13 lbs.—The peat dressed potatoes, too, were fairer and larger than the others.

Professor Marsh, in a recent letter from England, says:—"Englishmen almost universally believe that pasture lands will give a greater profit in the long run, if fed partly by sheep."

AGRICULTURE IN CALIFORNIA.

We take the following extracts from an interesting letter of L. C. Fiske, to the *Country Gentleman*:

Farming in California, I believe is a subject worthy of your particular attention. I think you will find it a near dispensation in agriculture. We have all the varieties of soil of New England, with climate and seasons entirely different. It is considered yet a question what crops are best adapted to the country, and it is still a greater query how to adapt them. In the valleys, where farming is the business of the country, barley and oats are the staples, and wheat will be as soon as they get mills.—Enormous—almost incredible crops of wheat have been raised, as also of vegetables. So far as I have heard, corn has been raised with little success, though roasting ears are among the first vegetables we get in market, though it is almost always stormy. In many huts, four-fifths are stormy. I have never seen a lot free from worms. The corn here resembles the southern corn in quality, but the cobs are small and short. It grows very tall and thrifty; but what I have seen or heard of produced poorly.

Seed time for small grain, is from the middle of December until April. With regard to seed time for vegetables, I cannot say; it varies very much. They have been as yet considered uncertain crops, though this year they are generally good, and small grain extra. In the highlands and mountains, they are extra compared with the crops in '52 and '53; but there are many miserable and many total failures, probably arising almost entirely to their cultivation. A man may be an adept in farming in what is called the valley. Take him forty miles into the mountains, and he knows no more about it than the Yankee does of farming in Greenland. Should this matter interest you, I will some time hereafter tell you something about farming in the mountains, which in the adventurer I conceive would be interesting. Farms of from a garden patch to a hundred and sixty acres are opening all over the mines. Freight in California is from 3 to 8 or ten cents to the 100 miles; hence the advantage of the highland farmer.

Game Breeder's Ideas of the Sitter's Influence.—A fancier of game fowls, and one who has fought many mains, informs me that he considers it all important, in breeding for the pit, to set a hen on her own eggs, or that they should be hatched under hens of the same breed. The argument used is that, inasmuch as the egg is porous, and the chick could not be hatched if the pores were closed with grease or other material, it necessarily absorbs with the heat of the hen some portion of her moisture, or nature, as he terms it; and that he has frequently had game chicks hatched under hens of other breeds, and though they were plucky and fought well a game or two, yet they invariably in the long run, showed the white feather and bolted, which he rarely knew a thoroughbred bird to do. If my informant's notions are correct, it behoves those who wish to breed first-class birds of *any breed* to attend to this suggestion, as it is equally probable that the form or feather may be affected *if* the *natural* habits of the bird are changed.—*Ex.*

Mule Trade of Bourbon Co., Ky.—The Paris (Ky.) *Citizen* gives some statistics of the mule trade of Bourbon county, which show a steady increase both in the demand for and value of these animals. In 1843, according to the Assessor's Books, there were in the county 1,932 mules, valued at 41,343, or an average of 21 31 per head; in 1854, 7,436, valued at $562,800, or $75 70 per head. The principal markets are the Southern States, where they are used on cotton and sugar plantations. In Virginia they are used on the farm and road. Baltimore furnishes a large market for the smaller animals, where they are shipped to the West Indies, to pack coffee from the mountain plantations. One dealer in Baltimore, purchases annually 1,000; and another in Richmond, Va., about double that number, our farmer in Bourbon county selling him every year between 500 and 800.—*Wool Grower and Stock Register.*

Corn Wheat.—Mr. Geo. E. Yeatman, Sr., informs us that he has cultivated this variety of wheat with great success for ten years. A year ago last fall, he purchased five bushels, in Baltimore, which yielded him over fifty bushels last season. He sold this to the neighboring farmers for seed, with the exception of a small quantity reserved for his own use—something less than four bushels—which produced, this season, about fifty bushels. It was sown on about three acres of land, and most of course have withstood the joint worm well. The rest of Mr. Yeatman's wheat, and that of most of his neighbors, yielded more than half a crop. The Coal wheat is an early variety, and is represented as having all the properties of the best qualities of this grain.—*Piedmont (Va.) Whig.*

Depth of Drains.—Richard Milward gives in the *Journal of the Royal Ag. Society*, the results of an experiment made by him on drainage at different depths. In February, 1850, he had a field of eight acres laid off at equal spaces, between six and seven yards, and drained at depths of two feet, two and a half feet, and four feet. The field was sown with barley in 1851, and was pastured in 1852 and 1853. He says there has been no perceptible difference in the crops or appearance of the land, and that the shallow drains begin to run before the others. He has practiced draining extensively for twenty-five years, and has been decidedly in favor of thirty inches depth.

David Gay, of New London, N. H., says garget root, steeped in water, will cure sick pigs, if they are allowed to drink as much as they will of the liquor. It is a sure remedy for blind staggers, and costiveness, and excellent in other diseases. It is also good for cattle.

FALL PLOWING.

So far as our observation has reached, we conclude it is not a common practice in the west to plow in the autumn for spring crops. There seems somehow to exist a prejudice against it in the minds of many farmers, for what reason is not known. It is a general belief that sandy lands are positively injured by fall plowing. This belief comes from planting them too late, so that they have not time to settle before the winter frosts come. If plowed early—say the last of September, or earlier, thereby permitting them to subside and settle firmly, it is found to be a most judicious practice. But clay lands we desire to keep light and porous, therefore, plow late, till frosts stop the work. The ground then works mellow and light the following season.

A writer in the *Country Gentleman* is much in favor of fall plowing. In such dry seasons as we have had for two years past, his crops endure the drouth much better—the corn leaves rolled ten days sooner on spring-plowed than on fall-plowed land. The soils subsoiler, and gives the crop a vigorous start, and this enables him to keep the weeds in subjection.—Last year he had a field of corn, eight acres; a little more than half was plowed in the fall, the rest in the spring. When harvested, the fall-plowed ground yielded nearly one-third more than the other; a great deal heavier growth of stalks and longer ears. We are greatly in favor of the practice when done so, and at the time it should be.—*Farmer's Companion.*

Inquiries and Answers.

Tile Drains.—Laying and Plastering.—Will two-inch sole tile make a good drain to conduct water from a sink, or will it clog like a wooden drain?

Is plastering stronger on lath nailed on flat plank than when strips are placed between the lathing and plank. Answers to the above will oblige—S. L., *Eden, Erie co., N. Y.*

Have any readers experience which will enable them to answer the above?

The Flea Nuisance.—In every Rural I find, just as it should be, "Inquiries and Answers," and under that head I wish to communicate to you and others an important inquiry. I have read from time to time various remedies for driving away bed-bugs, moths, ants, flies, goats, &c., but not one for driving away that universal pest, the flea. Now if you or any of your subscribers can furnish a receipe for making a flea flee, then will community receive a public benefit.—Joab, *Medina, N. Y.*

Sunflower Seed and Oil.—One of your correspondents has given information concerning the curing of the sunflower preparatory to gathering. He also states that a bushel of the seed will produce a gallon of oil, and that if properly cultivated, the average quantity that can be raised from an acre will be about 80 bushels. Now, considering its rich yield of oil, and the number of bushels per acre, it appears to me that the cultivation of the sunflower is a subject deserving more attention than it has heretofore received; that is, if the manufacture of the oil is sufficiently extensive to cause a remunerative demand for the seed.

Will you, or some one of your correspondents, inform me through the Rural as to the common market value of the seed, and whether the manufacture into oil is extensive enough to warrant the farming community in giving much attention to the business.—C. J. S., *Canandaigua, N. Y.*

We know of no manufactory of Sunflower Oil, and think as yet sufficient attention has not been paid to its value, to create any demand for it in market. The oil can be expressed by the machinery of any linseed oil mill.

Composition Roofs.—Will some of the patrons of the Rural inform me through its columns, whether a roof can be made of sand and coal tar; also the process of making it, and probable cost per square foot.—C. G., *Orangeville, N. Y.*

While waiting for replies, we would refer the inquirer to the following from the *Prairie Farmer*. The business of making such roofing is followed by Messrs. Burkett & Co., of Chicago, and according to the *Farmer*, these roofs are perfectly tight, and for flat roofs the best which can be employed. The process is thus described:

"The roof is made ready as for shingling. The boards must be put edge to edge without any wide cracks, and if any do occur, pieces of felt paper of two or three thickness are nailed over them. The paper is in rolls of about forty feet in length by two and a half feet wide. One man holds the end of this roll fast, while another unrolls it. After one course is laid down, the other is laid upon it, lapping two-thirds precisely as in the case of shingles, so as to expose to the weather one-third the width of the felt. These layers of felt are stuck together by the composition—put on hot. When several courses are laid, they are fastened to the roof by nailing strips of lath across these every four or five feet; so that the whole is fastened to the boarding firmly, without being so fastened as to wear the felt by the swelling and shrinking of the boards. The edges are also fastened off around in the same way, viz., by tacking down upon them strips of lath. After the paper is put down and fastened, it then receives its coating of hot composition, spread evenly all over it, so as to stop any crevice, crack or fine hole anywhere, which might conduct the water or air. As fast as the pitch is put on, it is covered with as much gravel as will stick. The gravel is first dried by heating and stirring in a large shallow pan made for the purpose."

Orchard and Garden.

NOTES OF THE WEEK.

Shaker Seedling Grape—*Early Northern Muscadine.*—We have received a small box of this new variety from our Shaker friend, Philemon Stewart, of New Lebanon, near Albany. It is a hardy seedling from the Native White Grape, and has been tested for over ten years at New Lebanon. It is described as a sure and constant bearer, not subject to mildew, and ripening earlier than the Isabella—and some think it superior to that variety as a wine and table grape. Our experience with it is not sufficiently extensive to bring us to this latter conclusion, but we have no hesitation in commending as a valuable variety, worthy of more extensive cultivation. Roots can be procured as above.

Preserving Fresh Grapes.—The last *Prairie Farmer* gives some account of a number of experiments made by Jer. Price, of Chicago, who tried numerous modes of preserving grapes, including packing in cotton, leaves, saw-dust, wet sand, dry sand, and in cans with the air exhausted, and he finds nothing equal to dry oak saw-dust or dry sand, the first being the best. Baked maple saw-dust is equally good—using jars for packing which can be covered air-tight. The greatest difficulty in *keeping* grapes, is in not having enough of them to last very late in winter.

Ripening of Early Peaches.—According to the *Country Gentleman*, this year the Early Anne ripened about the 14th of August, the Tillotson's on old trees on the 18th, Fay's Early Anne, a day or two later, and a day or two later still the Serrate Early York. Young and thrifty Tillotson trees which grew in shady places, ripened their fruit nearly two weeks after those first matured, a fact which should be remembered. Troth's Early Red was scarcely later than the Serrate Early York.—All the above were a week or two later than usual the present season.

New Seedling Peach.—A seedling from the Crawford, and resembling that variety has been grown by J. S. Clark, of Greece, in this county. It is a rich, juicy peach, and should it prove a better bearer than the Crawford, as it promises, it will be well worth general cultivation.

CULTURE OF THE RASPBERRY.

The following account of the management and profits of one of the most extensive and successful plantations of the Red Antwerp raspberry in the Union, (at Milton, Ulster Co., N. Y.) we copy from a late number of the *American Agriculturist:*

Mr. Hallock cultivates this superior fruit with great success. Before setting the canes, he plows deep and sub-soils the ground, and highly manures every year with a compost of muck and stable dung, applied to them when covered up in the winter or early spring. Two or three canes are set in every hill and these are four feet apart each way. The ground is kept well stirred with the cultivator during the growing season, and clear of all weeds with the hoe.

To protect the canes through the winter, he covers them two or three inches deep with earth. This is done by plowing the ground the way it is desired the plants should lie, two furrows between the rows; then bend the canes gently down from one hill to the next, and cover with a spade or hoe, being careful to leave the ground lowest between the rows, to prevent the water from settling around them, as they require to be kept dry. In the spring, as soon as the ground becomes settled and dry, the canes are carefully raised from the ground with the tines of a manure fork, and the ground is then plowed between the rows at a right angle to the way the canes lay in it during the winter, so as to level and smooth it. Stakes about five feet long are then driven into each hill, and the canes tied close to them.

Mr. Hallock has cultivated this kind of raspberry on the same ground in his garden for sixteen years, and they do as well now there as ever. The average yield is about 5,000 pint baskets a season; and they sell in market from twelve to fourteen cents each net, which leaves from $600 to $700 per acre.

There is little danger of the New York market being overstocked with this delicious fruit; for the desire to obtain it here increases faster than the cultivation extends in the country around us.

To Keep Apples.—The most effectual method of preserving both apples and pears, with which I am familiar—and which, of course, I recommend in preference to all others, is the following:—Having selected the best fruit, wipe it perfectly clean and dry with a fine cloth, then take a jar of suitable size, the inside of which is thoroughly coated with cement, and having placed a layer of fine and *perfectly dry* sand at the bottom, place thereon a layer of the fruit—apples or pears as the case may be—but not so close as to press each other, and then a layer of sand; and in this way proceed till the vessel is full. Over the upper layer of fruit, a thicker stratum of sand may be spread and lightly pressed down with the hands. In this manner, choice fruit, perfectly ripe, may be kept for almost any length of time, if the jar be placed in a situation free from moisture.—*Germantown Telegraph.*

BITTER ROT IN APPLES.

The *Boston Cultivator* gives the following, as communicated by Samuel Preston, in the "Memoirs of the Philadelphia Society of Agriculture," published many years ago.

I have been acquainted with the bitter-rot in some varieties of the apple for at least 40 years, and have considered it a kind of mildew or mould that penetrated the skin of some kinds more than others, and that pruning the trees or raising them in dry, airy situations would be of advantage; but about this time last year, two very intelligent gentlemen from near Boston, lodged at my house and among other topics of conversation, those of orchards and the bitter rot were introduced. One of them informed me, that he had discovered "the true cause of the bitter rot, and a safe and easy mode to prevent it; that it was occasioned by a certain kind of worm on the body of the tree, between the wood and the bark; and that a safe and easy mode was to peel all the bark off the bodies of the trees, on the longest day in the year; which he said he had frequently done; that it did not kill or injure the trees, but they grew much better for it; and that it effectually prevented the bitter rot."

I was surprised at this account, as I had no idea of a tree living with the bark peeled off, in the hot, dry season, yet they appeared worthy of credit. Therefore I resolved to sacrifice one tree to the experiment, and on the 20th day of last June, about one o'clock, in hot, clear weather, I peeled a tree on which there were apples, and had been subject to the bitter rot. I took all the bark off from the roots to up among the limbs, fully expecting to two days to see it withered and dead,—between the wood and bark I found many of those worms, and discovered that there was a pulp or glutinous substance which had grown that year between the wood and the bark, and adhered to the wood. I went every day faithfully to see my tree wither, but was disappointed; it appeared to grow and thrive the better, and this glutinous substance to harden, and has since grown into a perfect bark, the apples hung on as on the other trees, and no bitter rot on them, as had been some years before.—I have lost several good trees by those worms; they first kill the bark, then a speedy rot takes place in the wood, and they blow down with storms; and according to my observations, all trees in a declining state are much more subject to the bitter rot than those in a more flourishing condition.

WESTERN FRUIT CULTURE.

The Ohio Pomological Society holds its sixth session at Cleveland, Dec. 5th, and they are making an effort there to bring out a valuable class of facts on Western Fruit Culture. They ask each member to come prepared to submit information to the Society on the following points, viz:

First.—The fruits cultivated by himself, or in his region, with the proper name, and all the local and synonymes known to him. The character of the top and subsoil in which grown; if the surface is a level plane, or hill side, the aspect and elevation. What varieties best adapted to these soils, and locations, and their productiveness. The mode of cultivation, pruning, &c. The effect of manures, kind used, when and how applied.

Second.—The influence of the stock on the health and duration of the varieties grafted, or budded on the same, and the relative merits of the two modes of propagation, if any. Also, the relative effect of on grafting (as practised by many nurserymen,) and stock grafting, on the health and duration of the tree.

Third.—Observations on insects injurious to fruit, trees, and vines. The diseases or maladies to which they are subject, with the best modes to counteract these evils, with any other information of interest on the subject.

HEMLOCK HEDGES.

The *Country Gentleman* gives the following directions for the cultivation of Hemlock Hedges in answer to an inquiry on the subject:

The first thing is to procure the plants. If our correspondent can find a locality in the woods where young hemlock trees are abundant, he will have no difficulty in forming a hedge. The great requisite for success in transplanting is to remove a considerable portion of earth on the roots of every tree. If this cannot be done, they should *instantly*, on being withdrawn from the ground, and before the outside of the roots have dried in the least, be buried in wet moss,—or still better, if practicable, dipped first into a bed of thin mud, and then protected with moss. Another madding, and puddling on setting out, will be of additional service.

If the young plants can be had from a nursery, where they have become hardened to open ground, they will be still better. We know of no nursery in the vicinity of our correspondent's residence, more likely to supply good plants than that of Dell & Collins, of Waterloo, N. Y.

The mode of planting must depend on the objects of the hedge. If for a simple *screen* from the wind, and if the plants are scarce or costly, a distance of three or four feet apart will be near enough, to form in a few years, a continuous line. But if a *hedge proper* is wanted, the trees should be within about a foot of each other.

The hemlock will make the handsomest screen or hedge of any evergreen known; it will bear almost any amount of shearing, and the hedge may be formed into a smooth wall of verdure, or be left for a tall natural growth. Either way, it is of surpassing beauty. If cattle or other animals cannot *see* through, they scarcely ever attempt passing, even a weak hedge.

Nectarines do well on peach stocks,—but if apricots are budded on peach they are quite likely to be destroyed by the peach borer.

SEASONABLE HINTS.

Celery.—As the dry weather by this time has probably left us, this useful vegetable will begin to make good progress, and should have the earth drawn to it as the growth proceeds. A good soaking of liquid manure water, applied before the first earthing, except the soil be very rich, will be found to very much assist their growth, as the celery is a very rank feeder. The operation of earthing should always be performed when the leaves are quite dry, or they are liable to rot.

Lettuce.—Another batch of lettuce should be sown on warm borders for late use; and those in the seed bed planted out in vacant places for successional use.
